

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### **Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

### INSTAURATIO MAGNA.

Nobilissimi Auctoris Vita . . . . .	276
Introductio . . . . .	281
Dedicatio Principi ac Domino nostro Jacobo . . . . .	282
Præfatio: De statu scientiarum, quod non sit felix, aut majorem in modum auctus; quodque alia omnino, quam prioribus cognita fuerit, via aperienda sit intellectui humano; et alia comparanda auxilia, ut mens suo jure in rerum naturam uti possit . . . . .	282
Distributio operis . . . . .	285
Gulielmus Rawley Lectori . . . . .	289

#### DE DIGNITATE ET AUGMENTIS SCIENTIARUM, LIBRI NOVEM.

##### LIB. I.

Nullis constat capitibus, continet autem parti- tionem totius operis, et quarundam objec- tionum dilutionem . . . . .	290
-----------------------------------------------------------------------------------------------------------------------------	-----

##### LIB. II.

Cap. I. Partitio universalis doctrinæ humanæ in historiam, pœsim, philosophiam: secun- dum tres facultates intellectus, memoriam, phantasiam, rationem: quodque eadem parti- tutio competat etiam theologicis . . . . .	314
Cap. II. Partitio historiæ in naturalem et civi- lem; ecclesiastica et literaria sub civili com- prehensa: partitio historiæ naturalis, ex subjecto suo, in historiam generationum, præ- ter-generationum, et artium . . . . .	314
Cap. III. Partitio historiæ naturalis secunda, ex usu et fine suo, in narrativam et inductivam; quodque finis nobilissimus historiæ naturalis sit, ut ministret et in ordine sit ad condendam philosophiam; quem finem intuetur inductiva. Partitio historiæ generationum, in historiam cœlestium, historiam meteororum, historiam	

	PAGE
globo terræ et maris; historiam massarum sive collegiorum majorum, et historiam specierum sive collegiorum minorum . . . . .	316
Cap. IV. Partitio historiæ civilis, in ecclesiasticam, literariam, et (quæ generis nomen retinet) civilem: quodque historia literaria desideretur: ejus conficiendæ præcepta . . . . .	316
Cap. 5. De dignitate et difficultate historiæ civilis . . . . .	317
Cap. VI. Partitio prima historiæ civilis (specialis) in memorias, antiquitates, et historiam justam . . . . .	317
Cap. VII. Partitio historiæ justæ, in chronica temporum, vitas personarum, et relationes actionum: earum partium explicatio . . . . .	318
Cap. VIII. Partitio historiæ temporum, in historiam universalem, et particularem. Utriusque commoda et incommoda . . . . .	319
Cap. IX. Partitio secunda historiæ temporum, in annales, et acta diurna . . . . .	320
Cap. X. Partitio secunda historiæ civilis (specialis) in meram et mixtam . . . . .	320
Cap. XI. Partitio historiæ ecclesiasticæ, in ecclesiasticam specialem, historiam ad prophetias, et historiam nemeseos . . . . .	321
Cap. XII. De appendicibus historiæ, quæ circa verba hominum (quemadmodum historia ipsa circa facta) versantur: partitio earum in orationes, epistolas, et apophthegmata . . . . .	321
Cap. XIII. De secundo membro principali doctrinæ humanæ, nempe pœsi. Partitio pœseos in narrativam, dramaticam, et parabolicam	322
Exemplum primum philosophiæ, secundum fabulas antiquas, in naturalibus. De universo, secundum fabulam Panis . . . . .	323
Exemplum alterum philosophiæ, secundum parabolas antiquas, in politicis. De bello, secundum fabulam Persei . . . . .	326
Exemplum tertium philosophiæ, secundum parabolas antiquas, in moralibus. De cupiditate, secundum fabulam Dionysi . . . . .	328
LIB. III.	
Cap. I. Partitio scientiæ in theologiam et philosophiam. Partitio philosophiæ in doctrinas tres: de numine, de natura, de homine. Constitutio philosophiæ primæ, ut matris communis omnium . . . . .	329
Cap. II. De theologia naturali; et doctrina de angelis et spiritibus, quæ ejusdem est appendix	331
Cap. III. Partitio naturalis philosophiæ, in speculativam et operativam: quodque illæ duæ, et in intentione tractantis, et in corpore tractatus, segregari debeant . . . . .	332
Cap. IV. Partitio doctrinæ speculativæ de natura, in physicam (specialem) et metaphysicam: quarum physica causam efficientem et materiam; metaphysica causam finalem et formam, inquirat. Partitio physicæ (specialis) in doc-	

	PAGE
trinas de principiis rerum, de fabrica rerum sive de mundo, et de varietate rerum. Partitio doctrinæ de varietate rerum, in doctrinam de concretis, et doctrinam de abstractis. Partitio doctrinæ de concretis rejicitur ad easdem partitiones, quas suscipit historia naturalis. Partitio doctrinæ de abstractis, in doctrinam de schematibus materiæ, et doctrinam de motibus. Appendices duæ physicæ speculativæ: problemata naturalia, placita antiquorum philosophorum. Partitio metaphysicæ, in doctrinam de formis, et doctrinam de causis finalibus	332
Cap. V. Partitio operativæ doctrinæ de natura, in mechanicam et magiam: quæ respondent partibus speculativæ: physicæ mechanica, metaphysicæ magia. Expurgatio vocabuli magiæ. Appendices duæ operativæ: inventarium opum humanarum, et catalogus polychrestorum . . . . .	340
Cap. VI. De magna philosophiæ naturalis, tam speculativæ quam operativæ, appendice, mathematica: quodque inter appendices potius poni debet, quam inter scientias substantivas. Partitio mathematicæ in puram et mixtam	341

## LIB. IV.

Cap. I. Partitio doctrinæ de homine, in philosophiam humanitatis, et civilem. Partitio philosophiæ humanitatis, in doctrinam circa corpus hominis, et doctrinam circa animam hominis. Constitutio unius doctrinæ generalis de natura, sive de statu hominis. Partitio doctrinæ de statu hominis, in doctrinam de persona hominis, et de fœdere animi et corporis. Partitio doctrinæ de persona hominis, in doctrinam de miseriis hominis, et de prærogativis. Partitio doctrinæ de fœdere, in doctrinam de indicationibus, et de impressionibus. Assignatio physiognomiæ, et interpretationis somniorum naturalium, doctrinæ de indicationibus . . . . .	342
Cap. II. Partitio doctrinæ circa corpus hominis, in medicinam, cosmeticam, athleticam, et voluptariam. Partitio medicinæ in officia tria: viz. in conservationem sanitatis, curationem morborum, et prolongationem vitæ: quodque pars postrema de prolongatione vitæ disjungi debeat a duabus reliquis . . . . .	345
Cap. III. Partitio philosophiæ humanæ circa animam, in doctrinam de spiraculo, et doctrinam de anima sensibili, sive producta. Partitio secunda ejusdem philosophiæ, in doctrinam de substantia et facultatibus animæ, et doctrinam de usu et objectis facultatum. Appendices duæ doctrinæ de facultatibus animæ, doctrina de divinatione naturalis, et doctrina de fascinatione. Distributio facultatum animæ sensibilis, in motum et sensum . . . . .	351

LIB. V.		
Cap. I. Partitio doctrinæ circa usum et objecta facultatum animæ humanæ, in logicam et ethicam. Partitio logicæ, in artes inveniendi, judicandi, retinendi, et tradendi . . . . .	354	Sophisma 1. Quod laudant homines et celebrant, bonum; quod vituperant et reprehendunt, malum . . . . .
Cap. II. Partitio inventivæ, in inventivam artium et argumentorum: quodque prior harum (quæ eminent) desideretur. Partitio inventivæ artium, in experientiam literatam, et organum novum. Delineatio experientiæ literatæ . . . . .	355	Elenchus . . . . .
Cap. III. Partitio inventivæ argumentorum, in promptuariam et topicam. Partitio topicæ, in generalem et particularem. Exemplum topicæ particularis, in inquisitione de gravi et levi . . . . .	360	Sophisma 2. Quod etiam ab inimicis laudatur, magnum bonum; quod vero etiam ab amicis reprehenditur, magnum malum . . . . .
Cap. IV. Partitio artis judicandi, in iudicium per inductionem, et per syllogismum: quorum prius aggregatur organo novo. Partitio prima iudicii per syllogismum, in reductionem rectam et inversam. Partitio secunda ejus, in analyticam, et doctrinam de elenchis. Partitio doctrinæ de elenchis, in elenchos sophismatum, elenchos hermenis, et elenchos imaginum sive idolorum. Partitio idolorum, in idola tribus, idola specus, et idola fori. Appendix artis judicandi, viz. de analogia demonstrationum pro natura subjecti . . . . .	362	Elenchus . . . . .
Cap. V. Partitio artis retinendi sive retentivæ, in doctrinam de adminiculis memoriæ, et doctrinam de memoria ipsa. Partitio doctrinæ de memoria ipsa, in prænotionem et emblema . . . . .	365	Sophisma 3. Cujus privatio bona, id ipsum malum; cujus privatio mala, id ipsum bonum . . . . .
LIB. VI.		
Cap. I. Partitio traditivæ, in doctrinam de organo sermonis, doctrinam de methodo sermonis, et doctrinam de illustratione sermonis. Partitio doctrinæ de organo sermonis, in doctrinam de notis rerum, de locutione, et de descriptione: quarum duæ posteriores grammaticam constituunt, ejusque partitiones sunt. Partitio doctrinæ de notis rerum, in hieroglyphica et characteres reales. Partitio secunda grammaticæ, in literariam et philosophantem. Aggregatio poëseos quoad metrum ad doctrinam de locutione. Aggregatio doctrinæ de ciphris ad doctrinam de descriptione . . . . .	366	Elenchus . . . . .
Cap. II. Doctrina de methodo sermonis constituitur ut pars traditivæ substantiva et principalis. Nomen ei inditur prudentia traditivæ. Enumerantur methodi genera diversa, et subjunguntur eorum commoda et incommoda . . . . .	369	Sophisma 4. Quod bono aut malo vicinum est, id ipsum itidem bonum aut malum: quod vero remotum est a bono, malum; quod a malo, bonum . . . . .
Cap. III. De fundamentis et officio doctrinæ de illustratione sermonis, sive rhetoricæ. Appendices tres rhetoricæ, quæ ad promptuariam tantummodo pertinent: colores boni et mali, tam simplicis quam comparati; antitheta rerum; formulæ minores orationis . . . . .	372	Elenchus . . . . .
Exempla colorum boni et mali, tam simplicis, quam comparati . . . . .	373	Sophisma 5. Cui cæteræ partes, vel sectæ, secundas unanimiter deferunt (cum singulæ principatum sibi vindicent) melior reliquis videtur; nam primas quæque ex zelo videtur sumere, secundas autem ex vero et merito tribuere . . . . .
		Elenchus . . . . .
		Sophisma 6. Cujus excellentia vel exuperantia melior, id toto genere melius . . . . .
		Elenchus . . . . .
		Sophisma 7. Quod rem integram ærvat, bonum; quod sine receptu est, malum; nam se recipere non posse, impotentis genus est; potentia autem bonum . . . . .
		Elenchus . . . . .
		Sophisma 8. Quod quis culpa sua contraxit, majus malum; quod ab externis imponitur, minus malum . . . . .
		Elenchus . . . . .
		Sophisma 9. Gradus privationis major videtur, quam gradus diminutionis: et rursus gradus inceptionis major videtur, quam gradus incrementi . . . . .
		Elenchus . . . . .
		Sophisma 10. Quod ad veritatem refertur, majus est, quam quod ad opinionem. Modus autem, et probatio ejus, quod ad opinionem pertinet, hæc est; quod quis, si clam putaret fore, facturus non esset . . . . .
		Elenchus . . . . .
		Sophisma 11. Quod opera et virtute nostra partum est, majus bonum; quod ab alieno beneficio, vel ab indulgentia fortunæ delatum est, minus bonum . . . . .
		Elenchus . . . . .
		Sophisma 12. Quod ex pluribus constat et divisibilibus, est majus, quam quod ex paucioribus, et magis unum: nam omnia per partes considerata majora videntur: quare et pluralitas partium, magnitudinem præ se fert; fortius autem operatur pluralitas patium, si ordo absit: nam inducit similitudinem infiniti, et impedit comprehensionem . . . . .
		Elenchus . . . . .
		Exempla antithetorum . . . . .
		I. Nobilitas . . . . .

LIB. VII.

Cap. I. Partitio ethicæ, in doctrinam de exemplari, et georgica animi. Partitio exemplaris (scilicet boni) in bonum simplex et bonum comparatum: Partitio boni simplicis, in bonum individuale et bonum communionis . . . . .	387
Cap. II. Partitio boni individualis, vel suitatis, in bonum activum et bonum passivum. Partitio boni passivi, in bonum conservativum et	

	PAGE
bonum perfectivum. Partitio boni communionis, in officia generalia et respectiva . . . . .	390
Cap. III. Partitio doctrinæ de cultura animi, in doctrinam de characteribus animorum, de affectibus, et de remediis sive curationibus. Appendix doctrinæ ejusdem, de congruitate inter bonum animi et bonum corporis . . . . .	393

LIB. VIII.

Cap. I. Partitio doctrinæ civilis, in doctrinam de conversatione, doctrinam de negotiis, et doctrinam de imperio sive republica . . . . .	398
Cap. II. Partitio doctrinæ de negotiis, in doctrinam de occasionibus sparsis, et doctrinam de ambitu vitæ. Exemplum portionis doctrinæ de occasionibus sparsis, ex parabolis aliquibus Salomonis . . . . .	399
Parabola 1. Mollis responsio frangit iram . . . . .	400
Explicatio . . . . .	400
Parab. 2. Servus prudens dominabitur in filium stultum; et partietur hæreditatem inter fratres . . . . .	400
Explicatio . . . . .	400
Parab. 3. Vir sapiens, si cum stulto contenderit, sive irascatur, sive rideat, non inveniet requiem . . . . .	400
Explicatio . . . . .	400
Parab. 4. Sed et cunctis sermonibus, qui dicuntur, ne accommodes aurem tuam, ne forte audias servum tuum maledicentem tibi . . . . .	400
Explicatio . . . . .	400
Parab. 5. Advenit veluti viator pauperies, et egestas quasi vir armatus . . . . .	401
Explicatio . . . . .	401
Parab. 6. Qui erudit derisorem, ipse sibi injuriam facit: et qui arguit impium, sibi maculam generat . . . . .	401
Explicatio . . . . .	401
Parab. 7. Filius sapiens lætificat patrem: filius vero stultus mœstitiæ est matri suæ . . . . .	401
Explicatio . . . . .	401
Parab. 8. Memoria justi cum laudibus, at nomen impiorum putrescet . . . . .	401
Explicatio . . . . .	401
Parab. 9. Qui conturbat domum suam, possidebit ventos . . . . .	401
Explicatio . . . . .	401
Parab. 10. Melior est finis orationis, quam principium . . . . .	401
Explicatio . . . . .	401
Parab. 11. Sicut muscæ mortuæ fœtere faciunt unguentum optimum, sic hominem pretiosum sapientia et gloria, parva stultitia . . . . .	402
Explicatio . . . . .	402
Parab. 12. Homines derisores civitatem perdunt, sapientes vero avertunt calamitatem . . . . .	402
Explicatio . . . . .	402
Parab. 13. Princeps, qui libenter prebet aures verbis mendacii, omnes servos habet improbos . . . . .	402

	PAGE		PAGE
Explicatio . . . . .	402	Parab. 30. Prudens advertit ad gressus suos, stultus divertit ad dolos . . . . .	405
Parab. 14. Justus miseretur animæ jumenti sui; sed misericordiæ impiorum crudeles . . . . .	402	Explicatio . . . . .	406
Explicatio . . . . .	402	Parab. 31. Noli esse justus nimium, nec sapientior quam oportet; cur abripiare subito? . . . . .	406
Parab. 15. Totum spiritum suum profert stultus; at sapiens reservat aliquid in posterum . . . . .	403	Explicatio . . . . .	406
Explicatio . . . . .	403	Parab. 32. Da sapienti occasionem, et addetur ei sapientia . . . . .	406
Parab. 16. Si spiritus potestatem habentis ascenderit super te, locum tuum ne dimiseris; quia curatio faciet cessare magna peccata . . . . .	403	Explicatio . . . . .	406
Explicatio . . . . .	403	Parab. 33. Qui laudat amicum voce alta, surgendo mane, erit illi loco maledictionis . . . . .	406
Parab. 17. Primus in causa sua justus: tum venit altera pars, et inquit in eum . . . . .	403	Explicatio . . . . .	406
Explicatio . . . . .	403	Parab. 34. Quomodo in aquis resplendent facies; sic corda hominum manifesta sunt prudentibus . . . . .	406
Parab. 18. Qui delicate a pueritia nutrit servum suum, postea sentiet eum contumacem . . . . .	404	Explicatio . . . . .	406
Explicatio . . . . .	404	Præcepta de ambitu vitæ . . . . .	408
Parab. 19. Vidisti virum velocem in opere suo, coram regibus stabit, nec erit inter ignobiles . . . . .	404	Cap. III. Partitiones doctrinæ de imperio sive republica omittuntur: tantum aditus fit ad desiderata duo: doctrinam de proferendis finibus imperii, et doctrinam de justitia universali, sive de fontibus juris: exempla utriusque . . . . .	414
Explicatio . . . . .	404		
Parab. 20. Vidi cunctos viventes, qui ambulant sub sole, cum adolescente secundo, qui consurgit pro eo . . . . .	404	LIB. IX.	
Explicatio . . . . .	404	Cap. I. Partitiones theologiæ inspiratæ omittuntur: tantum aditus fit ad desiderata tria: doctrinam de legitimo usu rationis humanæ in divinis, doctrinam de gradibus unitatis in civitate Dei, et emanationes Scripturarum . . . . .	427
Parab. 21. Erat civitas parva, et pauci in ea viri; venit contra eam rex magnus, et vadavit eam, instruxitque munitiones per gyrum, et perfecta est obsidio; inventusque est in ea vir pauper et sapiens, et liberavit eam per sapientiam suam; et nullus deinceps recordatus est hominis illius pauperis . . . . .	404	Novus orbis scientiarum, sive desiderata . . . . .	430
Explicatio . . . . .	404		
Parab. 22. Iter pigrorum, quasi sepes spinarum . . . . .	404	INSTAURATIONIS MAGNÆ PARS II.	
Explicatio . . . . .	404	NOVUM ORGANUM, SIVE INDICIA VERA DE INTERPRETATIONE NATURÆ.	
Parab. 23. Qui cognoscit in judicio faciem, non bene facit; iste et pro buccella panis deseret veritatem . . . . .	404	LIB. I.	
Explicatio . . . . .	404	Aphorismi de interpretatione naturæ, et regno hominis . . . . .	433
Parab. 24. Vir pauper calumnians pauperes, similis est imbri vehementi, in quo paratur fames . . . . .	405	De idolis et notionibus falsis, quæ mentes humanas obsident . . . . .	435
Explicatio . . . . .	405	De theoriis philosophorum . . . . .	438
Parab. 25. Fons turbatus pede, et vena corrupta, est justus cadens coram impio . . . . .	405	De signis philosophiarum . . . . .	442
Explicatio . . . . .	405	De causis errorum in scientiis . . . . .	443
Parab. 26. Noli esse amicus homini iracundo, nec ambulato cum homine furioso . . . . .	405	De iis quæ spem faciunt promovendi scientias . . . . .	448
Explicatio . . . . .	405		
Parab. 27. Qui celat delictum, quærit amicitiam; sed qui altero sermone repetit, separat fœderatos . . . . .	405	LIB. II.	
Explicatio . . . . .	405	De arte ipsa interpretandi naturam . . . . .	457
Parab. 28. In omni opere bono erit abundantia; ubi autem verba sunt plurima, ibi frequenter egestas . . . . .	405	De inquisitione formarum . . . . .	460
Explicatio . . . . .	405	Exemplum inquisitionis hujus in calido . . . . .	460
Parab. 29. Melior est correctio manifesta, quam amor occultus . . . . .	405	Instantiæ convenientes in natura calidi . . . . .	460
Explicatio . . . . .	405	Instantiæ in proximo, quæ privantur natura calidi . . . . .	461
		Tabula graduum, sive comparativæ in calido . . . . .	464
		Exemplum exclusivæ sive rejectionis naturarum a forma calidi . . . . .	468

## OPUSCULA PHILOSOPHICA.

Cogitata et visa de interpretatione naturæ, sive de inventionē rerum et operum . . . . .	636
Epistola Thomæ Bodlei ad Francisc. Baconum, qua candide expendit ejus "Cogitata et Visa:" Latine versa et Anglico, ab Isaaco Grutero . . . . .	646

DESCRIPTIO GLOBI INTELLECTUALIS.

	PAGE
Cap. I. Partitio universalis humanæ doctrinæ in historiam, poësin, philosophiam, secundum triplicem facultatem mentis; memoriam, phantasiam, rationem; quodque eadem partitio competat etiam in theologicis . . . . .	649
Cap. II. Partitio historiæ in naturalem et civilem; ecclesiastica et literaria sub civili comprehensa. Partitio historiæ naturalis in historiam generationum, prætergenerationum, et artium, et triplici statu naturæ, liberæ videlicet, aberrantis, et constrictæ . . . . .	649
Cap. III. Partitio historiæ naturalis, ex usu et fine suo: quodque finis longe nobilissimus historiæ naturalis sit ministratio prima ad condendam philosophiam; et quod hujusmodi historia, quæ scilicet sit in ordine ad eum finem, desideretur . . . . .	650
Cap. IV. Incipit tractatus qualis esse debeat historia desiderata; nempe historia naturalis ad condendam philosophiam. Id ut clarius explicetur, primo subjungitur partitio historiæ generationum. Ejus constituuntur partes quinque. Prima, cœlestium. Secunda, meteororum. Tertia, terræ et maris. Quarta, collegiorum majorum, sive elementorum aut massarum. Quinta, collegiorum minorum sive specierum. Historia vero virtutum primarum rejicitur donec explicatio primæ illius partitionis generationum, prætergenerationum, et artium, sit absoluta . . . . .	651
Cap. V. Resumitur tractanda historia cœlestium; qualis et esse debeat in genere, et quod legitima hujusce historiæ ordinatio versetur in triplici genere præceptorum; videlicet, de fine, de materia, ac de modo conficiendæ hujusmodi historia . . . . .	651
Cap. VI. Quod quæstiones philosophicæ circa cœlestia, etiam quæ præter opinionum sunt, et quodammodo duræ, recipi debeant: proponuntur vero quinque quæstiones circa systema ipsum; videlicet, an sit systema? et, si sit, quod sit centrum ejus? et qualis profunditas? et qualis connexio? et qualis partium collocatio . . . . .	653
Cap. VII. Sequuntur quæstiones de substantia cœlestium; qualis, videlicet, sit substantia cœlestium in genere comparata ad corpora sublimaria? et qualis substantia ætheris interstellaris comparata ad corpus stellæ? et qualis sit substantia astrorum ipsorum comparata ad invicem, et comparata ad ignem nostrum, et in natura propria? et qualis sit substantia galaxiæ, et macularum nigrarum in hemisphærio antarctico? Tum proponitur quæstio prima, an sit heterogenea inter cœlestia et sublimaria, et qualis ea esse possit? . . . . .	656
Thema cœli . . . . .	663

# LETTERS.

## LETTERS IN THE REIGN OF QUEEN ELIZABETH.

### I.\*

IT MAY PLEASE YOUR GOOD LORDSHIPS,

I AM sorry the joint masque from the four inns of court falleth; wherein I conceive there is no other ground of that event but impossibility. Nevertheless, because it falleth out that at this time Gray's Inn is well furnished of gallant young gentlemen, your lordship may be pleased to know that rather than this occasion shall pass without some demonstration of affection from the inns of court, there are a dozen gentlemen of Gray's Inn, that out of the honour which they bear to your lordship and my lord chamberlain, to whom at their last masque they were so much bounden, will be ready to furnish a masque; wishing it were in their power to perform it according to their mind. And so for the present I humbly take my leave, resting,

Your Lordship's very humble and much bounden,

FR. BACON.

### II. A LETTER OF CEREMONY TO QUEEN ELIZABETH, UPON THE SENDING OF A NEW-YEAR'S GIFT.†

IT MAY PLEASE YOUR SACRED MAJESTY,

ACCORDING to the ceremony of the time, I would not forget, in all humbleness, to present your Majesty with a small new-year's gift: nothing to my mind. And therefore to supply it, I cannot but pray to God to give your Majesty his new-year's gift; that is, a new year that shall be as no year to your body, and as a year with two harvests to your coffers; and every other way prosperous and glad. And so I remain,

Your Majesty's loyal and obedient subject.

### III. A LETTER OF CEREMONY TO QUEEN ELIZABETH, UPON THE SENDING OF A NEW-YEAR'S GIFT.‡

MOST EXCELLENT SOVEREIGN MISTRESS,

THE only new-year's gift, which I can give your Majesty, is that, which God hath given to me;

\* Harl. MSS. Vol. 7042. No. 2.

† Rawley's Resuscitatio.

which is, a mind in all humbleness to wait upon your commandments and business: wherein I would to God, that I were hooded, that I saw less; or that I could perform more: for now I am like a hawk, that bates, when I see occasion of service, but cannot fly, because I am tied to another's fist. But meanwhile, I continue my presumption of making to your Majesty my poor oblation of a garment; as unworthy the wearing, as his service that sends it, but the approach to your excellent person may give worth to both; which is all the happiness I aspire unto.

### IV. TO THE QUEEN.§

IT MAY PLEASE YOUR SACRED MAJESTY,

I WOULD not fail to give your Majesty my most humble and due thanks, for your royal choice of such commissioners in the great star-chamber cause; being persons, besides their honour, of such science and integrity: by whose report I doubt not but your Majesty will find that, which you have been heretofore informed, both by my lord keeper, and by some much meaner person, touching the nature of that cause, to be true. This preparatory hearing doth already assail me, with new and enlarged offers of composition; which if I had borne a mind to have hearkened unto, this matter had been quenched long ago, without any benefit to your Majesty. But your Majesty's benefit is to me in greater regard than mine own particular: trusting to your Majesty's gracious disposition and royal word, that your Majesty will include me in any extraordinary course of your sovereign pleasure, which your Majesty shall like to take in this cause. The other man, I spoke to your Majesty of, may, within these two terms, be in the same straits, between your Majesty's justice and mercy, that this man now is, if your Majesty be so pleased. So most humbly craving pardon for my presuming to seek access for these few lines, I recommend your Majesty to the most precious custody and best preservation of the Divine Majesty.

Your Majesty's most humble, and entirely obedient servant and subject.

† Rawley's Resuscitatio.

§ Ibid. Probably wrote 1600.

## V. TO THE QUEEN.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I PRESUME according to the ceremony and good manner of the time and my accustomed duty, in all humbleness, to present your Majesty with a simple gift; almost as far from answering my mind, as sorting with your greatness; and therewith wish, that we may continue to reckon on, and ever, your Majesty's happy years of reign: and they that reckon upon any other hopes, I would they might reckon short and to their cost. And so craving pardon most humbly, I commend your Majesty to the preservation of the divine goodness.

## VI. TO THE QUEEN.†

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I MOST humbly entreat your Majesty, not to impute my absence to any weakness of mind or unworthiness. But, I assure your Majesty, I do find envy beating so strongly upon me, standing as I do, if this be to stand, as it were not strength of mind, but stupidity, if I should not decline the occasions; except I could do your Majesty more service than I can any ways discern that I am able to do. My course towards your Majesty, God is my witness, hath been pure and unleavened; and never poor gentleman, as I am persuaded, had a deeper and truer desire and care of your glory, your safety, your repose of mind, your service: wherein, if I have exceeded my outward vocation, I most humbly crave your Majesty's pardon for my presumption. On the other side, if I have come short of my inward vocation, I most humbly crave God's pardon for quenching the Spirit. But in this mind I find such solitude, and want of comfort, which I judge to be, because I take duty too exactly, and not according to the dregs of this age, wherein the old anthem might never be more truly sung, "Totus mundus in maligno positus est." My life hath been threatened, and my name libelled, which I count an honour. But these are the practices of those whose despairs are dangerous, but yet not so dangerous as their hopes; or else the devices of some, that would put out all your Majesty's lights, and fall on reckoning how many years you have reigned; which I beseech our blessed Saviour may be doubled, and that I may never live to see any eclipse of your glory, interruption of safety, or indisposition of your person, which I commend to the Divine Majesty, who keep you and fortify you.

This seems to refer to the earl of Essex, 1600.

## VII. TO MY LORD TREASURER BURGHLEY.

1591. †

MY LORD,

WITH as much confidence as mine own honest

\* Rawley's Resuscitatio. † Ibid. ‡ Ibid.

and faithful devotion unto your service, and your honourable correspondence unto me and my poor estate can breed in a man, do I commend myself unto your lordship. I wax now somewhat ancient; one and thirty years is a great deal of sand in the hour-glass. My health, I thank God, I find confirmed; and I do not fear that action shall impair it; because I account my ordinary course of study and meditation to be more painful than most parts of action are. I ever bare a mind, in some middle place that I could discharge, to serve her Majesty; not as a man born under Sol, that loveth honour; nor under Jupiter, that loveth business, for the contemplative planet carrieth me away wholly: but as a man born under an excellent sovereign, that deserveth the dedication of all men's abilities. Besides I do not find in myself so much self-love, but that the greater part of my thoughts are to deserve well, if I were able, of my friends, and namely of your lordship; who being the atlas of this commonwealth, the honour of my house, and the second founder of my poor estate, I am tied by all duties, both of a good patriot, and of an unworthy kinsman, and of an obliged servant, to employ whatsoever I am to do you service. Again, the meanness of my estate doth somewhat move me: for though I cannot accuse myself, that I am either prodigal or slothful, yet my health is not to spend, nor my course to get. Lastly, I confess that I have as vast contemplative ends, as I have moderate civil ends: for I have taken all knowledge to be my province; and if I could purge it of two sorts of rovers, whereof the one with frivolous disputations, confutations, and verborities; the other with blind experiments and auricular traditions and impostures, hath committed so many spoils; I hope I should bring in industrious observations, grounded conclusions, and profitable inventions and discoveries; the best state of that province. This, whether it be curiosity, or vain-glory, or nature, or if one take it favourably, *philanthropia*, is so fixed in my mind, as it cannot be removed. And I do easily see that place of any reasonable countenance doth bring commandment of more wits than of a man's own; which is the thing I greatly affect. And for your lordship, perhaps you shall not find more strength and less encounter in any other. And if your lordship shall find now or at any time, that I do seek or affect any place, whereunto any that is nearer unto your lordship shall be concurrent, say then that I am a most dishonest man. And if your lordship will not carry me on, I will not do as Anaxagoras did, who reduced himself with contemplation unto voluntary poverty: but this I will do, I will sell the inheritance that I have, and purchase some lease of quick revenue, or some office of gain, that shall be executed by deputy, and so give over all care of service, and become some sorry book-maker, or a true pioneer in that mine of truth, which, he said, lay so deep. This which I have writ unto your lordship, is rather thoughts than words, being set down without all art, disguising, or reservation: wherein I have done honour both to your lordship's wisdom, in judging that that will be best believed of your lordship which

is truest; and to your lordship's good nature in retaining nothing from you. And even so, I wish your lordship all happiness, and to myself means and occasion to be added to my faithful desire to do you service.

From my lodging at Gray's Inn.

### VIII. TO THE LORD TREASURER BURGHLEY.\*

MY SINGULAR GOOD LORD,

YOUR lordship's comfortable relation of her Majesty's gracious opinion and meaning towards me, though at that time your leisure gave me not leave to show how I was affected therewith; yet upon every representation thereof it entereth and striketh more deeply into me, as both my nature and duty presseth me to return some speech of thankfulness. It must be an exceeding comfort and encouragement to me, setting forth and putting myself in way towards her Majesty's service, to encounter with an example so private and domestical, of her Majesty's gracious goodness and benignity; being made good and verified in my father, so far forth, as it extendeth to his posterity: accepting them as commended by his service, during the non-age, as I may term it, of their own deserts. I, for my part, am very well content, that I take least part, either of his abilities of mind, or of his worldly advancement; both which he held and received, the one of the gift of God immediately, the other of her Majesty's gift: yet in the loyal and earnest affection which he bare to her Majesty's service, I trust my portion shall not be with the least; nor in proportion with the youngest birth. For methinks his precedent should be a silent charge, upon his blessing, unto us all, in our degrees, to follow him afar off, and to dedicate unto her Majesty's service both the use and spending of our lives. True it is, that I must needs acknowledge myself prepared and furnished therunto with nothing but with a multitude of lacks and imperfections; but calling to mind how diversly, and in what particular providence God hath declared himself to tender the state of her Majesty's affairs, I conceive and gather hope, that those whom he hath in a manner pressed for her Majesty's service, by working and imprinting in them a single and zealous mind to bestow their duties therein; he will see them accordingly appointed of sufficiency convenient for the rank and standing where they shall be employed: so as, under this her Majesty's blessing, I trust to receive a larger allowance of God's graces. And as I may hope for this, so I can assure and promise for my endeavour, that it shall not be in fault; but what diligence can entitle me unto, that I doubt not to recover. And now seeing it hath pleased her Majesty to take knowledge of this my mind, and to vouchsafe to appropriate me unto her service, preventing any desert of mine with her princely liberality; first, I humbly do beseech your lordship, to present to her Majesty my more

\* Rawley's Resuscitatio.

than humble thanks for the same: and withal, having regard to my own unworthiness to receive such favour, and to the small possibility in me to satisfy and answer what her Majesty conceiveth, I am moved to become a most humble suitor to her Majesty, that this benefit also may be affixed unto the other; which is, that if there appear in me no such towardness of service, as it may be her Majesty doth benignly value and assess me at, by reason of my sundry wants, and the disadvantage of my nature, being unapt to lay forth the simple store of those inferior gifts which God hath allotted unto me, most to view; yet that it would please her excellent Majesty, not to account my thankfulness the less, for that my disability is great to show it; but to sustain me in her Majesty's gracious opinion, whereupon I only rest, and not upon any expectation of desert to proceed from myself towards the contentment thereof. But if it shall please God to send forth an occasion whereby my faithful affection may be tried, I trust it shall save me labour for ever making more protestation of it hereafter. In the mean time, howsoever it be not made known to her Majesty, yet God knoweth it through the daily solicitations wherewith I address myself unto him, in unfeigned prayer, for the multiplying of her Majesty's prosperities. To your lordship also, whose recommendation, I know right well, hath been material to advance her Majesty's good opinion of me, I can be but a bounden servant. So much may I safely promise, and purpose to be, seeing public and private bonds vary not, but that my service to her Majesty and your lordship draw in a line. I wish therefore to show it with as good proof, as I can say it in good faith, &c.

Your lordship's, &c.

### IX. TO THE LORD TREASURER BURGHLEY.†

MAY IT PLEASE YOUR GOOD LORDSHIP,

I AM to give you humble thanks for your favourable opinion, which, by Mr. Secretary's report I find you conceive of me, for the obtaining of a good place, which some of my honourable friends have wished unto me *nec opinanti*. I will use no reason to persuade your lordship's mediation, but this, that your lordship, and my other friends, shall in this beg my life of the queen; for I see well the bar will be my bier, as I must and will use it, rather than my poor estate or reputation shall decay. But I stand indifferent whether God call me, or her Majesty. Had I that in possession, which by your lordship's only means, against the greatest opposition, her Majesty granted me, I would never trouble her Majesty, but serve her still voluntarily without pay. Neither do I, in this, more than obey my friends' conceits, as one that would not be wholly wanting to myself. Your lordship's good opinion doth somewhat confirm me, as that I take comfort in above all others; assuring your lordship, that I never thought so well of myself for any one thing,

† Rawley's Resuscitatio.

as that I have found a fitness to my thinking, in myself to observe and revere your virtues: for the continuance whereof, in the prolonging of your days, I will still be your beadsman; and accordingly, at this time, commend your lordship to the divine protection.

#### X. TO THE LORD TREASURER BURGHLEY.\*

MOST HONOURABLE AND MY VERY GOOD LORD,

I KNOW I may commit an error in writing this letter, both in a time of great and weighty business, as also when myself am not induced thereto by any new particular occasion; and therefore your lordship may impute to me either levity, or ignorance what appertaineth to good respects and forwardness of dealing, especially to an honourable person, in whom there is such concurrence of "magnitudo honoris et oneris," as it is hard to say whether is the greater. But I answer myself first, that I have ever noted it as a part of your lordship's excellent wisdom, "parvis componere magna;" that you do not exclude inferior matters of access, amongst the care of great. And for myself, I thought it would better manifest what I desire to express, if I did write out of a deep and settled consideration of my own duty, rather than upon the spur of a particular occasion: and therefore, my singular good lord, "ex abundantia cordis," I must acknowledge how greatly diversly your lordship hath vouchsafed to tie me unto you by many your benefits. The reversion of the office which your lordship only procured unto me, and carried through great and vehement opposition, though it yet bear no fruit, yet it is one of the fairest flowers of my poor estate; your lordship's constant and serious endeavours to have me solicitor; your late honourable wishes for the place of the wards; together with your lordship's attempt to give me way by the remove of Mr. Solicitor; they be matters of singular obligation: besides many other favours, as well by your lordship's grants from yourself, as by your commendation to others, which I have had for my help; and may justly persuade myself, out of the few denials I have received that fewer might have been, if mine own industry and good hap had been answerable to your lordship's goodness. But, on the other side, I most humbly pray your lordship's pardon if I speak it; the time is yet to come that your lordship did ever use, or command, or employ me, in my profession, in any services or occasions of your lordship's own, or such as are near unto your lordship; which hath made me fear sometimes, that your lordship doth more honourably affect me, than thoroughly discern of my most humble and dutiful affection to your lordship again: which if it were not in me, I knew not whether I were unnatural, unthankful, or unwise. This causeth me most humbly to pray your lordship, and I know mine own case too well, to speak it as weening I can do your lordship service, but as willing to do it, as, to believe, that your lordship is upon just

\* Rawley's Resuscitatio.

title, a principal owner and proprietor of that, I cannot call, talent, but mite, that God hath given me; which I ever do and shall devote to your service. And in like humble manner, I pray your lordship to pardon mine errors, and not to impute unto me the errors of any other, which I know also themselves have by this time left and forethought, but to conceive of me to be a man that daily profiteth in duty. It is true I do in part comfort myself, supposing that it is my weakness and insufficiency that moveth your lordship, who hath so general a command, to use others more able. But let it be as it is, for duty only and homage I will boldly undertake, that nature and true thankfulness shall never give place to a politic dependence. Lastly, I most humbly desire your lordship to continue unto me the good favour, and countenance, and encouragement, in the course of my poor travails, whereof I have had some taste and experience; for the which I yield your lordship my very humble good thanks. And so again, craving your honour's pardon for so long a letter, carrying so empty an offer of so impuissant a service, but yet a true and unfeigned signification of an honest and vowed duty; I cease, commending your lordship to the preservation of the Divine Majesty.

#### XI. A LETTER TO THE LORD TREASURER BURGHLEY, IN EXCUSE OF HIS SPEECH IN PARLIAMENT AGAINST THE TRIPLE SUBSIDY.†

IT MAY PLEASE YOUR LORDSHIP,

I WAS SORRY to find, by your lordship's speech yesterday, that my last speech in parliament, delivered in discharge of my conscience, and duty to God, her Majesty, and my country, was offensive. If it were misreported, I would be glad to attend your lordship to disavow any thing I said not; if it were misconstrued, I would be glad to expound myself, to exclude any sense I meant not. If my heart be misjudged by imputation of popularity or opposition, by any envious or officious informer, I have great wrong; and the greater, because the manner of my speech did most evidently show, that I spake simply and only to satisfy my conscience, and not with any advantage, or policy to sway the cause: and my terms carried all signification of duty and zeal towards her Majesty and her service. It is true, that from the beginning, whatsoever was above a double subsidy, I did wish might, for precedent's sake, appear to be extraordinary, and, for discontent's sake, might not have been levied upon the poorer sort: though otherwise, I wished it as rising as I think this will prove, and more. This was my mind, I confess it: and therefore I most humbly pray your good lordship, first, to continue me in your own good opinion: and then to perform the part of an honourable friend towards your poor servant and alliance, in drawing her Majesty to accept of the sincerity and simplicity of my heart, and to bear

† Rawley's Resuscitatio.

with the rest, and restore me to her Majesty's good favour, which is to me dearer than my life. And so, &c.

Your lordship's most humble in all duty.

1593, April.

III. TO THE RIGHT HONOURABLE HIS VERY GOOD LORD, THE LORD KEEPER OF THE GREAT SEAL, &c.\*

MY VERY GOOD LORD,

I WAS wished to be here ready in expectation of some good effect; and therefore I commend my fortune to your lordship's kind and honourable furtherance. MY affection inclineth me to be much [your] lordship's, and my course and way, in all reason and policy for myself, leadeth me to the same dependence: hereunto if there shall be join'd your lordship's obligation in dealing strongly for me as you have begun, no man can be more yours. A timorous man is every body's, and a covetous man is his own. But if your lordship consider my nature, my course, my friends, my opinion with her Majesty, if this eclipse of her favour were past, I hope you will think, I am no unlikely piece of wood to shape you a true servant of. My present thankfulness shall be as much as I have said. I humbly take my leave.

Your lordship's true humble servant,

FR. BACON.

From Greenwich this  
5th of April, 1594.

III. TO THE RIGHT HONOURABLE MY VERY GOOD LORD, THE LORD KEEPER.†

MY LORD,

I HAVE, since I spake with your lordship, pleaded to the queen against herself for the injury she doth Mr. Bacon in delaying him so long, and the unkindness she doth me in granting no better expedition in a suit which I have followed so long, and so affectionately. And though I find that she makes some difficulty, to have the more thanks, yet I do assure myself she is resolved to make him. I do write this not to solicit your lordship to stand firm in assisting me, because, I know, you hold yourself already tied by your affection to Mr. Bacon, and by your promise to me; but to acquaint your lordship of my resolution to set up my rest, and employ my uttermost strength to get him placed before the term: so as I beseech your lordship think of no temporizing course, for I shall think the queen deals unkindly with me, if she do not both give him the place, and give it with favour and some extraordi-

\* Harl. MSS. Vol. 6997. No. 20.  
† Ibid. No. 87.

nary advantage. I wish your lordship all honour and happiness; and rest,

Your lordship's very assured,

ESSEX.

Greenwich, this 14th of January, [1594.]

Endorsed,

*My lord of Essex for Mr. Fran. Bacon to be solicitor.*

XIV. TO THE RIGHT HONOURABLE HIS VERY GOOD LORD, THE LORD KEEPER OF THE GREAT SEAL.‡

MY VERY GOOD LORD,

SIR Thomas Egerton failing of your lordship, being newly gone, sent his letter to me to see conveyed unto you, which I send enclosed; desiring your lordship, according to your kind affection, to make the best use thereof for my fartherance. And I pray your lordship to call to remembrance my lord treasurer's kind course, who affirmed directly all the rest to be unfit. And because *vis unita fortior*, I pray your lordship to take a time with the queen when my lord treasurer is present. Thus in hope to-morrow will bring forth some good effect, I rest,

Your lordship's in all humble duty and service,

FR. BACON.

XV. TO THE RIGHT HONOURABLE, &c. THE LORD KEEPER, &c.§

MY VERY GOOD LORD,

BECAUSE I understand your lordship remaineth at court till this day, and that my lord of Essex writeth to me, that his lordship cometh to London, I thought good to remember your lordship, and to request you, as I touched in my last, that if my lord treasurer be absent, your lordship would forbear to fall into my business with her Majesty, lest it might receive some foil before the time, when it should be resolutely dealt in. And so commending myself to your good favour, I most humbly take my leave.

Your lordship's in all humble duty and service,

FR. BACON.

From Gray's-Inn this  
8th of April, 1594.

XVI. EARL OF ESSEX TO LORD KEEPER PUCKERING.||

MY LORD,

MY short stay at the court made me fail of speaking with your lordship; therefore I must write that which myself had told you; that is, that your lord-

‡ Harl. MSS. Vol. 6996. No. 52. § Ibid. No. 50.  
|| Ibid. No. 72.

ship will be pleased to forbear pressing for a solicitor, since there is no cause towards the end of a term to call for it; and because the absence of Mr. Bacon's friends may be much to his disadvantage. I wish your lordship all happiness, and rest

Your lordship's very assured to be commanded,  
ESSEX.

Wanstead this 4th of May, 1594.

XVII. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.

IT MAY PLEASE YOUR GOOD LORDSHIP,

I UNDERSTAND of some business like enough to detain the queen to-morrow, which maketh me earnestly to pray your good lordship, as one that I have found to take my fortune to heart, to take some time to remember her Majesty of a solicitor this present day.

Our Tower employment stayeth, and hath done these three days, because one of the principal offenders being brought to confess, and the other persisting in denial, her Majesty in her wisdom thought best some time were given to him that is obstinate, to bethink himself; which indeed is singular good in such cases. Thus desiring your lordship's pardon, in haste I commend my fortune and duty to your favour.

Your lordship's most humbly to receive your  
commandments,

FR. BACON.

From Gray's-Inn this  
13th of August, 1594.

XVIII. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.\*

IT MAY PLEASE YOUR GOOD LORDSHIP,

As your lordship hath at divers times helped me to pass over contrary times, so I humbly pray you not to omit this favourable time. I cannot bear myself as I should, till I be settled. And thus desiring pardon, I leave your lordship to God's preservation.

IT MAY PLEASE YOUR GOOD LORDSHIP,

I WAS minded, according to the place of employment, though not of office, wherein I serve, for my better direction and the advancement of the service, to have acquainted your lordship, now before the term, with such her Majesty's causes as are in my hands. Which course intended out of duty, I do

\* Harl. MSS. Vol. 6996. No. 103. † Ibid. No. 109.

now find by that I hear from my lord of Essex, your lordship of your favour is willing to use for my good, upon that satisfaction you may find in my travels. And I now send to your lordship, together with my humble thanks, to understand of your lordship's being at leisure, what part of to-morrow, to the end I may attend your lordship, which this afternoon I cannot, in regard of some conference I have appointed with Mr. Attorney-general. And so I commend your honourable lordship to God's good preservation.

Your good lordship's humbly at your hon[ourable]  
commandments,

FR. BACON.

From Gray's-Inn the 25th  
of September, Friday.

XX. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.‡

IT MAY PLEASE YOUR GOOD LORDSHIP,

I RECEIVED, at my lord of Essex last going from court, a message of good assurance, which his lordship sent to my brother and to myself; which was this: That her Majesty had stedfastly promised him to despatch my matter to-morrow. And somewhat her Majesty said to myself, when I attended her upon some service since, which I liked well, though it was with some doubtfulness, as, they say, her Majesty useth till the last hour. This I thought good to signify to your good lordship, both that your lordship may perceive how effectual and operative your lordship's last dealing with her Majesty was; and also that, now the wheel is going, your lordship would set it forward, the rather in respect of the necessity to go presently in hand with these criminal causes, if the commission shall hold according to the adjournment. And if her Majesty should not be pleased presently to give order for a patent, yet if your lordship may by her warrant give me warning to prepare myself, it will be some hold and satisfaction. So thinking long to have the strength of place, to do your lordship acceptable service, I leave your good lordship to God's good preservation.

commandments,

FR. BACON.

From Gray's-Inn this 28th  
of September, 1594.

XXI. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.§

IT MAY PLEASE YOUR LORDSHIP,

I THOUGHT good to step aside for nine days, which is the durance of a wonder, and not for any dislike in the world; for I think her Majesty hath done me as great a favour in making an end of this matter, as if she had enlarged me from some restraint. And I humbly pray your lordship, if it so

‡ Ibid. No. 110.

§ Ibid. Vol. 6697. No. 14.

please you, to deliver to her Majesty from me, that I would have been glad to have done her Majesty service now in the best of my years, and the same mind remains in me still; and that it may be, when her Majesty hath tried others, she will think of him that she hath cast aside. For I will take it upon that which her Majesty hath often said, that she doth reserve me, and not reject me. And so I leave your good lordship to God's good preservation.

Your lordship's much bounden,  
FR. BACON.

From Twicknam-Park this  
20th of May, 1595.

Endorsed,  
*Mr. Fr. Bacon, his contentation to leave the  
solicitorship.*

XXII. A LETTER TO THE LORD TREASURER  
BURGHLEY, RECOMMENDING HIS FIRST  
SUIT, TOUCHING THE SOLICITOR'S PLACE.\*

MY LORD,

AFTER the remembrance of my most humble duty, though I know, by late experience, how mindful your lordship vouchsafeth to be of me and my poor fortunes, since it pleased your lordship, during your indisposition, when her Majesty came to visit your lordship, to make mention of me for my employment and preferment; yet being now in the country, I do presume that your lordship, who of yourself had so honourable care of the matter, will not think it a trouble to be solicited therein. My hope is, that whereas your lordship told me her Majesty was somewhat gravelled upon the offence she took at my speech in parliament; your lordship's favourable and good word, who hath assured me, that for your own part you construed, that I spake to the best, will be as a good tide to remove her from that shelf. And it is not unknown to your good lordship, that I was the first of the ordinary sort of the lower house of parliament that spake for the subsidy; and that which I after spake in difference, was but in circumstances of time and manner, which methinks should be no great matter, since there is variety allowed in council, as a discord in music, to make it more perfect. But I may justly doubt, not so much her Majesty's impression upon this particular, as her conceit otherwise of my insufficiency; which though I acknowledge to be great, yet it will be the less, because I purpose not to divide myself between her Majesty and the causes of other men, as others have done, but to attend her business only: hoping that a whole man meanly able, may do as well as half a man better able. And if her Majesty think that she shall make an adventure in using one that is rather a man of study, than of practice and experience; surely I may remember to have heard that my father, an example, I confess, rather ready than like, was made solicitor of the augmentation, a court of much business, when he had never practised, and

\* Rawley's Resuscitatio.

was but twenty-seven years old; and Mr. Brograve was now in my time called to be attorney of the duchy, when he had practised little or nothing; and yet discharged his place with great sufficiency. But these things and the like are as her Majesty shall be made capable of them; wherein, knowing what authority your lordship's commendation hath with her Majesty, I conclude with myself, that the substance of strength which I may receive, will be from your lordship. It is true, my life hath been so private, as I have had no means to do your lordship service; but yet, as your lordship knoweth, I have made offer of such as I could yield; for as God hath given me a mind to love the public; so incidently, I have ever had your lordship in singular admiration; whose happy ability her Majesty hath so long used, to her great honour and yours. Besides, that amendment of state or countenance, which I have received, hath been from your lordship. And therefore if your lordship shall stand a good friend to your poor ally, you shall but "tueri opus proprium," which you have begun. And your lordship shall bestow your benefit upon one that hath more sense of obligation than of self-love. Thus humbly desiring pardon of so long a letter, I wish your lordship all happiness. This 7th of June 1595.

Your Lordship's in all humbleness to be  
commanded.

MAY IT PLEASE YOUR GOOD LORDSHIP,

NOT able to attend your lordship myself, before your going to the court, by reason of an ague, which offered me a fit on Wednesday morning, but since by abstinence, I thank God, I have starved it, so as now he hath turned his back, I am chasing him away with a little physic: I thought good to write these few words to your lordship, partly to signify my excuse, if need be, that I assisted not Mr. Attorney on Thursday last in the star-chamber, at which time, it is some comfort to me, that I hear by relation somewhat was generally taken hold of by the court, which I formerly had opened and moved; and partly to express a little my conceit, touching the news which your lordship last told me from the queen, concerning a condition in law knit to an interest, which your lordship remembereth, and is supposed to be broken by misfeance. Wherein surely my mind, as far as it appertaineth to me, is this, that as I never liked not so much as the coming in upon a lease by way of forfeiture, so I am so much enemy to myself, as I take no contentment in any such hope of advantage. For as your lordship can give me best testimony, that I never in my life propounded any such like motion, though I have been incited thereto; so the world will hardly believe, but that it is underhand quickened and nourished from me. And truly, my lord, I would not be thought to supplant any man for

† Harl. MSS. Vol. 6997. No. 18.

great gain; and I humbly pray your lordship to continue your commendation and countenance to me in the course of the queen's service that I am entered into: which when it shall please God to move the queen to profit, \* I hope I shall give cause for your lordship to obtain as many thanks as you have endured chidings. And so I commend your good lordship to God's good preservation.

Your Lordship's most humbly at your hon[ourable] commandment,

From Gray's Inn the  
11th of June, 1595.

FR. BACON.

XXIV. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.†

IT MAY PLEASE YOUR LORDSHIP,

THERE hath nothing happened to me in the course of my business more contrary to my expectation, than your lordship's failing me, and crossing me now in the conclusion, when friends are best tried. But now I desire no more favour of your lordship, than I would do if I were a suitor in the chancery; which is this only, that you would do me right. And I for my part, though I have much to allege, yet nevertheless, if I see her Majesty settle her choice upon an able man, such a one as Mr. Serjeant Fleming, I will make no means to alter it. On the other side, if I perceive any insufficient obscure idole † man offered to her Majesty, then I think myself double bound to use the best means I can for myself; which I humbly pray your lordship I may do with your favour, and that you will not disable me farther than is cause. And so I commend your lordship to God's preservation,

That beareth your lordship all humble respect,

From Gray's-Inn the  
28th of July, 1595.

FR. BACON.

Endorsed, in Lord Keeper's hand,

*Mr. Bacon wronging me.*

XXV. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.§

MAY IT PLEASE YOUR LORDSHIP,

I THOUGHT it became me to write to your lordship, upon that which I have understood from my lord of Essex, who vouchsafed, as I perceive, to deal with your lordship of himself to join with him in the concluding of my business, and findeth your lordship hath conceived offence, as well upon my manner when I saw your lordship at Temple last, as upon a letter, which I did write to your lordship some time before. Surely, my lord, for my behaviour, I am well assured, I omitted no point of duty or ceremony towards your lordship. But I know too much of the court to beg a countenance in public place, where I make account I shall not receive it. And for my letter, the principal point of it was,

\* f. perfect.

† Harl. MSS. Vol. 6997. No. 37.  
‡ Ita MSS.

that which I hope God will give me grace to perform, which is, that if any idole may be offered to her Majesty, since it is mixt with my particular, to inform her Majesty truly, which I must do, as long as I have a tongue to speak, or a pen to write, or a friend to use. And farther I remember not of my letter, except it were that I writ, I hoped your lordship would do me no wrong, which hope I do still continue. For if it please your lordship but to call to mind from whom I am descended, and by whom, next to God, her Majesty, and your own virtue, your lordship is ascended; I know you will have a compunction of mind to do me any wrong. And therefore, good my lord, when your lordship favoureth others before me, do not lay the separation of your love and favour upon myself. For I will give no cause, neither can I acknowledge any, where none is; but humbly pray your lordship to understand things as they are. Thus sorry to write to your lordship in an argument which is to me unpleasant, though necessary, I commend your lordship to God's good preservation.

Your lordship's in all humble respect,

FR. BACON.

From Twickenam-Park this  
19th of August, 1595.

XXVI. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.||

IT MAY PLEASE YOUR GOOD LORDSHIP,

I AM sorry the opportunity permitteth me not to attend your lordship as I minded. But I hope your lordship will not be the less sparing in using the argument of my being studied and prepared in the queen's causes, for my fartherance, upon belief that I had imparted to your lordship my travels, which some time next week I mean to do. Neither have I been able to confer with Mr. Attorney, as I desired, because he was removing from one building to another. And besides, he alleged his note-book was in the country at ——— and so we respited it to some time next week. I think he will rather do me good offices than otherwise, except it be for the township your lordship remembereth by the verse. Thus I commend your honourable lordship to God's good preservation.

Your Lordship's most humble at your hon[ourable] commandment,

FR. BACON.

From Gray's-Inn this 25th  
of September, 1595.

XXVII. TO THE RIGHT HONOURABLE MY  
GOOD LORD, THE LORD KEEPER OF THE  
GREAT SEAL OF ENGLAND.¶

IT MAY PLEASE YOUR GOOD LORDSHIP,

My not acquainting your lordship hath proceeded of my not knowing any thing, and of my not knowing

§ Harl. MSS. Vol. 6997. No. 44.

|| Harl. MSS. Vol. 6997. No. 59. ¶ Ibid. No. 60.

of my absence at Byasam with my lady Russel, upon some important cause of her son's. And as I have heard nothing, so I look for nothing, though my lord of Essex sent me word, he would not write till his lordship had good news. But his lordship may go on in his affection, which nevertheless myself have desired him to limit. But I do assure your lordship, I can take no farther care for the matter. I am now at Twicknam-Park, where I think to stay: for her Majesty placing a solicitor, my travel shall not need in her causes, though whensoever her Majesty shall like to employ me in any particular, I shall be ready to do her willing service. This I write lest your lordship might think my silence came of any conceit towards your lordship, which, I do assure you, I have not. And this needed I not to do, if I thought not so: for my course will not give me any ordinary occasion to use your favour, whereof nevertheless I shall ever be glad. So I commend your good lordship to God's holy preservation.

Your lordship's humble, &c.  
FR. BACON.

This eleventh of October, 1595.

XXVIII. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.\*

I CONCEIVE the end already made, which will, I trust, be to me a beginning of good fortune, or at least of content. Her Majesty by God's grace shall live and reign long, she is not running away, I may trust her. Or whether she look towards me or no, I remain the same, not altered in my intention. If I had been an ambitious man, it would have overthrown me, but minded as I am, "Revertet benedictio mea in sinum meum." If I had made any reckoning of any thing to be stirred, I would have waited on your lordship, and will be at any time ready to wait on you to do you service. So I commend your good lordship to God's holy preservation.

Your lordship's most humble at your hon[our-  
able] commandment,

FR. BACON.

From Twicknam-Park this  
14th of October.

Endorsed:  
14th October 95.

XXIX. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.†

MY VERY GOOD LORD,

I RECEIVED a letter from a very friend of mine requesting me to move your lordship, to put into the commission for the subsidy, Mr. Richard Kempe, a reader of Gray's-Inn, and besides born to good estate, being also my friend and familiar acquaint-

\* Harl. MSS. Vol. 6997. No 61.

ance. And because I conceive the gentleman to be every way sortable with the service, I am bold to commend him to your lordship's good favour. And even so, with remembrance of my most humble duty, I rest,

Your lordship's affectionate to do you humble  
service,

FR. BACON.

Twicknam-Park,  
July 3, 1595.

XXX. TO THE RIGHT HONOURABLE THE  
LORD KEEPER, &c.‡

MY LORD,

IN my last conference with your lordship, I did entreat you both to forbear hurting of Mr. Fr. Bacon's cause, and to suspend your judgment of his mind towards your lordship, till I had spoken with him. I went since that time to Twicknam-Park to confer with him, and had signified the effect of our conference by letter ere this, if I had not hoped to have met with your lordship, and so to have delivered it by speech. I told your lordship when I last saw you, that this manner of his was only a natural freedom, and plainness, which he had used with me, and in my knowledge with some other of his best friends, than any want of reverence towards your lordship; and therefore I was more curious to look into the moving cause of his style, than into the form of it: which now I find to be only a diffidence of your lordship's favour and love towards him, and no alienation of that dutiful mind which he hath borne towards your lordship. And therefore I am fully persuaded, that if your lordship would please to send for him, there would grow so good satisfaction, as hereafter he should enjoy your lordship's honourable favour, in as great a measure as ever, and your lordship have the use of his service, who, I assure your lordship, is as strong in his kindness, as you find him in his jealousy. I will use no argument to persuade your lordship, that I should be glad of his being restored to your lordship's wonted favour; since your lordship both knoweth how much my credit is engaged in his fortune, and may easily judge how sorry I should be, that a gentleman whom I love so much, should lack the favour of a person whom I honour so much. And thus commending your lordship to God's best protection, I rest,

Your lordship's very assured,  
ESSEX.

Endorsed:

31 August 95. My lord of Essex to have me send for Mr. Bacon, for he will satisfy me. In my Lord Keeper's own hand.

† Ibid. No. 29.

‡ Ibid. No. 47.

## XXXI. TO THE RIGHT HONOURABLE THE LORD KEEPER, &amp;c.\*

MY VERY GOOD LORD,

THE want of assistance from them which should be Mr. Fr. Bacon's friends, makes [me] the more industrious myself, and the more earnest in soliciting mine own friends. Upon me the labour must lie of his establishment, and upon me the disgrace will light of his being refused. Therefore I pray your lordship, now account me not as a solicitor only of my friend's cause, but as a party interested in this: and employ all your lordship's favour to me, or strength for me, in procuring a short and speedy end. For though I know, it will never be carried any other way, yet I hold both my friend and myself disgraced by this protraction. More I would write, but that I know to so honourable and kind a friend, this which I have said is enough. And so I commend your lordship to God's best protection, resting,

At your lordship's commandment,

[No date.]

ESSEX.

## XXXII. TO MY LORD OF ESSEX, FROM MR. BACON, OCTOBER 4, 1596.†

MY SINGULAR GOOD LORD,

I WILL no longer dis sever part of that, which I meant to have said to your lordship at Barn-Elms, from the *exordium* which I then made; whereunto I will only add this, that I humbly desire your lordship, before you give access to my poor advice, to look about, even jealously a little if you will, and to consider; first, whether I have not reason to think, that your fortune comprehended mine? Next, whether I shift my counsel and do not *constare mihi*? for I am persuaded, there are some would give you the same counsel now which I shall, but that they should derogate from that which they have said heretofore. Thirdly, whether you have taken hurt, at any time, by my careful and devoted counsel; for although I remember well your lordship once told me, that you having submitted upon my well-meant motion at Nonsuch, the place where you renewed a treaty with her Majesty of obsequious kindness, she had taken advantage of it; yet I suppose you do since believe, that it did much attemper a cold malignant humour then growing upon her Majesty toward your lordship, and hath done you good in consequence. And for my being against it, now lately that you should not estrange yourself, although I give place to none in true gratulation; yet neither do I repent me of safe counsel; neither do I judge of the whole play by the first act. But whether I counsel you the best, or for the best, duty bindeth me to offer to you my wishes. I said to your lordship last time, "Martha, Martha, attendis ad plurima, unum sufficit;" win the queen: if this be not the beginning of any other course, I see no end. And I will not now speak of favour of affection, but of

\* Harl. MSS. Vol. 6997. No. 106.

other correspondence and agreeableness; which, whensoever it shall be conjoined with the other of affection, I durst wager my life, let them make what *prosopopæias* they will of her Majesty's nature, that in you she will come to the question of "Quid fiet homini, quem rex vult honorare?" But how is it now? A man of a nature not to be ruled, that hath the advantage of my affection, and knoweth it; of an estate not grounded to his greatness; of a popular reputation; of a military dependence. I demand, whether there can be a more dangerous image than this, represented to any monarch living, much more to a lady, and of her Majesty's apprehension? And is it not more evident than demonstration itself, that whilst this impression continueth in her Majesty's breast, you can find no other condition, than inventions to keep your estate bare and low; crossing and disgracing your actions; extenuating and blasting of your merit; carping with contempt at your nature and fashions; breeding, nourishing, and fortifying such instruments as are most factious against you; repulses and scorns of your friends and dependants that are true and steadfast; winning and inveigling away from you such as are flexible and wavering; thrusting you into odious employments and offices to supplant your reputation; abusing you and feeding you with dalliances and demonstrations, to divert you from descending into the serious consideration of your own case; yea, and percase venturing you in perilous and desperate enterprises. Herein it may please your lordship to understand me; for I mean nothing less, than that these things should be plotted and intended as in her Majesty's royal mind towards you: I know the excellency of her nature too well. But I say, wheresoever the formerly described impression is taken in any king's breast towards a subject, these other recited inconveniences must, of necessity of politic consequence, follow; in respect of such instruments as are never failing about princes; which spy into humours and conceits, and second them: and not only second them, but in seconding increase them; yea, and many times, without their knowledge, pursue them farther than themselves would. Your lordship will ask the question, wherewith the Athenians were wont to interrupt their orators, when they exaggerated their dangers; "Quid igitur agendum est?"

I will tell your lordship "quæ mihi nunc in mentem veniunt;" supposing nevertheless, that yourself, out of your own wisdom upon the case, with this plainness and liberty represented to you, will find out better expedients and remedies. I wish a cure applied to every of the five former impressions, which I will take not in order, but as I think they are of weight.

For the removing the impression of your nature to be *opiniastre* and not rulable: first and above all things I wish, that all matters past, which cannot be revoked, your lordship would turn altogether upon insatisfaction, and not upon your nature or proper disposition. This string you cannot upon every apt occasion harp upon too much. Next, whereas I have noted you to fly and avoid, in some

† Rawley's Resuscitatio.

respect justly, the resemblance or imitation of my lord of Leicester, and my lord chancellor Hatton; yet I am persuaded, howsoever I wish your lordship as distant as you are from them in points of favour, integrity, magnanimity, and merit, that it will do you much good between the queen and you, to allege them, as oft as you find occasion, for authors and patterns: "for I do not know a readier mean to make her Majesty think you are in your right way. Thirdly, when at any time your lordship upon occasion happen in speeches to do her Majesty right, for there is no such matter as flattery amongst you all, I fear you handle it "magis in speciem adornatis verbis, quam ut sentire videaris." So that a man may read formality in your countenance; whereas your lordship should do it familiarly, "et oratione fida." Fourthly, your lordship should never be without some particulars afoot, which you should seem to pursue with earnestness and affection; and then let them fall, upon taking knowledge of her Majesty's opposition and dislike. Of which the weightiest sort may be, if your lordship offer to labour, in the behalf of some that you favour, for some of the places now void; choosing such a subject as you think her Majesty is like to oppose unto: and if you will say that this is "conjunctum cum aliena injuria," I will not answer, "Hæc non aliter constabunt;" but I say, commendation from so good a mouth doth not hurt a man, though you prevail not. A less weighty sort of particulars may be the pretence of some journeys which at her Majesty's request your lordship might relinquish: as if you would pretend a journey to see your living and estate towards Wales, or the like: for as for great foreign journeys of employment and service, it standeth not with your gravity to play or stratagem with them. And the lightest sort of particulars, which yet are not to be neglected, are in your habits, apparel, wearings, gestures, and the like.

The impression of greatest prejudice next is that of a military dependence: wherein I cannot sufficiently wonder at your lordship's course, that you say, the wars are your occupation, and go on in that course: whereas, if I might have advised your lordship, you should have left that person at Plymouth more than when in counsel, or in commending fit persons for service for wars, where it had been in season. And here, my lord, I pray mistake me not: I am not to play now the part of a gown-man, that would frame you best to mine own turn. I know what I owe you. I am infinitely glad of this last journey, now it is past; the rather, because you may make so honourable a full point for a time. You have property good enough in that greatness: there is some can, of many years, ascend near you in competition. Besides, the disposing of the places and affairs both, concerning the wars, you increasing in other greatness, will of themselves flow to you; which will preserve that dependence in full measure. It is a thing that of all things I would have you retain, the times considered, and the necessity of the service; for other reason I know none: yet I say, keep it in substance, but abolish it in shows to the queen; for her Majesty loveth peace. Next, she

loveth not charge. Thirdly, that kind of dependence maketh a suspected greatness. Therefore, "quod instat agamus." Let that be a sleeping honour a while, and cure the queen's mind in that point. Therefore, again, whereas I heard your lordship design to yourself the earl marshal's place, or the place of master of the ordnance; I did not in my mind so well like of either, because of their affinity with a martial greatness. But of the places now void, in my judgment and discretion, I would name you to the place of lord privy seal. For first, it is the third person of the great officers of the crown. Next, it hath a kind of superintendence over the secretary. It hath also an affinity with the court of wards, in regard of the fees from the liveries; and it is a fine honour, quiet place, and worth a thousand pounds by year: and my lord admiral's father had it, who was a martial man: and it fits a favourite to carry her Majesty's image in seal, who beareth it best expressed in heart. But my chief reason is, that which I first alleged, to divert her Majesty from this impression of a martial greatness. In concurrence whereof, if your lordship shall not remit any thing of your former diligence at the star-chamber; if you shall continue such intelligences as are worth the cherishing; if you shall pretend to be as bookish and contemplative as ever you were: all these courses have both their advantages and uses in themselves otherwise, and serve exceeding aptly to this purpose. Whereunto I add one expedient more, stronger than all the rest; and, for my own confident opinion, void of any prejudice or danger of diminution of your greatness; and that is, the bringing in of some martial man to be of the council; dealing directly with her Majesty in it, as for her service, and your better assistance; choosing nevertheless some person that may be known, not to come in against you, by any former division. I judge the fittest to be my lord Mountjoy, or my lord Willoughby. And if your lordship see deeper into it than I do, that you would not have it done in effect; yet in my opinion, you may serve your turn by the pretence of it, and stay it nevertheless.

The third impression is of a popular reputation; which, because it is a thing good in itself, being obtained as your lordship obtaineth it, that is, *bonis artibus*; and besides, well governed, is one of the best flowers of your greatness both present and to come; it would be handled tenderly. The only way is to quench it *verbis* and not *rebus*. And therefore to take all occasions to the queen, to speak against popularity and popular courses vehemently; and to tax it in all others: but, nevertheless, to go on in your honourable commonwealth courses as you do. And therefore, I will not advise you to cure this, by dealing in monopolies, or any oppressions: only, if in parliament your lordship be forward for treasure in respect of the wars, it becometh your person well; and if her Majesty object popularity to you at any time, I would say to her, a parliament will show that; and so feed her with expectation.

The fourth impression, of the inequality between your estate of means, and your greatness of respects, is not to be neglected. For believe it, my lord, that

till her Majesty find you careful of your estate, she will not only think you more like to continue chargeable to her, but also have a conceit that you have higher imaginations. The remedies are, first, to profess it in all speeches to her: next, in such suits wherein both honour, gift, and profit may be taken, to communicate freely with her Majesty, by way of inducing her to grant, that it will be this benefit to you. Lastly, to be plain with your lordship, for the gentlemen are such as I am beholden to, nothing can make the queen, or the world, think so much that you are come to a provident care of your estate, as the altering of some of your officers; who though they be as true to you as one hand to the other, yet *opinio veritate major*; but if, in respect of the bonds they may be entered into for your lordship, you cannot so well dismiss yourself of them, this cannot be done but with time.

For a fifth and last, which is of the advantage of a favourite; as severed from the rest, it cannot hurt; so joined with them, it maketh her Majesty more fearful and shadowy, as not knowing her own strength. The only remedy to this, is to give way to some other favourite, as in particular you shall find her Majesty inclined; so as the subject hath no ill nor dangerous aspect towards yourself. For otherwise, whosoever shall tell me, that you may not have singular use of a favourite at your devotion, I will say he understandeth not the queen's affection, nor your lordship's condition. And so I rest.

October 4, 1596.

#### XXXIII. TO MY LORD OF ESSEX.\*

IT MAY PLEASE YOUR GOOD LORDSHIP,

I PRAY God her Majesty's weighing be not like the weight of a balance; "gravia deorsum, levia sursum." But I am as far from being altered in devotion towards her, as I am from distrust that she will be altered in opinion towards me, when she knoweth me better. For myself, I have lost some opinion, some time, and some means; this is my account: but then for opinion, it is a blast that goeth and cometh; for time, it is true, it goeth and cometh not; but yet I have learned that it may be redeemed.

For means, I value that most; and the rather, because I am purposed, not to follow the practice of the law, if her Majesty command me in any particular, I shall be ready to do her willing service; and my reason is only, because it drinketh too much time, which I have dedicated to better purposes. But even for that point of estate and means, I partly lean to Thales's opinion, That a philosopher may be rich if he will. Thus your lordship seeth how I comfort myself; to the increase whereof I would fain please myself to believe that to be true which my lord treasurer writeth; which is, that it is more than a philosopher can morally digest. But without any such high conceit, I esteem it like the pulling out of an aching tooth, which, I remember, when

\* Rawley's Resuscitatio.

I was a child, and had little philosophy, I was glad of when it was done. For your lordship, I do think myself more beholden to you than to any man: and I say, I reckon myself as a common, not popular, but common; and as much as is lawful to be enclosed of a common, so much your lordship shall be sure to have.

Your lordship's, to obey your honourable commands, more settled than ever.

#### XXXIV. TO MY LORD OF ESSEX.†

MY SINGULAR GOOD LORD,

Your lordship's so honourable minding my poor fortune the last year, in the very entrance into that great action, which is a time of less leisure, and in so liberal an allowance of your care, as to write three letters to stir me up friends in your absence, doth, after a sort, warrant me not to object to myself your present quantity of affairs, whereby to silence myself from petition of the like favour. I brake with your lordship myself at the Tower; and I take it my brother hath since renewed the same motion, touching a fortune I was in thought to attempt, in *genere œconomico*. In *genere politico*, certain cross winds have blown contrary. My suit to your lordship is for your several letters to be left with me dormant, to the gentlewoman, and either of her parents: wherein I do not doubt, but as the beams of your favour have often dissolved the coldness of my fortune; so in this argument your lordship will do the like with your pen. My desire is also, that your lordship would vouchsafe unto me, as out of your care, a general letter to my lord keeper, for his lordship's holding me from you recommended; both in the course of my practice, and in the course of my employment in her Majesty's service: wherein, if your lordship shall in any *antithesis* or relation affirm, that his lordship shall have no less fruit of me than of any other whom he may cherish, I hope your lordship shall engage yourself for no impossibility. Lastly and chiefly, I know not whether I shall attain to see your lordship before your noble journey; for ceremonies are things infinitely inferior to my love and to my zeal. This let me, with your allowance, say unto you by pen. It is true, that in my well meaning advices, out of my love to your lordship, and perhaps out of the state of mine own mind, I have sometimes persuaded a course differing: "ac tibi pro tuis insignia facta placebunt:" be it so, yet remember, that the signing of your name is nothing, unless it be to some good patent or charter, whereby your country may be endowed with good and benefit. Which I speak, both to move you to preserve your person for farther merit and service of her Majesty and your country, and likewise to refer this action to the same end. And so, in most true and fervent prayers, I commend your lordship, and your work in hand, to the preservation and conduct of the Divine Majesty; so much the more watchful, as these actions

† Ibid.

do more manifestly in show, though alike in truth, depend upon his divine providence.

---

XXXV. TO SIR JOHN STANHOPE. •

SIR,

Your good promises sleep, which it may seem now no time to awake. But that I do not find that any general kalendar of observation of time serveth for the court: and besides, if that be done, which I hope by this time is done; and that other matters shall be done, which we wish may be done, I hope to my poor matter, the one of these great matters may clear the way, and the other give the occasion. And though my lord treasurer be absent, whose health nevertheless will enable him to be sooner at court than is expected; especially if this hard weather, too hard to continue, shall relent; yet we abroad say, his lordship's spirit may be there, though his person be away. Once I take for a good ground, that her Majesty's business ought to keep neither vacation nor holy-day, either in the execution, or in the care and preparation of those whom her Majesty calleth and useth: and therefore I would think no time barred from remembering that, with such discretion and respect as appertaineth. The conclusion shall be, to put you in mind to maintain that which you have kindly begun, according to the reliance I have upon the sincerity of your affection, and the soundness of your judgment. And so I commend you to God's preservation.

---

XXXVI. TO MY LORD OF ESSEX. †

MY SINGULAR GOOD LORD,

The message it pleased your lordship to send me, was to me delivered doubtfully. Whether your lordship said you would speak with me at the star-chamber, or with Mr. Philip. If with me, it is needless; for gratitude imposeth upon me satisfaction: if with Mr. Philip, it will be too late; because somewhat must, perchance, be done that day. This doubt not solved, maketh me write again; the rather because I did liberally, but yet privately, affirm your lordship would write; which if I make not good, it may be a discouragement. Your lordship's letter, though it have the subject of honour and justice, yet it shall have the secrecy of a thing done upon affection. I shall ever in a firm duty submit my occasions, though great, to your lordship's respects, though small: and this is my resolution, that when your lordship doth for me, you shall increase my obligation; when you refuse to do for me, you shall increase my merit. So leaving the matter wholly to your lordship's pleasure, I commend your lordship to the preservation of the Divine Majesty.

Your lordship's ever most humbly bounden.

From Gray's-Inn.

• *Bawley's Resuscitatio.*

† *Ibid.*

XXXVII. TO MY LORD OF ESSEX. †

MY SINGULAR GOOD LORD,

I MAY perceive, by my lord keeper, that your lordship, as the time served, signified unto him an intention to confer with his lordship at better opportunity; which in regard of your several and weighty occasions, I have thought good to put your lordship in remembrance of; that now at his coming to the court it may be executed: desiring your good lordship, nevertheless, not to conceive out of this my diligence in soliciting this matter, that I am either much in appetite, or much in hope. For as for appetite, the waters of Parnassus are not like the waters of the Spaw, that give a stomach; but rather they quench appetite and desires. And for hope, how can he hope much, that can allege no other reason than the reason of an evil debtor, who will persuade his creditor to lend him new sums, and to enter farther in with him to make him satisfy the old? and to her Majesty no other reason, but the reason of a waterman; I am her first man of those who serve in counsel of law? and so I commit your lordship to God's best preservation.

---

XXXVIII. TO MY LORD OF ESSEX. §

MOST HONOURABLE, AND MY SINGULAR GOOD LORD.

I CANNOT but importune your lordship, with thanks for your lordship's remembering my name to my lord keeper; which being done in such an article of time, could not but be exceedingly enriched, both in demonstration and effect; which I did well discern by the manner of expressing thereof by his lordship again to me. This accumulating of your lordship's favours upon me hitherto, worketh only this effect; that it raiseth my mind to aspire to be found worthy of them, and likewise to merit and serve you for them. But whether I shall be able to pay my vows or no, I must leave that to God, who hath them *in deposito*; whom also I most instantly beseech to give you fruit of your actions beyond that your heart can propound: "Nam Deus major est corde:" even to the enviring of his benedictions I recommend your lordship.

---

XXXIX. TO THE QUEEN: WRITTEN BY FRANCIS BACON FOR THE EARL OF ESSEX. †

IT MAY PLEASE YOUR MAJESTY,

It were great simplicity in me to look for better, than that your Majesty should cast away my letter, as you have done me; were it not that it is possible your Majesty will think to find somewhat in it, whereupon your displeasure may take hold; and so indignation may obtain that of you which favour

† *Ibid.*

§ *Ibid.*

|| *Ibid.*

could not. Neither might I in reason presume to offer unto your Majesty dead lines, myself being excluded as I am; were it not upon this only argument or subject, namely, to clear myself in point of duty. Duty, though my state lie buried in the sands, and my favours be cast upon the waters, and my honours be committed to the wind, yet standeth surely built upon the rock, and hath been, and ever shall be, unforced and unattempted. And therefore, since the world, out of error, and your Majesty, I fear, out of art, is pleased to put upon me, that I have so much as any election, or will in this my absence from attendance, I cannot but leave this protestation with your Majesty; that I am, and have been merely a patient, and take myself only to obey and execute your Majesty's will. And indeed, Madam, I had never thought it possible that your Majesty could have so disinterested yourself of me; nor that you had been so perfect in the art of forgetting; nor that after a quintessence of wormwood, your Majesty would have taken so large a draught of poppy, as to have passed so many \* summers without all feeling of my sufferings. But the only comfort I have is this, that I know your Majesty taketh delight and contentment in executing this disgrace upon me. And since your Majesty can find no other use of me, I am glad yet I can serve for that. Thus making my most humble petition to your Majesty, that in justice, howsoever you may by strangeness untie, or by violence cut asunder all other knots, your Majesty would not touch me in that which is indissoluble: that is, point of duty; and that your Majesty will pardon this my unwarranted presumption of writing, being to such an end: I cease in all humbleness;

Your Majesty's poor, and never so unworthy  
servant,

ESSEX.

XL. TO SIR ROBERT CECIL.†

SIR,

I FORBEAR not to put in paper, as much as I thought to have spoken to your honour to-day, if I could have stayed; knowing that if your honour should make other use of it, than is due to good meaning, and that I am persuaded you will; yet to persons of judgment, and that know me otherwise, it will rather appear, as it is, a precise honesty, and this same "suum cuique tribuere," than any hollowness to any. It is my luck still to be akin to such things as I neither like in nature, nor would willingly meet with in my course; but yet cannot avoid, without show of base timorousness, or else of unkind or suspicious strangeness . . . . .

[Some hiatus in the copy.]

And I am of one spirit still. I ever liked the Galenists, that deal with good compositions; and not the Paracelsians, that deal with these fine separations: and in music, I ever loved easy airs,

\* This shows this letter was wrote before the earl of Essex had been reconciled to the queen; and our author not having been called or advised with for some year and a half before the

that go full all the parts together; and not these strange points of accord and discord. This I write not, I assure your honour, officiously; except it be according to Tully's *Offices*; that is, honestly and morally. For though, I thank God, I account, upon the proceeding, in the queen's service, or not proceeding, both ways; and therefore neither mean to fawn nor retire; yet I naturally desire good opinion with any person which for fortune or spirit is to be regarded: much more with a secretary of the queen's, and a cousin-german, and one with whom I have ever thought myself to have some sympathy of nature, though accidents have not suffered it to appear. Thus not doubting of your honourable interpretation and usage of that I have written, I commend you to the divine preservation.

From Gray's-Inn.

XLI. TO SIR ROBERT CECIL.‡

SIR,

YOUR honour knoweth, my manner is, though it be not the wisest way, yet taking it for the honestest, to do as Alexander did by his physician, in drinking the medicine, and delivering the advertisement of suspicion: so I trust on, and yet do not smother what I hear. I do assure you, Sir, that by a wise friend of mine, and not factious towards your honour, I was told with asseveration, that your honour was bought by Mr. Coventry for two thousand angels: and that you wrought in a contrary spirit to my lord your father. And he said farther, that from your servants, from your lady, from some counsellors that have observed you in my business, he knew you wrought underhand with me: the truth of which tale I do not believe. You know the event will show, and God will right. But as I reject this report, though the strangeness of my case might make me credulous, so I admit a conceit, that the last messenger my lord and yourself used, dealt ill with your honours; and that word, speculation, which was in the queen's mouth, rebounded from him as a commendation: for I am not ignorant of those little arts. Therefore, I pray, trust not him again in my matter. This was much to write; but I think my fortune will set me at liberty, who am weary of asserviling myself to every man's charity. Thus I, &c.

XLII. TO FOULK GREVIL.§

SIR,

I UNDERSTAND of your pains to have visited me, for which I thank you. My matter is an endless question. I assure you I had said, "Requiesce, anima mea:" but I now am otherwise put to my psalter; "Nolite confidere." I dare go no farther. Her Majesty had, by set speech, more than once assured me of her intention to call me to her ser-

earl's going to Ireland, determines the date at the latest to the beginning of 1598.

† Rawley's Resuscitatio.

‡ Ibid.

§ Ibid.

vice; which I could not understand but of the place I had been named to. And now, whether "invidus homo hoc fecit;" or whether my matter must be an appendix to my lord of Essex's suit; or whether her Majesty, pretending to prove my ability, meaneth but to take advantage of some errors, which like enough, at one time or other, I may commit; or what it is; but her Majesty is not ready to despatch it. And what though the master of the rolls, and my lord of Essex, and yourself, and others, think my case without doubt, yet in the mean time I have a hard condition to stand so, that whatsoever service I do to her Majesty, it shall be thought but to be "servitium viscatum," lime-twigs and fetches to place myself; and so I shall have envy, not thanks. This is a course to quench all good spirits, and to corrupt every man's nature; which will, I fear, much hurt her Majesty's service in the end. I have been like a piece of stuff bespoken in the shop; and if her Majesty will not take me, it may be the selling by parcels will be more gainful. For to be, as I told you, like a child following a bird, which, when he is nearest fieth away, and lighteth a little before, and then the child after it again, and so *in infinitum*; I am weary of it, as also of wearying my good friends: of whom, nevertheless, I hope in one course or other gratefully to deserve. And so, not forgetting your business, I leave to trouble you with this idle letter, being but "justa et moderata querimonia:" for indeed I do confess, *primus amor* will not easily be cast off. And thus again I commend me to you.

#### XLIII. TO MY LORD OF ESSEX.\*

IT MAY PLEASE YOUR GOOD LORDSHIP,

I AM very sorry her Majesty should take my motion to travel in offence. But surely under her Majesty's royal correction, it is such an offence as it should be an offence to the sun, when a man, to avoid the scorching heat thereof, fieth into the shade. And your lordship may easily think, that having now these twenty years, for so long it is, and more, since I went with Sir † Amyas Paulet into France, from her Majesty's royal hand, made her Majesty's service the scope of my life; I shall never find a greater grief than this, *relinquere amorem primum*. But since *principia actionum sunt tantum in nostra potestate*, I hope her Majesty of her clemency, yea and justice, will pardon me, and not force me to pine here with melancholy. For though mine heart be good, yet mine eyes will be sore; so as I shall have no pleasure to look abroad: and if I should otherwise be affected, her Majesty in her wisdom will but think me an impudent man, that would face out a disgrace. Therefore, as I have ever found you my good lord and true friend, so I pray open the matter so to her Majesty, as she may discern the necessity of it without adding hard conceit to her rejection; of which, I am sure, the latter I never deserved. Thus, &c.

\* Rawley's Resuscitatio.

† This letter was therefore wrote about the year 1598.

‡ Rawley's Resuscitatio.

§ Ibid.

#### XLIV. TO SIR ROBERT CECIL, AT HIS BEING IN FRANCE.‡

IT MAY PLEASE YOUR HONOURABLE LORDSHIP,

I KNOW you will pardon this my observance in writing to you, empty of matter, but out of the fullness of my love. I am sorry that as your time of absence is prolonged, above that was esteemed at your lordship's setting forth; so now, upon this last advertisement received from you, there groweth an opinion amongst better than the vulgar, that the difficulties also of your negotiation are increased. But because I know the gravity of your nature to be not to hope lightly, it maketh me to despair the less. For you are *natus ad ardua*: and the indisposition of the subject may honour the skill of the workman. Sure I am, judgment and diligence shall not want in your lordship's self: but this was not my purpose; being only to signify unto your lordship my continual and incessant love towards you, thirsting after your return, for many respects. So I commend you ever to the good preservation of the Divine Majesty.

At your honour's commandment ever and particularly.

Gray's Inn, 1598.

#### XLIV. TO SIR ROBERT CECIL.§

MY SINGULAR GOOD LORD,

THE argument of my letters to your lordship rather increaseth than spendeth; it being only the desire I have to salute you; which by your absence is more augmented than abated. For me to write to your lordship occurrences, either of Scottish brags, or Irish plaints, or Spanish ruffling, or Low-Country states, were, besides that it is *alienum quiddam* from mine own humour, to forget to whom I write; save that you, that know true advertisements, sometimes desire and delight to hear common reports, as we that know but common reports desire to hear the truth. But to leave such as write to your fortunes, I write to yourself, in regard of my love to you, you being as near to me in heart's blood, as in blood of descent. || This day I had the contentment to see your father, upon occasion: and methought his lordship's countenance was not decayed, nor his cough vehement; but his voice was as faint all the while as at first. Thus wishing your lordship a happy and speedy return, I commend you to the Divine Majesty.

#### XLVI. A LETTER OF ADVICE TO THE EARL OF ESSEX, TO TAKE UPON HIM THE CARE OF IRISH CAUSES, WHEN MR. SECRETARY CECIL WAS IN FRANCE. 1598.¶

MY SINGULAR GOOD LORD,

I do write, because I had no time fully to express

|| This seems to be written 1598, the time of lord Burghley's last sickness.

¶ Rawley's Resuscitatio.

my conceit to your lordship touching Irish affairs, considering them as they may concern your lordship; knowing that you will consider them as they may concern the state. That it is one of the aptest particulars that hath come, or can come upon the stage for your lordship to purchase honour upon, I am moved to think for three reasons: because it is ingenerate, in your house, in respect of my lord your father's noble attempts: because of all the actions of state on foot at this time, the labour resteth most in that particular: and because the world will make a kind of comparison, between those that set it out of frame and those that bring it into frame: which kind of honour giveth the quickest kind of reflection. The transferring this honour upon yourself consisteth in two points: the one, if the principal person employed come in by you and depend upon you; the other, if your lordship declare yourself, and profess to undertake a care of that kingdom. For the persons, it falleth out well that your lordship hath had no interest in the persons of imputation: for neither Sir William Fitz-Williams, nor Sir John Norris, was yours. Sir William Russel was conceived yours, but was curbed. Sir Coniers Clifford, as I conceive it, dependeth on you, who is said to do well. And if my lord of Ormond, in this interim, doth accommodate things well, as it is said he doth, I take it he hath always had good understanding with your lordship; so as all things hitherto are not only whole and entire, but of favourable aspect towards your lordship, if hereafter you choose well: wherein in your wisdom you will remember there is a great difference in choice of the persons, as you shall think the affairs to incline to composition or to war. Concerning the care of business, the general and popular conceit hath been, that Irish causes have been much neglected; whereby the very reputation of better care will put life into them. And I am sure her Majesty, and my lords of the council, do not think their care dissolved when they have chosen whom to employ: but that they will proceed in a spirit of state, and not leave the main point to discretion. Then if a resolution be taken, a consultation must proceed; and the consultation must be governed upon information to be had from such as know the place, and matters in fact: and in taking of information I have always noted there is a skill and a wisdom. But for a beginning and a key to that which shall follow, it were good your lordship would have some large and serious conference with Sir William Russel, Sir Richard Bingham, the earl of Thomond, and Mr. Wilbraham; to know their relation of the past; their opinion of the present; and their advice for the future. But I am of opinion much more would be had of them, if your lordship shall be pleased severally to confer; not *obiter*, but expressly upon some caveat given them to think of it before; for *bene docet qui prudenter interrogat*.

For the points of apposing them, I am too much a stranger to the business to deduce them; but in a general topic, methinks the pertinent interrogations must be; either of the possibility and means of accord; or of the nature of the war; or of the reform-

ation of abuses; or of the joining of practice with force in the disunion of the rebels. If your lordship doubt to put your sickle into another's harvest, yet consider you have these advantages: first, time brings it to you in Mr. Secretary's absence: next, *vis unita fortior*: thirdly, the business being mixed with matters of war, it is fittest for you: and lastly, I know your lordship will carry it with that modesty and respect towards aged dignity, and that good correspondence towards my dear kinsman and your good friend now abroad, as no inconvenience may grow that way.

Thus have I played the ignorant statesman; which I do to nobody but your lordship; except I do it to the queen sometimes when she trains me on. But your lordship will accept my duty and good meaning, and secure me touching the privateness of that I write.

---

XLVII. A LETTER OF ADVICE TO THE EARL OF ESSEX, UPON THE FIRST TREATY WITH TYRONE 1598, BEFORE THE EARL WAS NOMINATED FOR THE CHARGE OF IRELAND.\*

MY VERY GOOD LORD,

CONCERNING the advertisements, which your lordship imparted to me, touching the state of Ireland, I hold them to be no more certain to make judgment upon, than a patient's water to a physician: therefore for me upon one water to make a judgment, were indeed like a foolish bold mountebank, or Dr. Birket: yet for willing duty's sake, I will set down to your lordship what opinion sprang in my mind upon that I read.

The letter from the council there, leaning to mistrust and dissuade the treaty, I do not much rely on, for three causes. First, because it is always the grace, and the safety from blame, of such a council, to err in caution: whereunto add, that it may be, they, or some of them, are not without envy towards the person who is used in treating the accord. Next, because the time of this treaty hath no show of dissimulation; for that Tyrone is now in no straits: but he is more like a gamester that will give over because he is a winner, than because he hath no more money in his purse. Lastly, I do not see but those articles, whereupon they ground their suspicion, may as well proceed out of fear, as out of falsehood. For the retaining the dependence of the Vraights, the protracting the admission of a sheriff, the refusing to give his son for an hostage, the holding off from present repair to Dublin, the refusing to go presently to accord, without including Odonnell, and other his associates, may very well come of an apprehension in case he should receive hard measure; and not out of treachery: so as if the great person you write of be faithful, and that you have not heard some present intelligence of present succours from Spain, for the expectation whereof Tyrone would win time, I see no deep cause of distrusting this course of treaty, if the main conditions

\* Rawley's Resuscitatio.

may be good. For her Majesty seemeth to me to be a winner thereby three ways: first, her purse shall have some rest: next, it will divert the foreign designs upon the place: thirdly, though her Majesty be like for a time to govern but *precario* in the north, and be not, as to a true command, in better state there than before; yet, besides the two respects of ease of charge, and advantage of opinion abroad, before mentioned, she shall have time to use her princely policy in two points to weaken them: the one, by division and the disunion of the heads; the other, by recovering and winning the people from them by justice: which of all other courses is the best.

Now for the Athenian question: you discourse well; "Quid igitur agendum est?" I will shoot my foes bolt, since you will have it so. The earl of Ormond to be encouraged and comforted. Above all things, the garrisons to be instantly provided for. For opportunity maketh a thief: and if he should mean never so well now, yet such an advantage as the breaking of her Majesty's garrisons might tempt a true man.

And because he may as well waver upon his own inconstancy as upon occasion, and wanton variableness is never restrained but by fear, I hold it necessary to be menaced with a strong war: not by words, but by musters and preparations of forces here, in case the accord proceed not: but none to be sent over, lest it disturb the treaty, and make him look to be overrun as soon as he hath laid away arms. And, but that your lordship is too easy to pass in such cases from dissimulation to verity, I think if your lordship lent your reputation in this case; that is, to pretend, that if peace go not on, and the queen mean to make, not a defensive war as in times past, but a full re-conquest of those parts of the country, you would accept the charge; I think it would help to settle Tyrone in his seeking accord, and win you a great deal of honour gratis.

And that which most properly concerns this action, if it prove a peace, I think her Majesty shall do well to cure the root of the disease; and to profess, by a commission of peaceable men, chiefly of respect and countenance, reformation of abuses, extortions, and injustices there; and to plant a stronger and surer government than heretofore, for the ease and protection of the subject. For the removing of the sword or government in arms from the earl of Ormond, or the sending of the deputy, which will eclipse it, if peace follow, I think it unseasonable.

Lastly, I hold still my opinion, both for your better information, and the fuller declaration of your care, in meddling in this urgent and meriting service, that your lordship have a set conference with the persons I named in my former letter.

XLVIII. A LETTER OF ADVICE TO MY LORD OF ESSEX, IMMEDIATELY BEFORE HIS GOING INTO IRELAND. 1599.\*

MY SINGULAR GOOD LORD,

† Your late note of my silence in your occasions

\* Rawley's Resuscitatio. † Our author observes, "I was not called or advised with some year and a half before VOL. II. C

hath made me set down these few wandering lines, as one that would say somewhat, and can say nothing, touching your lordship's intended charge for Ireland: which my endeavour I know your lordship will accept graciously and well; whether your lordship take it by the handle of the occasion ministered from yourself, or of the affection from which it proceeds.

Your lordship is designed to a service of great merit and great peril; and as the greatness of the peril must needs include a like proportion of merit; so the greatness of the merit may include no small consequence of peril, if it be not temperately governed. For all immoderate success extinguisheth merit, and stirreth up distaste and envy; the assured fore-runners of whole charges of peril. But I am at the last point first, some good spirit leading my pen to presage to your lordship success; wherein, it is true, I am not without my oracles and divinations; none of them superstitious, and yet not all natural. For first, looking into the course of God's providence in things now depending, and calling to consideration, how great things God hath done by her Majesty and for her; I collect he hath disposed of this great defection in Ireland, thereby to give an urgent occasion to the reduction of that whole kingdom; as upon the rebellion of Desmond there ensued the reduction of that whole province.

Next, your lordship goeth against three of the unluckiest vices of all others, disloyalty, ingratitude, and insolency; which three offences, in all examples, have seldom their doom adjourned to the world to come.

Lastly, he that shall have had the honour to know your lordship inwardly, as I have had, shall find *bona exta*, whereby he may better ground a divination of good, than upon the dissection of a sacrifice. But that part I leave; for it is fit for others to be confident upon you, and you to be confident upon the cause: the goodness and justice whereof is such as can hardly be matched in any example; it being no ambitious war against foreigners, but a recovery of subjects; and that after lenity of conditions often tried; and a recovery of them not only to obedience, but to humanity and policy, from more than Indian barbarism.

There is yet another kind of divination, familiar to matters of state; being that which Demosthenes so often relied upon in his time; when he said, That which for the time past is worst of all, is for the time to come the best: which is, that things go ill, not by accident, but by errors; wherein, if your lordship have been heretofore an awaking censor, yet you must look for no other now, but "Medice, cura teipsum;" and though you shall not be the happy physician that cometh in the declination of the disease; yet you embrace that condition which many noble spirits have accepted for advantage; which is, that you go upon the greater peril of your fortune, and the less of your reputation; and so the honour countervaileth the adventure; of which honour your lordship is in no small possession, when that her Majesty, known to be one of the most his lordship's [namely, the earl of Essex's] going into Ireland," which explains this passage. *Apology*, p. 435.

judicious princes in discerning of spirits that ever governed, hath made choice of you, merely out of her royal judgment; her affection inclining rather to continue your attendance, into whose hand, and trust, to put the command and conduct of so great forces; the gathering the fruit of so great charge; the execution of so many counsels; the redeeming of the defaults of so many former governors; the clearing of the glory of her so many happy years' reign, only in this part eclipsed. Nay farther, how far forth the peril of that state is interlaced with the peril of England; and therefore how great the honour is, to keep and defend the approaches or avenues of this kingdom, I hear many discourse; and there is a great difference, whether the tortoise gathereth herself within her shell hurt or unhurt.

And if any man be of opinion, that the nature of the enemy doth extenuate the honour of the service, being but a rebel and a savage, I differ from him; for I see the justest triumph that the Romans in their greatness did obtain, and that whereof the emperors in their styles took addition and denomination, were of such an enemy as this; that is, people barbarous, and not reduced to civility, magnifying a kind of lawless liberty, and prodigal of life, hardened in body, fortified in woods and bogs, and placing both justice and felicity in the sharpness of their swords; such were the Germans and ancient Britons, and divers others. Upon which kind of people, whether the victory were a conquest, or a reconquest upon a rebellion or a revolt, it made no difference, that ever I could find, in honour. And therefore it is not the enriching predatory war that hath the pre-eminence in honour, else should it be more honour to bring in a carrack of rich burden, than one of the twelve Spanish apostles. But then this nature of people doth yield a higher point of honour, considered in truth, and substance, than any war can yield which should be achieved against a civil enemy; if the end may be "*pacisque imponere morem,*" to replant and refund the policy of that nation; to which nothing is wanting, but a just and civil government; which design, as it doth descend unto you from your noble father, who lost his life in that action, though he paid tribute to nature, and not to fortune; so I hope your lordship shall be as fatal a captain to this war, as Africanus was to the war of Carthage, after that both his uncle and father had lost their lives in Spain in the same war. Now although it be true, that these things which I write, being but representations unto your lordship of the honour and appearance of the success of the enterprise, be not much to the purpose of any advice; yet it is that which is left to me, being no man of war, and ignorant in the particulars of estate. For a man may, by the eye, set up the white in the midst of the butt, though he be no archer. Therefore I will only add this wish, according to the English phrase, which termeth a well-willing advice, a wish; that your lordship in this whole action, looking forward, would set down this position; That merit is worthier than fame; and looking back hither would remember this text, That obedience is better than sacrifice. For designing to fame and glory may make your lordship in

the adventure of your person to be valiant as a private soldier, rather than as a general: it may make you in your commandments rather to be gracious than disciplinary: it may make you press action, in respect of the great expectation conceived, rather hastily than seasonably and safely: it may make you seek rather to achieve the war by force, than by intermixture of practice: it may make you, if God shall send prosperous beginnings, rather seek the fruition of that honour, than the perfection of the work in hand. And for the other point, that is, the proceeding, like a good protestant, upon express warrant, and not upon good intention, your lordship in your wisdom knoweth that as it is most fit for you to desire convenient liberty of instructions, so it is no less fit for you to observe the due limits of them; remembering that the exceeding of them may not only procure, in case of adverse accident, a dangerous disavow; but also, in case of prosperous success, be subject to interpretation, as if all were not referred to the right end.

Thus have I presumed to write these few lines to your lordship, in *methodo ignorantiae*; which is, when a man speaketh of any subject, not according to the parts of the matter, but according to the model of his own knowledge; and most humbly desire your lordship that the weakness thereof may be supplied in your lordship by a benign acceptation, as it is in me by my best wishing.

---

#### XLIX. TO MY LORD OF ESSEX.\*

MY LORD,

CONCEIVING that your lordship came now up in the person of a good servant to see your sovereign mistress; which kind of compliments are many times "*instar magnorum meritorum;*" and therefore that it would be hard for me to find you: I have committed to this poor paper the humble salutations of him that is more yours than any man's; and more yours than any man. To these salutations I add a due and joyful gratulation, confessing that your lordship, in your last conference with me before your journey, spake not in vain, God making it good; that you trusted, we should say, "*Quis putasset?*" Which, as it is found true in a happy sense, so I wish you do not find another "*Quis putasset?*" in the manner of taking this so great a service. But I hope it is as he said, "*Nubecula est, cito transibit:*" and that your lordship's wisdom, and obsequious circumspection, and patience, will turn all to the best. So referring all to some time that I may attend you, I commit you to God's best preservation.

---

L. A LETTER TO THE EARL OF ESSEX, IN OFFER OF HIS SERVICE WHEN HE WAS FIRST ENLARGED TO ESSEX-HOUSE.†

MY LORD,

No man can expound my doings better than your

\* Rawley's Resuscitatio.

† Ibid.

lordship, which makes me need to say the less; only I humbly pray you to believe, that I aspire to the conscience and commendation of "bonus civis," and "bonus vir;" and that though I love some things better, I confess, than I love your lordship, yet I love few persons better; both for gratitude's sake, and for your virtues, which cannot hurt but by accident; of which my good affection it may please your lordship to assure yourself; and of all the true effect and offices I can yield. For as I was ever sorry your lordship should fly with waxen wings, doubting Icarus's fortune, so for the growing up of your own feathers, be they ostrich's or other kind, no man shall be more glad. And this is the axle-tree whereon I have turned and shall turn. Which having already signified to you by some near mean, having so fit a messenger for mine own letter, I thought good also to redouble by writing. And so I commend you to God's protection.

From Gray's-Inn this \*  
9th day of July, 1600.

LI. AN ANSWER OF MY LORD OF ESSEX,  
TO THE PRECEDING LETTER OF MR.  
BACON.†

MR. BACON,

I CAN neither expound nor censure your late actions; being ignorant of all of them save one; and having directed my sight inward only to examine myself. You do pray me to believe, that you only aspire to the conscience and commendation of "bonus civis," and "bonus vir;" and I do faithfully assure you, that while that is your ambition, though your course be active, and mind contemplative, yet we shall both "convenire in eodem tertio;" and "convenire inter nos ipsos." Your profession of affection, and offer of good offices, are welcome to me; for answer to them I will say but this; that you have believed I have been kind to you, and you may believe that I cannot be other, either upon humour or mine own election. I am a stranger to all poetical conceits, or else I should say somewhat of your poetical example. But this I must say, that I never flew with other wings than desire to merit, and confidence in my sovereign's favour; and when one of these wings failed me, I would light no where but at my sovereign's feet, though she suffered me to be bruised with my fall. And till her Majesty, that knows I was never bird of prey, finds it to agree with her will and her service that my wings should be impeded again, I have committed myself to the mœ. No power but my God's, and my sovereign's, can alter this resolution of

Your retired friend,

ESSEX.

LII. TO MY LORD OF ESSEX.‡

MY LORD,

I AM glad your lordship hath plunged out of your own business: wherein I must commend your lordship, as Xenophon commended the state of his country, which was this, that having chosen the worst form of government of all others, they governed the best in that kind. "Hoc pace et venia tua," according to my charter. Now, as your lordship is my witness that I would not trouble you whilst your own cause was in hand, though that I know, that the farther from the term, the better the time was to deal for me, so that being concluded, I presume I shall be one of your next cares. And having communicated with my brother of some course, either to perfect the first, or to make me some other way; or rather, by seeming to make me some other way to perfect the first; wherewith he agreed to acquaint your lordship; I am desirous, for mine own better satisfaction, to speak with your lordship myself: which I had rather were somewhere else than at court; and as soon as your lordship will assign me to wait on you. And so in, &c.

LIII. TO MY LORD OF ESSEX.§

IT MAY PLEASE YOUR LORDSHIP,

THAT your lordship is *in statu quo prius*, no man taketh greater gladness than I do; the rather, because I assure myself that of your eclipses, as this hath been the longest, it shall be the least; as the comical poet saith "Neque illam tu satis noveras, neque te illa; hocque fit, ubi non vere vivitur."|| For if I may be so bold as to say what I think, I believe neither your lordship looked to have found her Majesty in all points as you have done, neither her Majesty *per case* looked to have found your lordship as she hath done. And therefore I hope upon this experience may grow more perfect knowledge, and upon knowledge more true consent; which I, for my part, do infinitely wish, as accounting these accidents to be like the fish remora; which though it be not great, yet hath it a hidden property to hinder the sailing of the ship. And therefore, as bearing unto your lordship, after her Majesty, of all public persons, the second duty, I could not but signify unto you my affectionate gratulation. And so I commend your good lordship to the best preservation of the Divine Majesty.

From Gray's-Inn.

LIV. TO SIR ROBERT CECIL.¶

IT MAY PLEASE YOUR GOOD HONOUR,

I AM apt enough to contemn *mendacia famæ*, yet it is with this distinction, as fame walks among inferiors, and not as it hath entrance into some ears.

\* 19 Jul. Cæb. † Rawley's Resuscitatio. ‡ Ibid.

§ Ibid. || Terent. Heaut. l. 1. ¶ Rawley's Resuscitatio.

And yet nevertheless, in that kind also I intend to avoid a suspicious silence, but not to make any base apology. It is blown about the town, that I should give opinion touching my lord of Essex's cause; first, that it was a *præmunire*; and now last, that it reached to high treason; and this opinion should be given in opposition to the opinion of the lord chief justice, and of Mr. Attorney-General. Sir, I thank God, whatsoever opinion my head serveth me to deliver to her Majesty, being asked, my heart serveth me to maintain, the same honest duty directing me and assisting me. But the utter untruth of this report God and the queen can witness; and the improbability of it, every man that hath wit, more or less, can conceive. The root of this I discern to be not so much a light and humourous envy at my accesses to her Majesty, which of her Majesty's grace being begun in my first years, I would be sorry she should estrange in my last years; for so I account them, reckoning by health not by age; as a deep malice to your honourable self; upon whom, by me, through nearness, they think to make some aspersion. But as I know no remedy against libels and lies; so I hope it shall make no manner of dis-severance of your honourable good conceits and affection towards me; which is the thing I confess to fear. For as for any violence to be offered to me, wherewith my friends tell me, to no small terror, that I am threatened, I thank God I have the privy coat of a good conscience; and have a good while since put off any fearful care of life, or the accidents of life. So desiring to be preserved in your good opinion, I remain.

This last letter seems to be wrote 1600, in the interval between the return of the earl of Essex from Ireland, and his hearing before the lord chancellor, &c.

#### LV. TO MY LORD HENRY HOWARD.\*

MY LORD,

THERE be very few besides yourself, to whom I would perform this respect. For I contemn *mendacia famæ*, as it walks among inferiors; though I neglect it not, as it may have entrance into some ears. For your lordship's love, rooted upon good opinion, I esteem it highly, because I have tasted the fruits of it; and we both have tasted of the best waters, in my account, to knit minds together. There is shaped a tale in London's forge, that beateth apace at this time, that I should deliver opinion to the queen in my lord of Essex's cause: first, that it was a *præmunire*; and now last, that it was high treason; and this opinion to be in opposition and encounter of the lord chief justice's opinion and the attorney-general's. My lord, I thank God, my wit serveth me not to deliver any opinion to the queen, which my stomach serveth me not to maintain; one and the same conscience of duty guiding me and fortifying me. But the untruth of this fable God and my sovereign can witness, and there I leave it;

\* Rawley's Resuscitatio.

knowing no more remedy against lies, than others do against libels. The root, no question of it, is partly some light-headed envy at my accesses to her Majesty; which being begun and continued since my childhood, as long as her Majesty shall think me worthy of them, I scorn those that shall think the contrary: and another reason is the aspersion of this tale, and the envy thereof, upon some greater man, in regard of my nearness. And therefore, my lord, I pray you answer for me, to any person that you think worthy your own reply, and my defence. For my lord of Essex, I am not servile to him, having regard to my superior's duty. I have been much bound unto him. And on the other side, I have spent more time and more thoughts about his well doing, than ever I did about mine own. I pray God, you his friends, amongst you, be in the right. "Nulla remedia tam faciunt dolorem, quam quæ sunt salutaria." For my part, I have deserved better, than to have my name objected to envy, or my life to a ruffian's violence. But I have the privy coat of a good conscience. I am sure these courses and bruits hurt my lord more than all. So having written to your lordship, I desire exceedingly to be preferred in your good opinion and love: and so leave you to God's goodness.

3 December 1599.

#### LVI. TWO LETTERS, FRAMED, THE ONE AS FROM MR. ANTHONY BACON, TO THE EARL OF ESSEX; THE OTHER, AS THE EARL'S ANSWER THEREUNTO:†

Both written by Mr. Francis Bacon, at the instance of Mr. Anthony Bacon his brother, and to be showed to the queen, upon some fit occasion; as a mean to work her Majesty to receive the earl again to favour and attendance at court. They were devised whilst my lord remained prisoner in his own house. See Sir Francis Bacon's *Apology* to the earl of Devonshire.

MY SINGULAR GOOD LORD,

THIS standing at a stay in your lordship's fortunes doth make me, in my love towards your lordship, jealous lest you do somewhat, or omit somewhat, that amounteth to a new error. For I suppose that of all former matters there is a full expiation; wherein, for any thing that your lordship doth, I for my part, who am remote, cannot cast nor devise wherein any error should be; except in one point, which I dare not censure nor dissuade; which is, that as the prophet saith, in this affliction you look up "ad manum percipientem," and so make your peace with God. And yet I have heard it noted, that my lord of Leicester, who could never get to be taken for a saint, nevertheless in the queen's disfavour waxed seeming religious: which may be thought by some, and used by others, as a case resembling yours, if men do not see, or will not see the difference between your two dispositions. But to be plain with your lordship, my fear rather is, because I hear how some of your good and wise friends, not unpractised in the court, and supposing them-

† Ibid.

selves not to be unseen in that deep and unscrutable centre of the court, which is her Majesty's mind, do not only toll the bell, but even ring out peals, as if your fortune were dead and buried, and as if there were no possibility of recovering her Majesty's favour; and as if the best of your condition were to live a private and retired life, out of want, out of peril and out of manifest disgrace; and so in this persuasion of their's include a persuasion to your lordship to frame and accommodate your actions and mind to that end: I fear, I say, that this untimely despair may in time bring forth a just despair, by causing your lordship to slacken and break off your wise, loyal, and seasonable endeavours and industry for redintegration to her Majesty's favour; in comparison whereof all other circumstances are but as *atomi*, or rather as a *occurus* without any substance at all. Against this opinion it may please your lordship to consider of these reasons which I have collected, and to make judgment of them, neither out of the melancholy of your present fortune, nor out of the infusion of that which cometh to you by others' relation, which is subject to much tincture, but *ex rebus ipsis*, out of the nature of the persons and actions themselves, as the truest and least deceiving grounds of opinion. For though I am so unfortunate as to be a stranger to her Majesty's eye, and much more to her nature and manners; yet by that which is apparent, I do manifestly discern, that she hath that character of the divine nature and goodness, "*quos amavit, amavit usque ad finem*;" and where she hath a creature, she doth not deface nor defeat it; inso-much as, if I observe rightly in those persons whom heretofore she hath honoured with her special favour, she hath covered and remitted not only defects and ingrati-tudes in affection, but errors in state and service. Secondly, if I can spell and scholar-like put together the parts of her Majesty's proceedings now towards your lordship, I cannot but make this construction, that her Majesty in her royal intention never purposed to call your lordship's doings into public question; but only to have used a cloud without a shower, in censuring them by some temporary restraint only of liberty, and debarring from her presence. For, first, the handling the cause in the star-chamber, you not being called, was enforced by the violence of libelling and rumours, wherein the queen thought to have satisfied the world, and yet spared your lordship's appearance; and after, when that means which was intended for the quenching of malicious bruits, turned to kindle them, because it was said your lordship was condemned unheard, and your lordship's sister wrote that piquant letter, then her Majesty saw plainly, that these winds of rumours could not be commanded down without a handling of the cause, by making you a party, and admitting your defence. And to this purpose I do assure your lordship, that my brother Francis Bacon, who is too wise, I think, to be abused, and too honest to abuse; though he be more reserved in all particulars than is needful, yet in generality he hath ever constantly and with asseveration affirmed to me, that both those days, that of the star-chamber, and that at

my lord keeper's, were won from the queen merely upon necessity and point of honour, against her own inclination. Thirdly, in the last proceeding, I note three points, which are directly significant, that her Majesty did expressly forbear any point which was \* irreparable, or might make your lordship in any degree incapable of the return of her favour; or might fix any character indelible of disgrace upon you: for she spared the public place of the star-chamber, which spared ignominy; she limited the charge precisely not to touch upon any pretence of disloyalty; and no record remaineth to memory of the charge or sentence. Fourthly, the very distinction which was made in the sentence of sequestration from the places of service in state, and leaving to your lordship the place of master of the horse, doth, to my understanding, *indicativè*, point at this; that her Majesty meant to use your lordship's attendance in court, while the exercises of the other places stood suspended. Fifthly, I have heard, and your lordship knoweth better than I, that now, since you were in your own custody, her Majesty in *verbo regio*, and by his mouth, to whom she committeth her royal grants and decrees, hath assured your lordship she will forbid, and not suffer, your ruin. Sixthly, as I have heard her Majesty to be a prince of that magnanimity, that she will spare the service of the ablest subject or peer, when she shall be thought to stand in need of it; so she is of that policy, as she will not lose the service of a meaner than your lordship, where it shall depend merely upon her choice and will. Seventhly, I hold it for a principle, that generally those diseases are hardest to cure whereof the cause is obscure; and those easiest, whereof the cause is manifest: whereupon I conclude, that since it hath been your error in your courses towards her Majesty, which hath prejudiced you, that your reforming and conformity will restore you; so as you may be *faber fortunæ propriæ*. Lastly, considering your lordship is removed from dealing in causes of state, and left only to a place of attendance; methinks the ambition of any man, who can endure no partners in state matters, may be so quenched, as they should not laboriously oppose themselves to your being in court: so as upon the whole matter, I can find neither in her Majesty's person, nor in your own person, nor in any third person, neither in former precedents, nor in your own case, any cause of dry and peremptory despair. Neither do I speak this so, but that, if her Majesty, out of her resolution, should design you to a private life, you should be as willing, upon her appointment, to go into the wilderness, as into the land of promise. Only I wish your lordship will not preoccupate despair, but put trust, next to God, in her Majesty's grace, and not to be wanting to yourself. I know your lordship may justly interpret, that this which I persuade, may have some reference to my particular, because I may truly say, *Te stante, not virebo*, for I am withered in myself, but *manebo, or tenebo*; I shall in some sort be, or hold out. But though your lordship's years and health may expect return of grace and fortune; yet your eclipse for a time is an *ultimum tale* to my

\* Irrecoverable, *Cab.*

fortune; and were it not that I desire and hope to see my brother established, by her Majesty's favour, as I think him well worthy, for that he hath done and suffered, it were time I did take that course, from which I dissuade your lordship. But now in the mean time, I cannot choose but perform these honest duties to you, to whom I have been so deeply bounden.

LVII. A LETTER FRAMED AS FROM THE EARL IN ANSWER TO THE FORMER LETTER.\*

Mr. BACON,

I THANK you for your kind and careful letter. It persuades me to that which I wish strongly, and hope for weakly; that is, possibility of restitution to her Majesty's favour; but your arguments that would cherish hope turn to despair. You say the queen never meant to call me to public censure, which showeth her goodness; but you see I passed under it, which showeth others' power. I believe most steadfastly her Majesty never intended to bring my cause to a sentence; and I believe as verily, that since that sentence she meant to restore me to attend upon her person. But they that could use occasions, which was not in me to let, and amplify occasions, and practise upon occasions, to represent to her Majesty a necessity to bring me to the one, can and will do the like to stop me from the other. You say, my errors were my prejudice, and therefore I can mend myself: it is true; but they that know that I can mend myself, and that if ever I recover the queen, that I will never lose her again; will never suffer me to obtain interest in her favour. And you say the queen never forsook utterly, where she inwardly favoured: but I know not whether the hour-glass of time hath altered her mind; but sure I am the false glass of others' informations must alter her, when I want access to plead my own cause. I know I ought doubly to be her Majesty's; both *jure creationis*, for I am her creature; and *jure redemptionis*, for I know she hath saved me from overthrow. But for her first love, and for her last protection, and all her great benefits, I can but pray for her Majesty: and my endeavours are now to make my prayers for her Majesty and myself better heard. For, thanks be to God, they that can make her Majesty believe I counterfeit with her, cannot make God believe that I counterfeit with him; and they which can let me from coming near unto her, cannot let me from drawing near unto him, as I hope I do daily. For your brother, I hold him an honest gentleman, and wish him all good, much rather for your sake. Yourself I know hath suffered more for me and with me than any friend I have: yet I cannot but lament freely, as you see I do; and advise you not to do that which I do, which is to despair. You know letters what hurt they have done me, and therefore make sure of this: and yet I could not, as

\* Rawley's Resuscitatio.

† Therefore this was wrote, 1603.

having no other pledge of my love, but communicate freely with you, for the ease of my heart and yours.

LVIII. A LETTER TO MR. SECRETARY CECIL, AFTER THE † DEFEATING OF THE SPANISH FORCES IN IRELAND; INCITING HIM TO EMBRACE THE CARE OF REDUCING THAT KINGDOM TO CIVILITY, WITH SOME REASONS ENCLOSED.‡

IT MAY PLEASE YOUR HONOUR,

As one that wisheth you all increase of honour; and as one that cannot leave to love the state, what interest soever I have, or may come to have in it; and as one that now this dead vacation time hath some leisure *ad aliud agendum*; I will presume to propound unto you that which though you cannot but see, yet I know not whether you apprehend and esteem it in so high a degree; that is, for the best action of importation to yourself, of sound honour and merit to her Majesty and this crown, without ventosity and popularity, that the riches of any occasion, or the tide of any opportunity, can possibly minister or offer: and that is the causes of Ireland, if they be taken by the right handle. For if the wound be not ripped up again, and come to a § recrudency by new foreign succours, I think that no physician will go on much with letting of blood, *in declinatione morbi*; but will intend to purge and corroborate. To which purpose I send you mine opinion, without labour of words, in the enclosed; and sure I am, that if you shall enter into the matter according to the vivacity of your own spirit, nothing can make unto you a more gainful return. For you shall make the queen's felicity complete, which now, as it is, is incomparable: and for yourself, you shall show yourself as good a patriot as you are thought a politic, and make the world perceive you have not less generous ends, than dexterous delivery of yourself towards your ends; and that you have as well true arts and grounds of government, as the facility and felicity of practice and negotiation; and that you are as well seen in the periods and tides of estates, as in your own circle and way: than the which, I suppose, nothing can be a better addition and accumulation of honour unto you. This, I hope, I may in privateness write, either as a kinsman, that may be bold; or as a scholar, that hath liberty of discourse, without committing any absurdity. But if it seem any error in me thus to intromit myself, I pray your honour to believe, I ever loved her Majesty and the state, and now love yourself; and there is never any vehement love without some absurdity, as the Spaniard well says: "*desuario con la calentura.*" So desiring your honour's pardon, I ever continue.

CONSIDERATIONS TOUCHING THE QUEEN'S SERVICE IN IRELAND.||

THE reduction of that country, as well to civility

‡ Rawley's Resuscitatio.

§ festered sense. Cab.

|| Rawley's Resuscitatio.

and justice, as to obedience and peace, which things, as affairs now stand, I hold to be inseparable, consisteth in four points :

1. The extinguishing of the relics of the war.
2. The recovery of the hearts of the people.
3. The removing of the root and occasions of new troubles.
4. Plantations and buildings.

For the first; concerning the places and times, and particularities of farther prosecution, in fact I leave it to the opinion of men of war; only the difficulty is, to distinguish and discern the propositions, which shall be according to the ends of the state here, that is, final and summary towards the extirpation of the troubles, from those, which though they pretend public ends, yet may refer indeed to the more private and compendious ends of the council there: or of the particular governors or captains. But still, as I touched in my letter, I do think much letting blood, in *declinatione morbi*, is against method of cure; and that it will but induce necessity, and exasperate despair; and percase discover the hollowess of that which is done already, which now blazeth to the best show. For Iaglia's\* and proscriptions of two or three of the principal rebels, they are, no doubt, *jure gentium*, lawful: in Italy usually practised upon the banditti; best in season when a side goeth down; and may do good in two kinds; the one, if they take effect; the other, in the distrust which may follow amongst the rebels themselves. But of all other points, to my understanding, the most effectual is, the well expressing or impressing the design of this state, upon that miserable and desolate kingdom; containing the same between these two lists or boundaries; the one, that the queen seeketh not an extirpation of that people, but a reduction; and that, now she hath chastised them by her royal power and arms, according to the necessity of the occasion, her Majesty taketh no pleasure in effusion of blood, or displacing of ancient generations. The other, that her Majesty's princely care is principally and intentionally bent upon the action of Ireland; and that she seeketh not so much the ease of charge, as the royal performance of the office of protection, and reclaim of those her subjects: and in a word, that the case is altered so far as may stand with the honour of the time past: which it is easy to reconcile, as in my last note I showed. And again, I do repeat, that if her Majesty's design be *ex professo* to reduce wild and barbarous people to civility and justice, as well as to reduce rebels to obedience, it makes weakness turn christianity, and conditions graces; and so hath a fineness in turning utility upon point of honour, which is agreeable to the humour of these times. And besides, if her Majesty shall suddenly abate the lists of her forces, and shall do nothing to countervail it in point of reputation, of a politic proceeding, I doubt things may too soon fall back into the state they were in. Next to this; adding reputation to the cause, by imprinting an opinion of her Majesty's care and intention upon this action, is the taking away of reputation from the contrary side,

\* Al. Taglaes.

by cutting off the opinion and expectation of foreign succours; to which purpose this enterprise of Algiers, if it hold according to the advertisement, and if it be not wrapped up in the period of this summer, seemeth to be an opportunity *cœlitus demissa*. And to the same purpose nothing can be more fit than a treaty, or a shadow of a treaty of a peace with Spain, which methinks shall be in our power to fasten at least *rumore tenuis*, to the deluding of as wise people as the Irish. Lastly, for this point; that which the ancients called "*potestas facta redeundi ad sanitatem*;" and which is but a mockery when the enemy is strong, or proud, but effectual in his declination; that is, a liberal proclamation of grace and pardon to such as shall submit, and come in within a time prefixed, and of some farther reward to such as shall bring others in; that one's sword may be sharpened by another's, is a matter of good experience, and now, I think, will come in time. And percase, though I wish the exclusions of such a pardon exceeding few, yet it will not be safe to continue some of them in their strength, but to translate them and their generations into England; and give them recompence and satisfaction here, for their possessions there, as the king of Spain did, by divers families of Portugal. To the effecting of all the points aforesaid, and likewise those which fall within the divisions following, nothing can be in priority, either of time or matter, better than the sending of some commission of countenance, *ad res inspiciendas et componendas*; for it will be a very significant demonstration of her Majesty's care of that kingdom; a credence to any that shall come in and submit; a bridle to any that shall have their fortunes there, and shall apply their propositions to private ends; and an evidence that her Majesty, after arms laid down, speedily pursueth a politic course, without neglect or respiration: and it hath been the wisdom of the best examples of government.

Towards the recovery of the hearts of the people, there be but three things, *in natura rerum*.

1. Religion.
2. Justice and protection.
3. Obligation and reward.

For religion, to speak first of piety, and then of policy, all divines do agree, that if consciences be to be enforced at all, wherein yet they differ, two things must precede their enforcement; the one, means of instruction; the other, time of operation; neither of which they have yet had. Besides, till they be more like reasonable men than they yet are, their society were rather scandalous to the true religion than otherwise; as pearls cast before swine: for till they be cleansed from their blood, incontinency, and theft, which are now not the lapses of particular persons, but the very laws of the nation, they are incompatible with religion reformed. For policy, there is no doubt but to wrestle with them now, is directly opposite to their reclaiming, and cannot but continue their alienation of mind from this government. Besides, one of the principal pretences, whereby the heads of the rebellion have prevailed both with the people, and with the foreigner, hath been the defence of the catholic religion: and it is

this that likewise hath made the foreigner reciprocally more plausible with the rebel. Therefore a toleration of religion, for a time, not definite, except it be in some principal towns and precincts, after the manner of some French edicts, seemeth to me to be a matter warrantable by religion, and in policy of absolute necessity. And the hesitation in this point, I think, hath been a great casting back of the affairs there. Neither if any English papist or recusant shall, for liberty of his conscience, transfer his person, family, and fortunes thither; do I hold it a matter of danger, but expedient to draw on undertaking, and to further population. Neither if Rome will cozen itself, by conceiving it may be some degree to the like toleration in England, do I hold it a matter of any moment; but rather a good mean to take off the fierceness and eagerness of the humour of Rome, and to stay further excommunications or interdictions for Ireland. But there would go hand in hand with this, some course of advancing religion indeed, where the people is capable thereof; as the sending over some good preachers, especially of that sort which are vehement and zealous persuaders, and not scholastical, to be resident in principal towns; endowing them with some stipends out of her Majesty's revenues, as her Majesty hath most religiously and graciously done in Lancashire: and the recontinuing and replenishing the college begun at Dublin, the placing of good men to be bishops in the sees there, and the taking care of the versions of Bibles and catechisms, and other books of instruction, into the Irish language; and the like religious courses, both for the honour of God, and for the avoiding of scandal and insatisfaction here, by the show of a toleration of religion in some parts there.

For justice: the barbarism and desolation of the country considered, it is not possible they should find any sweetness at all of justice; if it shall be, which hath been the error of times past, formal, and fetched far off from the state; because it will require running up and down for process; and give occasion for polling and exactions by fees, and many other delays and charges. And therefore there must be an interim in which the justice must be only summary; the rather, because it is fit and safe for a time the country do participate of martial government; and therefore, I could wish in every principal town or place of habitation, there were a captain or governor; and a judge, such as recorders and learned stewards are here in corporations, who may have a prerogative commission to hear and determine *secundum sanam discretionem*; and as near as may be to the laws and customs of England; and that by bill or plaint, without original writ; reserving from their sentence matter of freehold and inheritance, to be determined by a superior judge itinerant; and both sentences, as well of the bailywick judge, as itinerant, to be reversed, if cause be, before the council of the province to be established there with fit instructions.

For obligation and reward; it is true, no doubt, which was anciently said, that a state is contained in two words, *præmium* and *pœna*; and I am

persuaded, if a penny in the pound which hath been spent in *pœna*, for this kind of war is but *pœna*, a chastisement of rebels, without fruit or emolument to this state, had been spent in *præmio*, that is, in rewarding, things had never grown to this extremity. But to speak forwards. The keeping of the principal Irish persons in terms of contentment, and without cause of particular complaint; and generally the carrying of an even course between the English and the Irish; whether it be in competition, or whether it be in controversy, as if they were one nation, without that same partial course which hath been held by the governors and counsellors there, that some have favoured the Irish, and some contrary, is one of the best medicines of that state. And as for other points of contentment, as the countenancing of their nobility as well in this court as there; the imparting of knighthood; the care of education of their children, and the like points of comfort and allurements; they are things which fall into every man's consideration.

For the extirpating of the seeds of troubles, I suppose the main roots are but three. The first, the ambition and absoluteness of the chief of the families and septs. The second, the licentious idleness of their kernes and soldiers, that lie upon the country, by cesses and such like oppressions. And the third, the barbarous laws, customs, their brehon laws, habits of apparel, their poets or heralds that enchant them in savage manners, and sundry other such dregs of barbarism and rebellion, which by a number of politic statutes of Ireland, meet to be put in execution, are already forbidden; unto which such additions may be made as the present time requireth. But the deducing of this branch requireth a more particular notice of the state and manners there, than falls within my compass.

For plantations and buildings, I do find it strange that in the last plot for the population of Munster, there were limitations how much in demesne, and how much in farm, and how much in tenancy; again, how many buildings should be erected, how many Irish in mixture should be admitted, and other things foreseen almost to curiosity: but no restraint that they might not build *sparsim* at their pleasure; nor any condition that they should make places fortified and defensible: which omission was a strange neglect and secureness, to my understanding. So as for this last point of plantations and buildings, there be two considerations which I hold most material; the one for quickening, and the other for assuring. The first is, that choice be made of such persons for the government of towns and places, and such undertakers be procured, as be men gracious and well beloved, and are like to be well followed. Wherein for Munster, it may be, because it is not *res integra*; but that the former undertakers stand interested, there will be some difficulty; but surely, in mine opinion, either by agreeing with them, or by overruling them with a parliament in Ireland, which in this course of a politic proceeding, infinite occasions will require speedily to be held, it will be fit to supply fit qualified persons for undertakers. The other, that it be

not left, as heretofore, to the pleasure of the undertakers and adventurers, where and how to build and plant; but that they do it according to a prescript or formulary. For first, the places, both maritime and inland, which are fittest for colonies or garrisons, as well for doubt of the foreigner, as for keeping the country in bridle, will be found, surveyed, and resolved upon: and then that the patentees be tied to build in those places only, and to fortify as shall be thought convenient. And lastly, it followeth of course, in countries of new populations, to invite and provoke inhabitants by ample liberties and charters.

LIX. TO MY LORD OF CANTERBURY  
[DR. WHITGIFT.]\*

IT MAY PLEASE YOUR GRACE,

I HAVE considered the objections, perused the statutes, and framed the alterations, which I send, still keeping myself within the privy of a letter, and form of narration; not entering into a form of argument or disputation: for, in my poor conceit, it is somewhat against the majesty of princes' actions, to make too curious and striving apologies, but rather to set them forth plainly, and so as there may appear a harmony and constancy in them, so that one part upholdeth another. And so I wish your Grace all prosperity. From my poor lodging, this, &c.

Your Grace's most dutiful pupil and servant.

LX. TO SIR THOMAS LUCY.†

SIR,

THERE was no news better welcome to me this long time, than that of the good success of my kinsman; wherein if he be happy, he cannot be happy alone, it consisting of two parts. And I render you no less kind thanks for your aid and favour towards him, than if it had been for myself; assuring you that this bond of alliance shall on my part tie me to give all the tribute to your good fortune upon all occasions, that my poor strength can yield. I send you, as required, an abstract of the lands of inheritance; and one lease of great value, which my kinsman bringeth; with a note of the tenures, values, contents, and state, truly and perfectly drawn; whereby you may perceive the land is good land, and well countenanced by scope of acres, woods, and royal-

\* Rawley's Resuscitatio.

ties; though the total of the rents be set down as it now goeth, without improvement: in which respect it may somewhat differ from your first note. Out of this, what he will assure in jointure, I leave it to his own kindness; for I love not to measure affection. To conclude, I doubt not your daughter might have married to a better living, but never to a better life; having chosen a gentleman bred to all honesty, virtue, and worth, with an estate convenient. And if my brother or myself were either thrivers, or fortunate in the queen's service, I would hope there should be left as great a house of the Cokes in this gentleman, as in your good friend Mr. Attorney-General. But sure I am, if Scriptures fail not, it will have as much of God's blessing; and sufficiency is ever the best feast, &c.

LXI. A LETTER OF RECOMMENDATION OF  
HIS SERVICE TO THE EARL OF NORTHUMBERLAND,  
A FEW DAYS BEFORE QUEEN  
ELIZABETH'S DEATH.‡

IT MAY PLEASE YOUR GOOD LORDSHIP,

As the time of sowing a seed is known, but the time of coming up and disclosing is casual, or according to the season; so I am witness to myself, that there hath been covered in my mind a long time a seed of affection and zeal towards your lordship, sown by the estimation of your virtues, and your particular honours and favours to my brother deceased, and myself; which seed still springing, now bursteth forth into this profession. And to be plain with your lordship, it is very true, and no winds or noises of civil matters can blow this out of my head or heart, that your great capacity and love towards studies and contemplations of a higher and worthier nature, than popular, a nature rare in the world, and in a person of your lordship's quality almost singular, is to me a great and chief motive to draw my affection and admiration towards you. And therefore, good my lord; if I may be of any use to your lordship, by my head, tongue, or pen, means, or friends, I humbly pray you to hold me your own; and herewithal, not to do so much disadvantage to my good mind, nor partly to your own worth, as to conceive that this commendation of my humble service proceedeth out of any straits of my occasions, but merely out of an election, and indeed the fulness of my heart. And so wishing your lordship all prosperity, I continue, &c.

March 1603.

## LETTERS IN THE REIGN OF KING JAMES.

## LXII. TO MR. \*FOWLYS.†

SIR,

THE occasion awaketh in me the remembrance of the constant and mutual good offices, which passed between my good brother and yourself; whereunto, as you know, I was not altogether a stranger; though the time and design, as between brethren, made me more reserved. But well do I bear in mind the great opinion which my brother, whose judgment I much reverence, would often express to me, of your extraordinary sufficiency, dexterity, and temper, which he had found in you, in the business and service of the king our sovereign lord.‡ This latter bred in me an election, as the former gave an inducement for me, to address myself to you; and to make this signification of my desire towards a mutual entertainment of good affection and correspondence between us: hoping that both some good effect may result of it towards the king's service; and that for our particulars, though occasion give you the precedence of farthing my being known, by good note, unto the king; so no long time will intercede before I on my part shall have some means given to requite your favours, and to verify your commendation. And so with my loving commendations, good Mr. Fowlys, I leave you to God's goodness.

From Gray's-Inn, 27 March, 1603.

## LXIII. TO MR. FOWLYS.§

MR. FOWLYS,

I DID write unto you yesterday by Mr. Lake, who was despatched hence from their lordships, a letter of reviver of those sparks of former acquaintance between us in my brother's time; and now, upon the same confidence, finding so fit a messenger, I would not fail to salute you; hoping it will fall out so happily, as that you shall be one of the king's

He was afterwards created a baronet by the name of Sir David Fowlys of Ingleby, in the north riding of Yorkshire, where he had seated himself, and where his posterity now remain. *Stephens.*

† Rawley's Resuscitatio.

‡ Mr. Anthony Bacon, the elder and only brother to our author, of the whole blood, reported to have been equal to him in height of wit, though inferior in the improvements of learning and knowledge. Sir Henry Wotton observes, that he was a gentleman of impotent feet, but of a nimble head, through whose hands ran all the intelligences with Scotland. *Stephens.*

§ Rawley's Resuscitatio.

servants which his Majesty will first employ here with us; where I hope to have some means not to be barren in friendship towards you.

We all thirst after the king's coming, accounting all this but as the dawning of the day before the rising of the sun, till we have his presence. And though now his Majesty must be "Janus bifrons," to have a face to Scotland, as well as to England, yet "quod nunc instat agendum:" the expectation is here that he will come in state, and not in strength. || So for this time I commend you to God's goodness.

28 March, 1603.

## LXIV. TO SIR ¶ THOMAS CHALONER, THEN IN SCOTLAND, BEFORE HIS MAJESTY'S ENTRANCE.\*\*

SIR,

FOR our money matters, I am assured you received no insatisfaction: for you know my mind, and you know my means; which now the openness of the time caused by this blessed consent, and peace, will increase; and so our agreement according to your time, be observed. For the present, according to the Roman adage, that "one cluster of grapes ripeneth best besides another;" I know you hold me not unworthy, whose mutual friendship you should cherish; and I, for my part, conceive good hope, that you are likely to become an acceptable servant to the king our master: not so much for any way made heretofore, which, in my judgment, will make no great difference, as for the stuff and sufficiency which I know to be in you; and whereof, I know, his Majesty may reap great service. And therefore, my general request is, that according to that industrious vivacity which you use towards your friends, you will further his Majesty's good conceit and inclination towards me, to whom words cannot make me known, neither mine own, nor others; but time will, to no disadvantage of any that shall forerun his Majesty's experience, by your testimony and commendation. And though occasion give you prece-

|| My lord Bacon, in his history of king Henry VII. observes the like conduct in that wise prince, in order to quiet the fears of the people, and disperse the conceit of his coming in by conquest.

¶ Sir Thomas Chaloner was son to Sir Thomas Chaloner, who had behaved himself with great valour, under the command of the emperor Charles V. and the duke of Somerset, and with equal prudence, in the courts of the emperor and king of Spain; whither he was sent ambassador in the beginning of the reign of queen Elizabeth. The son was, like his father, a gentleman of great parts and abilities, to whose care king James committed the tuition of prince Henry, 17 Aug. 1603. *Rymer*, xvi. 545. Sir Thomas had, a few years before, made the first discovery of alum mines in this nation, at or near Gisborough in Yorkshire; where some of his name and family still continue. He survived his royal pupil just three years, dying in November, 1615. *Stephens.*

\*\* Rawley's Resuscitatio.

dence of doing me this special good office; yet I hope no long time will intercede before I shall have some means to requite your favour and acquit your report. More particularly, having thought good to make oblation of my most humble service to his Majesty by a few lines, I desire your loving care and help, by yourself, or such means as I refer to your discretion, to deliver and present the same to his Majesty's hands: of which letter I send you a copy, that you may know what you carry; and may take of Mr. Matthew the letter itself, if you be pleased to undertake the delivery. Lastly, I do commend to yourself, and such your courtesies as occasion may require, this gentleman Mr. Matthew, eldest son to my lord bishop of Duresme, and my very good friend, assuring you that any courtesy you shall use towards him, you shall use to a very worthy young gentleman, and one, I know, whose acquaintance you will much esteem. And so I ever continue.

1603.

LXV. AN OFFER OF SERVICE TO THE KING  
UPON HIS FIRST COMING IN.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

It is observed by some, upon a place in the Canticles, "Ego sum flos campi, et lilium convallium," that, *a dispari*, it is not said, "Ego sum flos horti, et lilium montium;" because the majesty of that person is not enclosed for a few, nor appropriated to the great. And yet, notwithstanding this royal virtue of access, which both nature and judgment have planted in your Majesty's mind, as the portal of all the rest, could not of itself, my imperfections considered, have animated me to make oblation of myself immediately to your Majesty, had it not been joined with a habit of the like liberty which I enjoyed with my late dear sovereign mistress; a princess happy in all things else, but most happy in such a successor. And yet farther, and more nearly, I was not a little encouraged, not only upon a supposal that unto your Majesty's sacred ear, open to the air of all virtues, there might perhaps have come some † small breath of the good memory of my father, so long a principal counsellor in your kingdom; ‡ but also a more particular knowledge of the infinite devotion and incessant endeavours, beyond the strength of his body, and the nature of the times, which appeared in my good brother, Mr. Anthony Bacon, towards your Majesty's service; and were on your Majesty's part, through your singular benignity, by many most gracious and lively significations and favours accepted and acknowledged, beyond the merit of any thing he could effect: which endeavours and duties, for the most part, were common to myself with him, though by design, as between brethren, dissembled. And therefore, most high and mighty king, my most dear and dread sovereign lord, since now the corner-stone is laid of

the mightiest monarchy in Europe; and that God above, who hath ever a hand in bridling the floods and motions both of the seas and people's hearts, hath by the miraculous and universal consent, the more strange, because it proceedeth from such diversity of causes, in your coming in, given a sign and token of great happiness in the continuance of your reign; I think there is no subject of your Majesty's which loveth this island, and is not hollow or unworthy, whose heart is not set on fire, not only to bring you peace-offerings, to make you propitious; but to sacrifice himself a burnt-offering or holocaust to your Majesty's service: amongst which number no man's fire shall be more pure and fervent than mine; but how far forth it shall blaze out, that resteth in your Majesty's § employment. So thirsting after the happiness of kissing your royal hand, I continue ever. 1603.

LXVI. A LETTER COMMENDING HIS LOVE  
TO THE LORD OF || KINLOSSE, UPON HIS  
MAJESTY'S ENTRANCE.¶

MY LORD,

THE present occasion awakeneth in me a remembrance of the constant amity and mutual good offices, which passed between my brother deceased and your lordship, whereunto I was less strange, than in respect of the time I had reason to pretend; and withal, I call to mind the great opinion which my brother, who seldom failed in judgment of a person, would often express to me of your lordship's great wisdom and soundness, both in head and heart, towards the service and affairs of our sovereign lord the king.

The one of those hath bred in me an election, and the other a confidence to address my good will and sincere affection to your good lordship; not doubting, in regard that my course of life hath wrought me not to be altogether unseen in the matters of the kingdom, that I may be of some use, both in point of service to the king, and in your lordship's particular.

And on the other side, I will not omit humbly to desire your lordship's favour, in farthering a good conceit and impression of my most humble duty and true zeal towards the king; to whose Majesty words cannot make me known, neither mine own nor others: but time will, to no disadvantage of any, that shall forerun his Majesty's experience, by their humanity and commendations. And so I commend your good lordship to God's providence and protection.

From Gray's-Inn, &c. 1603.

 \* SCOTTISH PHYSICIAN, UPON HIS MAJES-  
 TY'S COMING IN.

MR. DR. MORISON,

I HAVE thought good by this my letter to renew this my ancient acquaintance which hath passed between us, signifying my good mind to you to perform to you any good office, for your particular, and my expectation and a firm assurance of the like on your part towards me: wherein I confess you may have the start of me, because occasion hath given you the precedence in investing you with opportunity to use my name well, and by your loving testimony to further a good opinion of me in his Majesty, and the court.

But I hope my experience of matters here will, with the light of his Majesty's favour, enable me speedily both to requite your kindness, and to acquit and make good your testimony and report. So not doubting to see you here with his Majesty; considering that it belongeth to your art to feel pulses, (and I assure you, Galen doth not set down greater variety of pulses, than do vent here in men's hearts,) I wish you all prosperity, and remain

Yours, &c.

From my chamber at  
 Gray's-Inn, &c. 1603.

LXVIII. TO MR. DAVIES,† GONE TO MEET  
 THE KING.‡

MR. DAVIES,

THOUGH you went on the sudden, yet you could not go before you had spoken with yourself to the purpose which I will now write: and therefore I know it shall be altogether needless, save that I meant to show you, that I was not asleep. Briefly, I commend myself to your love and the well using my name; as well in repressing and answering for me, if there be any biting or nibbling at it in that place, as in imprinting a good conceit and opinion of me, chiefly in the king, of whose favour I make myself comfortable assurance, as otherwise in that court: and not only so, but generally to perform to me all the good offices which the vivacity of your wit can suggest to your mind, to be performed to one, with whose affection you have so great sympathy,

\* He had held a correspondence with Mr. Anthony Bacon, and was employed to find intelligence from Scotland to the earl of Essex. See "Memoirs of the Reign of Queen Elizabeth from the year 1581, till her death." Vol. I. p. 79, 109, 116.

† Mr. Davies having made his way unto the knowledge of king James, by a poem he dedicated unto the late queen, entitled, "Nosce teipsum," was very favourably received by the king; and not long after made his attorney-general in Ireland, and serjeant at law: and in the next reign, was nominated to be chief justice of the king's bench in England upon the displacing of Sir Randal Crew; but died suddenly on 27 December, 1626. He was very conversant with the wits of his time; some of his writings declare his excellency in that kind, as others do his abilities in his own profession. *Stephens.*

‡ Rawley's Resuscitatio.

§ Ibid.

¶ Henry Piercy, the ninth earl of Northumberland of that name, had not only great learning himself, but was also patron of other learned men, especially mathematicians. And though no man espoused the title of king James to the Eng-

thy, and in whose fortune you have so great interest. So desiring you to be good to concealed poets, I continue

Your assured friend,

FR. BACON.

Gray's-Inn this  
 28th of March, 1603.

LXIX. TO MR. ROBERT KEMPE, UPON THE  
 DEATH OF QUEEN ELIZABETH.§

MR. KEMPE,

THIS alteration is so great, as you might justly conceive some coldness of my affection towards you, if you should hear nothing from me, I living in this place. It is in vain to tell you with what wonderful still and calm this wheel is turned round; which, whether it be a remnant of her felicity that is gone, or a fruit of his reputation that is coming, I will not determine. For I cannot but divide myself between her memory and his name: yet we account it but a fair morn, before sun-rising, before his Majesty's presence: though for my part I see not whence any weather should arise. The papists are contained with fear enough, and hope too much. The French is thought to turn his practice upon procuring some disturbance in Scotland, where crowns may do wonders: but this day is so welcome to the nation, and the time so short, as I do not fear the effect. My lord of Southampton expecteth release by the next despatch, and is already much visited and much well-wished. There is continual posting by men of good quality towards the king: the rather, I think, because this spring-time it is but a kind of sport. It is hoped, that as the state here hath performed the part of good attorneys to deliver the king quiet possession of his kingdoms, so the king will redeliver them quiet possession of their places; rather filling places void, than removing men placed. So, &c. 1603.

LXX. TO THE EARL OF NORTHUMBERLAND,||  
 RECOMMENDING A PROCLAMATION TO  
 BE MADE BY THE KING AT HIS ENTRANCE.¶

IT MAY PLEASE YOUR LORDSHIP,

I do hold it a thing formal and necessary for the lish throne with a greater zeal than himself, declaring he would remove all impediments by his sword; yet the king, perhaps fearing that one who thought he could confer crowns, might attempt to resume them, caused this great man to be so effectually prosecuted in the star-chamber in the year 1606, upon the supposition of his being privy to the powder-plot, or at least of concealing his cousin Mr. Thomas Piercy, one of the conspirators therein: that he was fined 30,000*l.* and condemned to perpetual imprisonment. But the lord Hay, afterwards created viscount Doncaster and earl of Carlisle, marrying in 1617 his youngest daughter the lady Lucy Piercy, a lady of the most celebrated wit and beauty of any in her times; his release from the Tower was obtained about the year 1621. Though it is said, the earl was with great difficulty prevailed to accept of this favour, because procured by a man he disdained to own to be so near a relation, as that of a son. *Stephens.*

¶ Rawley's Resuscitatio.

king to forerun his coming, be it never so speedy, with some gracious declaration for the cherishing, entertaining, and preparing of men's affections.\* For which purpose I have conceived a draught, it being a thing familiar in my mistress her times to have my pen used in public writings of satisfaction. The use of this may be in two sorts: first, properly, if your lordship think it convenient to show the king any such draught, because the veins and pulses of this state cannot but be best known here; which if your lordship should do, then I would desire you to withdraw my name, and only signify, that you gave some heads of direction of such a matter to one, of whose style and pen you had some opinion. The other collateral; that though your lordship make no other use of it, yet it is a kind of portraiture of that which I think worthy to be advised by your lordship to the king; and perhaps more compendious and significant, than if I had set them down in articles. I would have attended your lordship but for some little physic I took. To-morrow morning I will wait on you. So I ever, &c. 1603.

LXXI. TO THE EARL OF SOUTHAMPTON,†  
UPON THE KING'S COMING IN.‡

IT MAY PLEASE YOUR LORDSHIP,

I WOULD have been very glad to have presented my humble service to your lordship by my attendance, if I could have foreseen that it should not have been displeasing unto you. And therefore, because I would be sure to commit no error, I chose to write; assuring your lordship, how little soever it may seem credible to you at first, yet it is as true as a thing that God knoweth; that this great change hath wrought in me no other change towards your lordship than this, that I may safely be that to you now, which I was truly before. And so craving no other pardon, than for troubling you

\* Instead of this declaration, Sir Francis Bacon tells us, that "at this time there came forth in print the king's book containing matter of instruction to the prince his son, touching the office of a king; which falling into every man's hand, filled the whole realm as with a good perfume or incense before the king's coming in; and far exceeded any formal or curious edict or declaration, which could have been devised of that nature, wherewith princes in the beginning of their reigns do use to grace themselves, or at least express themselves gracious in the eyes of their people." P. 797.

† Henry Wriothesley earl of Southampton having been involved in the guilt of the unfortunate earl of Essex, was condemned for the same crimes; but that earl, who seemed careless of his own life, interceded for the life of his friend, as did Southampton's own modest behaviour at his trial: from which time he suffered imprisonment in the Tower till the 10th of April, 1603. He was afterwards restored in blood, made knight of the garter, and one of his Majesty's privy council. Stephens.

‡ Rawley's Resuscitatio.

Mr. Matthew was son to Dr. Toby Matthew, bishop of Durham, afterwards archbishop of York; an eminent divine, considered either in the schools, the pulpit, or the episcopal chair. He was born in Oxford in 1578, whilst his father was dean of Christ's-Church; but was, to the great grief of his parents, a few years after the king's accession, reconciled to the church of Rome, through the means, as is said, of Parsons the Jesuit; and became so industrious an agent for her, that his refusal of the oath of allegiance established by act of parliament, together with some imprudent carriage, gave the king such offence, that he was in a manner exiled the king-

with my letter, I do not now begin to be, but continue to be

Your lordship's humble and much devoted  
1603. FR. BACON.

LXXII. TO MR. TOBIE MATTHEW,§ SIGNIFYING  
THE WISE PROCEEDINGS OF KING JAMES  
AT HIS FIRST ENTRANCE INTO ENGLAND.¶

SIR,

I WAS heartily glad to hear that you have passed so great a part of your journey ¶ in so good health. My aim was right in my address of letters to those persons in the court of Scotland, who are likeliest to be used for the affairs of England; but the pace they held was too swift, for the men were come away before my letters could reach them. With the first I have renewed acquaintance, and it was like a bill of revivor, by way of cross suits; for he was as ready to have begun with me. The second did this day arrive, and took acquaintance with me instantly in the council-chamber, and was willing to entertain me with farther demonstrations of confidence, than I was willing at that time to admit. But I have had no serious speech with him, nor do I yet know whether any of the doubles of my letter have been delivered to the king. It may perhaps have proved your luck to be the first.

Things are here in good quiet. The king acts excellently well; for he puts in clauses of reservation to every proviso. He saith, he would be sorry to have just cause to remove any. He saith, he will displace none who hath served the queen and state sincerely, &c. The truth is, here be two extremes; some few would have no change, no not reformation; some many would have much change, even with perturbation. God, I hope, will direct this wise king to hold a mean between reputation enough and no terrors.\*\* In my particular I have many comforts and assurances; but in my own opinion in the year 1607. He continued roving from one country and prince's court to another till 1617, when applying himself with much earnestness to the earl of Buckingham, he obtained a permission to come into England, which he did in July that year, presenting himself in the first place to Sir Francis Bacon, then lord keeper of the great seal. But the king being afterwards displeased with him, did, notwithstanding his moving and pressing letters, command him again to depart in October, 1618. Yet in 1622, he was recalled to assist in the business of the Spanish match then in agitation, and knighted the year following. He is represented as a man of very good parts and literature, but of an active and restless temper. What opinion Sir Francis Bacon had of him when young, appears before in his letter to Sir Thomas Chaloner; and what esteem he had for Sir Francis may be seen in the preface to his collection of letters: at the beginning of which is printed his character of the lady Carlisle, whom I have mentioned No. LXX. He died at Gaunt in Flanders in 1655. Stephens.

§ Sir Tobie Matthew's Collection of Letters, p. 18.

¶ Viz. Into Scotland to meet the king. See No. LXIV. p. 823.

\*\* Upon this occasion it may not be amiss to remember what cardinal d'Osat writ from Rome to M. de Villeroi upon the accession of king James to the crown of England, part of which I wish no prince would ever forget.

"C'est l'ordinaire des hommes de regarder plus au soleil orient qu'à l'occident, & des Princes bien avisés qui sont appelez à un nouvel estat, d'y entrer doucement, sans irriter ni mécontenter personne ni dedans ni dehors. Si ce Prince continue guidé par la vertu & accompagné de bonheur, comme jusques icy, il sera très-grand, & fera bon l'avoir pour amy;

nion the chief is, that the canvassing world is gone, and the deserving world is come. And withal I find myself as one awaked out of sleep; which I have not been this long time, nor could, I think, have been now without such a great noise as this, which yet is in *aura leni*. I have written this to you in haste, my end being no more than to write, and thereby to make you know that I will ever continue the same, and still be sure to wish you as heartily well as to myself. 1603.

LXXIII. TO THE EARL OF NORTHUMBERLAND.\*

IT MAY PLEASE YOUR GOOD LORDSHIP,

I WOULD not have lost this journey, and yet I have not that I went for; for I have had no private conference to purpose with the king; no more hath almost any other English: for the speech his Majesty admitteth with some noblemen, is rather matter of grace, than matter of business. With the attorney he spake, urged by the treasurer of Scotland, but no more than needs must. After I had received his Majesty's first welcome, and was promised private access; yet not knowing what matter of service your lordship's letter carried, for I saw it not, and well knowing that primeness in advertisement is much; I chose rather to deliver it to Sir Thomas Erskine, than to cool it in my own hands, upon expectation of access. Your lordship shall find a prince the farthest from vain glory that may be; and rather like a prince of the ancient form, than of the latter time. His speech is swift and cursory, and in the full dialect of his country; and in speech of business, short; in speech of discourse, large. He affecteth popularity by gracing such as he hath heard to be popular, and not by any fashions of his own: he is thought somewhat general in his favours; and his virtue of access is rather, because he is much abroad and in press, than that he giveth easy audience. He hasteneth to a mixture of both kingdoms and occasions, faster perhaps than policy will well bear. I told your lordship once before, that, methought, his Majesty rather asked counsel of the time past, than of the time to come: but it is yet early to ground any settled opinion. For the particulars, I refer to conference, having in these generals gone farther in so tender an argument than I would have done, were not the bearer hereof so assured. So I continue, &c. 1603.

& nous, qui depuis quelques années en ça n'avions eu l'œil quasi qu'en un lieu, faudra que l'ayons cy-après en deux; comme faudra bien aussi que fassent encore d'autres. Et en fin de compte, *Celui de tous qui regnera le mieux & le plus justement à l'honneur & gloire de Dieu, & au soulagement, profit & félicité de ses sujets; sera le plus assuré, le plus fort, & le plus aimé, loué & beni de Dieu & des hommes; en quoy consiste la vraie & perdurable grandeur & puissance des Roys, & l'assurance de leur posterité.*" Stephens.

† John Murray, Esq.

LXXIV. A LETTER TO MR. MURRAY,† OF THE KING'S BED-CHAMBER.

MR. MURRAY,

It is very true, that his Majesty, most graciously at my humble request, knighted the last Sunday my brother-in-law, a towardly young gentleman;‡ for which favour I think myself more bound to his Majesty, than for the benefit of ten knights: and to tell you truly, my meaning was not, that the suit of this other gentleman, Mr. Temple,§ should have been moved in my name. For I should have been unwilling to have moved his Majesty for more than one at once, though many times in his Majesty's courts of justice, if we move once for our friends, we are allowed to move again for our fee.

But indeed my purpose was, that you might have been pleased to have moved it as for myself.

Nevertheless, since it is so far gone, and that the gentleman's friends are in some expectation of success, I leave it to your kind regard what is farther to be done, as willing to give satisfaction to those which have put me in trust, and loth on the other side to press above good manners. And so with my loving commendation I remain

1603.

Yours, &c.

LXXV. TO MR. PIERCE, SECRETARY TO THE LORD DEPUTY OF IRELAND.||

MR. PIERCE,

I AM glad to hear of you, as I do; and for my part, you shall find me ready to take any occasion to further your credit and preferment. And I dare assure you, though I am no undertaker, to prepare your way with my lord of Salisbury, for any good fortune which may befall you. You teach me to complain of business, whereby I write the more briefly; and yet I am so unjust, as that which I allege for mine own excuse, I cannot admit for yours: for I must, by expecting, exact your letters, with this fruit of your sufficiency, as to understand how things pass in that kingdom. And therefore having begun, I pray you continue. This is not merely curiosity, for I have ever, I know not by what instinct, wished well to that impolished part of this crown. And so, with my very loving commendations, I remain.

‡ To this Sir John Constable, Sir Francis Bacon dedicated the second edition of his "Essays;" published at London in 1613, in octavo.

§ Probably Mr. William Temple, who had been educated in King's College, Cambridge, then master of the free-school at Lincoln, next successively secretary to Sir Philip Sidney, secretary Davison, and the earl of Essex, made provost of Dublin College in 1609, and at last knighted, and appointed one of the masters in chancery in Ireland. He died about 1626, at the age of 72.

|| Rawley's Resuscitatio.

LXXVI. TO THE EARL OF NORTHAMPTON,\*  
DESIRING HIM TO PRESENT "THE ADVANCEMENT OF LEARNING" TO THE KING. †

IT MAY PLEASE YOUR GOOD LORDSHIP,

HAVING finished a work touching the advancement of learning, and dedicated the same to his sacred Majesty, whom I dare avouch, if the records of time err not, to be the learnedest king that hath reigned; I was desirous, in a kind of congruity, to present it by the learnedest counsellor in this kingdom; to the end that so good an argument, lighting upon so bad an author, might receive some reputation by the hands into which, and by which, it shall be delivered. And therefore, I make it my humble suit to your lordship, to present this mean but well meant writing to his Majesty, and with it my humble and zealous duty; and also my like humble request of pardon, if I have too often taken his name in vain, not only in the dedication, but in the voucher of the authority of his speeches and writings. And so I remain.

1605.

LXXVII. TO SIR THOMAS BODLEY, † UPON  
SENDING HIS BOOK OF "ADVANCEMENT  
OF LEARNING." §

SIR,

I THINK no man may more truly say with the psalm, "Multum incola fuit anima mea," than myself; for, I do confess, since I was of any understanding, my mind hath in effect been absent from that I have done; and in absence are many errors, which I do willingly acknowledge; and, amongst the rest, this great one that led the rest; that knowing myself by inward calling to be fitter to hold a book, than to play a part, I have led my life in civil causes; for which I was not very fit by nature, and

\* The earl of Northampton was the second son, and bore the name of that accomplished gentleman, Henry Howard, earl of Surrey, son and heir to the duke of Norfolk, who suffered under the severity of king Henry VIII's latter days; the one by death, the other by imprisonment. During great part of the reign of queen Elizabeth, while his family lay under the cloud, he applied himself to learning; and to what a degree he arrived, appears by a book he published in 1583, against the poison of supposed prophecies, dedicated to Sir Francis Walsingham; and from the eulogy that was generally given him, that he was the most learned among the noble, and the most noble among the learned. But in the king's reign his advancement was speedy both in honours and riches. The services he performed as a commissioner in making the peace between England and Spain, gave birth to a saying in those times, but with what truth I know not, that his house in the Strand, now called Northumberland house, was built by Spanish gold. He died in 1614, leaving behind him the memory of some real good works, and of some supposed ill ones; being suspected of concealing his religion for many years, and of being privy to the untimely death of Sir Thomas Overbury.

—Stephens.

† Rawley's Resuscitatio.

‡ Sir Thomas Bodley restored the public library at Oxford, begun in the times of king Henry VI. by Humphrey, duke of

more unfit by the pre-occupation of my mind. Therefore calling myself home, I have now for a time enjoyed myself, whereof likewise I desire to make the world partaker. My labours, if I may so term that which was the comfort of my other labours, I have dedicated to the king; desirous, if there be any good in them, it may be as the fat of a sacrifice, incensed to his honour: and the second copy I have sent unto you, not only in good affection, but in a kind of congruity, in regard of your great and rare desert of learning. For books are the shrines where the saint is, or is believed to be: and you having built an ark to save learning from deluge, deserve propriety in any new instrument or engine, whereby learning should be improved or advanced.

1605.

LXXVIII. TO THE EARL OF SALISBURY, †  
UPON SENDING "THE ADVANCEMENT OF  
LEARNING." ¶

IT MAY PLEASE YOUR GOOD LORDSHIP,

I PRESENT your lordship with a work of my vacant time, which if it had been more, the work had been better. It appertaineth to your lordship, besides my particular respects, in some propriety, in regard you are a great governor in a province of learning.

And, that which is more, you have added to your place affection towards learning; and to your affection judgment: of which the last I could be content were, for the time, less, that you might the less exquisitely censure that which I offer unto you. But sure I am, the argument is good, if it had lighted upon a good author. But I shall content myself to awake better spirits, like a bell-ringer, which is first up to call others to church. So with my humble desire of your lordship's good acceptance, I remain.

1605.

Gloucester; or was rather the founder of a new one, which now bears his name, and which hath placed him among the chief benefactors to that university, and to the commonwealth of learning. He died in the entrance of the year 1613.—Stephens.

§ Rawley's Resuscitatio.

¶ Sir Robert Cecil, created by king James lord Cecil, viscount Cranburne, and earl Salisbury, was not only son to one of the greatest statesmen of his age, the lord Burleigh, but succeeded him in his places and abilities, and was one of the great supports of the queen's declining years. Yet the ill offices he was thought to perform towards the noble and popular earl of Essex, together with his conduct in some particulars in her successor's reign, abated the lustre of his character, which otherwise from his parts and prudence would have appeared very conspicuous. After he had been long secretary of state, some years lord treasurer and chancellor of the university of Cambridge, he died in May 1612, at Marlborough, in his return from the Bath; as by a diary of his sickness and the account given by Sir Robert Naunton, one of his retinue, appears; which I should not mention, but that his enemies in their libels, which flew freely about, have suggested that he died on the Downs; which, if true, could be esteemed at most but his misfortune.—Stephens.

¶ Rawley's Resuscitatio.

## LXXIX. TO THE LORD TREASURER BUCKHURST,\* ON THE SAME SUBJECT.†

IT MAY PLEASE YOUR GOOD LORDSHIP,

I HAVE finished a work touching the advancement or setting forward of learning, which I have dedicated to his Majesty, the most learned of a sovereign or temporal prince that time hath known: and upon reason not unlike I humbly present one of the books to your lordship; not only as a chancellor of an university, but as one that was excellently bred in all learning; which I have ever noted to shine in all your speeches and behaviours: and therefore your lordship will yield a gracious aspect to your first love, and take pleasure in the adorning of that wherewith yourself are so much adorned. And so humbly desiring your favourable acceptance thereof, with signification of humble duty, I remain. 1605.

## LXXX. TO THE LORD CHANCELLOR, SIR T. EGERTON, LORD ELLESMERE, ON THE SAME SUBJECT.‡

MAY IT PLEASE YOUR GOOD LORDSHIP,

I HUMBLY present your lordship with a work, wherein as you have much commandment over the author, so your lordship hath great interest in the argument; for, to speak without flattery, few have like use of learning, or like judgment in learning, as I have observed in your lordship. And again, your lordship hath been a great planter of learning, not only in those places in the church, which have been in your own gift, but also in your commendatory vote, no man hath more constantly held "Deur digniori:" and therefore, both your lordship is beholding to learning, and learning beholding to you: which maketh me presume with good assurance that your lordship will accept well of these my labours; the rather because your lordship in private speech hath often begun to me in expressing your admiration of his Majesty's learning, to whom I have dedicated this work; and whose virtue and perfection in that kind did chiefly move me to a work of this nature; and so with signification of my most humble duty and affection to your lordship, I remain. 1605.

\* I shall draw this noble lord's character from Sir Robert Naunton's observations of the favourites of queen Elizabeth; and much in his own words: "My lord of Buckhurst was of the noble house of the Sackvilles, and of the queen's consanguinity. He was a very fine gentleman of person and endowments both of art and nature, but without measure magnificent, till on the turn of his humour, and the alloy that his years, and good counsels of the queen, &c. had wrought upon those immoderate courses of his youth, and that height of spirit inherent to his house; she began to assist him in the reparation of that vast patrimony he had much wasted. After the honour she had given him of lord Buckhurst, and knight of the garter, she procured him to be chosen chancellor of the university of Oxford, upon the death of Sir Christopher Hatton, and constituted him lord treasurer on the death of the lord Burleigh, which office he enjoyed till April, 1606, dying then suddenly at the council table; the king having some years before created him earl of Dorset. He is also much commended for his

## LXXXI. TO MR. MATTHEW.§

SIR,

I PERCEIVE you have some time when you can be content to think of your friends; from whom since you have borrowed yourself, you do well, not paying the principal, to send the interest at six months day. The relation which here I send you enclosed, carries the truth of that which is public: and though my little leisure might have required a briefer, yet the matter would have endured and asked a larger.

I have now at last taught that child to go, at the swaddling whereof you were. My work touching the proficiency and advancement of learning, I have put into two books; whereof the former which you saw, I can't but account as a page to the latter. I have now published them both; whereof I thought it a small adventure to send you a copy, who have more right to it than any man, except bishop Andrews, who was my inquisitor.

The death of the late great judge concerned not me, because the other was not removed. I write this in answer to your good wishes; which I return not as flowers || of Florence, but as you mean them; whom I conceive place can't alter, no more than time shall me, except it be for the better. 1605.

## LXXXII. TO DR. PLAYFERE,¶ DESIRING HIM TO TRANSLATE "THE ADVANCEMENT" IN LATIN.\*\*

MR. DR. PLAYFERE,

A GREAT desire will take a small occasion to hope and put in trial that which is desired. It pleased you a good while since to express unto me the good liking which you conceived of my book of the advancement of learning; and that more significantly, as it seemed to me, than out of courtesy or civil respect. Myself, as I then took contentment in your approbation thereof, so I should esteem and acknowledge not only my contentment increased, but my labours advanced, if I might obtain your help in that nature which I desire: wherein, before I set down in plain terms my request unto you, I will open myself, what it was which I chiefly sought and propounded to myself in that work; that you may perceive that which I now desire, to be pursuant

happy vein in poetry, to which he was addicted in his youth; and for his elocution, and the excellencies of his pen; faculties that ran in the blood, as Sir Robert Naunton observes in his son Robert, and his grandsons Richard and Edward, successive earls of Dorset; and the last age had the satisfaction to see continued in the person of the right honourable Charles earl of Dorset and Middlesex. *Stephens.*

† Rawley's Resuscitatio.

‡ Ibid.

§ Sir Tobie Matthew's "Collection of Letters," p. 11.

¶ Mr. Matthew wrote an elegy on the duke of Florence's felicity.

¶ Thomas Playfere, D.D. a native of Kent, educated in St. John's college in Cambridge, and appointed Margaret professor of divinity in that university about 1596, in the room of Dr. Peter Baro. He died there about January or February, 1606.

\*\* Rawley's Resuscitatio.

thereupon. If I do not much err, for any judgment that a man maketh of his own doings, had need be spoken with a "Si nunquam fallat imago,"\* I have this opinion, that if I had sought mine own commendation, it had been a much fitter course for me to have done as gardeners used to do, by taking their seed and slips, and rearing them first into plants, and so uttering them in pots, when they are in flower, and in their best state. But forasmuch as my end was merit of the state of learning, to my power, and not glory; and because my purpose was rather to excite other men's wits, than to magnify mine own, I was desirous to prevent the uncertainty of mine own life and times, by uttering rather seeds than plants: nay, and farther, as the proverb is, by sowing with the basket, rather than with the hand: wherefore, since I have only taken upon me to ring a bell to call other wits together, which is the meanest office, it cannot but be consonant to my desire, to have that bell heard as far as can be. And since they are but sparks which can work but upon matter prepared, I have the more reason to wish that those sparks may fly abroad, that they may the better find and light upon those minds and spirits which are apt to be kindled. And therefore the privateness of the language considered, wherein it is written, excluding so many readers; as, on the other side, the obscurity of the argument in many parts of it excludeth many others; I must account it a second birth of that work, if it might be translated into Latin, without manifest loss of the sense and matter. For this purpose I could not represent to myself any man into whose hands I do more earnestly desire that work should fall than yourself; for by that I have heard and read, I know no man a greater master in commanding words to serve matter. Nevertheless, I am not ignorant of the worth of your labours, whether such as your place and profession imposeth, or such as your own virtue may, upon your voluntary election, take in hand. But I can lay before you no other persuasions than either the work itself may affect you with; or the honour of his Majesty, to whom it is dedicated; or your particular inclination to myself; who as I never took so much comfort in any labours of mine own, so I shall never acknowledge myself more obliged in any thing to the labours of another, than in that which shall assist it. Which your labour, if I can by my place, profession, means, friends, travel, work, need, requite unto you, I shall esteem myself so straitly bound thereunto, as I shall be ever most ready both to take and seek occasion of thankfulness. So leaving it nevertheless, *salva amicitia*, as reason is, to your good liking, I remain.

\* Vir. Ecl. ii. 27. † Rawley's Resuscitatio.

‡ Thought. *Matthew's Collection of Letters.*

§ The monument here spoken of was erected in king Henry VII's chapel at Westminster, in the year 1606.

¶ The unworthiness of the history of England hath been long complained of by ingenious men, both of this and other nations. Sir Francis Bacon hath expressed himself much to the same effect, though more at large, in his second book of *The Advancement of Learning*, (p. 30,) where he carries this period of remarkable events somewhat higher than in this letter, beginning with the union of the roses under Henry VII. and ending with the union of the kingdoms under king James. A portion of time filled with so great and variable

LXXXIII. TO THE LORD CHANCELLOR.  
TOUCHING THE HISTORY OF BRITAIN.†

IT MAY PLEASE YOUR GOOD LORDSHIP,

SOME late act of his Majesty, referred to some former speech which I have heard from your lordship, bred in me a great desire, and the strength of desire a boldness to make an humble proposition to your lordship, such as in me can be no better than a wish; † but if your lordship should apprehend it, it may take some good and worthy effect. The act I speak of, is the order given by his Majesty for the erection of a tomb or monument for our late sovereign queen Elizabeth: § wherein I may note much, but only this at this time, that as her Majesty did always right to his Majesty's hopes, so his highness doth in all things right to her memory; a very just and princely retribution. But from this occasion, by a very easy ascent, I passed farther, being put in mind, by this representative of her person, of the more true and more vive representation, which is of her life and government: for as statues and pictures are dumb histories, so histories are speaking pictures; wherein if my affection be not too great, or my reading too small, I am of this opinion, that if Plutarch were alive to write lives by parallels, it would trouble him both for virtue and fortune, to find for her a parallel amongst women. And though she was of the passive sex, yet her government was so active, as, in my simple opinion, it made more impression upon the several states of Europe, than it received from thence. But I confess unto your lordship I could not stay here, but went a little farther into the consideration of the times which have passed since king Henry VIII.; wherein I find the strangest variety, that in so little number of successions of any hereditary monarchy hath ever been known. The reign of a child; the offer of an usurpation, though it was but as a diary ague; the reign of a lady married to a foreigner; and the reign of a lady solitary and unmarried; so that as it cometh to pass in massy bodies, that they have certain trepidations and wavering before they fix and settle; so it seemeth that by the providence of God this monarchy, before it was to settle in his Majesty, and his generations, in which I hope it is now established for ever, hath had these preluive changes in these barren princes. Neither could I contain myself here, as it is easier for a man to multiply than to stay a wish, but calling to remembrance the unworthiness of the history of England, || in the main continuance thereof; and the partiality and obliquity of that of Scotland, in the latest and largest

accidents both in church and state, and since so well discovered to the view of the world, that had other parts the same performance, we should not longer lie under any reproach of this kind. The reign of king Henry VII. was written by our author soon after his retirement, with so great beauty of style, and wisdom of observation, that nothing can be more entertaining; the truth of history not being disguised with the false colours of romance. It was so acceptable a present to the P. of Wales, that when he became king, he commanded him to proceed with the reign of king Henry VIII. But my lord Bacon meditating the history of nature, which he hardly lived to publish; his ill state of health, and succeeding death, put an end to this and other noble designs;

author\* that I have seen: I conceived it would be honour for his Majesty, and a work very memorable, if this island of Great Britain, as it is now joined in monarchy for the ages to come, so it were joined in history for the times past: and that one just and complete history were compiled of both nations. And if any man perhaps should think it may refresh the memory of former discords, he may satisfy himself with the verse "olim hæc meminisse juvabit:" for the case being now altered, it is matter of comfort and gratulation to remember former troubles. Thus much, if it may please your lordship, is in the optative mood; and it is time that I did look a little into the potential; wherein the hope which I conceived was grounded upon three observations. The first, the nature of these times, which flourish in learning, both of art and language; which giveth hope not only that it may be done, but that it may be well done. Secondly, I do see that which all the world sees in his Majesty, both a wonderful judgment in learning, and a singular affection towards learning, and works which are of the mind more than of the hand. For there cannot be the like honour sought and found, in building of galleries,† and planting of elms along high-ways, and in those outward ornaments, wherein France is now so busy, things rather of magnificence than of magnanimity, as there is in the uniting of states,‡ pacifying of controversies,§ nourishing and augmenting of learning and arts, and the particular actions appertaining to these; of which kind Cicero judged truly, when he said to Cæsar, "Quantum operibus tuis detrahet vetustas, tantum addet laudibus." And lastly, I call to mind, that your lordship at some times hath been pleased to express unto me a great desire, that something of this nature should be performed; answerable indeed to your other noble and worthy courses and actions; joining and adding unto the great services towards his Majesty, which have, in small compass of time, been performed by your lordship, other great deservings, both of the church and commonwealth, and particulars: so as the opinion of so great and wise a man doth seem to me a good warrant both of the possibility and worth of the matter. But all this while I assure myself, I cannot be mistaken by your lordship, as if I sought an office or employment for myself; for no man knows better than your lordship, that if there were in me any faculty thereunto, yet neither my course of life nor profession would permit it; but because there be so many good painters|| both for hand and colours, it needeth but encouragement and instructions to give

leaving the ecclesiastical and civil affairs of those times to be related by the learned pens of Dr. Burnet, notwithstanding the objections of the avowed enemies, and seeming friends to the reformation, and the lord Herbert of Cherbury; that I think there is not much of moment to be expected from a future hand. And for the annals of queen Elizabeth compiled by Mr. Camden, the esteem of them is as universal as the language in which they are written. Nor must I forget in this place to take notice of two fair and large volumes lately published in French by Monsieur de Larrey; where building upon the foundations laid by these gentlemen, and some other memoirs, he hath not forgotten to do much honour to the English nation: beginning his history also with Henry VII. *Stephens.*

\* This I take to be meant of Buchanan's History of Scot-

life unto it. So in all humbleness I conclude my presenting unto your lordship this wish; which, if it perish, it is but a loss of that which is not. And so craving pardon that I have taken so much time from your lordship, I remain—

LXXXIV. TO THE KING, UPON SENDING UNTO HIM A BEGINNING OF THE HISTORY OF HIS MAJESTY'S TIMES.¶

IT MAY PLEASE YOUR MAJESTY,

HEARING that your Majesty is at leisure to peruse story, a desire took me to make an experiment what I could do in your Majesty's times, which being but a leaf or two, I pray your pardon, if I send it for your recreation; considering that love must creep where it cannot go. But to this I add these petitions: First, that if your Majesty do dislike any thing, you would conceive I can amend it upon your least beck. Next, that if I have not spoken of your Majesty encomiastically, your Majesty would be pleased only to ascribe it to the law of a history; which doth not cluster together praises upon the first mention of a name, but rather disperseth and weaveth them through the whole narrative. And as for the proper place of commemoration, which is in the period of life, I pray God I may never live to write it. Thirdly, that the reason why I presumed to think of this oblation, was because whatsoever my disability be, yet I shall have that advantage which almost no writer of history hath had; in that I shall write of times not only since I could remember, but since I could observe. And lastly, that it is only for your Majesty's reading.

MR. ATTORNEY,

I THOUGHT best, once for all, to let you know in plainness what I find of you, and what you shall find of me. You take to yourself a liberty to disgrace and disable my law, my experience, my discretion. What it pleaseth you, I pray, think of me: I am one that knows both mine own wants and other men's; and it may be, perchance, that mine mend, when others stand at a stay. And surely I may not endure, in public place, to be wronged without

land; a book much admired by some, though censured by many, for his partiality in favour of the lords, against Mary queen of the Scots, and the regal power. In other respects, archbishop Spotswood informs us that he penned it with such judgment and eloquence, as no country can show a better. *Stephens.*

† The magnificent gallery at the Louvre in Paris, built by Henry IV.

‡ The union of England and Scotland.

§ The conference at Hampton court held between the bishops and puritans, as they were then called, soon after the king's coming to the crown of England, and where his Majesty was the moderator. *Stephens.*

|| Great masters. *Math.*

\*\* Ibid.

repelling the same to my best advantage to right myself. You are great, and therefore have the more enviers, which would be glad to have you paid at another's cost. Since the time I missed the solicitor's place, the rather I think by your means, I cannot expect that you and I shall ever serve as attorney and solicitor together; but either to serve with another upon your remove, or to step into some other course; so as I am more free than ever I was from any occasion of unworthy conforming myself to you, more than general good manners, or your particular good usage shall provoke; and if you had not been short-sighted in your own fortune, as I think, you might have had more use of me. But that tide is passed. I write not this to show my friends what a brave letter I have written to Mr. Attorney; I have none of those humours; but that I have written is to a good end, that is, to the more decent carriage of my master's service, and to our particular better understanding one of another. This letter, if it shall be answered by you in deed, and not in word, I suppose it will not be worse for us both; else it is but a few lines lost, which for a much smaller matter I would have adventured. So this being to yourself, I for my part rest—

[Before June, 1606.]

LXXXVI. TO THE EARL OF SALISBURY, CONCERNING THE SOLICITOR'S PLACE.\*

MAY IT PLEASE YOUR LORDSHIP,

I AM not privy to myself of any such ill deserving towards your lordship, as that I should think it an impudent thing to be a suitor for your favour in a reasonable matter; your lordship being to me as, with your good favour, you cannot cease to be; but rather it were a simple and arrogant part in me to forbear it.

It is thought Mr. Attorney shall be chief justice of the common pleas; in case Mr. Solicitor rise, I would be glad now at last to be solicitor; chiefly because I think it will increase my practice, wherein God blessing me a few years, I may mend my state, and so after fall to my studies and ease; whereof one is requisite for my body, and the other serveth for my mind; wherein if I shall find your lordship's favour, I shall be more happy than I have been, which may make me also more wise. I have small store of means about the king, and to sue myself is not fit: and therefore I shall leave it to God, his Majesty, and your lordship, for I must still be next the door. I thank God, in these transitory things I am well resolved. So beseeching your lordship not to think this letter the less humble, because it is plain, I rest, &c.

1606.

FR. BACON.

LXXXVII. ANOTHER LETTER TO THE EARL OF SALISBURY, TOUCHING THE SOLICITOR'S PLACE.†

IT MAY PLEASE YOUR LORDSHIP,

I AM not ignorant how mean a thing I stand for, in desiring to come into the solicitor's place: for I know well, it is not the thing it hath been; time having wrought alteration both in the profession, and in that special place. Yet because, I think, it will increase my practice, and that it may satisfy my friends, and because I have been voiced to it, I would be glad it were done. Wherein I may say to your lordship, in the confidence of your poor kinsman, and of a man by you advanced, "Tu idem fer opem, qui spem dedisti:" for, I am sure, it was not possible for a man living to have received from another more significant and comfortable words of hope; your lordship being pleased to tell me, during the course of my last service, that you would raise me; and that when you had resolved to raise a man, you were more careful of him than himself; and that what you had done for me in my marriage, was a benefit to me, but of no use to your lordship; and therefore I might assure myself, you would not leave me there; with many like speeches, which I know my duty too well, to take any other hold of than the hold of a thankful remembrance. And I acknowledge, and all the world knoweth, that your lordship is no dealer of holy water, but noble and real: and, on my part, I am of a sure ground, that I have committed nothing that may deserve alteration. And therefore my hope is, your lordship will finish a good work, and consider, that time groweth precious with me, that I am now in *vergentibus annis*. And although I know that your fortune is not to need a hundred such as I am, yet I shall be ever ready to give you my first and best fruits; and to supply, as much as in me lieth, worthiness by thankfulness.

LXXXVIII. TO THE LORD CHANCELLOR, CONCERNING THE SOLICITOR'S PLACE.‡

IT MAY PLEASE YOUR GOOD LORDSHIP,

As I conceived it to be a resolution, both with his Majesty, and among your lordships of his council, that I should be placed solicitor, and the solicitor to be removed to be the king's serjeant; so I most thankfully acknowledge your lordship's fatherance and forwardness therein; your lordship being the man that first devised the mean: wherefore my humble request to your lordship is, that you would set in with some strength to finish this your work; which, I assure your lordship, I desire the rather, because being placed, I hope for many favours at last to be able to do you some better service. For as I am, your lordship cannot use me; nor scarcely indeed know me. Not that I vainly think I shall be able to do any great matters, but certainly it will

† Bawley's Resuscitation.

‡ Ibid.

frame me to use a more industrious observance and application to such, as I honour so much as I do your lordship; and not, I hope, without some good offices, which may now and then deserve your thanks. And herewithal, good my lord, I humbly pray your lordship to consider, that time groweth precious with me, and that a married man is seven years elder in his thoughts the first day: and therefore what a discomfortable thing is it for me to be unsettled still! Certainly, were it not that I think myself born to do my sovereign service, and therefore in that station I will live and die; otherwise for mine own private comfort, it were better for me that the king should blot me out of his book; or that I should turn my course to endeavour to serve in some other kind, than for me to stand thus at a stop; and to have that little reputation, which by my industry I gather, to be scattered and taken away by continual disgraces, every new man coming above me. Sure I am, I shall never have fairer promises and words from all your lordships. For I know not what my services are, saving that your lordships told me they were good, and I would believe you in a much greater matter. Were it nothing else, I hope the modesty of my suit deserveth somewhat; for I know well the solicitor's place is not as your lordship left it; time working alteration, somewhat in the profession, much more in that special place. And were it not to satisfy my wife's friends, and to get myself out of being a common gaze and a speech, I protest before God I would never speak word for it. But to conclude, as my honourable lady your wife was some mean to make me to change the name of another; so if it please you help me to change mine own name, I can be but more and more bounden to you: and I am much deceived, if your lordship find not the king well inclined, and my lord of Salisbury forward and affectionate.

1606.

LXXXIX. TO MY LADY PACKINGTON, IN ANSWER TO A MESSAGE BY HER SENT.\*

MADAM,

You shall with right good will be made acquainted with any thing that concerneth your daughters, if you bear a mind of love and concord: otherwise you must be content to be a stranger unto us: for I may not be so unwise as to suffer you to be an author or occasion of dissension between your daughters and their husbands, having seen so much misery of that kind in yourself.

And above all things I will turn back your kindness, in which you say, you will receive my wife if she be cast off; for it is much more likely we have occasion to receive you being cast off, if you remember what is passed. But it is time to make an end of those follies: and you shall at this time pardon me this one fault of writing to you; for I mean to do it no more till you use me and respect me as

\* From an old copy of Sir Francis Bacon's Letters.

you ought. So wishing you better than it seemeth you will draw upon yourself, I rest,

Yours,

FR. BACON.

XC. TO THE KING TOUCHING THE SOLICITOR'S PLACE.†

How honestly ready I have been, most gracious sovereign, to do your Majesty humble service, to the best of my power, and in a manner beyond my power, as I now stand, I am not so unfortunate but your Majesty knoweth. For both in the commission of union, the labour whereof, for men of my profession, rested most upon my hand, and this last parliament, in the bill of the subsidy, both body and preamble; in the bill of attainders, both Tresham and the rest; in the matter of purveyance; in the ecclesiastical petitions; in the grievances; and the like; as I was ever careful, and not without good success, sometimes to put forward that which was good, sometimes to keep back that which was not so good; so your Majesty was pleased kindly to accept of my services, and to say to me, such conflicts were the wars of peace, and such victories the victories of peace; and therefore such servants that obtained them were, by kings that reign in peace, no less to be esteemed, than services of commanders in the wars. In all which nevertheless I can challenge to myself no sufficiency, but that I was diligent and reasonably happy to execute those directions, which I received either immediately from your royal mouth, or from my lord of Salisbury: at which time it pleased your Majesty also to promise and assure me, that upon the remove of the then attorney I should not be forgotten, but brought into ordinary place. And this was after confirmed to me, by many of my lords, and towards the end of the last term, the manner also in particular was spoken of; that is, that Mr. Solicitor should be made your Majesty's serjeant, and I solicitor; for so it was thought best to sort with both our gifts and faculties for the good of your service; and of this resolution both court and country took knowledge. Neither was this any invention or project of mine own; but moved from my lords, and I think first from my lord chancellor; whereupon resting, your Majesty well knoweth I never opened my mouth for the greater place; though I am sure I had two circumstances, that Mr. Attorney, that now is, could not allege: the one, nine years service of the crown; the other, the being cousin germain to the lord of Salisbury, whom your Majesty esteemeth and trusteth so much. But for the less place, I conceived it was meant me. But after that Mr. Attorney Hobart was placed, I heard no more of my preferment; but it seemed to be at a stop, to my great disgrace and discouragement. For, gracious sovereign, if still, when the waters are stirred, another shall be put in before me, your Majesty had need work a miracle, or else I shall be still a lame man

† Rawley's Resuscitatio.

to do your Majesty service. And therefore my most humble suit to your Majesty is; that this, which seemed to me intended, may speedily be performed: and I hope, my former service shall be but as beginnings to better, when I am better strengthened: for, sure I am, no man's heart is fuller, I say not but many may have greater hearts, but I say, not fuller of love and duty towards your Majesty and your children; as, I hope, time will manifest against envy and detraction, if any be. To conclude, I most humbly crave pardon for my boldness, and rest—  
1606.

XCL. TO THE EARL OF SALISBURY, UPON  
A NEW-YEAR'S TIDE.\*

IT MAY PLEASE YOUR GOOD LORDSHIP,

HAVING no gift to present you with in any degree proportionable to my mind, I desire nevertheless to take the advantage of a ceremony to express myself to your lordship; it being the first time I could make the like acknowledgment, when I stood out of the person of a suitor: wherefore I most humbly pray your lordship to think of me, that, now it hath pleased you, by many effectual and great benefits, to add the assurance and comfort of your love and favour to that precedent disposition, which was in me to admire your virtue and merit; I do esteem whatsoever I have or may have in this world, but as trash, in comparison of having the honour and happiness to be a near and well accepted kinsman to so rare and worthy a counsellor, governor, and patriot: for having been a studious, if not a curious observer of antiquities of virtue, as of late pieces, I forbear to say to your lordship what I find and conceive; but to any other I would think to make myself believed. But not to be tedious in that which may have the show of a compliment, I can but wish your lordship many happy years, many more than your father had; even so many more, as we may need you more. So I remain—

XCL. TO MR. MATTHEW, IMPRISONED FOR  
RELIGION.†

MR. MATTHEW,

Do not think me forgetful or altered towards you: but if I should say, I could do you any good, I should make my power more than it is. I do hear that which I am right sorry for, that you grow more impatient and busy than at first; which maketh me exceedingly fear the issue of that which seemeth not to stand at a stay. I myself am out of doubt, that you have been miserably abused, when you were first seduced; but that which I take in compassion, others may take in severity. I pray God, that understandeth us all better than we understand one

\* Rawley's Resuscitatio.

† Ibid.

‡ Sir Tobie Matthew's Collection of Letters, p. 14.

§ Sir George Carew of Cornwall was master in chancery in the time of queen Elizabeth; and in 1597 sent ambassador into Poland; and in 1606 went to the court of France with the like character. After about three years' continuance, he was recalled by the king to make use of his services at home;

another, contain you, even as I hope he will, at the least, within the bounds of loyalty to his Majesty, and natural piety towards your country. And I entreat you much, sometimes to meditate upon the extreme effects of superstition in this last powder treason; fit to be tabled and pictured in the chambers of meditation, as another hell above the ground: and well justifying the censure of the heathen, that superstition is far worse than atheism; by how much it is less evil to have no opinion of God at all, than such as is impious towards his divine majesty and goodness. Good Mr. Matthew, receive yourself back from these courses of perdition. Willing to have written a great deal more, I continue, &c.

XCIII. TO MR. MATTHEW.‡

SIR,

Two letters of mine are now already walking towards you; but so that we might meet, it were no matter though our letters should lose their way. I make a shift in the mean time to be glad of your approaches, and would be more glad to be an agent for your presence, who have been a patient by your absence. If your body by indisposition make you acknowledge the healthful air of your native country; much more do I assure myself, that you continue to have your mind no way estranged. And as my trust with the state is above suspicion, so my knowledge both of your loyalty and honest nature will ever make me show myself your faithful friend without scruple. You have reason to commend that gentleman to me, by whom you sent your last, although his having travelled so long amongst the sadder nations of the world make him much the less easy upon small acquaintance to be understood. I have sent you some copies of my book of the "Advancement," which you desired; and a little work of my recreation, which you desired not. My "Instauration" I reserve for our conference; it sleeps not. Those works of the "Alphabet" are in my opinion of less use to you where you are now, than at Paris; and therefore I conceived, that you had sent me a kind of tacit countermand of your former request. But in regard that some friends of yours have still insisted here, I send them to you; and for my part, I value your own reading more than your publishing them to others. Thus, in extreme haste, I have scribbled to you I know not what, which therefore is the less affected, and for that very reason will not be esteemed the less by you.

XCIV. TO SIR GEORGE CAREW,§ ON SEND-  
ING HIM THE TREATISE "IN FELICEM  
MEMORIAM ELIZABETHÆ."||

BEING asked a question by this bearer, an old ser-

but he survived not many years. M. de Thou in a letter to Mr. Camden in 1613, very much laments his death; as losing a friend he much valued, and an assistant in the prosecution of his history: having received helps from him in that part which relates to the dissensions between the Poles and the Swedes in the year 1598, as appears before the contents of book CXXI. Stephens. || Rawley's Resuscitatio.

vant of my brother Anthony Bacon's, whether I would command him any thing into France; and being at better leisure than I would, in regard of sickness, I began to remember that neither your business nor mine, though great and continual, can be, upon an exact account, any just occasion why so much good-will as hath passed between us should be so much discontinued as it hath been. And therefore, because one must begin, I thought to provoke your remembrance of me by a letter: and thinking to fill it with somewhat besides salutations, it came to my mind, that this last summer vacation, by occasion of a factious book that endeavoured to verify "*Misera Fœmina*," the addition of the pope's bull, upon queen Elizabeth, I did write a few lines in her memorial, which I thought you would be pleased to read, both for the argument, and because you were wont to bear affection to my pen. "*Verum, ut aliud ex alio*," if it came handsomely to pass, I would be glad the president De Thou, who hath written a history, as you know, of that fame and diligence, saw it; chiefly because I know not whether it may not serve him for some use in his story; wherein I would be glad he did write to the truth, and to the memory of that lady, as I perceive by that he hath already written he is well inclined to do. I would be glad also, it were some occasion, such as absence may permit, of some acquaintance or mutual notice between us. For though he hath many ways the precedence, chiefly in worth, yet this is common to us both, that we serve our sovereigns in places of law eminent; and not ourselves only, but that our fathers did so before us. And lastly, that both of us love learning and liberal sciences, which was ever a bond of friendship in the greatest distance of places. But of this I make no farther request, than your own occasions and respects, to me unknown, may farther or limit; my principal purpose being to salute you, and to send you this token: whereunto I will add my very kind commendations to my lady; and so commit you both to God's holy protection.

\* Rawley's Resuscitatio.

† Ibid.

‡ The king and kingdom being exasperated by the gun-powder-treason, thought it necessary to make some more effectual laws to distinguish between those papists that paid due obedience to the king, and those that did not. For which end, in the parliament which met upon the memorable fifth of November, 1605, a new oath of allegiance was framed; declaring that the pope, &c. had no power to depose kings, absolve their subjects, or dispose of their kingdoms, &c. The court of Rome, jealous of losing an authority they had been many years assuming; and especially perceiving that many papists submitted to the oath, as not intrenching upon matters of faith, severely inhibited them from taking the same by two briefs, the one quickly succeeding the other. The king, on the other hand, esteeming it a point that nearly concerned him, had recourse to those arms he could best manage, and encountered the briefs by a premonition directed to all christian princes; exhorting them to espouse the common quarrel. Cardinal Bellarmine, who, by virtue of his title, thought himself almost equal to princes, and by his great learning much superior, enters the lists with the king. The seconds coming in on both sides, no man was thought fitter to engage this remarkable antagonist than that great and renowned prelate in learning and sanctity, Dr. Andrews, then bishop of Ely, and after of Winchester. Neither were the reformed of the French church idle spectators; as Monsieur du Moulin, and Monsieur du Plessis Mornay: this last published a book at Saumur in 1611, entitled, "*The Mystery of Iniquity*," &c. showing by what degrees the bishops of Rome had raised themselves to their present grandeur, asserting the right of

#### XCV. TO THE KING, UPON PRESENTING THE "DISCOURSE TOUCHING THE PLANTATION OF IRELAND."\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I KNOW not better how to express my good wishes of a new-year to your Majesty, than by this little book, which in all humbleness I send you. The style is a style of business, rather than curious or elaborate. And herein I was encouraged by my experience of your Majesty's former grace, in accepting of the like poor field-fruits touching the union. And certainly I reckon this action as a second brother to the union. For I assure myself that England, Scotland, and Ireland well united, is such a trefoil as no prince except yourself, who are the worthiest, weareth in his crown; "*Si potentia reducatur in actum*." I know well, that for me to beat my brains about these things, they be "*majora quam pro fortuna*;" but yet they be "*minora quam pro studio ac voluntate*." For as I do yet bear an extreme zeal to the memory of my old mistress queen Elizabeth, to whom I was rather bound for her trust than her favour; so I must acknowledge myself more bound to your Majesty both for trust and favour; whereof I will never deceive the one, as I can never deserve the other. And so in all humbleness kissing your Majesty's sacred hand, I remain.

#### XCVI. TO THE BISHOP OF ELY, UPON SENDING HIS WRITING ENTITLED, "COGITATA ET VISA."†

MY VERY GOOD LORD,

Now your lordship hath been so long in the church and the palace, disputing between kings and popes: † methinks you should take pleasure to look into the field, and refresh your mind with some mat-

sovereign princes against the positions of the cardinals Bellarmine and Baronius: the French edition whereof he dedicated to Lewis the thirteenth, and the Latin to king James. This last performance was presented to king James, with a letter exhorting him, "*de quitter d'oresnavant la plume, pour aller espée à la main desnicher l'antichrist hors de sa forteresse*:" to give over waging a war with his pen, and to destroy the papal power with his sword; which he excites the king to attempt in the conclusion of his dedication, with so much life, that I shall crave the liberty to insert part of his own words, in order to declare the spirit and zeal of a gentleman, who for his valour and conduct in war, his judgment in council, his dexterity in despatches, and his firmness and constancy in religion, in the defence of which, hand, and tongue, and pen, were employed, is far above all the titles of honour that can be given.

"Hanc tu, rex potentissime, laudem, hanc lauream, absit ut tibi præripi patiari; cuiquam alii servatam velis; non sanguine, non vita, non carioribus cæteris redemptam malis. At tu, Jehova Deus, cujus res, cujus gloria, hic proprie agitur; cujus absque ope frustra sint vota, suspiria, molimina nostra; evigila, exurge, robur indue, justitiam ut lorica. Voca servum tuum per nomen suum, prehende dexteram Uncti tui, ambula ante faciem ejus; complanentur valles, subsident montes, consternantur fluvii, pateant janua, conterantur vectes, contremiscant populi, corruat Jericho illa in spiritu oris tui, in conspectu ejus. Ego sexagenario licet jam major, lateri tunc ipsius hæream indivulsus; inter angusta, inter aspera Alpium senectam exuam; inter principia prælium miseream; inter triumphos præcincte angelo *Cecidi* illud conge-

ter of philosophy; though that science be now through age waxed a child again, and left to boys and young men. And because you were wont to make me believe you took liking to my writings, I send you some of this vacation's fruits; and thus much more of my mind and purpose. I hasten not to publish; perishing I would prevent; and I am forced to respect as well my times as the matter. For with me it is thus; and I think, with all men in my case: if I bind myself to an argument, it loadeth my mind; but if I rid my mind of the present cogitation, it is rather a recreation. This hath put me into these miscellanies; which I purpose to suppress, if God give me leave to write a just and perfect volume of philosophy, which I go on with, though slowly. I send not your lordship too much, lest it may grieve you. Now let me tell you what my desire is: if your lordship be so good now, as when you were the good dean of Westminster, my request to you is, that not by pricks, but by notes, you would mark unto me whatsoever shall seem unto you either not current in the style, or harsh to credit and opinion, or inconvenient for the person of the writer; for no man can be judge and party; and when our minds judge by reflection on ourselves, they are more subject to error. And though, for the matter itself, my judgment be in some things fixed, and not accessible by any man's judgment that goeth not my way; yet even in those things, the admonition of a friend may make me express myself diversely. I would have come to your lordship, but that I am hastening to my house in the country: and so I commend your lordship to God's goodness.

XCVII. TO SIR THOMAS BODLEY, AFTER HE HAD IMPARTED TO HIM A WRITING, ENTITLED, "COGITATA ET VISA."\*

SIR,

In respect of my going down to my house in the country, I shall have miss of my papers, which I pray you therefore to return unto me. You are, I bear you witness, slothful, and you help me nothing; so as I am half in conceit, that you affect not the argument: for myself, I know well, you love and affect. I can say no more to you, but "non canimus surdis, respondent omnia sylvæ." If you be not of the lodgings chalked up, whereof I speak in my preface, I am but to pass by your door. But if I had you a fortnight at Gorbambury, I would make you tell me another tale; or else I would add a cogitation against libraries, and be revenged on you that way. I pray you send me some good news of Sir Thomas Smith; and commend me very kindly to him. So I rest—

1607.

*animus; sanctæ hinc lætitiæ totus immergar, æternæ contiguus immergi raptus."*

But this was an enterprise suited to the warlike genius of De Plessis, great master of Henry the fourth, and not to the peaceable spirit of king James. Besides, the king, in his answer of the 20th of October, 1611, after he had excused his long silence, and very much commended this author in the *beginning* of his book, and as freely called the pope antichrist,

XCVIII. SIR THOMAS BODLEY'S LETTER TO SIR FRANCIS BACON, ABOUT HIS "COGITATA ET VISA," WHEREIN HE DECLARETH HIS OPINION FREELY TOUCHING THE SAME.†

SIR,

As soon as the term was ended, supposing your leisure was more than before, I was coming to thank you two or three times, rather choosing to do it by word than by letter: but I was still disappointed of my purpose, as I am at this present upon an urgent occasion, which doth tie me fast to Fulham, and hath now made me determine to impart my mind in writing.

I think you know I have read your "Cogitata et Visa," which I protest I have done with great desire, reputed it a token of your singular love that you joined me with those your chiefest friends, to whom you would commend the first perusal of your draught; for which, I pray you, give me leave to say but this unto you:

First, that if the depth of my affection to your person and spirit, to your works, and your words, and to all your abilities, were as highly to be valued, as your affection is to me, it might walk with yours arm in arm, and claim your love by just desert. But there can be no comparison where our states are so uneven, and our means to demonstrate our affections so different: insomuch as for my own, I must leave it to be prized in the nature that it is; and you shall evermore find it most addicted to your worth.

As touching the subject of your book, you have set afoot so many rare and noble speculations, as I cannot choose but wonder, and I shall wonder at it ever, that, your expense of time considered in your public profession, which hath in a manner no acquaintance with scholarship or learning, you should have culled out the quintessence, and sucked up the sap of the chiefest kind of learning.

For howsoever in some points you do vary altogether from that which is, and hath been ever, the received doctrine of our schools, and was always by the wisest, as still they have been deemed, of all nations and ages, adjudged the truest; yet it is apparent, that in those very points, and in all your proposals and plots in that book, you show yourself a master workman.

For myself, I must confess, and I speak it *ingenuè*, that for the matter of learning, I am not worthy to be reckoned in the number of smatterers.

And yet because it may seem, that being willing to communicate your treatise with your friends, you are likewise willing to listen to whatsoever I or others can except against it; I must deliver unto you for my private opinion, that I am one of that crew that say there is, and we profess, a far greater and Rome Babylon, conceives that neither the Scriptures, the doctrine nor example of the primitive church, would sufficiently justify an offensive war, undertaken purely for religion; could he in prudence expect any success in such an attempt. *Stephens.*

\* Rawley's Resuscitatio.

† Appendix to a Collection of Letters of Archbishop Usher, Letter xiv. p. 19.

holdfast of certainty in our sciences, than you by your discourse will seem to acknowledge.

For whereas, first, you do object the ill success and errors of practitioners in physic, you know as well they do proceed of the patient's unruliness, for not one of a hundred doth obey his physician in observing his cautions; or by misinformation of their own indispositions, for few are able in this kind to explicate themselves; or by reason their diseases are by nature incurable, which is incident, you know, to many sorts of maladies; or for some other hidden cause which cannot be discovered by course of conjecture. Howbeit, I am full of this belief, that as physic is ministered now-a-days by physicians, it is much to be ascribed to their negligence or ignorance, or other touch of imperfection, that they speed no better in their practice: for few are found of that profession so well instructed in their art, as they might by the precepts which their art doth afford; which though it be defective in regard of such perfection, yet for certain it doth flourish with admirable remedies, such as tract of time hath taught by experimental events, and are the open highway to that principal knowledge that you recommend.

As for alchemy, and magic, some conclusions they have that are worthy the preserving; but all their skill is so accompanied with subtleties and guiles, as both the crafts and craft-masters are not only despised, but named with derision. Whereupon to make good your principal assertion, methinks you should have drawn your examples from that which is taught in the liberal sciences, not by picking out cases that happen very seldom, and may by all confession be subject to reproof; but by controlling the generals, and grounds, and eminent positions, and aphorisms, which the greatest artists and philosophers have from time to time defended.

For it goeth for current amongst all men of learning, that those kind of arts which clerks in times past did term quadrivials, confirm their propositions by infallible demonstrations.

And likewise in the trivials such lessons and directions are delivered unto us, as will effect very near, or as much altogether, as every faculty doth promise. Now in case we should concur to do as you advise, which is, to renounce our common notions, and cancel all our theorems, axioms, rules, and tenets, and so to come babes "ad regnum naturæ," as we are willed by Scriptures to come "ad regnum cœlorum;" there is nothing more certain in my understanding, than that it would instantly bring us to barbarism, and, after many thousand years, leave us more unprovided of theoretical furniture than we are at this present: for that were indeed to become very babes, or *tabula rasa*, when we shall leave no impression of any former principles, but be driven to begin the world again, and to travel by trials of axioms and sense, which are your proofs by particulars, what to place *in intellectu*, for our general conceptions; it being a maxim of all men's approving, "In intellectu nihil esse, quod non prius fuit in sensu;" and so in appearance it would befall us, that till Plato's year be come about, our insight in learning would be of less reckoning than now it is accounted.

As for that which you inculcate, of a knowledge more excellent than now is among us, which experience might produce, if we would but essay to extract it out of nature by particular probations, it is no more upon the matter, but to incite us unto that, which without instigation by a natural instinct men will practise of themselves: for it cannot in reason be otherwise thought, but that there are infinite numbers in all parts of the world, for we may not in this case confine our cogitations within the bounds of Europe, which embrace the course that you purpose, with all the diligence and care that ability can perform; for every man is born with an appetite of knowledge, wherewith he cannot be so glutted, but still, as in a dropsy, thirst after more.

But yet why they should hearken to any such persuasion, as wholly to abolish those settled opinions and general theorems, to which they attained by their own and their ancestors' experience, I see nothing yet alleged to induce me to think it.

Moreover, I may speak, as I should suppose with good probability, that if we should make a mental survey what is like to be effected all the world over, those five or six inventions which you have selected, and imagine to be but of modern standing, would make but a slender show amongst so many hundreds of all kinds of natures, which are daily brought to light by the enforcement of wit, or casual events, and may be compared, or partly preferred above those that you have named.

But were it so here that all were admitted, that you can require, for the augmentation of our knowledge; and that all our theorems and general positions were utterly extinguished with a new substitution of others in their places, what hope may we have of any benefit of learning by this alteration?

Assuredly, as soon as the new are brought with their additions *ad ἀκμήν*, by the inventors and their followers, by an interchangeable course of natural things they will fall by degrees to be buried in oblivion, and so on continuance to perish outright; and that perchance upon the like to your present pretences, by proposal of some means to advance all our knowledge to a higher pitch of perfectness: for still the same defects that antiquity found will reside in mankind.

And therefore, other issues of their actions, devices, and studies are not to be expected, than is apparent by records were in former times observed.

I remember here a note which Paterculus made of the incomparable wits of the Grecians and Romans in their flourishing state, that there might be this reason of their notable downfall in their issue that came after; because by nature "Quod summo studio petatum est ascendit in summum, difficilisque in perfecto mora est;" insomuch that men perceiving that they could go no farther, being come to the top, they turned back again of their own accord, forsaking those studies that are most in request, and betaking themselves to new endeavours, as if the thing that they sought had been by prevention surprised by others.

So it fared in particular with the eloquence of that age, that when their successors found that hardly

they could equal, by no means excel their predecessors, they began to neglect the study thereof, and both to write and speak for many hundred years in a rustical manner; till this latter revolution brought the wheel about again, by inflaming gallant spirits to give the onset afresh, with straining and striving to climb unto the top and height of perfection, not in that gift only, but in every other skill in any part of learning.

For I do not hold it an erroneous conceit to think of every science, that as now they are professed, so they have been before in all precedent ages, though not alike in all places, nor at all times alike in one and the same place, but according to the changings and twinings of times, with a more exact and plain, or with a more rude and obscure kind of teaching.

And if the question should be asked, what proof I have of it, I have the doctrine of Aristotle, and of the deepest learned clerks, of whom we have any means to take any notice, that as there is of other things, so there is of sciences, *ortus et interitus*, which is also the meaning, if I should expound it, of "*nihil novum sub sole*," and is as well to be applied *ad facta*, as *ad dicta*, "*ut nihil neque dictum neque factum, quod non est dictum et factum prius*." I have farther for my warrant that famous complaint of Solomon to his son against the infinite making of books in his time, of which in all congruity it must needs be understood, that a great part were observations and instructions in all kind of literature: and those there is not now so much as one petty pamphlet, only some parts of the Bible excepted, remaining to posterity.

As then there was not, in like manner, any footing to be found of millions of authors that were long before Solomon, and yet we must give credit to that which he affirmed, that whatsoever was then, or had been before, it could never be truly pronounced of it, Behold this new.

Whereupon I must for my final conclusion infer, seeing all the endeavours, study, and knowledge of mankind, in whatsoever art or science, have ever been the same, as they are at this present, though full of mutabilities, according to the changes and accidental occasions of ages and countries, and clerks' dispositions, which can never be but subject to intimation and remission, both in their devices and practices of their knowledge: if now we should accord in opinion with you, First, to condemn our present knowledge of doubts and incertitudes, which you confirm but by averment, without other force of argument: And then to disclaim all our axioms and maxims, and general assertions that are left by tradition from our elders to us, which, for so it is to be pretended, have passed all probations of the sharpest wits that ever were: And lastly, to devise, being now become again as it were *abecedarii*, by the frequent spelling of particulars to come to the notice of the true generals, and so afresh to create new principles of sciences: the end of all would be that, when we shall be dispossessed of the learning which we have, all our consequent travels will but help us in a circle to conduct us to the place from whence we set forward, and bring us to the happiness to be

restored *in integrum*: which will require as many ages as have marched before us, to be perfectly achieved.

And this I write with no dislike of increasing our knowledge with new-found devices, which is undoubtedly a practice of high commendation, in regard of the benefit they will yield for the present; that the world hath ever been, and will assuredly for ever continue very full of such devisors, whose industry hath been very obstinate and eminent that way, and hath produced strange effects, above the reach and the hope of men's common capacities; and yet our notions and theorems have always kept in grace both with them, and with the rarest that ever were named among the learned.

By this you see to what boldness I am brought by your kindness, that if I seem to be too saucy in this contradiction, it is the opinion that I hold of your noble disposition, and of the freedom in these cases that you will afford your special friend, that hath induced me to do it. And although I myself, like a carrier's horse, cannot balk the beaten way in which I have been trained, yet such is my censure of your "*Cogitata*," that I must tell you, to be plain, you have very much wronged yourself and the world, to smother such a treasure so long in your coffer; for though I stand well assured, for the tenor and subject of your main discourse, you are not able to impanel a substantial jury in any university that will give up a verdict to acquit you of error, yet it cannot be gainsaid, but all your treatise over doth abound with choice conceits of the present state of learning, and with so worthy contemplations of the means to procure it, as may persuade any student to look more narrowly to his business, not only by aspiring to the greatest perfection of that which is now-a-days divulged in the sciences, but by diving yet deeper into, as it were, the bowels and secrets of nature, and by enforcing of the powers of his judgment and wit, to learn of St. Paul, "*consectari meliora dona*:" which course, would to God, to whisper so much in your ear, you had followed at the first, when you fell into the study of such a study as was not worthy such a student. Nevertheless being so as it is, that you are therein settled, and your country soundly served, I cannot but wish with all my heart, as I do very often, that you may gain a fit reward to the full of your deserts, which I hope will come with heaps of happiness and honour.

Yours to be used and commanded,

THO. BODLEY.

From Fulham, Feb. 19, 1607.

POSTSCRIPT.

SIR,

ONE kind of boldness doth draw on another, inso-much as, methinks, I should offend not to signify, that before the transcript of your book be fitted for the press, it will be requisite for you to cast a censor's eye upon the style and the elocution; which in the framing of some periods, and in divers words and phrases, will hardly go for current, if the copy brought to me be just the same that you would publish.

XCIX. TO MR. MATTHEW, UPON SENDING TO HIM A PART OF "INSTAURATIO MAGNA."\*

MR. MATTHEW,

I PLAINLY perceive by your affectionate writing touching my work, that one and the same thing affecteth us both; which is, the good end to which it is dedicated; for as to any ability of mine, it cannot merit that degree of approbation. For your caution for church-men and church-matters, as for any impediment it might be to the applause and celebrity of my work, it moveth me not; but as it may hinder the fruit and good which may come of a quiet and calm passage to the good port to which it is bound, I hold it a just respect; so as to fetch a fair wind I go not too far about. But the truth is, that I at all have no occasion to meet them in my way; except it be as they will needs confederate themselves with Aristotle, who, you know, is intemperately magnified by the schoolmen; and is also allied, as I take it, to the Jesuits, by Faber, who was a companion of Loyola, and a great Aristotelian. I send you at this time the only part which hath any harshness; and yet I framed to myself an opinion, that whosoever allowed well of that preface, which you so much commend, will not dislike, or at least ought not to dislike, this other speech of preparation; for it is written out of the same spirit, and out of the same necessity: nay, it doth more fully lay open, that the question between me and the ancients, is not of the virtue of the race, but of the rightness of the way. And to speak truth, it is to the other but as *palma* to *pugnus*, part of the same thing more large. You conceive aright, that in this and the other, you have commission to impart and communicate them to others according to your discretion. Other matters I write not of. Myself am like the miller of Granchester, that was wont to pray for peace amongst the willows; for while the winds blew, the windmills wrought, and the water-mill was less customed. So I see that controversies of religion must hinder the advancement of sciences. Let me conclude with my perpetual wish towards yourself, that the approbation of yourself, by your own discreet and temperate carriage, may restore you to your country, and your friends to your society. And so I commend you to God's goodness.

Gray's-Inn, Oct. 10, 1609.

C. TO MR. MATTHEW.†

SIR,

I THANK you for the last, and pray you to believe, that your liberty in giving opinion of those writings which I sent you, is that which I sought, which I

\* Rawley's Resuscitatio.

† Sir Toby Matthew's Collection of Letters, p. 12.

‡ Sir George Carew.

§ Rawley's Resuscitatio.

¶ Our author alludes to one of the dark sayings of Hera-

expected, and which I take in exceeding good part; so good as that it makes me recontinue, or rather continue my hearty wishes of your company here, that so you might use the same liberty concerning my actions, which now you exercise concerning my writings. For that of queen Elizabeth, your judgment of the temper and truth of that part, which concerns some of her foreign proceedings, concurs fully with the judgment of others, to whom I have communicated part of it; and as things go, I suppose they are likely to be more and more justified and allowed. And whereas you say, for some other part, that it moves and opens a fair occasion, and broad way, into some field of contradiction: on the other side it is written to me from the lieger † at Paris, and some others also, that it carries a manifest impression of truth with it, and that it even convinces as it grows. These are their very words; which I write not for mine own glory, but to show what variety of opinion rises from the disposition of several readers. And I must confess my desire to be, that my writings should not court the present time, or some few places, in such sort as might make them either less general to persons, or less permanent in future ages. As to the "Instauration," your so full approbation thereof I read with much comfort, by how much more my heart is upon it; and by how much less I expected consent and concurrence in a matter so obscure. Of this I can assure you, that though many things of great hope decay with youth, and multitude of civil businesses is wont to diminish the price, though not the delight of contemplations, yet the proceeding in that work doth gain with me upon my affection and desire, both by years and businesses. And therefore I hope, even by this, that it is well pleasing to God, from whom and to whom all good moves. To him I most heartily commend you.

CI. TO MR. MATTHEW.‡

MR. MATTHEW,

I HEARTILY thank you for your letter of the 10th of February, and am glad to receive from you matter both of encouragement and of advertisement touching my writings. For my part I do wish, that since there is no *lumen siccum* § in the world, but all *madidum*, and *maceratum*, infused in affections, and bloods, or humours, that these things of mine had those separations that might make them more acceptable: so that they claim not so much acquaintance of the present times, as they be thereby the less apt to last. And to show you that I have some purpose to new-mould them, I send you a leaf or two of the preface, carrying some figure of the whole work. Wherein I purpose to take that which I count real and effectual of both writings; and chiefly to add a pledge, if not payment, to my promises, I send you clitus, that dry light is ever the best; which in another place he thus expounds: "Certainly the light that a man receiveth by counsel from another, is drier and purer than that which cometh from his own understanding and judgment, this being ever infused and drenched in his affections." Stephens.

also a memorial of queen Elizabeth; to requite your eulogy of the late duke of Florence's\* felicity. Of this, when you were here, I showed you some model; at what time, methought, you were more willing to hear Julius Cæsar, than queen Elizabeth, commended. But this which I send is more full, and hath more of the narrative: and farther, hath one part that, I think, will not be disagreeable either to you or that place; being the true tract of her proceedings towards the catholics, which are infinitely mistaken. And though I do not imagine they will pass allowance there, yet they will gain upon excuse. I find Mr. Le Zure to use you well, I mean his tongue of you, which shows you either honest, or wise: but this I speak merrily. For in good faith I do conceive hope, that you will so govern yourself, as we may take you as assuredly for a good subject and patriot, as you take yourself for a good christian; and so we may again enjoy your company, and you your conscience, if it may no otherwise be. For my part, assure yourself, as we say in the law, "mutatis mutandis," my love and good wishes to you are not diminished. And so I remain—

CII. TO MR. MATTHEW UPON SENDING HIS BOOK "DE SAPIENTIA VETERUM."†

MR. MATTHEW,

I do very heartily thank you for your letter of the 24th of August from Salamanca; and in recompence thereof I send you a little work of mine, that hath begun to pass the world. They tell me my Latin is turned into silver, and become current: had you been here, you should have been my inquisitor before it came forth: but, I think, the greatest inquisitor in Spain will allow it. But one thing you must pardon me if I make no haste to believe, that the world should be grown to such an ecstasy, as to reject truth in philosophy, because the author dissenteth in religion; no more than they do by Aristotle or Averroes. My great work goeth forward; and after my manner, I alter ever when I add. So that nothing is finished till all be finished. This I have written in the midst of a term and parliament; thinking no time so possessed, but that I should talk of these matters with so good and dear a friend. And so with my wonted wishes I leave you to God's goodness.

From Gray's-Inn, Feb. 27, 1610.

CIII. TO THE KING, DESIRING TO SUCCEED IN THE ATTORNEY'S PLACE.‡

IT MAY PLEASE YOUR MAJESTY,

Your great and princely favours towards me in advancing me to place; and, that which is to me

\* This duke of Florence was named Ferdinand, of the house of Medici; whose memory Sir Henry Wotton celebrated in a letter printed in his Remains, and presented to king Charles I. Pisaccius, the bishop of Premista in Poland, begins his chronicle of the year 1609, with an account of his

of no less comfort, your Majesty's benign and gracious acceptation, from time to time, of my poor services, much above the merit and value of them; hath almost brought me to an opinion that I may sooner, perchance, be wanting to myself in not asking, than find your Majesty's goodness wanting to me in any my reasonable and modest desires. And therefore perceiving how at this time preferences of law fly about mine ears, to some above me, and to some below me; I did conceive your Majesty may think it rather a kind of dulness, or want of faith, than modesty, if I should not come with my piteher to Jacob's well, as others do. Wherein I shall propound to your Majesty that which tendeth not so much to the raising of my fortune, as to the settling of my mind: being sometimes assailed with this cogitation, that by reason of my slowness to see and apprehend sudden occasions, keeping in one plain course of painful service, I may, *in sine discrimine*, be in danger to be neglected and forgotten: and if that should be, then were it much better for me, now while I stand in your Majesty's good opinion, though unworthy, and have some little reputation in the world, to give over the course I am in, and to make proof to do you some honour by my pen, either by writing some faithful narrative of your happy, though not untraded, times; or by recompiling your laws, which, I perceive, your Majesty laboureth with; and hath in your head, as Jupiter had Pallas, or some other the like work; for without some endeavour to do you honour, I would not live; than to spend my wits and time in this laborious place wherein I now serve; if it shall be deprived of those outward ornaments, which it was wont to have, in respect of an assured succession to some place of more dignity and rest; which seemeth now to be a hope altogether casual, if not wholly intercepted. Wherefore, not to hold your Majesty long, my humble suit to your Majesty is that, than the which I cannot well go lower; which is, that I may obtain your royal promise to succeed, if I live, into the attorney's place, whensoever it shall be void; it being but the natural and immediate step and rise which the place I now hold hath ever, in sort, made claim to, and almost never failed of. In this suit I make no friends but to your Majesty, rely upon no other motive but your grace, nor any other assurance but your word; whereof I had good experience, when I came to the solicitor's place, that it was like to the two great lights, which in their motions are never retrograde. So with my best prayers for your Majesty's happiness, I rest—

CIV. TO THE KING, UPON THE ATTORNEY'S SICKNESS.§

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I do understand by some of my good friends, to my

death; and sums up his character in these words: "Princeps animo excelso, et omnibus politicis artibus in tantum instructus, ut in multis seculis vix æqualem habuerit." *Stephens.*

† Rawley's Resuscitatio.

‡ Ibid.

§ Ibid.

great comfort, that your Majesty hath in mind your Majesty's royal promise, which to me is *anchora spēs*, touching the attorney's place. I hope Mr. Attorney shall do well. I thank God I wish no man's death, nor much mine own life, more than to do your Majesty service. For I account my life the accident, and my duty the substance. But this I will be bold to say; if it please God that I ever serve your Majesty in the attorney's place, I have known an attorney Coke, and an attorney Hobart, both worthy men, and far above myself: but if I should not find a middle way between their two dispositions and carriages, I should not satisfy myself. But these things are far or near, as it shall please God. Meanwhile I most humbly pray your Majesty, to accept my sacrifice of thanksgiving for your gracious favour. God preserve your Majesty, I ever remain—

CV. \*TO THE MOST HIGH AND EXCELLENT PRINCE, HENRY, PRINCE OF WALES, DUKE OF CORNWALL, AND EARL OF CHESTER. †

IT MAY PLEASE YOUR HIGHNESS,

HAVING divided my life into the contemplative and active part, I am desirous to give his Majesty and your highness of the fruits of both, simple though they be.

To write just treatises, requireth leisure in the writer, and leisure in the reader, and therefore are not so fit, neither in regard of your highness's princely affairs, nor in regard of my continual service; which is the cause that hath made me choose to write certain brief notes, set down rather significantly than curiously, which I have called "Essays." The word is late, but the thing is ancient; for Seneca's epistles to Lucilius, if you mark them well, are but essays, that is, dispersed meditations, though conveyed in the form of epistles. These labours of mine, I know, cannot be worthy of your highness, for what can be worthy of you? But my hope is, they may be as grains of salt, that will rather give you an appetite, than offend you with satiety. And although they handle those things wherein both men's lives and their persons are most conversant; yet what I have attained I know not; but I have endeavoured to make them not vulgar, but of a nature, whereof a man shall find much in experience, and little in books; so as they are neither repetitions nor fancies. But, however, I shall most humbly desire your highness to accept them in gracious part, and to conceive, that if I cannot rest, but must show my dutiful and devoted affection to your highness in these things which proceed from myself, I shall be much more ready to do it in performance of any of your princely commandments. And so wishing your highness all princely felicity, I rest,

Your highness's most humble servant,

1612.

FR. BACON.

\* Stephens's Second Collection, p. 1.

† Sir Francis Bacon designed to have prefixed this epistle to his *Essays*, printed in the year 1612, but was prevented by the prince's death; yet it was so well liked by Mr. Matthew,

CVI. TO THE EARL OF SALISBURY, LORD TREASURER, UPON A NEW-YEAR'S TIDE. ‡

IT MAY PLEASE YOUR GOOD LORDSHIP,

I WOULD entreat the new year to answer for the old, in my humble thanks to your lordship; both for many your favours, and chiefly that upon the occasion of Mr. Attorney's infirmity I found your lordship even as I could wish. This doth increase a desire in me to express my thankful mind to your lordship; hoping, that though I find age and decays grow upon me, yet I may have a flash or two of spirit left to do you service: and I do protest before God, without compliment or any light vanity of mind, that if I knew in what course of life to do you best service, I would take it, and make my thoughts, which now fly to many pieces, be reduced to that centre. But all this is no more but that I am; which is not much; but yet the entire of him that is, &c.

CVII. TO MY LORD MAYOR, UPON A PROCEEDING IN A PRIVATE CAUSE. §

MY VERY GOOD LORD,

I DID little expect, when I left your lordship last, that there would have been a proceeding against Mr. Barnard to his overthrow: wherein I must confess myself to be in a sort accessory; because he relying upon me for counsel, I advised that course which he followed. Wherein now I begin to question myself whether in preserving my respects unto your lordship, and the rest, I have not failed in the duty of my profession towards my client. For certainly, if the words had been heinous, and spoken in a malicious fashion, and in some public place, and well proved; and not a prattle in a tavern, caught hold of by one who, as I hear, is a detected sycophant, Standish, I mean; yet I know not what could have been done more, than to impose upon him a grievous fine, and to require the levying of the same; and to take away his means of life by his disfranchisement, and to commit him to a defamed prison during Christmas; in honour whereof, the prisoners in other courts do commonly of grace obtain some enlargement. This rigour of proceeding, to tell your lordship and the rest, as my good friends, my opinion plainly, tendeth not to strengthen authority, which is best supported by love and fear intermixed; but rather to make people discontented and servile; especially when such punishment is inflicted for words not by rule of law, but by a jurisdiction of discretion, which would evermore be moderately used. And I pray God, whereas, Mr. Recorder, when I was with you, did well and wisely put you in mind of the admonitions you often received from my lords, that you should bridle unruly tongues; that those kind of speeches and rumours, whereunto those admonitions do refer, which are

that he inserted part of it in his dedication to the duke of Tuscany, before his translation of those *Essays* printed in 1618.

‡ Rawley's Resuscitatio.

§ Ibid.

concerning the state and honour thereof, do not pass too licentiously in the city unpunished; while these words which concern your particular, are so straitly inquired into, and punished with such extremity. But these things your own wisdom, first or last, will best represent unto you. My writing unto you at this time is, to the end, that howsoever I do take it somewhat unkindly, that my meditation prevailed no more: yet that I might preserve that farther respect that I am willing to use unto such a state, in delivering my opinion unto you freely, before I would be of counsel, or move any thing that should cross your proceedings; which, notwithstanding, in case my client can receive no relief at your hands, I must and will do; continuing, nevertheless, in other things, my wonted good affections to yourselves and your occasions.

## CVIII. TO SIR VINCENT SKINNER.\*

SIR VINCENT SKINNER,†

I SEE that by your needless delays, this matter is grown to a new question; wherein for the matter itself, if it had been stayed at the beginning by my lord Treasurer and Mr. Chancellor, I should not so much have stood upon it. For the great and daily travels which I take in his Majesty's service, either are rewarded in themselves, in that they are but my duty, or else may deserve a much greater matter. Neither can I think amiss of any man, that in furtherance of the king's benefit moved the doubt, that knew not what warrant I had. But my wrong is, that you having had my lord Treasurer's and Mr. Chancellor's warrant for payment above a month since; you, I say, making your payments, belike upon such differences, as are better known to yourself, than agreeable to the respect of his Majesty's service, have delayed all this time, otherwise than I might have expected from our ancient acquaintance, or from that regard which one in your place may owe to one in mine. By occasion whereof there cometh to me a greater inconvenience, that now my name in sort must be in question amongst you, as if I were a man likely to demand that which were unreasonable, or be denied that which is reasonable: and this must be, because you can pleasure men at pleasure. But this I leave with this: that it is the first matter wherein I had occasion to discern of your friendship, which I see to fall to this; that whereas Mr. Chancellor, the last time, in my man's hearing, very honourably said, that he would not discontent any man in my place; it seems you have no such caution. But my writing to you now is to know of you where now the stay is, without being any more beholden to you, to whom indeed no man ought to

be beholden in those cases in a right cause. And so I bid you farewell.

FR. BACON.

## CIX. † TO SIR HENRY SAVILLE.‡

SIR,

COMING back from your invitation at Eton, where I had refreshed myself with company which I loved, I fell into a consideration of that part of policy, whereof philosophy speaketh too much, and laws too little; and that is, of education of youth. Whereupon fixing my mind a while, I found straightways, and noted even in the discourses of philosophers, which are so large in this argument, a strange silence concerning one principal part of that subject. For as touching the framing and seasoning of youth to moral virtues, as tolerance of labours, continency from pleasures, obedience, honour, and the like, they handle it; but touching the improvement, and helping of the intellectual powers, as of conceit, memory, and judgment, they say nothing: whether it were, that they thought it to be a matter wherein nature only prevailed; or that they intended it as referred to the several and proper arts which teach the use of reason and speech. But for the former of these two reasons, howsoever it pleaseth them to distinguish of habits and powers, the experience is manifest enough, that the motions and faculties of the wit and memory may be not only governed and guided, but also confirmed and enlarged by custom and exercise duly applied: as if a man exercise shooting, he shall not only shoot nearer the mark, but also draw a stronger bow. And as for the latter, of comprehending these precepts within the arts of logic and rhetoric, if it be rightly considered, their office is distinct altogether from this point; for it is no part of the doctrine of the use or handling of an instrument, to teach how to whet or grind the instrument to give it a sharp edge, or how to quench it, or otherwise whereby to give it a stronger temper. Wherefore finding this part of knowledge not broken, I have, but "tanquam aliud agens," entered into it, and salute you with it; dedicating it, after the ancient manner, first as to a dear friend, and then as to an apt person, forasmuch as you have both place to practise it, and judgment and leisure to look deeper into it than I have done. Herein you must call to mind *Ἀριστον μὲν ὕδωρ*. Though the argument be not of great height and dignity, nevertheless it is of great and universal use: and yet I do not see why, to consider it rightly, that should not be a learning of height, which teacheth to raise the highest and worthiest part of the mind. But howsoever that be, if the world take any light and use

\* Stephens's First Collection, p. 53.

† Officer of the receipts of the exchequer. Rymer, XVI. p. 497.

‡ Sir Henry Saville, so justly celebrated for his noble edition of St. Chrysostom and other learned works, was many years warden of Merton college in Oxford, in which university he founded a geometry and astronomy lecture, 25 May, 1620. See the instrument of foundation, Rymer, XVI. p. 217, and

likewise provost of Eton. To this gentleman, as of all the most proper, Sir Francis Bacon sends this discourse touching "Helps for the intellectual Powers in Youth;" but being an imperfect essay to incite others, he places this useful subject among the deficient reckonings up in his "Advancement of Learning." Stephens.

§ Stephens's First Collection, p. 54.

by this writing, I will the gratulation be to the good friendship and acquaintance between us two: and so I commend you to God's divine protection.

A DISCOURSE TOUCHING THE HELPS FOR INTELLECTUAL POWERS.

I DID ever hold it for an insolent and unlucky saying, "Faber quisque fortunæ suæ;" except it be uttered only as a hortative or spur to correct sloth. For otherwise, if it be believed as it soundeth, and that a man entereth into a high imagination that he can compass and fathom all accidents; and ascribeth all successes to his drifts and reaches; and the contrary to his errors and sleepings: it is commonly seen that the evening fortune of that man is not so prosperous, as of him that without slackening of his industry attributeth much to felicity and providence above him. But if the sentence were turned to this, "Faber quisque ingenii sui," it were somewhat more true, and much more profitable; because it would teach men to bend themselves to reform those imperfections in themselves which now they seek but to cover, and to attain those virtues and good parts which now they seek but to have only in show and demonstration. Yet notwithstanding every man attempteth to be of the first trade, of carpenters, and few bind themselves to the second; whereas nevertheless the rising in fortune seldom amendeth the mind; but on the other side, the removing of the stonds and impediments of the mind doth often clear the passage and current to a man's fortune. But certain it is, whether it be believed or no, that as the most excellent of metals, gold, is of all others the most pliant and most enduring to be wrought; so of all living and breathing substances, the perfectest man is the most susceptible of help, improvement, impression, and alteration; and not only in his body, but in his mind and spirit; and there again not only in his appetite and affection, but in his powers of wit and reason.

For as to the body of man, we find many and strange experiences, how nature is over-wrought by custom, even in actions that seem of most difficulty and least possible. As first in voluntary motion, which though it be termed voluntary, yet the highest degrees of it are not voluntary; for it is in my power and will to run; but to run faster than according to my lightness or disposition of body, is not in my power nor will. We see the industry and practice of tumblers and funambulos, what effects of great wonder it bringeth the body of man unto. So for suffering of pain and dolour, which is thought so contrary to the nature of man, there is much example of penances in strict orders of superstition what they do endure, such as may well verify the report of the Spartan boys, which were wont to be scourged upon the altar so bitterly as sometimes they died of it, and yet were never heard to complain. And to pass to those faculties which are reckoned more involuntary, as long fasting and abstinence, and the contrary extreme, voracity; the leaving and forbearing the use of drink for altogether; the enduring vehement cold, and the like; there have not wanted, neither do want, divers ex-

amples of strange victories over the body in every of these. Nay, in respiration, the proof hath been of some who by continual use of diving and working under the water, have brought themselves to be able to hold their breath an incredible time: and others that have been able, without suffocation, to endure the stifling breath of an oven or furnace so heated as though it did not scald nor burn, yet it was many degrees too hot for any man not made to it to breathe or take in. And some impostors and counterfeits likewise have been able to wreath and cast their bodies into strange forms and motions; yea, and others to bring themselves into trances and astonishments. All which examples do demonstrate how variously and to how high points and degrees the body of man may be as it were molded and wrought. And if any man conceive that it is some secret propriety of nature that hath been in those persons which have attained to those points, and that it is not open for every man to do the like, though he had been put to it; for which cause such things come but very rarely to pass: it is true no doubt but some persons are apter than others; but so as the more aptness causeth perfection, but the less aptness doth not disable: so that, for example, the more apt child, that is taken to be made a funambulo, will prove more excellent in his feats; but the less apt will be *gregarius funambulo* also. And there is small question, but that these abilities would have been more common, and others of like sort, not attempted, would likewise have been brought upon the stage, but for two reasons: the one, because of men's diffidence in prejudging them as impossibilities; for it holdeth in those things which the poet saith, "possunt, quia posse videntur;" for no man shall know how much may be done except he believe much may be done. The other reason is, because they be but practices base and inglorious, and of no great use, and therefore sequestered from reward of value, and on the other side painful; so as the recompence balanceth not with the travel and suffering. And as to the will of man, it is that which is most maniable and obedient; as that which admitteth most medicines to cure and alter it. The most sovereign of all is religion, which is able to change and transform it in the deepest and most inward inclinations and motions, and next to that is opinion and apprehension, whether it be infused by tradition and institution, or wrought in by disputation and persuasion; and the third is example, which transformeth the will of man into the similitude of that which is most observant and familiar towards it; and the fourth is, when one affection is healed and corrected by another, as when cowardice is remedied by shame and dishonour, or sluggishness and backwardness by indignation and emulation, and so of the like; and lastly, when all these means or any of them have new-framed or formed human will, then doth custom and habit corroborate and confirm all the rest. Therefore it is no marvel, though this faculty of the mind, of will and election, which inclineth affection and appetite, being but the inceptions and rudiments of will, may be so well governed and managed;

because it admitteth access to so divers remedies to be applied to it, and to work upon it: the effects whereof are so many and so known, as require no enumeration; but generally they do issue, as medicines do, into two kinds of cures, whereof the one is a just or true cure, and the other is called palliation: for either the labour and intention is to reform the affections really and truly, restraining them if they be too violent, and raising them if they be too soft and weak; or else it is to cover them, or, if occasion be, to pretend them and represent them: of the former sort whereof the examples are plentiful in the schools of philosophers, and in all other institutions of moral virtue: and of the other sort the examples are more plentiful in the courts of princes, and in all politic traffic; where it is ordinary to find, not only profound dissimulations, and suffocating the affections, that no note or mark appear of them outwardly; but also lively simulations and affectations, carrying the tokens of passions which are not, as *risus jussus* and *lacrymæ coactæ*, and the like.

#### OF HELPS OF THE INTELLECTUAL POWERS.

THE intellectual powers have fewer means to work upon them, than the will or body of man; but the one that prevailleth, that is, exercise, worketh more forcibly in them than in the rest.

\* The ancient habit of the philosophers, "Si quis quærat in utramque partem de omni scibili."

The exercise of scholars making verses extempore, "Stans pede in uno."

The exercise of lawyers in memory narrative.

The exercise of sophists, and "Jo. ad oppositum," with manifest effect.

Artificial memory greatly holpen by exercise.

The exercise of buffoons to draw all things to conceits ridiculous.

The means that help the understanding and faculties thereof are,

(Not example, as in the will, by conversation; and here the conceit of imitation already digested, with the confutation "obiter si videbitur," of Tully's opinion, advising a man to take some one to imitate. Similitude of faces analysed.)

Arts, Logic, Rhetoric; The ancients, Aristotle, Plato, Theætetus, Gorgias "litigiosus vel sophista," Protagoras, Aristotle, "schola sua." Topics, Elencha, Rhetorica, Organon, Cicero, Hermogenes. The Neoterica, Ramus, Agricola. "Nil sacri;" Lullius his Typocosmia, studying Cooper's Dictionary, Mathæus collection of proper words for metaphors, Agrippa "de vanitatibus," &c.

Ques. If not here of imitation.

Collections preparative. Aristotle's similitude of a shoemaker's shop, full of shoes of all sorts: Demosthenes, "Exordia concionum." Tully's precept of theses of all sorts preparative.

The relying upon exercise, with the difference of using and tempering the instrument: and the similitude of prescribing against the laws of nature and of estate.

\* These that follow are but indigested notes.

Five points.

1. That exercises are to be framed to the life; that is to say, to work ability in that kind whereof a man in the course of action shall have most use.

2. The indirect and oblique exercises; which do, *per partes* and *per consequentiam*, enable these faculties; which perhaps direct exercise at first would but distort; and these have chiefly place where the faculty is weak, not *per se*, but *per accidens*; as if want of memory grow through lightness of wit and want of staid attention; then the mathematics or the law helpeth; because they are things, wherein if the mind once roam, it cannot recover.

3. Of the advantages of exercise; as to dance with heavy shoes, to march with heavy armour and carriage; and the contrary advantage, in natures very dull and unapt, of working alacrity, by framing an exercise with some delight or affection.

"Ut pueris olim dant crustula blandi  
Doctores, elementa velint ut discere prima."

Horat. Sat. I. i. 25.

4. Of the cautions of exercise; as to beware lest by evil doing, as all beginners do weakly, a man grow not, and be inveterate, in an ill habit, and so take not the advantage of custom in perfection, but in confirming ill. Slubbering on the lute.

5. The marshalling and sequel of sciences and practices; logic and rhetoric should be used to be read after poesy, history, and philosophy; first, exercise, to do things well and clean; after, promptly and readily.

The exercises in the universities and schools are of memory and invention; either to speak by heart that which is set down *verbatim*, or to speak *extempore*; whereas there is little use in action of either or both; but most things which we utter are neither verbally premeditate, nor merely extemporal. Therefore exercise would be framed to take a little breathing, and to consider of heads; and then to fit and form the speech *extempore*. This would be done in two manners; both with writing and tables, and without: for in most actions it is permitted and passable to use the note, whereunto if a man be not accustomed, it will put him out.

There is no use of a narrative memory in *academiis*, namely, with circumstances of times, persons, and places, and with names; and it is one art to discourse, and another to relate and describe; and herein use and action is most conversant.

Also to sum up and contract, is a thing in action of very general use.

#### CX. SIR FRANCIS BACON TO MR. MATTHEW, ABOUT HIS WRITINGS, AND THE DEATH OF A FRIEND.†

SIR,

THE reason of so much time taken before my answer to yours of the fourth of August, was chiefly by accompanying my letter with the paper which

† Sir Tobie Matthew's Collection of Letters, p. 23.

here I send you ; and again, now lately, not to hold from you till the end of a letter, that which by grief may, for a time, efface all the former contents, the death of your good friend and mine A. B., to whom because I used to send my letters for conveyance to you, it made me so much the more unready in the despatch of them. In the mean time I think myself, howsoever it hath pleased God otherwise to bless me, a most unfortunate man, to be deprived of two, a great number in true friendship, of those friends, whom I accounted as no stage-friends, but private friends, and such, as with whom I might both freely and safely communicate, him by death, and you by absence. As for the memorial of the late deceased queen, I will not question whether you be to pass for a disinterested man or no ; I freely confess myself am not, and so I leave it. As for my other writings, you make me very glad of your approbation ; the rather, because you add a concurrence in opinion with others ; for else I might have conceived, that affection would, perhaps, have prevailed with you, beyond that, which if your judgment had been neat and free, you could have esteemed. And as for your caution, touching the dignity of ecclesiastical persons, I shall not have cause to meet with them any otherwise, than in that some schoolmen have, with excess, advanced the authority of Aristotle. Other occasion I shall have none. But now I have sent you that only part of the whole writing, which may perhaps have a little harshness and provocation in it : although I may almost secure myself, that if the preface passed so well, this will not irritate more, being indeed, to the preface, but as *palma ad pugnum*. Your own love expressed to me, I heartily embrace ; and hope that there will never be occasion of other than en-tireness between us ; which nothing but *majores charitates* shall ever be able to break off.

#### INTERROGATORIES WHEREUPON PEACHAM IS TO BE EXAMINED.

##### QUESTIONS IN GENERAL.\*

1. Who procured you, moved you, or advised you, to put in writing these traitorous slanders which you have set down against his Majesty's person and government, or any of them ?

2. Who gave you any advertisement or intelligence touching those particulars which are contained in your writings ; as touching the sale of the crown lands, the deceit of the king's officers, the greatness of the king's gifts, his keeping divided courts, and the rest ; and who hath conferred with you, or discoursed with you, concerning these points ?

3. Whom have you made privy and acquainted with the said writings, or any part of them ? and who hath been your helpers or confederates therein ?

4. What use mean you to make of the said writings ? was it by preaching them in sermon, or by publishing them in treatise ? if in sermon, at what

\* Sir David Dalrymple's Memorials and Letters relating to the history of Great Britain in the reign of James the First, p. 26. Edit. Glasgow. 1762.

time, and in what place meant you to have preached them ? if by treatise, to whom did you intend to dedicate, or exhibit, or deliver such treatise ?

5. What was the reason, and to what end did you first set down in scattered papers, and after knit up, in form of a treatise or sermon, such a mass of treasonable slanders against the king, his posterity, and the whole state ?

6. What moved you to write, the king might be stricken with death on the sudden, or within eight days, as Ananias or Nabal ? do you know of any conspiracy or danger to his person, or have you heard of any such attempt ?

7. You have confessed that these things were applied to the king ; and that, after the example of preachers and chroniclers, kings' infirmities are to be laid open ; this showeth plainly your use must be to publish them : show to whom and what manner.

8. What was the true time when you wrote the said writings, or any part of them ? and what was the last time you looked upon them, or perused them, before they were found or taken ?

9. What moved you to make doubt whether the people will rise against the king for taxes and oppressions ? Do you know, or have you heard, of any likelihood or purpose of any tumults or commotion ?

10. What moved you to write, That getting of the crown-land again would cost blood, and bring men to say, This is the heir, let us kill him ? Do you know, or have you heard of any conspiracy or danger to the prince, for doubt of calling back the crown-land ?

11. What moved you to prove, that all the king's officers might be put to the sword ? Do you know, or have you heard of any petition is intended to be made against the king's council and officers, or any rising of people against them ?

12. What moved you to say in your writing, That our king, before his coming to the kingdom, promised mercy and judgment, but we find neither ? What promise do you mean of, and wherein hath the king broke the same promise ?

There follows in the hand-writing of Secretary Winwood,

Upon those interrogatories, Peacham this day was examined before torture, in torture, between torture, and after torture ; notwithstanding nothing could be drawn from him, he still persisting in his obstinate and insensible denials, and former answers.

January the 19th, 1614.

#### CXI. TO THE KING, CONCERNING PEACHAM'S CAUSE.†

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

It grieveth me exceedingly that your Majesty should be so much troubled with this matter of  
† Rawley's Resuscitatio.

Peacham, whose raging devil seemeth to be turned into a dumb devil. But although we are driven to make our way through questions, which I wish were otherwise, yet, I hope well, the end will be good. But then every man must put to his helping hand; for else I may say to your Majesty, in this and the like cases, as St. Paul said to the centurion, when some of the mariners had an eye to the cock-boat, "Except these stay in the ship ye cannot be safe." I find in my lords great and worthy care of the business: And for my part, I hold my opinion and am strengthened in it by some records that I have found. God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

Jan. 21, 1614.

CXII. TO THE KING, TOUCHING PEACHAM'S CAUSE.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

THIS day in the afternoon was read your Majesty's letters of direction touching Peacham; † which because it concerneth properly the duty of my place, I thought it fit for me to give your Majesty both a speedy and a private account thereof; that your Majesty, knowing things clearly how they pass, may have the true fruit of your own wisdom and clear-seeing judgment in governing the business.

First, for the regularity which your Majesty, as a master in business of estate, doth prudently prescribe in examining and taking examinations, I subscribe to it; only I will say for myself, that I was not at this time the principal examiner.

For the course your Majesty directeth and commandeth for the feeling of the judges of the king's

• Rawley's Resuscitation.

† Peacham was accused of having inserted several treasonable passages in a sermon; but in a sermon never preached, nor intended to be made public: it had been taken out of his study. The king would have the judges give their opinion of this affair privately and apart; which my lord Coke refused to do, as a thing of dangerous tendency. Peacham was found guilty of high treason; as was Algernon Sidney for the like crime, in Charles the second's time.

‡ Sir John Dodderidge was born in Devonshire, and successively admitted in Exeter college, Oxford, and the Middle Temple, London: where having acquired the reputation of being a very great common and civil lawyer, as well as a general scholar, he was made serjeant at law I Jacobi, then the king's solicitor, and after that the king's serjeant, till he was advanced to be one of the judges of the king's bench; where he sat many years. He died 13 Sept. 1628, in the 73rd year of his age, and was succeeded by Sir George Crook, who tells us Sir John Dodderidge was a man of great knowledge, as well in the common law, as in other sciences, and divinity. Stephens.

§ Sir John Crook, eldest son of John Crook, of Chilton in Buckinghamshire, inherited his father's virtues and fortunes; and was very famous for his wisdom, eloquence, and knowledge in our laws: who being speaker in the house of commons in the last parliament of queen Elizabeth, had from her this commendation at the end thereof; that he had proceeded therein with such wisdom and discretion, that none before him had deserved better. After he had been recorder of London, and serjeant at law, he was 5 Jacobi made one of the justices of the king's bench; where he continued till his death, 23 Jan. 1619. He was brother to Sir George Crook, so well known to the professors of the common law by his three large volumes of Reports: which Sir George was one of the judges of the court of common pleas, in the latter end of the reign of king James, and in a few years after removed into the king's

bench, their several opinions, by distributing ourselves and enjoining secrecy; we did first find an encounter in the opinion of my lord Coke, who seemed to affirm, that such particular and, as he called it, auricular taking of opinions was not according to the custom of this realm; and seemed to divine, that his brethren would never do it. But when I replied, that it was our duty to pursue your Majesty's directions, and it were not amiss for his lordship to leave his brethren to their own answers; it was so concluded: and his lordship did desire that I might confer with himself; and Mr. Serjeant Montague was named to speak with Justice Crook; Mr. Serjeant Crew with Justice Houghton; and Mr. Solicitor with Justice Dodderidge. † This done, I took my fellows aside, and advised that they should presently speak with the three judges, before I could speak with my lord Coke, for doubt of infusion; and that they should not in any case make any doubt to the judges, as if they mistrusted they would not deliver any opinion apart, but speak resolutely to them, and only make their coming to be, to know what time they would appoint to be attended with the papers. This sorted not amiss; for Mr. Solicitor came to me this evening, and related to me that he had found judge Dodderidge very ready to give opinion in secret; and fell upon the same reason which upon your Majesty's first letter I had used to my lord Coke at the council-table: which was, that every judge was bound expressly by his oath, to give your Majesty counsel when he was called; and whether he should do it jointly or severally, that rested in your Majesty's good pleasure, as you would require it. And though the ordinary course was to assemble them, yet there might intervene cases, wherein the other course was more convenient. The like answer made justice Crook. § Justice Houghton, who is a soft man, || seemed desirous first bench; where he sat till the year 1641, when by reason of his great age and infirmities, the king at his own request gave him a gracious discharge, as appears in the preface to one of his books, where a due character is given of his virtues by his son-in-law Sir Harbottle Grimston, late master of the rolls. But certainly nothing can raise in us a more lively idea of his merit, than part of a letter written to the duke of Buckingham, by the bishop of Lincoln, lord keeper of the great seal, which I copied from his own hand.

"Westminster coll. Feb. 11, 1624.

"May it please your Grace,

"I will not trouble your Grace with any long congratulation for the honour your Grace hath gained, in the preferring of this most worthy man Sir George Crook to a judge his place. I know you must meet with the applause of this act from every man that cometh from hence. In good faith I never observed in all my small experience any accident in this kind, so generally and universally accompanied with the acclamation of all kind of people.

"I am importuned, by the rest of the judges of the common pleas, to return their most humble and hearty thanks to the king's Majesty for his choice, and to assure his Majesty, that though his Majesty hath been extraordinary fortunate, above all his predecessors, in the continual election of most worthy judges: yet hath his Majesty never placed upon any bench a man of more integrity and sufficiency than this gentleman: for which act they do with tears in their eyes praise and bless him." Stephens.

|| This expression is to be understood in a favourable sense, since Sir George Crook gives a more than ordinary character of him. Mem. That in Hilary term, 21 Jac. Sir Robert Houghton died at Serjeant's-Inn in Chancery-lane, being a most reverend, prudent, learned, and temperate judge, and inferior to none of his time. Stephens.

to confer; alleging that the other three judges had all served the crown before they were judges, but that he had not been much acquainted with business of this nature.

We purpose therefore forthwith, they shall be made acquainted with the papers; and if that could be done as suddenly as this was, I should make small doubt of their opinions: and howsoever, I hope, force of law and precedent will bind them to the truth: neither am I wholly out of hope, that my lord Coke himself, when I have in some dark manner put him in doubt that he shall be left alone, will not continue singular.

For Owen, I know not the reason why there should have been no mention made thereof in the last advertisement: for I must say for myself, that I have lost no moment of time in it, as my lord of Canterbury can bear me witness. For having received from my lord an additional of great importance; which was, that Owen of his own accord after examination should compare the case of your Majesty, if you were excommunicate, to the case of a prisoner condemned at the bar; which additional was subscribed by one witness; but yet I perceived it was spoken aloud, and in the hearing of others; I presently sent down a copy thereof, which is now come up, attested with the hands of three more, lest there should have been any scruple of *singularis testis*; so as for this case I may say, *omnia parata*; and we expect but a direction from your Majesty for the acquainting the judges severally; or the four judges of the king's bench, as your Majesty shall think good.

I forget not, nor forsole not, your Majesty's commandment touching recusants; of which, when it is ripe, I will give your Majesty a true account, and what is possible to be done, and where the impediment is. Mr. Secretary bringeth *bonam voluntatem*, but he is not versed in these things: and sometimes urgeth the conclusion without the premises, and by haste hindereth. It is my lord treasurer and the exchequer must help it, if it be holpen. I have heard more ways than one, of an offer of 20,000*l. per annum*, for farming the penalties of recusants, not including any offence capital or of *premunire*: wherein I will presume to say, that my poor endeavours, since I was by your great and sole grace your attorney, have been no small spurs to make them feel your laws, and seek this redemption; wherein I must also say, my lord Coke hath done his part. And I do assure your Majesty, I know it somewhat inwardly and groundedly, that by the courses we have taken they conform daily and in great numbers; and I would to God it were as well a conversion as a conformity: but if it should die by dispensation or dissimulation, then I fear that whereas your Majesty hath now so many ill subjects poor and detected, you shall then have them rich and dissembled. And therefore I hold this offer very considerable of so great an increase of revenue: if it can pass the fiery trial of religion and honour, which I wish all projects may pass.

Thus, inasmuch as I have made to your Majesty

\* Rawley's Resuscitatio.

somewhat a naked and particular account of business, I hope your Majesty will use it accordingly. God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

Jan. 27, 1614.

CXIII. TO THE KING, REPORTING THE STATE OF LORD CHANCELLOR ELLESMERE'S HEALTH.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

BECAUSE I know your Majesty would be glad to hear how it is with my lord chancellor, and that it pleased him out of his ancient and great love to me, which many times in sickness appeareth most, to admit me to a great deal of speech with him this afternoon, which during these three days he had scarcely done to any, I thought it might be pleasing to your Majesty to certify you how I found him. I found him in bed, but his spirits fresh and good, speaking stoutly, and without being spent or weary; and both willing and beginning of himself to speak, but wholly of your Majesty's business; wherein I cannot forget to relate this particular; that he wished that his sentencing of O. S.† at the day appointed, might be his last work, to conclude his services, and express his affection towards your Majesty. I told him, I knew your Majesty would be very desirous of his presence that day, so it might be without prejudice; but otherwise your Majesty esteemed a servant more than a service, especially such a servant. Not to trouble your Majesty, though good spirits in sickness be uncertain kalendars, yet I have very good comfort of him, and I hope by that day, &c.

January 29, 1614.

CXIV. TO THE KING, TOUCHING PEACHAM'S BUSINESS, &c.‡

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I RECEIVED this morning, by Mr. Murray, a message from your Majesty, of some warrant and confidence that I should advertise your Majesty of your business, wherein I had part: wherein I am first humbly to thank your Majesty for your good acceptance of my endeavours and service, which I am not able to furnish with any other quality, save faith and diligence.

For Peacham's case, I have, since my last letter, been with my lord Coke twice; once before Mr. Secretary's going down to your Majesty, and once since, which was yesterday: at the former of which times I delivered him Peacham's papers; and at this latter the precedents, which I had with care gathered and selected: for these degrees and order the business required.

† Mr. Oliver St. John.

‡ Rawley's Resuscitatio.

At the former I told him that he knew my errand, which stood upon two points; the one to inform him of the particular case of Peacham's treasons, for I never give it other word to him, the other, to receive his opinion to myself, and in secret, according to my commission from your Majesty.

At the former time he fell upon the same allegation which he had begun at the council-table; that judges were not to give opinion by fractions, but entirely according to the vote whereupon they should settle upon conference: and that this auricular taking of opinions, single and apart, was new and dangerous; and other words more vehement than I repeat.

I replied in civil and plain terms, that I wished his lordship, in my love to him, to think better of it; for that this, that his lordship was pleased to put into great words, seemed to me and my fellows, when we spake of it amongst ourselves, a reasonable and familiar matter, for a king to consult with his judges, either assembled or selected, or one by one. And then to give him a little outlet to save his first opinion, wherewith he is most commonly in love, I added, that judges sometimes might make a suit to be spared for their opinion, till they had spoken with their brethren; but if the king, upon his own princely judgment, for reason of estate, should think it fit to have it otherwise, and should so demand it, there was no declining: nay, that it touched upon a violation of their oath, which was to counsel the king, without distinction whether it were jointly or severally. Thereupon, I put him the case of the privy council, as if your Majesty should be pleased to command any of them to deliver their opinion apart and in private; whether it were a good answer to deny it, otherwise than if it were propounded at the table. To this he said, that the cases were not alike, because this concerned life. To which I replied, that questions of estate might concern thousands of lives, and many things more precious than the life of a particular; as war, and peace, and the like.

To conclude, his lordship "tanquam exitum querens," desired me for the time to leave with him the papers, without pressing him to consent to deliver a private opinion till he had perused them. I said I would; and the more willingly, because I thought his lordship, upon due consideration of the papers, would find the case to be so clear a case of treason, as he would make no difficulty to deliver his opinion in private; and so I was persuaded of the rest of the judges of the king's bench, who likewise, as I partly understood, made no scruple to deliver their own opinion in private; whereunto he said, which I noted well, that his brethren were wise men, and that they might make a show as if they would give an opinion, as was required; but the end would be, that it would come to this: they would say, they doubted of it, and so pray advice with the rest. But to this I answered, that I was sorry to hear him say so much, lest, if it came so to pass, some that loved him not might make a construction, that that which he had foretold, he had wrought. Thus your Majesty sees, that, as Solomon saith, "Gressus no-

lentis tanquam in sepi spinarum," it catcheth upon every thing.

The latter meeting is yet of more importance; for then, coming armed with divers precedents, I thought to set in with the best strength I could, and said, that before I descended to the record, I would break the case to him thus: That it was true we were to proceed upon the ancient statute of king Edward the third, because other temporary statutes were gone; and therefore it must be said in the indictment, "Imaginatus est et compassavit mortem et finalem destructionem domini regis:" then must the particular treasons follow in this manner, namely, "Et quod ad perimplendum nefandum propositum suum, composuit et conscripsit quandam detestabilem et venenosum libellum, sive scriptum, in quo, inter alia proditoria, continetur, etc." And then the principal passages of treason, taken forth of the papers, are to be entered in *hæc verba*; and with a conclusion in the end, "Ad intentionem quod ligeus populus et veri subditi domini regis cordialem suum amorem a domino rege retraherent, et ipsum dominum regem relinquerent, et guerram et insurrectionem contra eum leverent et facerent, etc." I have in this form followed the ancient style of the indictments for brevity sake, though when we come to the business itself, we shall enlarge it according to the use of the later times. This I represented to him, being a thing he is well acquainted with, that he might perceive the platform of that was intended, without any mistaking or obscurity. But then I fell to the matter itself, to lock him in as much as I could, namely,

That there be four means or manners, whereby the death of the king is compassed and imagined.

The first by some particular fact or plot.

The second, by disabling his title; as by affirming, that he is not lawful king; or that another ought to be king; or that he is an usurper, or a bastard, or the like.

The third, by subjecting his title to the pope; and thereby making him of an absolute king a conditional king.

The fourth, by disabling his regiment, and making him appear to be incapable or indigne to reign.

These things I relate to your Majesty in sum, as is fit: which, when I opened to my lord, I did insist a little more upon, with more efficacy and edge, and authority of law and record than I can now express.

Then I placed Peacham's treason within the last division, agreeable to divers precedents, whereof I had the records ready; and concluded, that your Majesty's safety and life and authority was thus by law insconced and quartered; and that it was in vain to fortify on three of the sides, and so leave you open on the fourth.

It is true, he heard me in a grave fashion more than accustomed, and took a pen and took notes of my divisions; and when he read the precedents and records, would say, This you mean, falleth within your first, or your second, division. In the end I expressly demanded his opinion, as that whereto both he and I were enjoined. But he desired me

to leave the precedents with him, that he might advise upon them. I told him, the rest of my fellows would despatch their part, and I should be behind with mine; which I persuaded myself your Majesty would impute rather to his backwardness than my negligence. He said, as soon as I should understand that the rest were ready, he would not be long after with his opinion.

For Mr. St. John, your Majesty knoweth, the day draweth on; and my lord chancellor's recovery, the season, and his age, promising not to be too hasty. I spake with him on Sunday, at what time I found him in bed, but his spirits strong, and not spent or wearied, and spake wholly of your business, leading me from one matter to another; and wished and seemed to hope, that he might attend the day for O. S. and it were, as he said, to be his last work, to conclude his services, and express his affection towards your Majesty. I presumed to

\* That she was a woman of intrigue, and, as Camden says in his Annals of King James, "*rebus turbandis nata*," will appear from her conduct relating to the king's and her kinswoman the lady Arabella: for having been the great instrument of her marriage with Sir William Seymour, afterwards earl and marquis of Hertford, and of procuring her escape from the Tower; she was convened before the privy council, for refusing to give any answer in a matter which so nearly concerned the state: she was fined in the star-chamber, and the charge which was then given against her, printed in the Cabala, p. 369, was, I doubt not, says Mr. Stephens, made by Sir Francis Bacon. But as if this was not a sufficient warning, she afterwards reported that the lady Arabella left a child by her husband; for which and her repeated obstinacy she incurred a greater censure in the same court. That charge, whether Sir Francis Bacon's or not, is as follows:

Your lordships do observe the nature of this charge: my lady of Shrewsbury, a lady wise, and that ought to know what duty requireth, is charged to have refused, and to have persisted in refusal to answer, and to be examined in a high cause of state: being examined by the council-table, which is a representative body of the king. The nature of the cause, upon which she was examined, is an essential point, which doth aggravate and increase this contempt and presumption; and therefore of necessity with that we must begin.

How graciously and parent-like his Majesty used the lady Arabella before she gave him cause of indignation, the world knoweth.

My lady notwithstanding, extremely ill-advised, transacted the most weighty and binding part and action of her life, which is her marriage, without acquainting his Majesty; which had been a neglect even to a mean parent: but being to our sovereign, and she standing so near to his Majesty as she doth, and then choosing such a condition as it pleased her to choose, all parties laid together, how dangerous it was, my lady might have read it in the fortune of that house wherewith she is matched; for it was not unlike the case of Mr. Seymour's grandmother.

The king nevertheless so remembered he was a king, as he forgot not he was a kinsman, and placed her only "*sub libera custodia*."

But now did my lady accumulate and heap up this offence with a far greater than the former, by seeking to withdraw herself out of the king's power into foreign parts.

That this flight or escape into foreign parts might have been seed of trouble to this state, is a matter whereof the conceit of a vulgar person is not uncapable.

For although my lady should have put on a mind to continue her loyalty, as nature and duty did bind her; yet when she was in another sphere, she must have moved in the motion of that orb, and not of the planet itself: and God forbid the king's felicity should be so little, as he should not have envy and envious enough in foreign parts.

It is true, if any foreigner had wrought upon this occasion, I do not doubt but the intent would have been, as the prophet saith, "they have conceived mischief, and brought forth a vain thing." But yet your lordships know that it is wisdom in princes, and it is a watch they owe to themselves and to their people, to stop the beginnings of evils, and not to despise them. Seneca saith well, "*Non jam amplius levia sunt pericula, si levia videantur;*" dangers cease to be light, because by despising they grow and gather strength.

say to him, that I knew your Majesty would be exceeding desirous of his being present that day, so as that it might be without prejudice to his continuance; but that otherwise your Majesty esteemed a servant more than a service, especially such a servant. Surely in mine opinion your Majesty were better put off the day than want his presence, considering the cause of the putting off is so notorious; and then the capital and the criminal may come together the next term.

I have not been unprofitable in helping to discover and examine, within these few days, a late patent, by surreption obtained from your Majesty, of the greatest forest in England, worth 30,000*l.* under colour of a defective title, for a matter of 400*l.* The person must be named, because the patent must be questioned. It is a great person, my lord of Shrewsbury; or rather, as I think, a greater than he, which is my lady of Shrewsbury.\*

And accordingly hath been the practice both of the wisest and stoutest princes to hold for matter pregnant of peril, to have any near them in blood to fly into foreign parts. Wherein I will not wander; but take the example of king Henry the seventh, a prince not unfit to be paralleled with his Majesty; I mean not the particular of Perkin Warbeck, for he was but an idol or a disguise; but the example I mean, is that of the earl of Suffolk, whom the king extorted from Philip of Austria. The story is memorable, that Philip, after the death of Isabella, coming to take possession of his kingdom of Castile, which was but matrimonial to his father-in-law Ferdinand of Aragon, was cast by weather upon the coast of Weymouth, where the Italian story saith, king Henry used him in all things else as a prince, but in one thing as a prisoner; for he forced upon him a promise to restore the earl of Suffolk that was fled into Flanders: and yet this I note was in the 21st year of his reign, when the king had a goodly prince at man's estate, besides his daughters, nay, and the whole line of Clarence nearer in title; for that earl of Suffolk was descended of a sister of Edward the fourth: so far off did that king take his aim. To this action of so deep consequence, it appeareth, you, my lady of Shrewsbury, were privy, not upon foreign suspicions or strained inferences, but upon vehement presumptions, now clear and particular testimony, as hath been opened to you; so as the king had not only reason to examine you upon it, but to have proceeded with you upon it as for a great contempt; which if it be reserved for the present, your ladyship is to understand it aright, that it is not defect of proof, but abundance of grace, that is the cause of this proceeding; and your ladyship shall do well to see into what danger you have brought yourself. All offences consist of the fact which is open, and the intent which is secret: this fact of conspiring in the flight of this lady may bear a hard and gentler construction; if upon overmuch affection to your kinswoman, gentler; if upon practice or other end, harder: you must take heed how you enter into such actions; whereof if the hidden part be drawn into that which is open, it may be your overthrow; which I speak not by way of charge, but by way of caution.

For that which you are properly charged with, you must know that all subjects, without distinction of degrees, owe to the king tribute and service, not only of their deed and hand, but of their knowledge and discovery.

If there be any thing that imports the king's service, they ought themselves undemanded to impart it; much more if they be called and examined; whether it be of their own fact or of another's, they ought to make direct answer: neither was there ever any subject brought in causes of estate to trial judicial, but first he passed examination; for examination is the entrance of justice in criminal causes; it is one of the eyes of the king's politic body; there are but two, information and examination; it may not be endured that one of the lights be put out by your example.

Your excuses are not worthy your own judgment; rash vows of lawful things are to be kept, but unlawful vows not; your own divines will tell you so. For your examples, they are some erroneous traditions. My lord of Pembroke spake somewhat that he was unlettered, and it was but when he was examined by one private counsellor, to whom he took exception; that of my lord Lumley is a fiction; the pre-eminences of nobility I would hold with to the last grain; but every day's experience is to the contrary: nay, you may learn

But I humbly pray your Majesty to know this first from my lord treasurer, who methinks groweth even studious in your business. God preserve your Majesty.

Your Majesty's most humble and devoted  
subject and servant,

FR. BACON.

Jan. 31, 1614.

The rather, in regard to Mr. Murray's absence, I humbly pray your Majesty to have a little regard to this letter.

CXV. TO THE KING, TOUCHING MY LORD  
CHANCELLOR'S AMENDMENT, &c.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

MY lord chancellor sent for me to speak with me this morning, about eight of the clock. I perceive he hath now that *signum sanitatis*, as to feel better his former weakness: for it is true, I did a little mistrust that it was but a boutade of desire and good spirit, when he promised himself strength for Friday, though I was won and carried with it. But now I find him well inclined to use, should I say, your liberty, or rather your interdict, signified by Mr. Secretary from your Majesty. His lordship showed me also your own letter, whereof he had told me before, but had not showed it me. What shall I say? I do much admire your goodness for writing such a letter at such a time.

He had sent also to my lord treasurer, to desire him to come to him about that time. His lordship came; and, not to trouble your Majesty with circumstances, both their lordships concluded, myself present and concurring, That it could be no prejudice to your Majesty's service to put off the day for Mr. St. John † till the next term: the rather, because there are seven of your privy council, which are at least *numerus* and part of the court, which are by infirmity like to be absent; that is, my lord chancellor, my lord admiral, my lord of Shrewsbury, my lord of Exeter, my lord Zouch, my lord Stanhope, and Mr. Chancellor of the duchy; wherefore they agreed to hold a council to-morrow in the afternoon for that purpose.

It is true, that I was always of opinion that it was no time lost; and I do think so the rather, because I could be content, that the matter of Peacham were first settled and put to a point. For there be, perchance, that would make the example upon Mr. St. John to stand for all. For Peacham, I expect some account from my fellows this day; if it should fall out otherwise, then I hope it may not be left so. Your Majesty, in your last letter, very wisely put in

a disjunctive, that the judges should deliver an opinion privately, either to my lord chancellor, or to ourselves distributed: his sickness made the latter way to be taken; but the other may be reserved with some accommodating, when we see the success of the former.

I am appointed this day to attend my lord treasurer for a proposition of raising profit and revenue by enfranchising copy-holders. I am right glad to see the patrimonial part of your revenue well looked into, as well as the fiscal: and I hope it will so be in other parts as well as this. God preserve your Majesty.

Your Majesty's most humble, and devoted  
subject and servant,

FR. BACON.

Feb. 7, 1614.

CXVI. TO THE KING, CONCERNING OWEN'S  
CAUSE, &c.‡

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

MYSELF, with the rest of your counsel learned, conferred with my lord Coke, and the rest of the judges of the king's bench only, being met at my lord's chamber, concerning the business of Owen. For although it be true, that your Majesty in your letter did mention that the same course might be held in the taking of opinions apart in this, which was prescribed and used in Peacham's cause; yet both my lords of the council, and we amongst ourselves, holding it, in a case so clear, not needful; but rather that it would import a diffidence in us, and deprive us of the means to debate it with the judges, if cause were, more strongly, which is somewhat, we thought best rather to use this form.

The judges desired us to leave the examinations and papers with them for some little time, to consider, which is a thing they use, but I conceive, there will be no manner of question made of it. My lord chief justice, to show forwardness, as I interpret it, showed us passages of Suarez and others, thereby to prove, that though your Majesty stood not excommunicate by particular sentence, yet by the general bulls of *Cena Domini*, and others, you were upon the matter excommunicate; and therefore, that the treason was as *de presenti*. But I (that foresee that if that course should be held, when it cometh to a public day, to disseminate to the vulgar an opinion, that your Majesty's case is all one, as if you were *de facto* particularly and expressly excommunicate, it would but increase the danger of your person with those that are desperate papists, and that it is needless) commended my lord's diligence, but withal put it by; and fell upon the other course,

champ, dated June 4, 1611, who had made their escape the day before. *Rymer*, XVI. p. 710. *Stephens*.

\* Rawley's Resuscitatio.

† In 1614, a benevolence was set on foot. Mr. Oliver St. John gave his opinion publicly, that it was against law, reason, and religion; for which he was condemned in a fine of five thousand pounds, and to be imprisoned during the king's pleasure.

‡ Rawley's Resuscitatio.

duty of lady Arabella herself, a lady of the blood, of a higher rank than yourself, who declining, and yet that but by request neither, to declare of your fact, yieldeth ingenuously to be examined of her own. I do not doubt but by this time you see both your own error, and the king's grace in proceeding with you in this manner.

Note. See the proclamation for apprehending the lady Arabella, and William Seymour, second son of the lord Beau-

which is the true way, that is, that whoever shall affirm, *in diem, or sub conditione*, that your Majesty may be destroyed, is a traitor *de presenti*; for that he maketh you but tenant for life, at the will of another. And I put the duke of Buckingham's case, who said, that if the king caused him to be arrested of treason, he would stab him; and the case of the impostress Elizabeth Barton, that said, that if king Henry the eighth took not his wife again, Catherine dowager, he should be no longer king; and the like.

It may be these particulars are not worth the relating; but because I find nothing in the world so important to your service, as to have you thoroughly informed, the ability of your direction considered, it maketh me thus to do; most humbly praying your Majesty to admonish me, if I be over troublesome.

For Peacham, the rest of my fellows are ready to make their report to your Majesty at such time, and in such manner, as your Majesty shall require it. Myself yesterday took my lord Coke aside, after the rest were gone, and told him all the rest were ready, and I was now to require his lordship's opinion, according to my commission. He said, I should have it; and repeated that twice or thrice, as thinking he had gone too far in that kind of negative, to deliver any opinion apart, before; and said, he would tell it me within a very short time, though he were not that instant ready. I have tossed this business *in omnes partes*, whereof I will give your Majesty knowledge when time serveth. God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

Feb. 11, 1614.

CXVII. TO THE KING, ABOUT A CERTIFICATE OF LORD CHIEF JUSTICE COKE.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I SEND your Majesty enclosed my lord Coke's answers; I will not call them rescripts, much less oracles. They are of his own hand, and offered to me as they are in writing; though I am glad of it for mine own discharge. I thought it my duty, as soon as I received them, instantly to send them to your Majesty; and forbear, for the present, to speak farther of them. I, for my part, though this Muscovia weather be a little too hard for my constitution, was ready to have waited upon your Majesty this day, all respects set aside: but my lord treasurer, in respect of the season and much other business, was willing to save me. I will only conclude touching these papers with a text, divided I cannot say, "Oportet isthæc fieri;" but I may say, "Finis autem nondum." God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

14 Feb. 1614.

\* Rawley's Resuscitatio.

CXVIII. SIR FRANCIS BACON TO KING  
JAMES.†

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I PERCEIVE by the bishop of Bath and Wells, that although it seemeth he hath dealt in an effectual manner with Peacham, yet he prevaileth little hitherto; for he hath gotten of him no new names, neither doth Peacham alter in his tale touching Sir John Sydenham.

Peacham standeth off in two material points *de novo*.

The one, he will not yet discover into whose hands he did put his papers touching the consistory villainies. They were not found with the other bundles upon the search; neither did he ever say that he had burned or defaced them. Therefore it is like they are in some person's hands; and it is like again, that that person that he hath trusted with those papers, he likewise trusted with these others of the treasons, I mean with the sight of them.

The other, that he taketh time to answer, when he is asked, whether he heard not from Mr. Paulet some such words, as he saith he heard from Sir John Sydenham, or in some lighter manner.

I hold it fit, that myself, and my fellows, go to the Tower, and so I purpose to examine him upon these points, and some others; at the least, that the world may take notice that the business is followed as heretofore, and that the stay of the trial is upon farther discovery, according to that we give out.

I think also it were not amiss to make a false fire, as if all things were ready for his going down to his trial, and that he were upon the very point of being carried down, to see what that will work with him.

Lastly, I do think it most necessary, and a point principally to be regarded, that because we live in an age wherein no counsel is kept, and that it is true there is some bruit abroad, that the judges of the king's bench do doubt of the case, that it should not be treason; that it be given out constantly, and yet as it were a secret, and so a fame to slide, that the doubt was only upon the publication, in that it was never published, for that (if your Majesty marketh it) taketh away, or at least qualifies the danger of the example; for that will be no man's case.

This is all I can do to thridd your Majesty's business with a continual and settled care, turning and returning, not with any thing in the world, save only the occasions themselves, and your Majesty's good pleasure.

I had no time to report to your Majesty, at your being here, the business referred, touching Mr. John Murray. I find a shrewd ground of a title against your Majesty and the patentees of these lands, by the coheir of Thomas earl of Northumberland; for I see a fair deed, I find a reasonable consideration for the making the said deed, being for the advancement of his daughters; for that all the possessions of the earldom were entailed upon his

† Sir David Dalrymple's Memoirs and Letters, p. 29.

brother; I find it was made four years before his rebellion; and I see some probable cause why it hath slept so long. But Mr. Murray's petition speaketh only of the moiety of one of the coheirs, whereunto if your Majesty should give way, you might be prejudiced in the other moiety. Therefore, if Mr. Murray can get power of the whole, then it may be safe for your Majesty to give way to the trial of the right, when the whole shall be submitted to you.

Mr. Murray is my dear friend; but I must cut even in these things, and so I know he would himself wish no other. God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

Febr. the 28th, 1614.

FR. BACON.

CXIX. SIR FRANCIS BACON TO KING JAMES.\*

MAY IT PLEASE YOUR MAJESTY,

I SEND your Majesty enclosed a copy of our last examination of Peacham, taken the 10th of this present, whereby your Majesty may perceive, that this miscreant wretch goeth back from all, and denieth his hand and all. No doubt, being fully of belief that he shall go presently down to his trial, be meant now to repeat his part which he purposed to play in the country, which was to deny all. But your Majesty, in your wisdom, perceiveth, that this denial of his hand, being not possible to be counterfeited, and sworn to by Adams, and so oft by himself formerly confessed and admitted, could not mend his case before any jury in the world, but rather aggravateth it by his notorious impudence and falsehood, and will make him more odious. He never deceived me; for when others had hopes of discovery, and thought time well spent that way, I told your Majesty *pereuntibus mille figurae*, and that he did but now turn himself into divers shapes, to save or delay his punishment. And therefore submitting myself to your Majesty's high wisdom, I think myself bound, in conscience, to put your Majesty in remembrance, whether Sir John Sydenham shall be detained upon this man's impeaching, in whom there is no truth. Notwithstanding, that further inquiry be made of this other person, and that information and light be taken from Mr. Paulet and his servants, I hold it, as things are, necessary. God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant.

March the 12th, 1614.

FR. BACON.

THE EXAMINATION OF EDMUND PEACHAM  
AT THE TOWER, MARCH 10, 1614.†

BEING asked, when he was last at London, and where he lodged when he was there? he saith he

\* Sir David Dalrymple's Memorials and Letters, p. 32.

was last at London after the end of the last parliament, but where he lodged he knoweth not.

Being asked, with what gentlemen, or others in London, when he was here last, he had conference and speech withal? he saith he had speech only with Sir Maurice Berkeley, and that about the petitions only, which had been before sent up to him by the people of the country, touching the apparitors and the grievances offered the people by the court of the officials.

Being asked, touching one Peacham, of his name, what knowledge he had of him, and whether he was not the person that did put into his mind divers of those traitorous passages which are both in his loose and contexted papers? he saith this Peacham, of his name, was a divine, a scholar, and a traveller; and that he came to him some years past, the certainty of the time he cannot remember, and lay at this examine's house a quarter of a year, and took so much upon him, as he had scarce the command of his own house or study; but that he would be writing, sometimes in the church, sometimes in the steeple, sometimes in this examine's study; and now saith farther, that those papers, as well loose as contexted, which he had formerly confessed to be of his own hand, might be of the writing of the said Peacham; and saith confidently, that none of them are his own hand-writing or inditing; but whatsoever is in his former examinations, as well before his Majesty's learned council, as before my lord of Canterbury, and other the lords, and others of his Majesty's privy council, was wholly out of fear, and to avoid torture, and not otherwise.

Being required to describe what manner of man the said Peacham that lay at his house was; he saith that he was tall of stature, and can make no other description of him, but saith, as he taketh it, he dwelleth sometimes at Honslow as a minister; for he hath seen his letters of orders and licence under the hand of Mr. D. Chatterton, sometime bishop of Lincoln. He denieth to set his hand to this examination.

*Examinat' per* FR. BACON,

RANULPHE CREWE.

GER. HELWYSSE,

H. YELVERTON.

THE TRUE STATE OF THE QUESTION WHETHER PEACHAM'S CASE BE TREASON OR NOT.‡

IN THE HAND-WRITING OF KING JAMES.

THE indictment is grounded upon the statute of Edward the third, that he compassed and imagined the king's death; the indictment then is according to the law, and justly founded. But how is it verified? First, then, I gather this conclusion, that since the indictment is made according to the prescription of law, the process is formal, the law is fulfilled, and the judge and jury are only to hearken to the verification of the hypothesis, and whether the minor be well proved or not.

† Ibid. p. 34.

‡ Ibid. p. 36.

That his writing of this libel is an overt act, the judges themselves do confess: that it was made fit for publication, the form of it bewrays the self; that he kept not these papers in a secret and safe façon, (manner,) but in an open house and lidless cask, both himself and the messenger do confess; nay, himself confesseth, that he wrote them at the desire of another man, to whom he should have shown them when they had been perfected, and who craved an account for them, which though it be denied by the other party, worketh sufficiently against the deponer himself. Nay, he confesses that in the end he meant to preach it; and though, for diminishing of his fault, he alleges, that he meant first to have taken all the bitterness out of it, that excuse is altogether absurd, for there is no other stuff in, or through it all, but bitterness, which being taken out, it must be a quintessence of an alchemy, spirit without a body, or popish accidents without a substance; and then to what end would he have published such a ghost, or shadow without a substance, *cui bono?* and to what end did he so farce (stuff) it first with venom, only to scrape it out again; but it had been hard making that sermon to have tasted well, that was once so spiced, "quo semel est imbuta recens, etc." But yet this very excuse is by himself overthrown again, confessing that he meant to retain some of the most crafty malicious parts in it, as, &c. [So the manuscript.]

The only question that remains then is, whether it may be verified and proved, that, by the publishing of this sermon or rather libel of his he compassed or imagined the king's death: which I prove he did by this reason; had he compiled a sermon upon any other ground, or stuffed the bulk of it with any other matter, and only powdered it here and there with some passages of reprehension of the king; or had he never so bitterly railed against the king, and upbraided him of any two or three, though monstrous vices, it might yet have been some way excusable; or yet had he spued forth all the venom that is in this libel of his, in a railing speech, either in drunkenness, or upon the occasion of any sudden passion or discontentment, it might likewise have been excused in some sort; but upon the one part, to heap up all the injuries that the hearts of men, or malice of the devil, can invent against the king, to disable him utterly, not to be a king, not to be a christian, not to be a man, or a reasonable creature, not worthy of breath here, nor salvation hereafter; and, upon the other part, not to do this hastily or rashly, but after long premeditation, first having made collections in scattered papers, and then reduced it to a method, in a formal treatise, a text chosen for the purpose, a prayer premitted, applying all his wits to bring out of that text what he could, *in malam partem*, against the king.

This, I say, is a plain proof that he intended to compass or imagine, by this means, the king's destruction. For, will ye look upon the person or quality of the man, it was the far likeliest means he could use to bring his wicked intention to pass; his person an old, unable, and unwieldy man; his quality a minister, a preacher; and that in so remote a

part of the country, as he had no more means of access to the king's person, than he had ability of body, or resolution of spirit, to act such a desperate attempt with his own hands upon him; and therefore, as every creature is ablest, in their own element, either to defend themselves, or annoy their adversaries, as birds in the air, fishes in the water, and so forth, what so ready and natural means had he whereby to annoy the king as by publishing such a seditious libel? and so, under the specious pretext of conscience, to inflame the hearts of the people against him. Now, here is no illation nor inference made upon the statute, it stands *in puris naturalibus*, but only a just inference and probation of the guilty intention of this party. So the only thing the judges can doubt of, is of the delinquent's intention; and then the question will be, whether if these reasons be stronger to enforce the guiltiness of his intention, or his bare denial to clear him, since nature teaches every man to defend his life as long as he may; and whether, in case there were a doubt herein, the judges should not rather incline to that side wherein all probability lies: but if judges will needs trust better the bare negative of an infamous delinquent, without expressing what other end he could probably have, than all the probabilities, or rather infallible consequences upon the other part, caring more for the safety of such a monster, than the preservation of a crown, in all ages following, whereupon depend the lives of many millions: happy then are all desperate and seditious knaves, but the fortune of this crown is more than miserable. *Quod Deus avertat.*

#### CXX. TO THE KING, TOUCHING MATTER OF HIS MAJESTY'S REVENUE AND PROFIT.\*

IT MAY PLEASE YOUR MAJESTY,

I MAY remember what Tacitus saith, by occasion that Tiberius was often and long absent from Rome. "In urbe, et parva et magna negotia imperatorem simul premunt:" but, saith he, "In recessu, dimissis rebus minoris momenti, summæ rerum magnarum magis agitantur." This maketh me think it shall be no incivility to trouble your Majesty with business, during your abode from London; knowing that your Majesty's meditations are the principal wheel of your estate; and being warranted from a former commandment which I received from you.

I do now only send your Majesty these papers enclosed, because I do greatly desire so far forth to preserve my credit with you, as thus, that whereas lately, perhaps out of too much desire, which induceth too much belief, I was bold to say, that I thought it as easy for your Majesty to come out of want, as to go forth of your gallery; your Majesty would not take me for a dreamer, or a projector; I send your Majesty therefore some grounds of my hopes. And for that paper, which I have gathered of increasements sperate, I beseech you to give me leave to think, that if any of the particulars do fail,

\* Rawley's Resuscitatio.

it will be rather for want of workmanship in those that shall deal in them, than want of materials in the things themselves. The other paper hath many discarding cards; and I send it chiefly that your Majesty may be the less surprised by projectors; who pretend sometimes great discoveries and inventions in things, that have been propounded, and, perhaps, after a better fashion, long since. God Almighty preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

25 April, 1615.

CXXI. TO THE KING.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

MR. ST. JOHN his day is past, and well past. I hold it to be *Janus Bifrons*; it hath a good aspect to that which is past, and to the future; and doth both satisfy and prepare. All did well; my lord chief justice delivered the law for the benevolence strongly; I would he had done it timely. Mr. Chancellor of the exchequer † spake finely, somewhat after the manner of my late lord privy seal; ‡ not all out so sharply, but as elegantly. Sir Thomas Lake, who is also new in that court, did very well, familiarly and counsellor-like.§ My lord of Pembroke,|| who is likewise a stranger there, did extra-

\* Rawley's Resuscitatio.

† The chancellor of the exchequer here meant was Sir Fulke Greville, who being early initiated into the court of queen Elizabeth, became a polite and fine gentleman; and in the 18th of king James was created lord Brooke. He erected a noble monument for himself on the north side of Warwick church, which hath escaped the late desolation, with this well-known inscription, "Fulke Greville, servant to queen Elizabeth, counsellor to king James, and friend to Sir Philip Sydney." Nor is he less remembered by the monument he has left in his writings and poems, chiefly composed in his youth, and in familiar exercises with the gentleman I have before mentioned. *Stephens.*

‡ Late earl of Northampton.

§ Sir Thomas Lake was about this time made one of the principal secretaries of state, as he had been formerly Latin secretary to queen Elizabeth, and before that time bred under Sir Francis Walsingham. But in the year 1618, falling into the king's displeasure, and being engaged in the quarrels of his wife and daughter the lady Roos, with the countess of Exeter; he was at first suspended from the execution of his place, and afterwards removed, and deeply censured and fined in the star-chamber; although it is said the king then gave him in open court this public eulogy, that he was a minister of state fit to serve the greatest prince in Europe. Whilst this storm was hanging over his head, he writ many letters to the king and the marquis of Buckingham, which I have seen, complaining of his misfortune, that his ruin was likely to proceed from the assistance he gave to his nearest relations. *Stephens.*

|| William earl of Pembroke, son to Henry Herbert earl of Pembroke, lord president of the council in the marches of Wales, by Mary his wife, a lady in whom the Muses and Graces seemed to meet; whose very letters, in the judgment of one who saw many of them, declared her to be mistress of a pen not inferior to that of her brother, the admirable Sir Philip Sydney, and to whom he addressed his *Arcadia*. Nor did this gentleman degenerate from their wit and spirit, as by his own poems, his great patronage of learned men, and resolute opposition to the Spanish match, did, among other instances, fully prove. In the year 1616, he was made lord chamberlain, and chosen chancellor of the university of Oxford. He died suddenly on the 10th of April 1630, having just completed fifty years. But his only son deceasing a

ordinarily well, and became himself well, and had an evident applause. I meant well also; and because my information was the ground; having spoken out of a few heads which I had gathered, for I seldom do more, I set down, as soon as I came home, cursorily, a frame of that I had said; though I persuade myself I spake it with more life. I have sent it to Mr. Murray sealed; if your Majesty have so much idle time to look upon it, it may give some light of the day's work: but I most humbly pray your Majesty to pardon the errors. God preserve you ever.

Your Majesty's most humble subject and devoted  
servant,

FR. BACON.

April 29, 1615.

CXXII. TO THE KING, CONCERNING THE  
NEW COMPANY.¶

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

YOUR Majesty shall shortly receive the bill for the incorporation of the new company,\*\* together with a bill for the privy seal, being a dependency thereof: for this morning I subscribed and docketted them both. I think it therefore now time to represent to your Majesty's high wisdom that which I conceive, and have had long in my mind, concerning your Majesty's service, and honourable profit in this business.

child before him, his estate and honours descended upon his younger brother, Philip earl of Montgomery, the lineal ancestor of the present noble and learned earl. *Stephens.*

¶ Rawley's Resuscitatio.

\*\* Among other projects for supplying his Majesty with money, after his abrupt dissolution of the parliament, there was one proposed through the lord treasurer's means by Sir William Cockayne, an alderman of London. For the society or fellowship of merchant adventurers, having enjoyed by licence from the crown a power of exporting yearly several thousands of English cloths undyed; it was imagined that the king would not only receive an increase in his customs by the importation of materials necessary for dyeing, but the nation a considerable advantage in employing the subject, and improving the manufacture to its utmost before it was exported. This proposition being besides attended with the offer of an immediate profit to his Majesty, was soon embraced; the charter granted to the merchant adventurers recalled, and Sir William Cockayne and several other traders incorporated upon certain conditions, as appears in part from this letter; though some other letters in the same and the following year inform us what difficulties the king and council, and indeed the whole kingdom sustained thereby. For the trading towns in the Low Countries and in Germany, which were the great mart and staple of these commodities, perceiving themselves in danger of losing the profit, which they had long reaped by dyeing and dressing great quantities of English cloth, the Dutch prohibited the whole commodity; and the materials being either dearer here or the manufacturers less skilled in fixing of the colours, the vent of cloth was soon at a stand; upon which the clamour of the countries extended itself to the court. So that, after several attempts to carry on the design, Sir Fr. Bacon finding the new company variable in themselves, and not able to comply with their proposals, but making new and springing demands, and that the whole matter was more and more perplexed, sent on the 14th of October, 1616, a letter to the lord Villiers, enclosing his reasons why the new company was no longer to be trusted, but the old company to be treated with and revived. Accordingly, pursuant to a power of revocation, contained in the new charter, it was recalled, and a proclamation published for restoring the old company, dated August 12, 1617; and soon after another charter granted them upon their payment of 50,000*l.* *Stephens's Introd. p. 38, 39.*

This profit, which hath proceeded from a worthy service of the lord treasurer, I have from the beginning constantly affected; as may well appear by my sundry labours from time to time in the same: for I hold it a worthy character of your Majesty's reign and times; insomuch, as though your Majesty might have at this time, as is spoken, a great annual benefit for the quitting of it; yet I shall never be the man that should wish for your Majesty to deprive yourself of that beatitude, "*Beatius est dare quam accipere,*" in this cause; but to sacrifice your profit, though as your Majesty's state is, it be precious to you, to so great a good of your kingdom; although this project is not without a profit immediate unto you, by the increasing of customs upon the materials of dyes.

But here is the case: the new company by this patent and privy seal are to have two things, wholly diverse from the first intention, or rather *ex diametro* opposite unto the same; which nevertheless they must of necessity have, or else the work is overthrown: so as I may call them *mala necessaria*, but yet withal temporary. For as men make war to have peace; so these merchants must have licence for whites, to the end to banish whites; and they must have licence to use tenters, to the end to banish tenters.

This is therefore that I say; your Majesty, upon these two points, may justly, and with honour, and with preservation of your first intention inviolate, demand profit in the interim, as long as these unnatural points continue, and then to cease. For your Majesty may be pleased to observe, that they are to have all the old company's profit by the trade of whites; they are again to have, upon the proportion of cloths which they shall vend dyed and dressed, the Flemings' profit upon the tenter. Now then, I say, as it had been to good husbandry for a king to have taken profit for them, if the project could have been effected at once, as was voiced, so on the other side it might be, perchance, too little husbandry and providence to take nothing of them, for that which is merely lucrative to them in the mean time. Nay, I say farther, this will greatly conduce, and be a kind of security to the end desired. For I always feared, and do yet fear, that when men, by condition merchants, though never so honest, have gotten into their hands the trade of whites, and the dispensation to tenter, wherein they shall reap profit for that which they never sowed; but have gotten themselves certainties, in respect of the state's hopes: they are like enough to sleep upon this as upon a pillow, and to make no haste to go on with the rest. And though it may be said, that this is a thing will easily appear to the state, yet, no doubt, means may be devised and found to draw the business in length. So that I conclude, that if your Majesty take a profit of them in the interim, considering you refuse profit from the old company, it will be both spur and bridle to them, to make them pace aright to your Majesty's end.

This in all humbleness, according to my vowed care and fidelity, being no man's man but your Ma-

\* Rawley's Resuscitatio.

esty's, I present, leave, and submit to your Majesty's better judgment, and I could wish your Majesty would speak with Sir Thomas Lake in it; who, besides his good habit which he hath in business, beareth, methinks, an indifferent hand in this particular; and, if it please your Majesty, it may proceed as from yourself, and not as a motion or observation of mine.

Your Majesty need not in this to be straitened in time, as if this must be demanded or treated before you sign their bill. For I foreseeing this, and foreseeing that many things might fall out which I could not foresee, have handled it so, as with their good contentment there is a power of revocation inserted into their patent. And so commending your Majesty to God's blessing and precious custody, I rest,

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

Aug. 12, 1615.

CXXIII. TO SIR GEORGE VILLIERS, ABOUT  
ROPER'S PLACE.\*

SIR,

SENDING to the king upon occasion, I would not fail to salute you by my letter; which, that it may be more than two lines, I add this for news; that as I was sitting by my lord chief justice, upon the commission for the indicting of the great person; one of the judges asked him, whether Roper were dead; he said, he for his part knew not; another of the judges answered, It should concern you, my lord, to know it. Whereupon he turned his speech to me, and said, No, Mr. Attorney, I will not wrestle now in my latter times. My lord, said I, you speak like a wise man. Well, saith he, they have had no luck with it that have had it. I said again, those days be past. Here you have the dialogue to make you merry. But in sadness, I was glad to perceive he meant not to contest. I can but honour and love you, and rest

Your assured friend and servant,

FR. BACON.

Jan. 22, 1615.

CXXIV. SIR FRANCIS BACON TO KING  
JAMES.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

It pleased your Majesty to commit to my care and trust for Westminster-hall three particulars; that of the *rege inconsulto*, which concerneth Murray; that of the commendams, which concerneth the bishop of Lincoln; and that of the *habeas corpus*, which concerneth the chancery.

These causes, although I gave them private additions, yet they are merely, or at least chiefly, yours; and the die runneth upon your royal prerogatives' diminution, or entire conservation. Of these it is my duty to give your Majesty a short account.

† Sir David Dalrymple's Memorials and Letters, p. 46.

For that of the *rege inconsulto*, I argued the same in the king's bench on Thursday last. There argued on the other part Mr. George Crook, the judge's brother, an able book-man, and one that was manned forth with all the furniture that the bar could give him, I will not say the bench, and with the study of a long vacation. I was to answer, which hath a mixture of the sudden; and of myself I will not, nor cannot say any thing; but that my voice served me well for two hours and a half; and that those that understood nothing, could tell me that I lost not one auditor that was present in the beginning, but staid till the latter end. If I should say more, there were too many witnesses, for I never saw the court more full, that mought disprove me.

My lord Coke was pleased to say, that it was a famous argument; but withal, he asked me a politic and tempting question: for taking occasion by a notable precedent I had cited, where upon the like writ brought, all the judges in England assembled, and that privately, lest they should seem to dispute the king's commandment, and upon conference, with one mind agreed, that the writ must be obeyed. Upon this hold, my lord asked me, whether I would have all the rest of the judges called to it. I was not caught: but knowing well that the judges of the common pleas were most of all others interested in respect of the prothonotaries, I answered civilly, that I could advise of it; but that I did not distrust the court; and, besides, I thought the case so clear, as it needed not.

Sir, I do perceive, that I have not only stopped, but almost turned the stream: and I see how things cool by this, that the judges that were wont to call so hotly upon the business, when they had heard, of themselves took a fortnight day to advise what they will do, by which time the term will be near at an end; and I know they little expected to have the matter so beaten down with book-law, upon which my argument wholly went: so that every mean student was satisfied. Yet, because the times are as they are, I could wish, in all humbleness, that your Majesty would remember and renew your former commandment which you gave my lord chief justice in Michaelmas term, which was that after he had heard your attorney, which is now done, he should forbear farther proceeding till he had spoke with your Majesty.

It concerneth your Majesty threefold. First, in this particular of Murray; next, in consequence of fourteen several patents, part in queen Elizabeth's time, some in your Majesty's time, which depend upon the like question; but chiefly, because this writ is a mean provided by the ancient law of England, to bring any case that may concern your Majesty in profit or power, from the ordinary benches, to be tried and judged before your chancellor of England, by the ordinary and legal part of his power: and your Majesty knoweth your chancellor is ever a principal counsellor, and instrument of monarchy, of immediate dependence upon the king; and therefore like to be a safe and tender guardian of the royal rights.

For the case of the commendams, a matter like-

wise of great consequence, though nothing near the first, this day I was prepared to have argued it before all the judges; but, by reason of the sickness of the sergeant which was provided to argue on the other side, although I pressed to have had some other day appointed this term; yet it pleased divers of the judges to do me the honour, as to say it was not fit any should argue against me, upon so small time of warning, it is adjourned to the first Saturday next term.

For the matter of the *habeas corpus*, I perceive this common employment of my lord chancellor, and my lord chief justice, in these examinations, is such a *vinculum*, as they will not square while these matters are in hand, so that there is *altum silentium* of that matter. God ever preserve your Majesty.

Your Majesty's most humble and bounden subject  
and servant,

FR. BACON.

27th Jan. 1615.

CXXV. TO THE KING, ADVISING HIM TO  
BREAK OFF WITH THE NEW COMPANY.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I SPAKE yesternight long with my lord Coke; and for the *rege inconsulto*, I conceive by him it will be an *amplius deliberandum censeo*, as I thought at first, so as for the present your Majesty shall not need to renew your commandment of stay. I spake with him also about some propositions concerning your Majesty's casual revenue; wherein I found him to consent with me fully, assuming, nevertheless, that he had thought of them before; but it is one thing to have the vapour of a thought, another to digest business aright. He, on his part, imparted to me divers things of great weight concerning the reparation of your Majesty's means and finances, which I heard gladly; insomuch as he perceiving the same, I think was the readier to open himself to me in one circumstance, which he did much inculcate. I concur fully with him that they are to be held secret; for I never saw but that business is like a child, which is framed invisibly in the womb; and if it come forth too soon, it will be abortive. I know, in most of them, the prosecution must rest much upon myself. But I that had the power to prevail in the farmers' case of the French wines, without the help of my lord Coke, shall be better able to go through these with his help, the ground being no less just. And this I shall ever add of mine own, that I shall ever respect your Majesty's honour no less than your profit; and shall also take care, according to my pensive manner, that that which is good for the present, have not in it hidden seeds of future inconveniences.

The matter of the new company was referred to me by the lords of the privy council; wherein, after some private speech with Sir Lionel Cranfield, I made that report which I held most agreeable to truth, and your Majesty's service. If this new com-

\* Rawley's Resuscitatio.

pany break, it must either be put upon the patent, or upon the order made by themselves. For the patent, I satisfied the board, that there was no title in it which was not either *verbatim* in the patent of the old company, or by special warrant from the table inserted. My lord Coke, with much respect to me, acknowledged, but disliked the old patent in itself, and disclaimed his being at the table when the additions were allowed. But in my opinion, howsoever my lord Coke, to magnify his science in law, draweth every thing, though sometimes improperly and unseasonably, to that kind of question, it is not convenient to break the business upon those points. For considering they were but clauses that were in the former patents, and in many other patents of companies; and that the additions likewise passed the allowance of the table, it will be but clamoured, and perhaps conceived, that to quarrel them now, is but an occasion taken; and that the times are but changed, rather than the matter. But that which preserveth entire your Majesty's honour, and the constancy of your proceedings, is to put the breach upon their orders.

For this light I gave in my report, which the table readily apprehended, and much approved; that if the table reject their orders as unlawful and unjust, it doth free you from their contract: for whosoever contracteth or undertaketh any thing, is always understood to perform it by lawful means; so as they have plainly abused the state, if that which they have undertaken be either impossible or unjust.

I am bold to present this consideration to that excellent faculty of your Majesty's judgment: because I think it importeth that future good which may grow to your Majesty in the close of this business; that the falling off be without all exception. God have you in his precious custody.

Your Majesty's most humble and bounden subject  
and servant,

Feb. 3, 1615.

FR. BACON.

#### CXXXVI. TO THE KING, TOUCHING THE CHANCELLOR'S SICKNESS.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I AM glad to understand by Mr. Murray, that your Majesty accepteth well of my poor endeavours in opening unto you the passages of your service, that business may come the less crude, and the more prepared to your royal judgment; the perfection whereof, as I cannot expect they should satisfy in every particular; so, I hope, through my assiduity there will result a good total.

My lord chancellor's sickness falleth out *duro tempore*. I have always known him a wise man, and of just elevation for monarchy: but your Majesty's service must not be mortal. And if you lose him, as your Majesty hath now of late purchased many hearts by depressing the wicked; so God

\* Rawley's Resuscitation.

doth minister unto you a counterpart to do the like, by raising the honest. God evermore preserve your Majesty.

Your Majesty's most humble subject and bounden  
servant,

FR. BACON.

Feb. 9, 1615.

#### CXXVII. TO THE KING.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

YOUR worthy chancellor, I fear, goeth his last day. God hath hitherto used to weed out such servants as grew not fit for your Majesty; but now he hath gathered to himself one of the choicer plants, a true sage, or *salvia*, out of our garden; but your Majesty's service must not be mortal.

Upon this heavy accident I pray your Majesty, in all humbleness and sincerity, to give me leave to use a few words. I must never forget, when I moved your Majesty for the attorney's place, that it was your own sole act, and not my lord of Somerset's; who when he knew your Majesty had resolved it, thrust himself into the business to gain thanks; and therefore I have no reason to pray to saints.

I shall now again make oblation to your Majesty, first, of my heart, then, of my service, thirdly, of my place of attorney, which I think is honestly worth 6000*l.* per annum, and fourthly, of my place in the star-chamber, which is worth 1600*l.* per annum; and with the favour and countenance of a chancellor much more. I hope I may be acquitted of presumption if I think of it, both because my father had the place, which is some civil inducement to my desire, and I pray God your Majesty may have twenty no worse years in your greatness, than queen Elizabeth had in her model, after my father's placing, and chiefly because the chancellor's place, after it went to the law, was ever conferred upon some of the learned counsel, and never upon a judge. For Audeley was raised from king's serjeant; my father from attorney of the wards; Bromley from solicitor; Puckering from queen's serjeant; Egerton from master of the rolls, having newly left the attorney's place. Now, I beseech your Majesty, let me put you the present case truly. If you take my lord Coke, this will follow; first, your Majesty shall put an overruling nature into an overruling place, which may breed an extreme; next, you shall blunt his industries in matter of your finances, which seemeth to aim at another place; and lastly, popular men are no sure mounters for your Majesty's saddle. If you take my lord Hobart, you shall have a judge at the upper end of your council-board, and another at the lower end; whereby your Majesty will find your prerogative pent; for though there should be emulation between them, yet as legists they will agree in magnifying that wherein they are best; he is no statesman, but an economist wholly for himself; so as your Majesty, more than an outward form, will find little help in him for the business.

† Stephens's First Collection, p. 84.

If you take my lord of Canterbury, I will say no more, but the chancellor's place requires a whole man; and to have both jurisdictions, spiritual and temporal, in that height, is fit but for a king.

For myself, I can only present your Majesty with "gloria in obsequio;" \* yet I dare promise, that if I sit in that place, your business shall not make such short turns upon you, as it doth; but when a direction is once given, it shall be pursued and performed, and your Majesty shall only be troubled with the true care of a king, which is, to think what you would have done in chief, and not how for the passages.

I do presume also, in respect of my father's memory, and that I have been always gracious in the lower house, I have some interest in the gentlemen of England, and shall be able to do some good effect in rectifying that body of parliament-men, which is *cardo rerum*. For let me tell your Majesty, that that part of the chancellor's place, which is to judge in equity between party and party, that same *regnum judiciale*, which since my father's time is but too much enlarged, concerneth your Majesty least, more than the acquitting of your conscience for justice: but it is the other parts, of a moderator amongst your council, of an overseer over your judges, of a planter of fit justices and governors in the country, that importeth your affairs and these times most.

I will add also, that I hope by my care the inventive part of your council will be strengthened; who now commonly do exercise rather their judgments than their inventions, and the inventive part cometh from projectors and private men, which cannot be so well; in which kind my lord of Salisbury had a good method, if his ends had been upright.

To conclude: if I were the man I would be, I should hope, that as your Majesty hath of late won hearts by depressing, you should in this lose no hearts by advancing: for I see your people can better skill of *concretum* than *abstractum*, and that the waves of their affections flow rather after persons than things: so that acts of this nature, if this were one, do more good than twenty bills of grace. If God call my lord, the warrants and commissions which are requisite for the taking of the seal, and for the working with it, and for the reviving of warrants under his hand, which die with him, and the like, shall be in readiness. And in this, time presseth more, because it is the end of a term, and almost the beginning of the circuits; so that the seal cannot stand still: but this may be done as heretofore by commission, till your Majesty hath resolved of an officer. God ever preserve your Majesty.

Your Majesty's most humble subject and bounden servant,

FR. BACON.

Feb. 12, 1615.

\* "Gloria in obsequio" is taken from the sixth book of the Annals of Tacitus: where some persons being accused for their intimacy with Sejanus, the late great favourite of the emperor Tiberius; M. Terentius, a Roman knight, did not, like others, excuse or deny the same for fear of punishment; but doth in the senate make an ingenious confession thereof, and gives his reasons why he not only courted, but rejoiced in obtaining the friendship of Sejanus. And then addresses himself as if speaking to Tiberius, in these words; "Non est

CXXVIII. A LETTER TO THE KING, OF MY LORD CHANCELLOR'S AMENDMENT, AND THE DIFFERENCE BEGUN BETWEEN THE CHANCERY AND KING'S BENCH.†

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I do find, God be thanked, a sensible amendment in my lord chancellor: I was with him yesterday in private conference about half an hour; and this day again, at such a time as he did seal, which he endured well almost the space of an hour, though the vapour of wax be offensive to him. He is free from a fever, perfect in his powers of memory and speech; and not hollow in his voice nor look; he hath no panting or labouring respiration; neither are his coughs dry or weak. But whosoever thinketh his disease is but melancholy, he maketh no true judgment of it; for it is plainly a formed and deep cough, with a pectoral surcharge; so that at times he doth almost *animam agere*. I forbear to advertise your Majesty of the care I took to have commissions in readiness, because Mr. Secretary Lake hath let me understand, he signified as much to your Majesty: but I hope there shall be no use for them at this time. And as I am glad to advertise your Majesty of the amendment of your chancellor's person, so I am sorry to accompany it with an advertisement of the sickness of your chancery court, though by the grace of God that cure will be much easier than the other. It is true I did lately write to your Majesty, that for the matter of the *Habeas corpora*, which was the third matter in law you had given me in charge, I did think the communion in service between my lord chancellor and my lord chief justice, in the great business of examination, would so join them as they would not square at this time; but pardon me, I humbly pray your Majesty, if I have too reasonable thoughts.

And yet that which happened the last day of term, concerning certain indictments in the nature of *præmunire*, preferred into the king's bench, but not found, is not so much as is voiced abroad; though I must say, it is "omni tempore nimium, et hoc tempore alienum:" and therefore, I beseech your Majesty not to give any believing ear to reports, but to receive the truth from me, that am your attorney-general, and ought to stand indifferent for jurisdictions of all courts; which account I cannot give your Majesty now, because I was then absent; and some are now absent, which are properly and authentically to inform me touching that which passed. Neither let this any ways disjoint your other business, for there is a time for all things, and this very accident may be turned to good. Not that I am of opinion that that same cunning maxim of

nostrum æstimare, quem supra cæteros, et quibus de causis extollas: tibi summum rerum judicium dii dedere: nobis obsequii gloria relicta est." "It does not become us to inquire into the person you are pleased to prefer above others, or into the reasons: to you heaven has given a consummate judgment; to us there remains the glory of a cheerful obedience." Stephens.

† Rawley's Resuscitatio.

"*Separa et impera*," which sometimes holdeth in persons, can well take place in jurisdictions; but because some good occasion by this excess may be taken to settle that which would have been more dangerous, if it had gone out by little and little. God ever preserve your Majesty.

Your Majesty's most humble subject and most bounden servant,

FR. BACON.

February 15, 1615.

CXXIX. TO SIR GEORGE VILLIERS.\*

SIR,

I RECEIVED this morning from you two letters by the same bearer; the one written before, the other after his Majesty had received my last.

In this difference between the two courts of chancery and king's bench, for so I had rather take it for this time, than between the persons of my lord chancellor and my lord chief justice, I marvel not, if rumour get way of true relation; for I know fame hath swift wings, especially that which hath black feathers: but within these two days, for sooner I cannot be ready, I will write unto his Majesty both the narrative truly, and my opinion sincerely; taking much comfort that I serve such a king that hath God's property in discerning truly of men's hearts. I purpose to speak with my lord chancellor this day: and so to exhibit that cordial of his Majesty's grace, as I hope that other accident will rather rouse and raise his spirit, than deject him, or incline him to relapse. Meanwhile I commend the wit of a mean man that said this other day, "Well, the next term you shall have an old man come with a besom of wormwood in his hand that will sweep away all this." For it is my lord chancellor's fashion, specially towards the summer, to carry a posy of wormwood. I write this letter in haste to return your messenger with it. God keep you; and long and happily may you serve his Majesty.

Your true and affectionate servant,

FR. BACON.

Feb. 19, 1615.

SIR, I thank you for your inward letter; I have burned it as you commanded: but the fire it hath kindled in me will never be extinguished.

CXXX. TO SIR GEORGE VILLIERS, ABOUT SWEARING HIM INTO THE PRIVY COUNCIL.†

SIR,

My lord chancellor's health growing with the days, and his resignation being an uncertainty, I would be glad you went on with my first motion, my swearing privy counsellor. This I desire not so much to make myself more sure of the other, and to put it past competition, for herein I rest wholly

\* Rawley's Resuscitatio.

† Ibid.

upon the king and your excellent self, but because I find hourly that I need this strength in his Majesty's service, both for my better warrant and satisfaction of my conscience, that I deal not in things above my vocation; and for my better countenance and prevailing, where his Majesty's service is, under any pretext, opposed, I would it were despatched. I remember a greater matter than this was despatched by a letter from Royston, which was the placing of the archbishop that now is; and I imagine the king did it on purpose, that the act might appear to be his own.

My lord chancellor told me yesterday in plain terms, that if the king would ask his opinion touching the person that he would commend to succeed him upon death or disability, he would name me for the fittest man. You may advise, whether use may not be made of this offer.

I sent a pretty while since a paper to Mr. John Murray, which was indeed a little remembrance of some things past, concerning my honest and faithful services to his Majesty; not by way of boasting, from which I am far, but as tokens of my studying his service uprightly and carefully. If you be pleased to call for the paper, which is with Mr. John Murray, and to find a fit time that his Majesty may cast an eye upon it, I think it will do no hurt; and I have written to Mr. Murray to deliver the paper, if you call for it. God keep you in all happiness.

Your truest servant,

Feb. 1, 1615.

FR. BACON.

CXXXI. TO THE KING, CONCERNING THE PRÆMUNIRE IN THE KING'S BENCH, AGAINST THE CHANCERY.‡

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I WAS yesterday in the afternoon with my lord chancellor according to your commandment which I received by the master of the horse, and find the old man well comforted, both towards God, and towards the world: and that same middle comfort which is divine and human, proceeding from your Majesty, being God's lieutenant on earth, I am persuaded, hath been a great cause that such a sickness hath been portable to such an age. I did not fail in my conjecture, that this business of the chancery hath stirred him; he showeth to despise it, but he is full of it, and almost like a young duelist that findeth himself behind-hand.

I will now, as your Majesty requireth, give you a true relation of that which hath passed: neither will I decline your royal commandment for delivering my opinion also, though it be a tender subject to write on; but I that account my being but as an accident to my service, will neglect no duty upon self-safety.

First, it is necessary I let your Majesty know the ground of the difference between the two courts, that your Majesty may the better understand the narrative.

‡ Rawley's Resuscitatio.

There was a statute made 27 Edw. III. cap. 1, which, no doubt, in the principal intention thereof, was ordained against those that sued to Rome; wherein there are words somewhat general against any "that questioneth or impeacheth any judgment given in the king's courts, or in any other court." Upon these doubtful words, other courts, the controversy groweth. For the sounder interpretation taketh them to be meant of those courts, which though locally they were not held at Rome, or where the pope's chair was, but here within the realm; yet in their jurisdiction had their dependence upon the court of Rome; as were the court of the legate here, and the courts of the archbishops and bishops, which were then but subordinate judgment-seats to that high tribunal of Rome. And for this construction, the opposition of the words, if they be well observed, between the king's courts and other courts, maketh very much; for it importeth as if those other courts were not the king's courts. Also the main scope of the statute fortifieth the same. And lastly, the practice of many ages. The other interpretation, which cleaveth to the letter, expoundeth the king's courts to be the courts of law only, and other courts to be courts of equity, as the chancery, exchequer-chamber, duchy, &c. Though this also flieth indeed from the letter, for that all these are the king's courts.

There is also another statute, which is but a simple prohibition, and not with a penalty of a *præmunire*, as the other is, "that after judgments given in the king's courts, the parties shall be in peace, except the judgment be undone by error or attain't," which is a legal form of reversal. And of this also I hold the sounder interpretation to be to settle possessions against disturbances, and not to take away remedy in equity, where those judgments are obtained *ex rigore juris*, and against good conscience.

But upon these two statutes there hath been a late conceit in some, that if a judgment pass at the common law against any, that he may not after sue for relief in chancery; and if he doth, both he, and his counsel, and his solicitors, yea and the judge in equity himself, are within the danger of those statutes.

Here your Majesty hath the true state of the question, which I was necessarily to open to you first, because your Majesty calleth for this relation, not as news, but as business. Now to the historical part.

It is the course of the king's bench, that they give in charge to a grand jury offences of all natures, to be presented within Middlesex, where the said court is; and the manner is, to enumerate them as it were in articles. This was done by justice Crook, the Wednesday before the term ended. And that article, If any man, after a judgment given, had drawn the said judgment to a new examination in any other court, was by him specially given in charge; which had not used to be given in charge before. It is true, it was not solemnly dwelt upon, but as it were thrown in amongst the rest.

The last day of the term, and, that which all men condemn, the supposed last day of my lord chan-

cellor's life, there were two indictments preferred of *præmunire*, for suing in chancery after judgment in common law; the one by Rich. Glanville, the other by William Allen: the former against Courtney, the party in chancery, Gibb the counsellor, and Deurst the clerk; the latter against alderman Bowles and Humfrey Smith, parties in chancery; serjeant More the counsellor, Elias Wood, solicitor in the cause, and Sir John Tindal, master of the chancery, and an assessor to my lord chancellor.

For the cases themselves, it were too long to trouble your Majesty with them; but this I will say, if they were set on that preferred them, they were the worst marksmen that ever were that set them on. For there could not have been chosen two such causes to the honour and advantage of the chancery, for the justness of the decrees, and the foulness and scandal both of fact and person, in those that impeach the decrees.

The grand jury, consisting, as it seemeth, of very substantial and intelligent persons, would not find the bills, notwithstanding they were clamoured by the parties, and twice sent back by the court; and in conclusion, resolutely seventeen of nineteen found an *Ignoramus*; wherein, for that time, I think *Ignoramus* was wiser than those that know too much.

Your Majesty will pardon me, if I be sparing in delivering to you some other circumstances of aggravation, and of concurrences of some like matters the same day; as if it had been some fatal constellation. They be not things so sufficiently tried, as I dare put them into your ear.

For my opinion, I cannot but begin with this preface, that I am infinitely sorry that your Majesty is thus put to salve and cure, not only accidents of time, but errors of servants; for I account this a kind of sickness of my lord Coke's, that comes almost in as ill a time as the sickness of my lord chancellor. And as, I think, it was one of the wisest parts that ever he played, when he went down to your Majesty to Royston, and desired to have my lord chancellor joined with him; so this was one of the weakest parts that ever he played, to make all the world perceive that my lord chancellor is severed from him at this time.

But for that which may concern your service, which is my end, leaving other men to their own ways, first, my opinion is plainly that my lord Coke at this time is not to be disgraced; both because he is so well habituate for that which remaineth of these capital causes, and also for that which I find is in his breast touching your finances and matters of repair of your estate; and, if I might speak it, as I think it were good his hopes were at an end in some kind, so I could wish they were raised in some other.

On the other side, this great and public affront, not only to the reverend and well deserving person of your chancellor, and at a time when he was thought to lie on dying, which was barbarous, but to your high court of chancery, which is the court of your absolute power, may not, in my opinion, pass lightly, nor end only in some formal atonement, but use is to be made thereof for the settling of your

authority and strengthening of your prerogative according to the true rules of monarchy.

Now to reconcile and accommodate these two advices, which seem almost opposite; first, your Majesty may not see it, though I confess it to be suspicious, that my lord Coke was any way aforehand privy to that which was done; or that he did set it or animate it, but only took the matter as it came before him; and that his error was only, that at such a time he did not divert it in some good manner.

Secondly, if it be true, as is reported, that any of the puisne judges did stir this business; or that they did openly revile and menace the jury for doing their conscience, as they did honestly and truly, I think that judge is worthy to lose his place. And, to be plain with your Majesty, I do not think there is any thing a greater *polychreston*, or *ad multa utile* to your affairs, than upon a just and fit occasion to make some example against the presumption of a judge in causes that concern your Majesty, whereby the whole body of those magistrates may be contained the better in awe; and it may be this will light upon no unfit subject of a person, that is rude, and that no man cares for.

Thirdly, if there be no one so much in fault, which I cannot yet affirm either way, and there must be a just ground, God forbid else, yet I should think, that the very presumption of going so far, in so high a cause, deserveth to have that done which was done in this very case upon the indictment of serjeant Heale in queen Elizabeth's time; that the judges should answer it upon their knees before your Majesty or your council, and receive a sharp admonition: at which time also, my lord Wray, being then chief justice, slipt the collar and was forborn.

Fourthly, for the persons themselves, Glanville and Allen, which are base fellows and turbulent, I think there will be discovered and proved against them, besides the preferring of the bills, such combinations and contemptuous speeches and behaviours, as there will be good ground to call them, and perhaps some of their petty counsellors at law, into the star-chamber.

In all this which I have said your Majesty may be pleased to observe, that I do not engage you much in the main point of the jurisdiction, for which I have a great deal of reason, which I now forbear. But two things I wish to be done: the one, that your Majesty take this occasion to redouble unto all your judges your ancient and true charge and rule, That you will endure no innovating the point of jurisdiction, but will have every court impaled within their own precedents, and not assume to themselves new powers upon conceits and inventions of law; the other, that in these high causes that touch upon state and monarchy, your Majesty give them strait charge, that upon any occasions intervenient hereafter, they do not make the vulgar party to their contestations, by public handling them, before they have consulted with your Majesty, to whom the reglement of those things only appertaineth.

To conclude, I am not without hope, that your Majesty managing this business according to your great wisdom, unto which I acknowledge myself

not to be worthy to be card-holder, or candle-holder, will make profit of this accident as a thing of God's sending.

Lastly, I may not forget to represent to your Majesty, that there is no thinking of arraignments until these things be somewhat accommodated, and some outward and superficial reconciliation at least made between my lord chancellor and my lord chief justice; for this accident is a banquet to all the delinquent's friends. But this is a thing that falleth out naturally of itself, in respect of the judges going circuit, and my lord chancellor's infirmity with hope of recovery: and although this protraction of time may breed some doubt of mutability, yet I have lately learned out of an excellent letter of a certain king, that the sun showeth sometimes watry to our eyes, but when the cloud is gone, the sun is as before. God ever preserve your Majesty.

Your Majesty's most humble subject and bounden servant,

FR. BACON.

Feb. 21, 1615.

#### CXXXII. TO THE KING, ON THE BREACH OF THE NEW COMPANY.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

Your privy council have wisely and truly discerned of the orders and demands of the new company, that they are unlawful and unjust; and themselves have now acknowledged the work impossible without them, by their petition in writing now registered in the council book; so as this conclusion of their own making, is become peremptory and final to themselves; and the impossibility confessed, the practice and abuse reserved to the judgment the state shall make of it.

This breach then of this great contract is wholly on their part, which could not have been if your Majesty had broken upon the patent; for the patent was your Majesty's act, the orders are their act; and in the former case they had not been liable to farther question, now they are.

There rest two things to be considered: the one, if they, like Proteus when he is hard held, shall yet again vary their shape; and shall quit their orders convinced of injustice, and lay their imposition only upon the trade of whites, whether your Majesty shall farther expect: the other, if your Majesty dissolve them upon this breach on their part, what is farther to be done for the setting of the trade again in joint, and for your own honour and profit: in both which points I will not presume to give opinion, but only to break the business for your Majesty's better judgment.

For the first, I am sorry the occasion was given by my lord Coke's speech at this time of the commitment of some of them, that they should seek *omnem movere lapidem* to help themselves. Better it had been, if, as my lord Fenton said to me that morning very judiciously and with a great deal of

\* Rawley's Resuscitatio.

foreight, that for that time they should have had a bridge made for them to be gone. But my lord Coke floweth according to his own tides, and not according to the tides of business. The thing which my lord Coke said was good and too little, but at this time it was too much; but that is past. Howsoever, if they should go back and seek again to entertain your Majesty with new orders or offers, as is said to be intended, your Majesty hath ready two answers of repulse, if it please your Majesty to use them.

The one, that this is now the fourth time that they have mainly broken with your Majesty, and contradicted themselves. First, they undertook to dye and dress all the cloths of the realm; soon after, they wound themselves into the trade of whites, and came down to the proportion contracted. Secondly, they ought to have performed that contract according to their subscription *pro rata*, without any of these orders and impositions; soon after, they deserted their subscription, and had recourse to these devices of orders. Thirdly, if by order, and not by subscription, yet their orders should have laid it upon the whites; which is an unlawful and prohibited trade; nevertheless they would have brought in lawful and settled trades, full manufactures, merchandise of all natures, poll-money or brotherhood-money, and I cannot tell what. And now lastly, it seemeth, they would go back to lay it upon the whites; and therefore whether your Majesty will any more rest and build this great wheel of your kingdom upon these broken and brittle pins, and try experiments farther upon the health and body of your state, I leave to your princely judgment.

The other answer of repulse is a kind of apposing them what they will do after the three years contracted for; which is a point hitherto not much stirred, though Sir Lionel Cranfield hath ever beaten upon it in his speech with me; for after the three years they are not tied otherways than as trade shall give encouragement, of which encouragement your Majesty hath a bitter taste: and if they should hold on according to the third year's proportion, and not rise on by farther gradation, your Majesty hath not your end. No, I fear, and have long feared, that this feeding of the foreigner may be dangerous; for as we may think to hold up our clothing by vent of whites, till we can dye and dress; so they, I mean the Dutch, will think to hold up their manufacture of dyeing and dressing upon our whites, till they can clothe: so as your Majesty hath the greatest reason in the world to make the new company to come in and strengthen that part of their contract; and they refusing, as it is confidently believed they will, to make their default more visible to all men.

For the second main part of your Majesty's consultation, that is, what shall be done supposing an absolute breach, I have had some speech with Mr. Secretary Lake, and likewise with Sir Lionel Cranfield; and, as I conceive, there may be three ways taken into consideration: the first is, that the old company be restored, who, no doubt, are in appetite, and, as I find by Sir Lionel Cranfield, not unprepared;

and that the licences, the one, that of 30,000 cloths, which was the old licence; the other that of my lord Cumberland's, which is without stint, my lord of Cumberland receiving satisfaction, be compounded into one entire licence without stint; and then, that they amongst themselves take order for that profit which hath been offered to your Majesty. This is a plain and known way, wherein your Majesty is not an actor; only it hath this, that the work of dyeing and dressing cloths, which hath been so much glorified, seemeth to be wholly relinquished, if you leave there. The second is, that there be a free trade of cloth, with this difference, that the dyed and dressed pay no custom, and the whites double custom, it being a merchandise prohibited and only licentiate. This continueth in life and fame the work desired, and will have a popular applause: but, I do confess, I did ever think that trading in companies is most agreeable to the English nature, which wanteth that same general vein of a republic which runneth in the Dutch, and serveth to them instead of a company; and therefore I dare not advise to adventure this great trade of the kingdom, which hath been so long under government, in a free or loose trade. The third is a compound way of both, which is, to go on with the trade of whites by the old company restored; and that your Majesty's profit be raised by order amongst themselves, rather than by double custom, wherein you must be the actor; and that nevertheless there be added a privilege to the same company to carry out cloths dyed, and dressed, custom-free; which will still continue as a glorious beam of your Majesty's royal design. I hope and wish at least, that this which I have written may be of some use to your Majesty, to settle, by the advice of the lords about you, this great business: at the least it is the effect of my care and poor ability, which, if in me be any, it is given me to no other end but faithfully to serve your Majesty. God ever preserve you.

Your Majesty's most humble subject and bounden servant,

Feb. 25, 1615.

FR. BACON.

CXXXIII. TO SIR GEORGE VILLIERS.\*

SIR,

I HUMBLY pray you not to think me over-hasty or much in appetite, if I put you in remembrance of my motion of strengthening me with the oath and trust of a privy counsellor; not for mine own strength, for as to that, I thank God, I am armed within, but for the strength of my service. The times I submit to you, who knoweth them best. But sure I am, there were never times which did more require a king's attorney to be well armed, and, as I said once to you, to wear a gauntlet and not a glove: the arraignments, when they proceed; the contention between the chancery and king's bench; the great cause of the *rege inconsulto*, which is so precious to the king's prerogative; divers

\* Rawley's Resuscitatio.

other services that concern the king's revenue and the repair of his estate. Besides, it pleaseth his Majesty to accept well of my relations touching his business, which may seem a kind of interloping, as the merchants call it, for one that is no counsellor. But I leave all unto you, thinking myself infinitely bounden unto you for your great favours, the beams whereof I see plainly reflect upon me even from others; so that now I have no greater ambition than this, that as the king showeth himself to you the best master, so I might be found your best servant. In which wish and vow I shall ever rest,

Most devoted and affectionate to obey your commands,

FR. BACON.

Feb. 27, 1615.

CXXXIV. TO HIS MAJESTY, ABOUT THE EARL OF SOMERSET.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

At my last access to your Majesty, it was fit for me to consider the time and your journey, which maketh me now trouble your Majesty with a remnant of that I thought then to have said; besides your old warrant and commission to me, to advertise your Majesty when you are *aux champs*, of any thing that concerned your service and my place. I know your Majesty is *nunquam minus solus, quam cum solus*; and I confess, in regard of your great judgment, under which nothing ought to be presented but well weighed, I could almost wish that the manner of Tiberius were in use again, of whom Tacitus saith, "Mos erat quamvis presentem scripto adire;" much more in absence. I said to your Majesty that which I do now repeat, that the evidence upon which my lord of Somerset standeth indicted is of a good strong thread, considering impoisoning is the darkest of offences; but that the thread must be well spun and woven together; for, your Majesty knoweth, it is one thing to deal with a jury of Middlesex and Londoners, and another to deal with the peers: whose objects perhaps will not be so much what is before them in the present case, which I think is as odious to them as to the vulgar, but what may be hereafter. Besides, there be two disadvantages, we that shall give in evidence shall meet with, somewhat considerable; the one, that the same things often opened lose, their freshness, except there be an aspersion of somewhat that is new; the other is the expectation raised, which makes things seem less than they are, because they are less than opinion. Therefore I were not your attorney, nor myself, if I should not be very careful, that in this last part, which is the pinnacle of your former justice, all things may pass *sine offendiculo, sine scrupulo*. Hereupon I did move two things, which having now more fully explained myself, I do in all humbleness renew. First, that your Majesty will be careful to choose a steward of judgment that may be able to moderate the evidence and cut off digressions; for I may interrupt, but I cannot

\* Stephens's First Collection, p. 105.

silence: the other, that there may be special care taken for the ordering the evidence, not only for the knitting, but for the list, and to use your Majesty's own words, the confining of it. This to do, if your Majesty vouchsafe to direct it yourself, that is the best; if not, I humbly pray you to require my lord chancellor, that he, together with my lord chief justice, will confer with myself and my fellows, that shall be used for the marshalling and bounding of the evidence, that we may have the help of his opinion, as well as that of my lord chief justice; whose great travels as I much commend, yet that same *plerophoria*, or over-confidence, doth always subject things to a great deal of chance.

There is another business proper for me to crave of your Majesty at this time, as one that have in my eye a great deal of service to be done concerning your casual revenue; but considering times and persons, I desire to be strengthened by some such form of commandment under your royal hand, as I send you here enclosed. I most humbly pray your Majesty to think, I understand myself right well in this which I desire, and that it tendeth greatly to the good of your service. The warrant I mean not to impart, but upon just occasion; thus thirsty to hear of your Majesty's good health, I rest—

22 Jan. 1615.

CXXXV. TO HIS MAJESTY, ABOUT THE CHANCELLOR'S PLACE.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

THE last day when it pleased your Majesty to express yourself towards me far above that I can deserve or could expect, I was surprised by the prince's coming in: I most humbly pray your Majesty, therefore, to accept these few lines of acknowledgment. I never had great thoughts for myself, farther than to maintain those great thoughts, which, I confess, I have for your service. I know what honour is, and I know what the times are; but, I thank God, with me my service is the principal; and it is far from me, under honourable pretences to cover base desires; which I account them to be, when men refer too much to themselves, especially serving such a king. I am afraid of nothing but that the master of the horse, your excellent servant, and I shall fall out, who shall hold your stirrup best. But were your Majesty mounted and seated without difficulties and distastes in your business, as I desire and hope to see you; I should *ex animo* desire to spend the decline of my years in my studies: wherein also I should not forget to do him honour, who, besides his active and politic virtues, is the best pen of kings, and much more, the best subject of a pen. God ever preserve your Majesty.

Your Majesty's most humble subject, and more and more obliged servant,

FR. BACON.

April 1, 1616.

† Rawley's Resuscitatio.

## CXXXVI. TO SIR GEORGE VILLIERS, ABOUT THE EARL OF SOMERSET.\*

SIR,

I THOUGHT it convenient to give his Majesty an account of that which his Majesty gave me in charge in general, reserving the particulars for his coming; and I find it necessary to know his pleasure in some things ere I could farther proceed.

My lord chancellor and myself spent Thursday and yesterday, the whole forenoons of both days, in the examination of Sir Robert Cotton; whom we find hitherto but empty, save only in the great point of the treaty with Spain.

This examination was taken before his Majesty's warrant came to Mr. Vice-Chamberlain, for communicating unto us the secrets of the pensions; which warrant I received yesterday morning, being Friday, and a meeting was appointed at my lord chancellor's in the evening after council; upon which conference we find matter of farther examination for Sir Robert Cotton, of some new articles whereupon to examine Somerset, and of entering into examination of Sir William Mounson.

Wherefore, first for Somerset, being now ready to proceed to examine him, we stay only upon the duke of Lenox, who it seemeth is fallen sick and keepeth in; without whom, we neither think it warranted by his Majesty's direction, nor agreeable to his intention, that we should proceed; for that will want, which should sweeten the cup of medicine, he being his countryman and friend. Herein then we humbly crave his Majesty's direction with all convenient speed, whether we shall expect the duke's recovery, or proceed by ourselves; or that his Majesty will think of some other person, qualified according to his Majesty's just intention, to be joined with us. I remember we had speech with his Majesty of my lord Hay; and I, for my part, can think of no other, except it should be my lord chancellor of Scotland, for my lord Binning may be thought too near allied.

I am farther to know his Majesty's pleasure concerning the day; for my lord chancellor and I conceived his Majesty to have designed the Monday and Tuesday after St. George's feast; and nevertheless we conceived also, that his Majesty understood that the examinations of Somerset about this, and otherwise touching the Spanish practices, should first be put to a point; which will not be possible, as time cometh on, by reason of this accident of the duke's sickness, and the cause we find of Sir William Mounson's examination, and that divers of the peers are to be sent for from remote places.

It may please his Majesty therefore to take into consideration, whether the days may not well be put off till Wednesday and Thursday after the term, which endeth on the Monday, being the Wednesday and Thursday before Whitsuntide; or, if that please not his Majesty, in respect, it may be, his Majesty will be then in town, whereas these arraignments have been still in his Majesty's absence from town,

\* Stephens's First Collection, p. 108.

then to take Monday and Tuesday after Trinity Sunday, being the Monday and Tuesday before Trinity term.

Now for Sir William Mounson, if it be his Majesty's pleasure that my lord chancellor and I shall proceed to the examination of him, for that of the duke of Lenox differs, in that there is not the like cause as in that of Somerset, then his Majesty may be pleased to direct his commandment and warrant to my lord chief justice, to deliver unto me the examination he took of Sir William Mounson, that those, joined to the information which we have received from Mr. Vice-Chamberlain, may be full instructions unto us for his examination. Farther, I pray let his Majesty know, that on Thursday in the evening my lord chief justice and myself attended my lord chancellor at his house for the settling that scruple which his Majesty most justly conceived in the examination of the lady Somerset; at which time, resting on his Majesty's opinion, that that evidence, as it standeth now uncleaned, must "secundum leges sanæ conscientiæ" be laid aside; the question was, whether we should leave it out, or try what a re-examination of my lady Somerset would produce? Whereupon we agreed upon a re-examination of my lady Somerset, which my lord chief justice and I have appointed for Monday morning. I was bold at that meeting to put my lord chief justice a posing question; which was, Whether that opinion which his brethren had given upon the whole evidence, and he had reported to his Majesty, namely, that it was good evidence, in their opinions, to convict my lord of Somerset, was not grounded upon this part of the evidence now to be omitted, as well as upon the rest; who answered positively, No; and they never saw the exposition of the letter, but the letter only.

The same Thursday evening, before we entered into this last matter, and in the presence of Mr. Secretary Winwood, who left us when we went to the former business, we had conference concerning the frauds and abusive grants passed to the prejudice of his Majesty's state of revenue; where my lord chief justice made some relation of his collections which he had made of that kind; of which I will only say this, that I heard nothing that was new to me, and I found my lord chancellor, in divers particulars, more ready than I found him. We grew to a distribution both of times and of matters, for we agreed what to begin with presently, and what should follow, and also we had consideration what was to be holpen by law, what by equity, and what by parliament; wherein I must confess, that in the last of these, of which my lord chief justice made most account, I make most doubt. But the conclusion was, that upon this entrance I should advise and confer at large with my lord chief justice, and set things in work. The particulars I refer till his Majesty's coming.

The learned counsel have now attended me twice at my chamber, to confer upon that which his Majesty gave us in commandment for our opinion upon the case set down by my lord chancellor, whether the statutes extend to it or no; wherein we are

more and more edified and confirmed that they do not, and shall shortly send our report to his Majesty.

Sir, I hope you will bear me witness I have not been idle; but all is nothing to the duty I owe his Majesty for his singular favours past and present; supplying all with love and prayers, I rest,

Your true friend and devoted servant,

FR. BACON.

April 13, 1616.

CXXXVII. TO SIR GEORGE VILLIERS, ABOUT THE EARL OF SOMERSET.\*

SIR,

I RECEIVED from you a letter of very brief and clear directions; and I think it a great blessing of God upon me and my labours, that my directions come by so clear a conduit, as they receive no tincture in the passage.

Yesterday my lord chancellor, the duke of Lenox, and myself, spent the whole afternoon at the Tower, in the examination of Somerset, upon the articles sent from his Majesty, and some other additional, which were in effect contained in the former, but extended to more particularity, by occasion of somewhat discovered by Cotton's examination and Mr. Vice-Chamberlain's information.

He is full of protestations, and would fain keep that quarter towards Spain clear: using but this for argument, that he had such fortunes from his Majesty, as he could not think of bettering his conditions from Spain, because, as he said, he was no military man. He cometh nothing so far on, for that which concerneth the treaty, as Cotton, which doth much aggravate suspicion against him: the farther particulars I reserve to his Majesty's coming.

In the end, *tamquam obiter*, but very effectually, my lord chancellor put him in mind of the state he stood in for the impoisonment; but he was little moved with it, and pretended carelessness of life, since ignominy had made him unfit for his Majesty's service. I am of opinion that the fair usage of him, as it was fit for the Spanish examinations, and for the questions touching the papers and despatches, and all that, so it was no good preparative to make him descend into himself touching his present danger; and therefore my lord chancellor and myself thought not good to insist upon it at this time.

I have received from my lord chief justice the examination of Sir William Mounson; with whom we mean to proceed to farther examination with all speed.

My lord chief justice is altered touching the re-examination of the lady, and desired me that we might stay till he spake with his Majesty, saying it could be no casting back to the business; which I did approve.

Myself with the rest of my fellows, upon due and mature advice, perfected our report touching the chancery; for the receiving whereof, I pray you

put his Majesty in mind at his coming, to appoint some time for us to wait upon him all together, for the delivery in of the same, as we did in our former certificate.

For the revenue matters, I reserve them to his Majesty's coming; and in the mean time I doubt not but Mr. Secretary Winwood will make some kind of report thereof to his Majesty.

For the conclusion of your letter concerning my own comfort, I can but say the Psalm of "Quid retribuam?" God that giveth me favour in his Majesty's eyes, will strengthen me in his Majesty's service. I ever rest

Your true and devoted servant,

FR. BACON.

April 18, 1616.

To requite your postscript of excuse for scribbling, I pray you excuse that the paper is not gilt, I writing from Westminster-Hall, where we are not so fine.

CXXXVIII. A LETTER TO THE KING, WITH HIS MAJESTY'S OBSERVATIONS UPON IT.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

YOUR Majesty hath put me upon a work of providence in this great cause, which is to break and distinguish future events into present cases; and so to present them to your royal judgment, that, in this action, which hath been carried with so great prudence, justice, and clemency, there may be, for that which remaineth, as little surprise as is possible; but that things duly foreseen may have their remedies and directions in readiness; wherein I cannot forget what the poet Martial saith; "O quantum est subitis casibus ingenium!" signifying, that accident is many times more subtle than foresight, and overreacheth expectation; and besides, I know very well the meanness of my own judgment, in comprehending or forecasting what may follow.

It was your Majesty's pleasure also that I should couple the suppositions with my opinion in every of them, which is a harder task; but yet your Majesty's commandment requireth my obedience, and your trust giveth me assurance.

I will put the case, which I wish; that Somerset should make a clear confession of his offences, before he be produced to trial.

In this case it seemeth your Majesty will have a new consult; the points whereof will be, 1. Whether your Majesty will stay the trial, and so save them both from the stage, and that public ignominy. 2. Or whether you will, or may fily by law, have the trial proceed, and stay or reprieve the judgment, which saveth the lands from forfeiture, and the blood from corruption. 3. Or whether you will have both trial and judgment proceed, and save the blood only, not from corrupting, but from spilling. †

stand with law; and if it cannot, when I shall hear that he confesseth, I am then to make choice of the first or the last.

\* Stephens's First Collection, p. 112. † Ibid. 114.  
‡ REX. I say with Apollo, "Medio tutius itur," if it may

These be the depths of your Majesty's mercy which I may not enter into: but for honour and reputation they have these grounds:

That the blood of Overbury is already revenged by divers executions.

That confession and penitency are the footstools of mercy; adding this circumstance likewise, that the former offenders did none of them make a clear confession.

That the great downfall of so great persons carrieth in itself a heavy judgment, and a kind of civil death, although their lives should not be taken.

All which may satisfy honour for sparing their lives. But if your Majesty's mercy should extend to the first degree, which is the highest, of sparing the stage and the trial; then three things are to be considered:

First, That they make such a submission or deprecation, as they prostrate themselves, and all that they have, at your Majesty's feet, imploring your mercy.\*

Secondly, That your Majesty, in your own wisdom, do advise what course you will take, for the utter extinguishing of all hopes of resuscitating of their fortunes and favour; whereof if there should be the least conceit, it will leave in men a great deal of envy and discontent.

And lastly; whether your Majesty will not suffer it to be thought abroad, that there is cause of farther examination of Somerset, concerning matters of estate, after he shall begin once to be a confessor, and so make as well a politic ground, as a ground of clemency, for farther stay.

And for the second degree, of proceeding to trial, and staying judgment, I must better inform myself by precedents, and advise with my lord chancellor.

The second case is, if that fall out which is likeliest, as things stand, and which we expect, which is, that the lady confess; and that Somerset himself plead not guilty, and be found guilty: †

In this case, first, I suppose your Majesty will not think of any stay of judgment, but that the public process of justice pass on.

Secondly, For your mercy to be extended to both for pardon of their execution, I have partly touched in the considerations applied to the former case; whereunto may be added, that as there is ground of mercy for her, upon her penitency and free confession, and will be much more upon his finding guilty; because the malice on his part will be thought the deeper source of the offence; so there will be ground for mercy on his part, upon the nature of the proof; and because it rests chiefly upon presumptions. For certainly there may be an evidence so balanced, as it may have sufficient matter for the conscience of the peers to convict him, and yet leave sufficient matter in the conscience of a king upon the same evidence to pardon his life; because the peers are

astringed by necessity either to acquit or condemn; but grace is free: and for my part, I think the evidence in this present case will be of such a nature.

Thirdly, it shall be my care so to moderate the manner of charging him, as it might make him not odious beyond the extent of mercy.

Lastly, All these points of mercy and favour are to be understood with this limitation, if he do not by his contemptuous and insolent carriage at the bar, make himself incapable and unworthy of them. ‡

The third case is, if he should stand mute and will not plead, whereof, your Majesty knoweth, there hath been some secret question.

In this case I should think fit, that, as in public, both myself, and chiefly my lord chancellor, sitting then as lord steward of England, should dehort and deter him from that desperation; so nevertheless, that as much should be done for him, as was done for Weston; which was to adjourn the court for some days, upon a christian ground, that he may have time to turn from that mind of destroying himself; during which time your Majesty's farther pleasure may be known. §

The fourth case is that which I should be very sorry it should happen, but it is a future contingent; that is, if the peers should acquit him and find him not guilty.

In this case the lord steward must be provided what to do. For as it hath never been seen, as I conceive it, that there should be any rejecting of the verdict, or any respiting of the judgment of the acquittal; so on the other side this case requireth, that because there be many high and heinous offences, though not capital, for which he may be questioned in the star-chamber, or otherwise, that there be some touch of that in general at the conclusion, by my lord steward of England; and that therefore he be remanded to the Tower as close prisoner. ||

For the matter of examination, or other proceedings, my lord chancellor with my advice hath set down,

To-morrow, being Monday, for the re-examination of the lady:

Wednesday next, for the meeting of the judges concerning the evidence:

Thursday, for the examination of Somerset himself, according to your Majesty's instructions:

Which three parts, when they shall be performed, I will give your Majesty advertisement with speed, and in the mean time be glad to receive from your Majesty, whom it is my part to inform truly, such directions or significations of your pleasure as this advertisement may induce, and that with speed, because the time cometh on. Well remembering who is the person whom your Majesty admitted to this secret, I have sent this letter open unto him, that he may take your Majesty's times to report it, or show it unto you; assuring myself that nothing is

\* REX. This article cannot be mended in point thereof.

† REX. If stay of judgment can stand with the law, I could even wish it in this case: in all the rest this article cannot be mended.

‡ REX. That danger is well to be foreseen, lest he upon

the one part commit unpardonable errors, and I on the other part seem to punish him in the spirit of revenge.

§ REX. This article cannot be mended.

|| REX. This is so also.

more firm than his trust, tied to your Majesty's commandments.

Your Majesty's most humble and most bounden subject and servant,

FR. BACON.

April 28, 1616.

CXXXIX. TO SIR GEORGE VILLIERS,  
ABOUT THE EARL OF SOMERSET.\*

SIR,

I HAVE received my letter from his Majesty with his marginal notes, which shall be my directions, being glad to perceive I understand his Majesty so well. That same little charm, which may be secretly infused into Somerset's ear some few hours before his trial, was excellently well thought of by his Majesty; and I do approve it both for matter and time; only if it seem good to his Majesty I would wish it a little enlarged: for if it be no more than to spare his blood, he hath a kind of proud humour which may overwork the medicine. Therefore I could wish it were made a little stronger, by giving him some hopes that his Majesty will be good to his lady and child; and that time, when justice and his Majesty's honour is once saved and satisfied, may produce farther fruit of his Majesty's compassion: which was to be seen in the example of Southampton, whom his Majesty after attainder restored; and Cobham and Gray, to whom his Majesty, notwithstanding they were offenders against his own person, yet he spared their lives; and for Gray, his Majesty gave him back some part of his estate, and was upon point to deliver him much more. He having been so highly in his Majesty's favour, may hope well, if he hurt not himself by his public misdemeanor.

For the person that should deliver this message, I am not so well seen in the region of his friends, as to be able to make choice of a particular; my lord treasurer, the lord Knollys, or any of his nearest friends, should not be trusted with it, for they may go too far, and perhaps work contrary to his Majesty's ends. Those which occur to me, are my lord Hay, my lord Burleigh, of England I mean, and Sir Robert Carre.

My lady Somerset hath been re-examined, and his Majesty is found both a true prophet and a most just king in that scruple he made; for now she expoundeth the word He, that should send the tarts to Elwys's wife, to be of Overbury, and not of Somerset; but for the person that should bid her, she said it was Northampton or Weston, not pitching upon certainty, which giveth some advantage to the evidence.

Yesterday being Wednesday, I spent four or five hours with the judges whom his Majesty designed to take consideration with, the four judges of the king's bench, of the evidence against Somerset: they all concur in opinion, that the questioning and drawing him on to trial is most honourable and just, and that the evidence is fair and good.

\* Stephens's First Collection, p. 120.

His Majesty's letter to the judges concerning the *Commendams* was full of magnanimity and wisdom. I perceive his Majesty is never less alone, than when he is alone; for I am sure there was nobody by him to inform him, which made me admire it the more.

The judges have given a day over, till the second Saturday of the next term: so as that matter may endure farther consideration, for his Majesty not only not to lose ground, but to win ground.

To-morrow is appointed for the examination of Somerset, which by some infirmity of the duke of Lenox was put off from this day. When this is done, I will write more fully, ever resting

Your true and devoted servant,

FR. BACON.

May 2, 1616.

CXL. TO SIR GEORGE VILLIERS, OF  
SOMERSET'S ARRAIGNMENT.†

SIR,

I AM far enough from opinion, that the redintegration or resuscitation of Somerset's fortune can ever stand with his Majesty's honour and safety; and therein I think I expressed myself fully to his Majesty in one of my former letters; and I know well any expectation or thought abroad will do much hurt. But yet the glimmering of that which the king hath done to others, by way of talk to him, cannot hurt, as I conceive; but I would not have that part of the message as from the king, but added by the messenger as from himself. This I remit to his Majesty's princely judgment.

For the person, though he trust the lieutenant well, yet it must be some new man; for in these cases, that which is ordinary worketh not so great impressions as that which is new and extraordinary.

The time I wish to be the Tuesday, being the even of his lady's arraignment: for, as his Majesty first conceived, I would not have it stay in his stomach too long, lest it sour in the digestion; and to be too near the time, may be thought but to tune him for that day.

I send here withal the substance of that which I purpose to say nakedly, and only in that part which is of tenderness; for that I conceive was his Majesty's meaning.

It will be necessary, because I have distributed parts to the two sergeants, as that paper doth express, and they understand nothing of his Majesty's pleasure of the manner of carrying the evidence more than they may guess by observation of my example, which they may ascribe as much to my nature as to direction; therefore that his Majesty would be pleased to write some few words to us all, signed with his own hand, that, the matter itself being tragical enough, bitterness and insulting be forborne; and that we remember our part to be to make him delinquent to the peers, and not odious to the people. That part of the evidence of the lady's exposition of the pronoun, he, which was first

† Stephens's First Collection, p. 122.

caught hold of by me, and afterwards by his Majesty's singular wisdom and conscience excepted to, and now is by her re-examination retracted, I have given order to sergeant Montague, within whose part it falleth, to leave it out of the evidence. I do yet crave pardon, if I do not certify touching the point of law for respiting the judgment, for I have not fully advised with my lord chancellor concerning it, but I will advertise it in time.

I send his Majesty the lord steward's commission in two several instruments, the one to remain with my lord chancellor, which is that which is written in secretary-hand for his warrant, and is to pass the signet; the other, that whereunto the great seal is to be affixed, which is in chancery-hand: his Majesty is to sign them both, and to transmit the former to the signet, if the secretaries either of them be there; and both of them are to be returned to me with all speed. I ever rest,

Your true and devoted servant,

FR. BACON.

May 5, 1616.

CXLI. TO THE KING, ABOUT SOMERSET'S EXAMINATION.\*

IT MAY PLEASE YOUR MAJESTY,

We have done our best endeavours to perform your Majesty's commission, both in matter and manner, for the examination of my lord of Somerset; wherein that which passed, for the general, was to this effect; That he was to know his own case, for that his day of trial could not be far off; but that this day's work was that which would conduce to your Majesty's justice little or nothing, but to your mercy much, if he did lay hold upon it; and therefore might do him good, but could do him no hurt. For as for your justice, there had been taken great and grave opinion, not only of such judges as he may think violent, but of the most sad and most temperate of the kingdom, who ought to understand the state of the proofs, that the evidence was full to convict him, so as there needeth neither confession, nor supply of examination. But for your Majesty's mercy, although he were not to expect we should make any promise, we did assure him, that your Majesty was compassionate of him if he gave you some ground whereon to work; that as long as he stood upon his innocency and trial, your Majesty was tied in honour to proceed according to justice; and that he little understood, being a close prisoner, how much the expectation of the world, besides your love to justice itself, engaged your Majesty, whatsoever your inclinations were: but nevertheless that a frank and clear confession might open the gate of mercy, and help to satisfy the point of honour.

That his lady, as he knew, and that after many oaths and imprecations to the contrary, had nevertheless in the end, being touched with remorse, confessed; that she that led him to offend, might lead

\* Stephens's First Collection, p. 124.

him likewise to repent of his offence: that the confession of one of them could not fitly do either of them much good, but the confession of both of them might work some farther effect towards both: and therefore, in conclusion, we wished him not to shut the gate of your Majesty's mercy against himself, by being obdurate any longer. This was the effect of that which was spoken, part by one of us, part by another, as it fell out; adding farther, that he might well discern who spake in us in the course we held; for that commissioners for examination might not presume so far of themselves.

Not to trouble your Majesty with circumstances of his answers, the sequel was no other, but that we found him still not to come any degree farther on to confess; only his behaviour was very sober, and modest, and mild, differing apparently from other times, but yet, as it seemed, resolved to have his trial.

Then did we proceed to examine him upon divers questions touching the impoisonment, which indeed were very material and supplemental to the former evidence; wherein either his affirmatives gave some light, or his negatives do greatly falsify him in that which is apparently proved.

We made this farther observation; that when we asked him some question that did touch the prince or some foreign practice, which we did very sparingly at this time, yet he grew a little stirred, but in the questions of the impoisonment very cold and modest. Thus not thinking it necessary to trouble your Majesty with any farther particulars, we end with prayer to God ever to preserve your Majesty.

Your Majesty's most loyal and faithful servant,  
FR. BACON.

*Postscript.* If it seem good unto your Majesty, we think it not amiss some preacher, well chosen, had access to my lord of Somerset for his preparing and comfort, although it be before his trial.

CXLII. AN EXPOSTULATION TO THE LORD CHIEF JUSTICE COKE.†

MY VERY GOOD LORD,

THOUGH it be true, that "he who considereth the wind and the rain, shall neither sow nor reap;" yet "there is a season for every action," and so "there is a time to speak, and a time to keep silence." † There is a time when the words of a poor simple man may profit; and that poor man in "The Preacher," which delivered the city by his wisdom, found that without this opportunity the owner both of wisdom and eloquence lose but their labour, and cannot charm the deaf adder. God therefore, before his Son that bringeth mercy, sent his servant the trumpeter of repentance to level every high hill, to prepare the way before him, making it smooth and straight: and as it is in spiritual things, where Christ never comes before his way-maker hath laid even the heart with sorrow and repentance,

† Ibid. p. 126.

‡ Eccles. xi. 4.

since self-conceited and proud persons think themselves too good and too wise to learn of their inferiors, and therefore need not the physician; so in the rules of earthly wisdom, it is not possible for nature to attain any mediocrity of perfection, before she be humbled by knowing herself and her own ignorance. Not only knowledge, but also every other gift, which we call the gifts of fortune, have power to puff up earth: afflictions only level these mole-hills of pride, plough the heart, and make it fit for wisdom to sow her seed, and for grace to bring forth her increase. Happy is that man therefore, both in regard of heavenly and earthly wisdom, that is thus wounded to be cured, thus broken to be made straight; thus made acquainted with his own imperfections that he may be perfected.

Supposing this to be the time of your affliction, that which I have propounded to myself is, by taking this seasonable advantage, like a true friend, though far unworthy to be counted so, to show you your true shape in a glass; and that not in a false one to flatter you, nor yet in one that should make you seem worse than you are, and so offend you; but in one made by the reflection of your own words and actions; from whose light proceeds the voice of the people, which is often not unfitly called the voice of God. But therein, since I have purposed a truth, I must entreat liberty to be plain, a liberty, that at this time I know not whether or no I may use safely, I am sure at other times I could not; yet of this resolve yourself, it proceedeth from love and a true desire to do you good; that you knowing the general opinion, may not altogether neglect or condemn it, but mend what you find amiss in yourself, and retain what your judgment shall approve; for to this end shall truth be delivered as naked as if yourself were to be anatomized by the hand of opinion. All men can see their own profit, that part of the wallet hangs before. A true friend (whose worthy office I would perform, since I fear both yourself and all great men want such, being themselves true friends to few or none) is first to show the other, and which is from your eyes.

First therefore behold your errors. In discourse you delight to speak too much, not to hear other men; this, some say, becomes a pleader, not a judge; for by this sometimes your affections are entangled with a love of your own arguments, though they be the weaker; and rejecting of those, which, when your affections were settled, your own judgment would allow for strongest. Thus while you speak in your own element, the law, no man ordinarily equals you; but when you wander, as you often delight to do, you wander indeed, and give never such satisfaction as the curious time requires. This is not caused by any natural defect, but first for want of election, when you, having a large and fruitful mind, should not so much labour what to speak, as to find what to leave unspoken: rich soils are often to be weeded.

Secondly, You cloy your auditory when you would be observed; speech must be either sweet or short.

Thirdly, you converse with books, not men, and books especially human; and have no excellent

choice with men, who are the best books: for a man of action and employment you seldom converse with, and then but with your underlings; not freely, but as a schoolmaster with his scholars, ever to teach, never to learn; but if sometimes you would in your familiar discourse hear others, and make election of such as know what they speak, you should know many of these tales you tell to be but ordinary; and many other things, which you delight to repeat and serve in for novelties, to be but stale. As in your pleadings you were wont to insult over misery, and to inveigh bitterly at the persons, which bred you many enemies, whose poison yet swelleth, and the effects now appear, so are you still wont to be a little careless, in this point, to praise or disgrace upon slight grounds, and that sometimes untruly; so that your reproofs or commendations are for the most part neglected and contemned; when the censure of a judge, coming slow but sure, should be a brand to the guilty, and a crown to the virtuous. You will jest at any man in public, without respect of the person's dignity or your own: this disgraceth your gravity, more than it can advance the opinion of your wit; and so do all actions which we see you do directly with a touch of vain-glory, having no respect to the true end. You make the law to lean too much to your opinion, whereby you show yourself to be a legal tyrant, striking with that weapon where you please, since you are able to turn the edge any way: for thus the wise master of the law gives warning to young students, that they should be wary, lest, while they hope to be instructed by your integrity and knowledge, they should be deceived with your skill armed with authority. Your too much love of the world is too much seen, when having the living of a thousand,\* you relieve few or none: the hand that has taken so much, can it give so little? Herein you show no bowels of compassion, as if you thought all too little for yourself; or that God hath given you all that you have, if you think wealth to be his gift, I mean that you get well, for I know sure the rest is not, only to that end you should still gather more, and never be satisfied; but try how much you would gather, to account for all at the great and general audit-day. We desire you to amend this, and let your poor tenants in Norfolk find some comfort; where nothing of your estate is spent towards their relief, but all brought up hither, to the impoverishing of your country.

In your last, which might have been your best piece of service to the state, affectioned to follow that old rule, which giveth justice leaden heels and iron hands, you used too many delays till the delinquents' hands were loosed, and yours bound: in that work you seemed another Fabius, where the humour of Marcellus would have done better: what need you have sought more evidences than enough? while you pretended the finding out of more, missing your aim, you discredited what you had found. This best judgments think; though you never used such speeches as are fathered upon you, yet you might well have done it, and but rightly; for this

\* 10,000*l.* *Chb.*

crime was second to none, but the powder-plot: that would have blown up all at one blow, a merciful cruelty; this would have done the same by degrees, a lingering but a sure way; one might by one be called out, till all opposers had been removed.

Besides, that other plot was scandalous to Rome, making popery odious in the sight of the whole world: this hath been scandalous to the truth of the whole gospel; and since the first nullity to this instant, when justice hath her hands bound, the devil could not have invented a more mischievous practice to our state and church than this hath been, is, and is like to be. God avert the evil.

But herein you committed another fault: that as you were too open in your proceedings, and so taught them thereby to defend themselves; so you gave them time to undermine justice, and to work upon all advantages both of affections, and honour, and opportunity, and breach of friendship; which they have so well followed, sparing neither pains nor costs, that it almost seemeth a higher offence in you to have done so much indeed, than that you have done no more: you stopt the confessions and accusations of some, who perhaps, had they been suffered, would have spoken enough to have removed some stumbling-blocks out of your way; and that you did not this in the favour of any one, but of I know not what present unadvised humours, supposing enough behind to discover all; which fell not out so. Howsoever, as the apostle saith in another case, "you went not rightly to the truth;" and therefore, though you were to be commended for what you did, yet you were to be reprehended for many circumstances in the doing; and doubtless God hath an eye in this cross to your negligence, and the briars are left to be pricks in your sides and thorns in your eyes. But that which we commend you for, are those excellent parts in nature, and knowledge in the law, which you are endowed withal; but these are only good in their good use. Wherefore we thank you heartily for standing stoutly in the commonwealth's behalf; hoping it proceedeth not from a disposition to oppose greatness, as your enemies say, but to do justice, and deliver truth indifferently without respect of persons; and in this we pray for your prosperity, and are sorry that your good actions should not always succeed happily. But in the carriage of this you were faulty; for you took it in hand in an evil time, both in respect of the present business which was interrupted, and in regard of his present sickness whom it concerned whereby you diminished your strength, and made a gap for the enemies to pass out at, and to return and assault you.

But now since the case so standeth, we desire you to give way to power, and so to fight that you be not utterly broken, but reserved entirely to serve the commonwealth again, and to do what good you can, since you cannot do all the good you would; and since you are fallen upon this rock, cast out the goods to save the bottom; stop the leaks and make

towards land; learn of the steward to make friends of the unrighteous mammon. Those Spaniards in Mexico who were chased of the Indians, tell us what to do with our goods in our extremity; they being to pass over a river in their flight, as many as cast away their gold swam over safe; but some more covetous, keeping their gold, were either drowned with it, or overtaken and slain by the savages: you have received, now learn to give. The beaver learns us this lesson, who being hunted for his stones, bites them off: you cannot but have much of your estate, pardon my plainness, ill got; think how much of that you never spake for, how much by speaking unjustly or in unjust causes. Account it then a blessing of God, if thus it may be laid out for your good, and not left for your heir, to hasten the wasting of much of the rest, perhaps of all: for so we see God oftentimes proceeds in judgment with many hasty gatherers: you have enough to spare, being well laid, to turn the tide, and fetch all things again. But if you escape, I suppose it worthy of an *If*, since you know the old use, that none called in question must go away uncensured, yet consider that accusations make wounds, and leave scars; and though you see the toil behind your back, yourself free, and the covert before, yet remember there are stands: trust not a reconciled enemy; but think the peace is but to secure you for farther advantage, or expect a second and a third encounter; the main battle, the wings are yet unbroken, they may charge you at an instant, or Death before them; walk therefore circumspectly, and if at length, by means of our endeavours and yours, you recover the favour that you have lost, give God the glory in action, not in words only; and remember us with sense of your past misfortune, whose estate hath, and may hereafter lie in the power of your breath.

There is a great mercy in despatch, delays are tortures, wherewith by degrees we are rent out of our estates;\* do not you, if you be restored, as some others do, fly from the service of virtue to serve the time, as if they repented their goodness, or meant not to make a second hazard in God's house; but rather let this cross make you zealous in God's cause, sensible in ours, and more sensible in all; which express thus. You have been a great enemy to papists; if you love God be so still, but more indeed than heretofore: for much of your zeal was heretofore wasted in words: call to remembrance that they were the persons that prophesied of that cross of yours long before it happened; they saw the storm coming, being the principal contrivers and fartherers of the plot, the men that blew the coals, heat the iron, and made all things ready; they owe you a good turn, and will, if they can, pay it you; you see their hearts by their deeds, prove then your faith so to: the best good work you can do, is to do the best you can against them, that is, to see the law severely, justly, and diligently executed.

And now we beseech you, my lord, be sensible

\* My lord Bacon observes elsewhere, that the Scripture saith, there be that turn judgment into wormwood; and saith he, surely there be "also that turn it into vinegar; for injus-

tice maketh it bitter, and delays make it sour." Essay lvi. p. 304.

both of the stroke and hand that striketh; learn of David to leave Shimei, and call upon God: he hath some great work to do, and he prepareth you for it; he would neither have you faint, nor yet bear this cross with a stoical resolution: there is a christian mediocrity worthy of your greatness. I must be plain, perhaps rash; had some notes which you had taken at sermons been written in your heart to practise, this work had been done long ago without the envy of your enemies; but when we will not mind ourselves, God, if we belong to him, takes us in hand; and because he seeth that we have unbridled stomachs, therefore he sends outward crosses, which while they cause us to mourn, do comfort us, being assured testimonies of his love that sends them. To humble ourselves therefore before God is the part of a christian; but for the world and our enemies the counsel of the poet is apt,

"Tu ne cede malis, sed contra audentior ito."  
Æneid. vi. 95.

The last part of this counsel you forget, yet none need be ashamed to make use of it, that so being armed against casualties, you may stand firm against the assaults on the right hand, and on the left. For this is certain, the mind that is most prone to be puffed up with prosperity, is most weak and apt to be dejected with the least puff of adversity. Indeed she is strong enough to make an able man stagger, striking terrible blows: but true christian wisdom gives us armour of proof against all assaults, and teacheth us in all estates to be content: for though she cause our truest friends to declare themselves our enemies; though she give heart then to the most cowardly to strike us; though an hour's continuance countervails an age of prosperity: though she cast in our dish all that ever we have done; yet hath she no power to hurt the humble and wise, but only to break such as too much prosperity hath made stiff in their own thoughts, but weak indeed; and fitted for renewing: when the wise rather gather from thence profit and wisdom; by the example of David, who said, "Before I was chastised I went astray." Now then he that knoweth the right way, will look better to his footing. Cardan saith, that weeping, fasting, and sighing, are the chief purges of grief; indeed naturally they do assuage sorrow: but God in this case is the only and best physician; the means he hath ordained are the advice of friends, the amendment of ourselves; for amendment is both physician and cure. For friends, although your lordship be scant, yet I hope you are not altogether destitute; if you be, do but look upon good books: they are true friends, that will neither flatter nor dissemble: be you but true to yourself, applying that which they teach unto the party grieved, and you shall need no other comfort nor counsel. To them and to God's holy Spirit, directing you in the reading of them, I commend your lordship; beseeching him to send you a good issue out of these troubles, and from henceforth to work a reformation in all that is amiss, and a resolute perseverance, proceeding, and growth

\* Rawley's Resuscitatio.

in all that is good; and that for his glory, the bettering of yourself, this church and commonwealth; whose faithful servant whilst you remain,

I remain a faithful servant to you,

FR. BACON.

### CXLIII. TO SIR GEORGE VILLIERS.\*

SIR,

THE time is, as I should think, now or never, for his Majesty to finish his good meaning towards me; if it please him to consider, what is past and what is to come.

If I would tender my profit, and oblige men unto me by my place and practice, I could have more profit than I could devise; and could oblige all the world, and offend none; which is a brave condition for a man's private. But my heart is not on these things. Yet on the other side I would be sorry that worthless persons should make a note that I get nothing but pains and enemies; and a little popular reputation, which followeth me whether I will or no. If any thing be to be done for yourself, I should take infinite contentment, that my honour might wait upon yours; but I would be loth it should wait upon any man's else. If you would put your strength to this business, it is done; and that done many things more will begin. God keep you ever. I rest,

Your true and devoted servant,

FR. BACON.

May 30, 1616.

### CXLIV. TO THE KING, ABOUT THE COMMENDAMS.†

MAY IT PLEASE YOUR MOST EXCELLENT MAJESTY,

I AM not swift to deliver any thing to your Majesty before it be well weighed. But now that I have informed myself of as much as is necessary touching this proceeding of the judges to the argument of the Commendams, notwithstanding your Majesty's pleasure signified by me, upon your Majesty's commandment in presence of my lord chancellor and the bishop of Winchester, to the contrary, I do think it fit to advertise your Majesty what hath passed; the rather, because I suppose the judges, since they performed not your commandment, have at least given your Majesty their reasons of failing therein; I being to answer for the doing your Majesty's commandment, and they for the not doing.

I did conceive, that in a cause that concerned your Majesty and your royal power, the judges having heard your attorney-general argue the Saturday before, would of themselves have taken farther time to be advised.

And, if I fail not in memory, my lord Coke received from your Majesty's self, as I take it, a precedent commandment in Hilary term, that both in

† Stephens's First Collection, p. 137.

the *rege inconsulto*, and in the Commendams, your attorney should be heard to speak, and then stay to be made of farther proceedings, till my lord had spoken with your Majesty.

Nevertheless, hearing that the day appointed for the judges' argument held, contrary to my expectation, I sent on Thursday in the evening, having received your Majesty's commandment but the day before in the afternoon, a letter to my lord Coke; whereby I let him know, that upon some report of my lord of Winchester, who by your commandment was present at my argument of that which passed, it was your Majesty's express pleasure, that no farther proceedings should be, until you had conferred with your judges: which your Majesty thought to have done at your being now last in town; but by reason of your many and weighty occasions, your princely times would not serve; and that it was your pleasure he should signify so much to the rest of the judges, whereof his lordship might not fail. His answer by word to my man was, that it were good the rest of the judges understood so much from myself: whereupon I, that cannot skill of scruples in matter of service, did write on Friday three several letters of like content to the judges of the common pleas, and the barons of the exchequer, and the other three judges of the king's bench, mentioning in that last my particular letter to my lord chief justice.

This was all I did, and thought all had been sure; in so much as the same day being appointed in chancery for your Majesty's great cause, followed by lord Hunsden,\* I writ two other letters to both the chief justices, to put them in mind of assisting my lord chancellor at the hearing. And when my lord chancellor himself took some notice upon that occasion openly in the chancery, that the Commendams could not hold presently after, I heard the judges were gone about the Commendams; which I thought at first had been only to adjourn the court, but I heard after that they proceeded to argument.

In this their doing, I conceive they must either except to the nature of the commandment, or to the credence thereof; both which, I assure myself, your Majesty will maintain.

For if they should stand upon the general ground, "Nulli negabimus, nulli differemus justitiam,"†‡ it receiveth two answers. The one, that reasonable and mature advice may not be confounded with delay; and that they can well allege when it pleaseth them. The other is, that there is a great difference between a case merely between subject and subject, and where the king's interest is in question directly or by consequence. As for the attorney's place and commission, it is as proper for him to signify the king's pleasure to the judges, as for the secretary to signify the same to the privy-council; and so it hath ever been.

\* This case is reported by my lord Hobart, p. 109.

† Mag. Chart.

‡ Stephens's First Collection, p. 140.

§ By the laws, several ages are assigned to persons for several purposes; and by the common law the fourteenth year is a kind of majority, and accounted an age of discretion. At that time a man may agree or disagree to a precedent marriage: the heir in socage may reject the guardian appointed

These things were a little strange if there came not so many of them together, as the one maketh the other seem less strange: but your Majesty hath fair occasions to remedy all with small aid; I say no more for the present.

I was a little plain with my lord Coke in these matters; and when his answer was, that he knew all these things, I said he could never profit too much in knowing himself and his duty. God ever preserve your Majesty.

CXLV. A MEMORIAL FOR HIS MAJESTY, CORRECTED WITH SIR FR. BACON'S OWN HAND. 1616.†

It seemeth this year of the fourteenth of his Majesty's reign, being a year of a kind of majority in his government, is consecrated to justice:§ which as his Majesty hath performed to his subjects in this late memorable occasion, so he is now to render and perform to himself, his crown, and posterity.

That his council shall perceive by that which his Majesty shall now communicate with them, that the mass of his business is continually prepared in his own royal care and cogitations, howsoever he produceth the same to light, and to act "per opera diorum."||

That his Majesty shall make unto them now a declarative of two great causes, whereof he doubteth not they have heard by glimpses; the one concerning his high court of chancery, the other concerning the church and prelacy; but both of them deeply touching his prerogative and sovereignty, and the flowers of his crown.

That about the end of Hilary term last, there came to his Majesty's ears, only by common voice and report, not without great rumour and wonder, that there was somewhat done in the king's bench the last day of that term, whereby his chancery should be pulled down, and be brought in question for *præmunire*; being the most heinous offence after treason, and felony, and misprision of treason: and that the time should be when the chancellor lay at the point of death.

That his Majesty was so far from hearing of this by any complaint from his chancellor, who then had given over worldly thoughts, that he wrote letters of comfort to him upon this accident, before he heard from him; and for his attorney, his Majesty challenged him for not advertising him of that, of which it was proper for his Majesty to be informed from him.

That his Majesty being sensible of this so great novelty and perturbation in his courts of justice, nevertheless used this method and moderation, that before he would examine this great affront and dis-

by law, and choose a new one: and the woman at that age shall be out of ward. *Stephens.*

|| "Per opera diorum," alluding to the gradations Almighty God was pleased to observe in the creating of the world. In this paragraph Sir Francis Bacon insinuates, what he expressly declares *Essay* xlvii. p. 300, that in all negotiations of difficulty a man must first prepare business, and so ripen it by degrees. *Stephens.*

grace offered to his chancery and chancellor, he would first inform himself whether the chancery or chancellor were in fault; and whether the former precedents of chancery did warrant the proceedings there after judgment passed at common law, which was the thing in question, and thereupon his Majesty called his learned counsel to him, and commanded them to examine the precedents of chancery, and to certify what they found: which they did; and by their certificate it appeareth, that the precedents of that kind were many and precise in the point, and constant, and in good times, and allowed many times by the judges themselves.

That after this his Majesty received from the lord chancellor a case, whereby the question was clearly set down and contained within the proper bounds of the present doubt; being, Whether upon apparent matter of equity, which the judges of the law by their place and oath cannot meddle with or relieve, if a judgment be once passed at common law, the subject shall perish, or that the chancery shall relieve him; and whether there be any statute of *premunire* or other, to restrain this power in the chancellor; which case, upon the request of the lord chancellor, his Majesty likewise referred to his learned counsel, and the prince's attorney Mr. Walter was joined with them, who, upon great advice and view of the original records themselves, certified the chancery was not restrained by any statute in that case.

That his Majesty again required his learned counsel to call the clerks of the king's bench to them, and to receive from them any precedents of indictments in the king's bench against the chancery for proceeding in the like case; who produced only two precedents, being but indictments offered or found, upon which there was no other proceeding; and the clerks said, they had used diligence and could find no more.

That his Majesty, after he had received this satisfaction that there was ground for that the chancery had done, and that the chancery was not in fault, he thought then it was time to question the misdemeanor and contempt in scandalizing and dishonouring his justice in that high court of chancery in so odious a manner; and commanded his attorney-general, with the advice of the rest of his learned counsel, to prosecute the offenders in the star-chamber, which is done; and some of them are fled, and others stand out and will not answer.

That there resteth only one part more towards his Majesty's complete information in this cause: which is to examine that which was done in open court the said last day of Hilary term, and whether the judges of the king's bench did commit any excess of authority; or did animate the offenders otherwise than according to their duty and place; which inquiry, because it concerneth the judges of a court to keep order and decorum, his Majesty thinketh not so convenient to use his learned counsel therein, but will commit the same to some of the council-table, and his learned counsel to attend them.

This declared, or what else his Majesty in his own high wisdom shall think good; it will be fit time

to have the certificate of the learned counsel openly read.

His Majesty may, if he please, forbear to publish at this time at the table the committees; but signify his pleasure to themselves afterwards.

The committees named by his Majesty, were the archbishop of Canterbury, secretary Lake, the chancellor of the exchequer, and the master of the rolls.

This report is to be prefixed, to be given in by Wednesday at night, that his Majesty may communicate it with his council, and take farther order on Thursday thereupon, if his Majesty be so pleased.

At this declaration, it is his Majesty's direction, to the end things may appear to be the more evenly carried, that neither my lord chancellor nor my lord chief justice be present.

But then when his Majesty entereth into the second declarative, my lord chancellor is to be called for; but my lord chief justice not; because it concerneth him.

For the second declarative: that his Majesty hath reason to be offended and grieved, in that which passed touching the Commendams, both in matter and manner: for the matter, that his Majesty's religious care of the church and of the prelacy, and namely, of his lords spiritual the bishops, may well appear, first, in that he hath utterly expelled those sectaries or inconformable persons that spurned at the government; secondly, that by a statute made in the first year of his reign, he hath preserved their livings from being wasted and dilapidated by long leases, and therein bound himself and his crown and succession; and lastly, that they see two bishops privy counsellors at the table, which hath not been of late years.

That agreeably to this his Majesty's care and good affection, hearing that there was a case of the bishop of Lincoln's, wherein his Majesty's supreme power of granting Commendams, which in respect of the exility of bishoprics is sometimes necessary, was questioned to be overthrown or weakened; he commanded his attorney-general, not only to have care to maintain it according to his place, but also that he should relate to his Majesty how things passed; and did also command the bishop of Winchester to be present at the public argument of the case; and to report to his Majesty the true state of that question, and how far it extended.

This being accordingly done; then upon report of the bishop of Winchester in presence of the lord chancellor, his Majesty thought it necessary, that before the judges proceeded to declare their opinion they should have conference with his Majesty, to the end to settle some course, that justice might be done, and his regal power, whereof his crown had been so long vested, not touched nor diminished: and thereupon commanded his attorney, who by his place ought properly to signify his Majesty's pleasure to his judges, as his secretary doth to his privy council, in the presence of the lord chancellor and the bishop, to signify his pleasure to the judges, that because his Majesty thought it needful to consult with them in that case before they proceeded to judgment; and that his Majesty's business, as they

all knew, was very great, and Midsummer term so near at hand, and the cause argued by his attorney so lately, they should put off the day till they might advise with his Majesty at his next coming to town. That his Majesty's attorney signified so much by his letters, the next day after he had received his commandment, to all the judges, and that in no imperious manner, but alleging the circumstances aforesaid, that the case was lately argued, his Majesty's business great, another term at hand, &c.

Now followeth the manner that was held in this, which his Majesty conceiveth was not only indiscreet, but presumptuous and contemptuous.

For first, they disobeyed this his Majesty's commandment, and proceeded to public argument notwithstanding the same; and thought it enough to certify only their mind to his Majesty.

Secondly, in a general letter under all their hands, howsoever it may be upon divided opinion, they allege unto his Majesty their oath; and that his Majesty's commandment, for the attorney's letter was but the case that it was wrapped in, was against law; as if maturity and a deliberate proceeding were a delay, or that commandment of stay in respect of so high a question of state and prerogative, were like a commandment gotten by importunity, or in favour of a suitor.

Thirdly, above all, it is to be noted and justly doubted, that upon the contrary, in this that they have done, they have broken their oath; for their oath is to counsel the king when they shall be called; and if when the king calleth them to counsel, they will do the deed first, and give him counsel after, this is more than a simple refusal.

Lastly, it is no new thing upon divers particular occasions, of a far higher nature than the consulting with their sovereign about a cause of great moment, to put off days, and yet no breach of oath. And there was another fair passage well known to my lord Coke, that he might have used if it had pleased him; for that very day was appointed for the king's great cause in the chancery, both for my lord Hobart and him; which cause ought to have had precedence afore any private cause, as they would have this seem to be.

To this letter his Majesty made a most princely and prudent answer, which I leave to itself.

Upon this declaration his Majesty will be pleased to have the judges' letter and his own letter read.

Then his Majesty, for his part as I conceive, will be pleased to ask the advice of his council as well for the stay of the new day, which is Saturday next, as for the censure and reproof of the contempt passed: for though the judges are a reverend body, yet they are, as all subjects are, corrigible.

#### CXLVI. TO SIR GEORGE VILLIERS.\*

SIR,

THE king giveth me a noble choice; and you are

\* *Rawley's Resuscitatio.*

† *Ibid.*

† *Stephens's First Collection, p. 149.*

† It is very clear, that this is the act of council referred to in the preceding letter, and drawn up by Sir Francis Bacon:

the man my heart ever told me you were. Ambition would draw me to the latter part of the choice; but in respect of my hearty wishes, that my lord chancellor may live long; and the small hopes I have, that I shall live long myself; and, above all, because I see his Majesty's service daily and instantly bleedeth; towards which, I persuade myself, vainly perhaps, but yet in mine own thoughts firmly and constantly, that I shall give, when I am of the table, some effectual fartherance, as a poor thread of the labyrinth, which hath no other virtue, but an united continuance, without interruption or distraction, I do accept of the former, to be counsellor for the present, and to give over pleading at bar; let the other matter rest upon my proof, and his Majesty's pleasure, and the accidents of time. For, to speak plainly, I would be loth that my lord chancellor, to whom I owe most after the king and yourself, should be locked to his successor, for any advancement or gracing of me. So I ever remain

Your true and most devoted and most obliged  
servant,

June 3, 1616.

FR. BACON.

#### CXLVII. TO SIR GEORGE VILLIERS †

SIR,

I SEND his Majesty a draught of the act of council concerning the judges' letter, penned as near as I could to his Majesty's instructions received in your presence. I then told his Majesty my memory was not able to keep way with his; and therefore his Majesty will pardon me for any omissions or errors, and be pleased to supply and reform the same. I am preparing some other materials for his Majesty's excellent hand, concerning business that is coming on: for since his Majesty hath renewed my heart within me, methinks I should double my endeavours. God ever preserve and prosper you. I rest

Your most devoted and bounden servant,

FR. BACON.

June 12, 1616.

#### CXLVIII. TOUCHING THE COMMENDAMS.‡

Present the KING'S MAJESTY.

Lord Archbishop of Cant.	Lord Wotton.
Lord Chancellor.	Lord Stanhope.
Lord Treasurer.	Lord Fenton.
Lord Privy-Seal.	Mr. Vice-Chamberlain.
Lord Chamberlain,	Mr. Secretary Lake.
Duke of Lenox.	Mr. Secretary Winwood.
Lord Zouche.	Mr. Chancellor of the
Bishop of Winton.	Exchequer.
Lord Knollys.	Master of the Rolls.

which, being written in a fair manner, I accidentally bought, and have corrected several errors therein. If any remain, as I believe the reader will think there doth; it is because I had no opportunity to peruse the council-books. *Stephens.*

His Majesty having this day given order for meeting of the council, and that all the judges, being twelve in number, should be sent for to be present; when the lords were sat, and the judges ready attending, his Majesty came himself in person to council, and opened to them the cause of that assembly; which was: That he had called them together concerning a question that had relation to no private person, but concerned God and the king, the power of his crown, and the state of this church whereof he was protector; and that there was no fitter place to handle it than at the head of his council-table: that there had been a question pleaded and argued concerning Commendams; the proceedings wherein had either been mis-reported or mis-handled; for his Majesty for a year since had received advertisements concerning the cause in two entrances, by some that intrenched upon his prerogative royal in the general power of granting Commendams; and by others, that the doubt rested only upon a special nature of a Commendam, such as in respect of the incongruity and exorbitant form thereof might be questioned, without impeaching or weakening the general power of all.

Whereupon his Majesty, willing to know the true state thereof, commanded the lord bishop of Winchester\* and Mr. Secretary Winwood to be present at the next argument, and to report the state of the question and proceeding to his Majesty. But Mr. Secretary Winwood being absent by occasion, the lord of Winchester only was present, and made information to his Majesty of the particulars thereof, which his Majesty commanded him to report to the board. Whereupon the lord of Winchester stood up and said, that serjeant Chiborne, who argued the cause against the Commendams, had maintained divers positions and assertions very prejudicial to his Majesty's prerogative royal; as first, that the translation of bishops was against the canon law, and for authority vouched the canons of the council of Sardis; that the king had not power to grant Commendams, but in case of necessity; that there could be no necessity, because there could be no need for augmentation of living, for no man was bound to keep hospitality above his means; besides many other parts of his argument tending to the overthrow of his Majesty's prerogative in case of Commendams.

The lord of Winchester having made his report, his Majesty resumed his former narrative, letting the lords know, that after the lord of Winton had made unto his Majesty a report of that which passed at the argument of the cause, like in substance unto that which now had been made; his Majesty apprehending the matter to be of so high a nature, commanded his attorney-general to signify his Majesty's pleasure unto the lord chief justice; That in regard of his Majesty's most weighty occasions, and for that his Majesty held it necessary upon the lord of Winton's report, that his Majesty be first consulted with, before the judges proceed to argue it; therefore the day appointed for the judges' argument should be put off till they might speak with his

\* Dr. Bilson, who died June 18, 1616.

Majesty; and this letter of his Majesty's attorney was, by his Majesty's commandment, openly read as followeth, *in hæc verba*.

MY LORD,

"It is the king's express pleasure, that because his Majesty's time would not serve to have conference with your lordship and his judges, touching the cause of Commendams, at his last being in town; in regard of his Majesty's other most weighty occasions; and for that his Majesty holdeth it necessary, upon the report which my lord of Winchester, who was present at the last arguments by his Majesty's royal commandment, made to his Majesty, that his Majesty be first consulted with, ere there be any farther proceedings by arguments by any of the judges, or otherwise; therefore that the day appointed for the farther proceedings by arguments of the judges in that case, be put off till his Majesty's farther pleasure be known, upon consulting with him; and to that end, that your lordship forthwith signify his commandment to the rest of the judges: whereof your lordship may not fail: and so I leave your lordship to God's goodness."

Your loving friend to command,

FR. BACON.

This Thursday afternoon,  
April 25, 1616.

That upon this letter received, the lord chief justice returned word to his Majesty's said attorney by his servant; that it was fit the rest of his brethren should understand his Majesty's pleasure immediately by letters from the said attorney to the judges of the several benches; and accordingly it was done; whereupon all the said judges assembled, and by their letter under their hands certified his Majesty, that they held those letters, importing the signification aforesaid, to be contrary to law, and such as they could not yield to the same by their oath; and that thereupon they had proceeded at the day, and did now certify his Majesty thereof: which letter of the judges his Majesty also commanded to be openly read, the tenor whereof followeth *in hæc verba*.

MOST DREAD AND MOST GRACIOUS SOVEREIGN,

"It may please your most excellent Majesty to be advertised, that this letter here enclosed was delivered unto me your chief justice on Thursday last in the afternoon, by a servant of your Majesty's attorney-general; and letters of the like effect were on the day following sent from him by his servant to us your Majesty's justices of every of the courts at Westminster. We are and ever will be ready with all faithful and true hearts, according to our bounden duties, to serve and obey your Majesty, and think ourselves most happy to spend our times and abilities to do your Majesty true and faithful service in this present case mentioned in this letter. What information hath been made unto you, whereupon Mr. Attorney doth ground his letter, from the report of the bishop of Winton, we know not: this we

know, that the true substance of the cause summarily is thus; it consisteth principally upon the construction of two acts of parliament, the one of the twenty-fifth year of K. Edw. III. and the other of the twenty-fifth year of K. Hen. VIII. whereof your Majesty's judges upon their oaths, and according to their best knowledge and learning, are bound to deliver their true understanding faithfully and uprightly; and the case between two for private interest and inheritance earnestly called on for justice and expedition. We hold it our duty to inform your Majesty, that our oath is in these express words: That in case any letters come unto us contrary to law, that we do nothing by such letters, but certify your Majesty thereof, and go forth to do the law, notwithstanding the same letters. We have advisedly considered of the said letter of Mr. Attorney, and with one consent do hold the same to be contrary to law, and such as we could not yield to the same by our oath, assuredly persuading ourselves that your Majesty being truly informed, that it standeth not with your royal and just pleasure to give way to them: and knowing your Majesty's zeal to justice to be most renowned, therefore we have, according to our oaths and duties, at the very day prefixed the last term, proceeded, and thereof certified your Majesty; and shall ever pray to the Almighty for your Majesty in all honour, health and happiness long to reign over us."

EDW. COKE,  
HENRY HOBART,  
LAUR. TANFIELD,  
PET. WARBERTON,  
GEORGE SNIGGE,  
JA. ALTHAM,

ED. BROMLEY,  
JOHN CROKE,  
HUMPHRY WINCHE,  
JOHN DODDERIDGE,  
AUGUSTIN NICHOLLS,  
ROBERT HOUGHTON.

Serjeant's-Inn,  
25th April, 1616.

His Majesty having considered of this letter, by his princely letters returned answer, reporting himself to their own knowledge and experience, what princely care he hath ever had since his coming to the crown, to have justice duly administered to his subjects, with all possible expedition, and how far he was from crossing or delaying of justice, when the interest of any private person was questioned: but on the other side expressing himself, that where the case concerned the high powers and prerogatives of the crown, he would not endure to have them wounded through the sides of a private person; admonishing them also, lastly, of a custom lately entertained, of a greater boldness to dispute the high points of his Majesty's prerogative in a popular and unlawful liberty of argument more than in former times; and making them perceive also how weak and impertinent the pretence of allegation of their oath was in a case of this nature, and how well it might have been spared; with many other weighty points in the said letter contained: which letter also by his Majesty's appointment and commandment was publicly ready in *hæc verba*.

JAMES REX.

"Trusty and well-beloved counsellors, and trusty

and well-beloved, we greet you well. We perceive by your letter, that you conceive the commandment given you by our attorney-general in our name to have proceeded upon wrong information: but if you list to remember what princely care we have ever had, since our coming to this crown, to see justice duly administered to our subjects, with all possible expedition; and how far we have ever been from urging the delay thereof in any sort, you may safely persuade yourselves that it was no small reason that moved us to send you that direction. You might very well have spared your labour in informing us of the nature of your oath; for although we never studied the common law of England, yet are we not ignorant of any points which belong to a king to know: we are therefore to inform you hereby, that we are far from crossing or delaying any thing which may belong to the interest of any private party in this case; but we cannot be contented to suffer the prerogative royal of our crown to be wounded through the sides of a private person: we have no care at all which of the parties shall win this process in this case, so that right prevail, and that justice be truly administered. But on the other side, we have reason to foresee that nothing be done in this case which may wound our prerogative in general; and therefore so that we may be sure that nothing shall be debated amongst you which may concern our general power of giving Commendams, we desire not the parties to have one hour's delay of justice: but that our prerogative should not be wounded in that regard for all times hereafter, upon pretext of private persons' interest, we sent you that direction; which we account as well to be wounded if it be publicly disputed upon, as if any sentence were given against it: we are therefore to admonish you, that since the prerogative of our crown hath been more boldly dealt withal in Westminster-Hall, during the time of our reign, than ever it was before, in the reigns of divers princes immediately preceding us, that we will no longer endure that popular and unlawful liberty; and therefore we were justly moved to send you that direction to forbear to meddle in a cause of so tender a nature, till we had farther thought upon it. We have cause indeed to rejoice of your zeal for your speedy execution of justice; but we would be glad that all our subjects might so find the fruits thereof, as that no pleas before you were of older date than this is. But as to your argument, which you found upon your oath, you give our predecessors, who first founded the oath, a very charitable meaning, in perverting their intention and zeal to justice, to make a weapon of it to use against their successors; for although your oath be, that you shall not delay justice between any private persons or parties, yet was it not meant that the king should thereby receive harm, before he be forewarned thereof; neither can you deny, but that every term you will, out of your own discretions, for reasons known unto you, put off either the hearing or determining of any ordinary cause betwixt private persons till the next term following. Our pleasure therefore is, who are the head and fountain of justice under God in our

dominions, and we out of our absolute power and authority royal do command you, that you forbear to meddle any farther in this plea till our coming to town, and that out of our own mouth you hear our pleasure in this business; which we do out of the care we have, that our prerogative may not receive an unwitting and indirect blow, and not to hinder justice to be administered to any private parties, which no importunities shall persuade us to move you in. Like as, only for the avoiding of the unreasonable importunity of suitors in their own particular, that oath was by our predecessors ordained to be ministered unto you: so we wish you heartily well to fare.

*Postscript.* "You shall upon the receipt of this letter call our attorney-general unto you, who will inform you of the particular points which we are unwilling to be disputed of in this case."

This letter being read, his Majesty resolved to take into his consideration the parts of the judges' letter and other their proceedings in that cause, and the errors therein contained and committed; which errors his Majesty did set forth to be both in matter and manner: in matter, as well by omission as commission; for omission, that it was a fault in the judges, that when they heard a counsellor at the bar presume to argue against his Majesty's prerogative, which in this case was in effect his supremacy, they did not interrupt and reprove sharply that base and bold course of defaming or impeaching things of so high a nature by discourse; especially since his Majesty hath observed, that ever since his coming to the crown, the popular sort of lawyers have been the men, that most affrontedly in all parliaments have trodden upon his prerogative: which being most contrary to their vocation of any men, since the law or lawyers can never be respected if the king be not revered; it doth therefore best become the judges of any, to check and bridle such impudent lawyers, and in their several benches to disgrace them that bear so little respect to their king's authority and prerogative: that his Majesty had a double prerogative, whereof the one was ordinary and had relation to his private interest, which might be, and was every day, disputed in Westminster-Hall; the other was of a higher nature, referring to his supreme and imperial power and sovereignty, which ought not to be disputed or handled in vulgar argument; but that of late the courts of the common law are grown so vast and transcendent, as they did both meddle with the king's prerogative, and had encroached upon all other courts of justice; as the high commission, the councils established in Wales and at York, the court of requests.

Concerning that which might be termed commission, his Majesty took exception at the judges' letter both in matter and form: for matter, his Majesty plainly demonstrated, that whereas it was contained in the judges' letter that the signification of his Majesty's letter as aforesaid was contrary to law, and not agreeable to the oath of a judge; that could not be: first, for that the putting off any hearing or proceeding upon any just or

necessary cause, is no denying or delaying of justice, but wisdom and maturity of proceeding; and that there cannot be a more just and necessary cause of stay, than the consulting with the king, where the cause concerns the crown; and that the judges did daily put off causes upon lighter occasions; and likewise his Majesty did desire to know of the judges, how his calling them to consult with him was contrary to law, which they could never answer unto.

Secondly, That it was no bare supposition or surmise, that this cause concerned the king's prerogative; for that it had been directly and plainly disputed at the bar; and the very disputing thereof in a public audience is both dangerous and dishonourable to his Majesty.

Thirdly, That the manner of the putting off that which the king required, was not infinite nor long time, but grounded upon his Majesty's weighty occasions, which were notorious: by reason whereof he could not speak with the judges before the argument; and that there was a certain expectation of his Majesty's return at Whitsuntide: and likewise that the cause had been so lately handled and argued, and would not receive judgment by the Easter term next, as the judges themselves afterwards confessed.

And afterwards, because there was another just cause of absence for the two chief justices, for that they ought to have assisted the lord chancellor the same day in a great cause of the king's followed by the lord Hunsdon against the lord William Howard in chancery; which cause of the king's especially being so worthy, ought to have had precedency before any cause betwixt party and party. Also whereas it was contained in the judges' letter that the cause of Commendams was but a cause of private interest between party and party, his Majesty showed plainly the contrary; not only by the argument of serjeant Chiborne, which was before his commandment, but by the argument of the judges themselves, namely, justice Nicholls, which was after; but especially since one of the parties is a bishop who pleaded for the Commendams by the virtue of his Majesty's prerogative.

Also whereas it was contained in the judges' letter, that the parties called upon them earnestly for justice, his Majesty conceived it to be but pretence; urging them to prove that there was any solicitation by the parties for expedition, otherwise than in an ordinary course of attendance; which they could not prove.

As for the form of the letter, his Majesty noted, that it was a new thing, and very indecent and unfit for subjects to disobey the king's commandment, but most of all to proceed in the mean time, and to return to him a bare certificate; whereas they ought to have concluded with the laying down and representing of their reasons modestly to his Majesty, why they should proceed; and so to have submitted the same to his princely judgment, expecting to hear from him whether they had given him satisfaction.

After this his Majesty's declaration, all the judges fell down upon their knees, and acknowledged their error for matter and form, humbly craving his Majesty's gracious favour and pardon for the same.

But for the matter of the letter, the lord chief justice of the king's bench entered into a defence thereof; the effect whereof was, that the stay required by his Majesty was a delay of justice, and therefore contrary to law and the judges' oath; and that the judges knew well amongst themselves, that the case, as they meant to handle it, did not concern his Majesty's prerogative of granting of Commendams: and that if the day had not held by the not coming of the judges, the suit had been discontinued, which had been a failing of justice, and that they could not adjourn it, because Mr. Attorney's letter mentioned no day certain, and that an adjournment must always be to a day certain.

Unto which answer of the chief justice his Majesty did reply; that for the last conceit, it was mere sophistry, for that they might in their discretions have prefixed a convenient day, such as there might have been time for them to consult with his Majesty before, and that his Majesty left that point of form to themselves.

And for that other point, that they should take upon them peremptorily to discern whether the plea concerned the king's prerogative, without consulting with his Majesty first, and informing his princely judgment, was a thing preposterous; for that they ought first to have made that appear to his Majesty, and so to have given him assurance thereof upon consulting with him.

And for the matter, that it should be against the law and against their oath, his Majesty said he had spoken enough before; unto which the lord chief justice in effect had made no answer, but only insisted upon the former opinion; and therefore the king required the lord chancellor to deliver his opinion upon that point, Whether the stay that had been required by his Majesty were contrary to law, or against the judges' oath?

The chancellor stood up and moved his Majesty, that because this question had relation to matter of law, his Majesty would be informed by his learned counsel first, and they first to deliver their opinions, which his Majesty commanded them to do.

Whereupon his Majesty's attorney-general gave his opinion, that the putting off of the day in manner as was required by his Majesty, to his understanding was without all scruple no delay of justice, nor danger of the judges' oath; insisting upon some of the reasons which his Majesty had formerly opened, and adding, that the letter that he had formerly written by his Majesty's command was no imperious letter; as to say his Majesty for certain causes, or for causes known to himself, would have them put off the day: but fairly and plainly expressed the causes unto them; for that the king conceived upon my lord of Winton's report, that the cause concerned him: and that his Majesty would have willingly spoken with them before, but by reason of his important business could not; and therefore required a stay till they might conveniently speak with him, which they knew could not be long. And in conclusion of his speech wished the judges to consider seriously with themselves, whether they were not in greater danger of breach of their oaths

by the proceedings, than they would have been by their stay; for that it is part of their oath to counsel his Majesty when they are called; and if they will proceed first in a business whereupon they are called to counsel, and will counsel him when the matter is past, it is more than a simple refusal to give him counsel; and so concluded his speech, and the rest of the learned counsel consented to his opinion.

Whereupon the lord chief justice of the king's bench, answering nothing to the matter, took exception that the king's counsel learned should plead or dispute with the judges; for he said they were to plead before judges, and not to dispute with them. Whereunto the king's attorney replied, that he found that exception strange; for that the king's learned counsel were by oath and office, and much more where they had the king's express commandment, without fear of any man's face, to proceed or declare against any the greatest peer or subject of the kingdom; and not only any subject in particular, but any body of subjects or persons, were they judges, or were they of an upper or lower house of parliament, in case they exceed the limits of their authority, or took any thing from his Majesty's royal power or prerogative; and so concluded, that this challenge, and that in his Majesty's presence, was a wrong to their places, for which he and his fellows did appeal to his Majesty for reparation. And thereupon his Majesty did affirm, that it was their duty so to do, and that he would maintain them therein, and took occasion afterward again to speak of it; for when the lord chief justice said, he would not dispute with his Majesty, the king replied, That the judges would not dispute with him, nor his learned counsel might not dispute with them: so whether they did well or ill, it must not be disputed.

After this the lord chancellor declared his mind plainly and clearly, that the stay that had been by his Majesty required, was not against the law, nor a breach of the judges' oath, and required that the judges' oath itself might be read out of the statute, which was done by the king's solicitor, and all the words thereof weighed and considered.

Thereupon his Majesty and the lords thought good to ask the judges severally their opinions; the question being put in this manner; Whether, if at any time, in a case depending before the judges, his Majesty conceived it to concern him either in power or profit, and thereupon required to consult with them, and that they should stay proceedings in the mean time, they ought not to stay accordingly? They all, the lord chief justice only excepted, yielded that they would, and acknowledged it to be their duties so to do; only the lord chief justice of the king's bench said for answer, that when the case should be, he would do that which should be fit for a judge to do. And the lord chief justice of the common pleas, who had assented with the rest, added, that he would ever trust the justice of his Majesty's commandment. After this was put to a point, his Majesty thought fit, in respect of the farther day of argument, appointed the Saturday following for the Commendams, to know from

his judges what he might expect from them concerning the same. Whereupon the lord of Canterbury breaking the case into some questions, his Majesty did require his judges to deal plainly with him, whether they meant in their argument to touch the general power of granting Commendams, yea or no? Whereupon all the said judges did promise and assure his Majesty, that in the argument of the said case of Commendams, they would speak nothing which should weaken or draw into doubt his Majesty's prerogative for granting of them; but intended particularly to insist upon the points of *lapse* and other judicial points of this case, which they conceived to be of a form differing from all other Commendams which have been practised.

The judges also went farther, and did promise his Majesty, that they would not only abstain from speaking any thing to weaken his Majesty's prerogative of Commendams, but would directly and in plain terms affirm the same, and correct the erroneous and bold speeches which had been used at the bar in derogation thereof.

Also the judges did in general acknowledge and profess with great forwardness, that it was their duty, if any counsellor at the law presumed at any time to call in question his Majesty's high prerogative, that they ought to reprehend them and silence them; and all promised so to do hereafter.

Lastly, the two judges that were then next to argue, Mr. Justice Dodderidge and Mr. Justice Winch, opened themselves unto his Majesty thus far; that they would insist chiefly upon the *lapse*, and some points of uncertainty, repugnancy, and absurdity, being peculiar to this Commendam; and that they would show their dislike of that which had been said at the bar for the weakening of the general power; and Mr. Justice Dodderidge said he would conclude for the king, that the church was void and in his Majesty's gift; he also said that the king might give a Commendam to a bishop, either before or after his consecration, and that he might give it him during his life, or for a certain number of years.

The judges having thus far submitted and declared themselves, his Majesty commanded them to keep the bounds and limits of their several courts, not to suffer his prerogative to be wounded by rash and unadvised pleading before them, or by new invention of law; for as he well knew the true and ancient common law is the most favourable for kings of any law in the world; so he advised them to apply their studies to that ancient and best law, and not to extend the power of any other of their courts beyond their due limits; following the precedents of their best ancient judges in the times of the best government; and that then they might assure themselves that he, for his part, in his protection of them, and expediting of justice, would walk in the steps of ancient and best kings. Whereupon he gave them leave to proceed in their argument.

When the judges were removed, his Majesty that

† Soon after this date Dr. Burgess was presented to the parsonage of Sutton-Colfield in Warwickshire. In 1620 he attended Sir Horace Vere into the Palatinate, when that noble

had forborne to ask the voices and opinions of his council before the judges, because he would not prejudicate the freedom of the judges' opinion, concerning whether the stay of proceedings, that hath been by his Majesty required, could by any construction be thought to be within the compass of the judges' oath, which they had heard read unto them, did then put the question to his council; who all with one consent did give opinion, that it was far from any colour or shadow of such interpretation, and that it was against common sense to think the contrary, especially since there is no mention made in their oath of delay of justice, but only that they should not deny justice, nor be moved by any of the king's letters, to do any thing contrary to law or justice.

CXLIX. TO SIR GEORGE VILLIERS, FOR THE RESTORING TO DR. BURGESS THE LIBERTY OF PREACHING.\*

SIR,

I do think you may do yourself honour, and, that which is more, do a good work; if you will assist and perfect a motion begun, and that upon a good ground, both of submission and conformity, for the restoring of doctor Burgess to preach; † and I wish likewise, that if Gray's-Inn should think good, after he is free from the state, to choose him for their preacher, his Majesty should not be against it: for certainly we should watch him well if he should fly forth; so as he cannot be placed in a more safe auditory. This may seem a trifle, but I do assure you I do scarce know a particular, wherein you may open more honest mouths to speak honour of you, than this. And I do extremely desire there may be a full cry from all sorts of people, especially the best, to speak, and to trumpet out your commendations. I pray you take it to heart, and do somewhat in it. I rest

Your devoted and bounden servant,

FR. BACON.

June 12, 1616.

SIR,

‡ Stephens's First Collection, p. 167.

been laboured by my lady of Bedford,\* and put in good way by the bishop of Bath and Wells,† concerning the restoring to preach of a famous preacher, one doctor Burgess; who, though he hath been silenced a great time, yet he hath now made such a submission touching his conformity, as giveth satisfaction. It is much desired also by Gray's-Inn, if he shall be free from the state, to choose him for their preacher: and certainly it is safer to place him there, than in another auditory, because he will be well watched, if he should any ways fly forth in his sermons beyond duty. This may seem a trifle, but, I do assure you, in opening this man's mouth to preach, you shall open every man's mouth to speak honour of you; and I confess I would have a full cry of puritans, of papists, of all the world, to speak well of you; and, besides, I am persuaded, which is above all earthly glory, you shall do God good service in it. I pray deal with his Majesty in it. I rest

FR. BACON.

June 13, 1616.

CLII. TO SIR GEORGE VILLIERS.‡

SIR,

I SEND you enclosed a warrant for my lady of Somerset's pardon, reformed in that main and material point, of inserting a clause [that she was not a principal, but an accessory before the fact, by the instigation of base persons.] Her friends think long to have it despatched, which I marvel not at, for that in matter of life moments are numbered.

I do more and more take contentment in his Majesty's choice of Sir Oliver St. John, for his deputy of Ireland, finding, upon divers conferences with him, his great sufficiency; and I hope the good intelligence, which he purposeth to hold with me by advertisements from time to time, shall work a good effect for his Majesty's service.

I am wonderful desirous to see that kingdom flourish, because it is the proper work and glory of his Majesty and his times. And his Majesty may be pleased to call to mind, that a good while since, when the great rent and divisions were in the parliament of Ireland, I was no unfortunate remembrancer to his Majesty's princely wisdom in that business. God ever keep you and prosper you.

Your true and most devoted and bounden servant,

FR. BACON.

1 July, 1616.

\* My lady of Bedford, so much celebrated by Dr. Donne and Sir William Temple, for the admirable disposition of her garden at Moor Park, was sister and co-heir to the last lord Harrington of Exton; who dying in the entrance of the year 1614, and the 22d of his age, revived in the nation the sense it had of the loss of prince Henry, as being a young nobleman of great hopes and piety. This lady disposed of much of the estate she had from her brother: selling Burley upon the Hill in the county of Rutland to the then marquis of Buckingham, where he afterwards adorned the seat with noble structures, which were destroyed in the time of our civil wars. But this place has now recovered its ancient splendour at the

CLII. TO SIR GEORGE VILLIERS.§

SIR,

I THINK I cannot do better service towards the good estate of the kingdom of Ireland, than to procure the king to be well served in the eminent places of law and justice; I shall therefore name unto you for the attorney's place there, or for the solicitor's place, if the new solicitor shall go up, a gentleman of mine own breeding and framing. Mr. Edward Wyrthington of Gray's-Inn; he is born to eight hundred pounds a year; he is the eldest son of a most severe justicer, amongst the recusants of Lancashire, and a man most able for law and speech, and by me trained in the king's causes. My lord deputy, by my description, is much in love with the man. I hear my lord of Canterbury, and Sir Thomas Laque, should name one Sir John Beare, and some other mean men. This man I commend upon my credit, for the good of his Majesty's service. God ever preserve and prosper you. I rest,

Your most devoted and most bounden servant,

FR. BACON.

2 July, 1616.

CLIII. TO SIR GEORGE VILLIERS, ABOUT IRISH AFFAIRS.||

SIR,

BECAUSE I am uncertain whether his Majesty will put to a point some resolutions touching Ireland, now at Windsor; I thought it my duty to attend his Majesty by my letter, and thereby to supply my absence, for the renewing of some former commissions for Ireland, and the framing a new commission for the wards and the alienations, which appertain properly to me as his Majesty's attorney, and have been accordingly referred by the lords. I will undertake that they are prepared with a greater care, and better application to his Majesty's service in that kingdom, than heretofore they have been; and therefore of that I say no more. And for the instructions of the new deputy, they have been set down by the two secretaries, and read to the board; and being things of an ordinary nature, I do not see but they may pass.

But there have been three propositions and counsels which have been stirred, which seem to me of very great importance; wherein I think myself bound to deliver to his Majesty my advice and opinion, if they should now come in question.

expense, and by the direction of its present lord the earl of Nottingham. *Stephens.*

† This bishop was fifth son to Sir Edward Montague, and brother to Edward the first lord Montague of Boughton, a prelate of great learning and eloquence, and very munificent; and by some called king James's ecclesiastical favourite. In 1616 he was translated to Winchester, and dying in two years' time, he was buried in the body of the abbey church at Bath, which with great cost and care he had preserved from the ruins which time and neglect were bringing upon it. *Stephens.*

‡ *Stephens's* Second Collection, p. 3.

§ *Ibid.* p. 4.

|| *Ibid.* p. 5.

The first is, touching the recusant magistrates of the towns of Ireland, and the commonalties themselves their electors, what shall be done? Which consultation ariseth from the late advertisements of the two lords justices, upon the instance of the two towns, Limerick and Kilkenny; in which advertisements they represent the danger only, without giving any light for the remedy; rather warily for themselves, than agreeably to their duties and places.

In this point I humbly pray his Majesty to remember, that the refusal is not of the oath of allegiance, which is not enacted in Ireland, but of the oath of supremacy, which cutteth deeper into matter of conscience. Also, that his Majesty will, out of the depth of his excellent wisdom and providence, think, and, as it were, calculate with himself, whether time will make more for the cause of religion in Ireland, and be still more and more propitious; or whether deferring remedies will not make the case more difficult. For if time give his Majesty advantage, what needeth precipitation to extreme remedies? But if time will make the case more desperate, then his Majesty cannot begin too soon. Now, in my opinion, time will open and facilitate things for reformation of religion there, and not shut up and lock out the same. For, first, the plantations going on, and being principally of protestants, cannot but mate the other party in time: also his Majesty's care in placing good bishops and divines, in amplifying the college there, and in looking to the education of wards and the like; as they are the most natural means, so are they like to be the most effectual and happy for the weeding out of popery, without using the temporal sword; so that, I think, I may truly conclude, that the ripeness of time is not yet come.

Therefore my advice in all humbleness is, that this hazardous course of proceeding, to tender the oath to the magistrates of towns, proceed not, but die by degrees. And yet, to preserve the authority and reputation of the former council, I would have somewhat done; which is, that there be a proceeding to seizure of liberties; but not by any act of power, but by *Quo warranto*, or *Scire facias*: which is a legal course; and will be the work of three or four terms; by which time the matter will somewhat cool.

But I would not, in any case, that the proceeding should be with both the towns which stand now in contempt, but with one of them only, choosing that which shall be thought most fit. For if his Majesty proceed with both, then all the towns that are in the like case will think it a common cause; and that it is but their case to-day, and their own to-morrow. But if his Majesty proceed with one, the apprehension and terror will not be so strong; for they will think it may be their case as well to be spared as prosecuted: and this is the best advice that I can give to his Majesty in this strait; and of this opinion seemed my lord chancellor to be.

The second proposition is this: It may be his Majesty will be moved to reduce the number of his council of Ireland, which is now almost fifty, to

twenty, or the like number; in respect the greatness of the number doth both embase the authority of the council, and divulge the business. Nevertheless, I do hold this proposition to be rather specious and solemn, than needful at this time; for certainly it will fill the state full of discontentment: which in a growing and unsettled estate ought not to be.

This I could wish; that his Majesty would appoint a select number of counsellors there, which might deal in the improvement of his revenue, being a thing not fit to pass through too many hands, and that the said selected number should have days of sitting by themselves, at which the rest of the council should not be present; which being once settled, then other principal business of state may be handled at those sittings, and so the rest begin to be disused, and yet retain their countenance without murmur or disgrace.

The third proposition, as it is wound up, seemeth to be pretty, if it can keep promise; for it is this, that a means may be found to reinforce his Majesty's army there by 500 or 1000 men; and that without any penny increase of charge. And the means should be, that there should be a commandment of a local removing, and transferring some companies from one province to another; whereupon it is supposed, that many that are planted in house and lands, will rather lose their entertainment, than remove; and thereby new men may have their pay, and yet the old be mingled in the country for the strength thereof.

In this proposition two things may be feared; the one, discontent of those that shall be put off; the other, that the companies shall be stuffed with *Tirones*, instead of *Veterani*. I wish therefore that this proposition be well debated ere it be admitted. Thus having performed that which duty binds me to do, I commend you to God's best preservation.

Your most devoted and bounden servant,

FR. BACON.

Gorhambury, July 5, 1616.

#### CLIV. TO THE KING.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

ACCORDING TO YOUR COMMANDMENT, I send enclosed the preface to the patent of creation of Sir George Villiers. I have not used any glaring terms, but drawn it according to your Majesty's instructions, and the note which thereupon I framed and your Majesty allowed, with some additions which I have inserted. But I hope your Majesty will be pleased to correct and perfect it. Your Majesty will be also pleased to remember, that if the creation shall be at Roughford, your pleasure and this draught be speedily returned: for it will ask a sending of the bill for your Majesty's signature, and a sending back of the same to pass the seals, and a sending thereupon the patent itself; so

\* Stephens's Second Collection, p. 9.

it must twice be sent up and down before the day.  
God evermore preserve your Majesty.

Your Majesty's most devoted and most bounden  
servant,

FR. BACON.

28 July, 1616.

CLV. TO SIR GEORGE VILLIERS ON SEND-  
ING HIS BILL FOR VISCOUNT.\*

I SEND you the bill for his Majesty's signature, reformed according to his Majesty's amendments, both in the two places, which, I assure you, were both altered with great judgment, and in the third place, which his Majesty termed a question only. But he is an idle body that thinks Majesty asks an idle question; and therefore his Majesty's questions are to be answered, by taking away the cause of the question, and not by replying.

For the name, his Majesty's will is law in those things; and to speak truth, it is a well-sounding and noble name, both here and abroad; and being your proper name, I will take it for a good sign that you shall give honour to your dignity, and not your dignity to you. Therefore I have made it viscount Villiers; and for your barony, I will keep it for an earldom; for though the other had been more orderly, yet that is as usual, and both alike good in law.

For Roper's place,† I would have it by all means despatched: and therefore I marvel it lingereth. It were no good manners to take the business out of my lord treasurer's hands; and therefore I purpose to write to his lordship, if I hear not from him first by Mr. Deccomb. But if I hear of any delay, you will give me leave, especially since the king named me, to deal with Sir John Roper myself; for neither I, nor my lord treasurer, can deserve any great thanks of you in this business; considering the king hath spoken to Sir John Roper, and he hath promised: and besides, the thing itself is so reasonable, as it ought to be as soon done as said. I am now gotten into the country to my house, where I have some little liberty to think of that I would think of, and not of that which other men hourly break my head withal, as it was at London. Upon this you may conclude, that most of my thoughts are of his Majesty; and then you cannot be far off. God ever keep you, and prosper you. I rest always

Your true and most devoted servant,

FR. BACON.

Aug. 5, one of the happiest days, 1616.

\* Stephens's Second Collection, p. 10.

† Sir John Roper, who had for many years enjoyed the place of the chief clerk for enrolling of pleas in the court of King's bench, esteemed to be worth about 4000*l.* per annum, being grown old, was prevailed with to surrender it upon being created lord Teynham, with a reservation of the profits thereof to himself during life. Upon which surrender Sir George Villiers was to have the office granted to two of his trustees for their lives, as Carr earl of Somerset was to have had before. But the lord chief justice Coke not being very forward to accept of the surrender, or make a new grant of it upon those terms,

CLVI. TO SIR GEORGE VILLIERS, ON SEND-  
ING HIS PATENT.‡

SIR,

I have sent you now your patent of creation of lord Blechly of Blechly, and of viscount Villiers. Blechly is your own; and I liked the sound of the name better than Whaddon; but the name will be hid, for you will be called viscount Villiers. I have put them both in a patent, after the manner of the patent of arms where baronies are joined: but the chief reason was, because I would avoid double prefaces, which had not been fit: nevertheless the ceremony of robing, and otherwise, must be double. And now, because I am in the country, I will send you some of my country fruits, which with me are good meditations: which, when I am in the city, are choked with business.

After that the king shall have watered your new dignities with his bounty of the lands which he intends you, and that some other things concerning your means, which are now likewise in intention, shall be settled upon you; I do not see but you may think your private fortunes established; and therefore it is now time, that you should refer your actions chiefly to the good of your sovereign and your country. It is the life of an ox or a beast always to eat, and never to exercise; but men are born, especially christian men, not to cram in their fortunes, but to exercise their virtues; and yet the other have been the unworthy, and sometimes the unlucky humour of great persons in our times; neither will your farther fortune be the farther off: for assure yourself, that fortune is of a woman's nature, that will sooner follow you by slighting than by too much wooing. And in this dedication of yourself to the public, I recommend unto you principally that which I think was never done since I was born; and which not done, hath bred almost a wilderness and solitude in the king's service; which is, that you countenance, and encourage, and advance able and virtuous men in all kinds, degrees, and professions. For in the time of some late great counsellors, when they bare the sway, able men were by design and of purpose suppressed; and though now since choice goeth better both in church and commonwealth, yet money, and turn-serving, and cunning canvasses, and impotunity prevail too much. And in places of moment, rather make able and honest men yours, than advance those that are otherwise because they are yours. As for cunning and corrupt men, you must, I know, sometimes use them, but keep them at a distance; and let it appear, that you make use of them, rather than that they lead you. Above all,

he was upon the third of October, 1616, commanded to desist from the service of his place, and at last removed from it upon the 15th of November following. His successor Sir Henry Montagu, third son of Sir Edward Montagu, of Boughton in Northamptonshire, recorder of London, and king's serjeant, being more complaisant, Sir John Roper resigned towards the latter end of the same month; and Mr. Shute, and Mr. Heath, who was afterwards the king's solicitor-general, being the deputies and trustees of Sir George Villiers, were admitted. Stephens's *Introduct.* p. 37.

‡ Rawley's Resuscitatio.

depend wholly, next to God, upon the king; and be ruled, as hitherto you have been, by his instructions; for that's best for yourself. For the king's care and thoughts concerning you are according to the thoughts of a great king; whereas your thoughts concerning yourself are, and ought to be, according to the thoughts of a modest man. But let me not weary you: the sum is, that you think goodness the best part of greatness; and that you remember whence your rising comes, and make return accordingly. God ever keep you.

Your true and most devoted servant,

FR. BACON.

Gorhambury, Aug. 12, 1616.

CLVII. TO THE KING, OF SIR GEORGE VILLIERS'S PATENT.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I HAVE sent Sir George Villiers's patent drawn again, containing also a barony; the name Blechly, which is his own, and to my thinking soundeth better than Whaddon. I have included both in one patent, to avoid a double preface, and as hath been used in the patents of earls in the like nature: nevertheless the ceremony of robing and otherwise is to be double, as is also used in the like case of earls.

It resteth, that I express unto your Majesty my great joy, in your honouring and advancing this gentleman; whom to describe, not with colours, but with true lines, I may say this; your Majesty certainly hath found out and chosen a safe nature, a capable man, an honest will, generous and noble affections, and a courage well lodged, and one that I know loveth your Majesty unfeignedly, and admireth you as much as is in a man to admire his sovereign upon earth. Only your Majesty's school, wherein he hath already so well profited, as in this entrance upon the stage, being the time of the greatest danger, he hath not committed any manifest error, will add perfection to your Majesty's comfort and the great contentment of your people. God ever preserve your Majesty. I rest in all humbleness,

Your Majesty's most bounden and devoted subject and servant,

FR. BACON.

Gorhambury, Aug. 12, 1615.

CLVIII. TO SIR GEORGE VILLIERS, ON SENDING HIS PATENT SEALED.†

SIR,

I TOOK much contentment in that I perceived by your letter, that you took in so good part the freedom of my advice, and that yourself in your own nature and judgment consented therewith. There is no service comparable to good counsel; and the reason is, because no man can do so much for another, as a man

\* Rawley's Resuscitatio.

† Rawley's Resuscitatio, with corrections from the original.

may do for himself: now good counsel helpeth a man to help himself; but you have so happy a master as supplieth all. My service and good will shall not be wanting.

It was graciously and kindly done also of his Majesty towards me, to tell you that you were beholden to me; but it must be then for thinking of you as I do; for otherwise, for speaking as I think, it is but the part of an honest man. I send you your patent, whereof God give you joy; and I send you here enclosed a little note of remembrance for that part of the ceremony which concerneth the patent; for as for other ceremonies, I leave to others.

My lord chancellor despatched your patent presently upon the receipt; and writ to me, how glad he was of it, and how well he wished you. If you write to him a few words of thanks, I think you shall do well. God keep you and prosper you. I ever rest

Your true and most devoted servant,

FR. BACON.

Gorhambury, Aug. 19, 1616.

CLIX. TO SIR GEORGE VILLIERS, ACKNOWLEDGING THE KING'S FAVOUR.‡

Now touching the clothing business; for that I perceive the cloth goeth not off as it should, and that Wiltshire is now come in with complaint, as well as Gloucestershire and Worcestershire, so that this gangrene creepeth on; I humbly pray your Majesty to take into your Majesty's princely consideration a remedy for the present stand, which

‡ Rawley's Resuscitatio.

§ Stephens's First Collection, p. 179.

certainly will do the deed; and for any thing that I know will be honourable and convenient, though joined with some loss in your Majesty's customs, which I know in a business of this quality, and being but for an interim till you may negotiate, your Majesty doth not esteem: and it is this:

That your Majesty by your proclamation do forbid, after fourteen days, giving that time for suiting men's selves, the wearing of any stuff made wholly of silk, without mixture of wool, for the space of six months. So your Majesty shall supply outward vent with inward use, specially for the finer cloths, which are those wherein the stand principally is, and which silk weavers are likest to buy; and you shall show a most princely care over thousands of the poor people; and besides, your Majesty shall blow a horn, to let the Flemings know your Majesty will not give over the chace. Again, the winter season coming on is fittest for wearing of cloth; and there is scope enough left for bravery and vanity by lacing and embroidery, so it be upon cloth or stuffs of wool.

I thought it my duty to offer and submit this remedy, amongst others, to your Majesty's great wisdom, because it pleased you to lay the care of this business upon me; and indeed my care did fly to it before, as it shall always do to any knots and difficulties in your business, wherein hitherto I have been not unfortunate. God ever have you in his most precious custody.

Your Majesty's most faithful and most bounden servant,

FR. BACON.

Sept. 13, 1616.

CLXI. TO THE LORD VISCOUNT VILLIERS.\*

MY VERY GOOD LORD,

It was my opinion from the beginning, that this company will never overcome the business of the cloth; and that the impediments are as much or more in the persons which are *instrumenta animata*, than in the dead business itself.

I have therefore sent unto the king here enclosed my reasons, which I pray your lordship to show his Majesty.

The new company and the old company are but the sons of Adam to me, and I take myself to have some credit with both; but it is upon fear rather with the old, and upon love rather with the new; and yet with both upon persuasion that I understand the business.

Nevertheless I walk *in via regia*, which is not absolutely acceptable to either; for the new company would have all their demands granted, and the old company would have the king's work given over and deserted.

My opinion is, that the old company be drawn to succeed into the contract, else the king's honour suffereth, and that we all draw in one way to effect that. If time, which is the wisest of things, prove

\* Stephens's First Collection, p. 181.

the work impossible or inconvenient, which I do not yet believe, I know his Majesty and the state will not suffer them to perish.

I wish what shall be done were done with resolution and speed, and that your lordship, because it is a gracious business, had thanks of it next the king; and that there were some commission under his Majesty's sign manual to deal with some selected persons of the old company, and to take their answers and consent under their hands; and that the procuring the commission, and the procuring their offers to be accepted, were your lordship's work.

In this treaty my lord chancellor must by no means be left out; for he will moderate well, and aimeth at his Majesty's ends.

Mr. Solicitor is not yet returned, but I look for him presently. I rest

Your lordship's true and most devoted servant,

FR. BACON.

Monday, October 14,  
at 10 of the clock.

CLXII. REASONS WHY THE NEW COMPANY IS NOT TO BE TRUSTED AND CONTINUED WITH THE TRADE OF CLOTHS.†

First, The company consists of a number of young men and shop-keepers, which not being bred in the trade, are fearful to meddle with any of the dear and fine cloths, but only meddle with the coarse cloths, which is every man's skill; and besides, having other trades to live upon, they come in the sunshine so long as things go well, and as soon as they meet with any storm or cloud, they leave trade, and go back to shop-keeping; whereas the old company were beaten traders, and having no other means of living but that trade, were fain to ride out all accidents and difficulties, which, being men of great ability, they were well able to do.

Secondly, These young men being the major part, and having a kind of dependence upon alderman Cockain, they carry things by plurality of voices; and yet those few of the old company, which are amongst them, do drive almost three parts of the trade: and it is impossible things should go well, where one part gives the vote, and the other doth the work; so that the execution of all things lies chiefly upon them that never consented, which is merely *motus violentus*, and cannot last.

Thirdly, The new company make continually such new springing demands, as the state can never be secure nor trust to them; neither doth it seem that they do much trust themselves.

Fourthly, The present stand of cloth at Blackwell-hall, which is that that presseth the state most, and is provided for but by a temporary and weak remedy, is supposed would be presently at an end, upon the revivor of the old; in respect that they are able men and united amongst themselves.

Fifthly, In these cases *opinio est veritate major*, and the very voice and expectation of revivor of the old

† Stephens's First Collection, p. 182.

company will comfort the clothiers, and encourage them not to lay down their looms.

Sixthly, The very Flemings themselves, in regard of the pique they have against the new company, are like to be more pliant and tractable towards his Majesty's ends and desires.

Seventhly, Considering the business hath not gone on well, his Majesty must either lay the fault upon the matter itself, or upon the persons that have managed it; wherein the king shall best acquit his honour, to lay it where it is indeed; that is, upon the carriage and proceedings of the new company, which have been full of uncertainty and abuse.

Lastly, The subjects of this kingdom generally have an ill taste and conceit of the new company, and therefore the putting of them down will discharge the state of a great deal of envy.

### CLXIII. TO THE LORD VISCOUNT VILLIERS.\*

MY VERY GOOD LORD,

Now that the king hath received my opinion, with the judges' opinion, unto whom it was referred, touching the proposition for inns, in point of law; it resteth that it be molded and carried in that sort, as it may pass with best contentment and convenience. Wherein I that ever love good company, as I was joined with others in the legal point, so I desire not to be alone touching the conveniency. And therefore I send your lordship a form of warrant for the king's signature, whereby the framing of the business, and that which belongeth to it, may be referred to myself with serjeant Montague and serjeant Finch, and though Montague should change his place, that alteration hurteth not the business, but rather helpeth it. And because the inquiry and survey touching inns will require much attendance and charge, and the making of the licences, I shall think fit, when that question cometh to me, to be † to the justice of assise, and not to those that follow this business: therefore his Majesty may be pleased to consider what proportion or dividend shall be allotted to Mr. Mompesson, and those that shall follow it at their own charge, which useth in like case to be a fifth. † So I ever rest

Your lordship's true and most devoted servant,

FR. BACON.

Nov. 13, 1616.

\* Stephens's First Collection, p. 184.

† Here (referred) or some word of the like import is omitted.

‡ I suppose after the judges and attorney-general had given the opinion above mentioned, that a patent was soon granted for licensing of common inns; whence Sir Giles Mompesson levied several sums by fines, and annual rent, and from ale-houses also by a subsequent patent: proceeding therein with so much rigour, that it was complained of in the parliament which begun in 1620-21, as one of the great grievances of the nation; the patent declared illegal, and recalled by the king's proclamation; Mompesson and Michel, the chief projectors of this and some other oppressions, severely censured accord-

### CLXIV. TO THE LORD VISCOUNT VILLIERS. †

MY VERY GOOD LORD,

I think his Majesty was not only well advised, but well inspired, to give order for this same wicked child of Cain, Bertram, to be examined before he was farther proceeded with. And I for my part, before I had received his Majesty's pleasure by my lord chamberlain, went thus far; that I had appointed him to be farther examined, and also had taken order with Mr. Solicitor that he should be provided to make some declaration at his trial in some solemn fashion, and not to let such a strange murder pass, as if it had been but a horse-stealing.

But upon his Majesty's pleasure signified, I forthwith caused the trial to be staid, and examined the party according to his Majesty's questions; and also sent for the principal counsel in the cause, whereupon Sir John Tyndal's report was grounded, to discern the justice or iniquity of the said report, as his Majesty likewise commanded.

I send therefore the case of Bertram truly stated and collected, and the examination taken before myself and Mr. Solicitor; whereby it will appear to his Majesty that Sir John Tyndal, as to his cause, is a kind of martyr: for if ever he made a just report in his life, this was it.

But the event since all this is, that this Bertram being, as it seemeth, indurate, or in despair, hath hanged himself in prison; of which accident, as I am sorry, because he is taken from example and public justice, so yet I would not for any thing it had been before his examination; so that there may be otherwise some occasion taken, either by some declaration in the king's bench upon the return of the coroners' inquest, or by some printed book of the fact, or by some other means, whereof I purpose to advise with my lord chancellor, to have both his Majesty's royal care, and the truth of the fact, with the circumstances, manifested and published. †

For the taking of a toy of my lord chief justice before he was placed, it was done before your letter came; and on Tuesday Heath and Shute shall be admitted and all perfected.

My lord chancellor proposeth to be at the hall to-morrow, to give my lord chief justice his oath; and I pray God it hurt him not this cold weather. God ever prosper you.

Your true and most devoted servant,

FR. BACON.

Sunday night, Nov. 17, 1616.

ing to their demerits: the manner of which may be seen in the journals of that parliament, and the histories of those times. Stephens.

† Stephens's First Collection, p. 186.

‡ This Bertram, who according to Camden in his Annals of king James, was a grave man of above 70 years of age, and of a clear reputation, pistoled Sir John Tyndal, a master in chancery, on the 12th of November, for making a report against him, in a cause where the sum contended for did not exceed 200.

By his examination taken the 16th, he confessed it to be as foul a murder as ever was: under the sense of which he hanged himself the next day. Stephens.

## CLXV. TO SIR FRANCIS BACON, HIS MAJESTY'S ATTORNEY-GENERAL.\*

SIR,

I HAVE acquainted his Majesty with your letter, and the other papers enclosed, wholikeh very well of the course you purpose touching the manifest to be published of Bertram's fact; and will have you, according to your own motion, advise with my lord chancellor of the manner of it. His Majesty's pleasure likewise is, that according to the declaration he made before the lords of his council at Whitehall, touching the review of my lord Coke's Reports, you draw a warrant ready for his signature, directed to those judges whom he then named to that effect, and send it speedily to him to be signed, that there may be a despatch of that business before the end of this term. And so I rest

Your faithful friend at command,

GEORGE VILLIERS.

Newmarket, Nov. 19, 1616.

## THE CASE OF JOHN BERTRAM.

LEONARD Chamberlayne died intestate without issue, and left a sister married to Bertram, and a niece afterwards married to Sir George Simeon.

The niece obtained letters of administration, and did administer; but afterwards upon appeal, Bertram in the right of his wife, that was the sister, obtained the former administration to be repealed, and new letters of administration to be committed to Bertram and his wife, because the sister was nearer of kin than the niece.

Thereupon Bertram brings his bill in chancery against the first administratrix, to discover the true state of the intestate, and to have it set over unto him, being the rightful administrator; and this cause coming to hearing, it did appear that there was a debt of 200*l.* owing by one Harris to the intestate: whereupon it was decreed, that the debt of Harris by bond should be set over to Bertram, and likewise that all other moneys, debts, and bonds, should be assigned over to him. In the penning of this decree there was an error or slip; for it was penned that a debt by Harris by a bond of 200*l.* should be set over, whereas the proofs went plainly that it was but 200*l.* *in toto* upon divers specialties and writings. Upon this pinch and advantage Bertram moved still that the bond of 200*l.* should be brought in, and at last the defendant alleging that there was no such bond, the court ordered that the money itself, namely, 200*l.* should be brought in: which was done accordingly, and soon after by order of the court it was paid over to Bertram.

When Bertram had this 200*l.* in his purse, he would needs surmise, that there was another 200*l.* due by Harris upon account, besides the 200*l.* due by one singular bond, and still pressed the words of

\* Stephens's Second Collection, p. 23.

the decree, which mentions a bond, and thereupon got his adversary Sir George Simeon committed. Afterwards it was moved upon Simeon's part, that there was only one debt of 200*l.* and that the decree was mistaken in the penning of it, and so must needs be understood, because the decree must be upon the proofs; and all the proofs went but upon the 200*l.* *in toto*, and not upon any particular bond: whereupon my lord chancellor referred the consideration of the proofs, and the comparing of them with the decree, to Sir John Tyndal and doctor Amye.

They reported, which was the killing report, that upon the proofs there was but one 200*l.* in all, and that had been eagerly followed by Bertram, and that Simeon had suffered by error and mistaking, and that it were time he were released, which was a most just and true report, and yet it concluded, as is used in such cases, that they referred it to the better judgment of the court; and the court upon the reading of that report gave order that the plaintiff Bertram should show cause by a day why Simeon should not be enlarged, and the plaintiff Bertram dismissed. And before the day prefixed to show cause, Bertram pistolled Sir John Tyndal.

## CLXVI. TO THE LORD VISCOUNT VILLIERS.†

MY VERY GOOD LORD,

I AM glad to find your lordship mindful of your own business, and if any man put you in mind of it, I do not dislike that neither; but your lordship may assure yourself, in whatsoever you commit to me your lordship's farther care shall be needless: for I desire to take nothing from my master and my friend but care; and therein I am so covetous, as I will leave them as little as may be.

Now therefore things are grown to a conclusion, touching your land and office, I will give your lordship an account of that which is passed; and acquaint your judgment, which I know to be great and capable of any thing, with your own business; that you may discern the difference between doing things substantially, and between shuffling and talking: and first for your patent.

First, It was my counsel and care that your book should be fee-farm, and not fee-simple; whereby the rent of the crown in succession is not diminished, and yet the quantity of the land, which you have upon your value, is enlarged; whereby you have both honour and profit.

Secondly, By the help of Sir Lionel Cranfield I advanced the value of Sherbourn from 26,000*l.* (which was thought and admitted by my lord treasurer and Sir John Decombe, as a value of great favour to your lordship, because it was a thousand pound more than it was valued at to Somerset) to thirty-two thousand pounds; whereby there were six thousand pounds gotten, and yet justly.

Thirdly, I advised the course of rating Hartington at a hundred years' purchase, and the rest at

† Stephens's First Collection, p. 108.

thirty-five years' purchase fee-farm, to be set down and expressed in the warrant; that it may appear and remain of record, that your lordship had no other rates made to you in favour, than such as purchasers upon sale are seldom drawn into; whereby you have honour.

Fourthly, That lease to the feoffees, which was kept as a secret in the decke, and was not only of Hartington, but also of most of the other particulars in your book, I caused to be thoroughly looked into and provided for; without which your assurance had been nothing worth: and yet I handled it so, and made the matter so well understood, as you were not put to be a suitor to the prince for his good will in it, as others ignorantly thought you must have done.

Fifthly, The annexation,\* which no body dreamt of, and which some idle bold lawyer would perhaps have said had been needless; and yet is of that weight, that there was never yet any man that would purchase any such land from the king, except he had a declaration to discharge it, I was provident to have it discharged by declaration.

Sixthly, Lest it should be said that your lordship was the first, except the queen and the prince, that brake the annexation, upon a mere gift; for that others had it discharged only upon sale, which was for the king's profit and necessity; I found a remedy for that also, because I have carved it in the declaration, as that this was not gift to your lordship, but rather a purchase and exchange, as indeed it was, for Sherbourn.

Seventhly and lastly, I have taken order, as much as in me was, that your lordship in these things which you have passed be not abused, if you part with them: for I have taken notes in a book of their values and former offers.

Now for your office.

First, Whereas my lord Teynham, at the first, would have had your lordship have had but one life in it, and he another; and my lord treasurer, and the solicitor, and Decombe, were about to give way to it: I turned utterly that course, telling them that you were to have two lives in it, as well as Somerset had.

Secondly, I have accordingly, in the assurance from your deputies, made them acknowledge the trust, and give security not only for your lordship's time, but after; so as you may dispose, if you should die, which I would be sorry to live to, the profits of the office by your will, or otherwise, to any of your friends for their comfort and advancement.

Thirdly, I dealt so with Whitlocke as well as Heath, as there was no difficulty made of the surrender.

Lastly, I did cast with myself, that if your lordship's deputies had come in by Sir Edward Coke,

\* The annexation; by which lands, &c. were united or annexed to the duchies of Cornwall and Lancaster.

† Certainly the wisdom of foresight and prevention is far above the wisdom of remedy; and yet I fear the following observation Sir Francis Bacon makes in his essay of empire, concerning the times in or near which he lived, hath been verified too much in others. "This is true, that the wisdom of all these later times in princes' affairs, is rather fine deli-

who was tied to Somerset, it would have been subject to some clamour from Somerset, and some question what was forfeited by Somerset's attainder, being but of felony, to the king; but now they coming in from a new chief justice, all is without question or scruple.

Thus your lordship may see my love and care towards you, which I think infinitely too little in respect of the fulness of my mind; but I thought good to write this, to make you understand better the state of your own business, doing by you as I do by the king; which is, to do his business safely and with foresight, not only of to-morrow or next day, but afar off; † and not to come fiddling with a report to him what is done every day, but to give him up a good sum in the end.

I purpose to send your lordship a kalendar fair written of those evidences which concern your estate, for so much as have passed my hands; which in truth are not fit to remain with solicitors, no nor with friends, but in some great cabinet to be made for that purpose.

All this while I must say plainly to your lordship, that you fall short for your present charge, except you play the good husband; for the office of Teynham is in reversion; Darcey's land is in reversion; all the land in your books is but in reversion, and yields you no present profit, because you pay the fee-farm. So as you are a strange heteroclit in grammar, for you want the present tense; many verbs want the præterperfect tense, and some the future tense, but none want the present tense. I will hereafter write to your lordship, what I think of for that supply; to the end that you may, as you have begun to your great honour, despise money, where it crosseth reason of state or virtue. But I will trouble you no farther at this time. God ever preserve and prosper your lordship.

Your true and most devoted servant,

Nov. 29, 1616.

FR. BACON.

#### CLXVII. TO THE LORD VISCOUNT VILLIERS, ABOUT DUELS.‡

MY VERY GOOD LORD,

I DELIVERED the proclamation for cloth to secretary Winwood on Saturday, but he keepeth it to carry it down himself, and goeth down, as I take it, to-day. His Majesty may perceive by the docket of the proclamation, that I do not only study, but act that point touching the judges, which his Majesty commandeth in your last.

Yesterday was a day of great good for his Majesty's service, and the peace of this kingdom concerning duels, by occasion of Darcy's case. I spake

veries or shiftings of dangers and mischiefs when they are near, than solid or grounded courses to keep them aloof. But this is but to try masteries with fortune; and let men beware how they neglect and suffer matter of trouble to be prepared; for no man can forbid the spark, nor tell whence it may come."

‡ Stephens's First Collection, p. 192.

big, and, publishing his Majesty's strait charge to me, said, it had struck me blind, as in point of duels and cartels, &c. I should not know coronet from a hatband. I was bold also to declare how excellently his Majesty had expressed to me a contemplation of his touching duels; that is, that when he came forth and saw himself princely attended with goodly nobles and gentlemen, he entered into the thought, that none of their lives were in certainty not for twenty-four hours from the duel; for it was but a heat or a mistaking, and then a lie, and then a challenge, and then life: saying, that I did not marvel, seeing Xerxes shed tears, to think none of his great army should be alive once within a hundred years, his Majesty were touched with compassion to think that not one of his attendance but might be dead within twenty-four hours by the duel. This I write because his Majesty may be wary what he saith to me, in things of this nature, I being so apt to play the blab. In this also I forgot not to prepare the judges, and wish them to profess, and as it were to denounce, that in all cases of duel capital before them, they will use equal severity towards the insolent murder by the duel, and the insidious murder; and that they will extirpate that difference out of the opinions of men; which they did excellent well.

I must also say, that it was the first time that I heard my lord of Arundel speak in that place; and I do assure your lordship he doth excellently become the court; he speaketh wisely and weightily, and yet easily and clearly, as a great nobleman should do.\*

There hath been a proceeding in the king's bench against Bertram's keeper, for misdemeanor, and I have put a little pamphlet, prettily penned by one Mr. Trotte, that I set on work, touching the whole business to the press, by my lord chancellor's advice.

I pray God direct his Majesty in the cloth business, that that thorn may be once out of our sides. His Majesty knoweth my opinion *ab antiquo*. Thanks be to God for your health, and long may you live to do us all good. I rest

Your true and most devoted servant,

FR. BACON.

A PROPOSITION FOR THE REPRESSING OF SINGULAR COMBATS OR DUELS, IN THE HAND-WRITING OF SIR FRANCIS BACON.†

First, for the ordinance which his Majesty may establish herein, I wish it may not look back to

\* My lord of Arundel descended from the noble family of the Howards; his grandfather the duke of Norfolk losing his life upon the account of Mary queen of Scots, and his father suffering some years' imprisonment under sentence of condemnation: he was restored in blood, and to the titles of Arundel and Sorry, 1 Jac. made a privy counsellor on the 25th of July, 1616, and afterwards earl marshal of England, and general of the army sent against the Scots by king Charles I. But about the beginning of our civil wars he retired into Italy, where he had spent part of his youth, and returned to the religion he had professed, dying at Padua in 1646. He was a gentleman of a noble aspect, and of a noble nature, a great patron and antiquary, who with much care and cost procured many valuable antiquities and inscriptions to be brought from Asia, Greece, and Italy into England, and placed them in or near his garden at Arundel-house in the Strand; several of which were very generously presented by his grandson the

any offence past, for that strikes before it warns. I wish also it may be declared to be temporary, until a parliament; for that will be very acceptable to the parliament; and it is good to teach the parliament to work upon an edict or proclamation precedent.

For the manner, I should think fit there be published a grave and severe proclamation, induced by the overflow of the present mischief.

For the ordinance itself: first, I consider that offence hath vogue only amongst noble persons, or persons of quality. I consider also that the greatest honour for subjects of quality in a lawful monarchy, is to have access and approach to their sovereign's sight and person, which is the fountain of honour: and though this be a comfort all persons of quality do not use; yet there is no good spirit but will think himself in darkness, if he be debarred of it. Therefore I do propound, that the principal part of the punishment be, that the offender, in the cases hereafter set down, be banished perpetually from approach to the courts of the king, queen, or prince.

Secondly, That the same offender receive a strict prosecution by the king's attorney, *ore tenus*, in the star-chamber: for the fact being notorious, will always be confessed, and so made fit for an *ore tenus*. And that this prosecution be without respect of persons, be the offender never so great; and that the fine set be irremissible.

Lastly, For the causes, that they be these following:

1. Where any singular combat, upon what quarrel soever, is acted and performed, though death do not ensue.
2. Where any person passeth beyond the seas, with purpose to perform any singular combat, though it be never acted.
3. Where any person sendeth a challenge.
4. Where any person accepteth a challenge.
5. Where any person carrieth or delivereth a challenge.
6. Where any person appointeth the field, directly or indirectly, although it be not upon any cartel or challenge in writing.
7. Where any person accepteth to be second in any quarrel.

CLXVIII. TO THE LORD VISCOUNT VILLIERS.‡

IT MAY PLEASE YOUR LORDSHIP,

I PRAY let his Majesty understand, that although

duke of Norfolk to the university of Oxford, where they are among others of the famous Selden fixed to the walls enclosing the Theatre. It were to be wished, that the great number of ancient statues which adorned his house and gardens, and have since been much neglected, had met with as safe a repository. The eloquence which Sir Francis Bacon doth here commend in this lord, is much the same which in the beginning of his "Advancement of Learning" he doth attribute to the king, in the words of Tacitus, concerning Augustus Cæsar: "Augusto profuens, et quæ principem deceret eloquentia fuit."

† On occasion of this letter, in which is mentioned Sir Francis Bacon's speech against duels, it may not be improper to insert here this curious paper from Sir David Dalrymple's Memorials and Letters, p. 51.

‡ Stephens's Second Collection, p. 32.

my lord chancellor's answer touching the dismission of the Farmers' cause, was full of respect and duty, yet I would be glad to avoid an express signification from his Majesty, if his Majesty may otherwise have his end. And therefore I have thought of a course, that a motion be made in open court, and that thereupon my lord move a compromise to some to be named on either part, with bond to stand to their award. And as I find this to be agreeable to my lord chancellor's disposition, so I do not find but the Farmers and the other party are willing enough towards it. And therefore his Majesty may be pleased to forbear any other letter or message touching that business. God ever keep your lordship.

Your lordship's true and most devoted servant,

FR. BACON.

Jan. 23, 1616.

CLXIX. THIS LETTER WAS WRITTEN TO THE EARL OF BUCKINGHAM, ON THE SAME DAY SIR FRANCIS BACON WAS DECLARED LORD KEEPER OF THE GREAT SEAL.\*

MY DEAREST LORD,

It is both in care and kindness, that small ones float up to the tongue, and great ones sink down into the heart in silence. Therefore I could speak little to your lordship to-day, neither had I fit time: but I must profess thus much, that in this day's work you are the truest and perfectest mirror and example of firm and generous friendship that ever was in court. And I shall count every day lost, wherein I shall not either study your well doing in thought, or do your name honour in speech, or perform you service in deed. Good my lord, account and accept me,

Your most bounden and devoted friend and servant of all men living,

FR. BACON, C. S.

March 7, 1616.

CLXX. TO THE EARL OF BUCKINGHAM.†

MY SINGULAR GOOD LORD,

WHEN I heard here your lordship was dead, I thought I had lived too long. That was, to tell your lordship truly the state of my mind, upon that report. Since, I hear it was an idle mistaking of my lord Evers for my lord Villiers. God's name be blessed, that you are alive to do infinite good, and not so much as sick or ill disposed for any thing I now hear.

I have resigned the prince's seal, and my lord Hobart is placed. I made the prince laugh, when I told him I resigned it with more comfort than I received it; he understanding me that I had changed for a better: but after I had given him that thought, I turned it upon this, that I left his state and busi-

ness in good case, whereof I gave him a particular account.

The queen calleth upon me for the matter of her house, wherein your lordship and my lord chamberlain and I dealt, and received his Majesty's direction, so that I shall prepare a warrant first to my lord treasurer and Mr. Chancellor, for that is the right way, to advise how to settle it by assignment, in case she survive his Majesty, which I hope in God she shall not.

Her desire was expressly and of herself, that when I had prepared a warrant to be sent to his Majesty, I should send it by your lordship's hands.

We sit in council, that is all I can yet say; Sir John Denham is not come, upon whose coming the king shall have account of our consultations touching Ireland, which we cannot conclude till we have spoken with him. God ever preserve and prosper you.

It grieveth me much that I cannot hear enough of his Majesty's good disposition of health, and his pleasures, and other ordinary occurrences of his journey. I pray your lordship will direct Mr. Packer to write to me some time of matters of that kind; I have made the like request of Sir Edward Villiers, by whom I write this present, to whose good affection I think myself beholden, as I do also esteem him much for his good parts, besides his nearness to your lordship, which bindeth me above all.

Your Lordship's most faithful and devoted friend and servant,

FR. BACON, C. S.

7 Apr. 1617.

CLXXI. TO THE RENOWNED UNIVERSITY OF CAMBRIDGE, HIS DEAR AND REVEREND MOTHER.‡

I AM debtor to you for your letters, and of the time likewise, that I have taken to answer them. But as soon as I could choose what to think on, I thought good to let you know; that although you may err much in your valuation of me, yet you shall not be deceived in your assurance: and for the other part also, though the manner be to mend the picture by the life; yet I would be glad to mend the life by the picture, and to become, and be, as you express me to be. Your gratulations shall be no more welcome to me, than your business or occasions; which I will attend; and yet not so, but that I shall endeavour to prevent them by my care of your good. And so I commend you to God's goodness.

Your most loving and assured friend and son,

FR. BACON, C. S.

Gorhambury, Apr. 12, 1617.

CLXXII. TO THE EARL OF BUCKINGHAM.‡

I AM NOW for five or six days retired to my house

‡ Rawley's Resuscitatio.

‡ Stephens's First Collection, p. 196.

\* Stephens's First Collection, p. 194.

† Stephens's Second Collection, p. 33.

in the country: for I think all my lords are willing to do as scholars do, who though they call them holy-days, yet they mean them play-days.

We purpose to meet again on Easter-Monday, and go all to the spital sermon for that day, and therein to revive the ancient religious manner, when all the council used to attend those sermons, which some neglect in queen Elizabeth's time, and his Majesty's great devotion in the due hearing of sermons himself with his council at the court, brought into desuetude. But now our attendance upon his Majesty, by reason of his absence, cannot be, it is not amiss to revive.

I perceive by a letter your lordship did write some days since to my lord Brackley, that your lordship would have the king satisfied by precedents, that letters patents might be of the dignity of an earldom without delivery of the patent by the king's own hand, or without the ordinary solemnities of a creation. I find precedents somewhat tending to the same purpose, yet not matching fully. But howsoever let me, according to my faithful and free manner of dealing with your lordship, say to you, that since the king means it, I would not have your lordship, for the satisfying a little trembling or panting of the heart in my lord or lady Brackley, to expose your lordship's self, or myself, whose opinion would be thought to be relied upon, or the king our master, to envy with the nobility of this realm; as to have these ceremonies of honour dispensed with, which in conferring honour have used to be observed, like a kind of *doctor Bullatus* without the ceremony of a commencement: the king and you know I am not ceremonious in nature, and therefore you may think, if it please you, I do it in judgment. God ever preserve you.

Your lordship's most faithful and devoted friend  
and servant,

FR. BACON, C. S.

I purpose to send the precedents themselves by my lord of Brackley; but I thought fit to give you some taste of my opinion before.

Gorhambury, Apr. 13, 1617.

CLXXIII. TO THE EARL OF BUCKINGHAM.\*

MY SINGULAR GOOD LORD,

I PRAY your good lordship to deliver to his Majesty the enclosed.

I send your lordship also the warrant to my lord treasurer and Mr. Chancellor of the exchequer for the queen's † house: it is to come again to the king, when the bill is drawn for the letters patents; for this is only the warrant to be signed by his Majesty.

I asked the queen, whether she would write to your lordship about it; her answer was very modest and discreet, that because it proceeded wholly from his Majesty's kindness and goodness, who had

\* Stephens's Second Collection, p. 37.

† Somerset-House.

referred it, it was not so fit for her to write to your lordship for the despatch of it, but she desired me to thank your lordship for your former care of it, and to desire you to continue it: and withal she desireth your lordship not to press his Majesty in it, but to take his best times. This answer, because I like it so well, I write to you at large; for other matters I will write by the next. God ever prosper you and preserve you.

and servant,

FR. BACON, C. S.

London, 19 Apr. 1617.

CLXXIV. TO MR. MATTHEW, IN REFLECTION  
UPON SOME ASTRONOMERS IN ITALY;‡

SIR,

I WRITE to you chiefly now, to the end, that by the continuance of my acquaintance with you by letters, you may perceive how much I desire, and how much I do not despair of the recontinuance of our acquaintance by conversation. In the mean time I wish you would desire the astronomers of Italy to amuse us less than they do with their fabulous and foolish traditions, and come nearer to the experiments of sense; and tell us, that when all the planets, except the moon, are beyond the line in the other hemisphere for six months together, we must needs have a cold winter, as we saw it was the last year. For understanding that this was general over all these parts of the world; and finding that it was cold weather with all winds, and namely west-wind, I imagined there was some higher cause of this effect; though yet I confess I thought not that ever I should have found that cause so palpable a one as it proved; which yet, when I came quickly afterwards to observe, I found also very clearly, that the summer must needs be cold too; though yet it were generally thought, that the year would make a shift to pay itself, and that we should be sure to have heats for our cold. You see, that though I be full of business, yet I can be glad rather to lay it all aside, than to say nothing to you. But I long much more to be speaking often with you, and I hope I shall not long want my wish.

CLXXV. TO THE KING, ABOUT THE SPANISH  
MATCH.§

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

Mr. Vice-Chamberlain hath acquainted myself and the rest of the commissioners for the marriage with Spain, which are here, with your Majesty's instructions, signed by your royal hands, touching that point of the suppressing of pirates, as it hath relation to his negotiation; whereupon we met yesterday at my lord admiral's at Chelsea, because

‡ Sir Tobie Matthew's Collection of Letters, p. 25.

§ Stephens's First Collection, p. 197.

we were loth to draw my lord into the air, being but newly upon his recovery.\*

We conceive the parts of the business are four: the charge; the confederations, and who shall be solicited or retained to come in; the forces and the distributions of them; and the enterprise. We had only at this time conference amongst ourselves, and shall appoint, after the holy-days, times for the calling before us such as are fit, and thereupon perform all the parts of your royal commandments.

In this conference I met with somewhat which I must confess was altogether new to me, and opened but darkly neither; whereof I think Mr. Vice-Chamberlain will give your Majesty some light, for so we wished. By occasion whereof I hold it my duty, in respect of the great place wherein your Majesty hath set me, being only made worthy by your grace, which maketh it decent for me to counsel you *ad summas rerum*, to intimate or represent to your Majesty thus much.

I do foresee, in my simple judgment, much inconvenience to ensue, if your Majesty proceed to this treaty with Spain, and that your council draw not all one way. I saw the bitter fruits of a divided council the last parliament; I saw no very pleasant fruits thereof in the matter of the cloth. This will be of equal, if not more inconvenience; for wheresoever the opinion of your people is material, as in many cases it is not, there, if your council be united, they shall be able almost to give law to opinion and rumour; but if they be divided, the infusion will not be according to the strength and virtue of the votes of your council, but according to the aptness and inclination of the popular. This I leave to your Majesty in your high wisdom to remedy: only I could wish that when Sir John Digby's instructions are perfected, and that he is ready to go, your Majesty would be pleased to write some formal letter to the body of your council, if it shall be in your absence, signifying to them your resolution in general, to the end, that when deliberation shall be turned into resolution, no man, howsoever he may retain the inwardness of his opinion, may be active *in contrarium*.

The letters for my lords of the council with your Majesty, touching the affairs of Ireland, written largely and articulately, and by your Majesty's direction, will much facilitate our labours here: though there will not want matter of consultation thereupon. God ever preserve your Majesty safe and happy.

Your Majesty's most devoted and obliged servant,  
London, April 19, 1617. FR. BACON, C. S.

CLXXVI. TO THE EARL OF BUCKINGHAM.†

MY SINGULAR GOOD LORD,

I SEND your lordship, according to the direction

\* Charles lord Howard of Effingham and earl of Nottingham, was, as Sir Robert Naunton observes, as goodly a gentleman for person as the times had any; which is confirmed by Mr. Osbourn, although his eyes met not with him till he was turned towards the point of eighty. He being also brave, faithful, and diligent, commanded the fleet as lord high admiral

of your letter, a note of the precedents that I find in my lord Brackley's business; which do rather come near the case than match it. Your lordship knoweth already my opinion, that I would rather have you constant in the matter, than instant for the time.

I send also enclosed an account of council business by way of remembrance to his Majesty, which it may please you to deliver to him.

The queen returneth her thanks to your lordship for the despatch of the warrant touching her house: I have not yet acquainted the lord treasurer and chancellor of the exchequer with it; but I purpose to-morrow to deliver them the warrant, and to advise with them for the executing of the same.

I have received the king's letter with another from your lordship, touching the cause of the officers, and Sir Arthur Ingram, whereof I will be very careful to do them justice.

Yesterday I took my place in chancery, which I hold only for the king's grace and favour, and your constant friendship. There was much ado, and a great deal of world; but this matter of pomp, which is heaven to some men, is hell to me, or purgatory at least. It is true, I was glad to see that the king's choice was so generally approved; and that I had so much interest in men's good will and good opinions, because it maketh me the fitter instrument to do my master service and my friend also.

After I was set in chancery, I published his Majesty's charge which he gave me when he gave me the seal; and what rules and resolutions I had taken for the fulfilling his commandments. I send your lordship a copy of that I said. My lord Hay coming to take his leave of me two days before, I told him what I was meditating, and he desired me to send him some remembrance of it; and so I could not but send him another copy thereof. Men tell me it hath done the king a great deal of honour; insomuch that some of my friends that are wise men and no vain ones, did not stick to say to me, that there was not these seven years such a preparation for a parliament; which was a commendation, I confess, pleased me well. I pray take some fit time to show it his Majesty, because if I misunderstood him in any thing, I may amend it, because I know his judgment is higher and deeper than mine.

I take infinite contentment to hear his Majesty is in great good health and vigour; I pray God preserve and continue it. Thus wishing you well above all men living, next my master and his: I rest

Your true and devoted friend and servant,  
FR. BACON, C. S.

Dorset-house, which putteth me  
in mind to thank your lordship,  
for your care of me touching  
York-house, May 8, 1617.

upon several occasions, particularly against the Spanish Armada, 1588. But in the latter end of the year 1618, he surrendered this honourable place to the king, who conferred it upon the marquis of Buckingham, and died in the year 1624, and of his age the 88th. Stephens.

† Stephens's First Collection, p. 200.

## CLXXVII. AN ACCOUNT OF COUNCIL BUSINESS, AND OTHER MATTERS COMMITTED TO ME BY HIS MAJESTY.\*

First, for May-day; at which time there was great apprehension of tumult by prentices and loose people; there was never such a still. The remedies that did the effect were three:

First, the putting in muster of the trained bands and military bands in a brave fashion that way. Next, the laying a strait charge upon the mayor and aldermen for the city, and justices of the peace for the suburbs, that the prentices and others might go abroad with their flags and other gauderies, but without weapon of shot and pike, as they formerly took liberty to do: which charge was exceeding well performed and obeyed. And the last was, that we had, according to our warrant dormant, strengthened our commissions of the peace in London and Middlesex, with new clauses of lieutenantancy; which as soon as it was known abroad, all was quiet by the terror it wrought. This I write, because it maketh good my farther assurance I gave his Majesty at his first removes, that all should be quiet; for which I received his thanks.

For the Irish affairs, I received this day his Majesty's letter to the lords, which we have not yet opened, but shall sit upon them this afternoon. I do not forget, besides the points of state, to put my lord treasurer in remembrance, that his Majesty laid upon him the care of the improvement of the revenue of Ireland by all good means, of which I find his lordship very careful, and I will help him the best I can.

The matter of the revenue of the recusants here in England, I purpose to put forward by a conference with my lord of Canterbury, upon whom the king laid it, and upon secretary Winwood; and, because it is matter of the exchequer, with my lord treasurer and Mr. Chancellor; and after to take the assistance of Mr. Attorney, and the learned counsel; and when we have put it in a frame, to certify his Majesty.

The business of the pirates is, I doubt not, by this time come to his Majesty, upon the letters of us the commissioners, whereof I took special care; and I must say, I find Mr. Vice-Chamberlain a good able man with his pen. But to speak of the main business, which is the match with Spain, the king knows my mind by a former letter; that I

would be glad it proceeded with an united council; not but that votes and thoughts are to be free: but yet after a king hath resolved, all men ought to cooperate, and neither to be active nor much locutive *in oppositum*; especially in a case where a few dissenting from the rest, may hurt the business *in foro fame*.

Yesterday, which was my weary day, I bid all the judges to dinner, which was not used to be, and entertained them in a private withdrawing chamber, with the learned counsel. When the feast was passed, I came amongst them, and sat me down at the end of the table, and prayed them to think I was one of them, and but a foreman. I told them I was weary, and therefore must be short, and that I would now speak to them upon two points. Whereof the one was, that I would tell them plainly, that I was firmly persuaded, that the former discords and differences between the chancery and other courts were but flesh and blood; and that now the men were gone, the matter was gone; and that for my part, as I would not suffer any the least diminution or derogation from the ancient and due power of the chancery, so if any thing should be brought to them at any time, touching the proceedings of the chancery, which did seem to them exorbitant or inordinate, that they should freely and friendly acquaint me with it, and we should soon agree; or if not, we had a master that could easily both discern and rule. At which speech of mine, besides a great deal of thanks and acknowledgment, I did see cheer and comfort in their faces, as if it were a new world.

The second point was, that I let them know how his Majesty, at his going, gave me charge to call and receive from them the accounts of their circuits, according to his Majesty's former prescript, to be set down in writing; and that I was to transmit the writings themselves to his Majesty; and accordingly as soon as I have received them I will send them to his Majesty.

Some two days before I had a conference with some judges, not all, but such as I did choose, touching the high commission, and the extending of the same in some points; which I see I shall be able to despatch by consent, without his majesty's farther trouble.

I did call upon the committees also for the proceeding in the purging of Sir Edward Coke's "Reports," which I see they go on with seriously.†

Thanks be to God, we have not much to do for

\* Stephens's First Collection, p. 202.

† During the time that my lord chief justice Coke lay under the displeasure of the court, some information was given to the king, that he having published eleven books of *Reports*, had written many things against his Majesty's prerogative. And being commanded to explain some of them, my lord chancellor Ellesmere doth thereupon, in his letter of 22 October 1616, write thus to the king: "According to your Majesty's directions signified unto me by Mr. Solicitor, I called the lord chief justice before me on Thursday the 17th instant, in presence of Mr. Attorney, and others of your learned counsel. I did let him know your Majesty's acceptance of the few animadversions, which upon review of his own labours he had sent, though fewer than you expected, and his excuses other than you expected." And did at the same time inform him, that his Majesty was dissatisfied with several other passages therein; and those not of the principal points of the cases judged, but delivered by way of expatiation, and which might have been omitted without prejudice to the judgment; of

which sort the attorney and solicitor-general did for the present only select five, which being delivered to the chief justice on the 17th of October, he returns his answers at large upon the 21st of the same month, the which I have seen under his own hand. 'Tis true the lord chancellor wished he might have been spared all service concerning the chief justice, as remembering the fifth petition of "dimitte nobis debita nostra, etc." Inasmuch that though a committee of judges was appointed to consider these books, yet the matter seems to have slept, till after Sir Francis Bacon was made lord keeper, it revived, and two judges more were added to the former. Whereupon Sir Edward Coke doth by his letter make his humble suit to the earl of Buckingham, 1. That if his Majesty shall not be satisfied with his former offer, namely, by the advice of the judges to explain and publish those points, so as no shadow may remain against his prerogative, that then all the judges of England may be called thereto. 2. That they might certify also what cases he had published for his Majesty's prerogative and benefit, for the good of the church, and quiet-

matters of council, and I see now that his Majesty is as well able by his letters to govern England from Scotland, as he was to govern Scotland from England.

CLXXVIII. A NOTE OF SOME PRECEDENTS AS COME NEAREST THE CASE OF THE LORD BRACKLEY: REFERRED TO IN THE FOREGOING LETTER.\*

THE lord Hay was created baron of Sawley, 28 Junii 13 Regis, without the ceremony of robing, as I take it, but then the patent, as I conceive it also, delivered to the person of the said lord Hay by the king's own hands; and again, the dignity of a baron hath incident to it only the ceremony of robes, and not the cincture of the sword, coronet, &c.

The duke of Lenox was created earl of Richmond, 6 Octobris 11 Regis, without any of the ceremonies, as I take it; but the patent, as I conceive it also, was delivered to the person of the said duke, with the hands of the king; and again, in regard he was invested of the superior dignity of duke of Scotland, the ceremonies were not fit to be iterated.

King Henry VII. created Edward Courtenay, knight, earl of Devon, "26 Octobris, 1 Regni, teste meipso apud Wesmonasterium," &c. Whereby it may be collected, that it was done without the solemnities; for that where the solemnities were performed, it hath used to be with a *hisce testibus*, and not *teste meipso*; and whether it were delivered with the king's hand or not, it appears not.

Edward VI. created William earl of Essex, marquis of Northampton, 16 Feb. 1 Edw. VI. and it is mentioned to be "per cincturam gladii, cappam honoris, et circuli aurei impositionem;" but whether the delivery was by the king's own hand *non constat*, but it was *teste meipso*, and not *hisce testibus*.

The same king created John viscount L'Isle, earl of Warwick, the same time, and it is mentioned to be "per cincturam gladii," &c. but it was *teste meipso*, and not *hisce testibus*.

Edward VI. created Thomas lord Wriothesley, earl of Southampton in the same day, and in the same manner, with a *teste meipso*, and not *hisce testibus*. These three creations being made upon one day, and when the king was a child of about nine years old, and in the very entrance of his reign, for the patents bear date at the Tower of London, doth make me conjecture that all the solemnities were performed; but whether the king endured to be present at the whole ceremony, and to deliver the patents with his own hand, I doubt; for that I find that the very self-same day, year, and place, the

ing men's inheritances, and good of the commonwealth. But Sir Edward then, or soon after, coming into favour by the marriage of his daughter, I conceive there was no farther proceedings in this affair. It will be needless for me to declare what reputation these books have among the professors of the law; but I cannot omit upon this occasion to take notice of a character Sir Francis Bacon had some time before given them in his proposition to the king, touching the compiling an amendment of the laws of England. "To give every man his due, had it not

king created his uncle the earl of Hertford, to be duke of Somerset "per cincturam gladii, cappam honoris, et circuli aurei impositionem, et traditionem virgulæ aureæ," *hisce testibus*, and not *teste meipso*, and with a *datum per manus nostras*: yet these things are but conjectural.

I find no precedents for a *non obstante*, or a dispensation with the solemnities, as the lord Brackley's bill was penned.

CLXXIX. TO THE LORD KEEPER.†

MY HONOURED LORD,

I HAVE acquainted his Majesty with your letter, and the papers that came enclosed, who is exceedingly well satisfied with that account you have given him therein, especially with the speech you made at the taking of your place in the chancery. Whereby his Majesty perceiveth that you have not only given proof how well you understand the place of a chancellor, but done him much right also, in giving notice unto those that were present, that you have received such instructions from his Majesty: whose honour will be so much the greater, in that all men will acknowledge the sufficiency and worthiness of his Majesty's choice, in preferring a man of such abilities to that place, which besides cannot but be a great advancement and fartherance to his service: and I can assure your lordship, that his Majesty was never so well pleased, as he is with this account you have given him of this passage. Thus with the remembrance of my service, I rest

Your lordship's ever at command,

G. BUCKINGHAM.

Edinburgh, 18 May, 1617.

CLXXX. TO THE EARL OF BUCKINGHAM.‡

MY VERY GOOD LORD,

I KNOW your lordship hath a special care of any thing that concerneth the queen. She was entered into dislike of her solicitor, this bearer Mr. Lowder, and resolute in it. To serve, and not to please, is no man's condition. Therefore upon knowledge of her pleasure, he was willing to part with his place, upon hopes not to be destituted, but to be preferred to one of the barons' places in Ireland. I pray move the king for him, and let his Majesty know from me, that I think, howsoever he pleased not here, he is fit to do his Majesty service in that place; he is grave and formal, which is somewhat there, and sufficient enough for that place. The queen had

been for Sir Edward Coke's Reports, which though they may have errors and some peremptory and extrajudicial resolutions more than are warranted, yet they contain infinite good decisions and rulings over of cases, the law by this time had been almost like a ship without ballast: for that the cases of modern experience are fled from those that are adjudged and ruled in former time." Stephens.

\* Stephens's First Collection, p. 206.

† Stephens's Second Collection, p. 47.

‡ Ibid. p. 48.

made Mr. Hackwell her solicitor, who hath for a long time taken much pains in her business, wherein she hath done well. He was an opposite in parliament, as Jones was, that the king hath made chief justice of Ireland. But I hold it no ill counsel to join, or to remove such men. God preserve and prosper you.

Your true and devoted friend and servant,

FR. BACON.

Whitehall, 25 May, 1617.

CLXXXI. TO THE EARL OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I SHALL write to your lordship of a business which your lordship may think to concern myself; but I do think it concerneth your lordship much more. For as for me, as my judgment is not so weak to think it can do me any hurt, so my love to you is so strong, as I would prefer the good of you and yours before mine own particular.

It seemeth secretary Winwood hath officiously busied himself to make a match between your brother and Sir Edward Coke's daughter: and, as we hear, he doth it rather to make a faction, than out of any great affection to your lordship; it is true, he hath the consent of Sir Edward Coke, as we hear, upon reasonable conditions for your brother; and yet no better than, without question, may be found in some other matches. But the mother's consent is not had, nor the young gentlewoman's, who expecteth a great fortune from her mother, which without her consent is endangered. This match, out of my faith and freedom towards your lordship, I hold very inconvenient both for your brother and yourself.

First, He shall marry into a disgraced house, which in reason of state is never held good.

Next, He shall marry into a troubled house of man and wife, which in religion and christian discretion is disliked.

Thirdly, Your lordship will go near to lose all such your friends as are adverse to Sir Edward Coke; myself only except, who out of a pure love and thankfulness shall ever be firm to you.

And lastly and chiefly, believe it, it will greatly weaken and distract the king's service; for though, in regard of the king's great wisdom and depth, I am persuaded, those things will not follow which they imagine: yet opinion will do a great deal of harm, and cast the king back, and make him relapse into those inconveniences which are now well on to be recovered.

Therefore my advice is, and your lordship shall do yourself a great deal of honour, if, according to religion and the law of God, your lordship will signify unto my lady your mother, that your desire is, that the marriage be not pressed or proceeded in without the consent of both parents; and so either

break it altogether, or defer any farther delay in it, till your lordship's return: and this the rather, for that, besides the inconvenience of the matter itself, it hath been carried so harshly and inconsiderately by secretary Winwood, as, for doubt that the father should take away the maiden by force, the mother, to get the start, hath conveyed her away secretly; which is ill of all sides. Thus hoping your lordship will not only accept well, but believe my faithful advice, who by my great experience in the world must needs see farther than your lordship can, I ever rest

Your lordship's true and most devoted friend and servant,

FR. BACON, C. S.

I have not heard from your lordship since I sent the king my last account of council business: but I assure myself you received it, because I sent at the same time a packet to secretary Lake, who hath signified to me that he hath received it.

I pray your lordship deliver to his Majesty this little note of chancery business.

July 12, 1617.

CLXXXII. TO THE KING.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I THINK it agreeable to my duty, and the great obligation wherein I am tied to your Majesty, to be freer than other men in giving your Majesty faithful counsel, while things are in passing; and more bound than other men in doing your commandments, when your resolution is settled, and made known to me.

I shall therefore most humbly crave pardon from your Majesty, if in plainness, and no less humbleness, I deliver to your Majesty my honest and disinterested opinion, in the business of the match of Sir John Villiers, which I take to be *magnum in parvo*: preserving always the laws and duties of a firm friendship to my lord of Buckingham, whom I will never cease to love, and to whom I have written already, but have not heard yet from his lordship.

But first I have three suits to make to your Majesty, hoping well you will grant them all.

The first is, that if there be any merit in drawing on that match, your Majesty would bestow the thanks not upon the zeal of Sir Edward Coke to please your Majesty, nor upon the eloquent persuasions or pragmatics of Mr. Secretary Winwood, but upon them, that carrying your commands and directions with strength and justice, in the matter of the governor of Diepe,‡ in the matter of Sir Robert Rich, and in the matter of protecting the lady, according to your Majesty's commandment; have so humbled Sir Edward Coke, as he seeketh now that with submission, which, as your Majesty knoweth,

29 June this year, and in these words; "Sir Edward Coke hath consigned into the hands of the lords 24000. for the satisfaction of the French ambassador, in the cause which concerneth the governor of Diepe." Stephens.

\* Stephens's First Collection, p. 207.

† Ibid. p. 210.

‡ All that I have seen relating to the difference between the governor of Diepe and Sir Edward Coke, is contained in a letter of secretary Winwood's to my lord Buckingham, dated

before he rejected with scorn : for this is the true orator that hath persuaded this business ; as I doubt not but your Majesty in your excellent wisdom doth easily discern.

My second suit is, that your Majesty would not think me so pusillanimous, as that I, that when I was but Mr. Bacon, had ever, through your Majesty's favour, good reason at Sir Edward Coke's hands, when he was at the greatest, should now, that your Majesty of your great goodness hath placed me so near your chair, being, as I hope, by God's grace and your instructions, made a servant according to your heart and hand, fear him, or take umbrage of him, in respect of mine own particular.

My third suit is, that if your Majesty be resolved the match shall go on, after you have heard my reasons to the contrary ; I may receive therein your particular will and commandments from yourself, that I may conform myself thereunto ; imagining with myself, though I will not wager on women's minds, that I can prevail more with the mother than any other man. For if I should be requested in it from my lord of Buckingham, the answer of a true friend ought to be, that I had rather go against his mind than against his good : but your Majesty I must obey ; and besides, I shall conceive that your Majesty, out of your great wisdom and depth, doth see those things which I see not.

Now therefore, not to hold your Majesty with many words, which do but drown matter, let me most humbly desire your Majesty to take into your royal consideration, that the state is at this time not only in good quiet and obedience, but in a good affection and disposition. Your Majesty's prerogative and authority having risen some just degrees above the horizon more than heretofore, which hath dispersed vapours : your judges are in good temper ; your justices of the peace, which is the body of the gentlemen of England, grow to be loving and obsequious, and to be weary of the humour of ruffling : all mutinous spirits grow to be a little poor, and to draw in their horns ; and not the less for your Majesty's disauthorizing the man I speak of. Now then I reasonably doubt, that if there be but an opinion of his coming in, with the strength of such an alliance, it will give a turn and relapse in men's minds, into the former state of things, hardly to be helpen, to the great weakening of your Majesty's service.

Again, your Majesty may have perceived, that as far as it was fit for me in modesty to advise, I was ever for a parliament ; which seemeth to me to be *cardo rerum* or *summa summarum* for the present occasions. But this my advice was ever conditional ; that your Majesty should go to a parliament with a council united, and not distracted ; and that your Majesty will give me leave never to expect, if that man come in. Not for any difference of mine own, for I am *omnibus omnia* for your Majesty's service, but because he is by nature unsociable, and by habit popular, and too old now to take a new ply. And men begin already to collect, yea and to conclude, that he that raiseth such a smoke to get in, will set all on fire when he is in.

It may please your Majesty, now I have said, I have done ; and as I think I have done a duty not unworthy the first year of your last high favour, I most humbly pray your Majesty to pardon me, if in any thing I have erred ; for my errors shall always be supplied by obedience ; and so I conclude with my prayers for the happy preservation of your person and estate.

Your Majesty's most humble, bounden, and most devoted servant,

FR. BACON, C. S.  
Gorhambury, July 25, 1617.

---

CLXXXIII. TO THE EARL OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I do think long to hear from your lordship, touching my last letter, wherein I gave you my opinion touching your brother's match. As I then showed my dislike of the matter, so the carriage of it here in the manner I dislike as much. If your lordship think it is humour or interest in me that leads me, God judge my sincerity. But I must say, that in your many noble favours towards me, they ever moved and flowed from yourself, and not from any of your friends whatsoever ; and therefore in requital give me leave, that my counsels to you again be referred to your happiness, and not to the desires of any of your friends. I shall ever give you, as I give my master, safe counsel, and such as time will approve.

I received yesterday from Mr. Attorney the queen's bill, which I send your lordship. The payment is not out of lands, but out of the customs, and so it can be but the rent. Your lordship remembereth, it is but in a case which I hope shall never be ; that is, after his Majesty's death, if she survive. God ever bless and direct you.

Your lordship's most faithful and devoted friend and servant,

FR. BACON, C. S.  
Gorhambury, July 25, 1617.

---

CLXXXIV. TO THE KING.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I DARE not presume any more to reply upon your Majesty, but I reserve my defence till I attend your Majesty at your happy return ; when I hope verily to approve myself, not only a true servant to your Majesty, but a true friend to my lord of Buckingham ; and for the times also, I hope to give your Majesty a good account, though distance of place may obscure them. But there is one part of your Majesty's letter that I could be sorry to take time to answer ; which is, that your Majesty conceiveth, that whereas I wrote that the height of my lord's fortune might make him secure, I meant that he was turned proud, or unknowing of himself ; surely the opinion which

\* Stephens's First Collection, p. 213. † Ibid. p. 214.

I have ever had of my lord, whereof your Majesty is best witness, is far from that. But my meaning was plain and simple, that his lordship might, through his great fortune, be the less apt to cast and foresee the unfaithfulness of friends, and the malignity of enemies, and accidents of time. Which is a judgment, your Majesty knoweth better than I, that the best authors make of the best and best tempered spirits, "ut sunt res humanæ;" insomuch that Guicciardine maketh the same judgment, not of a particular person, but of the wisest state of Europe, the senate of Venice, when he saith, their prosperity had made them secure, and underweighers of perils. Therefore I beseech your Majesty to deliver me in this from any the least imputation upon my dear and noble lord and friend. And so expecting that that sun which when it went from us left us cold weather, and now it is returned towards us hath brought with it a blessed harvest; will, when it cometh to us, dispel and disperse all mists and mistakings.

July 31, 1617.

CLXXXV. TO THE EARL OF BUCKINGHAM.\*

MY VERY GOOD LORD,

SINCE my last to your lordship, I did first send for Mr. Attorney-General, and made him know, that, since I heard from court, I was resolved to further the match and the conditions thereof for your lordship's brother's advancement the best I could. I did send also to my lady Hatton, and some other special friends, to let them know, I would in any thing declare for the match; which I did, to the end that if they had any apprehension of my assistance, they might be discouraged in it. I sent also to Sir John Butler, and after by letter to my lady your mother, to tender my performance of any good office towards the match or the advancement from the mother. This was all I could think of for the present.

I did ever foresee, that this alliance would go near to lose me your lordship that I hold so dear; and that was the only respect particular to myself that moved me to be as I was, till I heard from you. But I will rely upon your constancy and nature, and my own deserving, and the firm tie we have in respect of the king's service.

In the mean time I must a little complain to your lordship, that I do hear my lady your mother and your brother Sir John do speak of me with some bitterness and neglect. I must bear with the one as a lady, and the other as a lover, and with both for your lordship's sake, whom I will make judge of any thing they shall have against me. But I hope, though I be a true servant to your lordship, you will not have me to be a vassal to their passions, especially as long as they are governed by Sir Edward Coke and secretary Winwood, the latter of which I take to be the worst; for Sir Edward Coke, I think, is more modest and discreet: therefore your

lordship shall do me right: and yet I shall take it for favour, if you signify to them, that you have received satisfaction from me, and would have them use me friendly and in good manner. God keep us from these long journeys and absence, which make misunderstandings and give advantage to untruth, and God ever prosper and preserve your lordship.

Your lordship's true and devoted friend and servant,

FR. BACON, C. S.

Gorhambury, Aug. 23, 1617.

CLXXXVI. A MEMORIAL FOR YOUR MAJESTY.†

ALTHOUGH I doubt not but your Majesty's own memory and care of your affairs will put you in mind of all things convenient against you shall meet with your council, yet some particulars I thought it not unfit to represent to your Majesty; because they passed the labour of your council.

I. Some time before your departure, here was delivered unto you by the officers of your exchequer a computation of your revenue and expense, wherein was expressed that your revenue ordinary was not only equal to your expense, but did somewhat exceed it, though not much.

In this point, because the half year will now be expired at Michaelmas, it shall be fit, that your Majesty call to account, whether that equality hath held for this half year; and if not, what the causes have been, and whether the course prescribed hath been kept, that the ordinary expense hath been borne out of the ordinary revenue, and the extraordinary only out of such money as hath come in by extraordinary means, or else your estate cannot clearly appear.

II. To maintain this equality, and to cause your Majesty's state to subsist in some reasonable manner till farther supply might be had, it was found to be necessary that 200,000*l.* of your Majesty's most pregnant and pressing debts should be discharged; and after consideration of the means how to do that, two ways were resolved on. One that 100,000*l.* should be discharged to the farmers of your customs by 25,000*l.* yearly, they having for their security power to defalke so much of their rent in their own hands: but because if that should be defalked, then your ordinary should want so much, it was agreed that the farmers should be paid the 25,000*l.* yearly in the sale of woods.

In this point it is fit for your Majesty to be informed what hath been done, and whether order hath been taken with the farmers for it, and what debts were assigned to them so to discharge; for of the particulars of that course I never heard yet.

And because it is apparent that the woodfalls this year do not amount to half that sum of 25,000*l.* your Majesty is to give charge that consideration be had how the same shall be supplied by some

\* Stephens's First Collection, p. 215.

† Stephens's Second Collection, p. 58.

other extraordinary for the present year, or else here will follow a fracture of the whole assignments.

*Item*, Your Majesty may please to call for information how that money raised upon the woods is employed, so much as is already received, and to be wary that no part hereof be suffered to go for extraordinaries, but to be employed only for the use for which it is assigned, or else a greater rupture will follow in your assignments.

*Item*, A special consideration is to be had what course shall be taken for the rest of the years with the wood sales for supply of this 25,000*l.* yearly.

III. The other hundred thousand pound was agreed to be borrowed, and an allotment made by my lords of the council at the table, how the same should be employed, and for what special services, whereof I deliver to your Majesty herewith a copy.

In which point it may please your Majesty to cause yourself to be informed how that allotment hath been observed, and because it is likely that a good part of it hath gone towards the charges of this your journey to Scotland, at least so it is paid, your Majesty is to call for the particulars of that charge, that you may see how much of that hundred thousand it taketh up.

And then consideration is to be had how it may be supplied with some extraordinary comings in, as namely the moneys to come from the merchant adventurers, that the same be allotted to none other use, but to perform this allotment, that so the foundation laid may be maintained, or else all will be to seek; and if there be any other extraordinary means to come to your Majesty, that they may be reserved to that use.

And because care must be had to keep your credit in London, for this money borrowed, your Majesty may please to call for information what is done in the matter of the forests, and what sum, and in what reasonable time, is like to be made hereof.

The extraordinaries which it is like will be alleged for this year.

Your Majesty's journey into Scotland.

The lord Hay's employment into France.

The lord Roos into Spain.

The Baron de Tour extraordinary from France.

Sir John Bennett to the Archduke.

The enlarging your park at Theobalds.

Sir John Digby's sending into Spain.

Of all which when your Majesty hath seen an estimate what they amount unto, and what money hath been already delivered towards them, which I fear will fall to be out of the moneys borrowed at London; then it is to be considered what extraordinaries are any ways to come in, which may supply these extraordinaries laid out, and be employed for the uses for which the moneys borrowed were intended.

CLXXXVII. TO THE EARL OF BUCKINGHAM.\*

MY EVER BEST LORD, NOW BETTER THAN YOURSELF,

Your lordship's pen or rather pencil hath portrayed towards me such magnanimity and nobleness and true kindness, as methinketh I see the image of some ancient virtue, and not any thing of these times. It is the line of my life, and not the lines of my letter, that must express my thankfulness: wherein if I fail, then God fail me, and make me as miserable as I think myself at this time happy by this reviver, through his Majesty's singular clemency, and your incomparable love and favour. God preserve you, prosper you, and reward you for your kindness to

Your raised and infinitely obliged friend and servant,

FR. BACON, C. S.

Sept. 22, 1617.

CLXXXVIII. TO THE EARL OF BUCKINGHAM.†

MY VERY GOOD LORD,

I SEND your lordship the certificate touching the enrolment of prentices. We can find no ground for it by law. Myself shall ever be ready to farther things that your lordship commendeth; but where the matter will not bear it, your lordship, I know, will think not the worse, but the better of me, if I signify the true state of things to your lordship; resting ever

Your lordship's true friend and devoted servant,

FR. BACON, C. S.

York-house, October 29, 1617.

THE CERTIFICATE.

According to his Majesty's command signified by your lordship's letters, we have advisedly considered of the petition touching the enrolment of apprentices' indentures, and heard the petitioners' counsel, and do find as followeth:

1. That the act of parliament 5 Eliz. doth not warrant the erecting of an office to enrol such indentures, in cities, towns corporate, or market towns; but if any such enrolment should be, it must be by the officers there, who are assigned to perform sundry other things touching apprentices and servants.

2. That in country villages, for which the suit carries most colour, we cannot give the suitors hope, that any profit will be there made, warrantable by law.

Thus we have, according to our duties, certified our opinions of this petition, submitting the same nevertheless to his Majesty's great wisdom; and rest

At your lordship's command,

FR. BACON, C. S.

H. MONTAGUE,

THO. COVENTRY.

Oct. 25, 1617.

† Ibid.

## CLXXXIX. TO THE EARL OF BUCKINGHAM.\*

MY VERY GOOD LORD,

THE liking which his Majesty hath of our proceeding concerning his household, telleth me that his Majesty cannot but dislike the declining and tergiversation of the inferior officers; which by this time he understandeth.

There be but four kinds of retrenchments. 1. The union of tables. 2. The putting down of tables. 3. The abatement of dishes to tables. 4. The cutting off new diets and allowance lately raised; and yet perhaps such as are more necessary than some of the old.

In my opinion, the first is the best and most feasible. The lord chamberlain's table is the principal table of state. The lord steward's table, I think, is much frequented by Scottish gentlemen. Your lordship's table hath a great attendance; and the groom of the stole's table is much resorted to by the bedchamber. These would not be touched. But for the rest, his Majesty's case considered, I think they may well be united into one.

These things are out of my element, but my care runneth where the king's state most laboureth. Sir Lionel Cranfield † is yet sick, for which I am very sorry; for methinks his Majesty, upon these tossings over his business from one to others, hath an apt occasion to go on with sub-committees. God ever preserve and prosper you.

Your lordship's true friend and devoted servant,

FR. BACON, C. S.

York-house, Nov. 19, 1617.

## CXC. TO THE LORD KEEPER. †

MY HONOURABLE LORD,

HIS Majesty commandeth me to write to your lordship, that he wonders your hand being at that letter of the lords of the council, which he saith is a

\* Stephens's First Collection, p. 219.

† Sir Lionel Cranfield was a man of so much note in these times, and so often named in these papers, that I cannot omit taking some notice of his good and bad fortunes. He was bred a merchant, yet by his great abilities in, and application to business, and the relation he had to my lord of Buckingham by marriage, he was raised to be master of the court of requests, then of the wardrobe, and after of the court of wards, created Lord Cranfield, and earl of Middlesex; missing the lord keeper's place, he was constituted lord high treasurer, which being an office he understood as well as any, we may conclude his integrity fell short of his ability, from the severe judgment given against him by the house of lords in 1624. Stephens.

\* Stephens's Second Collection, p. 64.

† Ibid. p. 65.

One of these letters of K. James, as it contains a specimen of the frugality and good economy of his court, and relates to the subject we are upon, I have borrowed from the Cabala, p. 255, in terms following.

*A letter read to the council-board 21 Nov. 1617, touching the abatement of his Majesty's household charge.*

MY LORDS:

No worldly thing is so precious as time: ye know what task I gave you to work upon, during my absence; and what time was limited unto you, for the performance thereof. This same chancellor of Scotland was wont to tell me twenty-four years

very blunt one; you have not besides sent him some advice of your own, his Majesty having only intrusted you to speak with Sir Lionel Cranfield about his estate.

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, 19 Nov. 1617.

## CXCI. TO THE EARL OF BUCKINGHAM. §

MY VERY GOOD LORD,

YESTERDAY at afternoon were read at the table his Majesty's two letters, || written with his own hand, the matter worthy the hand. For they were written "ex arte imperandi," if I can judge; and I hope they and the like will disenchant us of the opinion, which yet sticks with us, that to-day will be as yesterday, and to-morrow as to-day; so as there will be, as he saith, "Acribus initis, fine incurioso."

I hold my opinion given in my former letter, that the uniting of some tables is the most passable way. But that is not all; for when that is done, the king may save greatly in that which remaineth. For if it be set down, what tables shall be fixed, and what diet allowed to them, my steward, as ill a *mesnager* as I am, or my lord mayor's steward, can go near to tell, what charge will go near to maintain the proportion. Then add to that some large allowance for waste, because the king shall not lose his prerogative to be deceived more than other men, and yet, no question, there will be a great retrenchment. But against this last abatement will be fronted the payment of arrears. But I confess I would be glad that I might see, or rather that a parliament may see, and chiefly that the king, for his own quiet, may see, that upon such a sum paid, such an annual retrenchment will follow: for things will never be done in act, except they be first done in conceit.

I know these things do not pertain to me: for my part is to acquit the king's office towards God by administration of justice, and to oblige the hearts

ago, that my house could not be kept upon epigrams: long discourses and fair tales will never repair my estate. "Omnis virtus in actione constitit." Remember, that I told you, the shoe must be made for the foot, and let that be the square of all your proceeding in this business. Abate superfluities of all things; and multitudes of unnecessary officers, wherever they be placed. But for the household, wardrobe, and pensions, cut and carve as many as may agree with the possibility of my means. Exceed not your own rule of 50,000*l.* for the household. If you can make it less I will account it for good service. And that you may see I will not spare mine own person, I have sent, with this bearer, a note of the superfluous charges concerning my mouth, having had the happy opportunities of this messenger, in an errand so nearly concerning his place. In this I expect no answer in word or writing, but only the real performance, for a beginning to relieve me out of my miseries. For now the ball is at your feet, and the world shall bear me witness, that I have put you fairly to it; and so praying God to bless your labours, I bid you heartily farewell. Your own,

JAMES R.

Mr. Stephens says, In the other I suppose his Majesty apprehends that the vigour the council at first showed in reducing the charge of his household, would not be of long continuance; it being observed by Tacitus, in the words here cited, to be a thing not unusual in public affairs, that violent beginnings had negligent conclusions.

of his people to him by the same, and to maintain his prerogative. But yet because it is *in hoc* that the king's case laboureth, I cannot but yield my care, and my strength too, in council, such as it is; which cannot be so much, as it was between our Lady-day and Michaelmas last. But whatsoever it is, it is wholly his Majesty's without any deflexion.

As soon as I find any possibility of health in Sir Lionel Cranfield, to execute a sub-commission, I will by conference with him frame a draught of a letter from his Majesty, for which there is the fairest occasion in the world. And the king hath prepared it as well as possible. God ever preserve and prosper you.

Your lordship's true friend and devoted servant,  
FR. BACON, C. S.

York-house, Nov. 22, 1617.

#### CXCII. TO THE EARL OF BUCKINGHAM.\*

MY LORD,

How well I wish to Sir Gilbert Haughton, himself I dare say doth not doubt, partly out of mine own affection, and chiefly for your lordship's affection towards him, which is to me more than mine own. That the king should make bargains of hope, when his treasure sufficeth not for his own charge, I may not advise for my dearest friends; for I am nailed to the king's estate. But two things I shall assent unto; the one, that if the king can redeem his works without charge of officers, I shall be glad of it, both for the gentleman's sake, and because I perceive the uniting of the allum-works in the king's hand is best; the other, that if his Majesty be pleased to signify his pleasure to my lord treasurer and me, that there be no forfeiture taken by Banister till the king shall advise of this bargain, we will hold him to it. God preserve and prosper your lordship. Your lordship, I think, perceiveth both by scribbling and cursory inditing, that I write in straits of business.

Your lordship's true friend and devoted servant,  
FR. BACON, C. S.

York-house, this 24th of Nov. 1617.

#### CXCIII. TO THE EARL OF BUCKINGHAM.†

MY VERY GOOD LORD,

I SEND your lordship a draught of a letter touching the sub-commission, written in wide lines, because it may be the better amended by his Majesty. I think it is so penned as none can except to it, nor imagine any thing of it. For the household business there was given a fortnight's day; for the pensions, the course which I first propounded, of abating a third throughout, and some wholly, seemeth well entered into. These be no ill beginnings. But this course of the sub-commission threads all the

\* Stephens's Second Collection, p. 67.

king's business. God ever preserve and prosper you.

Your lordship's true friend and devoted servant,

York-house, Nov. 27, 1617.

Sir Lionel Cranfield is now reasonably well recovered.

#### DRAUGHT OF THE SUB-COMMISSION.

MY LORDS,

In this first and greatest branch of our charge concerning our house, we do find what difficulties are made, and what time is lost, in disputing of and devising upon the manner of doing it: whereof the matter must be, and is so fully resolved. Neither can we but see in this, as in a glass, the like event to follow in the rest upon like reason. For the inferior officers in every kind, who are best able for skill to propound the retrenchments, will out of interest or fearfulness make dainty to do service; and that which is done with an ill-will will never be well done. Again, to make it the act of the whole table, for the particular propositions and reckonings, will be too tedious for you, and will draw the business itself into length; and to make any particular committees of yourselves, were to impose that upon a few, which requirerth to be carried indifferently as the act of you all. For since the great officers themselves think it too heavy for them, as our state now is, to deal in it, without bringing it to the table; with much more reason may any particular persons of you be loth to meddle in it, but at the board. In all which respects we have thought fit, neither do we see any other way, that you send unto us the names of the officers of our exchequer, and our custom-house, and auditors, out of which we will make choice of some few, best qualified to be sub-committees, for the better case, and the speeding of the business by their continual travels and meetings; whose part and employment we incline to be to attend the principal officers in their several charges, and join themselves to some of the inferior officers, and so take upon them the mechanic and laborious part of every business, thereby to facilitate and prepare it for your consultations, according to the directions and instructions they shall receive from you from time to time.

#### CXCIV. TO THE KING.‡

MAY IT PLEASE YOUR MAJESTY,

BRING yesterday assembled in council to proceed in the course we had begun for retrenchment of your Majesty's expenses; we received your princely letters, whereby we are directed to send to your Majesty the names of the officers of the exchequer, custom-house, and auditors, out of which you purpose to make choice of some to be sub-committed to handle the mechanic and laborious part of that which your Majesty had appointed to our care; we

† Ibid.

‡ Ibid. p. 69.

have, according to our duty, sent unto your Majesty the names of the several officers of your Majesty in those places, to be ordered as your wisdom shall think best to direct. But withal, we thought it appertenant to our duties to inform your Majesty how far we have proceeded in the several heads of retrenchments by your Majesty at your departure committed unto us, that when you know in what estate our labours are, your judgment may the better direct any farther course as shall be meet.

The matter of the household was by us, some days since, committed peremptorily to the officers of the house, as matter of commandment from your Majesty, and of duty in them, to reduce the expense of your house to a limited charge of fifty thousand pounds by the year, besides the benefit of the compositions; and they have ever since painfully, as we are informed, travailed in it, and will be ready on Sunday next, which was the day given them, to present some models of retrenchments of divers kinds, all aiming at your Majesty's service.

In the point of pensions we have made a beginning, by suspending some wholly for a time, and of others of a third part; in which course we are still going on, until we make it fit to be presented to your Majesty; in like manner the lord chamberlain and the lord Hay did yesterday report unto us, what their travail had ordered in the wardrobe; and although some doubt did arise unto us, whether your Majesty's letters intended a stay of our labours, until you had made choice of the sub-committee intended by you; yet presuming that such a course by sub-committee was purposed rather for a fartherance, than let to that work, we did resolve to go on still till your Majesty's farther directions shall come unto us; and then according to our duty we will proceed, as we shall be by your Majesty commanded. In the mean time we thought it our duty to inform your Majesty of what we have done, that neither your Majesty may conceive that we have been negligent in those things which were committed unto us, nor your directions by your late letters hinder or cast back that which is already so far proceeded in. And so humbly kissing your royal hands, and praying to the Almighty for your long and happy reign over us, we rest

Your Majesty's most humble and obedient subjects and servants,

G. CANT.	LENOX.	PEMBROKE.
R. WORCESTER.	W. WALLINGFORD.	L. ELIEN.
T. ARUNDEL.	JAMES HAY.	T. EDMONDS.

V. LAKE.	T. SUFFOLK.	C. EDMONDS.

FR. BACON, C. S.

5 Dec. 1617.

CXCV. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I WRITE now only rather in a kind of continuance

\* Stephens's Second Collection, p. 71.

† Sir Toby Matthew's Second Collection of Letters, p. 22.

This seems to be spoken pleasantly of himself, and to refer to Jan. 15, 1617-18, on which day the lord Verulam was by

and fresh suit, upon the king's business, than that the same is yet ripe, either for advertisement, or advice.

The sub-commissioners meet forenoon and afternoon, with great diligence, and without distraction or running several ways: which if it be no more than necessary, what would less have done? that is, if there had been no sub-commissioners, or they not well chosen.

I speak with Sir Lionel Cranfield, as cause requireth either for account or direction, and as far as I can, by the taste I have from him, discern probably their service will attain, and may exceed his Majesty's expectation.

I do well like the course they take, which is, in every kind to set down, as in beer, in wine, in beef, in muttens, in corn, &c. what cometh to the king's use, and then what is spent, and lastly what may be saved. This way, though it be not so accusative, yet it is demonstrative. "Nam rectum est index sui et obliqui," and the false manner of accounting, and where the gain cleaveth, will appear after by consequence. I humbly pray his Majesty to pardon me for troubling him with these imperfect glances, which I do, both because I know his Majesty thinketh long to understand somewhat, and lest his Majesty should conceive, that he multiplying honours and favours upon me, I should not also increase and redouble my endeavours and cares for his service. God ever bless, preserve, and prosper his Majesty and your lordship, to whom I ever remain,

Your true and most devoted servant,

FR. BACON, C. S.

16 Jan. 1617.

CXCVI. TO MR. MATTHEW, ABOUT READING AND GIVING JUDGMENT UPON HIS WRITINGS.†

SIR,

BECAUSE you shall not lose your labour this afternoon, which now I must needs spend with my † lord chancellor, I send my desire to you in this letter, that you will take care not to leave the writing, which I left with you last, with any man, so long, as that he may be able to take a copy of it; because, first, it must be censured by you, and then considered again by me. The thing which I expect most from you is, that you would read it carefully over by yourself, and to make some little note in writing, where you think, to speak like a critic, that I do perhaps *indormiscere*, or where I do *indulgere genio*; or where, in fine, I give any manner of disadvantage to myself. This, *super totam materiam*, you must not fail to note: besides, all such words and phrases as you cannot like; for you know in how high account I have your judgment.

special warrant made lord chancellor, Rymer XVII. p. 55, and at which time probably some affairs, that required privacy and retirement, might occur.

## CXCVII. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I THOUGHT fit by this my private letter to your lordship, to give you an account of such business as your lordship hath recommended unto me, that you may perceive that I have taken that care of them I ought, and ever shall in those you recommend or remit to me.

For the suit of the alehouses which concerneth your brother Mr. Christopher Villiers, and Mr. Patrick Mawl, I have conferred with my lord chief justice and Mr. Solicitor thereupon, and there is a scruple in it that it should be one of the grievances put down in parliament; which if it be, I may not in my duty and love to you advise you to deal in it; if it be not, I will mold it in the best manner and help it forward. The stay is upon the search of the clerk of the parliament, who is out of town; but we have already found, that the last grievance *in septimo*, is not the same with this suit; but we doubt yet of another *in tertio*.

For the business of Mr. Leviston, for your lordship's sake, who I perceive keeps your noble course with me, in acquainting me with these things, I shall apply myself unto you; though in my nature I do desire that those that serve in the court where I sit, though they be not in places of my gift, and so concerns not me nor my place in profit; yet I wish, I say, I might leave them in as good case as I find them. And this suit concerneth the main profit of the six clerks; who though they be of the master of the rolls his gift, yet they serve in my court. But my greatest doubt is, that the grant cannot be good in law; and that it is not like those other precedents, whereof I have received a note. For the difference is, where things have been written by all the clerks indifferently and loosely, in which case the king may draw them into an office; and where they have appertained to one especial office; in which case the king can no more take away the profits of a man's office, than he can the profits of his land. Therefore I think your lordship may do well to write to Mr. Solicitor † and serjeant Finch, ‡ or some other lawyers that you trust, or such as Mr. Leviston trusteth, being persons of account, to inform you of the point in law, before you proceed any farther: for without that all is in vain.

For the business of Hawkins, touching the register for the commission of bankrupts; I am not yet satisfied likewise for the law, nor for the conveniency; but I rather incline to think it may pass; and I have set it in a course by which it may be thoroughly informed.

For Sir Rowland Egerton's cause, and his lady's, the parties have submitted themselves unto me, and are content to do it by bond, and therefore I will

\* Stephens's Second Collection, p. 73.

† Sir Thomas Coventry.

‡ Sir Henry Finch, serjeant at law, being the first of his name that made a considerable figure in that profession, I shall give a short account of him. He was younger brother to Sir Moyle Finch, of Eastwel in the county of Kent, and father of John, lord Finch, keeper of the great seal in the reign of king Charles I. He died in 1625, leaving to poste-

undoubtedly make an end of it according to justice and conscience.

For Sir Gilbert Houghton's business, I am in very good hope to effect your lordship's desire for his good.

For Moor's business, concerning the printing of books, after hearing all parties, I have sealed his patent; but for his former patent of salt, I dare not do it, without acquainting the council therewith, which I am ready to do if he require that course to be taken.

If his Majesty at any time ask touching the lord Clifton's business, I pray your lordship represent to his Majesty thus much: that whatsoever hath passed, I thank God I neither fear nor hate him; but I am wonderful careful of the seats of justice, that they may still be well munited, being principal sinews of his Majesty's authority. Therefore the course will be, as I am advised, that for this hainous misprision, that the party, without all colour or shadow of cause, should threaten the life of his judge, and of the highest judge of the kingdom next his Majesty, he be first examined, and if he confess it, then an *ore tenus*; if he confess it not, then an information in the star-chamber, and he to remain where he is till the hearing. But I do purposely forbear yet to have him examined, till the decree or agreement between him and my lord Aubigny, which is now ready, be perfected, lest it should seem an oppression, by the terror of the one, to beat him down in the other. Thus I ever rest

Your lordship's true friend and devoted servant,  
FR. BACON, CANC.

York-house, Jan. 25, 1617.

I pray your lordship to pardon me, if in respect of a little watering in one of mine eyes, I have written this letter, being long and private business, in my secretary's hand.

## CXCVIII. TO THE LORD CHANCELLOR. §

MY HONOURABLE LORD,

I HAVE received your lordship's letters, wherein I see the continuance of your love and respect to me, in any thing I write you of, for which I give your lordship many thanks, desiring nothing for any man but what you shall find just and convenient to pass. I am very glad to understand that there is so good hope of Sir Gilbert Houghton's business, which I must needs ascribe to your lordship's great favour toward him for my sake, which I will ever acknowledge. If his Majesty at any time speak of the lord Clifton's business, I will answer according to that your lordship hath written, &c.

Your lordship's faithful servant,  
G. BUCKINGHAM.  
Newmarket, the last of Jan. 1617.

rity a sufficient testimony of his learning in the law, as well as the sciences, in his book entitled, "A Description of the Common Laws of England according to the rules of art, &c." His son's good parts and elocution were acknowledged by the greatest of his enemies; which accomplishments, though he died without issue, have eminently appeared in some other descendants from his honourable family. *Stephens.*

§ Stephens's Second Collection, p. 75.

## CXCIX. TO THE KING.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

FINDING as well by your Majesty's despatches and directions to your council, as now by speech with Mr. Secretary Lake, that your Majesty is content to be troubled with business of sundry natures; I thought good, according to the duty of my place, and the necessity of the occasion, to put your Majesty in mind, that on this day seven-night, being Friday in the morning, I am, according to custom, to give a charge and admonition to the judges and justices of peace now before the circuits, wherein I am humbly to crave your Majesty's pleasure and directions.

I have for your Majesty's better ease set down the heads, which by the prescript of your book, and out of the consideration of the present times, I have thought fittest to be remembered. I have also sent your Majesty the last account of the judges' circuits, not to trouble you with the reading of them all; but to the end that if upon my memorial, or otherwise out of your Majesty's own memory, which is above memorials, you should have occasion to resort to those accounts, the papers may be by you.

The point of greatest weight, in my opinion, is the carrying of a balanced hand at this time in the matter of recusants, in regard of the treaty with Spain. For it were good, in respect of your people, that there were no note made, that the string is relaxed, and in respect of the treaty, that it is not strained; and therefore that the proceeding in those causes be rather diligent than severe.

I am wonderful glad to hear that this extremity of weather, which I think the Muscovite hath brought with him, hath not touched your Majesty, whose health and ease is far dearer to me than my life with all the appurtenances. God ever preserve and prosper you,

Your Majesty's most faithful and most obliged servant,

FR. BACON, CANC.

Friday morning, Feb. 6, 1617.

Your Majesty will be pleased your answer be with me on Thursday at noon, or soon after.

## CC. TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter to me, and delivered likewise to him the letter and other things directed to his Majesty, who hath commanded me to return this answer to them all.

First, For your memorial of your charge to the judges, he liketh it so well, that he findeth nothing either to be added or diminished, and was so well satisfied therewith, that he accounteth it needless to read the other papers, but sealed them up again, and sendeth them back to your lordship without reading

\* Stephens's Second Collection, p. 76.

them. Only in the point of recusants his Majesty is of the quite contrary opinion to you; for though he would not by any means have a more severe course held, than his laws appoint in that case, yet sith the many reasons why, there should be no mitigation above that which his laws have enacted, and his own conscience telleth him to be fit. As first, the papists in his kingdom have taken such heart upon the commission given to Sir John Digby touching the match with Spain, that they have sent copies thereof privately up and down, and are so lifted up in their hopes of what they desire, that his Majesty cannot but take a more severe course, as far as by his laws he may, than hitherto he hath done. Besides, when they shall see a harder hand carried toward them than hath been accustomed, his Majesty assureth himself, they will employ all their means to farther the match, in hope of mitigating of that severity when it shall be accomplished. And though these reasons were not, his Majesty would account it a baseness in a prince to show such a desire of the match, as to slack any thing in his course of government, much more in propagation of the religion he professeth, for fear of giving hinderance to the match thereby. And so with many thanks for your favours to my brother in his business, I rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, 8 Feb. 1617.

## CCL. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

MR. Chancellor of the exchequer hath signified to me this day, that yesterday his Majesty called him to his coach, and said to him, that one that had used ill speech of me should be called before me, and make his submission to me; and thereupon be called before the council, and receive a sharp reprehension, and so be enlarged. And Mr. Chancellor could not tell me who the person was, but after by some letter he received from my lord Clifton, and speech with a man of his, he perceived it was he.

I pray your lordship in humbleness to let his Majesty know, that I little fear the lord Clifton, but I much fear the example, that it will animate ruffians and rodomonti extremely against the seats of justice, which are his Majesty's own seats, yea, and against all authority and greatness, if this pass without public censure and example; it having gone already so far as that the person of a baron hath been committed to the Tower. The punishment it may please his Majesty to remit, and I shall not formally but heartily intercede for him: but an example, setting myself aside, I wish for terror of persons that may be more dangerous than he, towards the least judge of the kingdom.

Therefore it may please his Majesty to speak of it with myself and my lords, when he cometh next, and in the mean time I will command, from his

† Ibid. p. 77.

‡ Ibid. p. 79.

Majesty, the master of the rolls, and Mr. Attorney, who were appointed by the table to examine him, to stay.\* God ever prosper you.

Your Majesty's true friend and devoted servant,  
March 17, 1617. FR. BACON, CANC.

CCII. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

WE have sat once upon the commission of treasure to no ill purpose, as may appear by the account enclosed; wherein his Majesty will find no preposterous issue of treasure: Mr. Chancellor imagines well, Coke seeks and beats over, as well where it is not, as where it is; secretary Naunton forgets nothing. I will look to bow things to the true ends. God bless and prosper his Majesty and yourself.

Your lordship's most obliged friend and faithful servant,  
25 July, 1617. FR. VERULAM, CANC.

CCIII. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

I PRAY your lordship to signify to his Majesty, that I thought it my duty to stay at the seal, a book of Sir Francis Steward's, and Sir James Auterlony, &c. of 200*l.* land in charge in fee-simple: my reasons,

First, It is a perpetuity, and so much rent in diminution of revenue certain.

Secondly, The warrant, as is acknowledged, came only from my lord of Suffolk, and not from Mr. Chancellor. And yet my lord was wont to boast, that since he was treasurer, all commissions and contracts for sale of the king's lands were broken off and ceased.

Thirdly, The rate of the moneys paid by the gentlemen amounteth but to thirteen years' purchase; which is a plain gift of a good proportion of value.

If his Majesty, now informed, iterate his mandate, it is done, and I excused; but I could wish his Majesty would refer it to the commissioners of the treasury, how the gentlemen may be otherwise satisfied.

I received yesternight a brave account of the commission of the wards in Ireland, which this one year is advanced from 200*l.* per annum to 4000*l.* which is twenty-fold multiplied. This I write for two reasons. First, because I glory in it, because it was my work wholly; next, because his Majesty may take occasion by this to look better to the improve-

\* I know not whether there was any prosecution against the lord Clifton, or whether it was prevented by the laying of violent hands upon himself, in the year ensuing. *Stephens.*

† *Stephens's Second Collection*, p. 80.

‡ *Ibid.*

§ *Ibid.* p. 82.

|| The advancement of this lady to the title of the countess of Buckingham, was, notwithstanding the reasons here alleged, so ill resented by the house of commons in 1626, that in article XI. of their impeachment of the duke her son, it was objected against him as one of his offences. *Stephens.*

¶ 18 Hen. VII. cap. 1.

\*\* By this and the preceding letter it appears, that as my lord chancellor thought it his duty to offer to the king his

ment of his wards in England in due time. God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

York-house, July 27, 1618.

CCIV. TO THE MARQUIS OF BUCKINGHAM.§

MY VERY GOOD LORD,

I AM very glad to hear of the honour his Majesty intendeth to my noble lady your lordship's mother.|| This, amongst many other things, showeth in your lordship good nature, which is the root of all virtues, next religion. Besides, it doth sort well in states, when place and power do meet and stand not too far at distance.

For the passing of it by direction without bill signed, it cannot be in law. So is Mr. Attorney's opinion, and so is mine; and therefore there is presently a bill sent with an indorsement of passing it by immediate warrant, and this antedate.

For the antedate, I must present his Majesty with my caution, and with my obedience.

For the statute tieth me from antedates; and indeed the mischief is infinite: for by that means the king may grant any land, &c. and take it away a month hence, and grant it another by an antedate.¶¶ And surely were it land or the like, I would not say *absit*, or your Majesty cannot do it, for a world; or, Your Majesty is sworn and I am sworn; or such brave phrases; but surely, I say, I would in humbleness represent it to his Majesty.\*\*

But the case of honour differeth; for therein his Majesty's prerogative and declaration is absolute, and he may make him that is last to be first. And therefore upon his Majesty's signification of his pleasure upon the indorsement of the bill signed, I take it I may lawfully do it.

I am here rejoicing with my neighbours the townsmen of St. Albans, for this happy day, the fifth of August,†† 1618.

Your lordship's most obliged friend and faithful servant,

Gorhambury. FR. VERULAM, CANC.

CCV. TO THE MARQUIS OF BUCKINGHAM.‡‡

MY VERY GOOD LORD,

I THANK your lordship for your last loving letter.

reasons against passing of a patent: yet if then the king, who was judge of the inconvenience, was pleased to command it, he was obliged to allow the same. But in those things which were contrary to law, as it is to be presumed, that after an humble representation thereof, no prince would exact, so no minister in such a case would yield an obedience. *Stephens.*

†† The fifth of August, being the anniversary of the king's deliverance from the earl of Gowry's conspiracy, was by some called the court holiday, and ridiculed as a fiction; though the truth thereof being delivered down by Archbishop Spotswood, and other good historians, I see no great reason to call it into question. *Stephens.*

‡‡ *Stephens's Second Collection*, p. 83.

I now write to give the king an account of a patent I have stayed at the seal. It is of licence to give in mortmain eight hundred pound land, though it be of tenure in chief to Allen \* that was the player, for an hospital.

I like well that Allen playeth the last act of his life so well; but if his Majesty give way thus to amortize his tenures, his courts of wards will decay; which I had well hoped should improve.

But that which moved me chiefly is, that his Majesty now lately did absolutely deny Sir Henry Savile for 200*l.* and Sir Edward Sandys for 100*l.* to the perpetuating of two lectures, the one in Oxford, the other in Cambridge, foundations of singular honour to his Majesty, the best learned of kings, and of which there is great want; whereas hospitals abound, and beggars abound never a whit the less. †

If his Majesty do like to pass the book at all; yet if he would be pleased to abridge the 800*l.* to 500*l.* and then give way to the other two books for the university, it were a princely work. And I would make an humble suit to the king, and desire your lordship to join in it, that it might be so. God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

York-house, Aug. 18, 1618.

I have written to my lord chamberlain, being chancellor of Oxford, to help in the business.

#### CCVI. TO THE MARQUIS OF BUCKINGHAM. †

MY VERY GOOD LORD,

WHAT passed in your lordship's presence, your lordship can tell, touching the navy. The morrow following we concluded in approbation of the books, save in one point, touching the number convenient for naming the ships, wherein the number allowed by the commissioners had, in my judgment, a little of the merchant; for to measure by so many as were

\* That Allen the player, who founded an hospital at Dulwich in Surry, had been an excellent actor of the comical and whimsical part, will appear evident to any one that shall thoughtfully consider the following epigram made by that admirable dramatic poet, Ben Jonson.

To Mr. EDWARD ALLEN.

If Rome so great, and in her wisest age,  
Fear'd not to boast the glories of her stage:  
As skilful Roscius, and grave Æsop, men  
Yet crown'd with honours, as with riches then;  
Who had no less a trumpet of their name,  
Than Cicero, whose every breath was fame:  
How can so great example die in me?  
That, Allen, I should pause to publish thee;  
Who both their graces in thyself hast more  
Outstrip, than they did all that went before:  
And present worth in all dost so contract,  
As others speak, but only thou dost act.  
Wear this renown. 'Tis just that who did give  
So many poets life, by one should live.

† It were to be wished this observation did not hold true to this day: for though the foundations of hospitals are to be commended, which Sir Francis Bacon hath done both in this letter and other his writings; yet it shows that some more adequate remedy for supporting the poor, than what arises from the

above dead pays, is no good argument. For the abuse of dead pays is to be amended, and not the necessary number abated. In this his Majesty may fall upon a middle proportion between that of the commissioners and that of the officers.

It were good, now the three books, which we have appointed to be engrossed into one ledger-book, are affirmed, there were a short book of his Majesty's royal directions, and orders thereupon, extracted.

For the commission of the treasury, I persuade myself, they are of the first hours that have been well spent in that kind. We have put those particulars, whereof his Majesty gave us charge, into a way.

Bingley's information will be to good purpose, and we find another of like nature revealed to Mr. Secretary and myself. God ever prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

9 October, 1618.

#### CCVII. TO THE MARQUIS OF BUCKINGHAM. §

MY VERY GOOD LORD,

LOOKING for matter of service, I have found out a suit for myself: and it is proper for me more than all men, because it is within the account of the hanaper. But I have made a law to myself, that I will never beg any thing which shall not bring gain to the king. Therefore my suit is, to farm the profits of the alienations, yielding a thousand pounds a year more to the king than hath been yielded *communibus annis*, by a medium of seven years. If the king be pleased to grant me this, it will a little warm the honour he hath given me; and I shall have a new occasion to be, as I ever have been, and shall be,

Your lordship's obliged friend and faithful servant,

FR. VERULAM, CANC.

York-house, October 9, 1618.

charities, or even from the laws enacted for their relief, was then, and yet is to be desired. And as the defect thereof is no small reproach to the government of a country, happy in its natural products, and enriched by commerce; so it would be an act of the greatest humanity to provide for the poor, and that idleness and beggary, the successive nursery of rogues, might as far as possible be extirpated. Upon this occasion I cannot but take notice of a story which has been spread abroad to the defamation of Sir Francis Bacon, though upon no good ground, as far as I can judge, as in the accomplishment of the foundation of the Charter-house hospital, begun by Mr. Sutton and carried on by his executors, Sir Francis, who was then the king's solicitor, had for some ill designs of gain to himself or others, endeavoured to have defeated the same. The fact was, that the heir at law supposing, notwithstanding what Mr. Sutton had done in procuring acts of parliament, and patents from the king, in order to establish this noble charity, that the greatest part of his estate was descended to him, it was argued on his behalf by the solicitor-general, by Mr. Henry Yelverton, and Mr. Walter, men of great reputation in those times; and whatever ill intentions some of the court might have, my request to the reader is, that before he pass any censure upon Sir Francis Bacon, relating hereunto, he would please to peruse his advice, printed in vol. i. p. 495, given to the king touching Mr. Sutton's estate. *Stephens.*

‡ *Stephens's Second Collection*, p. 84. § *Ibid.* p. 85.

## CCVIII. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

THIS morning Mr. Attorney came to me, and desired of me the many writs of *Ne exeat regnum* against most of the Dutch merchants,† and withal let me understand that there was a discovery of an infinite transportation of gold and silver out of this realm by the said Dutch merchants, amounting to millions; and that Sir John Britain had made a book thereof, and presented the same to his Majesty; and farther, that his Majesty had directed him to prosecute the same; and had also given Sir Thomas Vavasor the forfeiture of such ten of them as he should choose.

Hereupon I thought it my duty, as in a matter of great weight, to signify to his Majesty by your lordship what I conceive.

The discovery I think very happy. For if it be true, it will be a great benefit to his Majesty: it will also content his people much, and it will demonstrate also that Scotland is not the leech, as some discousers say, but the Netherlanders, that suck the realm of treasure. So that the thing is very good.

But two things I must represent to his Majesty; the first, that if I stay merchants from their trading by this writ, I must do it either *ex officio*, or by special warrant from his Majesty.

If *ex officio*, then I must have more than a bare surmise to grant the writ upon, so as I must be acquainted with the grounds, or at least appearance of proofs. If by special warrant, then I desire to receive the same. The other is, that I humbly beseech his Majesty that these royal boughs of forfeiture may not be vintaged or cropp'd by private suitors, considering his Majesty's state as it is, but that Sir Thomas Vavasor, or Sir John Britain, may have a bountiful and gracious reward for their discovery; but not the prime, or without stint.

In sum, I would wish his Majesty to refer the whole business, and carriage of the same for his honour and profit, to the commissioners of treasury; or because it is a legal forfeiture, to myself, Mr. Chancellor, Sir Edward Coke, and my lord chief justice of England: and by us his Majesty shall be assured to know the best course for his justice, honour, and profit, and that he may dispose what

\* Stephens's Second Collection, p. 86.

† The affair of these Dutch merchants is in some measure represented in this letter, and those of October 9, and Nov. 9, 1619. But Mr. Stephens in his introduction, p. 45, 46, gives us by the assistance of some authentic papers, the following account of the affair: Upon the 19th of October, 1618, the attorney-general having applied to the lord chancellor for writs *Ne exeat regnum*, against these merchants, afterwards exhibited an information against about one hundred and eighty of them, for transporting beyond the seas vast quantities of gold and silver in money, plate, and bullion, since the beginning of king James I.'s reign. The attorney at first brought the cause to a hearing against about twenty of them, who were supposed the greatest offenders, and most able to make restitution. Their fines amounting in the whole to 150,000*l.* of which Mr. William Courteen, and two others, were condemned in 20,000*l.* each; the advice which the lord chancellor gave the king, not to grant away the fines of such ten of them as

bounty he will. God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

York-house, Octob. 19, 1618.

## CCIX. TO THE LORD CHANCELLOR.‡

MY LORD,

I HAVE acquainted his Majesty with your letter, who giveth you thanks for your advice to communicate the business of the Dutchmen to the commissioners of the treasury, which his Majesty was before purposed to refer to them, as it concerns his treasure, for the carriage of it: and to your lordship and the rest named in your letter, for the relation it hath to the law. For the proposers of the suit, his Majesty intendeth only to reward their pains as may stand with his service and his princely disposition, but to preserve the main benefit himself: all that his Majesty would have your lordship to do for the present, is to take order about the writ of *Ne exeant regnum*; to advise with his learned counsel what course is to be taken, and if by a warrant from his Majesty, that your lordship send him a warrant to be signed, which shall be returned with all speed. Of other things his Majesty thinketh it will be time enough to speak at his return to London. In the mean time I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Hinchenbroke, 21 Octob. 1618.

## CCX. TO THE MARQUIS OF BUCKINGHAM.§

MY VERY GOOD LORD,

I HAVE this morning received the petty roll for the sheriffs. I received also the papers exhibited by Sir Miles Fleetwood, which I will use to his Majesty's best service, and thereupon give account to his Majesty when time serveth.

My care, which is not dormant touching his Majesty's service, especially that of treasure, which is now *summa summarum*, maketh me propound to his

Sir Thomas Vavasor the discoverer should choose, and which it seems he had in a manner been promised, was a piece of service worthy the place he enjoyed, and the trust he had with the king. Upon the 12th of October, 1619, Mr. Courteen was censured to pay 2000*l.* more, and other smaller sums, for endeavouring to corrupt the king's evidence. And the 19th of November following was appointed for the trial of between twenty and thirty more; but by reason of some neglect or mismanagement in the prosecution, which gave the court a great deal of trouble, and the defendants some advantage, the cause was not heard till the 7th of December, though most of them were then found guilty. Of the large fines imposed upon the delinquents, it is supposed that they paid but a third part: for during the prosecution, the States-General did by a letter desire the marquis of Buckingham to endeavour to moderate the heat thereof, as Sir Noel Carson their ambassador did the next day after sentence, to mitigate the severity.

‡ Stephens's Second Collection, p. 87.

§ Ibid. p. 88.

Majesty a matter, which, God is my witness, I do without contemplation of friend or end, but *animo recto*.

If Sir Edward Coke continue sick, or keep in, I fear his Majesty's service will languish too, in those things which touch upon law; as the calling in debts, recusants, alienations, defalcations, &c. And this is most certain, that in these new diligences, if the first beginning cool, all will go back to the old bias. Therefore it may please his Majesty to think of it, whether there will not be a kind of necessity to add my lord chief justice of England to the commissioners of treasure. This I move only to the king and your lordship, otherwise it is a thing *ex non entibus*. God preserve and prosper you.

Your lordship's most faithful servant,

FR. VERULAM, CANC.

From the Star-Chamber, 25 Nov. 1618.

P. S. I forget not Tufton's cause. All things stay, and precedents are in search.

#### CCXI. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

THIS long book, which I send for his Majesty's signature, was upon a conference and consult yesternight (at which time I was assisted by the two chief justices, and attended by the surveyor, attorney, and receiver of the court of wards, Fleetwood) framed and allowed.

It is long, because we all thought fit not to piece new instructions with old instructions, but to reduce both old and new into one body of instructions. I do not see that of the articles, which are many, any could have been spared. They are plain, but they have a good property, that they will take fast hold. I may not trouble his Majesty with choosing some of them in particular, when all are good: only I think fit to let his Majesty know of one, which is, that according to his own directions, the oath of making no private unlawful profit is now as well translated to the master and officers, that may take, as to the parties and suitors that may give.

It little becometh me to possess his Majesty that this will be to his Majesty's benefit ten thousands yearly, or fifteen thousands, or twenty thousands: for these rattles are fitter for mountebanks of service, than grave counsellors. But my advices, as far as I am able to discern, tend or extend but to that much: this is his Majesty's surest and easiest way for his most good.

Sir Miles Fleetwood, who both now and heretofore hath done very good service in this, meriteth to be particularly from your lordship encouraged; which I beseech your lordship not to forget. God ever prosper you.

Your lordship's most faithful bounden friend and servant,

FR. VERULAM, CANC.

Dec. 4. 1618.

\* Stephens's Second Collection, p. 89.

#### CCXII. TO THE KING. †

MAY IT PLEASE YOUR MOST EXCELLENT MAJESTY,

ACCORDING to your Majesty's pleasure, signified to us by the lord marquis Buckingham, we have considered of the fitness and conveniency of the gold and silver thread business, as also the profit that may accrue unto your Majesty.

We are all of opinion that it is convenient that the same should be settled, having been brought hither at the great charge of your Majesty's now agents, and being a means to set many of your poor subjects on work; and to this purpose there was a former certificate to your Majesty from some of us with others.

And for the profit that will arise, we see no cause to doubt: but do conceive apparent likelihood, that it will redound much to your Majesty's profit, which we esteem may be at the least 10,000*l.* by the year; and therefore in a business of such benefit to your Majesty, it were good it were settled with all convenient speed, by all lawful means that may be thought of, which, notwithstanding, we most humbly leave to your Majesty's highest wisdom.

Your Majesty's most humble and faithful servants,

FR. VERULAM, CANC.

H. MONTAGU. HENRY YELVERTON.

4 Oct. 1618. The marquis of Buckingham writes from Theobald's to the lord chancellor, that the king being desirous to be satisfied of the gold and silver thread business, would have his lordship consult the lord chief justice, and the attorney and solicitor-general therein.

#### CCXIII. TO THE KING. ‡

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I DO many times with gladness, and for a remedy of my other labours, revolve in my mind the great happiness which God, of his singular goodness, hath accumulated upon your Majesty every way; and how complete the same would be if the state of your means were once rectified, and well ordered: your people military and obedient, fit for war, used to peace; your church illightened with good preachers, as an heaven of stars; your judges learned, and learning from you, just, and just by your example; your nobility in a right distance between crown and people, no oppressors of the people, no overshadowers of the crown; your council full of tributes of care, faith, and freedom; your gentlemen and justices of peace willing to apply your royal mandates to the nature of their several counties, but ready to obey; your servants in awe of your wisdom, in hope of your goodness; the fields growing every day, by the improvement and recovery of grounds, from the desert to the garden; the city grown from wood to brick; your sea-walls or *pomerium* of your island

† Ibid. p. 90.

‡ Ibid.

surveyed, and in edifying; your merchants embracing the whole compass of the world, east, west, north, and south; the times give you peace, and yet offer you opportunities of action abroad: and lastly, your excellent royal issue entaileth these blessings and favours of God to descend to all posterity. It resteth, therefore, that God having done so great things for your Majesty, and you for others, you would do so much for yourself, as to go through, according to your good beginnings, with the rectifying and settling of your estate and means, which only is wanting; *hoc rebus deficit unum*. I therefore, whom only love and duty to your Majesty, and your royal line, hath made a financier, do intend to present unto your Majesty a perfect book of your estate, like a perspective glass, to draw your estate nearer to your sight; beseeching your Majesty to conceive, that if I have not attained to do that that I would do, in this which is not proper for me, in my element, I shall make your Majesty amends in some other thing, in which I am better bred. God ever preserve, &c.

Jan. 2, 1618.

CCXIV. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

If I should use the count de Gondemar's action, I should first lay your last letter to my mouth in token of thanks, and then to my heart in token of contentment, and then to my forehead in token of a perpetual remembrance.

I send now to know how his Majesty doth after his remove, and to give you account that yesterday was a day of motions in the chancery. This day was a day of motions in the star-chamber, and it was my hap to clear the bar, that no man was left to move any thing, which my lords were pleased to note they never saw before. To-morrow is a sealing day; Thursday is the funeral day; so that I pray your lordship to direct me whether I shall attend his Majesty Friday or Saturday. Friday hath some reliques of business, and the commissioners of treasure have appointed to meet; but to see his Majesty, is to me above all.

I have set down *de bene esse*, Suffolk's cause, the third sitting next term; if the wind suffer the commission of Ireland to be sped. I ever more and more rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

This 11th May, 1619.

CCXV. TO THE LORD CHANCELLOR.†

MY MOST HONOURABLE LORD,

I acquainted his Majesty with your letter at the first opportunity after I received it, who was very

\* Stephens's Second Collection, p. 93. † Ibid. p. 94.

well pleased with that account of your careful and speedy despatch of business, &c.

Yours, &c.

G. BUCKINGHAM.

Greenwich, 13th May, 1619.

P. S. Your business had been done before this, but I knew not whether you would have the attorney or solicitor to draw it.

CCXVI. TO THE LORD CHANCELLOR.‡

MY NOBLE LORD,

I showed your letter of thanks to his Majesty, who says there are too many in it for so small a favour, which he holdeth too little to encourage so well a deserving servant. For myself, I shall ever rejoice at the manifestation of his Majesty's favour towards you, and will contribute all that is in me to the increasing his good opinion; ever resting

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

CCXVII. TO MY VERY LOVING FRIENDS SIR THOMAS LEIGH AND SIR THOMAS PUCKERING, KNIGHTS AND BARONETS.§

AFTER my hearty commendations, being informed by the petition of one Thomas Porten, a poor Yorkshireman, of a heavy accident by fire, whereby his house, his wife, and a child, together with all his goods, were utterly burnt and consumed; which misfortune, the petitioner suggests with much eagerness, was occasioned by the wicked practices and conjurations of one John Clarkson of Rowington in the county of Warwick, and his daughter, persons of a wandering condition, affirming, for instance, that one Mr. Hailes of Warwick did take from the said Clarkson certain books of conjuration and witchcraft: that the truth of the matter may be rightly known, and that Clarkson and his daughter, if there be ground for it, may answer the law according to the merit of so heinous a fact, I have thought good to wish and desire you to send for Clarkson and his daughter, and as upon due examination you shall find cause, to take order for their forthcoming, and answering of the matter at the next assize for the county of York; and also to confer with Mr. Hailes, whether he took from the said Clarkson any such book of conjuration, as the petitioner pretends he did, and to see them in safe custody. Whereupon I desire to be certified how you find the matter; and your doing thereupon. So not doubting of your special care and diligence herein, I bid you heartily farewell, and rest

Your very loving friend,

FR. VERULAM, CANC.

York-house, 15 May, 1619.

§ Ibid.

## CCXVIII. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I SEND his Majesty a volume of my lord of Bangor's and my lord Sheffield, whereof I spake when I left his Majesty at Theobald's. His Majesty may be pleased, at his own good time and pleasure, to cast his eye upon it. I purpose at my coming to London to confer with the chief justice as his Majesty appointed: and to put the business of the pursuivants in a way, which I think will be best by a commission of oyer and terminer; for the star-chamber, without confession, is long seas. I should advise that this point of the pursuivants were not single, but that it be coupled in the commission with the offences of keepers of prisons hereabouts: it hath a great affinity; for pursuivants are but ambulatory keepers, and it works upon the same party, of the papists; and it is that wherein many of his Majesty's and the council's severe charges have been hitherto unfruitful; and it doth a great deal of mischief. I have some other reasons for it. But of this it will be fittest to advertise more particularly, what I have resolved of on advice, upon conference with the chief justice. I am wonderful glad to hear of the king's good health. God preserve his Majesty and your lordship. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Gorbambury, this last of July, 1619.

## CCXIX. TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

Your lordship hath sent so good news to his Majesty, that I could have wished you had been the reporter of it yourself; but seeing you came not, I cannot but give you thanks for employing me in the delivering of that which pleased his Majesty so well, whereof he will put your lordship in mind, when he seeth you. I am glad we are come so near together, and hoping to see you at Windsor, I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

29 Aug. 1619.

## CCXX. TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

As I was reading your lordship's letter, his Majesty came, and took it of my hands, when he knew from whom it came, before I could read the paper enclosed: and told me that you had done like a wise counsellor: first setting down the state of the question, and then propounding the difficulties, the rest being to be done in its own time.

I am glad of this occasion of writing to your lord-

\* Stephens's Second Collection, p. 95. † Ibid. p. 96.

ship, that I may now let your lordship understand his Majesty's good conceit and acceptation of your service, upon your discourse with him at Windsor, which though I heard not myself, yet I heard his Majesty much commend it both for the method and the affection you showed therein to his affairs, in such earnest manner, as if you made it your only study and care to advance his Majesty's service. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Wanstead, 9 Sept. 1619.

## CCXXI. TO THE MARQUIS OF BUCKINGHAM.§

MY VERY GOOD LORD,

I THINK it my duty to let his Majesty know what I find in this cause of the *ore tenus*. For as his Majesty hath good experience, that when his business comes upon the stage, I carry it with strength and resolution; so in the proceedings I love to be wary and considerate.

I wrote to your lordship by my last, that I hoped by the care I had taken, the business would go well, but without that care I was sure it would not go well. This I meant because I had had conference with the two chief justices, Sir Edward Coke being present, and handled the matter so, that not without much ado I left both the chief justices firm to the cause and satisfied.

But calling to mind that in the main business, notwithstanding I and the chief justices went one way, yet the day was not good, and I should be loth to see more of such days, I am not without some apprehension. For though we have Sir Edward Coke earnest and forward, insomuch as he advised the *ore tenus*, before I knew it at Wanstead, and now bound the Dutchmen over to the star-chamber, before I was made privy; unto both which proceedings I did nevertheless give approbation; yet if there should be either the major part of the votes the other way, or any main distraction, though we bear it through, I should think it a matter full of inconvenience. But that which gives me most to think, is the carriage of Mr. Attorney, which sorteth neither with the business, nor with himself: for, as I hear from divers, and partly perceive, he is fallen from earnest to be cool and faint: which weakness, if it should make the like alteration at the bar, it might overthrow the cause. All the remedy which is in my power, is by the advice of the judges to draw some other of the learned counsel to his help; which he, I know, is unwilling with, but that is all one.

This I thought it necessary to write, lest the king should think me asleep, and because I know that his Majesty's judgment is far better than mine. But I for my part mean to go on roundly; and so I ever rest

Your lordship's most obliged friend and faithful servant,

Octob. 9, 1619.

FR. VERULAM, CANC.

‡ Ibid. p. 96.

§ Ibid. p. 97.

If the king in his great wisdom should any ways incline to have the *ore tenus* put off, then the way were to command that the matter of the *ore tenus* should be given in evidence, by way of aggravation in the main cause. And it is true, that if this precursory matter goeth well, it giveth great entrance into the main cause; if ill, contrariwise, it will do hurt and disadvantage to the main.

---

CCXXII. TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

THE news of this victory hath so well pleased his Majesty, that he giveth thanks to all; and I among the rest, who had no other part but the delivering of your letter, had my part of his good acceptation, which he would have rewarded after the Roman fashion with every man a garland, if it had been now in use; but after the fashion of his gracious goodness, he giveth your lordship thanks: and would have you deliver the like in his Majesty's name to Sir Edward Coke, and the judges. Your news which came the first, gave his Majesty a very good breakfast, and I hope his health will be the better after it.

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

14 Oct. 1619.

This letter was indorsed,

*Thanks on the success in the ore tenus against the Dutch.*

---

CCXXIII. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

THESE things which I write now and heretofore in this cause, I do not write so as any can take knowledge that I write; but I despatch things *ex officio* here, and yet think it fit inwardly to advertise the king what doth occur. And I do assure your lordship, that if I did serve any king whom I did not think far away wiser than myself, I would not write in the midst of business, but go on of myself.

This morning, notwithstanding my speech yesterday with the duke,‡ he delivered this letter enclosed, and I having cleared the room of all save the court and learned counsel, whom I required to stay, the letter was read a little before our hour of sitting. When it was read, Mr. Attorney began to move, that my lord should not acknowledge his offences as he conceived he had committed them, but as they were charged; and some of the lords speaking to that point, I thought fit to interrupt and divert that kind of question; and said, before we considered of the extent of my lord's submission, we were first to consider of the extent of our own duty and power; for that I conceived it was neither fit for us to stay

\* Stephens's Second Collection, p. 99.

† Ibid.

‡ Of Lenox.

proceeding, nor to move his Majesty in that which was before us in course of justice: unto which, being once propounded by me, all the lords and the rest *una voce* assented. I would not so much as ask the question, whether, though we proceeded, I should send the letter to his Majesty, because I would not straiten his Majesty in any thing.

The evidence went well, I will not say I sometime help it, as far as was fit for a judge; and at the rising of the court, I moved their lordships openly, whether they would not continue this cause from day to day till it were ended; which they thought not fit, in regard of the general justice which would be delayed in all courts. Yet afterwards within I prevailed so far, as we have appointed to sit Wednesday, Thursday, and Friday, and to sit by eight of the clock, and so to despatch it before the king come, if we can. God preserve and prosper you. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

This 22 October, Friday at  
4 of the clock, 1619.

---

CCXXIV. TO THE LORD CHANCELLOR.§

MY HONOURABLE LORD,

I HAVE received your letters by both your servants, and have acquainted his Majesty with them, who is exceedingly pleased with the course you have held in the earl of Suffolk's business, and holdeth himself so much the more beholden to you, because you sent the letter of your own motion, without order or consent of the lords, whereby his Majesty is not tied to an answer. His Majesty hath understood by many, how worthily your lordship hath carried yourself both in this and the Dutch business: for which he hath commanded me to give you thanks in his name, and seeth your care to be so great in all things that concern his service, that he cannot but much rejoice in the trust of such a servant, which is no less comfort to

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

Royston, 23 Oct. 1619.

Indorsed thus,

*On my lord of Bucks enclosing a letter of submission from my lord of Suffolk.*

---

CCXXV. TO THE MARQUIS OF BUCKINGHAM.||

MY VERY GOOD LORD,

My lord of Suffolk's cause is this day sentenced My lord and his lady fined together at 30,000*l.* w<sup>it</sup> imprisonment in the Tower at their own charge Bingley at 2000*l.* and committed to the Fleet. S

§ Stephens's Second Collection, p. 101.

|| Ibid. p. 102.

Edward Coke did his part, I have not heard him do better, and began with a fine of 100,000*l.* but the judges first, and most of the rest, reduced it as before. I do not dislike that things passed moderately; and, all things considered, it is not amiss, and might easily have been worse.

There was much speaking of interceding for the king's mercy: which, in my opinion, was not so proper for a sentence. I said, in conclusion, that mercy was to come *ex mero motu*, and so left it: I took some other occasion pertinent to do the king honour, by showing how happy he was in all other parts of his government, save only in the manage of his treasure by his officers.

I have sent the king a new bill for Sussex; for my lord of Nottingham's certificate was true, and I told the judges of it before; but they neglected it. I conceive the first man, which is newly set down, is the fittest. God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Nov. 13, 1619.

CCXXVI. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I do not love to interlope by writing in the midst of business; but because his Majesty commanded me to acquaint him with any occurrence which might cross the way, I have thought fit to let his Majesty know what hath passed this day.

This day, which was the day set down, the great cause of the Dutchmen was entered into. The pleading being opened, and the case stated by the counsel; the counsel of the defendants made a motion to have certain examinations taken concerning the old defendants suppressed, because they were taken since the last hearing.

I set the business in a good way, and showed they were but supplemental, and that at the last hearing there were some things extrajudicial alleged *ad infrmandum conscientiam judicis*, and therefore there was more reason these should be used *ad informandum conscientiam judicis*, and that there was order for it. The order was read, and approved both by the court, and the defendants' own counsel; but it was alleged, that the order was not entered time enough, whereby the defendants might likewise examine: wherein certainly there was some slip or forgetfulness in Mr. Attorney or Brittain that followed it, which I wish had been otherwise; yet it went fair out of the court.

But after dinner my lords were troubled about it, and after much dispute we have agreed to confer silently and *sine strepitu* to-morrow, and set all straight, calling the judges, and the learned counsel, with whom I have spoken this evening, I think, to good purpose. For in good faith, I am fain to

\* Stephens's Second Collection, p. 103.

be *omnibus omnia*, as St. Paul saith, to set forward his Majesty's service.

I discern a kind of inclination to take hold of all accidents to put off the cause, whereunto neither I shall give way, nor I hope his Majesty; to-morrow, if cause be, I shall write more, but I hope all shall be well. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Friday night, Nov. 19, 1619.

CCXXVII. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

I HAVE conferred with Sir Lionel Cranfield, according to his Majesty's special commandment, touching two points of value, for the advancement, the one present, the other speedy, of his Majesty's revenue.

The first is of the currants, to restore the imposition of five shillings sixpence, laid in the late queen's time, and drawn down unduly, to serve private turns, to three shillings four pence; which will amount to above three thousand pounds yearly increase.

The other is of the tobacco, for which there is offered 2000*l.* increase yearly, to begin at Michaelmas next, as it now is, and 3000*l.* increase, if the plantations of tobacco here within land be restrained.

I approve in mine own judgment both propositions, with these cautions: That for the first the farmers of the currants do by instrument under their seals relinquish to the king all their claim thereto by any general words of their patent. And for the second, that the bargain be concluded and made before the proclamation go forth; wherein perhaps there will occur some doubt in law, because it restraineth the subject in the employment of his freehold at his liberty. But being so many ways *pro bono publico*, I think it good enough.

His Majesty may therefore be pleased to write his letter to the commissioners of the treasury, signifying his Majesty's pleasure directly in both points to have them done, and leaving to us the consideration *de modo*. God ever prosper you. I rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Nov. 22, 1619.

CCXXVIII. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

I SEND the submission of Sir Thomas Lake, drawn in such form as upon a meeting with me, of the chief justice and the learned counsel, was conceived agreeable to his Majesty's meaning and directions;

† *Ibid.* p. 104.

‡ *Ibid.* p. 105.

yet lest we should err, we thought good to send it to his Majesty. It is to be returned with speed, or else there will be no day in court to make it. God bless and prosper you. I rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

28 Nov. 1619.

CCXXIX. TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your lordship's letter, and with the submission you sent drawn for Sir Thomas Lake, which his Majesty liketh well; and because he served him in so honourable a place, is graciously pleased that he maketh submission in writing, so that my lady of Exeter be contented and the lords, whom his Majesty would have you acquaint therewith. And so I rest

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

Newmarket, 29 Nov. 1619.

CCXXX. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

WE sentence to-morrow, but I write to-day, because I would not leave the king in suspense.

I shall write not so good news as I would, but better than I expected.

We met amongst ourselves to-day, which I find was necessary, more than convenient. I gave aim that the meeting was not to give a privy verdict, or to determine what was a good proof or not a good proof, nor who was guilty or not guilty, but only to think of some fit proportion of the fines, that there might be less distraction in the sentence, in a cause so scattered. Some would have entered into the matter itself, but I made it good, and kept them from it.

I perceive the old defendants will be censured, as well as the new, which was the goale, and I am persuaded the king will have a great deal of honour of the cause. Their fines will be moderate, but far from contemptible. The attorney did very well to-day; I perceive he is a better pleader than a director, and more eloquent than considerate.

Little thinks the king what ado I have here, but I am sure I acquit my trust. To-morrow I will write particularly. God ever preserve you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Tuesday afternoon, this 7th Dec. 1619.

\* Stephen's Second Collection, p. 106.

† Ibid.

The marquis of Buckingham writes that he had acquainted his Majesty with this letter, who commanded him to give the lord chancellor thanks for his speed in advertising those things that pass, and for the great care he ever seeth his lordship has in his service.

CCXXXI. TO THE LORD CHANCELLOR.‡

MY LORD,

HIS Majesty having seen in this great business your exceeding care and diligence in his service by the effect which hath followed thereupon, hath commanded me to give you many thanks in his name, and to tell you that he seeth you play the part of all in all, &c.

Yours, &c.

G. BUCKINGHAM.

Newmarket, 10 Dec. 1619.

Indorsed,  
*In the Dutch Cause.*

CCXXXII. TO THE MARQUIS OF BUCKINGHAM.§

MY VERY GOOD LORD,

To keep form, I have written immediately to his Majesty of justice Croke's death, and send your lordship the letter open, wishing time were not lost. God preserve and prosper you.

Your lordship's ever,

FR. VERULAM, CANC.

24 Jan. 1619.

CCXXXIII. TO THE MARQUIS OF BUCKINGHAM.||

But I go on, and hope good service will be done.

For the commissions to be published in the star-chamber, for which it pleaseth his Majesty to give me special thanks, I will have special care of them in time. God ever prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

10 Feb. 1619.

‡ Ibid. p. 107.

§ Ibid. p. 108.

|| Ibid.

## CCXXXIV. TO THE KING.

MA Y IT PLEASE YOUR MOST EXCELLENT MAJESTY,

ACCORDING to your commandment, we met together yesterday at Whitehall, and there consulted what course were fittest to be taken now in this business of your Majesty's attorney-general, both for the satisfying your own honour, as also for calling in the late exorbitant charter of the city; which are the two ends, as we conceive, that your Majesty proposed unto yourself.

To effect both which, we humbly presume to present thus much unto your Majesty as our opinion. First, that an information be put into the star-chamber, as we formerly advised, against your attorney as delinquent, against the mayor, &c. as interested, and against the recorder also, mixtly with some touch of charge.

That the submission by letter offered by Mr. Attorney is no way satisfactory for your Majesty's honour; but is to be of record by way of answer, and deduced to more particulars.

That any submission of surrender of the patents by the city should be also of record in their answer; and no other can be received with your Majesty's honour, but by answer in court: the same to come merely of themselves, without any motion on your Majesty's behalf directly or indirectly; which being done in this form, it will be afterwards in your Majesty's choice and pleasure to use mercy, and to suspend any farther proceedings against your attorney.

That it is of necessity as well for the putting in of this information, as for your Majesty's other urgent and public services in that and other courts, to have a sequestration presently of your attorney, and a provisional commission to some other, during your Majesty's pleasure, to execute that charge. For both which, instruments legal shall be provided as soon as your Majesty's pleasure is known. To which we humbly and dutifully submit our advice and opinion, beseeching God to bless your Majesty's sacred person with continuance and increase of much health and happiness: wherewith, humbly kissing your royal hands, we rest

Your Majesty's most humble and faithful subjects and servants,

FR. VERULAM, CANC.	GEO. CALVERT,
T. ARUNDEL,	JUL. CÆSAR,
ROBERT NAUNTON,	EDW. COKE.

At your Majesty's Palace of  
Whitehall, June 16, 1620.

## CCXXXV. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

I HAVE lately certified his Majesty on the behalf of Sir George Chaworth, by secretary Calvert, touching the place of a remembrancer in the chan-

\* Stephens's Second Collection, p. 169. † Ibid. p. 110.

cery for setting down of causes. And because the gentleman telleth me, the king thought my certificate a little doubtful; he desired me to write to your lordship, touching my approbation more plainly. It is true, that I conceive it to be a good business, and will be for the service of the court, and ease of the subject; I will look it shall be accompanied with good cautions.

We ruffle over business here in council apace, and I think to reasonable good purpose. By my next I will write of some fit particulars. I ever rest

Your most obliged friend and faithful servant,  
FR. VERULAM, CANC.

June 21, 1620.

## CCXXXVI. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

THE tobacco business is well settled in all points. For the coals, they that brought the offer to secretary Calvert, do very basely shrink from their words; but we are casting about to piece it and perfect it. The two goose-quills Maxwell and Alured have been pulled, and they have made submissions in that kind which the board thought fit: for we would not do them the honour to require a recantation of their opinion, but an acknowledgment of their presumption.

His Majesty doth very wisely, not showing much care or regard to it, yet really to suppress their licentious course of talking and writing. My old lord Burghley was wont to say, that the Frenchman when he hath talked, he hath done; but the Englishman when he hath talked, he begins. It evaporateth malice and discontent in the one, and kindleth it in the other. And therefore upon some fit occasion I wish a more public example. The king's state, if I should now die and were opened, would be found at my heart, as queen Mary said of Calais; we find additionals still, but the consumption goeth on. I pray God give his Majesty resolution, passing by at once all impediments and less respects, to do that which may help it, before it be irremediable. God ever preserve and prosper your lordship.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

23 July, 1620.

I have stayed the thousand pounds set upon Englefield for his Majesty, and given order for levying it.

## CCXXXVII. TO THE MARQUIS OF BUCKINGHAM.§

MY VERY GOOD LORD,

ONE gave me a very good precept for the stone; that I should think of it most when I feel it least.

‡ Ibid. p. 111.

§ Ibid. p. 112.

This I apply to the king's business, which surely I revolve most when I am least in action; whereof at my attendance I will give his Majesty such account as can proceed from my poor and mean abilities, which as his Majesty out of grace may think to be more than they are, so I out of desire may think sometime they can effect more than they can. But still it must be remembered, that the stringing of the harp, nor the tuning of it, will not serve, except it be well played on from time to time.

If his Majesty's business or commandments require it, I will attend him at Windsor, though I would be glad to be spared, because quick airs at this time of the year do affect me. At London, and so at Theobald's and Hampton-Court, I will not fail, God willing, to wait upon his Majesty. Meanwhile I am exceeding glad to hear his Majesty hath been lusty and well this progress. Thus, much desiring to see your lordship, 'cujus amor tantum mihi crescit in horas,' as the poet saith, I ever remain

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Gorhambury, this 30th  
of Aug. 1620.

CCXXXVIII. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

I WRITE now only a letter of thanks to his Majesty, for that I hear, in my absence he was pleased to express towards me, though unworthy, a great deal of grace and good opinion before his lords; which is much to my comfort, whereunto I must ever impute your lordship as accessary. I have also written to him what signification I received from secretary Naunton of his Majesty's will and pleasure, lest in so great a business there should be any mistaking.

The pain of my foot is gone, but the weakness doth a little remain, so as I hope within a day or two to have full use of it. I ever remain

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

2 Octob. 1620.

CCXXXIX. TO THE KING.†

IT MAY PLEASE YOUR MAJESTY,

I THOUGHT myself an unfortunate man that I could not attend you at Theobald's. But I hear that your Majesty hath done, as God Almighty useth to do, which is to turn evil into good, in that your Majesty hath been pleased upon that occasion to express before your lords your gracious opinion and favour towards me, which I most humbly thank your Majesty for, and will aspire to deserve.

\* Stephens's Second Collection, p. 113

Secretary Naunton this day brought me your pleasure in certain notes; that I should advise with the two chief justices, old parliament men, and Sir Edward Coke, who is also their senior in that school, and Sir Randall Crewe the last speaker, and such other judges as we should think fit, touching that which mought in true policy, without packing or degenerate arts, prepare to a parliament, in case your Majesty should resolve of one to be held; and withal he signified to me some particular points, which your Majesty very wisely had deduced.

All your Majesty's business is *super cor meum*, for I lay it to heart, but this is a business *secundum cor meum*; and yet, as I will do your Majesty all possible good services in it, so I am far from seeking to impropriate to myself the thanks, but shall become *omnibus omnia*, as St. Paul saith, to attain your Majesty's ends.

As soon as I have occasion, I will write to your Majesty touching the same, and will have special care to communicate with my lords, in some principal points, though all things are not at first fit for the whole table. I ever rest

Your Majesty's most bounden and most devoted servant,

FR. VERULAM, CANC.

2 Oct. 1620.

Your Majesty needeth not to doubt but that I shall carry the business with that secrecy which appertaineth.

CCXL. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

YESTERDAY I called unto us the two chief justices, and serjeant Crewe, about the parliament business. To call more judges, I thought not good. It would be tribute to assistance, much to secrecy. The distribution of the business we made was into four parts.

I. The perusing of the former grievance, and of things of like nature which have come since.

II. The consideration of a proclamation, with the clauses thereof, especially touching elections; which clauses nevertheless, we are of opinion, should be rather monitory than exclusive.

III. The inclusive: that is to say, what persons were fit to be of the house, tending to make a sufficient and well-composed house of the ablest men of the kingdom, fit to be advised with *circa ardua regni*, as the style of the writs goeth, according to the pure and true institution of a parliament; and of the means to place such persons without novelty or much observation. For this purpose we made some lists of names of the prime counsellors, and principal statesmen or courtiers; of the gravest or wisest lawyers; of the most respected and best tempered knights and gentlemen of the county. And here *obiter* we did not forget to consider who were the *boutefeus* of the last session, how many of them are dead, how many reduced, and how many remain, and what were fit to be done concerning them.

† Ibid. p. 114.

‡ Ibid. p. 115.

IV. The having ready of some commonwealth bills, that may add respect and acknowledgment of the king's care; not wooing bills to make the king and his graces cheap; but good matter to set them on work, that an empty stomach do not feed upon humour.

Of these four points, that which concerneth persons is not so fit to be communicated with the council-table, but to be kept within fewer hands. The other three may, when they are ripe.

Meanwhile I thought good to give his Majesty an account what is done, and in doing, humbly craving his direction if any thing be to be altered or added; though it may be ourselves shall have second thoughts, this being but the result of our first meeting.

The state of his Majesty's treasure still maketh me sad, and I am sorry I was not at Theobald's to report it, or that it was not done by my fellows: it is most necessary we do it faithfully and freely: for to flatter in this, were to betray his Majesty with a kiss. I humbly pray his Majesty to think of my former counsel; and this I will promise, that whomsoever his Majesty shall make treasurer, if his Majesty shall direct him to have relation to my advice, I will continue the same care and advice I do now, and much more cheerfully when I shall perceive that my propositions shall not be *literæ scriptæ in glacie*.

Meanwhile, to keep the commission in doing of somewhat worth the doing, it may please his Majesty to take knowledge, that upon our report we had agreed to make remonstrance to him, that we thought Ireland might, if his Majesty leave it to our care, be brought by divers good expedients to bear their own charge; and therefore his Majesty may be pleased by his commandment to set us in hand with it out of hand. God ever prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Octob. 7, 1620.

CCXLI. TO THE LORD CHANCELLOR.\*

MY LORD,

I HAVE acquainted his Majesty with your letter, and labour in his service, for which he commandeth me to give you thanks, and to let your lordship know, that he liketh exceeding well your method held by the judges, which could not be amended, and concurrerth with you and your opinions. First, touching the proclamation, that it should be monitory and persuasive, rather than compulsive: and, secondly, that the point concerning the persons, who should be admitted, and who avoided, is fit to be kept from the knowledge of the council-table, and to be carried with all secrecy.

For the business of Ireland, his Majesty had heard of it before, and gave commandment to the

master of the wards, that it should be hastened and set in hand with all speed, which his Majesty doubteth not but is done by this time. Touching your advice for a treasurer, his Majesty is very mindful of it, and will let you know as much at his return, when he will speak farther with your lordship of it. And so I rest

Yours, &c.

G. BUCKINGHAM.

Royston, 9 October, 1620.

CCXLII. THIS LETTER WAS WRITTEN WITH THE KING'S OWN HAND, TO MY LORD CHANCELLOR VERULAM, UPON HIS LORDSHIP'S SENDING TO HIS MAJESTY HIS *NOVUM ORGANUM*.†

MY LORD,

I HAVE received your letter, and your book, than the which you could not have sent a more acceptable present unto me. How thankful I am for it, cannot better be expressed by me, than by a firm resolution I have taken; first, to read it through with care and attention, though I should steal some hours from my sleep: having otherwise, as little spare time to read it, as you had to write it. And then, to use the liberty of a true friend, in not sparing to ask you the question in any point whereof I shall stand in doubt: *nam ejus est explicare, cujus est condere*: as, on the other part, I will willingly give a due commendation to such places, as, in my opinion, shall deserve it. In the mean time I can with comfort assure you, that you could not have made choice of a subject more befitting your place, and your universal and methodical knowledge; and in the general, I have already observed, that you jump with me, in keeping the mid way between the two extremes; as also in some particulars I have found that you agree fully with my opinion. And so praying God to give your work as good success as your heart can wish, and your labours deserve, I bid you heartily farewell.

JAMES R.

October 16, 1620.

CCXLIII. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

I SEND his Majesty a form of a proclamation for the parliament, which I thought fit to offer first to his Majesty's perusal, before I acquainted the council.

For that part which concerneth the foreign business, his Majesty will graciously consider, how easy it is for me to mistake, or not to attain; which his Majesty in his wisdom will pardon, correct, and direct.

\* Stephens's Second Collection, p. 117.

† Rawley's Resuscitatio.

‡ Stephens's Second Collection, p. 121.

For that part touching the elections, I have communicated it with my colleagues, Sir Edward Coke, the two chief justices, and serjeant Crewe, who approve it well; and we are all of opinion, that it is not good to have it more peremptory, more particular, nor more sharp.

We are thinking of some commonwealth laws, amongst which I would have one special for the maintenance of the navy, as well to give occasion to publish, to his Majesty's honour, what hath been already done; as, to speak plainly, to do your lordship honour in the second place; and besides, it is agreeable to the times. God ever prosper you.

Your lordship's most obliged friend and faithful servant,

Oct. 18, 1620.

FR. VERULAM, CANC.

CCXLIV. DRAUGHT OF A PROCLAMATION FOR A PARLIAMENT, REFERRED TO IN THE PRECEDING LETTER.\*

As in our princely judgment we hold nothing more worthy of a christian monarch, than the conservation of peace at home and abroad; whereby effusion of christian blood and other calamities of war are avoided, trade is kept open, laws and justice retain their due vigour and play, arts and sciences flourish, subjects are less burdened with taxes and tallages, and infinite other benefits redound to the state of a commonweal; so in our own practice we suppose there hath been seldom any king, that hath given more express testimonies and real pledges of his desire to have peace conserved, than we have done in the whole course of our regiment.

For neither have we, for that which concerns ourselves, been ready to apprehend or embrace any occasions or opportunities of making war upon our neighbours; neither have we omitted, for that which may concern the states abroad, any good office or royal endeavour for the quenching of the sparks of troubles and discords in foreign parts. Wherein, as we have been always ready and willing, so we wish that we had been always as happy and prevailing in our advices and counsels that tended to that end.

And yet do we not forget, that God hath put into our hands a sceptre over populous and warlike nations, which might have moved us to second the affection and disposition of our people, and to have wrought upon it for our own ambition, if we had been so minded. But it hath sufficed unto us to seek a true and not swelling greatness, in the plantations and improvements of such parts of our dominions, as have, in former times, been more desolate or uncivil, and in the maintaining of all our loving subjects in general in tranquillity and security, and the other conditions of good government, and happy times. But amongst other demonstrations of our constant purpose and provident care to maintain peace, there was never such a trial, nor so apparent to the world, as in a theatre, as our persisting in

\* Stephens's Second Collection, p. 122.

the same resolution, since the time that our dear son-in-law was elected and accepted king of Bohemia; by how much the motives tending to shake and assail our said resolution were the more forcible. For neither did the glory of having our dearest daughter and son-in-law to wear a crown; nor the extreme alacrity of our people devoted to that cause; nor the representations, which might be set before us of dangers, if we should suffer a party in christendom, held commonly adverse and ill-affected to our state and government, to gather farther reputation and strength, transport us to enter into an auxiliary war, in prosecution of that quarrel: but contrariwise, finding the justice of the cause not so clear, as that we could be presently therein satisfied; and weighing with ourselves likewise, that if the kingdom of Bohemia had continued in the house of Austria, yet nevertheless the balance of christendom had stood in no other sort than it had done for many years before, without increase of party; and chiefly fearing that the wars in those parts of Germany, which have been hitherto the bulwark of christendom against the approaches of the Turk, might by the intestine dissensions allure and let in the common enemy; we did abstain to declare or engage ourselves in that war, and were contented only to give permission to the ambassador of our son-in-law, to draw some voluntary helps of men and money from our subjects, being a matter that violated no treaty, and could not be denied in case of so near a conjunction.

But while we contained ourselves in this moderation, we find the event of war hath much altered the case, by the late invasion of the Palatinate, whereby, howsoever under the pretence of a diversion, we find our son in fact expelled in part, and in danger to be totally dispossessed of his ancient inheritance and patrimony, so long continued in that noble line; whereof we cannot but highly resent, if it should be alienated and ravished from him in our times, and to the prejudice of our grandchildren and line royal. Neither can we think it safe for us in reason of state, that the county Palatine carrying with itself an electorate, and having been so long in the hands of princes of our religion and no way depending upon the house of Austria, should now become at the disposing of that house: being a matter, that indeed might alter the balance of christendom importantly, to the weakening of our estate, and the estate of our best friends and confederates.

Wherefore, finding a concurrence of reasons and respects of religion, nature, honour, and estate; all of them inducing us in no wise to endure so great an alteration; we are resolved to employ the uttermost of our forces and means, to recover and re-settle the said Palatinate to our son and our descendants, purposing nevertheless, according to our former inclination so well grounded, not altogether to intermit, if the occasions give us leave, the treaties of peace and accord, which we have already begun, and whereof the coming on of the winter, and the counterpoise of the actions of war, hitherto may give us as yet some appearance of hope.†

† Against this passage, in the margin, is written, "I pray God this hold."

But forasmuch as it were great improvidence to depend upon the success of such treaties, and therefore good policy requires that we should be prepared for a war which we intend for the recovery and assuring of the said Palatinate, with the dependences, a design of no small charge and difficulty, the strength and conjunctures of the adverse party considered, we have thought good to take into our princely and serious consideration, and that with speed, all things that may have relation to such a designment; amongst which we hold nothing more necessary than to confer and advise with the common council of our kingdom, upon this so important a subject.

For although the making of war or peace be a secret of empire, and a thing properly belonging to our high prerogative royal, and imperial power; yet nevertheless, in causes of that nature, which we shall think fit not to reserve, but to communicate, we shall ever think ourselves much assisted and strengthened by the faithful advice and general assent of our loving subjects.

Moreover, no man is so ignorant, as to expect that we should be any ways able, moneys being the sinews of war, to enter into the list against so great potentates, without some large and bountiful help of treasure from our people; as well towards the maintenance of the war, as towards the relief of our crown and estate. And this the rather, for that we have now, by the space of full ten years, a thing unheard of in late times, subsisted by our own means, without being chargeable to our people, otherwise than by some voluntary gifts of some particulars, which though in total amounted to no great matter, we thankfully acknowledge at their hands; but as, while the affairs abroad were in greater calm, we did content ourselves to recover our wants by provident retrenchment of charge, and honourable improvement of our own, thinking to wear them out without troubling our people; so in such a state of christendom, as seemeth now to hang over our heads, we durst no longer rely upon those slow remedies, but thought necessary, according to the ancient course of our progenitors, to resort to the good affections and aids of our loving subjects.

Upon these considerations, and for that also, in respect of so long intermission of a parliament, the times may have introduced some things fit to be reformed, either by new laws, or by the moderate desires of our loving subjects, dutifully intimated unto us, wherein we shall ever be no less ready to give them all gracious satisfaction, than their own hearts can desire, we have resolved, by the advice of our privy council, to hold a parliament at our city of Westminster.

And because as well this great cause, there to be handled amongst the rest, and to be weighed by the beam of the kingdom, as also the true and ancient institution of parliament, do require the lower house, at this time, if ever, to be compounded of the gravest, ablest, and worthiest members that may be found: we do hereby, out of the care of the common good, wherein themselves are participant, without all prejudice to the freedom of elections, admonish all our

loving subjects, that have votes in the elections of knights and burgesses, of these few points following.

First, That they cast their eyes upon the worthiest men of all sorts, knights and gentlemen, that are lights and guides in their countries, experienced parliament-men, wise and discreet statesmen, that have been practised in public affairs, whether at home or abroad, grave and eminent lawyers, substantial citizens and burgesses, and generally such as are interested and have portion in the estate.

Secondly, That they make choice of such as are well affected in religion, without declining either on the one hand to blindness and superstition, or on the other hand to schism or turbulent disposition.

Thirdly, and lastly, That they be truly sensible, not to disvalue or disparage the house with bankrupts and necessitous persons, that may desire long parliaments only for protection; lawyers of mean account and estimation; young men that are not ripe for grave consultations; mean dependants upon great persons, that might be thought to have their voices under command, and such like obscure and inferior persons: so that, to conclude, we may have the comfort to see before us the very face of a sufficient and well composed house, such as may be worthy to be a representative of the third estate of our kingdom, fit to nourish a loving and comfortable meeting between us and our people, and fit to be a noble instrument, under the blessing of Almighty God, and our princely care and power, and with the loving conjunction of our prelates and peers, for the settling of so great affairs as are before expressed.

---

CCLXV. TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I HAVE showed your letter and the proclamation to his Majesty, who expecting only, according as his meaning was, directions therein for the well ordering of the elections of the burgesses, findeth a great deal more, containing matter of state, and the reasons of calling the parliament: whereof neither the people are capable, nor is it fit for his Majesty to open unto them, but to reserve to the time of their assembling, according to the course of his predecessors, which his Majesty intendeth to follow. The declaring whereof in the proclamation would cut off the ground of his Majesty's and your lordship's speech, at the proper time; his Majesty hath therefore extracted somewhat of the latter part of the draught you have sent, purposing to take a few days' space to set down himself what he thinketh fit, and to make it ready against his return hither, or to Theobald's at the farthest, and then to communicate it to your lordship, and the rest of the lords. And so I rest

Yours, &c.

G. BUCKINGHAM.

Royston, 19 Oct. 1620.

\* Stephens's Second Collection, p. 128.

## CCXLVI. TO SIR\* HENRY WOTTON.

MY VERY GOOD COUSIN,

THE letter which I received from your lordship upon your going to sea, was more than a compensation for any former omission; and I shall be very glad to entertain a correspondence with you in both kinds which you write of; for the latter, I am now ready for you, having sent you some ore of that mine. I thank you for your favours to Mr. Meautys, and I pray continue the same. So wishing you out of your honourable exile, and placed in a better orb, I rest

Your lordship's affectionate kinsman and assured friend,

FR. VERULAM, CANC.†

York-house, Oct. 20, 1620.

## CCXLVII. LORD OF ST. ALBANS TO MR. MATTHEW.‡

SIR,

THE report of this act, which I hope will prove the last of this business, will probably, by the weight it carries, fall and seize on me. And therefore, not now at will, but upon necessity, it will become me to call to mind what passed; and, my head being then wholly employed about invention, I may the worse put things upon the account of mine own memory. I shall take physic to-day, upon this change of weather, and vantage of leisure; and I pray you not to allow yourself so much business, but that you may have time to bring me your friendly aid before night, &c.

## CCXLVIII. TO MR. MATTHEW, BELIEVING HIS DANGER LESS THAN HE FOUND IT.§

SIR,

I SAY to you, upon the occasion which you give me in your last, *Modicæ fidei, quare dubitasti?* I would not have my friends, though I know it to be out of love, too apprehensive either of me or for me; for, I thank God, my ways are sound and good, and

\* Mr. Stephens observes, when this letter was written, upon the occasion of my lord chancellor's publishing his *Novum Organum*, Sir Henry Wotton, so eminent for his many embassies, great learning, candour, and other accomplishments, was resident at Vienna, endeavouring to quench that fire which began to blaze in Germany, upon the proclaiming the elector Palatine king of Bohemia. How grateful a present this book was to Sir Henry, cannot better be expressed than by his answer to this letter: which though it may be found in his *Remains*, the reader will not be displeased to see part of it transcribed in this place.

“RIGHT HONOURABLE AND MY VERY GOOD LORD,

“I HAVE your lordship's letters dated October 20, and I have withal, by the care of my cousin Meautys, and by your own special favour, three copies of that work, wherewith your lordship hath done a great and ever-living benefit to all the children of nature, and to nature herself in her uttermost extent and latitude; who never before had so noble nor so true an interpreter, or, as I am ready to style your lordship, never

I hope God will bless me in them. When once my master, and afterwards myself, were both of us in extremity of sickness, which was no time to dissemble, I never had so great pledges and certainties of his love and favour: and that which I knew then, such as took a little poor advantage of these later times, know since. As for the nobleman that passed that way by you, I think he is fallen out with me for his pleasure, or else, perhaps, to make good some of his own mistakings. For he cannot in his heart but think worthily of my affection and well deserving towards him; and as for me, I am very sure that I love his nature and parts.

## CCXLIX. TO MR. MATTHEW, EXPRESSING GREAT ACKNOWLEDGMENT AND KINDNESS.||

SIR,

I HAVE been too long a debtor to you for a letter, and especially for such a letter, the words whereof were delivered by your hand, as if it had been in old gold: for it was not possible for entire affection to be more generously and effectually expressed. I can but return thanks to you; or rather indeed such an answer, as may better be of thoughts than words. As for that which may concern myself, I hope God hath ordained me some small time, whereby I may redeem the loss of much. Your company was ever of contentment to me, and your absence of grief; but now it is of grief upon grief. I beseech you therefore make haste hither, where you shall meet with as good a welcome as your own heart can wish.

## CCL. TO MR. MATTHEW, OWNING HIS IMPATIENT ATTENTION TO DO HIM SERVICE.¶

SIR,

IT is not for nothing that I have deferred my essay *De amicitia*; whereby it hath expected the proof of your great friendship towards me: whatsoever the event be, (wherein I depend upon God, who ordains the effects, the instrument, all,) yet your incessant thinking of me, without loss of a moment of time, or a hint of occasion, or a circumstance of endeavour, or the stroke of a pulse, in demonstration

so inward a secretary of her cabinet. But of your said work, which came but this week to my hands, I shall find occasion to speak more hereafter: having yet read only the first book thereof, and a few aphorisms of the second. For it is not a banquet that men may superficially taste, and put up the rest in their pockets; but in truth a solid feast, which requireth due mastication—&c.

“But I am gone farther than I meant in speaking of this excellent labour, while the delight I yet feel, and even the pride that I take in a certain congeniality, as I may term it, with your lordship's studies, will scant let me cease. And indeed I owe your lordship, even by promise, which you are pleased to remember, and thereby doubly binding me, some trouble this way; I mean by the commerce of philosophical experiments, which surely, of all other, is the most ingenious traffic.”

† Stephens's Second Collection, p. 129.

‡ Sir Tobie Matthew's Collection of Letters, p. 20.

§ Ibid. p. 32.

|| Ibid. p. 69.

¶ Ibid. p. 53.

of your affection to me, doth infinitely tie me to you. Commend my service to my friend. The rest to-morrow, for I hope to lodge at London this night, &c.

Secrecy I need not recommend, otherwise than that you may recommend it over to our friend; both because it prevents opposition, and because it is both the king's and my lord marquis's nature, to love to do things unexpected.

---

CCLI. TO THE MARQUIS OF BUCKINGHAM.\*

OUR VERY GOOD LORD,

We thought it our duty to impart to his Majesty, by your lordship, one particular of parliament business, which we hold it our part to relate, though it be too high for us to give our opinion of it.

The officers that make out the writs of parliament addressed themselves to me the chancellor to know, whether they should make such a writ of summons to the prince, giving me to understand, that there were some precedents of it; which I the chancellor communicated with the rest of the committees for parliament business; in whose assistance I find so much strength that I am not willing to do any thing without them: whereupon we, according to his Majesty's prudent and constant rule, for observing in what reigns the precedents were, upon diligent search have found as followeth.

That king Edward I. called his eldest son prince Edward to his parliament in the thirtieth year of his reign, the prince then being about the age of eighteen years; and to another parliament in the four and thirtieth year of his reign.

Edward III. called the Black Prince, his eldest son, to his parliament in the five and twentieth, eight and twentieth, and two and fortieth years of his reign.

Henry IV. called prince Henry to his parliaments in the first, third, eighth, and eleventh years of his reign, the prince being under age in the three first parliaments; and we find in particular, that the eighth year, the prince sat in the upper house in days of business, and recommended a bill to the lords.

King Edward IV. called prince Edward, his son, to his parliament, in anno 22 of his reign, being within age.

King Henry VII. called prince Arthur to his parliament in the seventh year of his reign, being within age.

Of king Edward VI. we find nothing, his years were tender, and he was not created prince of Wales.

And for prince Henry, he was created prince of Wales during the last parliament at which he lived.

We have thought it our duty to relate to his Majesty what we have found, and withal that the writs of summons to the prince are not much differing from the writs to the peers; for they run *in fide et ligeancia*, and sometime *in fide et homagio in quibus nobis tenemini*, and after, *consilium nobis impensuri circa ardua regni*. Whereby it should seem that princes came to parliament not only in the days of

solemnity, when they came without writ, but also on the days of sitting. And if it should be so, then the prince may vote, and likewise may be of a committee of the upper house, and consequently may be of a conference with the lower house, and the like.

This might have been made more manifest as to the presence, and acts of the prince in days of sitting, if, through the negligence of officers, the journal books of the upper house before the reign of king Henry VIII. were not all missing.

All which we thought it appertained to our care to look through, and faithfully to represent to his Majesty: and having agreed secrecy amongst ourselves, and enjoined it to the inferior officers, we humbly desire to know his Majesty's pleasure, whether he will silence the question altogether, or make use of it for his service, or refer it to his council, or what other course he will be pleased to take according to his great wisdom and good pleasure.

This we have despatched the sooner, because the writs of summons must have forty days distance from the first days of the parliament. And for the other parts of our accounts, his Majesty shall hear from us, by the grace of God, within few days; evermore praying for his Majesty's prosperity, and wishing your lordship much happiness.

Your lordship's to be commanded,

FR. VERULAM, CANC. EDW. COKE, H. MONTAGU,  
HENRY HOBARTE, RAN. CREW.

York-house, 21 Oct. 1620.

---

CCLII. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

We have, these two days past, made report to the board of our parliament committee, upon relation whereof, for some things we provide, for some things we arm.

The king, by my lord treasurer's signification, did wisely put it upon a consult, whether the patents, which we mentioned in our joint letters, were at this time to be removed by act of council before parliament. I opined (but yet somewhat like Ovid's mistress, that strove, but yet as one that would be overcome) that yes. My reasons are:

That men would go better and faster to the main errand.

That these things should not be staged, nor talked of, and so the less fuel to the fire.

That in things of this nature, wherein the council had done the like in former particulars, which I enumerated, before parliament, near parliament, during parliament, the council were to keep their wonted sentinel, as if they thought not of a parliament, to destroy in other patents as concealments.

The reasons on the other side were:

That it would be thought but an humouring of the parliament, being now in the calends of a parliament, and that after parliament they would come up again.

\* Stephens's Second Collection, p. 129.

† Stephens's Second Collection, p. 137.

That offered graces, by reason and experience, lose their thanks.

That they are to be suffered to play upon something, since they can do nothing of themselves.

That the choosing out of some things, when perhaps their minds might be more upon other things, would do no great effect.

That former patents taken away by act of council, were upon the complaints of particular persons; whereas now it should seem to be done *tanquam ex officio*.

To this I yielded, though, I confess, I am yet a little doubtful to the point of *suavibus modis*. But it is true that the speech of these, though in the lower house, may be contemned; and if way be given to them, as I writ to your lordship of some of them in my last, it will sort to your honour. For other things, the lords have put them in a very good way, of which I will give express account when I see his Majesty, as also of other observations concerning parliament. For if his Majesty said well, that when he knew the men and the elections, he would guess at the success; the prognostics are not so good as I expected, occasioned by the late occurrences abroad, and the general licentious speaking of state matters, of which I wrote in my last. God ever keep you.

Your lordship's most obliged friend and faithful servant,

16 Dec. 1620. FR. VERULAM, CANC.

#### CCLIII. TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

As soon as his Majesty's convenience would permit, I have acquainted him with the draught of the proclamation your lordship sent me by his Majesty's direction: his Majesty liketh it in every point so well, both in matter and form, that he findeth no cause to alter a word in it, and would have your lordship acquaint the lords of the council with it, though he assureth himself, no man can find any thing in it to be changed, and to take order for the speedy setting it forth. And so I rest

I HAVE acquainted his Majesty with your letter and the enclosed: the matter which his Majesty hath been thinking upon for his speech concerneth both the points of the institution of a parliament, and of the end for which this is called; yet his Majesty thinketh it fit that some extract be made out of it, which needeth to be but very short, as he will show you at his return.

Yours, &c.

G. BUCKINGHAM.

Theobald's, 19 Jan. 1620.

\* Stephens's Second Collection, p. 133.

† Ibid.

#### CCLV. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

YESTERDAY I KNOW was no day; now I hope I shall hear from your lordship, who are my anchor in these floods. Meanwhile to ease my heart, I have written to his Majesty the enclosed; which I pray your lordship to read advisedly, and to deliver it, or not to deliver it, as you think good. Yours ever what I can,

FR. ST. ALBAN, CANC.

March 25, 1621.

#### CCLVI. TO THE KING.§

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

TIME hath been when I have brought unto you *gemium columba* from others, now I bring it from myself. I fly unto your Majesty with the wings of a dove, which once within these seven days I thought would have carried me a higher flight. When I enter into myself, I find not the materials of such a tempest as is come upon me: I have been, as your Majesty knoweth best, never author of any immoderate counsel, but always desired to have things carried *suavibus modis*. I have been no avaricious oppressor of the people. I have been no haughty, or intolerable, or hateful man, in my conversation or carriage: I have inherited no hatred from my father, but am a good patriot born. Whence should this be? For these are the things that use to raise dislikes abroad.

For the house of commons, I began my credit there, and now it must be the place of the sepulture thereof; and yet this parliament, upon the message touching religion, the old love revived, and they said, I was the same man still, only honesty was turned into honour.

For the upper house, even within these days, before these troubles, they seemed as to take me into their arms, finding in me ingenuity, which they took to be the true straight line of nobleness, without any crooks or angles.

And for the briberies and gifts wherewith I am charged, when the books of hearts shall be opened, I hope I shall not be found to have the troubled fountain of a corrupt heart, in a depraved habit of taking rewards to pervert justice; howsoever I may be frail, and partake of the abuses of the times.

And therefore I am resolved, when I come to my answer, not to trick up my innocence, as I writ to the lords, by cavillations or voidances; but to speak to them the language that my heart speaketh to me, in excusing, extenuating, or ingenuously confessing; praying to God to give me the grace to see the bottom of my faults, and that no hardness of heart do steal upon me, under show of more neatness of conscience, than is cause. But not to trouble your Majesty any longer, craving pardon for this long mourning letter; that which I thirst after, *as the*

‡ Ibid. p. 136.

§ Ibid.

*hart after the streams*, is, that I may know, by my matchless friend that presenteth to you this letter, your Majesty's heart (which is an *abyssus* of goodness, as I am an *abyssus* of misery) towards me. I have been ever your man, and counted myself but an usufructuary of myself, the property being yours. And now making myself an oblation to do with me as may best conduce to the honour of your justice, the honour of your mercy, and the use of your service, resting as clay in your Majesty's gracious hands.

March 25, 1621. FR. ST. ALBAN, CANC.

---

CCLVII. TO THE KING.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I THINK myself infinitely bounden to your Majesty, for vouchsafing me access to your royal person, and to touch the hem of your garment. I see your Majesty imitateth Him that would not break the broken reed, nor quench the smoking flax; and as your Majesty imitateth Christ, so I hope assuredly my lords of the upper house will imitate you: and unto your Majesty's grace and mercy, and next to my lords, I recommend myself. It is not possible, nor it were not safe, for me to answer particulars till I have my charge; which when I shall receive, I shall without fig-leaves or disguise excuse what I can excuse, extenuate what I can extenuate, and ingenuously confess what I can neither clear nor extenuate. And if there be any thing which I mought conceive to be no offence, and yet is, I desire to be informed, that I may be twice penitent, once for my fault, and the second time for my error. And so submitting all that I am to your Majesty's grace, I rest—

20 April, 1621.

---

CCLVIII. TO THE KING'S MOST EXCELLENT MAJESTY.†

IT MAY PLEASE YOUR MAJESTY,

It hath pleased God, for these three days past, to visit me with such extremity of head-ache, upon the hinder part of my head, fixed in one place, that I thought verily it had been some imposthumation. And then the little physic that I have, told me, that either it must grow to a congelation, and so to a lethargy; or to break, and so to a mortal fever and sudden death: which apprehension, and chiefly the anguish of the pain, made me unable to think of any business. But now that the pain itself is assuaged to be tolerable, I resume the care of my business, and therein prostrate myself again, by my letter, at your Majesty's feet.

Your Majesty can bear me witness, that, at my last so comfortable access, I did not so much as move your Majesty, by your absolute power of pardon, or otherwise, to take my cause into your hands, and to interpose between the sentence of the house; and, according to my own desire, your Majesty left

\* Stephens's Second Collection, p. 138.

it to the sentence of the house, and it was reported by my lord treasurer.

But now, if not *per omnipotentiam*, as the divines speak, but *per potestatem suaviter disponentem*, your Majesty will graciously save me from a sentence, with the good liking of the house, and that cup may pass from me, it is the utmost of my desires.

This I move with the more belief, because I assure myself that, if it be reformation that is sought, the very taking away the seal, upon my general submission, will be as much in example, for this four hundred years, as any farther severities.

The means of this I most humbly leave unto your Majesty. But surely I conceive, that your Majesty opening yourself in this kind to the lords counsellors, and a motion from the prince, after my submission, and my lord marquis using his interest with his friends in the house, may effect the sparing of a sentence, I making my humble suit to the house for that purpose, joined with the delivery of the seal into your Majesty's hands.

This is the last suit I shall make to your Majesty in this business, prostrating myself at your mercy-seat, after fifteen years' service, wherein I have served your Majesty in my poor endeavours with an entire heart, and, as I presumed to say unto your Majesty, am still a virgin for matters which concern your person or crown; and now only craving, that after eight steps of honour I be not precipitated altogether.

But because he that hath taken bribes is apt to give bribes, I will go farther, and present your Majesty with a bribe. For if your Majesty give me peace and leisure, and God give me life, I will present your Majesty with a good history of England, and a better digest of your laws. And so concluding with my prayers, I rest

Your Majesty's afflicted, but ever devoted servant,

21 April, 1621. FR. ST. ALBAN, CANC.

---

CCLIX. TO THE PRINCE OF WALES.‡

IT MAY PLEASE YOUR HIGHNESS,

WHEN I call to mind, how infinitely I am bound to your highness, that stretched forth your arm to save me from a sentence; that took hold of me to keep me from being plunged deep in a sentence; that hath kept me alive in your gracious memory and mention since the sentence; pitying me as, I hope, I deserve, and valuing me above that I can deserve: I find my words almost as barren as my fortunes, to express unto your highness the thankfulness I owe. Therefore I can but resort to prayers to Almighty God to clothe you with his most rich and precious blessings, and likewise joyfully to meditate upon those he hath conferred upon you already; in that he hath made you to the king your father, a principal part of his safety, contentment, and continuance: in yourself so judicious, accomplished, and graceful in all your doings, with more

† Ibid. p. 143.

‡ Ibid. p. 145.

virtues in the buds (which are the sweetest) than have been known in a young prince, of long time; with the realm so well beloved, so much honoured, as it is men's daily observation how nearly you approach to his Majesty's perfections; how every day you exceed yourself; how, compared with other princes, which God hath ordained to be young at this time, you shine amongst them; they rather setting off your religious, moral, and natural excellencies, than matching them, though you be but a second person. These and such like meditations I feed upon, since I can yield your highness no other retribution. And for myself, I hope by the assistance of God above, of whose grace and favour I have had extraordinary signs and effects during my afflictions, to lead such a life in the last acts thereof, as whether his Majesty employ me, or whether I live to myself, I shall make the world say that I was not unworthy such a patron.

I am much beholden to your highness's worthy servant Sir John Vaughan, the sweet air and loving usage of whose house hath already much revived my languishing spirits; I beseech your highness, thank him for me. God ever preserve and prosper your highness.

Your highness's most humble and most bounden servant,

FR. ST. ALBAN.

1 June, 1621.

---

CCLX. TO THE KING.\*

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I HUMBLY thank your Majesty for my liberty, without which timely grant, any farther grace would have come too late. But your Majesty that did shed tears in the beginning of my trouble, will, I hope, shed the dew of your grace and goodness upon me in the end. Your Majesty's most devoted servant,

FR. ST. ALBAN.

4 June, 1621.

---

CCLXI. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

I HEARTILY thank your lordship for getting me out of prison; and now my body is out, my mind nevertheless will be still in prison, till I may be on my feet to do his Majesty and your lordship faithful service. Wherein your lordship, by the grace of God, shall find that my adversity hath neither spent, nor pent my spirits. God prosper you.

Your lordship's most obliged friend and faithful servant,

4 June, 1621.

FR. ST. ALBAN.

\* Stephens's Second Collection, p. 146.

CCLXII. A MEMORIAL FOR HIS MAJESTY'S SERVICE.‡

FOR that your Majesty is pleased to call for my opinion concerning the sacred intention you have to go on with the reformation of your courts of justice, and relieving the grievances of your people, which the parliament hath entered into; I shall never be a recusant, though I be confined, to do you service.

Your Majesty's star-chamber, next your court of parliament, is your highest chair. You never came upon that mount, but your garments did shine before you went off. It is the supreme court of judicature ordinary, it is an open council; nothing I would think can be more seasonable, if your other appointments permit it, than if your Majesty will be pleased to come thither in person, the morrow after this term, (which is the time anniversary, before the circuits and the long vacation,) and there make an open declaration:

That you purpose to pursue the reformation, which the parliament hath begun. That all things go well, in all affairs, when the ordinary and extraordinary are well mingled and tempered together. That in matters of your treasure, you did rely upon your parliament for the extraordinary, but you were ever desirous to do what you could by improvements, retrenchments, and the like, to set the ordinary in good frame and establishment. That you are in the same mind in matter of reformation of justice, and grievance, to assist yourself with the advice and authority of parliament at times; but meanwhile to go on with the same intentions, by your own regal power and care. That it doth well in church-music when the greatest part of the hymn is sung by one voice, and then the choir at all times falls in sweetly and solemnly, and that the same harmony sorteth well in monarchy between the king and his parliament.

That all great reformations are best brought to perfection by a good correspondence between the king and his parliament, and by well sorting the matters and the times; for in that which the king doth in his ordinary administration, and proceedings, neither can the information be so universal, nor the complaint so well encouraged, nor the references so many times free from private affection, as when the king proceedeth by parliament; on the other side, that the parliament wanteth time to go through with many things; besides, some things are of that nature, as they are better discerned and resolved by a few than by many. Again, some things are so merely regal, as it is not fit to transfer them; and many things, whereof it is fit for the king to have the principal honour and thanks.

Therefore, that according to these differences and distributions, your Majesty meaneth to go on, where the parliament hath left, and to call for the memorials, and inchoations of those things, which have passed in both houses, and to have them pass the file of your council, and such other assistance as shall be thought fit to be called respectively, accord-

† Ibid. p. 147.

‡ Ibid.

ing to the nature of the business, and to have your learned counsel search precedents what the king hath done for matter of reformation, as the parliament hath informed themselves by precedents what the parliament hath done: and thereupon that the clock be set, and resolutions taken, what is to be helpen by commission, what by act of council, what by proclamation, what to be prepared for parliament, what to be left wholly for parliament.

That if your Majesty had done this before a parliament, it mought have been thought to be done to prevent a parliament, whereas, now it is to pursue a parliament; and that by this means many grievances shall be answered by deed, and not by word; and your Majesty's care shall be better than any standing committee in this interim between the meetings of parliament.

For the particulars, your Majesty in your grace and wisdom will consider, how improper and how unwarranted a thing it is for me, as I now stand, to send for entries of parliament, or for searchers for precedents, whereupon to ground an advice; and besides, what I should now say may be thought by your Majesty (how good an opinion soever you have of me) much more by others, to be busy or officious, or relating to my present fortunes.

CCLXIII. TO THE MARQUIS OF BUCKINGHAM.\*

MY VERY GOOD LORD,

YOUR lordship, I know, and the king both, mought think me very unworthy of that I have been, or that I am, if I should not by all means desire to be freed from the restraint which debarreth me from approach to his Majesty's person, which I ever so much loved, and admired; and severeth me likewise from all conference with your lordship, which is my second comfort. Nevertheless, if it be conceived that it may be matter of inconvenience, or envy, my particular respects must give place: only in regard of my present urgent occasions, to take some present order for the debts that press me most, I have petitioned his Majesty to give me leave to stay at London till the last of July, and then I will dispose of my abode according to the sentence. I have sent to the prince to join with you in it, for though the matter seem small, yet it importeth me much. God prosper you.

Your lordship's true servant,

FR. ST. ALBAN.

20 June, 1621.

CCLXIV. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

I HUMBLY thank your lordship for the grace and favour you did both to the message and messenger, in bringing Mr. Meautys to kiss his Majesty's

\* Stephens's Second Collection, p. 150. † Ibid. p. 151.

hands, and to receive his pleasure from himself. My riches in my adversity have been, that I have had a good master, a good friend, and a good servant.

I perceive by Mr. Meautys his Majesty's inclination, that I should go first to Gorhambury; and his Majesty's inclinations have ever been with me instead of directions. Wherefore I purpose, God willing, to go thither forthwith, humbly thanking his Majesty, nevertheless, that he meant to have put my desire, in my petition contained, into a way, if I had insisted upon it; but I will accommodate my present occasions as I may, and leave the times, and seasons, and ways, to his Majesty's grace and choice.

Only I desire his Majesty to bear with me if I have pressed unseasonably. My letters out of the Tower were *de profundis*; and the world is a prison, if I may not approach his Majesty, finding in my heart as I do. God preserve and prosper his Majesty, and your lordship.

Your lordship's faithful and bounden servant,

22 June, 1621.

FR. ST. ALBAN.

CCLXV. TO THE MARQUIS OF BUCKINGHAM.‡

MY VERY GOOD LORD,

I THANK God I am come very well to Gorhambury, whereof I thought your lordship would be glad to hear sometimes; my lord, I wish myself by you in this stirring world, not for any love to place or business, for that is almost gone with me, but for my love to yourself, which can never cease in

Your lordship's most obliged friend and true servant,

FR. ST. ALBAN.

Being now out of use and out of sight, I recommend myself to your lordship's love and favour, to maintain me in his Majesty's grace and good intention.

CCLXVI. TO THE KING.§

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I PERCEIVE by my noble and constant friend the marquis, that your Majesty hath a gracious inclination towards me, and taketh care of me, for fifteen years the subject of your favour, now of your compassion; for which I most humbly thank your Majesty. This same *nova creatura* is the work of God's pardon and the king's; and since I have the inward seal of the one, I hope well of the other.

'Utar,' saith Seneca to his master, 'magnis exemplis; nec meæ fortunæ, sed tuæ.' Demosthenes was banished for bribery of the highest nature, yet was recalled with honour; Marcus Livius was condemned for exactions, yet afterwards made consul and censor. Seneca banished for divers corruptions, yet was afterwards restored, and an instrument of

‡ Ibid. p. 152.

§ Ibid.

that memorable *Quinquennium Neronis*. Many more. This, if it please your Majesty, I do not say for appetite of employment, but for hope that if I do by myself as is fit, your Majesty will never suffer me to die in want or dishonour. I do now feed myself upon remembrance, how when your Majesty used to go a progress, what loving and confident charges you were wont to give me touching your business. For as Aristotle saith, young men may be happy by hope, so why should not old men, and sequestered men, by remembrance? God ever prosper and preserve your Majesty.

Your Majesty's most bounden and devoted servant,  
FR. ST. ALBAN.

16 July, 1621.

CCLXVII. TO THE LORD ST. ALBAN.\*

MY HONOURABLE LORD,

I HAVE delivered your lordship's letter of thanks to his Majesty, who accepted it very graciously, and will be glad to see your book, which you promised to send very shortly, as soon as it cometh. I send your lordship his Majesty's warrant for your pardon, as you desired it; but am sorry that in the current of my service to your lordship there should be the least stop of any thing; yet having moved his Majesty, upon your servant's intimation, for your stay in London till Christmas, I found his Majesty, who hath in all other occasions, and even in that particular already, to the dislike of many of your own friends, showed with great forwardness his gracious favour towards you, very unwilling to grant you any longer liberty to abide there: which being but a small advantage to you, would be a great and general distaste, as you cannot but easily conceive, to the whole state. And I am the more sorry for this refusal of his Majesty's falling in a time when I was a suitor to your lordship in a particular concerning myself, wherein though your servant insisted farther than, I am sure, would ever enter into your thoughts, I cannot but take it as a part of a faithful servant in him. But if your lordship, or your lady, find it inconvenient for you to part with the house, I would rather provide myself otherwise, than any way incommode you, but will never slack any thing of my affection to do you service; whereof if I have not yet given good proof, I will desire nothing more, than the fittest occasion to show how much I am

Your lordship's faithful servant,  
G. BUCKINGHAM.

Octob. 1621.

CCLXVIII. TO THE MARQUIS OF BUCKINGHAM. †

MY VERY GOOD LORD,

AN unexpected accident maketh me hasten this letter to your lordship, before I could despatch Mr. Meautys; it is that my lord keeper hath stayed my

\* Stephens's Second Collection, p. 153. † Ibid. p. 154.

pardon at the seal. But it is with good respect; for he saith it shall be private, and then he would forthwith write to your lordship, and would pass it if he received your pleasure; and doth also show his reason of stay, which is, that he doubteth the exception of the sentence of parliament is not well drawn, nor strong enough; which if it be doubtful, my lord hath great reason. But sure I am, both myself, and the king, and your lordship, and Mr. Attorney, meant clearly, and I think Mr. Attorney's pen hath gone well. My humble request to your lordship is, that for my lord's satisfaction Mr. Solicitor may be joined with Mr. Attorney, and if it be safe enough, it may go on; if not it may be amended. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. ST. ALBAN.

18 October, 1621.

CCLXIX. TO THE LORD ST. ALBAN. ‡

MY HONOURABLE LORD,

I HAVE brought your servant along to this place, in expectation of the letter from the lord keeper, which your lordship mentioneth in yours; but having not yet received it, I cannot make answer of the business you write of; and therefore thought fit not to detain your man here any longer, having nothing else to write, but that I always rest

G. BUCKINGHAM.

Hinchenbrook, 20 Oct. 1621.

CCLXX. TO THE LORD ST. ALBAN.§

MY NOBLE LORD,

Now that I am provided of a house, I have thought it congruous to give your lordship notice thereof, that you may no longer hang upon the treaty, which hath been between your lordship and me, touching York-house; in which I assure your lordship, I never desired to put you to the least inconvenience. So I rest

Your lordship's servant,  
G. BUCKINGHAM.

CCLXXI. TO THE LORD ST. ALBAN.||

MY LORD,

I AM glad your lordship understands me so rightly in my last letter. I continue still in the same mind, for, I thank God, I am settled to my contentment; and so I hope you shall enjoy yours, with the more, because I am so well pleased in mine. And, my lord, I shall be very far from taking it ill, if you part with it to any else, judging it alike un-

‡ Ibid. p. 155.

§ Ibid. p. 156.

|| Ibid.

reasonableness, to desire that which is another man's, and to bind him by promise or otherwise not to let it to another.

My lord, I will move his Majesty to take commiseration of your long\* imprisonment, which in some respects, both you and I have reason to think harder, than the Tower; you for the help of physic, your parley with your creditors, your conference for your writings, and studies, dealing with friends about your business: and I for this advantage to be sometimes happy in visiting and conversing with your lordship, whose company I am much desirous to enjoy, as being tied by ancient acquaintance to rest,

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

CCLXXII. TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

THOUGH I returned answer to your lordship's last honourable and kind letter, by the same way by which I received it; yet I humbly pray your lordship to give me leave to add these few lines. My lord, as God above is my witness, that I ever have loved and honoured your lordship as much, I think, as any son of Adam can love or honour a subject; and continue in as hearty and strong wishes of felicity to be heaped and fixed upon you as ever; so as low as I am, I had rather sojourn in a college in Cambridge, than recover a good fortune by any other than yourself. To recover yourself to me (if I have you not) or to ease your lordship in any thing, wherein your lordship would not so fully appear, or to be made participant of your favours in your way; I would use any man that were your lordship's friend. Secondly, if in any of my former letters I have given your lordship any distaste, by the style of them, or any particular passage, I humbly pray your lordship's benign construction and pardon. For I confess it is my fault, though it be some happiness to me withal, that I many times forget my adversity: but I shall never forget to be, &c.

CCLXXIII. TO THE KING'S MOST EXCELLENT MAJESTY.‡

IT MAY PLEASE YOUR MAJESTY,

I ACKNOWLEDGE myself in all humbleness infinitely bounden to your Majesty's grace and goodness, for that, at the intercession of my noble and constant friend, my lord marquis, your Majesty hath been pleased to grant me that which the civilians say is *res inestimabilis*, my liberty. So that now, whenever God calleth me, I shall not die a prisoner. Nay, farther, your Majesty hath vouchsafed to cast a second and iterate aspect of your eye of compassion

\* Restraint from coming within the verge of the court.  
† From the original draught.

upon me, in referring the consideration of my broken estate to my good lord the treasurer; which as it is a singular bounty in your Majesty, so I have yet so much left of a late commissioner of your treasure, as I would be sorry to sue for any thing that might seem immodest. These your Majesty's great benefits, in casting your bread upon the waters, (as the Scripture saith,) because my thanks cannot any ways be sufficient to attain, I have raised your progenitor, of famous memory, (and now I hope, of more famous memory than before,) king Henry VII. to give your Majesty thanks for me; which work, most humbly kissing your Majesty's hands, I do present. And because in the beginning of my trouble, when in the midst of the tempest I had a kenning of the harbour, which I hope now by your Majesty's favour I am entering into, I made a tender to your Majesty of two works, *A history of England*, and *A digest of your laws*, as I have, by a figure of *pars pro toto*, performed the one, so I have herewith sent your Majesty, by way of an epistle, a new offer of the other. But my desire is farther, if it stand with your Majesty's good pleasure, since now my study is my exchange, and my pen my factor, for the use of my talent; that your Majesty (who is a great master in these things) would be pleased to appoint me some task to write, and that I shall take for an oracle. And because my *Instauration* (which I esteem my great work, and do still go on with silence) was dedicated to your Majesty; and this *History of king Henry VII.* to your lively and excellent image the prince; if now your Majesty will be pleased to give me a theme to dedicate to my lord of Buckingham, whom I have so much reason to honour, I should with more alacrity embrace your Majesty's direction than my own choice. Your Majesty will pardon me for troubling you thus long. God evermore preserve and prosper you.

Your Majesty's poor beadsman most devoted,

FR. ST. ALBAN.

Gorhambury, 20 Mar. 1621.

CCLXXIV. TO THE RIGHT HONOURABLE HIS VERY GOOD LORD, THE LORD MARQUIS OF BUCKINGHAM, HIGH ADMIRAL OF ENGLAND.§

MY VERY GOOD LORD,

THESE main and real favours which I have lately received from your good lordship, in procuring my liberty, and a reference of the consideration of my release, are such as I now find that in building upon your lordship's noble nature and friendship, I have built upon the rock, where neither winds nor waves can cause overthrow. I humbly pray your lordship to accept from me such thanks as ought to come from him whom you have much comforted in fortune, and much more comforted in showing your love and affection to him; of which also I have heard by my lord Falkland, Sir Edward Sackville, Mr. Matthews, and other ways.

‡ Stephens's Second Collection, p. 164.

§ Ibid. p. 157.

I have written, as my duty was, to his Majesty thanks touching the same, by the letter I here put into your noble hands.

I have made also, in that letter, an offer to his Majesty of my service, for bringing into better order and frame the laws of England: the declaration whereof I have left with Sir Edward Sackville, because it were no good manners to clog his Majesty, at this time of triumph and recreation, with a business of this nature; so as your lordship may be pleased to call for it to Sir Edward Sackville when you think the time seasonable.

I am bold likewise to present your lordship with a book of my *History of king Henry the seventh*. And now that, in summer was twelve months, I dedicated a book to his Majesty; and this last summer, this book to the prince; your lordship's turn is next, and this summer that cometh (if I live to it) shall be yours. I have desired his Majesty to appoint me the task, otherwise I shall use my own choice; for this is the best retribution I can make to your lordship. God prosper you. I rest

FR. ST. ALBAN.

Gorhambury, this 20th of March, 1621.

CCCLXXV.\* TO FATHER REDEMPT.  
BARANZAN.†

DOMINE BARANZANE,

LITERAS tuas legi libenter: cumque inter veritatis amatores ardor etiam candorem generet, ad ea, quæ ingenue petiisti, ingenue respondebo.

Non est meum abdicare in totum syllogismum. Res est syllogismus magis inhabilis ad præcipua, quam inutilis ad plurima.

Ad mathematica quidni adhibeatur? Cum fluxus materiæ & inconstantia corporis physica illud sit, quod inductionem desideret; ut per eam veluti figuratur, atque inde eruantur notiones bene terminatæ.

De metaphysica ne sis sollicitus. Nulla enim erit post veram physicam inventam; ultra quam nihil præter divina.

In physica prudenter notas, et idem tecum sentio, post notiones primæ classis, et axiomata super ipsas, per inductionem bene eruta et terminata, tuto adhiberi syllogismum, modo inhibeat salus ad generalissima, et fiat progressus per scalam convenientem.

De multitudine instantiarum, quæ homines deterere possit, hæc respondeo:

Primo, quid opus est dissimulatione? Aut copia instantiarum comparanda, aut negotium deserendum. Aliæ omnes viæ, utcunque blandiantur, imperviæ.

Secundo (quod et ipse notas) prærogativæ instantiarum, et modus experimentandi circa experimenta lucifera (quem aliquando trademus) de multitudine ipsarum plurimum detrahent.

Tertio, quid magni foret, rogo, si in describendis

instantiis impleantur volumina, quæ historiam C. Plinii sextuplicent? In qua tamen ipsa plurima philologica, fabulosa, antiquitatis, non naturæ. Et enim veram historiam naturalem nihil aliud ingreditur præter instantias, connexiones, observationes, canones. Cogita altera ex parte immensa volumina philosophica; facile perspicies maximæ solida esse maxime finita.

Postremo, ex nostra philosophandi methodo excipietur in via plurimorum operum utilium messis, quæ ex speculationibus aut disputationibus sterilis aut nulla est.

Historiam naturalem ad condendam philosophiam (ut et tu mones) ante omnia præopto; neque huic rei deero, quantum in me est. Utinam habeam et adjuutores idoneos. Neque in hac parte mihi quidpiam accidere poterit felicius, quam si tu, talis vir, primitias huic operi præbeas conscribendo historiam celestium, in qua ipsa tantum phænomena, atque una instrumenta astronomica, eorumque genera et usum; dein hypotheses præcipuas et maxime illustres, tam antiquas quam modernas, atque simul exactas restitutionum calculationes, et alia hujusmodi sincere proponas, absque omni dogmate et themate. Quod si huic cælestium historiæ historiam cometarum adjeceris (de qua conficienda ecce tibi articulos quosdam et quasi topica particularia) magnificum prorsus frontispicium historiæ naturali extruxeris, et optime de scientiarum instauratione merueris, mihi que gratissimum feceris.

Librum meum de progressu scientiarum traducendum commisi. Illa translatio, volente Deo, sub finem ætatis perficietur: eam ad te mittam.

Opera tua, quæ publici juris sunt, inspexi; magne certe subtilitatis et diligentiæ in via vestra. Novatores, quos nominas, Patricium, Telesium, etiam alios, quos prætermittis, legi. Possint esse tales innumeri velut etiam antiquis temporibus fuerunt Anaximenes, Anaxagoras, Democritus, Parmenides, et alii (nam Pythagoram ut superstitiosum omitto). Inter istos tam antiquos quam modernos differentiam facultatis agnosco maximam, veritatis perparvam. Summa rei est, si homines se rebus submittere velint, aliquid confiet; sin minus, ingenia ista redibunt in orbem.

Stabilita jam sit inter nos notitia; meque, ut cœpisti, maxime autem veritatem ama. Vale.

Tui amantissimus,

S. ALBANS.

Apud Ædes meas, Londini,  
Junii ultimo, 1622.

CCCLXXVI. TO THE KING.‡

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

IN the midst of my misery, which is rather assuaged by remembrance, than by hope; my chiefest worldly comfort is, to think that since the time I had the first vote of the commons house of parliament for

of Aristotle. He died the 23 December, 1622, at the age of 33.

‡ Stephens's Second Collection, p. 158.

\* From Nicéron, tom. III. p. 45.

† He was a Barnabite monk at Annecy in Savoy, who in his Lectures on Philosophy began to discard the authority

commissioner of the union, until the time that I was this last parliament chosen by both houses for their messenger to your Majesty in the petition of religion, (which two were my first and last services,) I was evermore so happy as to have my poor services graciously accepted by your Majesty, and likewise not to have had any of them miscarry in my hands. Neither of which points I can any ways take to myself, but ascribe the former to your Majesty's goodness, and the latter to your prudent directions; which I was ever careful to have and keep. For, as I have often said to your Majesty, I was towards you but as a bucket and a cistern, to draw forth and conserve; whereas yourself was the fountain. Unto this comfort of nineteen years' prosperity, there succeeded a comfort even in my greatest adversity, somewhat of the same nature; which is, that in those offences wherewith I was charged, there was not any one that had special relation to your Majesty, or any your particular commandments. For as towards Almighty God there are offences against the first and second table, and yet all against God; so with the servants of kings there are offences more immediate against the sovereign; although all offences against law are also against the king. Unto which comfort there is added this circumstance, that as my faults were not against your Majesty, otherwise than as all faults are; so my fall was not your Majesty's act, otherwise than as all acts of justice are yours. This I write not to insinuate with your Majesty, but as a most humble appeal to your Majesty's gracious remembrance, how honest and direct you have ever found me in your service; whereby I have an assured belief, that there is in your Majesty's own princely thoughts a great deal of serenity and clearness towards me your Majesty's now prostrate and cast down servant.

Neither (my most gracious sovereign) do I, by this mention of my services, lay claim to your princely grace and bounty, though the privilege of calamity doth bear that form of petition. I know well, had they been much more, they had been but my bounden duty. Nay, I must also confess, that they were from time to time, far above my merit, over and super-rewarded by your Majesty's benefits which you heaped upon me. Your Majesty was and is that master to me, that raised and advanced me nine times; thrice in dignity, and six times in office. The plates indeed were the painfullest of all your services; but then they had both honour and profits. And the then profits might have maintained my now honour, if I had been wise. Neither was your Majesty's immediate liberality wanting towards me in some gifts, if I may hold them. All this I do most thankfully acknowledge, and do herewith conclude, that for any thing arising from myself to move your eye of pity towards me, there is much more in my present misery, than in my past services; save that the same your Majesty's goodness, that may give relief to the one, may give value to the other.

And indeed, if it may please your Majesty, this theme of my misery is so plentiful, as it need not be coupled with any thing else. I have been somebody by your Majesty's singular and undeserved

favour, even the prime officer of your kingdom; your Majesty's arm hath been often laid over mine in council, when you presided at the table; so near I was. I have borne your Majesty's image in metal, much more in heart; I was never in nineteen year's service chidden by your Majesty, but contrariwise often overjoyed, when your Majesty would sometimes say, I was a good husband for you, though none for myself: sometimes, that I had a way to deal in business *suavibus modis*, which was the way which was most according to your own heart: and other most gracious speeches of affection and trust, which I feed on to this day. But why should I speak of these things which are now vanished, but only the better to express the downfall?

For now it is thus with me: I am a year and a half \* old in misery: though I must ever acknowledge, not without some mixture of your Majesty's grace and mercy; for I do not think it possible, that any one whom you once loved should be totally miserable. Mine own means, through my own improvidence, are poor and weak, little better than my father left me. The poor things that I have had from your Majesty, are either in question or at courtesy. My dignities remain marks of your past favour, but burdens of my present fortune. The poor remnants which I had of my former fortunes, in plate or jewels, I have spread upon poor men unto whom I owed, scarce leaving myself a convenient subsistence. So as, to conclude, I must pour out my misery before your Majesty, so far as to say, *Si deseris tu, perimus*.

But as I can offer to your Majesty's compassion little arising from myself to move you, except it be my extreme misery, which I have truly laid open; so looking up to your Majesty's own self, I should think I committed Cain's fault, if I should despair. Your Majesty is a king whose heart is as unscrutable for secret motions of goodness, as for depth of wisdom. You are creator-like, factive and not destructive. You are the prince in whom hath been ever noted an aversation against any thing that savoured of a hard heart; as, on the other side, your princely eye was wont to meet with any motion that was made on the relieving part. Therefore as one that hath had the happiness to know your Majesty's near hand, I have (most gracious sovereign) faith enough for a miracle, and much more for a grace, that your Majesty will not suffer your poor creature to be utterly defaced, nor blot that name quite out of your book, upon which your sacred hand hath been so oft for the giving him new ornaments and additions.

Unto this degree of compassion, I hope God above (of whose mercy towards me, both in my prosperity and adversity, I have had great testimonies and pledges, though my own manifold and wretched unthankfulness might have averted them) will dispose your princely heart, already prepared to all piety. And why should I not think, but that that thrice noble prince, who would have pulled me out of the fire of a sentence, will help to pull me (if I may use that homely phrase) out of the mire of an

\* Therefore this was wrote near the middle of 1622.

abject and sordid condition in my last days: and that excellent favourite of yours ( the goodness of whose nature contendeth with the greatness of his fortune; and who counteth it a prize, a second prize, to be a good friend, after that prize which he carrieth to be a good servant) will kiss your hands with joy for any work of piety you shall do for me.\* And as all commiserable persons, especially such as find their hearts void of all malice, are apt to think that all men pity them, so I assure myself that the lords of your council, who out of their wisdom and nobleness cannot but be sensible of human events, will in this way which I go, for the relief of my estate, further and advance your Majesty's goodness towards me. For there is, as I conceive, a kind of fraternity between great men that are, and those that have been, being but the several tenses of one verb; nay, I do farther presume, that both houses of parliament will love their justice the better, if it end not in my ruin; for I have been often told, by many of my lords, as it were in the way of excusing the severity of the sentence, that they knew they left me in good hands. And your Majesty knoweth well, I have been all my life long acceptable to those assemblies, not by flattery, but by moderation, and by honest expressing of a desire to have all things go fairly and well.

But if it may please your Majesty, (for saints I shall give them reverence, but no adoration, my address is to your Majesty, the fountain of goodness,) your Majesty shall by the grace of God, not feel that in gift, which I shall extremely feel in help; for my desires are moderate, and my courses measured to a life orderly and reserved, hoping still to do your Majesty honour in my way. Only I most humbly beseech your Majesty to give me leave to conclude with those words which necessity speaketh: Help me (dear sovereign lord and master) and pity me so far, as that I, that have borne a bag, be not now in my age forced in effect to bear a wallet; nor that I, that desire to live to study, may not be driven to study to live.† I most humbly crave pardon of a long letter, after a long silence. God of heaven ever bless, preserve, and prosper your Majesty.

Your Majesty's poor ancient servant and  
bedsman,

FR. ST. ALBAN.

CCLXXVII. TO MR. MATTHEW, EMPLOYING  
HIM TO DO A GOOD OFFICE WITH A  
GREAT MAN.‡

SIR,

I HAVE received your letter, wherein you mention

\* Vouchsafe to express towards me. *Matth.*

† Although the subject matter of this and some other letters of the like nature hath given me occasion to make some remarks thereon already; yet I cannot omit taking notice, in this place, of what the learned Monsieur Le Clerc hath observed in the twelfth chapter of his Reflections upon Good and Bad Fortune. Where, in his discourse of liberality, and the obligations that are upon princes, &c. to extend their bounty to learned men, in respect of the benefit the world receives from them; he expresses his sense of the honour which was due to the memory of those who assisted Erasmus and Grotius, and his resentment of the neglect of king James, for deserting the lord Bacon: "One cannot read," saith he, "without

some passages at large, concerning the lord you know of. You touched also that point in a letter which you wrote upon my lord's going over; which I answered, and am a little doubtful, whether mine ever came to your hands. It is true, that I wrote a little sullenly therein, how I conceived that my lord was a wise man in his own way, and perhaps thought it fit for him to be out with me; for at least I found no cause thereof in myself. As for the latter of these points, I am of the same judgment still; but for the former, I perceive by what you write, that it is merely some misunderstanding of his: and I do a little marvel at the instance, which had relation to that other crabbed man; for I conceived that both in passing that book, and (as I remember) two more, immediately after my lord's going over, I had showed more readiness than many times I use in like cases. But, to conclude, no man hath thought better of my lord than I have done. I know his virtues, and namely, that he hath much greatness of mind, which is a thing almost lost amongst men: nor can any body be more sensible and remembering than I am of his former favours; so that I shall be most glad of his friendship. Neither are the past occasions in my opinion such, as need either reparation or declaration; but may well go under the title of nothing. Now I had rather you dealt between us than any body else, because you are no way drenched in any man's humour. Of other things at another time; but this I was forward to write in the midst of more business than ever I had.

CCLXXVIII. TO THE LORD DIGBY, ON HIS  
GOING TO SPAIN.§

MY VERY GOOD LORD,

I NOW only send my best wishes to follow you at sea and land, with due thanks for your late great favours. God knows whether the length of your voyage will not exceed the size of my hour-glass: but whilst I live, my affection to do your lordship service shall remain quick under the ashes of my fortune.

CCLXXIX. TO MR. MATTHEW.||

SIR,

IN this solitude of friends, which is the base court of adversity, where nobody almost will be seen stirring, I have often remembered this Spanish say-

indignation, that which is reported of the famous chancellor of England, Francis Bacon, whom the king suffered to languish in poverty, whilst he preferred worthless persons, to his dishonour. A little before his death this learned man writ to that prince a bemoaning letter; and then cites this moving conclusion out of Howell's letters; which though that author thought it argued a little abjection of spirit in my lord Bacon; yet Monsieur Le Clerc thinks it showed a much lower in the king, to permit so able a man to lie under the necessity of making so sad a request, and yet withal to afford no relief.—*Stephens.*

† Sir Tobie Matthew's Second Collection of Letters, p. 34.

§ Stephens's Second Collection, p. 155.

|| Sir Tobie Matthew's Collection of Letters, p. 51.

ing, *Amor sine fine, non tenet sine.*\* This bids me make choice of your friend and mine, for his noble succours; not now towards the aspiring, but only the respiring of my fortunes. I, who am a man of books, have observed, that he hath both the magnanimity of the old Romans, and the cordiality of the old English; and withal, I believe, he hath the wit of both: sure I am, that for myself I have found him in both my fortunes, to esteem me so much above my just value, and to love me so much above the possibility of deserving, or obliging on my part, as if he were a friend created and reserved for such a time as this. You know what I have to say to the great lord, and I conceive it cannot pass so fitly to him by the mouth of any, as of this gentleman; and therefore do your best (which I know will be of power enough) to engage him both in the substance and to the secrecy of it: for I can think of no man but yourself, to be used by me in this, who are so private, so faithful, and so discreet a friend to us both; as on the other side, I dare swear he is, and know myself to be as true to you as your own heart.

CCLXXX. AN EXPOSTULATION TO THE  
MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

YOUR lordship will pardon me, if, partly in the freedom of adversity, and partly of former friendship, (the sparks whereof cannot but continue,) I open myself to your lordship, and desire also your lordship to open yourself to me. The two last acts which you did for me, in procuring the releasement of my fine, and my *Quietus est*, I acknowledge, were effects real and material of your love and favour; which, as to my knowledge, it never failed in my prosperity, so in these two things it seems not to have turned with the wheel. But the extent of these two favours is not much more than to keep me from persecution. For any thing farther, which might tend to my comfort and assistance, as I cannot say to myself, that your lordship hath forsaken me; so I see not the effects of your undeserved, yea undesired professions and promises; which being made to a person in affliction, have the nature, after a sort, of vows. But that which most of all makes me doubt of a change or cooling in your lordship's affection towards me, is, that being twice now at London, your lordship did not vouchsafe to see me, though by messages you gave me hope thereof, and the latter time I had begged it of your lordship.

The cause of change may either be in myself or your lordship. I ought first to examine myself, which I have done; and God is my witness, I find all well, and that I have approved myself to your lordship a true friend, both in the watery trial of prosperity, and in the fiery trial of adversity. If your lordship take any insatisfaction touching the

\* Love without ends hath no end, was a saying of Gondomar the Spanish ambassador; meaning thereby, that if it were begun not upon particular ends, it would last. *Bacon's Apophthegms*, 67. Vol. I. p. 315.

house, I humbly pray you think better of it. For that motion to me was a second sentence more grievous than the first, as things then stood, and do yet stand: for it sentenced me to have lost both in my own opinion, and much more in the opinion of others, that which was saved to me, almost only, in the former sentence; and which was more dear to me than all that which was taken from me, which is your lordship's love and favour. For had it not been for that bitter circumstance, your lordship knows, that you might have commanded my life, and all that is mine. But surely it could not be that, nor any thing in me, which wrought the change. It is likely on the other part, that though your lordship in your nature I know to be generous and constant, yet I being now become out of sight, and out of use, your lordship having a flood of new friends, and your ears possessed perhaps by such as would not leave room for an old; your lordship may, even by course of the world, and the overbearing of others, be turned from me; and it were almost a miracle if it should be otherwise. But yet, because your lordship may still have so heroic a spirit, as to stand out in all these violent assaults, which might have alienated you from your friend; my humble suit to your lordship is, that remembering our former friendship, which began with your beginnings, and since that time hath never failed on my part, your lordship would deal clearly with me, and let me know whether I continue in your favour or no; and whether in those poor requests, which I may yet make to his Majesty (whose true servant I ever was and am) for the tempering of my misery, I may presume to use your lordship's favour and help as I have done; for otherwise it were a kind of stupidity in me, and a great trouble also to your lordship, for me not to discern the change, for your lordship to have an importuner, instead of a friend and a suitor. Though howsoever, if your lordship should never think of me more, yet in respect of your former favours, which cannot altogether be made void, I must remain, &c.

CCLXXXI. TO THE LORD ST. ALBAN.‡

MY LORD,

I HAVE despatched the business your lordship recommended to me, which I send your lordship here enclosed, signed by his Majesty, and have likewise moved him for your coming to kiss his hand, which he is pleased you should do at Whitehall when he returneth next thither. In the mean time I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, 13 Nov. 1622.

I will give order to my secretary to wait upon Sir John Suckling about your other business.

*My lord of Bucks, touching my warrant and access.*

† Sir Tobie Matthew's Collection of Letters, p. 48, and Stephens's Second Collection, p. 167.

‡ Stephens's Second Collection, p. 174.

## CCLXXXII. TO THE MARQUIS OF BUCKINGHAM.\*

EXCELLENT LORD,

THOUGH I have troubled your lordship with many letters, oftener than I think I should, (save that affection keepeth no account,) yet upon the repair of Mr. Matthew, a gentleman so much your lordship's servant, and to me another myself, as your lordship best knoweth, you would not have thought me a man alive, except I had put a letter into his hand, and withal, by so faithful and approved a man, commended my fortunes afresh unto your lordship.

My lord, to speak my heart to your lordship, I never felt my misfortunes so much as now: not for that part which may concern myself, who profit (I thank God for it) both in patience, and in settling mine own courses; but when I look abroad and see the times so stirring, and so much dissimulation and falsehood, baseness and envy in the world, and so many idle clocks going in men's heads, then it grieveth me much, that I am not sometimes at your lordship's elbow, that I might give you some of the fruits of the careful advice, modest liberty, and true information of a friend that loveth your lordship as I do. For though your lordship's fortunes be above the thunder and storms of inferior regions; yet nevertheless, to hear the wind and not to feel it, will make one sleep the better.

My good lord, somewhat I have been, and much I have read; so that few things that concern states or greatness, are new cases unto me: and therefore I hope I may be no unprofitable servant to your lordship. I remember the king was wont to make a character of me, far above my worth, that *I was not made for small matters*; and your lordship would sometimes bring me from his Majesty that Latin sentence, *De minimis non curat lex*: and it hath so fallen out, that since my retiring, times have been fuller of great matters than before; wherein perhaps, if I had continued near his Majesty, he might have found more use of my service, if my gift lay that way: but that is but a vain imagination of mine. True it is, that as I do not aspire to use my talent in the king's great affairs; yet for that which may concern your lordship, and your fortune, no man living shall give you a better account of faith, industry, and affection, than I shall. I must conclude with that which gave me occasion of this letter, which is Mr. Matthew's employment to your lordship in those parts, wherein I am verily persuaded your lordship shall find him a wise and able gentleman, and one that will bend his knowledge of the world (which is great) to serve his Majesty, and the prince, and in especial your lordship. So I rest

Your lordship's most obliged and faithful servant,

FR. ST. ALBAN.

Gray's-Inn, this 18th April, 1623.

## CCLXXXIII. TO THE DUKE OF BUCKINGHAM.†

EXCELLENT LORD,

How much I rejoice in your Grace's safe return, you will easily believe, knowing how well I love you, and how much I need you. There be many things in this journey both in the felicity and in the carriage thereof, that I do not a little admire, and wish your Grace may reap more and more fruits in continuance answerable to the beginnings. Myself have ridden at anchor all your Grace's absence, and my cables are now quite worn. I had from Sir Toby Matthew, out of Spain, a very comfortable message, that your Grace had said, I should be the first that you would remember in any great favour after your return: and now coming from court, he telleth me he had commission from your lordship to confirm it: for which I humbly kiss your hands.

My lord, do some good work upon me, that I may end my days in comfort, which nevertheless cannot be complete except you put me in some way to do your noble self service; for I must ever rest

Your Grace's most obliged and faithful servant,  
FR. ST. ALBAN.

12 Oct. 1623.

I have written to his highness, and had presented my duty to his highness, to kiss his hands at York-house, but that my health is scarce yet confirmed.

## CCLXXXIV. TO THE LORD ST. ALBAN.‡

MY LORD,

THE assurance of your love makes me easily believe your joy at my return; and if I may be so happy, as by the credit of my place to supply the decay of your cables, I shall account it one of the special fruits thereof. What Sir Toby Matthew hath delivered on my behalf, I will be ready to make good, and omit no opportunity that may serve for the endeavours of

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, Octob. 14, 1623.

## CCLXXXV. TO THE DUKE OF BUCKINGHAM.§

EXCELLENT LORD,

I SEND your Grace for a *parabien* a book of mine, written first and dedicated to his Majesty in English, and now translated into Latin and enriched. After his Majesty and his highness, your Grace is ever to have the third turn with me. Vouchsafe of your wonted favour to present also the king's book to his Majesty. The prince's I have sent to Mr. Endimion Porter. I hope your Grace, because you are wont to disable your Latin, will not send your book to

\* Stephens's Second Collection, p. 175. † Ibid. p. 177.

‡ Ibid. p. 178.

§ Ibid. p. 179.

the Conde d'Olivares, because he was a deacon; for I understand by one, that your Grace may guess whom I mean, that the Conde is not rational, and I hold this book to be very rational. Your Grace will pardon me to be merry, however the world goeth with me. I ever rest

Your Grace's most faithful and obliged servant,

I have added a begging postscript in the king's letter; for, as I writ before, my cables are worn out, my hope of tackling is by your lordship's means. For me and mine I pray command.

CCLXXXVI. TO THE LORD ST. ALBAN.\*

MY LORD,

I GIVE your lordship many thanks for the *parablen* you have sent me; which is so welcome unto me, both for the author's sake and for the worth of itself, that I cannot spare a work, of so much pains to your lordship and value to me, unto a man of so little reason and less art; who if his skill in languages be no greater than I found it in argument, may, perhaps, have as much need of an interpreter, for all his deaconry, as myself; and whatsoever mine ignorance is in the tongue, yet this much I understand in the book, that it is a noble monument of your love, which I will entail to my posterity, who I hope, will both reap the fruit of the work, and honour the memory of the author. The other book I delivered to his Majesty, who is tied here by the feet longer than he purposed to stay.

For the business your lordship wrote of in your other letters, I am sorry I can do you no service, having engaged myself to Sir William Becher before my going into Spain, so that I cannot free myself, unless there were means to give him satisfaction. But I will ever continue

CCLXXXVII. TO THE LORD ST. ALBAN.†

MY HONOURABLE LORD,

I HAVE delivered your lordship's letter and your book to his Majesty, who hath promised to read it over: I wish I could promise as much for that which you sent me, that my understanding of that language might make me capable of those good fruits, which, I assure myself by an implicit faith, proceed from your pen. But I will tell you in good English, with my thanks for your book, that I ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Hinchenbrook, 29 Oct. 1623.

\* Stephens's Second Collection, p. 180. † Ibid. p. 181.

CCLXXXVIII. TO THE DUKE OF BUCKINGHAM.‡

EXCELLENT LORD,

I SEND Mr. Parker to have ready, according to the speech I had with your Grace, my two suits to his Majesty, the one for a full pardon, that I may die out of a cloud; the other for a translation of my honours after my decease. I hope his Majesty will have compassion on me, as he promised me he would. My heart telleth me that no man hath loved his Majesty and his service more entirely, and love is the law and the prophets. I ever rest

CCLXXXIX. TO THE LORD ST. ALBAN.§

MY HONOURABLE LORD,

I HAVE received your lordship's letter, and have been long thinking upon it, and the longer the less able to make answer unto it. Therefore if your lordship would be pleased to send any understanding man unto me, to whom I may in discourse open myself, I will by that means so discover my heart with all freedom, which were too long to do by letter, especially in this time of parliament business, that your lordship shall receive satisfaction. In the mean time I rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Royston, 16 December.

CCXC. TO THE LORD ST. ALBAN.||

MY LORD,

I HAVE moved his Majesty in your suit, and find him very graciously inclined to grant it; but he desireth first to know from my lord treasurer his opinion and the value of it: to whom I have written to that purpose this enclosed letter, and would wish your lordship to speak with him yourself for his favour and fartherance therein; and for my part I will omit nothing that appertaineth to

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, the 28th of Jan. 1623.

CCXCI. TO THE DUKE OF BUCKINGHAM.¶

EXCELLENT LORD,

I HAVE received the warrant, not for land but for the money, which if it may be speedily served, is

‡ Ibid. p. 181. § Ibid. p. 184. || Ibid. p. 185. ¶ Ibid.

sure the better; for this I humbly kiss your Grace's hands. But because the exchequer is thought to be somewhat barren, although I have good affiance of Mr. Chancellor, yet I hold it very essential, and therein I most humbly pray your Grace's favour, that you would be pleased by your letter to recommend to Mr. Chancellor the speedy issuing of the money by this warrant, as a business whereof your Grace hath an especial care; the rather for that I understand from him, there be some other warrants for money to private suitors at this time on foot. But your Grace may be pleased to remember this difference: that the other are mere gifts; this of mine is a bargain, with an advance only.

I most humbly pray your Grace likewise to present my most humble thanks to his Majesty. God ever guide you by the hand. I always rest

Your faithful and more and more obliged servant,

November, 1624.

I most humbly thank your Grace for your Grace's favour to my honest deserving servant.

CCXCII. TO THE LORD ST. ALBAN.\*

MY NOBLE LORD,

THE hearty affection I have borne to your person and service, hath made me ever ambitious to be a messenger of good news to you, and an eschewer of ill; this hath been the true reason why I have been thus long in answering you, not any negligence in your discreet modest servant, you sent with your letter, nor his who now returns you this answer, oftentimes given me by your master and mine; who though by this may seem not to satisfy your desert and expectation, yet, take the word of a friend who will never fail you, hath a tender care of you, full of a fresh memory of your by-past service. His Majesty is but for the present, he says, able to yield unto the three years' advance, which if you please to accept, you are not hereafter the farther off from obtaining some better testimony of his favour worthier both of him and you, though it can never be answerable to what my heart wishes you, as

Your lordship's humble servant,  
G. BUCKINGHAM.

CCXCIII. TO THE LORD † TREASURER MARLBOROUGH, EXPOSTULATING ABOUT HIS UNKINDNESS AND INJUSTICE. ‡

MY LORD,

I HUMBLY entreat your lordship, and if I may use the word, advise you to make me a better answer.

\* Stephens's Second Collection, p. 186.

† The lord Marlborough was made treasurer 22 Dec. 1624. 22 Jac.

‡ Sir Tobie Matthew's Collection of Letters, p. 54.

§ Stephens's First Collection, p. 197.

Your lordship is interested in honour, in the opinion of all them who hear how I am dealt with; if your lordship malice me for such a cause, surely it was one of the justest businesses that ever was in chancery. I will avouch it; and how deeply I was tempted therein, your lordship knows best. Your lordship may do well, in this great age of yours, to think of your grave, as I do of mine; and to beware of hardness of heart. And as for fair words, it is a wind, by which neither your lordship, nor any man else, can sail long. Howsoever, I am the man who will give all due respects and reverence to your great place, &c.

CCXCIV. TO THE KING.§

MOST GRACIOUS AND DREAD SOVEREIGN,

BEFORE I make my petition to your Majesty, I make my prayers to God above *pectore ab ima*, that if I have held any thing so dear as your Majesty's service, nay, your heart's ease, and your honour's, I may be repulsed with a denial: but if that hath been the principal with me, that God, who knoweth my heart, would move your Majesty's royal heart to take compassion of me, and to grant my desire.

I prostrate myself at your Majesty's feet, I your ancient servant, now sixty-four years old in age, and three years five months old in misery. I desire not from your Majesty means, nor place, nor employment, but only, after so long a time of expiation, a complete and total remission of the sentence of the upper house, to the end that blot of ignominy may be removed from me, and from my memory with posterity; that I die not a condemned man, but may be to your Majesty, as I am to God, *nova creatura*. Your Majesty hath pardoned the like to Sir John Bennet, between whose case and mine, not being partial with myself, but speaking out of the general opinion, there was as much difference, I will not say as between black and white, but as between black and gray, or ash-coloured: || look therefore down, dear sovereign, upon me also in pity. I know your Majesty's heart is inscrutable for goodness; and my lord of Buckingham was wont to tell me you were the best natured man in the world; and it is God's property, that those he hath loved, he loveth to the end. Let your Majesty's grace, in this my desire, stream down upon me, and let it be out of the fountain and spring-head, and *ex mero motu*, that, living or dying, the print of the goodness of king James may be in my heart, and his praises in my mouth. This my most humble request granted, may make me live a year or two happily; and denied, will kill me quickly. But yet the last thing that will die in me, will be the heart and affection of

Your Majesty's most humble and true devoted servant,

FR. ST. ALBAN.

July 30, 1624.

|| Sir John Bennet, judge of the prerogative court, was, in the year 1621, accused, convicted, and censured in parliament for taking of bribes, and committing several misdemeanors relating to his office.

CCXCV. IN ANSWER TO THE FOREGOING,  
BY KING JAMES.\*

TO OUR TRUSTY AND WELL BELOVED, THOMAS COVENTRY, OUR ATTORNEY-GENERAL.

TRUSTY AND WELL BELOVED, WE GREET YOU WELL :

WHEREAS our right trusty and right well-beloved cousin, the viscount of St. Alban, upon a sentence given in the upper house of parliament full three years since, and more, hath endured loss of his place, imprisonment, and confinement† also for a great time; which may suffice for the satisfaction of justice, and example to others: We being always graciously inclined to temper mercy with justice, and calling to mind his former good services, and how well and profitably he hath spent his time since his trouble, are pleased to remove from him that blot of ignominy which yet remaineth upon him, of incapacity and disablement; and to remit to him all penalties whatsoever inflicted by that sentence. Having therefore formerly pardoned his fine, and released his confinement; these are to will and require you to prepare, for our signature, a bill containing a pardon, in due form of law, of the whole sentence: for which this shall be your sufficient warrant.

CCXCVI. THE LORD VISCOUNT ST. ALBAN  
TO DR. WILLIAMS; BISHOP OF LINCOLN,  
CONCERNING HIS SPEECHES, &c.‡

MY VERY GOOD LORD,

I AM much bound to your lordship for your honourable promise to Dr. Rawley: he chooseth rather to depend upon the same in general, than to pitch upon any particular; which modesty of choice I commend.

I find that the ancients, as Cicero, Demosthenes, Plinius Secundus, and others, have preserved both their orations and their epistles. In imitation of whom I have done the like to my own; which nevertheless I will not publish while I live; but I have been bold to bequeath them to your lordship, and Mr. Chancellor of the duchy. My speeches, perhaps, you will think fit to publish: the letters, many of them, touch too much upon late matters of state, to be published; yet I was willing they should not be lost. I have also by my will erected two lectures in perpetuity, in either university one, with an endowment of 200*l.* per annum apiece: they to be for natural philosophy, and the sciences thereupon depending; which foundations I have required my executors to order, by the advice and direction of your lordship, and my lord bishop of Coventry and Litchfield. These be my thoughts now. I rest

Your lordship's most affectionate to do you service.

CCXCVII. THE BISHOP'S ANSWER TO THE  
PRECEDING LETTER.‖

RIGHT HONOURABLE AND MY VERY NOBLE LORD,

Mr. Doctor Rawley, by his modest choice, hath much obliged me to be careful of him, when God shall send any opportunity; and, if his Majesty shall remove me from this see, before any such occasion be offered, not to change my intentions with my bishopric.

It is true that those ancients, Cicero, Demosthenes, and Plinius Secundus, have preserved their orations, the heads and effects of them at the least, and their epistles; and I have ever been of opinion, that those two pieces are the principal pieces of our antiquities: those orations discovering the form of administering justice, and the letters the carriage of the affairs in those times. For our histories, or rather lives of men, borrow as much from the affections and phantasies of the writers, as from the truth itself, and are for the most of them built altogether upon unwritten relations and traditions. But letters written *re nata*, and bearing a synchronism or equality of time *cum rebus gestis*, have no other fault, than that which was imputed unto Virgil, *nihil peccat, nisi quod nihil peccat*; they speak the truth too plainly, and cast too glaring a light for that age, wherein they were, or are written.

Your lordship doth most worthily therefore in preserving those two pieces, amongst the rest of those matchless monuments you shall leave behind you; considering, that as one age hath not bred your experience, so is it not fit it should be confined to one age, and not imparted to the times to come. For my part therein, I do embrace the honour with all thankfulness, and the trust imposed upon me with all religion and devotion. For these two lectures in natural philosophy, and the sciences woven and involved with the same; it is a great and a noble foundation both for the use, and the salary, and a foot that will teach the age to come, to guess in part at the greatness of that Herculean mind, which gave them their existence. Only your lordship may be advised for the seats of this foundation. The two universities are the two eyes of this land, and fittest to contemplate the lustre of this bounty: these two lectures are as the two apples of these eyes. An apple when it is single, is an ornament, when double a pearl or a blemish in the eye. Your lordship may therefore inform yourself if one Sidley of Kent hath not already founded in Oxford a lecture of this nature and condition. But if Oxford in this kind be an Argus, I am sure poor Cambridge is a right Polyphemus; it hath but one eye, and that not so steadily or artificially placed; but *bonum est facile sui diffusivum*: your lordship being so full of goodness will quickly find an object to pour it on. That which made me say thus much, I will say in verse, that your lordship may remember it better;

† This title seems to imply that the date of this letter was after the bishop was removed from being lord keeper.

\* Cabala, 270. Edit. 1663.

† His sentence forbid his coming within the verge of the court. [In consequence of this letter, my lord Bacon was summoned to parliament in the first year of king Charles.]

Sola ruinosis stat Cantabrigia pannis,  
Atque inopi lingua disertis invocat artes.

I will conclude with this vow: 'Deus, qui animum istum tibi, animo isti tempus quam longissimum tribuat.' It is the most affectionate prayer of

Your lordship's most humble servant,

JO. LINCOLN.

Buckdon, the last of  
December, 1625.

CCXCVIII. TO THE QUEEN\* OF BOHEMIA. †

IT MAY PLEASE YOUR MAJESTY,

I HAVE received your Majesty's gracious letter from Mr. Secretary Morton, who is now a saint in heaven. It was at a time when the great desolation of the plague was in the city, and when myself was ill of a dangerous and tedious sickness. The first time that I found any degree of health, nothing came sooner to my mind, than to acknowledge your Majesty's great favour, by my most humble thanks: and because I see your Majesty taketh delight in my writings, and to say the truth, they are the best fruits I now yield, I presume to send your Majesty a little discourse of mine, touching a war with Spain, which I writ about two years since; which the king your brother liked well. It is written without bitterness or invective, as king's affairs ought to be carried; but if I be not deceived, it hath edge enough. I have yet some spirits left, and remnant of experience, which I consecrate to the king's service and your Majesty's; for whom I pour out my daily prayers to God, that he would give your Majesty a fortune worthy your rare virtues; which, some good spirit tells me, will be in the end. I do in all reverence kiss your Majesty's hands, ever resting

Your Majesty's most humble and devoted servant,

FR. ST. ALBAN.

CCXCIX. A LETTER OF THE LORD BACON'S,  
IN FRENCH, TO THE MARQUIS FIAT, RE-  
LATING TO HIS ESSAYS. †

MONSIEUR L'AMBASSEADEUR MON FILS,

VOYANT que vostre excellence faict & traite

\* The princess Elizabeth, eldest daughter of king James, was married to Frederick V. elector palatine, who by accepting the crown of Bohemia was soon deprived both of that and his ancient principality. Under all her afflictions she had the happiness of being mother of many fine children, and at length of seeing her son restored to the Palatinate, and her nephew to his kingdoms. To her, who had been so much injured by Spain, my lord St. Alban presents his discourse touching a war with Spain, in acknowledgment of the favour

mariages, non seulement entre les princes d'Angleterre & de France, mais aussi entre les langues (puis que faictes traduire mon livre de *l'Advancement des Sciences* en Francois) j'ai bien voulu vous envoyer mon livre dernièrement imprimé, que j'avois pourveu pour vous, mais j'estois en doute de le vous envoyer, pour ce qu'il estoit escrit en Anglois. Mais à cest heure pour la raison susdicte je le vous envoie. C'est un recompillement de mes *Essays morales & civiles*; mais tellement enlargies & enrichies, tant de nombre que de poids, que c'est de fait un œuvre nouveau. Je vous baise les mains, & reste

Vostre très affectionné ami, & très humble serviteur.

CCC. TO THE EARL OF ARUNDEL AND  
SURREY: JUST BEFORE HIS DEATH, BEING  
THE LAST LETTER HE EVER WROTE. †

MY VERY GOOD LORD,

I WAS likely to have had the fortune of Caius Plinius the elder, who lost his life by trying an experiment about the burning of the mount Vesuvius: for I was also desirous to try an experiment or two, touching the conservation and induration of bodies. As for the experiment itself, it succeeded excellently well; but in the journey, between London and Highgate, I was taken with such a fit of casting, as I knew not whether it were the stone, or some surfeit, or cold, or indeed a touch of them all three. But when I came to your lordship's house, I was not able to go back, and therefore was forced to take up my lodging here, where your house-keeper is very careful and diligent about me; which I assure myself your lordship will not only pardon towards him, but think the better of him for it. For indeed your lordship's house was happy to me; and I kiss your noble hands for the welcome which I am sure you give me to it, &c.

I know how unfit it is for me to write to your lordship with any other hand than my own; but by my troth my fingers are so disjointed with this fit of sickness, that I cannot steadily hold a pen.

of her Majesty's letter, sent by her secretary Sir Albertus Morton; in which quality he had served his uncle Sir Henry Wotton, in some of his embassies: and as he was tenderly beloved by him in his life, and much lamented in his death; so Sir Harry professed no less admiration of this queen, and the splendour of her virtues under the darkness of her fortunes. *Stephens.*

# LETTERS, SPEECHES, CHARGES, ADVICES, &c.

OF

FRANCIS BACON, LORD VISCOUNT ST. ALBAN,

LORD CHANCELLOR OF ENGLAND;

FIRST PUBLISHED IN THE YEAR 1763,

BY THOMAS BIRCH, D. D.

CHAPLAIN TO HER ROYAL HIGHNESS THE PRINCESS AMELIA, AND SECRETARY TO  
THE ROYAL SOCIETY.

---

TO THE HONOURABLE CHARLES YORKE,

ATTORNEY-GENERAL TO HIS MAJESTY.

SIR,

THE gratitude, which I owe you for the honour and other important advantages of your friendship, hath often made me wish for an opportunity of making you some return equal, in any degree, to your merit, and my own obligations. It was, therefore, a very agreeable incident to me, when by means of your noble brother, the Lord Viscount Royston, always attentive to enlarge the fund of history, as well as to encourage and reward every attempt in favour of literature in general, there was put into my hands a volume of original papers of the great Lord Bacon. This volume was, at his lordship's request, readily intrusted with me by his Grace the lord archbishop of Canterbury, whose zeal for the advancement of useful learning of all kinds bears a just proportion to that which he has shown in every station of the church filled by him, for the support of religion, and for what is the most perfect system of its principles, laws, and sanctions—Christianity.

From the long acquaintance with which I have been favoured by you, and the frequent conversations which we have had upon subjects foreign to the profession which you so much adorn, I well knew your high veneration for the writings of Bacon, and your thorough knowledge of the most abstruse of them. Having, therefore, with an application little less than that of decyphering, transcribed from the first draughts, and digested into order, a collection of his letters, little inferior in number, and much superior in contents, to what the world hath hitherto seen, intermixed with other papers of his of an important nature, I could not doubt, but that the publishing of them would be no less acceptable to you, than, I persuade myself, they will be to the public. For it is scarce to be imagined, but that the bringing to light, from obscurity and oblivion, the remains of so eminent a person, will be thought an acquisition not inferior to the discovery (if the ruins of Herculaneum should afford such a treasure) of a new set of the epistles of Cicero, whom our immortal countryman most remarkably resembled as an orator, a philosopher, a writer, a lawyer, and a statesman. The communication of them to the public appearing to me a duty to it and the memory of the author, to whom could I, separately from the consideration of all personal connexions and inducements, so justly present them, as to him, whom every circumstance of propriety, and conformity of character, in the most valuable part of it, pointed out to me for that purpose? Similarity of genius; the same extent of knowledge in the laws of our own and other countries, enriched and adorned with all the stores of ancient and modern learning; the same eloquence at the bar and in the senate; an equal force of writing, shown in a single work indeed, and composed at a very early age, but decisive of a grand question of law and sanction of government, the grounds of which had never before been stated with due precision; and the most successful discharge of the same offices of king's counsel and solicitor and attorney-general.

These reasons, Sir, give your name an unquestionable right to be prefixed to these posthumous pieces. And I hope, while I am performing this act of justice, I may be excused the ambition of preserving my own name, by uniting it with those of BACON and YORKE.

Your delicacy here restrains me from indulging myself farther in the language which truth and esteem would dictate. But I must be allowed to add a wish, in which every good man and lover of his country will join with me, that as there now remains but one step for you to complete that course of public service and glory, in which you have so closely followed your illustrious father, he, happy in the most important circumstance of human life, the characters and fortunes of his children,

—longo ordine Nati,  
Clari omnes patria pariter Virtute suaque,

may live to see you possessed of that high station, which himself filled for almost twenty years, with a reputation superior to all the efforts of envy or party. Nor is it less to his honour, (and may it be yours at a very distant period,) that, though he thought proper to retire from that station in the full vigour of his abilities, he still continues to exert them in a more private situation, for the general benefit of his country; enjoying in it the noblest reward of his services, an unequalled authority, founded on the acknowledged concurrence of the greatest capacity, experience, and integrity.

I am, SIR,

Your most obliged and most devoted humble servant,

London, June 1, 1762.

THOMAS BIRCH.

---

## P R E F A C E.

As the reader will undoubtedly have some curiosity about the history of the transmission of these papers, now presented to him at the distance of an hundred and forty years from the date of most of them, though the hand of the incomparable writer is too conspicuous in them to admit of any suspicion of their genuineness; it will be proper here to give him some information upon that subject. Dr. Thomas Tenison is known to have been the editor of the *Baconiana*, published at London, 1679, though he added only the initial letters of his name to the account of all the lord Bacon's works,\* subjoined to that collection. He had been an intimate friend of, and fellow of the same college † with Mr. William Rawley, only son of Dr. William Rawley, chaplain to the lord chancellor Bacon, and employed by his lordship, as publisher of most of his works. Dr. Rawley dying in the 79th year of his age, June the 18th, 1667, near a year after his son; ‡ his executor, Mr. John Rawley, put into the hands of his friend Dr. Tenison these papers of lord Bacon, which composed the *Baconiana*; and probably, at the same time, presented to him all the rest of his lordship's manuscripts, which Dr. Rawley had been possessed of, but did not think proper to make public. The reasons of his reserve appear from Dr. Tenison's account § cited above, to have been, "that he judged some papers touching *matters of state* to tread too near to the heels of truth, and to the times of the persons concerned: and that he thought his lordship's *letters* concerning his fall might be injurious to his honour, and cause the old wounds of it to bleed anew." But this is a delicacy, which though suitable to the age in which Dr. Rawley lived, and to the relation under which he had stood to his noble patron, ought to have no force in other times and circumstances, nor ever to be too much indulged to the prejudice of the rights of historical truth.

Dr. Tenison being, soon after the publication of the *Baconiana*, removed from the more private station of a country living to the vicarage of St. Martin's in the Fields, Westminster, and, after the revolution, advanced to the bishopric of Lincoln, and at last to the archbishopric of Canterbury, had scarce leisure, if he had been inclined, to select more of the papers of his admired Bacon. These therefore with the rest of his manuscripts, not already deposited in the library at Lambeth, were left by him in his last will, dated the 11th of April, 1715, to his chaplain, Dr. Edmund Gibson, then rector of Lambeth, and afterwards successively bishop of Lincoln and London, and to Mr. (afterwards Dr.) Benjamin Ibbot, who had succeeded Dr. Gibson as library-keeper to his Grace. Dr. Ibbot dying || many years before bishop Gibson, the whole collection of archbishop Tenison's papers came under the disposition of that bishop, who directed his two executors, the late Dr. Bettesworth, dean of the Arches, and his eldest son, George Gibson, Esq. to deposit them, with the addition of many others of his own collecting, in the manuscript library at Lambeth: and accordingly after his lordship's death, which happened on the 6th of Sept. 1748, all these manuscripts were delivered by his said executors to archbishop Herring, on the 21st of October of that year, and placed in the library on the 23d of February following. But as they lay undigested in bundles, and in that condition were neither convenient for use, nor secure from damage, his Grace the present archbishop directed them to be methodized and bound up in volumes with proper indexes, which was done by his

\* This account is dated Nov. the 30th, 1678.

† Who was buried the 3d of July, 1666.

‡ Benet, in the university of Cambridge.

§ Page 81.

|| The 11th of April, 1725.

learned librarian, Andrew Coltee Ducarel, LL. D. Fellow of the Royal and Antiquarian Societies, to whose knowledge, industry, and love of history and antiquities, the valuable library of manuscripts of the archiepiscopal see of Canterbury is highly indebted for the order in which it is now arranged; and by whose obliging and communicating temper it is rendered generally useful. Bishop Gibson's collection, including what is the chief part of it, that of archbishop Tenison, fills fourteen large volumes in folio. The eighth of these consists merely of lord Bacon's papers.

Of them principally, the work which I now offer the public is formed; nor has any paper been admitted into it that had been published before, except two of lord Bacon's letters, which having been disguised and mutilated in all former impressions, were thought proper to be reprinted here, together with two other letters of his lordship; one on the remarkable case of Peacham, the other accompanying his present to king James I. of his *Novum Organum*. These letters I was unwilling to omit, because the collection, in which they have lately appeared, entitled by the very learned and ingenious editor, Sir David Dalrymple, *Bat. Memorials and Letters relating to the History of Britain in the reign of James the First, published from the Originals*, at Glasgow, 1762, in 8vo, is likely to be much less known in England, from the smallness of the number of printed copies, than it deserves.

The general rule, which I have prescribed myself, of publishing only what is new, restrained me from adding those letters, written in the earlier part of Mr. Francis Bacon's life, which I had before published from the originals, found among the papers of his brother Anthony, in the *Memoirs of the Reign of Queen Elizabeth, from the year 1581 to her death*.

The example of the greatest men, in preserving in their editions of the classics the smallest remains of their writings, will be a full justification of my industry in collecting and inserting even the fragments of a writer equal to the most valuable of the ancients. Nor will the candid and intelligent object to the least considerable of the duke of Buckingham's letters, since they acquire an importance from the rank and character of the writer, as well as from their carrying on the series of his correspondence, acquainting us with new facts, or ascertaining old ones with additional evidence and circumstances, and showing the extent of that authority and influence, which his situation, as a favourite, gave him in all parts of the government, even as high as the seat of justice itself.

---

### POSTSCRIPT, RELATING TO THIS SECOND EDITION.

SINCE the former edition, there came into my hands, among the collections in print and manuscript, relating to lord Bacon and his works, made by the late John Locker, Esq. two letters of Dr. Tenison, afterwards archbishop of Canterbury, which will enable me to give the public full satisfaction, in what manner that learned divine became possessed of the *Letters, &c.* of the noble author published by me.

One of these letters, the original, written to Mr. Richard Chiswell, the bookseller, for whom the *Baconiana* had been printed, is as follows:

Decemb. 16, 1682.

" SIR,

" I HAVE NOW looked over all the books and papers in the box. In the books there are copies of *Esays, Maxims of Law, &c.* all printed already: but they contain some things fit to be printed; and they and the *Letters* will make a handsome folio, which I doubt not but will turn to account. For the *Letters*, there are divers of Sir Thomas Meautys, &c. worth nothing: but there are more than forty letters to the duke of Buckingham, and some of the duke of Buckingham to him.

" There are eight or ten to king James. There are three or four to Gondomar, and Gondomar's answer to one of them.

" There are two or three letters to bishop Williams, and two from him.

" There is lord Bacon's letter to Casaubon in Latin.

" There is one essay never printed.

" All which will be well accepted.

" After the holy-days I will methodize all, and put all letters of the same date together, (for as yet they are in confusion,) and then we will take farther resolutions about them. I will get an afternoon (if God permit) to see the remaining papers in Bartholomew-Close. The Greek MS. will not prove much worth. The latter and greater part is only a piece of Tzetzes.

" It is necessary that you procure for me Tobie Matthew's printed letters, for here are also ten of his to lord Bacon; and I know not which they are yet printed. Also I shall want a copy of the *Essays* printed in 12mo, 1663, printed for Thomas Palmer, at the Crown in Westminster-Hall, with a preface by one Griffith. I have the book; and the preface is mentioned in the title page, but is wanting.

" I am your assured friend,

" T. TENISON."

" If more sheets of Dr. Spencer's are done, pray send them."

For Mr. Chiswell, at the Rose and Crown, in St. Paul's Church-Yard, London.

The other letter of which I have a copy taken by the late Richard Rawlinson, L.L. D. from bishop Tanner's manuscripts, in Christ-Church, Oxford, Vol. XXXV. p. 152, was addressed to archbishop Sancroft in these terms :

MAY IT PLEASE YOUR GRACE,

" I HAVE received your Grace's letter touching my course of preaching in Lent, which I shall be ready, God assisting me, to do my duty at that time according to my poor talent.

" I did forget on Tuesday to acquaint your Grace, that I had, by a strange providence, lately found out in this town a great many original papers of the lord Bacon. When I have looked over them and sorted them, I will be bold to present your Grace with a catalogue of them. They came to me from the executor of Sir Thomas Meautys, who was his lordship's executor. Amongst his lordship's papers are letters from king James, the queen of Bohemia, count Gondomar, and others. Amongst his lordship's own letters there is one in Latin to Isaac Casaubon.

" One just now come from my lord chancellor's\* assured me he was not indeed dead, but just dying.

" I am your Grace's most obliged servant,

" Decemb. 18, 1682."

" T. TENISON."

The reason of the rule, which I prescribed to myself in the former edition, of publishing only what was new, not subsisting in the present, which forms a part of a complete collection of the author's writings, I have inserted in it such letters from and to him, as I had published in 1754 in the *Memoirs of the Reign of Queen Elizabeth*.

London, January 1, 1765.

## LETTERS, &c. OF LORD CHANCELLOR BACON.

MR. FRANCIS BACON TO MR. ROBERT  
CECIL.†

SIR,

I AM very glad, that the good affection and friendship, which conversation and familiarity did knit between us, is not by absence and intermission of society discontinued; which assureth me, it had a farther root than ordinary acquaintance. The signification whereof, as it is very welcome to me, so it maketh me wish, that, if you have accomplished yourself, as well in the points of virtue and experience, which you sought by your travel, as you have won the perfection of the Italian tongue, I might have the contentment to see you again in England, that we may renew the fruit of our mutual good will; which, I may truly affirm, is, on my part, much increased towards you, both by your own demonstration of kind remembrance, and because I discern the like affection in your honourable and nearest friends.

Our news are all but in seed; for our navy is set forth with happy winds, in token of happy adventures, so as we do but expect and pray, as the husbandman when his corn is in the ground.

Thus commending me to your love, I commend you to God's preservation.

MR. FRANCIS BACON TO THE EARL OF  
ESSEX.‡

MY LORD,

I DID almost conjecture by your silence and countenance a distaste in the course I imparted to your lordship touching mine own fortune; the care whereof in your lordship as it is no news to me, so nevertheless the main effects and demonstrations past are so far from dulling in me the sense of any new, as contrariwise every new refresheth the memory of many past. And for the free and loving advice your lordship hath given me, I cannot correspond to the same with greater duty, than by assuring your lordship, that I will not dispose of myself without your allowance, not only because it is the best wisdom in any man in his own matters, to rest in the wisdom of a friend, (for who can by often looking in the glass discern and judge so well of his own favour, as another, with whom he converseth?) but also because my affection to your lordship hath made mine own contentment inseparable from your satisfaction. But, notwithstanding, I know it will be pleasing to your good lordship, that I use my liberty of replying; and I do almost assure myself, that your lordship will rest persuaded by the answer of those reasons, which your lordship vouch-

\* Heneage Finch, earl of Nottingham, who died on the day of the date of this letter, aged 61 years.

† From the original draught in the library of Queen's college, Oxford. *Arch. D. 2*. This letter seems to be of a very

early date, and to have been written to Mr. Rob. Cecil, while he was upon his travels.

said to open. They were two, the one, that I should include \* \* \*

1593, April.

*The rest of the Letter is wanting.*

MR. FRANCIS BACON TO SIR JOHN PUCKERING, LORD KEEPER OF THE GREAT SEAL.\*

MY LORD,

It is a great grief unto me, joined with marvel, that her Majesty should retain a hard conceit of my speeches in parliament.† It might please her sacred Majesty to think what my end should be in those speeches, if it were not duty, and duty alone. I am not so simple, but I know the common beaten way to please. And whereas popularity hath been objected, I muse what care I should take to please many, that take a course of life to deal with few. On the other side, her Majesty's grace and particular favour towards me hath been such, as I esteem no worldly thing above the comfort to enjoy it, except it be the conscience to deserve it. But if the not seconding of some particular person's opinion shall be presumption, and to differ upon the manner shall be to impeach the end; it shall teach my devotion not to exceed wishes, and those in silence. Yet notwithstanding, to speak vainly as in grief, it may be her Majesty hath discouraged as good a heart, as ever looked toward her service, and as void of self-love. And so in more grief than I can well express, and much more than I can well dissemble, I leave your lordship, being as ever,

Your lordship's entirely devoted, &c.

MR. ALDERMAN SPENCER,§

THOUGH I be ready to yield to any thing for my brother's sake, so yet he will not, I know, expect, no nor permit me, that I should do myself wrong. For me, that touch no money, to have a statute hurrying upon my estate of that greatness, were a thing utterly unreasonable, and not to be moved, specially, since your assurance is as good without. There is much land bought and sold in England, and more entailed than fee-simple. But for a remainder man to join in seal, I think was never put

\* Harl. MSS. Vol. 286. No. 129. fol. 232.

† On Wednesday the 7th of March, 1592-3, upon the three subsidies demanded of the house of commons; to which he assented, but not to the payment of them under six years, urging the necessities of the people, the danger of raising public discontentment, and the setting of an evil precedent against themselves and their posterity. See Sir Simonds D'Ewes's Journals, p. 493. He sat in that parliament, which met November 19, 1592, and was dissolved 10 April, 1593, as one of the knights of the shire for Middlesex.

‡ Among the Papers of Antony Bacon, Esq. vol. iii. fol. 156, in the Lambeth library.

§ Sir John Spencer, lord mayor of London in 1594. His vast fortune came to his only daughter, Elizabeth, married to

in practice. For a time, till your assurance pass, so it pass with convenient speed, because of the uncertainty of life, I am content to enter into one; looking, nevertheless, for some present of gratification for my very joining in conveyance, and much more having yielded to this. For any warranty or charter, I had had neither law nor wit, if I should have meant it; and the reforming of the covenant and the deed of feoffment, doth sufficiently witness my intention. Thus bid I heartily farewell.

Your very loving friend,

Twickenham Park, FR. BACON.  
this 26th of August, 1593.

THE EARL OF ESSEX TO MR. FRANCIS BACON.¶

MR. BACON,

YOUR letter met me here yesterday. When I came, I found the queen so wayward, as I thought it no fit time to deal with her in any sort, especially since her choler grew towards myself, which I have well satisfied this day, and will take the first opportunity I can to move your suit. And if you come hither, I pray you let me know still where you are. And so being full of business, I must end, wishing you what you wish to yourself.

Your assured friend,

ESSEX.

LORD TREASURER BURGHLEY TO MR. FRANCIS BACON.¶

NEPHEW,

I HAVE no leisure to write much; but for answer, I have attempted to place you: but her Majesty hath required the lord keeper\*\* to give to her the names of divers lawyers to be preferred, wherewith he made me acquainted, and I did name you as a meet man, whom his lordship allowed in way of friendship, for your father's sake: but he made scruple to equal you with certain, whom he named, as Brograve†† and Branthwayt, whom he specially commendeth. But I will continue the remembrance of you to her Majesty, and implore my lord of Essex's help.

Your loving uncle,

N. BURGHLEY.

William lord Compton, created earl of Northampton, in August 1618.

¶ 1593, Sept. Among the papers of Antony Bacon, Esq. vol. iii. fol. 197, in the Lambeth library.

¶ Among the papers of Antony Bacon, Esq. vol. iii. fol. 197, in the Lambeth library.

\*\* Puckering.

†† John Brograve, attorney of the duchy of Lancaster, and afterwards knighted. He is mentioned by Mr. Francis Bacon, in his letter to the lord treasurer, of 7th of June, 1595, from Gray's Inn, as having discharged his post of attorney of the duchy with great sufficiency. There is extant of his, in print, a reading upon the statute of 27 Henry VIII. concerning Jointures.

## SIR ROBERT CECIL TO MR. FRANCIS BACON.\*

COUSIN,

ASSURE yourself, that the solicitor's † coming gave no cause of speech; for it was concerning a book to be drawn concerning the bargain of wines. If there had been, you should have known, or when there shall. To satisfy your request of making my lord know how recommended your desires are to me, I have spoken with his lordship, who answereth, he hath done and will do his best. I think your absence longer than for my good aunt's comfort will do you no good: for, as I ever told you, it is not likely to find the queen apt to give an office, when the scruple is not removed of her forbearance to speak with you. This being not yet perfected may stop good, when the hour comes of conclusion, though it be but a trifle, and questionless would be straight despatched, if it were luckily handled. But herein do I, out of my desire to satisfy you, use this my opinion, leaving you to your own better knowledge what hath been done for you, or in what terms that matter standeth. And thus, desirous to be recommended to my good aunt, to whom my wife heartily commends her, I leave you to the protection of Almighty God. From the court at Windsor, this 27th of September, 1593.

Your loving cousin and friend,

ROBERT CECIL.

I have heard in these causes, 'Facies hominis est tanquam leonis.'

## MR. FRANCIS BACON TO THE QUEEN. ‡

MADAM,

REMEMBERING, that your Majesty had been gracious to me both in countenancing me, and conferring upon me the reversion of a good place, and perceiving that your Majesty had taken some displeasure towards me, both these were arguments to move me to offer unto your Majesty my service, to the end to have means to deserve your favour, and to repair my error. Upon this ground I affected myself to no great matter, but only a place of my profession, such as I do see divers younger in proceeding to myself, and men of no great note, do without blame aspire unto. But if any of my friends do press this matter, I do assure your Majesty my spirit is not with them.

It sufficeth me, that I have let your Majesty know, that I am ready to do that for the service, which I never would do for mine own gain. And if your Majesty like others better, I shall, with the Lacedæmonian, be glad, that there is such choice of abler men than myself. Your Majesty's favour

\* Among the Papers of Antony Bacon, Esq. vol. iii. fol. 197, verso, in the Lambeth library.

† Mr. Edward Coke.

‡ 1593. Among the Papers of Antony Bacon, Esq. vol. iii. fol. 315, in the Lambeth library.

indeed, and access to your royal person, I did ever, encouraged by your own speeches, seek and desire; and I would be very glad to be reintegrate in that. But I will not wrong mine own good mind so much, as to stand upon that now, when your Majesty may conceive, I do it but to make my profit of it. But my mind turneth upon other wheels than those of profit. The conclusion shall be, that I wish your Majesty served answerable to yourself. 'Principis est virtus maxima nosse suos.' Thus I most humbly crave pardon of your boldness and plainness. God preserve your Majesty.

## MR. FRANCIS BACON TO ROBERT KEMP, OF GRAY'S-INN, ESQ. §

GOOD ROBIN,

THERE is no news you can write to me, which I take more pleasure to hear, than of your health, and of your loving remembrance of me; the former whereof though you mention not in your letter, yet I straight presumed well of it, because your mention was so fresh to make such a flourish. And it was afterwards accordingly confirmed by your man Roger, who made me a particular relation of the former negotiation between your ague and you. Of the latter, though you profess largely, yet I make more doubt, because your coming is turned into a sending; which when I thought would have been repaired by some promise or intention of yourself, your man Roger entered into a very subtle distinction to this purpose, that you could not come, except you heard I was attorney; but I ascribe that to your man's invention, who had his reward in laughing; for I hope you are not so stately, but that I shall be one to you *stylo vetere* or *stylo novo*. For my fortune (to speak court) it is very slow, if any thing can be slow to him that is secure of the event. In short, nothing is done in it; but I propose to remain here at Twickenham till Michaelmas term, then to St. Alban's, and after the term to court. Advise you, whether you will play the honest man or no. In the mean time I think long to see you, and pray to be remembered to your father and mother.

Yours in loving affection,

FR. BACON.

From Twickenham-Park,  
this 4th of Nov. 1593.

## MR. FRANCIS BACON TO THE EARL OF ESSEX. ||

MY LORD,

I THOUGHT it not amiss to inform your lordship of that which I gather partly by conjecture, and partly by advertisement of the late recovered man, that is § 1593, Nov. 4. Among the Papers of Antony Bacon, Esq. vol. iii. fol. 281, in the Lambeth library. || 1593, Nov. 10. Among the Papers of Antony Bacon, Esq. vol. iii. fol. 283, in the Lambeth library.

so much at your devotion, of whom I have some cause to think, that he worketh for the *Huddler* † underhand. And though it may seem strange, considering how much it importeth him to join straight with your lordship, in regard both of his enemies and of his ends; yet I do the less rest secure upon the conceit, because he is a man likely to trust so much to his art and finesse, (as he, that is an excellent wherryman, who, you know, looketh towards the bridge, when he pulleth towards Westminster,) that he will hope to serve his turn, and yet to preserve your lordship's good opinion. This I write to the end, that if your lordship do see nothing to the contrary, you may assure him more or trust him less; and chiefly, that your lordship be pleased to sound again, whether they have not, amongst them, drawn out the nail, which your lordship had driven in for the negative of the *Huddler*; which if they have, it will be necessary for your lordship to iterate more forcibly your former reasons, whereof there is such copia, as I think you may use all the places of logic against his placing.

Thus, with my humble thanks for your lordship's honourable usage of Mr. Standen, I wish you all honour.

Your lordship's in most faithful duty,

FR. BACON.

I pray, Sir, let not my jargon privilege my letter from burning; because it is not such, but the light showeth through.

THE EARL OF ESSEX TO MR. FRANCIS BACON.‡

SIR,

I HAVE received your letter, and since I have had opportunity to deal freely with the queen. I have dealt confidently with her as a matter, wherein I did more labour to overcome her delays, than that I did fear her denial. I told her how much you were thrown down with the correction she had already given you, that she might in that point hold herself already satisfied. And because I found, that Tanfield § had been most propounded to her, I did most disable him. I find the queen very reserved, staying herself upon giving any kind of hope, yet not passionate against you, till I grew passionate for you. Then she said, that none thought you fit for the place but my lord treasurer and myself. Marry, the others must some of them say before us for fear or for flattery. I told her the most and wisest of her council had delivered their opinions, and preferred you before all men for that place. And if it would please her Majesty to think, that whatsoever they said contrary to their own words when they spake without witness, might be as factiously spoken, as the other way flattering, she would not be deceived.

• Probably Lord Keeper Puckering.

† Mr. Edward Coke.

‡ Among the Papers of Antony Bacon, Esq. vol. iv. fol. 90, in the Lambeth library

Yet if they had been never for you, but contrarily against you, I thought my credit, joined with the approbation and mediation of her greatest counsellors, might prevail in a greater matter than this; and urged her, that though she could not signify her mind to others, I might have a secret promise, wherein I should receive great comfort, as in the contrary great unkindness. She said she was neither persuaded nor would hear of it till Easter, when she might advise with her council, who were now all absent; and therefore in passion bid me go to bed, if I would talk of nothing else. Wherefore in passion I went away, saying, while I was with her, I could not but solicit for the cause and the man I so much affected; and therefore I would retire myself till I might be more graciously heard; and so we parted. To-morrow I will go hence of purpose, and on Thursday I will write an expostulating letter to her. That night or upon Friday morning I will be here again, and follow on the same course, stirring a discontentment in her, &c. And so wish you all happiness, and rest

Your most assured friend,

ESSEX.

Indorsed,  
March 28, 1594.

THE EARL OF ESSEX TO MR. FRANCIS BACON.

SIR,

I HAVE now spoken with the queen, and I see no stay from obtaining a full resolution of that we desire. But the passion she is in by reason of the tales that have been told her against Nicholas Clifford, with whom she is in such rage, for a matter, which I think you have heard of, doth put her infinitely out of quiet; and her passionate humour is nourished by some foolish women. Else I find nothing to distaste us, for she doth not contradict confidently; which they, that know the minds of women, say is a sign of yielding. I will to-morrow take more time to deal with her, and will sweeten her with all the art I have to make *benevolum auditorem*. I have already spoken with Mr. Vice-chamberlain; ¶ and will to-morrow speak with the rest. Of Mr. Vice-chamberlain you may assure yourself; for so much he hath faithfully promised me. The exceptions against the competitors I will use to-morrow; for then I do resolve to have a full and large discourse, having prepared the queen to-night to assign me a time under colour of some such business, as I have pretended. In the mean time I must tell you, that I do not respect either my absence, or my showing a discontentment in going away, for I was received at my return, and I think I shall not be the worse. And for that I am oppressed with multitude of letters that are come, of which I must

§ Probably Laurence Tanfield, made lord chief baron of the Exchequer in June 1607.

¶ Among the Papers of Antony Bacon, Esq. vol. iv. fol. 89, in the Lambeth library.

¶ Sir Thomas Heneage.

give the queen some account to-morrow morning, I therefore desire to be excused for writing no more to-night : to-morrow you shall hear from me again. I wish you what you wish yourself in this and all things else, and rest

Your affectionate friend,  
ESSEX.

This Friday at night.  
Indorsed, March 29, 1594.

MR. FRANCIS BACON TO THE EARL OF  
ESSEX.\*

MY LORD,

I THANK your lordship very much for your kind and comfortable letter, which I hope will be followed at hand with another of more assurance. And I must confess this very delay hath gone so near me, as it hath almost overthrown my health ; for when I revolved the good memory of my father, the near degree of alliance I stand in to my lord treasurer, your lordship's so signalled and declared favour, the honourable testimony of so many counsellors, the commendations unlaboured, and in sort offered by my lords the judges and the master of the rolls elect ; † that I was voiced with great expectation, and, though I say it myself, with the wishes of most men, to the higher place ; ‡ that I am a man, that the queen hath already done for ; and that princes, especially her Majesty, love to make an end where they begin ; and then add hereunto the obscureness and many exceptions to my competitors : when, I say, I revolve all this, I cannot but conclude with myself, that no man ever read a more exquisite disgrace ; and therefore truly, my lord, I was determined, if her Majesty reject me, this to do. My nature can take no evil ply ; but I will, by God's assistance, with this disgrace of my fortune, and yet with that comfort of the good opinion of so many honourable and worthy persons, retire myself with a couple of men to Cambridge, and there spend my life in my studies and contemplations without looking back. I humbly pray your lordship to pardon me for troubling you with my melancholy. For the matter itself, I commend it to your love ; only I pray you communicate afresh this day with my lord treasurer and Sir Robert Cecil ; and if you esteem my fortune, remember the point of precedency. The objections to my competitors your lordship knoweth partly. I pray spare them not, not over the queen, but to the great ones, to show your confidence, and to work their distrust. Thus longing exceedingly to exchange troubling your lordship with serving you, I rest

Your lordship's, in most entire and faithful service,

FRANCIS BACON.

I humbly pray your lordship I may hear from you some time this day.

30th March, 1594.

\* Among the Papers of Antony Bacon, Esq. vol. iii. fol. 62, Lambeth library.

† Sir Thomas Egerton.

‡ That of attorney-general.

MR. FRANCIS BACON TO SIR ROBERT  
CECIL.‡

MY MOST HONOURABLE GOOD COUSIN,

YOUR honour in your wisdom doth well perceive, that my access at this time is grown desperate in regard of the hard terms, that as well the earl of Essex as Mr. Vice-chamberlain, who were to have been the means thereof, stand in with her Majesty, according to their occasions. And therefore I am only to stay upon that point of delaying and preserving the matter entire till a better constellation ; which, as it is not hard, as I conceive, considering the French business and the instant progress, &c. so I commend in special to you the care, who in sort assured me thereof, and upon whom now, in my lord of Essex's absence, I have only to rely ; and, if it be needful, I humbly pray you to move my lord your father to lay his hand to the same delay. And so I wish you all increase of honour.

Your honour's poor kinsman in faithful service  
and duty,

FRANCIS BACON.

From Gray's-Inn, this 1st of May, 1594.

SIR ROBERT CECIL'S ANSWER.¶

COUSIN,

I DO think nothing cut the throat more of your present access than the earl's being somewhat troubled at this time. For the delaying I think it not hard, neither shall there want my best endeavour to make it easy, of which I hope you shall not need to doubt by the judgment which I gather of divers circumstances confirming my opinion. I protest I suffer with you in mind, that you are thus gravelled ; but time will founder all your competitors, and set you on your feet, or else I have little understanding.

EARL OF ESSEX TO MR. FRANCIS BACON.¶

SIR,

I WROTE not to you till I had a second conference with the queen, because the first was spent only in compliments ; she in the beginning excepted all business : this day she hath seen me again. After I had followed her humour in talking of those things, which she would entertain me with, I told her, in my absence I had written to Sir Robert Cecil, to solicit her to call you to that place, to which all the world had named you ; and being now here, I must follow it myself ; for I know what service I should do her in procuring you the place ; and she knew not how great a comfort I should take in it. Her answer in playing just was, that she came not to me for that, I should talk of those things when I

‡ Among the Papers of Antony Bacon, Esq. vol. iv. fol. 122, in the Lambeth library.

¶ Ibid.

¶ Ibid.

came to her, not when she came to me; the term was coming, and she would advise. I would have replied, but she stopped my mouth. To-morrow or the next day I will go to her, and then this excuse will be taken away. When I know more, you shall hear more; and so I end full of pain in my head, which makes me write thus confusedly.

Your most affectionate friend.

THE SAME TO THE SAME.\*

Sir,

I WENT yesterday to the queen through the galleries in the morning, afternoon, and at night. I had long speech with her of you, wherein I urged both the point of your extraordinary sufficiency, proved to me not only by your last argument, but by the opinion of all men I spake withal, and the point of mine own satisfaction, which, I protested, should be exceeding great, if, for all her unkindness and discomforts past, she should do this one thing for my sake. To the first she answered, that the greatness of your friends, as of my lord treasurer and myself, did make men give a more favourable testimony than else they would do, thinking thereby they pleased us. And that she did acknowledge you had a great wit, and an excellent gift of speech, and much other good learning. But in law she rather thought you could make show to the uttermost of your knowledge, than that you were deep. To the second she said, she showed her mislike to the suit, as well as I had done my affection in it; and that if there were a yielding, it was fitter to be of my side. I then added, that this was an answer, with which she might deny me all things, if she did not grant them at the first, which was not her manner to do. But her Majesty had made me suffer and give way in many things else; which all I should bear, not only with patience, but with great contentment, if she would but grant my humble suit in this one. And for the pretence of the approbation given you upon partiality, that all the world, lawyers, judges, and all, could not be partial to you; for somewhat you were crossed for their own interest, and some for their friends; but yet all did yield to your merit. She did in this as she useth in all, went from a denial to a delay, and said, when the council were all here, she would think of it; and there was no haste in determining of the place. To which I answered, that my sad heart had need of hasty comfort: and therefore her Majesty must pardon me, if I were hasty and importunate in it. When they come we shall see what will be done; and I wish you all happiness, and rest

Your most affectionate friend,

ESSEX.

Indorsed, 18th of May, 1594.

FOULKE GREVILL, ESQ. TO MR. FRANCIS BACON.†

MR. FRANCIS BACON,

SATURDAY was my first coming to the court, from whence I departed again as soon as I had kissed her Majesty's hands, because I had no lodging nearer than my uncle's, which is four miles off. This day I came thither to dinner, and waiting for to speak with the queen, took occasion to tell how I met you, as I passed through London; and among other speeches, how you lamented your misfortune to me, that remained as a withered branch of her roots, which she had cherished and made to flourish in her service. I added what I thought of your worth, and the expectation for all this, that the world had of her princely goodness towards you: which it pleased her Majesty to confess, that indeed you began to frame very well, insomuch as she saw an amends in those little supposed errors, avowing the respect she carried to the dead, with very exceeding gracious inclination towards you. Some comparisons there fell out besides, which I leave till we meet, which I hope shall be this week. It pleased her withal to tell of the jewel you offered her by Mr. Vice-chamberlain, which she had refused, yet with exceeding praise. I marvel, that as a prince she should refuse those havings of her poor subjects, because it did include a small sentence of despair; but either I deceive myself, or she was resolved to take it; and the conclusion was very kind and gracious. Sure as I will 100*l.* to 50*l.* that you shall be her solicitor, and my friend: in which mind and for which mind I commend you to God. From the court this Monday in haste,

Your true friend to be commanded by you,

FOULKE GREVILL.

We cannot tell whether she come to ——— or stay here. I am much absent for want of lodging; wherein my own man hath only been to blame.

Indorsed, 17th June, 1594.

MR. FRANCIS BACON TO THE QUEEN.‡

MOST GRACIOUS AND ADMIRABLE SOVEREIGN,

As I do acknowledge a providence of God towards me, that findeth it expedient for me *tolerare jugum in juventute mea*: so this present arrest of mine by his Divine Majesty from your Majesty's service is not the least affliction, that I have proved; and I hope your Majesty doth conceive, that nothing under mere impossibility could have detained me from earning so gracious a vail, as it pleased your Majesty to give me. But your Majesty's service by the grace of God shall take no lack thereby; and thanks to God, it hath lighted upon him, that may be best spared. Only the discomfort is mine, who nevertheless have the private comfort, that in the time I

† Ibid. folio 132.

‡ Ibid. fol. 141 and 156.

\* Among the papers of Antony Bacon, Esq. vol. iv. fol. 123, in the Lambeth library.

have been made acquainted with this service, it hath been my hap to stumble upon somewhat unseen, which may import the same, as I made my lord keeper acquainted before my going. So leaving it to God to make a good end of a hard beginning, and most humbly craving your Majesty's pardon for presuming to trouble you, I recommend your sacred Majesty to God's tenderest preservation.

Your sacred Majesty's in most humble obedience and devotion,

FR. BACON.

From Huntingdon, this  
20th of July, 1594.

MR. FRANCIS BACON TO HIS BROTHER  
ANTONY.\*

MY GOOD BROTHER,

ONE day draweth on another; and I am well pleased in my being here; for methinks solitariness collecteth the mind, as shutting the eyes doth the sight. I pray you therefore advertise me what you find, by my lord of Essex, (who, I am sure, hath been with you,) was done last Sunday; and what he conceiveth of the matter. I hold in one secret, and therefore you may trust your servant. I would be glad to receive my parsonage rent as soon as it cometh. So I leave you to God's good preservation.

Your ever loving brother,

FR. BACON.

From Twickenham-Park, this  
Tuesday morning, 1594.

Indorsed, 16 Oct. 1594.

EARL OF ESSEX TO MR. FRANCIS BACON.†

ESSEX.

Indorsed, 23 Oct. 1594.

MR. FRANCIS BACON TO HIS BROTHER  
ANTONY.‡

GOOD BROTHER,

SINCE I saw you this hath passed. Tuesday, though sent for, I saw not the queen. Her Majesty

alleged she was then to resolve with the council upon her places of law. But this resolution was *ut supra*; and note, the rest of the counsellors were persuaded she came rather forwards than otherwise; for against me she is never peremptory but to my lord of Essex. I missed a line of my lord keeper's; but thus much I hear otherwise. The queen seemeth to apprehend my travel. Whereupon I was sent for by Sir Robert Cecil in sort as from her Majesty; himself having of purpose immediately gone to London to speak with me; and not finding me there, he wrote to me. Whereupon I came to the court, and upon his relation to me of her Majesty's speeches, I desired leave to answer it in writing; not, I said, that I mistrusted his report, but mine own wit; the copy of which answer I send. We parted in kindness *secundum exterius*. This copy you must needs return; for I have no other; and I wrote this by memory after the original was sent away. The queen's speech is after this sort. *Why? I have made no solicitor. Hath any body carried a solicitor with him in his pocket? But he must have it in his own time, (as if it were but yesterday's nomination,) or else I must be thought to cast him away.* Then her Majesty sweareth thus; "If I continue this manner, she will seek all England for a solicitor rather than take me. Yes, she will send for Heuston and Coventry § to-morrow next," as if she would swear them both. Again she entereth into it, that "she never deals so with any as with me, (*in hoc erratum non est,*) she hath pulled me over the bar, (*note the words, for they cannot be her own,*) she hath used me in her greatest causes. But this is Essex; and she is more angry with him than with me." And such like speeches so strange as I should lose myself in it, but that I have cast off the care of it. My conceit is, that I am the least part of mine own matter. But her Majesty would have a delay, and yet would not bear it herself. Therefore she giveth no way to me, and she perceiveth her council giveth no way to others; and so it sticketh as she would have it. But what the secret of it is, *oculus aquilæ non penetravit*. My lord || continueth on kindly and wisely a course worthy to obtain a better effect than a delay, which to me is the most unwelcome condition.

Now to return to you the part of a brother, and to render you the like kindness, advise you, whether it were not a good time to set in strongly with the queen to draw her to honour your travels. For in the course I am like to take, it will be a great and necessary stay to me, besides the natural comfort I shall receive. And if you will have me deal with my lord of Essex, or otherwise break it by mean to the queen, as that, which shall give me full contentment, I will do it as effectually, and with as much good discretion, as I can. Wherein if you aid me with your direction, I shall observe it. This as I did ever account it sure and certain to be accomplished, in case myself had been placed, and therefore deferred it till then, as to the proper op-

\* Among the Papers of Antony Bacon, Esq. vol. iv. fol. 197, in the Lambeth library.

† Ibid. fol. 195.

‡ Ibid. fol. 28.

§ Thomas Coventry, afterwards one of the justices of the common pleas, and father of the lord keeper Coventry.

|| Essex.

portunity; so now that I see such delay in mine own placing, I wish *ex animo* it should not expect.

I pray you let me know what mine uncle Killigrew will do;\* for I must be more careful of my credit than ever, since I receive so little thence where I deserved best. And to be plain with you, I mean even to make the best of those small things I have with as much expedition, as may be without loss; and so sing a mass of *requiem*, I hope, abroad. For I know her Majesty's nature, that she neither careth though the whole surname of Bacons travelled, nor of the Cecils neither.

I have here an idle pen or two, specially one, that was cozened, thinking to have got some money this term. I pray send me somewhat else for them to write out besides your Irish collection, which is almost done. There is a collection of king James, of foreign states, largeliest of Flanders; which, though it be no great matter, yet I would be glad to have it. Thus I commend you to God's good protection.

Your entire loving brother,

FR. BACON.

From my lodging at Twickenham-Park,  
this 25th of January, 1594.

LETTER OF MR. FRANCIS BACON TO SIR ROBERT CECIL,† A COPY OF WHICH WAS SENT WITH THE PRECEDING TO MR. ANTONY BACON.

SIR,

Your honour may remember, that upon relation of her Majesty's speech concerning my travel, I asked leave to make answer in writing; not but I knew then what was true, but because I was careful to express it without doing myself wrong. And it is true, I had then opinion to have written to her Majesty: but since weighing with myself, that her Majesty gave no ear to the motion made by yourself, that I might answer by mine own attendance, I began to doubt the second degree, whether it might not be taken for presumption in me to write to her Majesty; and so resolved, that it was best for me to follow her Majesty's own way in committing it to your report.

It may please your honour to deliver to her Majesty, first, that it is an exceeding grief to me, that any not motion (for it was not a motion) but mention,

\* Mr. Antony Bacon had written to Sir Henry Killigrew on the 14th of January, 1594-5, to desire the loan of two hundred pounds for six months. Vol. iv. fol. 4.

† Among the Papers of Antony Bacon, Esq. vol. iv. fol. 31.

‡ Bishop Gibson's papers, vol. v. No. 118.

§ An account of this device, which was much applauded, is given by Mr. Rowland Whyte to Sir Robert Sydney, in a letter dated at London, Saturday the 22nd of November, 1595, and printed in the *Letters and Memorials of State of the Sydney family*, vol. i. p. 362. According to this letter, the earl of Essex, some considerable time before he came himself into the tilt-yard, sent his page with some speech to the queen, who returned with her Majesty's glove; and when his lordship came himself, he was met by an old hermit, a secretary of state, a brave soldier, and an esquire. The first presented him with a book of meditations; the second with political discourses; the third with orations of bravely fought battles; the

that should come from me, should offend her Majesty, whom for these one and twenty years (for so long it is, that I kissed her Majesty's hands upon my journey into France) I have used the best of my wits to please.

Next, mine answer standing upon two points, the one, that this mention of travel to my lord of Essex was no present motion, suit, or request; but casting the worst of my fortune with an honourable friend, that had long used me privately, I told his lordship of this purpose of mine to travel, accompanying it with these very words, that upon her Majesty's rejecting me with such circumstance, though my heart might be good, yet mine eyes would be sore, that I should take no pleasure to look upon my friends; for that I was not an impudent man, that could face out a disgrace; and that I hoped her Majesty would not be offended, that, not able to endure the sun, I fled into the shade. The other, that it was more than this; for I did expressly and particularly (for so much wit God then lent me) by way of caveat restrain my lord's good affection, that he should in no wise utter or mention this matter till her Majesty had made a solicitor: wherewith (now since my looking upon your letter) I did in a dutiful manner challenge my lord, who very honourably acknowledged it, seeing he did it for the best: and therefore I leave his lordship to answer for himself. All this my lord of Essex can testify to be true; and I report me to yourself, whether at the first, when I desired deliberation to answer, yet nevertheless said, I would to you privately declare what had passed, I said not in effect so much. The conclusion shall be, that wheresoever God and her Majesty shall appoint me to live, I shall truly pray for her Majesty's preservation and felicity. And so I humbly commend me to you.

Your poor kinsman to do you service,

FR. BACON.

Indorsed, January, 1594.

*The Speeches † drawn up by Mr. FRANCIS BACON for the Earl of ESSEX in a device § exhibited by his lordship before Queen ELIZABETH, on the anniversary of her accession to the throne November 17, 1595.*

#### THE SQUIRE'S SPEECH.

Most excellent and most glorious queen, give me

fourth was his own follower to whom the other three imparted much of their purpose before the earl came in. "Another," adds Mr. Whyte, "devised with him, persuading him to this and that course of life, according to their inclinations. Comes into the tilt-yard, unthought upon, the ordinary post-boy of London, a ragged villain, all bemired, upon a poor lean jade galloping and blowing for life, and delivered the secretary a packet of letters, which he presently offered my lord of Essex. And with this dumb show our eyes were fed for that time. In the after-supper, before the queen; they first delivered a well-penned speech to move this worthy knight to leave his following of love, and to betake him to heavenly meditation; the secretary's all tending to have him follow matters of state; the soldier's persuading him to the war: but the squire answered them all, and concluded with an excellent, but too plain, English, that this knight would never forsake his mistress's love, whose virtue made all his thoughts divine; whose wisdom

leave, I beseech your Majesty, to offer my master's complaint and petition; complaint, that coming hither to your Majesty's most happy day, he is tormented with the importunity of a melancholy dreaming hermit, a mutinous brain-sick soldier, and a busy tedious secretary. His petition is, that he may be as free as the rest; and, at least, whilst he is here, troubled with nothing but with care how to please and honour you.

#### THE HERMIT'S SPEECH IN THE PRESENCE.

THOUGH our ends be diverse, and therefore may be one more just than another; yet the complaint of this Squire is general, and therefore alike unjust against us all. Albeit he is angry, that we offer ourselves to his master uncalled, and forgets we come not of ourselves, but as the messengers of self-love, from whom all that comes should be well taken. He saith, when we come, we are importunate. If he mean, that we err in form, we have that of his master, who being a lover, useth no other form of soliciting. If he will charge us to err in matter, I for my part will presently prove, that I persuade him to nothing but for his own good. For I wish him to leave turning over the book of fortune, which is but a play for children; when there be so many books of truth and knowledge, better worthy the revolving; and not fix his view only upon a picture in a little table, when there be so many tables of historiae, yea to life, excellent to behold and admire. Whether he believe me or no, there is no prison to the prison of the thoughts, which are free under the greatest tyrants. Shall any man make his conceit, as an anchorite, mured up with the compass of one beauty or person, that may have the liberty of all contemplation? Shall he exchange the sweet travelling through the universal variety, for one wearisome and endless round or labyrinth? Let thy master, Squire, offer his service to the *muses*. It is long since they received any into their court. They give alms continually at their gate, that many come to live upon; but few they have ever admitted into their palace. There shall he find secrets not dangerous to know; sides and parties not factious to hold; precepts and commandments not penal to disobey. The gardens of love, wherein he now placeth himself, are fresh to-day, and fading to-morrow, as the sun comforts them, or is turned from them. But the gardens of the *muses* keep the privilege of the golden age; they ever flourish, and are in league with time. The monuments of wit survive the monuments of power. The verses of a poet endure without a syllable lost, while states and empires pass many periods. Let him not think he shall descend; for he is now upon a hill, as a ship is mounted upon the ridge of a wave: but that hill of

taught him all true policy; whose beauty and worth were at all times able to make him fit to command armies. He showed all the defects and imperfections of all their times; and therefore thought his course of life to be best in serving his mistress." Mr. Whyte then mentions, that the part of the old *hermit* was performed by him, who at Cambridge played that of *Giraldi*; that Morley acted the *secretary*, and that the *soldier* was represented by him, who acted the *pe-*

the *muses* is above tempesta, always clear and calm; a hill of the goodliest discovery that man can have, being a prospect upon all the errors and wanderings of the present and former times. Yea, in some cliff it leadeth the eye beyond the horizon of time, and giveth no obscure divinations of times to come. So that if he will indeed lead *vitam vitam*, a life that unites safety and dignity, pleasure and merit; if he will win admiration without envy; if he will be in the feast, and not in the throng; in the light, and not in the heat; let him embrace the life of study and contemplation. And if he will accept of no other reason, yet because the gift of the *muses* will enworthy him in love, and where he now looks on his mistress's outside with the eyes of sense, which are dazzled and amazed, he shall then behold her high perfections and heavenly mind with the eyes of judgment, which grow stronger by more nearly and more directly viewing such an object.

#### THE SOLDIER'S SPEECH.

SQUIRE, the good old man hath said well to you; but I dare say, thou wouldst be sorry to leave to carry thy master's shield, and to carry his books: and I am sure thy master had rather be a falcon, a bird of prey, than a singing bird in a cage. The *muses* are to serve martial men, to sing their famous actions; and not to be served by them. Then hearken to me.

It is the war that giveth all spirits of valour, not only honour, but contentment. For mark, whether ever you did see a man grown to any honourable commandment in the wars, but whensoever he gave it over, he was ready to die with melancholy? Such a sweet felicity is that noble exercise, that he, that hath tasted it thoroughly, is distasted for all other. And no marvel; for if the hunter takes such solace in his chace; if the matches and wagers of sport pass away with such satisfaction and delight; if the looker on be affected with pleasure in the representation of a feigned tragedy; think what contentment a man receiveth, when they, that are equal to him in nature, from the height of insolency and fury are brought to the condition of a chased prey; when a victory is obtained, whereof the victories of games are but counterfeit and shadows; and, when in a lively tragedy, a man's enemies are sacrificed before his eyes to his fortune.

Then for the dignity of military profession, is it not the truest and perfectest practice of all virtues? of wisdoms in disposing those things, which are most subject to confusion and accident: of justice, in continual distributing rewards: of temperance, in exercising of the straitest discipline: of fortitude, in toleration of all labours, and abstinence from effeminate delights: of constancy, in bearing and

*dant*, and that Mr. Tobie Matthew was the *squire*. "The world," says Mr. Whyte, "makes many untrue constructions of these speeches, comparing the hermit and the secretary to two of the lords; and the soldier to Sir Roger Williams. But the queen said, that if she had thought there had been so much said of her, she would not have been there that night; and so went to bed."

digesting the greatest variety of fortune. So that when all other places and professions require but their several virtues, a brave leader in the wars must be accomplished with all. It is the wars that are the tribunal seat, where the highest rights and possessions are decided; the occupation of kings, the root of nobility, the protection of all estates. And lastly, lovers never thought their profession sufficiently graced, till they have compared it to a warfare. All, that in any other profession can be wished for, is but to live happily; but to be a brave commander in the field, death itself doth crown the head with glory. Therefore, Squire, let thy master go with me; and though he be resolved in the pursuit of his love, let him aspire to it by the noblest means. For ladies count it no honour to subdue them with their fairest eyes, which will be daunted with the fierce encounter of an enemy. And they will quickly discern a champion fit to wear their glove, from a page not worthy to carry their pantofle. Therefore, I say again, let him seek his fortune in the field, where he may either lose his love, or find new argument to advance it.

#### THE STATESMAN'S SPEECH.

SQUIRE, my advice to thy master shall be as a token wrapped up in words: but then will it show itself fair when it is unfolded in his actions. To wish him to change from one humour to another, were but as if, for the cure of a man in pain, one should advise him to lay upon the other side, but not enable him to stand on his feet. If from a sanguine delightful humour of love, he turn to a melancholy retired humour of contemplation, or a turbulent boiling humour of the wars; what doth he but change tyrants? Contemplation is a dream; love, a trance; and the humour of war is raving. These be shifts of humour, but no reclaiming to reason. I debar him not studies nor books, to give him stay and variety of conceit, refresh his mind, to cover aloth and indisposition, and to draw to him from those that are studious, respect and commendation. But let him beware, lest they possess not too much of his time; that they abstract not his judgment from present experience, nor make him presume upon knowing much, to apply the less. For the wars, I deny him no enterprise, that shall be worthy in greatness, likely in success, or necessary in duty; not mixed with any circumstance of jealousy, but duly laid upon him. But I would not have him take the alarm from his own humour, but from the occasion; and I would again he should know an employment from a discourting. And for his love, let it not disarm his heart within, as to make him too credulous to favours, nor too tender to unkindnesses, nor too apt to depend upon the heart he knows not. Nay in his demonstration of love, let him not go too far; for these seely lovers, when they profess such infinite affection and obligation, they tax themselves at so high a rate, that they are ever under arrest. It makes their service seem nothing, and every cavil or imputation very great.

But what, Squire, is thy master's end? If to make the prince happy he serves, let the instructions to employ men, the relations of ambassadors, the treaties between princes, and actions of the present time, be the books he reads: let the orations of wise princes, or experimented counsellors, in council or parliament, and the final sentences of grave and learned judges in weighty and doubtful causes, be the lecturers he frequents. Let the holding of affection with confederates without charge, the frustrating of the attempts of enemies without battles, the entitling of the crown to new possessions without show of wrong, the filling of the prince's coffers without violence, the keeping of men in appetite without impatience, be the inventions he seeks out. Let policy and matters of state be the chief, and almost the only thing he intends. But if he will believe *Philautia*, and seek most his own happiness, he must not of them embrace all kinds, but make choice, and avoid all matter of peril, displeasure, and charge, and turn them over to some novices, that know not manacles from bracelets, nor burdens from robes. For himself, let him set for matters of commodity and strength, though they be joined with envy. Let him not trouble himself too laboriously to sound into any matter deeply, or to execute any thing exactly; but let himself make himself cunning rather in the humours and drifts of persons, than in the nature of business and affairs. Of that it sufficeth to know only so much, as may make him able to make use of other men's wits, and to make again a smooth and pleasing report. Let him entertain the proposition of others, and ever rather let him have an eye to the circumstances, than to the matter itself; for then shall he ever seem to add somewhat of his own: and besides, when a man doth not forget so much as a circumstance, men do think his wit doth superabound for the substance. In his counsels let him not be confident; for that will rather make him obnoxious to the success; but let him follow the wisdom of oracles, which uttered that which might ever be applied to the event. And ever rather let him take the side which is likeliest to be followed, than that which is soundest and best, that every thing may seem to be carried by his direction. To conclude, let him be true to himself, and avoid all tedious reaches of state, that are not merely pertinent to his particular. And if he will needs pursue his affection, and go on his course, what can so much advance him in his own way? The merit of war is too outwardly glorious to be inwardly grateful: and it is the exile of his eyes, which looking with such affection upon the picture, cannot but with infinite contentment behold the life. But when his mistress shall perceive, that his endeavours are become a true support of her, a discharge of her care, a watchman of her person, a scholar of her wisdom, an instrument of her operation, and a conduit of her virtue; this, with his diligences, accesses, humility, and patience, may move her to give him further degrees and approaches to her favour. So that I conclude, I have traced him the way to that, which hath been granted to some few, *amare et sapere*, to love and to be wise.

## THE REPLY OF THE SQUIRE.

WANDERING Hermit, storming Soldier, and hollow Statesman, the enchanting orators of *Philautia*, which have attempted by your high charms to turn resolved *Erophilus* into a statue deprived of action, or into a vulture attending about dead bodies, or into a monster with a double heart; with infinite assurance, but with just indignation and forced patience, I have suffered you to bring in play your whole forces. For I would not vouchsafe to combat you one by one, as if I trusted to the goodness of my breath, and not the goodness of my strength, which little needeth the advantage of your severing, and much less of your disagreeing. Therefore, first, I would know of you all what assurance you have of the fruit whereto you aspire.

You, Father, that pretend to truth and knowledge, how are you assured that you adore not vain chimeras and imaginations? that in your high prospect, when you think men wander up and down; that they stand not indeed still in their place? and it is some smoke or cloud between you and them, which moveth, or else the dazzling of your own eyes? Have not many, which take themselves to be inward counsellors with nature, proved but idle believers, which told us tales, which were no such matter? And, Soldier, what security have you for these victories and garlands which you promise to yourself? Know you not of many which have made provision of laurel for the victory, and have been fain to exchange it with cypress for the funeral? of many which have bespoken fame to sound their triumphs, and have been glad to pray her to say nothing of them, and not to discover them in their flights?

Corrupt Statesman, you that think by your engines and motions to govern the wheel of fortune, do you not mark, that clocks cannot be long in temper? that jugglers are no longer in request, when their tricks and slights are once perceived? Nay, do you not see, that never any man made his own cunning and practice, without religion and moral honesty, his foundation, but he overbuilt himself, and in the end made his house a windfall? But give ear now to the comparison of my master's condition, and acknowledge such a difference, as is betwixt the melting hailstone and the solid pearl. Indeed it seemeth to depend, as the globe of the earth seemeth to hang, in the air; but yet it is firm and stable in itself. It is like a cube, or a die-form, which toss it or throw it any way, it ever lighteth upon a square. Is he denied the hopes of favours to come? He can resort to the remembrance of contentments past. Destiny cannot repeal that which is past. Doth he find the acknowledgment of his affection small? He may find the merit of his affection the greater. Fortune cannot have power over that which is within. Nay, his falls are like the falls of Antæus; they renew his strength. His clouds are like the clouds of harvest, which make the sun break forth with greater force. His wanes are changes like the moon's, whose globe is all light towards the sun, when it is all dark towards the world; such is the excellency

of her nature, and of his estate. Attend, you bea-ds-man of the muses, you take your pleasure in a wilderness of variety; but it is but of shadows. You are as a man rich in pictures, medals, and crystals. Your mind is of the water, which taketh all forms and impressions, but is weak of substance. Will you compare shadows with bodies, picture with life, variety of many beauties with the peerless excellency of one? the element of water with the element of fire? and such is the comparison between knowledge and love.

Come out, man of war; you must be ever in noise. You will give laws, and advance force, and trouble nations, and remove land-marks of kingdoms, and hunt men, and pen tragedies in blood: and that, which is worst of all, make all the virtues accessory to bloodshed. Hath the practice of force so deprived you of the use of reason, as that you will compare the interruption of society with the perfection of society? the conquest of bodies with the conquest of spirits? the terrestrial fire, which destroyeth and dissolveth, with the celestial fire, which quickeneth and giveth life? And such is the comparison between the soldier and the lover.

And as for you, untrue Politique, but truest bond-man to *Philautia*, you that presume to bind occasion, and to overwork fortune, I would ask you but one question. Did ever any lady, hard to please, or disposed to exercise her lover, enjoin him so good tasks and commandments, as *Philautia* exacteth of you? While your life is nothing but a continual acting upon a stage; and that your mind must serve your humour, and yet your outward person must serve your end; so as you carry in one person two several servitudes to contrary masters. But I will leave you to the scorn of that mistress, whom you undertake to govern; that is, to fortune, to whom *Philautia* hath bound you. And yet, you commissioner of *Philautia*, I will proceed one degree farther: if I allowed both of your assurance, and of your values, as you have set them, may not my master enjoy his own felicity, and have all yours for advantage? I do not mean, that he should divide himself in both pursuits, as in your feigning tales towards the conclusion you did yield him; but because all these are in the hands of his mistress more fully to bestow, than they can be attained by your addresses, knowledge, fame, fortune. For the muses, they are tributary to her Majesty for the great liberties they have enjoyed in her kingdom, during her most flourishing reign; in thankfulness whereof they have adorned and accomplished her Majesty with the gifts of all the sisters. What library can present such a story of great actions, as her Majesty carrieth in her royal breast by the often return of this happy day? What worthy author or favourite of the muses, is not familiar with her? Or what language, wherein the muses have used to speak, is unknown to her? Therefore, the hearing of her, the observing of her, the receiving instructions from her, may be to *Erophilus* a lecture exceeding all dead monuments of the muses. For *Fame*, can all the exploits of the war win him such a title, as to have the name of favoured and selected

servant of such a queen? For *Fortune*, can any insolent politique promise to himself such a fortune, by making his own way, as the excellency of her nature cannot deny to a careful, obsequious, and dutiful servant? And if he could, were it equal honour to obtain it by a shop of cunning, as by the gift of such a hand?

Therefore *Erophilus's* resolution is fixed: he renounceth *Philautia*, and all her enchantments. For her recreation, he will confer with his muse: for her defence and honour, he will sacrifice his life in the wars, hoping to be embalmed in the sweet odours of her remembrance. To her service will he consecrate all his watchful endeavours, and will ever bear in his heart the picture of her beauty; in his actions, of her will; and in his fortune, of her grace and favour.

TO SIR THOMAS EGERTON, LORD KEEPER  
OF THE GREAT SEAL.\*

MAY IT PLEASE YOUR HONOURABLE GOOD LORDSHIP,

OF your lordship's honourable disposition, both generally and to me, I have that belief, as what I think, I am not afraid to speak; and what I would speak, I am not afraid to write. And therefore I have thought to commit to letter some matter, whereunto [which] I have been [conceived] led [into the same] by two motives; the one, the consideration of my own estate; the other, the appetite, which I have to give your lordship some evidence of the thoughtful and voluntary desire, which is in me, to merit well of your most honourable lordship: which desire in me hath been bred chiefly by the consent I have to your great virtue come in good time to do this state pleasure; and next by your loving courses held towards me, especially in your nomination and enablement of me long since to the solicitor's place, as your lordship best knows. Which your two honourable friendships I esteem so much [in so great sort] as your countenance and favour in my practice, which are somewhat to my poverty; yet I count them not the best [greatest] part of the obligation, wherein I stand bound to you.

And now, my lord, I pray you right humbly, that you will vouchsafe your honourable licence and patience, that I may express to you, what in a doubtful liberty I have thought fit, partly by way of praying your help, and partly by way of offering my good will; partly again by way of pre-occupating your conceit, lest you may in some things mistake.

My estate, to confess a truth to your lordship, is weak and indebted, and needeth comfort; for both my father, though I think I had greatest part in his love to all his children, yet in his wisdom served me in as a last comer; and myself, in mine own industry, have rather referred and aspired to virtue

than to gain; whereof I am not yet wise enough to repent me. But the while, whereas Solomon speaketh that *want cometh first like a wayfaring man*, and after like *an armed man*, I must acknowledge to your lordship myself to [be] in *primo gradu*; for it stealeth upon me. But for the second, that it should not be able to be resisted, I hope in God I am not in that case; for the preventing whereof, as I do depend upon God's providence all in all, so in the same his providence I see opened unto me three not unlikely expectations of help: the one, my practice; the other, some proceeding in the queen's service; the third, [the] place I have in reversion; which, as it standeth now unto me, is but like another man's ground reaching upon my house, which may mend my prospect, but it doth not fill my barn.

For my practice, it presupposeth my health, which, if I should judge of as a man that judgeth of a fair morrow by a fair evening, I might have reason to value well. But myself having this error of mind, that I am apter to conclude in every thing of change from the present tense than of a continuance, do make no such appointment. Besides, I am not so far deceived in myself, but that I know very well, and I think your lordship is *major corde*, and in your wisdom you note it more deeply than I can in myself, that in practising the law, I play not all my best game, which maketh me accept it with a *nisi quod potius*, as the best of my fortune, and a thing agreeable to better gifts than mine, but not to mine.

For my placing, your lordship best knows, that when I was much dejected with her Majesty's strange dealing towards me, it pleased you of your singular favour so far to comfort and encourage me, as to hold me worthy to be excited to think of succeeding your lordship in your second place; † signifying in your plainness, that no man should better content yourself: which your exceeding favour you have not since varied from, both in pleading the like signification into the hands of some of my best friends, and also in an honourable and answerable nomination and commendation of me to her Majesty. Wherein I hope your lordship, if it please you to call to mind, did find me neither overweening in presuming too much upon it, nor much deceived in my opinion of the event for the continuing it still in yourself, nor sleepy in doing some good offices to the same purpose.

Now upon this matter I am to make your lordship three humble requests, which had need be very reasonable, coming so many together. First, that your lordship will hold and make good your wishes towards me in your own time; for no other I mean it; and in thankfulness thereof, I will present your lordship with the fairest flower of my estate; though it yet bear no fruit; and that is the poor reversion, which of her Majesty's gift I hold; in the which I shall be no less willing Mr. John Egerton, ‡ if it seem

\* From the original draught in the library of Queen's College, Oxford, Arch. D. 2, the copy of which was communicated to me by Thomas Tyrwhitt, Esq. clerk of the honourable House of Commons. Sir William Dugdale in his *Baronage of England*, vol. ii. p. 438, has given two short passages of this letter transcribed by him from the unpublished original.

† The mastership of the rolls; which office the lord keeper held till the lord Bruce was advanced to it, May 18, 1603.

‡ Second son of the lord keeper, whose eldest son Sir Thomas, knighted at Cadiz upon the taking it in 1596 by the earl of Essex, died in Ireland, whither he attended that earl in 1599, as Mr. John Egerton likewise did, and was knighted by his lordship, and at the coronation of king James was

good to you, should succeed me in that, than I would be willing to succeed your lordship in the other place.

My next humble request is, that your lordship would believe a protestation, which is, that if there be now against the next term, or hereafter, for a little bought knowledge of the court teacheth me to foresee these things, any heaving or palting at that place, upon mine honesty and troth, my spirit is not in, nor with it; I, for my part, being resolutely resolved not to proceed one pace or degree in this matter but with your lordship's foreknowledge and approbation. The truth of which protestation will best appear, if by any accident, which I look not for, I shall receive any farther strength. For, as I now am, your lordship may impute it only to policy alone in me, that being without present hope myself, I would be content the matter sleep.

My third humble petition to your lordship is, that you would believe an intelligence, and not take it for a fiction in court; of which manner I like Cicero's speech well, who writing to Appius Claudius, saith; "Sin attem quæ tibi ipsi in mentem veniant, ea aliis tribuere soles, inducis genus sermonis in amicitiam minime liberale." But I do assure your lordship, it is both true and fresh, and from a person of that sort, as having some glimpse of it before, I now rest fully confirmed in it: and it is this, that there should be a plot laid of some strength between Mr. Attorney-General,\* and Mr. Attorney of the wards,† for the one's remove to the rolls, and the other to be drawn to his place. Which, to be plain with your lordship, I do apprehend much. For first, I know Mr. Attorney-General, whatsoever he pretendeth or protesteth to your lordship, or any other, doth seek it; and I perceive well by his dealing towards his best friends, to whom he oweth most, how perfectly he hath conned the adage of "proximus egomet mihi:" and then I see no man ripened for the place of the rolls in competition with Mr. Attorney-General. And lastly, Mr. Attorney of the wards being noted for a pregnant and stirring man, the objection of any hurt her Majesty's business may receive in her causes by the drawing up of Mr. Attorney-General, will wax cold. And yet nevertheless, if it may please your lordship to pardon me so to say, of the second of those placings I think with some scorn; only I commend the knowledge hereof to your lordship's wisdom, as a matter not to be neglected.

And now lastly, my honourable good lord, for my third poor help, I account [it] will do me small good, except there be a heave; and that is this place of the star-chamber. I do confess ingenuously to your lordship out of my love to the public, besides my particular, that I am of opinion, that rules without examples will do little good, at least not to continue; but that there is such a concordance between the time to come and the time passed, as there will be no reforming the one without informing of the other. And I will not, as the proverb is, spit against the made knight of the Bath. He succeeded his father in the titles of baron of Ellesmere and viscount Brackley, and on the 17th of May was created earl of Bridgewater.

\* Coke.

† Probably Sir Thomas Heskett, who died 15th October,

wind, but yield so far to a general opinion, as there was never a more \* \* or particular example. But I submit it wholly to your honourable grave consideration; only I humbly pray you to conceive that it is not any money that I have borrowed of Mr. Mills, nor any gratification I receive for my aid, that makes me show myself any ways in it, but simply a desire to preserve the rights of the office, as far as it is meet and incorrupt; and secondly his importunity, who nevertheless, as far as I see, taketh a course to bring this matter in question to his farther disadvantage, and to be principal in his own harm. But if it be true, that I have heard of more than one or two, that besides this forerunning in taking of fees, there are other deep corruptions, which in an ordinary course are intended to be proved against him; surely, for my part, I am not superstitious, as I will not take any shadow of it, nor labour to stop it, since it is a thing medicinable for the office of the realm. And then if the place by such an occasion or otherwise should come in possession, the better to testify my affection for your lordship, I should be glad, as I offered it to your lordship by way of [surrender,] so in this case to offer it by way of joint-patency, in nature of a reversion, which, as it is now, there wanteth no good will in me to offer, but that both, in that condition it is not worth the offering; and besides, I know not whether my necessity may enforce me to sell it away; which, if it were locked in by any reversion or joint-patency, I were disabled to do for my relief.

Thus your lordship may perceive how assured a persuasion I have of your love towards me, and care of me; which hath made me so freely to communicate of my poor state with your lordship, as I could have done to my honourable father, if he had lived; which I most humbly pray your lordship may be private to yourself, to whom I commit it to be used to such purpose, as in your wisdom and honourable love and favour should seem good. And so humbly craving pardon, I commend your lordship to the divine preservation.

At your lordship's honourable command humbly and particularly.

MR. FRANCIS BACON TO THE EARL OF ESSEX; ON HIS LORDSHIP'S GOING ON THE EXPEDITION AGAINST CADIZ.

MY SINGULAR GOOD LORD,

I HAVE no other argument to write on to your good lordship, but upon demonstration of my deepest and most bounden duty, in fulness whereof I mourn for your lordship's absence, though I mitigate it as much as I can with the hope of your happy success, the greatest part whereof, be it never so great, will be the safety of your most honourable 1605, and has a monument erected to his memory in Westminster Abbey.

‡ Among the Papers of Antony Bacon, Esq. vol. xi. fol. 69, in the Lambeth library.

person : for the which in the first place, and then for the prosperity of your enterprise, I frequently pray. And as in so great discomfort it hath pleased God some ways to regard my desolateness by raising me so great and so worthy a friend in your absence, as the new-placed lord keeper,\* in whose placing as it hath pleased God to establish mightily one of the chief pillars of this estate, that is, the justice of the land, which began to shake and sink, and for that purpose no doubt gave her Majesty strength of heart of herself to do that in six days, which the deepest judgment thought would be the work of many months ; so for my particular, I do find in an extraordinary manner, that his lordship doth succeed my father almost in his fatherly care of me, and love towards me, as much as he professeth to follow him in his honourable and sound courses of justice and estate ; of which so special favour the open and apparent reason I can ascribe to nothing more than the impression, which upon many conferences of long time used between his lordship and me, he may have received, both of your lordship's high love and good opinion towards his lordship, verified in many and singular offices, whereof now the realm, rather than himself, is like to reap the fruit ; and also of your singular affection towards me, as a man chosen by you to set forth the excellency of your nature and mine, though with some error of your judgment. Hereof if it may please your lordship to take knowledge to my lord, according to the style of your wonted kindness, your lordship shall do me great contentment. My lord told me he had written to your lordship, and wished with great affection he had been so lucky, as to have had two hours' talk with you upon those occasions, which have since fallen out. So wishing that God may conduct you by the hand pace by pace, I commend you and your actions to his divine providence.

Your lordship's ever deepliest bounden,

FR. BACON.

10 May, 1596.

THE EARL OF ESSEX TO MR. FRANCIS BACON.†

SIR,

I HAVE thought the contemplation of the art military harder than the execution. But now I see where the number is great, compounded of sea and land forces, the most *tyrones*, and almost all volunteers, the officers equal almost in age, quality, and standing in the wars, it is hard for any man to approve himself a good commander. So great is my zeal to omit nothing, and so short my sufficiency to perform all, as, besides my charge, myself doth afflict myself. For I cannot follow the precedents of our dissolute armies, and my helpers are a little

amazed with me, when they are come from governing a little troop to a great ; and from ——— to all the great spirits of our state. And sometimes I am as much troubled with them, as with all the troops. But though these be warrants for my seldom writing, yet they shall be no excuses for my fainting industry. I have written to my lord keeper and some other friends to have care of you in my absence. And so commending you to God's happy and heavenly protection, I rest

Your true friend,

ESSEX.

Plymouth, this 17th of May, 1596.

MR. FRANCIS BACON TO HIS BROTHER ANTONY.‡

GOOD BROTHER,

YESTERNIGHT Sir John Fortescu§ told me he had, not many hours before, imparted to the queen your advertisements, and the gazette likewise ; which the queen caused Mr. John Stanhope|| to read all over unto her ; and her Majesty conceiveth they be not vulgar. The advertisements her Majesty made estimation of as concurring with other advertisements, and alike concurring also with her opinion of the affairs. So he willed me to return you the queen's thanks. Other particular of any speech from her Majesty of yourself he did not relate to me. For my lord of Essex's and your letters, he said, he was ready and desirous to do his best. But I seemed to make it but a love-wish, and passed presently from it, the rather because it was late in the night, and I mean to deal with him at some better leisure after another manner, as you shall hereafter understand from me. I do find in the speech of some ladies and the very face of the court some addition of reputation, as methinks, to us both ; and I doubt not but God hath an operation in it, that will not suffer good endeavours to perish.

The queen saluted me to-day, as she went to chapel. I had long speech with Sir Robert Cecil this morning, who seemed apt to discourse with me ; yet of yourself *ne verbum quidem*, not so much as a *quomodo valet* ?

This I write to you in haste, *aliud ex alio*, I pray set in a course of acquainting my lord keeper what passeth, at first by me, and after from yourself. I am more and more bound to him.

Thus wishing you good health, I recommend you to God's happy preservation.

Your entire loving brother,

FR. BACON.

From the court, this 30th of May, [1596.]

\* Egerton.

‡ Ibid. vol. xi. fol. 29.

§ Chancellor of the exchequer.

|| Made treasurer of the chamber, in July, 1596, and in May, 1605, created lord Stanhope of Harrington, in Northamptonshire.

TO SIR THOMAS EGERTON, LORD KEEPER  
OF THE GREAT SEAL.\*

IT MAY PLEASE YOUR LORDSHIP,

I AM to make humble complaint to your lordship of some hard dealing offered me by one Sympson, a goldsmith, a man noted much, as I have heard, for extremities and stoutness upon his purse; but yet I could scarcely have imagined, he would have dealt either so dishonestly towards myself, or so contemptuously towards her Majesty's service. For this Lombard, pardon me, I most humbly pray your lordship, if, being admonished by the street he dwells in, I give him that name, having me in bond for 300*l.* principal, and I having the last term confessed the action, and by his full and direct consent respited the satisfaction till the beginning of this term to come, without ever giving me warning, either by letter or message, served an execution upon me, having trained me at such time, as I came from the Tower, where, Mr. Waad can witness, we attended a service of no mean importance.† Neither would he so much as vouchsafe to come and speak with me to take any order in it, though I sent for him divers times, and his house was just by; handling it as upon a despite, being a man I never provoked with a cross word, no nor with many delays. He would have urged it to have had me in prison; which he had done, had not sheriff More, to whom I sent, gently recommended me to a handsome house in Coleman-street, where I am. Now because he will not treat with me, I am enforced humbly to desire your lordship to send for him, according to your place, to bring him to some reason; and this forthwith, because I continue here to my farther discredit and inconvenience, and the trouble of the gentleman with whom I am. I have a hundred pounds lying by me, which he may have, and the rest upon some reasonable time and security; or if need be, the whole; but with my more trouble. As for the contempt he hath offered, in regard her Majesty's service, to my understanding, carrieth a privilege *eundo et redeundo* in meaner causes, much more in matters of this nature, especially in persons known to be qualified with that place and employment, which, though unworthy, I am vouchsafed, I enforce nothing, thinking I have done my part,

\* From the original in the Hatfield collection of state papers, communicated to me by the Rev. William Murden, B.D. and intended by him for the public in a third volume of the collection of those papers, if his death had not prevented him from executing his design.

† It is not easy to determine what this service was; but it seems to relate to the examination of some prisoner; perhaps Edward Squire, executed in November, 1598, for poisoning the queen's saddle; or Valentine Thomas, who accused the king of Scots of practices against queen Elizabeth, [*Historical View*, p. 178.] or one Stanley; concerning whom I shall insert here passages from two MS. letters of John Chamberlain, Esq., to his friend, Dudley Carleton, Esq., afterwards ambassador to Venice, the United Provinces, and France; these letters being part of a very large collection, from 1598 to 1625, which I transcribed from the originals. "One Stanley," says Mr. Chamberlain, in his letter dated at London, 3 October, 1598, "that came in sixteen days over land with letters out of Spain, is lately committed to the Tower. He was very earnest to have private conference with her Majesty, pretending matter of great importance, which he would by no means

when I have made it known; and so leave it to your lordship's honourable consideration. And so with signification of my humble duty, &c.

TO SIR ROBERT CECIL, SECRETARY OF  
STATE.‡

IT MAY PLEASE YOUR HONOUR,

I HUMBLY pray you to understand how badly I have been used by the enclosed, being a copy of a letter of complaint thereof which I have written to the lord keeper. How sensitive you are of wrongs offered to your blood in my particular, I have had not long since experience. But herein I think your honour will be doubly sensitive, in tenderness also of the indignity to her Majesty's service. For as for me, Mr. Sympson might have had me every day in London; and therefore to bely me, while he knew I came from the Tower about her Majesty's special service, was to my understanding very bold. And two days before he brags he forbore me, because I dined with sheriff More. So as with Mr. Sympson, examinations at the Tower are not so great a privilege, *eundo et redeundo*, as sheriff More's dinner. But this complaint I make in duty; and to that end have also informed my lord of Essex thereof; for otherwise his punishment will do me no good.

So with signification of my humble duty, I commend your honour to the divine preservation.

At your honourable command particularly,

FR. BACON.

From Coleman-street, this  
24th of September [1598.]

*The Substance of a Letter I § now wish your Lordship || should write to her Majesty.*

THAT you desire her Majesty to believe *id, quod, res ipsa loquitur*, that it is not conscience to yourself of any advantage her Majesty hath towards you, otherwise than the general and infinite advantage of a queen and a mistress; nor any drift or device to win her Majesty to any point or particular, that

utter to any body else." In another letter dated 20 November, 1598, Mr. Chamberlain observes, that on "the day that they looked for Stanley's arraignment, he came not himself, but sent his forerunner, one Squire, that had been an under purveyor of the stable, who being in Spain was dealt withal by one Walpole, a jesuit, to poison the queen and the earl of Essex; and accordingly came prepared into England, and went with the earl in his own ship the last journey, and poisoned the arms or handles of the chair he used to sit in, with a confection he had received of the Jesuit; as likewise he had done the pommel of the queen's saddle not past five days before his going to sea. But because nothing succeeded of it, the priest thinking he had either changed his purpose, or betrayed it, gave Stanley instructions to accuse him; thereby to get him more credit, and to be revenged of Squire for breaking promise. The fellow confessed the whole practice, and, as it seemed, died very penitent."

‡ From the Hatfield collection.

§ Francis Bacon.

|| Robert earl of Essex.

moveth you to send her these lines of your own mind. But first, and principally, gratitude; next, a natural desire of, you will not say, the tedious remembrance, for you can hold nothing tedious, that hath been derived from her Majesty; but the troubled and pensive remembrance of that which is past, of enjoying better times with her Majesty, such as others have had, and that you have wanted. You cannot impute the difference to the continuance of time, which addeth nothing to her Majesty but increase of virtue; but rather to your own misfortune or errors. Wherein nevertheless, if it were only question of your own endurances, though any strength never so good may be oppressed, yet you think you should have suffocated them, as you had often done, to the impairing of your health, and weighing down of your mind. But that, which indeed toucheth the quick, is that, whereas you accounted it the choice fruit of yourself to be a contentment and entertainment to her Majesty's mind, you found many times to the contrary, that you were rather a disquiet to her, and a distaste.

Again, whereas in the course of her service, though you confess the weakness of your own judgment, yet true zeal, not misled with any mercenary nor glorious respect, made you light sometimes upon the best and soundest counsels; you had reason to fear, that the distaste particular against yourself made her Majesty farther off from accepting any of them from such a hand. So as you seemed, to your deep discomfort, to trouble her Majesty's mind, and to foil her business; inconveniences, which, if you be minded as you ought, thankfulness should teach you to redeem, with stepping down, nay throwing yourself down, from your own fortune. In which intricate case, finding no end of this former course, and therefore desirous to find the beginning of a new, you have not whither to resort, but unto the oracle of her Majesty's direction. For though the true introduction *ad tempora meliora* be by an *amnestia* of that which is past, except it be in the sense, that the verse speaketh, *Olim hæc meminisse juvabit*, when tempests past are remembered in the calm; and that you do not doubt of her Majesty's goodness in pardoning and obliterating any of your errors and mistakings heretofore; refreshing the memory and contemplations of your poor services, or any thing that hath been grateful to her Majesty from you; yea, and somewhat of your sufferings, so though that be, yet you may be to seek for the time to come. For as you have determined your hope in a good hour, not willingly to offend her Majesty, either in matter of court or state, but to depend absolutely upon her will and pleasure; so you do more doubt and mistrust your wit and insight in finding her Majesty's mind, than your conformities and submission in obeying it; the rather, because you cannot but nourish a doubt in your breast, that her Majesty, as princes' hearts are inscrutable, hath many times towards you *aliud in ore et aliud in corde*. So that you, that take her *secundum literam*, go many times farther out of your way.

Therefore your most humble suit to her Majesty is, that she will vouchsafe you that approach to her heart and bosom, *et ad scrinium pectoris*, plainly, for as much as concerneth yourself, to open and expound her mind towards you, suffering you to see clear what may have bred any dislike in her Majesty; and in what points she would have you reform yourself; and how she would be served by you. Which done, you do assure her Majesty, she shall be both at the beginning and the ending of all, that you do, of that regard, as you may presume to impart to her Majesty.

And so that hoping, that this may be an occasion of some farther serenity from her Majesty towards you, you refer the rest to your actions, which may verify what you have written; as that you have written may interpret your actions, and the course you shall hereafter take.

Indorsed by Mr. Francis Bacon,

*A letter framed for my lord of Essex to the queen.*

TO MR. SECRETARY CECIL.\*

IT MAY PLEASE YOUR HONOUR,

BECAUSE we live in an age, where every man's imperfection is but another's fable; and that there fell out an accident in the exchequer, which I know not how, nor how soon may be traduced, though I dare trust rumour in it, except it be malicious, or extreme partial; I am bold now to possess your honour, as one, that ever I found careful of my advancement, and yet more jealous of my wrongs, with the truth of that which passed; deferring my farther request, until I may attend your honour: and so I continue

Your honour's very humble and particularly bounden,

FR. BACON.

Gray's-Inn, this 24th of April, 1601.

*A true remembrance of the abuse I received of Mr. Attorney-General † publicly in the exchequer the first day of term; for the truth whereof I refer myself to all that were present.*

I MOVED to have a reseizure of the lands of George More, a relapsed recusant, a fugitive, and a practising traitor; and showed better matter for the queen against the discharge by plea, which is ever with a *salvo jure*. And this I did in as gentle and reasonable terms as might be.

Mr. Attorney kindled at it, and said, "Mr. Bacon, if you have any tooth against me, pluck it out; for it will do you more hurt than all the teeth in your head will do you good." I answered coldly in these very words: "Mr. Attorney, I respect you: I fear you not: and the less you speak of your own greatness, the more I will think of it."

1603; and made lord chief justice of the common pleas 30 June, 1606.

\* From the Hatfield collection.

† Edward Coke, knighted by king James at Greenwich in

He replied, "I think scorn to stand upon terms of greatness towards you, who are less than little; less than the least:" and other such strange light terms he gave me, with that insulting, which cannot be expressed.

Herewith stirred, yet I said no more but this: "Mr. Attorney, do not depress me so far; for I have been your better, and may be again, when it please the queen."

With this he spake, neither I nor himself could tell what, as if he had been born attorney-general; and in the end bade me not meddle with the queen's business, but with mine own; and that I was unsworn, &c. I told him, sworn or unsworn was all one to an honest man; and that I ever set my service first, and myself second; and wished to God, that he would do the like.

Then he said, it were good to clap a *cap. ut legatum* upon my back! To which I only said he could not; and that he was at a fault; for he hunted upon an old scent.

He gave me a number of disgraceful words besides; which I answered with silence, and showing that I was not moved with them.

TO ROBERT, LORD CECIL.\*

IT MAY PLEASE YOUR GOOD LORDSHIP,

THEY say late thanks are ever best. But the reason was, I thought to have seen your lordship ere this. Howsoever I shall never forget this your last favour amongst others; and it grieveth me not a little, that I find myself of no use to such an honourable and kind friend.

For that matter, I think I shall desire your assistance for the punishment of the contempt; not that I would use the privilege in future time, but because I would not have the dignity of the king's service prejudiced in my instance. But herein I will be ruled by your lordship.

It is fit likewise, though much against my mind, that I let your lordship know, that I shall not be able to pay the money within the time by your lordship undertaken, which was a fortnight. Nay, money I find so hard to come by at this time, as I thought to have become an humble suitor to your honour to have sustained me with your credit for the present from urgent debts with taking up 300*l.* till I can put away some land. But I am so forward with some sales, as this request, I hope, I may forbear.

For my estate, because your honour hath care of it, it is thus: I shall be able, with selling the skirts of my living in Hertfordshire,† to preserve the body; and to leave myself, being clearly out of debt, and having some money in my pocket, 300*l.* land *per annum*, with a fair house, and the ground well timbered. This is now my labour.

For my purpose or course, I desire to meddle as

\* From the Hatfield collection.

† Gorbambury.

‡ Probably the lady whom he afterwards married, Alice, one of the daughters and coheirs of Benedict Barnham, Esq.

little as I can in the king's causes, his Majesty now abounding in council; and to follow my private thrift and practice, and to marry with some convenient advancement. For as for any ambition, I do assure your honour, mine is quenched. In the queen's, my excellent mistress's, time, the *quorum* was small: her service was a kind of freehold, and it was a more solemn time. All those points agreed with my nature and judgment. My ambition now I shall only put upon my pen, whereby I shall be able to maintain memory and merit of the times succeeding.

Lastly, for this divulged and almost prostituted title of knighthood, I could without charge, by your honour's mean, be content to have it, both because of this late disgrace, and because I have three new knights in my mess in Gray's-Inn commons; and because I have found out an alderman's daughter, a handsome maiden, to my liking. So as if your honour will find the time, I will come to the court from Gorbambury, upon any warning.

How my sales go forward, your lordship shall in a few days hear. Meanwhile, if you will not be pleased to take farther day with this lewd fellow, I hope your lordship will not suffer him to take any part of the penalty, but principal, interest, and costs.

So I remain your lordship's most bounden,

FR. BACON.

3 July, 1603.

TO THE SAME.

IT MAY PLEASE YOUR GOOD LORDSHIP,

IN answer of your last letter, your money shall be ready before your day, principal, interest, and costs of suit. So the sheriff promised when I released errors; and a Jew takes no more. The rest cannot be forgotten; for I cannot forget your lordship's *dum memor ipse mei*; and if there have been *aliquid nimis*, it shall be amended. And, to be plain with your lordship, that will quicken me now which slackened me before. Then I thought you might have had more use of me than now, I suppose, you are like to have. Not but I think the impediment will be rather in my mind than in the matter or times. But to do you service, I will come out of my religion at any time.

For my knighthood,§ I wish the manner might be such as might grace me, since the matter will not; I mean, that I might not be merely gregarious in a troop. The coronation|| is at hand. It may please your lordship to let me hear from you speedily. So I continue

Your lordship's ever much bounden,

FR. BACON.

From Gorbambury, this 16th of July, 1603.

alderman of London. She survived her husband above twenty years. *Life of Lord Bacon*, by Dr. William Rawley.

§ He was knighted at Whitehall, 23 July, 1603.

|| It was solemnized, 24 July, 1603.

TO SIR JOHN DAVIS, HIS MAJESTY'S ATTORNEY-GENERAL IN IRELAND.\*

MR. ATTORNEY,

I THANK you for your letter, and the discourse you sent of this new accident, as things then appeared. I see manifestly the beginning of better or worse: but methinketh it is first a tender of the better, and worse followeth but upon refusal or default. I would have been glad to see you here; but I hope occasion reserveth our meeting for a vacation, when we may have more fruit of conference. To requite your proclamation, which, in my judgment, is wisely and seriously penned, I send you another with us, which happened to be in my hands when yours came. I would be glad to hear often from you, and to be advertised how things pass, whereby to have some occasion to think some good thoughts; though I can do little. At the least it will be a continuance in exercise of our friendship, which on my part remaineth increased by that I hear of your service, and the good respects I find towards myself. And so in Tormour's haste, I continue

Your very loving friend,

FR. BACON.

From Gray's-Inn, this 23d of Octob. 1607.

TO ISAAC CASAUBON.†

Cum ex literis, quas ad dominum Carew misisti, cognoscam scripta mea a te probari, et mihi de judicio tuo gratulatus sum, et tibi, quam ea res mihi fuerit voluptati, scribendum existimavi. Atque illud etiam de me recte anguraris, me scientias ex latebris in lucem extrahere vehementer cupere. Neque enim multum interest ea per otium scribi, quæ per otium legantur, sed plane vitam, et res humanas, et medias earum turbas, per contemplationes sanas et veras instructiores esse volo. Quanta autem in hoc genere aggrediar, et quam parvis præidiis, postmodum fortasse resciesces. Etiam tu pariter gratissimum mihi facies, si quæ in animo habes atque moliris et agitas, mihi nota esse velis. Nam conjunctionem animorum et studiorum plus facere ad amicitias judico, quam civilis necessitatis et occasionum officia. Equidem existimo neminem unquam magis vere potuisse dicere de sese, quam me ipsum, illud quod habet psalmus, *multum incola fuit anima mea*. Itaque magis videor cum antiquis versari, quam cum his, quibuscum vivo. Quid ni etiam possim cum absentibus potius versari, quam cum iis, qui præsto sunt; et magis electione in amicitias uti, quam occasionibus de more submitti? Verum ad institutum revertor ego; si qua in re amicitia mea tibi aut tuis usui aut ornamento esse possit, tibi operam meam

bonam atque navam polliceor. Itaque salutem tibi dicit

Amicus tuus, &c.

Indorsed,  
To Casaubon.

*The beginning of a Letter immediately after my Lord Treasurer's † decease.‡*

May 29, 1612.

IT MAY PLEASE YOUR MAJESTY,

IF I shall seem in these few lines to write *majora quam pro fortuna*, it may please your Majesty to take it to be an effect, not of presumption, but of affection. For of the one I was never noted; and for the other I could never show it hitherto to the full; being as a hawk tied to another's fist, that might sometimes bait and proffer, but could never fly. And therefore if, as it was said to one that spoke great words, *Amice, verba tua desiderant civitatem*,|| so your Majesty say to me, "Bacon, your words require a place to speak them;" I must answer, that place, or not place, is in your Majesty to add or refrain: and though I never grow eager but to . . . . . yet your Majesty ———

TO THE KING,

*Immediately after the Lord Treasurer's death.*

31 May, 1612.

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I CANNOT but endeavour to merit, considering your preventing graces, which is the occasion of these few lines.

Your Majesty hath lost a great subject and a great servant. But if I should praise him in propriety, I should say, that he was a fit man to keep things from growing worse; but no very fit man to reduce things to be much better. For he loved to have the eyes of all Israel a little too much on himself, and to have all business still under the hammer; and, like clay in the hands of the potter, to mould it as he thought good; so that he was more *in operations* than *in opere*. And though he had fine passages of action, yet the real conclusions came slowly on. So that although your Majesty hath grave counsellors and worthy persons left; yet you do, as it were, turn a leaf, wherein if your Majesty shall give a frame and constitution to matters, before you place the persons, in my simple opinion it were not amiss. But the great matter, and most instant for the present, is the consideration of a parliament, for two effects; the one for the supply of your estate; the other for the better knitting of the

† Robert earl of Salisbury, who died 24 May, 1612.

‡ The draught of this imperfect letter is written chiefly in Greek characters.

|| These words of Themistocles are cited likewise by lord Bacon, at the end of his book *De Augmentis Scientiarum*.

\* From the MS. Collections of Robert Stephens, Esq. deceased.

† This letter appears to have been written after Sir George Carew, mentioned in it, returned from his embassy in France, in October, 1609; and before the arrival of Casaubon in England, in October, 1610.

hearts of your subjects unto your Majesty, according to your infinite merit; for both which, parliaments have been, and are, the ancient and honourable remedy.

Now because I take myself to have a little skill in that region, as one that ever affected, that your Majesty might, in all your causes, not only prevail, but prevail with satisfaction of the inner man; and though no man can say but I was a perfect and peremptory royalist, yet every man makes me believe that I was never one hour out of credit with the lower house; my desire is to know, whether your Majesty will give me leave to meditate and propound unto you some preparative remembrances, touching the future parliament.

Your Majesty may truly perceive, that, though I cannot challenge to myself either invention, or judgment, or elocution, or method, or any of those powers; yet my offering is care and observance: and as my good old mistress was wont to call me her watch-candle, because it pleased her to say, I did continually burn, and yet she suffered me to waste almost to nothing; so I must much more owe the like duty to your Majesty, by whom my fortunes have been settled and raised. And so craving pardon, I rest

Your Majesty's most humble servant devote,

F. B.

TO THE KING.

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

My principal end being to do your Majesty service, I crave leave to make at this time to your Majesty this most humble oblation of myself. I may truly say with the psalm, *Multum incola fuit anima mea*; for my life hath been conversant in things, wherein I take little pleasure. Your Majesty may have heard somewhat, that my father was an honest man; and somewhat yet I may have been of myself, though not to make any true judgment by, because I have hitherto had only *potestatem verborum*, nor that neither. I was three of my young years bred with an ambassador\* in France, and since I have been an old truant in the school-house of your council chamber, though on the second form; yet longer than any, that now sitteth, hath been in the head form. If your Majesty find any aptness in me, or if you find any scarcity in others, whereby you may think it fit for your service to remove me to business of state, although I have a fair way before me for profit, and, by your Majesty's grace and favour, for honour and advancement, and in a course less exposed to the blast of fortune; yet now that he † is gone, *quo vivente virtutibus certissimum exitium*, I will be ready as a chessman to be wherever your Majesty's royal hand

\* Sir Amias Poulet, who was sent ambassador to France, in September, 1576. He was succeeded by Sir Edward Stafford, in December, 1578.

† Lord Treasurer Salisbury.

‡ The beginning of this letter is wanting.

§ It will be but justice to the memory of the earl of Salisbury to remark, that this disadvantageous character of him by Sir Francis Bacon seems to have been heightened by the preju-

shall set me. Your Majesty will bear me witness, I have not suddenly opened myself thus far. I have looked on upon others. I see the exceptions; I see the distractions; and I fear Tacitus will be a prophet, *magis alii homines, quam alii mores*. I know mine own heart; and I know not whether God, that hath touched my heart with the affection, may not touch your royal heart to discern it. Howsoever, I shall go on honestly in mine ordinary course, and supply the rest in prayers for you, remaining, &c.

TO THE KING. †

\* \* \* Lastly, I will make two prayers unto your Majesty, as I used to do to God Almighty, when I commend to him his own glory and cause; so I will pray to your Majesty for yourself.

The one is, that these cogitations of want do not any ways trouble or vex your mind. I remember Moses saith of the land of promise, that it was not like the land of Egypt, that was watered with a river, but was watered with showers from heaven; whereby I gather, God preferreth sometimes uncertainties before certainties, because they teach a more immediate dependence upon his providence. Sure I am, *nil novi accidit vobis*. It is no new thing for the greatest kings to be in debt; and, if a man shall *parvis componere magna*, I have seen an earl of Leicester, a chancellor Hatton, an earl of Essex, and an earl of Salisbury in debt; and yet was it no manner of diminution to their power or greatness.

My second prayer is, that your Majesty, in respect of the hasty freeing of your state, would not descend to any means, or degree of means, which carrieth not a symmetry with your majesty and greatness. He is gone, from whom those courses did wholly flow. So have your wants and necessities in particular, as it were, hanged up in two tablets before the eyes of your lords and commons to be talked of for four months together: to have all your courses to help yourself in revenue or profit put into printed books, which were wont to be held *arcana imperii*: to have such worms of aldermen to lend for ten in the hundred upon good assurance, and with such \* \* \*, as if it should save the bark of your fortune: to contract still where might be had the readiest payment, and not the best bargain: to stir a number of projects for your profit, and then to blast them, and leave your Majesty nothing but the scandal of them: to pretend an even carriage between your Majesty's rights and the ease of the people, and to satisfy neither. These courses and others the like, I hope, are gone with the deviser of them; which have turned your Majesty to inestimable prejudice. §

I hope your Majesty will pardon my liberty of dices of the latter against that able minister, grounded upon some suspicions, that the earl had not served him with so much zeal, as he might have expected from so near a relation, either in queen Elizabeth's reign, or that of her successor. Nor is it any just imputation on his lordship, that he began to decline in king James I.'s good opinion, when his Majesty's ill economy occasioned demands on the lord treasurer, which all his skill in the business of the finances could not answer,

writing. I know these things are *majora quam pro fortuna*: but they are *minora quam pro studio et voluntate*. I assure myself, your Majesty taketh not me for one of a busy nature; for my state being free from all difficulties, and I having such a large field for contemplations, as I have partly, and shall much more make manifest to your Majesty and the world, to occupy my thoughts, nothing could make me active but love and affection. So praying my God to bless and favour your person and estate, &c.

---

TO THE KING.

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I HAVE, with all possible diligence since your Majesty's progress, attended the service committed to the sub-commissioners, touching the repair and improvement of your Majesty's means: and this I have done, not only in meeting, and conference, and debate with the rest; but also by my several and private meditation and inquiry. So that, besides joint account, which we shall give to the lords, I hope I shall be able to give your Majesty somewhat *ex proprio*. For as no man loveth better *consulers in communis* than I do; neither am I of those fine ones, that use to keep back any thing, wherein they think they may win credit apart, and so make the consultation almost *inutile*. So nevertheless, in cases, where matters shall fall in upon the bye, perhaps of no less worth than that, which is the proper subject of the consultation; or where I find things passed over too slightly, or in cases where that, which I should advise, is of that nature, as I hold it not fit to be communicated to all those with whom I am joined; these parts of business I put to my private account; not because I would be officious, (though I profess I would do works of supererogation, if I could,) but in a true discretion and caution. And your Majesty had some taste in those notes, which I gave you for the wards, (which it pleased you to say were no tricks nor novelties, but true passages of business,) that mine own particular remembrances and observations are not like to be unprofitable. Concerning which notes for the wards, though I might say, *sic vos non vobis*; yet let that pass.

I have also considered fully of that great proposition, which your Majesty commended to my care and study, touching the conversion of your revenue of land into a multiplied present revenue of rent: wherein I say, I have considered of the means and course to be taken, of the assurance, of the rates, of the exceptions, and of the arguments for and against it. For though the project itself be as old as I can remember, and falleth under every man's capacity; yet the dispute and manage of it asketh a great deal of consideration and judgment; projects being like *Æsop's* tongues, the best meat and the worst,

but which drew from him devices and remonstrances still extant, which that king, not being very ready to profit by, conceived some resentment against his old servant, and even raised it against his memory.

\* Harl. MSS. Vol. 1893. fol. 75. It seems to me no im-

as they are chosen and handled. But surely, *ubi deficient remedia ordinaria, recurrendum est ad extraordinaria*. Of this also I am ready to give your Majesty an account.

Generally upon this subject of the repair of your Majesty's means, I beseech your Majesty to give me leave to make this judgment, that your Majesty's recovery must be by the medicines of the Galenists and Arabians, and not of the Chemists or Paracelsians. For it will not be wrought by any one fine extract, or strong water; but by a skilful company of a number of ingredients, and those by just weight and proportion, and that of some simples, which perhaps of themselves, or in over-great quantity, were little better than poisons; but mixed, and broken, and in just quantity, are full of virtue. And secondly, that as your Majesty's growing behind-hand hath been work of time; so must likewise be your Majesty's coming forth and making even. Not but I wish it were by all good and fit means accelerated; but that I foresee, that if your Majesty shall propound to yourself to do it *per saltum*, it can hardly be without accidents of prejudice to your honour, safety, or profit.

Indorsed,

*My letter to the KING, touching his estate in general, September 18th, 1612.*

---

IN HENRICUM PRINCIPEM WALLIÆ ELOGIUM FRANCISCI BACONI.\*

HENRICUS primogenitus regis Magnæ Britanniae, princeps Walliæ, antea spe beatus, nunc memoria felix, diem suum obiit 6 Novemb. anno 1612. Is magno totius regni luctu et desiderio extinctus est, utpote adolescens, qui animos hominum nec offendisset nec satiasset. Excitaverat autem propter bonam indolem multiplices apud plurimos omnium ordinum spes, nec ob brevitatem vitæ frustraverat. Illud imprimis accessit, quod in causa religionis firmus vulgo habebatur: prudentioribus quoque hoc animo penitus insederat, adversus insidias conjunctionum, cui malo ætas nostra vix remedium reperit, patri eum instar præsidii et scuti fuisse, adeo ut et religionis et regis apud populum amor in eum redundaret, et in æstimationem jacturæ merito annumeraretur. Erat corpore validus et erectus, statura mediocri, decora membrorum compage, incessu regio, facie oblonga et in maciem inclinante, habitu plenior, vultu composito, oculorum motu magis sedato quam forti. Inerant quoque et in fronte severitatis signa, et in ore nonnihil fastus. Sed tamen si quis ultra exteriora illa penetraverat, et eum obsequi debito et sermone tempestivo deliniverat, utebatur eo benigno et facili, ut alius longe videretur colloquio quam aspectu, talisque prorsus erat, qui famam sui excitaret moribus dissimilem. Laudis et gloriæ sui procul dubio appetens, et ad omnem speciem boni

probable supposition, that this character was intended to be sent to Thuanus, in order to be inserted in his excellent history, if he should have continued it to the year 1612, whereas it reached only to 1607.

et auram decoris commovebatur; quod adolescenti pro virtutibus est. Nam et arma ei in honore erant ac viri militares; quin et ipse quiddam bellicum spirabat; et magnificentiæ operum, licet pecuniæ aliquin satis parcus, deditus erat: amator insuper antiquitatis et artium. Litteris quoque plus honoris attribuit quam temporis. In moribus ejus nihil laudandum magis fuit, quam quod in omni genere officiorum probe institutus credebatur et congruus: filius regi patri mire obsequens, etiam reginam multo cultu demerebat, erga fratrem indulgens; sororem vero unice amabat, quam etiam, quantum potuit virilis forma ad eximiam virginalem pulchritudinem collata, referebat. Etiam magistri et educatores pueritiæ ejus, quod raro fieri solet, magna in gratia apud eum manserant. Sermone vero obsequii idem exactor et memor. Denique in quotidiano vitæ genere, et assignatione horarum ad singula vitæ munera, magis quam pro ætate constans atque ordinatus. Affectus ei inerant non nimium vehementes, et potius æquales quam magni. Etenim de rebus amatoriis mirum in illa ætate silentium, ut prorsus lubricum illud adolescentiæ suæ tempus in tanta fortuna, et valetudine satis prospera, absque aliqua insigni nota amorum transigeret. Nemo reperiebatur in aula ejus apud eum præpotens, aut in animo ejus validus: quin et studia ipsa, quibus capiebatur maxime, potius tempora patiebantur quam excessus, et magis repetita erant per vices, quam quod extaret aliquod unum, quod reliqua superaret et comperceret, sive ea moderatio fuit, sive in natura non admodum præcoci, sed lente maturescente, non cernebantur adhuc quæ prævalitura erant. Ingenio certe pollebat, eratque et curiosus satis et capax, sed sermone tardior et tanquam impeditus: tamen si quis diligenter observaverat ea, quæ ab eo proferebantur, sive quæstionis vim obtinebant, sive sententiæ, ad rem omnino erant, et captum non vulgarem arguebant; ut in illa loquendi tarditate et raritate judicium ejus magis suspensum videretur et anxium, quam infirmum aut hebes. Interim audiendi miris modis patiens, etiam in negotiis, quæ in longitudinem porrigebantur; idque cum attentione et sine tædio, ut raro animo peregrinaretur aut fessa mente aliquid ageret, sed ad ea, quæ dicebantur, aut agebantur, animum adverteret atque applicaret; quod magnam ei, si vita suppetiisset, prudentiam spondebat. Certe in illius principis natura plurima erant obscura, neque judicio cuspisiam patefacienda, sed tempore, quod ei præreptum est. Attamen quæ apparebant, optima erant, quod famæ satis est. Mortuus est ætatis suæ anno decimo nono ex febre contumaci, quæ ubique a magnis et insularis fere insolitis siccitatibus ac fervoribus orta per ætatem populariter grassabatur, sed raro funere; dein sub autumnum erat facta lethalior. Addidit fama atrocior, ut ille\* ait, erga dominantium exitus suspicionem veneni. Sed cum nulla ejus rei extarent indicia, præsertim in ventriculo, quod præcipue a veneno pati solet, is sermo cito evanuit.

*The following translation is an attempt, for the sake of the English reader, to give the sense of the original, without pretending to reach the force and conciseness of expression peculiar to the great writer as well as to the Roman language.*

HENRY Prince of Wales, eldest son of the king of Great Britain, happy in the hopes conceived of him, and now happy in his memory, died on the 6th of Nov. 1612, to the extreme concern and regret of the whole kingdom, being a youth, who had neither offended nor satiated the minds of men. He had by the excellence of his disposition excited high expectations among great numbers of all ranks; nor had through the shortness of his life disappointed them. One capital circumstance added to these was the esteem, in which he was commonly held, of being firm to the cause of religion: and men of the best judgment were fully persuaded, that his life was a great support and security to his father from the danger of conspiracies; an evil, against which our age has scarce found a remedy; so that the people's love of religion and the king overflowed to the prince: and this consideration deservedly heightened the sense of the loss of him. His person was strong and erect; his stature of a middle size; his limbs well made; his gait and deportment majestic; his face long and inclining to leanness; his habit of body full; his look grave, and the motion of his eyes rather composed than spirited. In his countenance were some marks of severity, and in his air some appearance of haughtiness. But whoever looked beyond these outward circumstances, and addressed and softened him with a due respect and seasonable discourse, found the prince to be gracious and easy; so that he seemed wholly different in conversation from what he was in appearance, and in fact raised in others an opinion of himself very unlike what his manner would at first have suggested. He was unquestionably ambitious of commendation and glory, and was strongly affected by every appearance of what is good and honourable; which in a young man is to be considered as virtue. Arms and military men were highly valued by him; and he breathed himself something warlike. He was much devoted to the magnificence of buildings and works of all kinds, though in other respects rather frugal; and was a lover both of antiquity and arts. He showed his esteem of learning in general more by the countenance which he gave to it, than by the time which he spent in it. His conduct in respect of morals did him the utmost honour; for he was thought exact in the knowledge and practice of every duty. His obedience to the king his father was wonderfully strict and exemplary: towards the queen he behaved with the highest reverence: to his brother he was indulgent; and had an entire affection for his sister, whom he resembled in person as much as that of a young man could the beauty of a virgin. The instructors of his younger years (which rarely happens) continued high in his favour. In conversation he both expected a proper decorum, and practised it. In the daily business of life, and the allotment of hours for the several offices of it, he

\* Tacit. *Annal.* l. iv. 11.

was more constant and regular than is usual at his age. His affections and passions were not strong, but rather equal than warm. With regard to that of love, there was a wonderful silence, considering his age, so that he passed that dangerous time of his youth, in the highest fortune, and in a vigorous state of health, without any remarkable imputation of gallantry. In his court no person was observed to have any ascendant over him, or strong interest with him: and even the studies, with which he was most delighted, had rather proper times assigned them, than were indulged to excess, and were rather repeated in their turns, than that any one kind of them had the preference of, and controlled the rest: whether this arose from the moderation of his temper, and that in a genius not very forward, but ripening by slow degrees, it did not yet appear what would be the prevailing object of his inclination. He had certainly strong parts, and was endued with both curiosity and capacity; but in speech he was slow, and in some measure hesitating. But whoever diligently observed what fell from him either by way of question or remark, saw it to be full to the purpose, and expressive of no common genius. So that under that slowness and infrequency of discourse, his judgment had more the appearance of suspense and solicitude to determine rightly, than of weakness and want of apprehension. In the mean time he was wonderfully patient in hearing, even in business of the greatest length; and this with unwearied attention, so that his mind seldom wandered from the subject, or seemed fatigued, but he applied himself wholly to what was said or done: which (if his life had been lengthened) promised a very superior degree of prudence. There were indeed in the prince some things obscure, and not to be discovered by the sagacity of any person, but by time only, which was denied him; but what appeared were excellent, which is sufficient for his fame.

He died in the 19th year of his age of an obstinate fever, which during the summer, through the excessive heat and dryness of the season, unusual to islands, had been epidemical, though not fatal, but in autumn became more mortal. Fame, which, as Tacitus says, is more tragical with respect to the deaths of princes, added a suspicion of poison: but as no signs of this appeared, especially in his stomach, which uses to be chiefly affected by poison, this report soon vanished.

#### TO THE KING.

MAY IT PLEASE YOUR MAJESTY,

ACCORDING to your highness's pleasure signified by my lord chamberlain,\* I have considered of the

\* Thomas Howard, earl of Suffolk.

† The order of baronets was created by patent of king James I. dated the 22d of May, 1611. The year following, a decree was made relating to their place and precedence, and four years after, namely, in 1616, another decree to the same purpose. See Selden's *Titles of Honour*, Part II. Ch. V. p. 621. Ch. XI. p. 906, and 910. 2d Edit. fol. 1631.

‡ He had been committed, in May 1613, to the Fleet, for speaking too boldly against the marshal's court, and for giving

petition of certain baronets † made unto your Majesty for confirmation and extent or explanation of certain points mentioned in their charter; and am of opinion, that first, whereas it is desired, that the baronets be declared a middle degree between baron and knight, I hold this to be reasonable as to their placing.

Secondly, where it is desired, that unto the words *degree or dignity of baron*, the word *honour* might be added: I know very well, that in the preface of the baronet's patent it is mentioned, that all honours are derived from the king. I find also, that in the patent of the baronets, which are marshalled under the barons, except it be certain principals, the word *honour* is granted. I find also, that the word *dignity* is many times in law a superior word to the word *honour*, as being applied to the king himself, all capital indictments concluding *contra coronam et dignitatem nostram*. It is evident also, that the words *honour* and *honourable* are used in these times in common speech very promiscuously. Nevertheless, because the style of honour belongs chiefly to peers and counsellors, I am doubtful what opinion to give therein.

Thirdly, whereas it is believed, that if there be any question of precedence touching baronets, it may be ordered that the same be decided by the commissioners marshal, I do not see but it may be granted them for avoiding disturbances.

Fourthly, for the precedence of baronets, I find no alteration or difficulty, except it be in this, that the daughters of baronets are desired to be declared to have precedence before the wives of knights' eldest sons; which, because it is a degree hereditary, and that in all examples, the daughters in general have place next the eldest brothers' wives, I hold convenient.

Lastly, whereas it is desired, that the apparent heirs males of the bodies of the baronets may be knighted during the life of their fathers; for that I have received from the lord chamberlain a signification, that your Majesty did so understand it, I humbly subscribe thereunto, with this, that the baronets' eldest sons being knights do not take place of ancient knights, so long as their fathers live.

All which nevertheless I humbly submit to your Majesty's better judgment.

Your Majesty's most humble and most bounden servant,

FR. BACON.

#### THE CHARGE AGAINST MR. WHITELOCKE.‡

MY LORDS,

THE offence, wherewith Mr. Whitelocke is

his opinion to Sir Robert Mansell, treasurer of the navy and vice-admiral, that the commission to the earl of Nottingham, lord high admiral, for reviewing and reforming the disorders committed by the officers of the navy, was not according to law; though Mr. Whitelocke had given that opinion only in private to his client, and not under his hand. Sir Robert Mansell was also committed to the Marshalsea, for animating the lord admiral against the commission. [Sir Ralph Winwood's *Memorials of State*, vol. iii. p. 460.] This Mr. Whitelocke

charged, for as to Sir Robert Mansell, I take it to my part only to be sorry for his error, is a contempt of a high nature, and resting upon two parts: on the one, a presumptuous and licentious censure and defying of his Majesty's prerogative in general; the other, a slander and traducement of one act or emanation hereof, containing a commission of survey and reformation of abuses in the office of the navy.

This offence is fit be opened and set before your lordships, as it hath been well begun, both in the true state and in the true weight of it. For as I desire, that the nature of the offence may appear in its true colours; so, on the other side, I desire, that the shadow of it may not darken or involve any thing that is lawful, or agreeable with the just and reasonable liberty of the subject.

First, we must and do agree, that the asking, and taking, and giving of counsel in law is an essential part of justice; and to deny that, is to shut the gate of justice, which in the Hebrews' commonwealth was therefore held in the gate, to show all passage to justice must be open: and certainly counsel in law is one of the passages. But yet, for all that, this liberty is not infinite and without limits.

If a jesuited papist should come, and ask counsel (I put a case not altogether feigned) whether all the acts of parliament made in the time of queen Elizabeth and king James are void or no; because there are no lawful bishops sitting in the upper house, and a parliament must consist of lords spiritual and temporal and commons; and a lawyer will set it under his hand, that they be all void, I will touch him for high treason upon this his counsel.

So, if a puritan preacher will ask counsel, whether he may style the king Defender of the Faith, because he receives not the discipline and presbytery; and the lawyer will tell him, it is no part of the king's style, it will go hard with such a lawyer.

Or if a tributitious popular spirit will go and ask a lawyer, whether the oath and band of allegiance be to the kingdom and crown only, and not to the king, as was Hugh Spencer's case, and he deliver his opinion as Hugh Spencer did; he will be in Hugh Spencer's danger.

So as the privilege of giving counsel proveth not all opinions: and as some opinions given are traitorous; so are there others of a much inferior nature, which are contemptuous. And among these I reckon Mr. Whitelocke's; for as for his loyalty and true heart to the king, God forbid I should doubt it.

Therefore let no man mistake so far, as to conceive, that any lawful and due liberty of the subject for asking counsel in law is called in question when points of disloyalty or of contempt are restrained. Nay, we see it is the grace and favour of the king and his courts, that if the case be tender, and a wise lawyer in modesty and discretion refuseth to be of

counsel, for you have lawyers sometimes too nice as well as too bold, they are then ruled and assigned to be of counsel. For certainly counsel is the blind man's guide; and sorry I am with all my heart, that in this case the blind did lead the blind.

For the offence, for which Mr. Whitelocke is charged, I hold it great, and to have, as I said at first, two parts: the one a censure, and, as much as in him is, a circling, nay a clipping, of the king's prerogative in general; the other, a slander, and deprivation of the king's power and honour in this commission.

And for the first of these, I consider it again in three degrees: first, that he presumed to censure the king's prerogative at all. Secondly, that he runneth into the generality of it more than was pertinent to the present question. And lastly, that he hath erroneously, and falsely, and dangerously given opinion in derogation of it.

First, I make a great difference between the king's grants and ordinary commissions of justice, and the king's high commissions of regiment, or mixed with causes of state.

For the former, there is no doubt but they may be freely questioned and disputed, and any defect in matter or form stood upon, though the king be many times the adverse party:

But for the latter sort, they are rather to be dealt with, if at all, by a modest and humble intimation or remonstrance to his Majesty and his council, than by bravery of dispute or peremptory opposition.

Of this kind is that properly to be understood, which is said in Bracton, "*De chartis et factis regis non debent aut possunt justitiiarii aut privatæ personæ disputare, sed tutius est, ut expectetur sententia regis.*"

And the king's courts themselves have been exceeding tender and sparing in it; so that there is in all our law not three cases of it. And in that very case of 24 Ed. 3. ass. pl. s. which Mr. Whitelocke vouched, where, as it was a commission to arrest a man, and to carry him to prison, and to seize his goods without any form of justice or examination preceding; and that the judges saw it was obtained by surreption; yet the judges said they would keep it by them, and show it to the king's council.

But Mr. Whitelocke did not advise his client to acquaint the king's council with it, but presumptuously giveth opinion, that it is void. Nay, not so much as a clause or passage of modesty, as that he submits his opinion to censure; that it is too great a matter for him to deal in; or this is my opinion, which is nothing, &c. But *illotis manibus*, he takes it into his hands, and pronounceth of it, as a man would scarcely do of a warrant of a justice of peace, and speaks like a dictator, that *this is law*, and *this is against law*, &c.\*

was probably the same with James Whitelocke, who was born in London, 28th November, 1572, educated at Merchant-tailors' school there, and St. John's college in Oxford, and studied law in the Middle Temple, of which he was summer reader in 1619. In the preceding year, 1618, he stood for the place of recorder of the city of London, but was not elected to it, Robert Heath, Esq. being chosen on the 10th of November, chiefly by the recommendation of the king, the city having been told, that they must choose none, whom his Majesty

should refuse, as he did in particular except to Mr. Whitelocke by name. [MS. letter of Mr. Chamberlain to Sir Dudley Carleton, November 14, 1618.] Mr. Whitelocke, however, was called to the degree of serjeant in Trinity-term, 1620, knighted, made chief justice of Chester; and at last, on the 18th of October, 1624, one of the justices of the king's bench; in which post he died June, 1632. He was father of Balstrode Whitelocke, Esq., commissioner of the great seal.

\* Sir H. Wotton, in a letter of his to Sir Edmund Bacon,

ROBERT EARL OF SOMERSET TO SIR THOMAS OVERBURY.\* FROM A COPY AMONG LORD BACON'S PAPERS IN THE LAMBETH LIBRARY.

SIR,

I HAVE considered that my answer to you, and what I have otherwise to say, will exceed the bounds of a letter; and now having not much time to use betwixt my waiting on the king, and the removes we do make in this our little progress, I thought fit to use the same man to you, whom I have heretofore many times employed in the same business. He has, besides an account and a better description of me to give you, to make a repetition of the former carriages of all this business, that you may distinguish that, which he did by knowledge of mine and direction, and betwixt that he did out of his own discretion without my warrant. With all this he has to renew to you a former desire of mine, which was the groundwork of this, and the chief errand of his coming to you, wherein I desire your answer by him. I would not employ this gentleman to you, if he were, as you conceit of him, your unfriend, or an ill instrument betwixt us. So owe him the testimony of one, that has spoken as honestly, and given more praises of you, than any man, that has spoken to me.

My haste at this time makes me to end sooner than I expected: but the subject of my next sending shall be to answer that part you give me in your love, with a return of the same from

Your assured loving Friend,

R. SOMERSET.

Indorsed,

*Lord Somersel's first letter.*

TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

HAVING understood of the death of the lord chief justice,† I do ground in all humbleness an assured hope, that your Majesty will not think of any other but your poor servants, your attorney,‡ and your solicitor,§ one of them, for that place. Else we shall

[*Reliq. Wotton*, p. 421, edit. 3d.] written about the beginning of June, 1613, mentions, that Sir Robert Mansell and Mr. Whitelocke were, on the Saturday before, called to a very honourable hearing in the queen's presence-chamber at Whitehall, before the lords of the council, with intervention of the lord chief justice Coke, the lord chief baron Tanfield, and the master of the rolls; the lord chief justice of the king's bench, Fleming, being kept at home by some infirmity. There the attorney and solicitor first undertook Mr. Whitelocke, and the recorder, [Henry Montagu,] as the king's serjeant, Sir Robert Mansell, charging the one as a counsellor, the other as a questioner, in matters of the king's prerogative and sovereignty upon occasion of a commission intended for a research into the administration of the admiralty. "Whitelocke in his answer," adds Sir Henry Wotton, "speaks more confusedly than was expected from a lawyer; and the knight more temperately than was expected from a soldier . . . Whitelocke ended his speech with an absolute confession of his own offence, and with a promise of employing himself hereafter in defence of the king's prerogative. . . . In this they generally agreed, both counsellors and judges, to represent the humiliation of

be like Noah's dove, not knowing where to rest our feet. For the places of rest, after the extreme painful places, wherein we serve, have used to be either the lord chancellor's place, or the mastership of the rolls, or the places of the chief justices: whereof, for the first, I could be almost loth to live to see this worthy counsellor fail. The mastership of the rolls is blocked with a reversion.|| My lord Coke is like to out-live us both. So as if this turn fail, I for my part know not whither to look. I have served your Majesty above a prenticehood, full seven years and more, as your solicitor, which is, I think, one of the painfulest places in your kingdom, specially as my employments have been; and God hath brought mine own years to fifty-two, which I think is older than ever any solicitor continued unpreferred. My suit is principally, that you would remove Mr. Attorney to the place. If he refuse, then I hope your Majesty will seek no farther than myself, that I may at last, out of your Majesty's grace and favour, step forwards to a place either of more comfort or more ease. Besides, how necessary it is for your Majesty to strengthen your service amongst the judges by a chief justice, which is sure to your prerogative, your Majesty knoweth. Therefore I cease farther to trouble your Majesty, humbly craving pardon, and relying wholly upon your goodness and remembrance, and resting in all true humbleness,

Your Majesty's most devoted, and faithful subject and servant,

FR. BACON.

*Reasons why it should be exceeding much for his Majesty's service to remove the lord COKE from the place he now holdeth ¶ to be chief justice of England,\*\* and the attorney†† to succeed him, and the solicitor †† the attorney.*

FIRST, it will strengthen the king's causes greatly amongst the judges; for both my lord Coke will think himself near a privy counsellor's place, and thereupon turn obsequious; and the attorney-general, a new man, and a grave person, in a judge's place, will come in well to the other, and hold him hard to it, not without emulation between them, who shall please the king best.

both the prisoners to the king, in lieu of innocency, and to intercede for his gracious pardon: which was done, and accordingly the next day they were enlarged upon a submission under writing."

\* He was committed to the Tower on the 21st of April, 1613, and died there of poison on the 15th of September following.

† Sir Thomas Fleming, who died about August, 1613.

‡ Sir Henry Hobart, who was made lord chief justice of the common pleas, November 26, 1613, in the room of Sir Edward Coke, removed to the post of lord chief justice of the king's bench, October 25.

§ Sir Francis Bacon himself, who was appointed attorney-general, October 27, 1613.

|| To Sir Julius Cæsar.

¶ Of chief justice of the common pleas, having been appointed to that office June 30, 1606.

\*\* He was advanced to that office October 25, 1613.

†† Sir Henry Hobart, who had been appointed attorney-general July 4, 1606.

‡‡ Sir Francis Bacon, who had been sworn solicitor-general June 25, 1607.

Secondly, the attorney-general sorteth not so well with his present place, being a man timid and scrupulous both in parliament and other business, and one, that in a word was made fit for the late lord treasurer's bent, which was to do little with much formality and protestation: whereas the now solicitor going more roundly to work, and being of a quicker and more earnest temper, and more effectual in that he dealeth in, is like to recover that strength to the king's prerogative, which it hath had in times past, and which is due unto it. And for that purpose there must be brought in to be solicitor some man of courage and speech, and a grounded lawyer; which done, his Majesty will speedily find a marvellous change in his business. For it is not to purpose for the judges to stand well-disposed, except the king's council, which is the active and moving part, put the judges well to it; for in a weapon, what is a back without an edge?

Thirdly, the king shall continue and add reputation to the attorney's and solicitor's place, by this orderly advancement of them; which two places are the champion's places for his rights and prerogative; and being stripped of their expectations and successions to great place, will wax vile; and then his Majesty's prerogative goeth down the wind.

\* Sir John Dodderidge was made judge of the king's bench, November 25, 1612, and Sir Augustin Nichols of the common pleas the day following.

† The case of this gentleman will render the detail of it necessary for the illustration of this letter; and the circumstances of it, not known in our history, may be thought to deserve the reader's attention. He was a native of the West of England, and a recusant, against whom a proclamation was issued in June 1613, charging him with high treason against the king and state for having published a very scandalous and railing book against his Majesty, under the title of *Balaam's Ass*, which was dropped in the gallery at Whitehall. Just at the time of publishing this proclamation, he happened to cross the Thames, and inquiring of the watermen what news? they, not knowing him, told him of the proclamation. At landing, he muffled himself up in his cloak, to avoid being known; but had not gone many paces, when one Mr. Maine, a friend of his, meeting and discovering him, warned him of his danger; and being asked what he would advise him to do, recommended it to him to surrender himself; which he did to the earl of Southampton. He denied himself to be the author of the libel: but his study being searched, among his papers were found many parts of the book, together with relics of those persons who had been executed for the gun-powder treason, as one of Sir Everard Digby's fingers, a toe of Thomas Percy, some other part of Catesby or Rookewood, and a piece of one of Peter Lambert's ribs. He was kept prisoner in the Tower till March 1618, when the true author of the libel was discovered to be John Williams, Esq. a barrister of the Middle Temple, who had been expelled the house of commons on account of his being a papist. The discovery was owing to this accident: a pursuivant in want of money, and desirous to get some by his employment, waited at the Spanish ambassador's door, to see if he could light upon any prey. At last came out Mr. Williams, unknown to the pursuivant; but carrying, in his conceit, the countenance of a priest. The pursuivant, therefore, followed him to his inn, where Williams, having mounted his horse, the pursuivant came to him, and told him, that he must speak a word or two with him. "Marry, with all my heart," said Williams; "what is your pleasure?" "You must light," answered the pursuivant; "for you are a priest." "A priest?" replied Williams; "I have a good warrant to the contrary, for I have a wife and children." Being, however, obliged to dismount, the pursuivant searched him; and in his pocket was found a bundle of papers sealed up; which the pursuivant going to open, Williams made some resistance, pretending they were evidences of a gentleman whose law-businesses he transacted. The pursuivant insisting upon opening the papers, among them was found *Balaam's Ass*, with new annotations; of which, upon examination, Williams confessed himself to be the author. He was brought

Besides, the remove of my lord Coke to a place of less profit, though it be with his will, yet will be thought abroad a kind of discipline to him for opposing himself in the king's causes; the example whereof will contain others in more awe.

Lastly, whereas now it is voiced abroad touching the supply of places, as if it were a matter of labour, and canvass, and money; and other persons are chiefly spoken of to be the men, and the great suitors; this will appear to be the king's own act, and is a course so natural and regular, as it is without all suspicion of these by-courses, to the king's infinite honour. For men say now, the king can make good second judges, as he hath done lately;\* but that is no mastery, because men sue to be kept from these places. But now is the trial in those great places, how his Majesty can hold good, where there is great suit and means.

### TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

WE have, with all possible care and diligence, considered Cotton's † cause, the former and the

to trial on the 3d of May, 1619, for writing that and another book entitled *Speculum Regale*; in both of which he had presumed to prophesy, that the king would die in 1621, grounding this prediction on the prophecy of Daniel, where the prophet speaks of *time and times, and half a time*. He farther affirmed, that antichrist will be revealed when sin shall be at the highest; and then the end is nigh: that such is our time; sin is now at the highest; ergo that the land is the abomination of desolation mentioned by Daniel, and the habitation of devils, and the antimark of Christ's church. Williams's defence was, 1. That what he had written was not with any malice or disloyalty of heart towards the king, but purely from affection, and by way of caution and admonition, that his Majesty might avoid the mischiefs likely to befall him; having added in his book, when he delivered the threats of judgment and destruction, *which God avert, or such words*. 2. That the matter rested only in opinion and thought, and contained no overt act; no rebellion, treason, or other mischief following it. 3. That he had enclosed his book in a box sealed up, and secretly conveyed it to the king, without ever publishing it. But the court was unanimously of opinion, that he was guilty of high treason; and that the words contained in the libel, as cited above, imported the end and destruction of the king and his realm; and that antichristianism and false religion were maintained in the said realm; which was a motive to the people to commit treasons, to raise rebellions, &c. and that the writing of the book was a publication. *Reports of Henry Rolle, serjeant at law*, part II. p. 88. In consequence of this judgment he had a sentence of death passed upon him, which was executed over-against Charing-Cross two days after. MS. letters of Mr. Thomas Lorkin to Sir Thomas Puckering, Bart. dated at London, June the 24th and 30th, 1613, and March the 16th, 1618-9, and May the 4th and 5th, 1619, among the Harleian MSS. Vol. 7002. At his death he adhered to his profession of the Roman catholic religion, and died with great resolution. He prayed for the king and prince; and said, that he was sorry for having written so saucily and irreverently; but pretended that he had an inward warrant and particular illumination to understand certain hard passages of Daniel and the Revelation, which made him adventure so far. MS. letter of John Chamberlain, Esq. to Sir Dudley Carleton, dated at London, May 8 1619.

This case was urged against the seven bishops at their trial in king James II.'s reign by Sir William Williams, then solicitor-general, who observed, *Trial*, p. 76, that it had been made use of by Mr. Solicitor-general Finch on the trial of Co Sidney, and was the great "case relied upon, and that guide and governed that case;" though there is nothing of this that appears in the printed trial of Sidney.

It is but justice to the memory of our great antiquary, S

latter, touching the book and the letter in the gilt apple, and have advisedly perused and weighed all the examinations and collections which were formerly taken; wherein we might attribute a good deal of worthy industry and watchful inquiry to my lord of Canterbury. We thought fit also to take some new examinations; which was the cause we certified no sooner. Upon the whole matter, we find the cause of his imprisonment just, and the suspicions and presumptions many and great; which we little need to mention, because your Majesty did relate and enforced them to us in better perfection, than we can express them. But, nevertheless, the proofs seem to us to amount to this, that it was possible he should be the man; and that it was probable, likewise, he was the man: but no convicting proofs, that may satisfy a jury of life and death, or that may make us take it upon our conscience, or to think it agreeable to your Majesty's honour, which next our conscience to God, is the dearest thing to us on earth, to bring it upon the stage; which notwithstanding we, in all humbleness, submit to your Majesty's better judgment. For his liberty, and the manner of his delivery, he having so many notes of a dangerous man, we leave it to your princely wisdom. And so commending your Majesty to God's precious custody, we rest

Your Majesty's most humble and bounden servants,

22 Jan. 1613.

TO JOHN MURRAY\* OF THE BED-CHAMBER  
TO THE KING.†

MR. MURRAY,

I KEEP the same measure in a proportion with my master and with my friend; which is, that I will never deceive them in any thing, which is in my power; and when my power faileth my will, I am sorry.

Monday is the day appointed for performing his Majesty's commandment. Till then I cannot tell what to advise you farther, except it should be this, that in case the judges should refuse to take order in themselves, then you must think of some warrant to Mr. Secretary, who is your friend, and constant in the businesses, that he see forthwith his Majesty's commandment executed, touching the double lock; and, if need be, repair to the place, and see by view the manner of keeping the seal; and take order, that there be no stay for working of the

Robert Cotton, Bart. to remark here a mistake of Dr. Thomas Smith in his life of Sir Robert, p. 26, prefixed to his catalogue of the Cottonian library, where he has confounded the Cotton, mentioned in the beginning of this note, with Sir Robert Cotton, and erroneously supposed, that the suspicion of having written the libel had fallen upon the latter.

\* He was created viscount of Annan in Scotland, in August, 1622. *Negotiations of Sir Thomas Roe, in his Embassy to the Ottoman Porte*, p. 93. In April, 1624, the lord Annan was created earl of Annandale in Scotland. *Ibid.* p. 250.

seal of justice, nor no prejudice to Killegrewe's farm, nor to the duty of money paid to the chief justice. Whether this may require your presence, as you write, that yourself can best judge. But of this more, when we have received the judges' answer. It is my duty, as much as in me is, to procure my master to be obeyed. I ever rest

Your friend and assured

January 21, 1614. FR. BACON.

I pray deliver the enclosed letter to his Majesty.

To his very good friend Mr. John Murray, of his Majesty's bed-chamber.

TO MR. MURRAY.

MR. MURRAY,

MY Lord Chancellor, yesterday in my presence, had before him the judges of the common pleas, and hath performed his Majesty's royal command in a very worthy fashion, such as was fit for our master's greatness; and because the king may know it, I send you the enclosed. This seemeth to have wrought the effect desired; for presently I sent for Sir Richard Cox,† and willed him to present himself to my lord Hobart, and signify his readiness to attend. He came back to me, and told me, all things went on. I know not what afterwards may be; but I think this long chase is at an end. I ever rest

Yours assured,

January 25, 1614. FR. BACON.

TO MR. MURRAY.

MR. MURRAY,

I PRAY deliver the enclosed to his Majesty, and have care of the letter afterwards. I have written also to his Majesty about your reference to this purpose, that if you can get power over the whole title, it may be safe for his Majesty to assent, that you may try the right upon the deed. This is the farthest I can go. I ever rest

Yours assured,

February 28, 1614. FR. BACON.

TO THE KING.

MAY IT PLEASE YOUR MOST EXCELLENT MAJESTY,

I SEND your Majesty enclosed, a copy of our last examination of Peacham,§ taken the 10th of this

† This, and the three following letters, are printed from Harl. MSS. Vol. 6986.

‡ He was one of the masters of the green cloth, and had had a quarrel at court during the Christmas holy-days of the year 1614, with Sir Thomas Erskine; which quarrel was made up by the lords of the marshal's court, Sir Richard being obliged to put up with very foul words. MS. letter of Mr. Chamberlain to Sir Dudley Carleton, January 12, 1614-5.

§ Edmund Peacham, a minister in Somersetshire. [MS. letter of Mr. Chamberlain, dated January 5, 1614-15.] I find one

present; whereby your Majesty may perceive, that this miscreant wretch goeth back from all, and denieth his hand and all. No doubt, being fully of belief, that he should go presently down to his trial, he meant now to repeat his part, which he purposed to play in the country, which was to deny all. But your Majesty in your wisdom perceiveth, that this denial of his hand, being not possible to be counterfeited, and to be sworn by Adams, and so oft by himself formerly confessed and admitted, could not mend his case before any jury in the world, but rather aggravateth it by his notorious impudency and falsehood, and will make him more odious. He never deceived me; for when others had hopes of discovery, and thought time well spent that way, I told your Majesty *pereuntibus mille figuræ*; and that he now did but turn himself into divers shapes, to save or delay his punishment. And therefore submitting myself to your Majesty's high wisdom, I think myself bound in conscience to put your Majesty in remembrance, whether Sir John Sydenham\* shall be detained upon this man's impeaching, in whom there is no truth. Notwithstanding, that farther inquiry be made of this other Peacham, and that information and light be taken from Mr. Poulet† and his servants, I hold it, as things are, necessary. God preserve your Majesty.

Your Majesty's most humble and devoted subject  
and servant,

FR. BACON.

March 12, 1614.

of both his names, who was instituted into the vicarage of Ridge in Hertfordshire, July 22, 1581, and resigned it in 1587. [Newcourt, *Repertor*. Vol. 1. p. 864.] Mr. Peacham was committed to the Tower for inserting several treasonable passages in a sermon *never preached, nor*, as Mr. Justice Croke remarks in his *Reports* during the reign of king Charles I. p. 125, *ever intended to be preached*. Mr. Chamberlain, in a letter of the 9th of February, 1614-15, to Sir Dudley Carleton, mentions Mr. Peacham's having been "stretched already, though he be an old man, and they say, much above threescore: but they could wring nothing out of him more than they had at first in his papers. Yet the king is extremely incensed against him, and will have him prosecuted to the uttermost." In another letter dated February 23, we are informed, that the king, since his coming to London on the 15th, had had "the opinion of the judges severally in Peacham's case; and it is said, that most of them concur to find it treason; yet my lord chief justice [Coke] is for the contrary; and if the lord Hobart, that rides the western circuit, can be drawn to jump with his colleague, the chief baron, [Tanfield,] it is thought he shall be sent down to be tried, and trussed up in Somersetshire." In a letter of the 2nd of March, 1614-15, Mr. Chamberlain writes, "Peacham's trial at the western assizes is put off, and his journey stayed, though Sir Randall Crew, the king's serjeant, and Sir Henry Yelverton, the solicitor, were ready to go to horse to have waited on him there." "Peacham, the minister," adds he in a letter, of the 13th of July 1615, "that hath been this twelvemonth in the Tower, is sent down to be tried for treason in Somersetshire before the lord chief baron and Sir Henry Montagu the recorder. The lord Hobart gave over that circuit the last assizes. Sir Randall Crew, and Sir Henry Yelverton, the king's serjeant and solicitor, are sent down to

*Supplement of two passages omitted in the edition of SIR FRANCIS BACON'S speech in the King's Bench, against OWEN,† as printed in his works. After the words [it is bottomless] in the paragraph beginning [For the reason itself, which is the second point &c.] add,*

[I SAID in the beginning, that this treason in the nature of it was old. It is not of the treasons whereof it may be said *from the beginning it was not so*. You are indicted, Owen, not upon any statute made against the pope's supremacy, or other matters, that have reference to religion; but merely upon that law, which was born with the kingdom, and was law even in superstitious times, when the pope was received. The compassing and imagining of the king's death was treason. The statute of the 25th of Edward III. which was but declaratory, begins with this article, as the capital of capitals in treason, and of all others the most odious and the most perilous.] And so the civil law, &c.

At the conclusion of his speech, after the words [*the duke of Anjou, and the papists*] add,

[As for subjects, I see not, or ever could discern, but that by infallible consequence, it is the case of all subjects and people, as well as of kings; for it is all one reason, that a bishop, upon an excommunication of a private man, may give his lands and goods in spoil, or cause him to be slaughtered, as for the pope to do it towards a king; and for a bishop to absolve the son from duty to the father, as for the pope to absolve the subject from his allegiance to his king. And this is not my inference, but the very affirmative of pope Urban the second, who in a brief to Godfrey, bishop of Luca, hath these very words, which cardinal Baronius reciteth in his *Annals*, tom. xi. p. 802. "Non illos homicidas arbitramur, qui adversus excommunicatos zelo

prosecute the trial." The event of this trial, which was on the 7th of August, appears from Mr. Chamberlain's letter of the 14th of that month, wherein it is said, that "seven knights were taken from the bench, and appointed to be of the jury. He defended himself very simply, but obstinately and doggedly enough. But his offence was so foul and scandalous, that he was condemned of high treason; yet not hitherto executed, nor perhaps shall be, if he have the grace to submit himself, and show some remorse." He died, as appears from another letter of the 27th of March, 1616, in the jail at Taunton, where he was said to have "left behind a most wicked and desperate writing, worse than that he was convicted for."

\* He had been confronted about the end of February, or beginning of March, 1614-15, with Mr. Peacham, about certain speeches, which had formerly passed between them. MS. letter of Mr. Chamberlain to Sir Dudley Carleton, from London, March 2, 1614-15.

† John Poulet, Esq. knight of the shire for the county of Somerset in the parliament, which met April 5, 1614. He was created lord Poulet of Henton St. George, June 23, 1627.

‡ He was of the family of that name at Godstow in Oxfordshire. [Camdeni *Annales Regis Jacobi I.* p. 12.] He was a young man who had been in Spain; and was condemned at the king's bench, on Wednesday, May 17, 1615, "for divers most vile and traitorous speeches confessed and subscribed with his own hand; as, among others, that it was as lawful for any man to kill a king excommunicated, as for the hangman to execute a condemned person. He could say little for himself, or in maintenance of his desperate positions, but only that he meant it not by the king, and he holds him not excommunicate." MS. letter of Mr. Chamberlain to Sir Dudley Carleton, from London, May 20, 1615.

catholicæ matris ardentibus eorum quolibet trucidare contigeret," speaking generally of all excommunications.]

TO MR. MURRAY.\*

GOOD MR. MURRAY,

ACCORDING to his Majesty's pleasure by you signified unto me, we have attended my lord chancellor,† my lord treasurer,‡ and Mr. Chancellor of the exchequer,§ concerning Sir Gilbert Houghton's patent stayed at the seal; and we have acquainted them with the grounds and state of the suit, to justify them, that it was just and beneficial to his Majesty. And for any thing we could perceive by any objection or reply they made, we left them in good opinion of the same, with this, that because my lord chancellor, by the advice as it seemeth of the other two, had acquainted the council-table, for so many as were then present, with that suit amongst others, they thought fit to stay till his Majesty's coming to town, being at hand, to understand his farther pleasure. We purpose upon his Majesty's coming, to attend his Majesty, to give him a more particular account of this business, and some other. Meanwhile, finding his Majesty to have care of the matter, we thought it our duty to return this answer to you in discharge of his Majesty's direction. We remain,

Your assured friends,

FRANCIS BACON.

HENRY YELVERTON.

July 6th, 1615.

SIR FRANCIS BACON, TO LORD NORRIS, IN ANSWER TO HIM.||

MY LORD,

I AM sorry of your misfortune; and for any thing, that is within mine own command, your lordship may expect no other than the respects of him, that forgetteth not your lordship is to him a nearly, and an ancient acquaintance, client, and friend. For that, which may concern my place, which governeth me, and not I it; if any thing be demanded at my hands or directed, or that I am *ex officio* to do any thing; if, I say, it come to any of these three; for as yet I am a stranger to the business; yet saving my duties, which I will never live to violate, your lordship shall find, that I will observe those degrees and limitations of proceeding, which belongeth to him, that knoweth well he serveth a clement and merciful master, and that in his own nature shall ever incline to the more benign part; and that knoweth also what belongeth to nobility,

and to a house of such merit and reputation, as the lord Norris is come from. And even so I remain,

Your lordship's very loving friend,

Sept. 20, 1615.

TO THE KING.¶

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

I RECEIVED this very day, in the forenoon, your Majesty's several directions touching your cause prosecuted by my lord Hunsdon\*\* as your farmer. Your first direction was by Sir Christopher Parkins, that the day appointed for the judicial sentence should hold: and if my lord chief justice, upon my repair to him, should let me know, that he could not be present, then my lord chancellor should proceed, calling to him my lord Hobart, except he should be excepted to; and then some other judge by consent. For the latter part of this your direction, I suppose, there would have been no difficulty in admitting my lord Hobart; for after he had assisted at so many hearings, it would have been too late to except to him. But then your Majesty's second and later direction, which was delivered unto me from the earl of Arundel, as by word of mouth, but so as he had set down a remembrance thereof in writing freshly after the signification of his pleasure, was to this effect, that before any proceeding in the chancery, there should be a conference had between my lord chancellor, my lord chief justice, and myself, how your Majesty's interest might be secured. This later direction I acquainted my lord chancellor with; and finding an impossibility, that this conference should be had before to-morrow, my lord thought good, that the day be put over, taking no occasion thereof other than this, that in a cause of so great weight it was fit for him to confer with his assistants, before he gave any decree or final order. After such time as I have conferred with my lords, according to your commandment, I will give your Majesty account with speed of the conclusion of that conference.

Farther, I think fit to let your Majesty know, that in my opinion I hold it a fit time to proceed in the business of the *Rege inconsulto*, which is appointed for Monday, I did think these greater causes would have come to period or pause sooner: but now they are in the height, and to have so great a matter as this of the *Rege inconsulto* handled, when men do *aliud agere*, I think it no proper time. Besides, your Majesty in your great wisdom knoweth, that this business of Mr. Murray's is somewhat against the stream of the judges' inclination: and it is no part of a skilful mariner to sail on against a tide, when the tide is at strongest. If your Majesty be pleased to write to my lord Coke, that you would have the business of the *Rege inconsulto* receive a hearing, when he should be *animo sedato et libero*,

and not in the midst of his assiduous and incessant cares and industries in other practices, I think your Majesty shall do your service right. Howsoever, I will be provided against the day.

Thus praying God for your happy preservation, whereof God giveth you so many great pledges,

I rest your Majesty's most humble and devoted subject and servant,

FR. BACON.

November 17, 1615.

*Innovations introduced into the laws and government.\**

1. The ecclesiastical commission. In this he prevailed, and the commission was pared, and namely, the point of alimony left out, whereby wives are left wholly to the tyranny of their husbands. This point, and some others, may require a review, and is fit to be restored to the commission.
2. Against the provincial councils. In this he prevailed in such sort, as the precedents are continually suitors for the enlargement of the instructions, sometimes in one point, sometimes in another; and the jurisdictions grow into contempt, and more would, if the lord chancellor did not strengthen them by injunctions, where they exceed not their instructions.
3. Against the star-chamber for levying damages. In this he was overruled by the sentence of the court; but he bent all his strength and wits to have prevailed: and so did the other judges by long and laborious arguments: and if they had prevailed, the authority of the court had been overthrown. But the plurality of the court took more regard to their own precedents, than to the judges' opinion.
4. Against the admiralty. In this he prevaieth, for prohibitions fly continually; and many times are cause of long suits, to the discontent of foreign ambassadors, and the king's dishonour and trouble by their remonstrances.
5. Against the court of the duchy of Lancaster prohibitions go; and the like may do to the court of wards and exchequer. This is new, and would be forthwith restrained, and the others settled.

\* This paper was evidently designed against the lord chief justice Coke.

6. Against the court of requests. In this he prevaieth; and this but lately brought in question.
7. Against the chancery for decrees after judgment. In this his Majesty hath made an establishment: and he hath not prevailed, but made a great noise and trouble.
8. Præmunire for suits in the chancery. This his Majesty hath also established, being a strange attempt to make the chancellor sit under a hatchet, instead of the king's arms.
9. Disputed in the common pleas whether that court may grant a prohibition to stay suits in the chancery, and time given to search for precedents. This was but a bravery, and dieth of itself, especially the authority of the chancery by his Majesty's late proceedings being so well established.
10. Against the new boroughs in Ireland. This in good time was overruled by the voice of eight judges of ten, after they had heard your attorney. And had it prevailed, it had overthrown the parliament of Ireland, which would have been imputed to a fear in this state to have proceeded; and so his Majesty's authority and reputation lost in that kingdom.
11. Against the writs *Dom. Rege incon-sulto*. This is yet *sub judice*: but if it should prevail, it maketh the judges absolute over the patents of the king, be they of power and profit, contrary to the ancient and ever continued law of the crown; which doth call those causes before the king himself, as he is represented in chancery.
12. Against contribution, that it was not law neither to levy it, nor to move for it. In this he prevailed, and gave opinion, that the king by his great seal could not so much as move any his subjects for benevolence. But this he retracted after in the star-chamber; but it marred the benevolence in the mean time.
13. Peacham's case. In this, for as much as in him was, and in the court of king's bench, he prevailed, though it was holpen by the good service of others. But the opinion, which he held, amounted in effect to this, that no word of scandal or defamation, importing that the king was utterly unable or unworthy to govern, were treason, except they disabled his title, &c.
14. Owen's case. In this we prevailed with him to give opinion it was treason: but then it was upon a conceit of

his own, that was no less dangerous, than if he had given his opinion against the king; for he proclaimed the king excommunicate in respect of the anniversary bulls of *Cæna Domini*, which was to expose his person to the fury of any jesuited conspirator.

15. The value of benefices not to be according to the tax in the king's book of taxes. By this the intent of the statute of 21 Henry VIII. is frustrated; for there is no benefice of so small an improved value as 8*l.* by that kind of rating. For this the judges may be assembled in the exchequer for a conference.

16. Suits for legacies ought to be in their proper dioceses, and not in the prerogative court; although the will be proved in the prerogative court upon *bona notabilia* in several dioceses, commendams, &c. The practice hath gone against this; and it is fit the suit be where the probate is. And this served but to put a pique between the archbishops' courts and the bishops' courts. This may be again pounded upon a conference of the judges.

TO SIR GEORGE VILLIERS.

SIR,

The message, which I received from you by Mr. Shute, hath bred in me such belief and confidence, as I will now wholly rely upon your excellent and happy self. When persons of greatness and quality begin speech with me of the matter, and offer me their good offices, I can but answer them civilly. But those things are but toys: I am yours surer to you than to my own life; for, as they speak of the Turquois stone in a ring, I will break into twenty pieces, before you have the least fall. God keep you ever.

Your truest servant,

Feb. 15, 1615.

FR. BACON.

My lord chancellor is prettily amended. I was with him yesterday almost half an hour. He used me with wonderful tokens of kindness. We both wept, which I do not often.

Indorsed,

*A letter to Sir G. Villiers touching a message brought to him by Mr. Shute, of a promise of the chancellor's place.*

\* From an old manuscript in my possession, entitled *A Book of Letters of Sir Francis Bacon*.

† Secretary Winwood, in a private letter to Sir Thomas Edmondes, printed in the *Historical View of the Negotiations between the Courts of England, France, and Brussels*, p. 362, mentions, that there was great expectation, that Sir John Digby, just then returned from Spain, where he had been ambassador, could charge the earl of Somerset with some

SIR FRANCIS BACON TO SIR GEORGE VILLIERS.\*

*Touching the examination of Sir Robert Cotton upon some information of Sir John Digby.†*

I RECEIVED your letter yesterday towards the evening, being the 8th of this present, together with the interrogatory included, which his Majesty hath framed, not only with a great deal of judgment what to interrogate, but in a wise and apt order; for I do find that the degrees of questions are of great efficacy in examination. I received also notice and direction by your letter, that Sir Robert Cotton was first thoroughly to be examined; which indeed was a thing most necessary to begin with; and that for that purpose Sir John Digby was to inform my lord chancellor of such points, as he conceived to be material; and that I likewise should take a full account for my lord chief justice of all Sir Robert Cotton's precedent examinations. It was my part then to take care, that that, which his Majesty had so well directed and expressed, should be accordingly performed without loss of time. For which purpose, having soon after the receipt of your letter received a letter from my lord chancellor, that he appointed Sir John Digby to be with him at two of the clock in the afternoon, as this day, and required my presence, I spent the mean time, being this forenoon, in receiving the precedent examinations of Sir Robert Cotton from my lord chief justice, and perusing of them; and accordingly attended my lord chancellor at the hour appointed, where I found Sir John Digby.

At this meeting it was the endeavour of my lord chancellor and myself to take such light from Sir John Digby, as might evidence first the examination of Sir Robert Cotton; and then to the many examinations of Somerset; wherein we found Sir John Digby ready and willing to discover unto us what he knew; and he had also, by the lord chancellor's direction, prepared some heads of examination in writing for Sir Robert Cotton; of all which use shall be made for his Majesty's service, as is fit. Howbeit, for so much as did concern the practice of conveying the prince into Spain, or the Spanish pensions, he was somewhat reserved upon this ground, that they were things his Majesty knew, and things, which by some former commandment from his Majesty he was restrained to keep in silence, and that he conceived they could be no ways applied to Somerset. Wherefore it was not fit to press him beyond that, which he conceived to be his warrant, before we had known his Majesty's farther pleasure; which I pray you return unto us with all convenient speed. I for my part am in no appetite for secrets; but nevertheless seeing his Majesty's great trust towards me, wherein I shall never treasons and plots with Spain. "To the king," adds Sir Ralph, "as yet he hath used no other language, but that, having served in a place of honour, it would ill become him to be an accuser. Legally or criminally he can say nothing: yet this he says and hath written, that all his private despatches, wherein he most discovered the practices of Spain, and their intelligences, were presently sent into Spain; which could not be but by the treachery of Somerset."

deceive him; and that I find the chancellor of the same opinion, I do think it were good my lord chancellor chiefly and myself were made acquainted with the persons and the particulars; not only because it may import his Majesty's service otherwise, but also because to my understanding, for therein I do not much rely upon Sir John Digby's judgment, it may have a great connexion with the examination of Somerset, considering his mercenary nature, his great undertaking for Spain in the match, and his favour with his Majesty; and therefore the circumstances of other pensions given cannot but tend to discover whether he were pensioner or no.

But herein no time is lost; for my lord chancellor, who is willing, even beyond his strength, to lose no moment for his Majesty's service, hath appointed me to attend him Thursday morning for the examination of Sir Robert Cotton, leaving to-morrow for council-business to my lord, and to me for considering of fit articles for Sir Robert Cotton.

10 April, 1616.

MR. TOBIE MATTHEW\* TO SIR FRANCIS BACON, ATTORNEY-GENERAL.

MAY IT PLEASE YOU, SIR,

THE notice I have from my lord Roos, Sir Henry Goodere, and other friends, of the extreme obligation, wherein I continue towards you, together with the conscience I have of the knowledge, how dearly and truly I honour and love you, and daily pray, that you may rise to that height, which the state, wherein you live, can give you, hath taken away the wings of fear, whereby I was almost carried away from daring to importune you in this kind. But I know how good you have always been, and are still, towards me; or rather because I am not able to comprehend how much it is, I will presume there is enough for any use, whereupon an honest humble servant may employ it.

It imports the business of my poor estate, that I be restored to my country for some time; and I have divers friends in that court, who will further my desire thereof, and particularly Mr. Secretary Lake and my lord Roos, whom I have desired to confer with you about it. But nothing can be done therein, unless my lord of Canterbury† may be made propitious, or at least not averse; nor do I know in the world how to charm him but by the music of your tongue. I beseech you, Sir, lose some minutes upon me, which I shall be glad to pay by whole years of service; and call to mind, if it please you, the last speech you made me, that if I should continue as I then was, and neither prove ill-affected to the state, nor become otherwise than a mere secular man in my religion, you would be pleased to negotiate for my return. On my part the conditions

\* Son of Dr. Tobie Matthew, archbishop of York. He was born at Oxford in 1578, while his father was dean of Christchurch, and educated there. During his travels abroad, he was seduced to the Romish religion by Father Parsons. This occasioned his living out of his own country from the year 1607 to 1617, when he had leave to return to England. He was again ordered to leave it in October, 1618; but in 1622

are performed; and it remains that you do the like: nor can I doubt but that the nobleness of your nature, which loves nothing in the world so well as to be doing of good, can descend from being the attorney-general to a great king, to be solicitor for one of the meanest subjects that he hath.

I send my letter to my lord's grace open, that before you seal it, if you shall think fit to seal it, and rather not to deliver it open, you may see the reasons that I have; which, if I be not partial, are very pregnant. Although I confess, that till it was now very lately mentioned to me by some honourable friends, who have already procured to disimpression his Majesty of some hard conceit he had of me in, I did not greatly think thereof; and now I am full of hope, that I shall prevail. For supposing, that my lord of Canterbury's mind is but made of iron, the adamant of your persuasion will have power to draw it. It may please you either to send a present answer hereunto; or, since I am not worthy of so much favour, to tell either of those honourable persons aforementioned what the answer is, that accordingly they may co-operate.

This letter goes by Sir Edward Parham, a gentleman whom I have been much beholden to. I know him to be a perfect honest man; and since, I protest, I had rather die than deceive you, I will humbly pray, that he may rather receive favour from you, than otherwise, when he shall come in your way, which at one time or other all the world there must do. And I shall acknowledge myself much bound to you, as being enabled by this means to pay many of my debts to him.

I presume to send you the copy of a piece of a letter, which Galileo, of whom, I am sure, you have heard, wrote to a monk of my acquaintance in Italy, about the answering of that place in Joshua, which concerns the sun's standing still, and approving thereby the pretended falsehood of Copernicus's opinion. The letter was written by occasion of the opposition, which some few in Italy did make against Galileo, as if he went about to establish that by experiments, which appears to be contrary to Holy Scripture. But he makes it appear the while by this piece of a letter, which I send you, that if that passage of Scripture doth expressly favour either side, it is for the affirmative of Copernicus's opinion, and for the negative of Aristotle's. To an attorney-general in the midst of a town, and such a one, as is employed in the weightiest affairs of the kingdom, it might seem unseasonable for me to interrupt you with matter of this nature. But I know well enough in how high account you have the truth of things; and that no day can pass, wherein you give not liberty to your wise thoughts of looking upon the works of nature. It may please you to pardon the so much trouble which I give you in this kind; though yet, I confess, I do not deserve a pardon,

was recalled to assist in the match with Spain; and on account of his endeavours to promote it, was knighted by king James I. at Royston, on the 10th of October, 1623. He translated into Italian Sir Francis Bacon's *Essays*, and died at Ghent in Flanders, October 13th, 1655. N. S.

† Dr. George Abbot.

because I find not in myself a purpose of forbearing to do the like hereafter. I most humbly kiss your hand.

Your most faithful and affectionate servant,  
TOBIE MATTHEW.

Brussels, this 21st of April, 1616.

SIR FRANCIS BACON TO THE JUDGES.\*

MY LORD,

It is the king's express pleasure, that because his Majesty's time would not serve to have conference with your lordship and his judges touching his cause of commendams at his last being in town, in regard of his Majesty's other most weighty occasions; and for that his Majesty holdeth it necessary, upon the report, which my lord of Winchester, who was present at the last argument by his Majesty's royal commandment, made to his Majesty, that his Majesty be first consulted with, ere there be any farther proceeding by argument by any of the judges or otherwise: Therefore, that the day appointed for the farther proceeding by argument of the judges in that case be put off till his Majesty's farther pleasure be known upon consulting him; and to that end, that your lordship forthwith signify his commandment to the rest of the judges; whereof your lordship may not fail. And so I leave your lordship to God's goodness.

Your loving friend to command,

FR. BACON.

This Thursday at afternoon,  
the 25th of April, 1616.

*Questions legal for the Judges [in the case of the Earl and Countess of Somerset].*

WHETHER the axe is to be carried before the prisoner, being in the case of felony?

Whether, if the lady make any digression to clear his lordship, she is not by the lord steward to be interrupted and silenced?

Whether, if my lord of Somerset should break forth into any speech of taxing the king, he be not presently by the lord steward to be interrupted and silenced; and, if he persist, he be not to be told, that if he take that course, he is to be withdrawn, and evidence to be given in his absence? And whether that may be; and what else to be done?

\* From the collections of the late Robert Stephens, Esq.

† The king's apprehension of being taxed by the earl of Somerset on his trial, though for what is not known, accounts in some measure for his Majesty's extreme uneasiness of mind till that trial was over, and for the management used by Sir Francis Bacon in particular, as appears from his letters, to prevail upon the earl to submit to be tried, and to keep him in temper during his trial, *lest he*, as the king expressed it in an apostyle on Sir Francis's letter of the 28th of April, 1616, upon the one part commit unpardonable errors, and I on the other seem to punish him in the spirit of revenge. See more on this subject in Mr. Mallett's *Life of the Lord Chancellor Bacon*, who closes his remarks with a reference to a letter of

Whether if there should be twelve votes to condemn, and twelve or thirteen to acquit, it be not a verdict for the king?

*Questions of Convenience, whereupon his Majesty may confer with some of the Counsel.*

WHETHER, if Somerset confess at any time before his trial, his Majesty shall stay trial in respect of farther examination concerning practice of treason, as the death of the late prince, the conveying into Spain of the now prince, or the like; for till he confess the less erime, there is [no] likelihood of confessing the greater?

Whether, if the trial upon that reason shall be put off, it shall be discharged privately by dissolving the commission, or discharging the summons? Or whether it shall not be done in open court, the peers being met, and the solemnity and celebrity preserved; and that with some declaration of the cause of putting off the farther proceeding?

Whether the days of her trial and his shall be immediate, as it is now appointed; or a day between, to see if, after condemnation, the lady will confess of this lord; which done, there is no doubt but he will confess of himself?

Whether his trial shall not be set first, and hers after, because then any conceit, which may be wrought by her clearing of him, may be prevented; and it may be he will be in the better temper, hoping of his own clearing, and of her respiting?

What shall be the days; for Thursday and Friday can hardly hold in respect of the summons; and it may be as well Friday and Saturday, or Monday and Tuesday, as London makes it already?

*A particular remembrance for his Majesty.*

It were good, that after he is come into the Hall, so that he may perceive he must go to trial, and shall be retired into the place appointed, till the court call for him, then the lieutenant should tell him roundly, that if in his speeches he shall tax the king,† that the justice of England is, that he shall be taken away, and the evidence shall go on without him; and then all the people will cry away with him; and then it shall not be in the king's will to save his life, the people will be so set on fire.

Indorsed,

*Memorial touching the course to be had in my lord of Somerset's arraignment.*

Somerset to the king, printed in the *Cabala*, and written in a high style of expostulation, and showing, through the affected obscurity of some expressions, that there was an important secret in his keeping, of which his Majesty dreaded a discovery. The earl and his lady were released from their confinement in the Tower in January, 1621-2, the latter dying August 23, 1632, leaving one daughter Anne, then sixteen years of age, afterwards married to William lord Russel, afterwards earl, and at last duke of Bedford. The earl of Somerset survived his lady several years, and died in July, 1645, being interred on the 17th of that month in the church of St. Paul's, Covent-Garden.

*The Heads of the Charge against Robert Earl of Somerset.*

Apostyle of the King.

*Ye will doe well to remember lyke wayes in your preamble, that insigne, that the only zeal to justice maketh me take this course. I have commandit you not to expatiate, nor digresse upon any other points, that maye not serve clearlie for probation or inducement of that point, quhairof he is accused.*

FIRST it is meant, that Somerset shall not be charged with any thing by way of aggravation, otherwise than as conduceth to the proof of the impoisonment.

For the proofs themselves, they are distributed into four :

The first to prove the malice, which Somerset bore to Overbury, which was the motive and ground of the impoisonment.

The second is to prove the preparations unto the impoisonment, by plotting his imprisonment, placing his keepers, stopping access of friends, &c.

The third is the acts of the impoisonments themselves.

And the fourth is acts subsequent, which do vehemently argue him to be guilty of the impoisonment.

For the first two heads, upon conference, whereunto I called serjeant Montagu and serjeant Crew, I have taken them two heads to myself; the third I have allotted to serjeant Montagu; and the fourth to serjeant Crew.

In the first of these, to my understanding, is the only tenderness: for on the one side, it is most necessary to lay a foundation, that the malice was a deep malice, mixed with fear, and not only matter of revenge upon his lordship's quarrel: for *periculum periculo vincitur*; and the malice must have a proportion to the effect of it, which was the impoisonment: so that if this foundation be not laid, all the evidence is weakened.

On the other side, if I charge him, or could charge him, by way of aggravation, with matters tending to disloyalty or treason, then he is like to grow desperate.

Therefore I shall now set down perspicuously what course I mean to hold, that your Majesty may be pleased to direct and correct it, preserving the strength of the evidence: and this I shall now do, but shortly and without ornament.

First, I shall read some passages of Overbury's letters, namely these: "Is this the fruit of nine years' love, common secrets, and common dangers?" In another letter: "Do not drive me to extremity to do that, which you and I shall be sorry for." In another letter: "Can you forget him, between whom such secrets of all kinds have passed?" &c.

Then will I produce Simcock, who deposeth from Weston's speech, that Somerset told Weston, that, "if ever Overbury came out of prison, one of them must die for it."

Then I will say what these secrets were. I mean not to enter into particulars, nor to charge him with disloyalty, because he stands to be tried for his life upon another crime. But yet by some taste, that I

shall give to the peers in general, they may conceive of what nature those secrets may be. Wherein I will take it for a thing notorious, that Overbury was a man, that always carried himself insolently, both towards the queen, and towards the late prince: that he was a man, that carried Somerset on in courses separate and opposite to the privy council: that he was a man of nature fit to be an incendiary of a state; full of bitterness and wildness of speech and project: that he was thought also lately to govern Somerset, insomuch that in his own letters he vaunted, "that from him proceeded Somerset's fortune, credit, and understanding."

This course I mean to run in a kind of generality, putting the imputations rather upon Overbury than Somerset; and applying it, that such a nature was like to hatch dangerous secrets and practices. I mean to show likewise what jargons there were and cyphers between them, which are great badges of secrets of estate, and used either by princes and their ministers of state, or by such as practise against princes. That your Majesty was called *Julius* in respect of your empire; the queen *Agrippina*, though Somerset now saith it was *Livia*, and that my lady of Suffolk was *Agrippina*; the bishop of Canterbury, *Unctius*; Northampton, *Dominic*; Suffolk, first *Lerma*, after *Wolsey*; and many others; so as it appears they made a play both of your court and kingdom; and that their imaginatious wrought upon the greatest men and matters.

Neither will I omit Somerset's breach of trust to your Majesty, in trusting Overbury with all the despatches, things, wherewith your council of estate itself was not many times privy or acquainted: and yet this man must be admitted to them, not cursorily, or by glimpses, but to have them by him, to copy them, to register them, to table them, &c.

Apostyle of the king.

*This evidence cannot be given in without making me his accuser, and that upon a very slight ground. As for all the subsequent evidences, they are all so little evident, as una litura may serve thaim all.*

I shall also give in evidence, in this place, the slight account of that letter, which was brought to Somerset by Ashton, being found in the fields soon after the late prince's death, and was directed to Antwerp, containing these words, "that the first branch was cut from the tree, and that he should, ere long, send happier and joyfuller news."

Which is a matter I would not use, but that my lord Coke, who hath filled this part with many frivolous things, would think all lost, except he hear somewhat of this kind. But this it is to come to the leaveings of a business.

*Nothing to Somerset, and declared by Franklin after condemnation.*

And for the rest of that kind, as to speak of that particular, that Mrs. Turner did at Whitehall show to Franklin the man, who, as she said, poisoned the prince, which, he says, was a physician with a red beard.

*Nothing to Somerset, and a loose conjecture.*

*No better than a gazette, or passage of Gallo Belgicus.*

*Nothing yet proved against Lowbell.*

*Nothing to Somerset.*

*Declared by Franklin after condemnation.*

*Nothing to Somerset.*

*Nothing to Somerset.*

That there was a little picture of a young man in white wax, left by Mrs. Turner with Forman the conjurer, which my lord Coke doubted was the prince.

That the viceroy of the Indies at Goa reported to an English factor, that prince Henry came to an untimely death by a mistress of his.

That Somerset, with others, would have preferred Lowbell the apothecary to prince Charles.

That the countess laboured Forman and Gresham, the conjurers, to enforce the queen by witchcraft to favour the countess.

That the countess told Franklin, that when the queen died, Somerset should have Somerset-house.

That Northampton said, the prince, if ever he came to reign, would prove a tyrant.

That Franklin was moved by the countess to go to the Palsgrave, and should be furnished with money.

The particular reasons, why I omit them, I have set in the margin; but the general is partly to do a kind of right to justice, and such a solemn trial, in not giving that in evidence, which touches not the delinquent, or is not of weight; and partly to observe your Majesty's direction, to give Somerset no just occasion of despair or flushes.

But I pray your Majesty to pardon me, that I have troubled your Majesty with repeating them, lest you should hear hereafter, that Mr. Attorney hath omitted divers material parts of the evidence.

Indorsed,

*Somerset's business and charge, with his Majesty's postiles.*

#### TO SIR GEORGE VILLIERS.

SIR,

Your man made good haste; for he was with me yesterday about ten of the clock in the forenoon. Since I held him.

The reason, why I set so small a distance of time between the use of the little charm, or, as his Majesty better terms it, *the evangile*,\* and the day of his trial,† notwithstanding his majesty's being so far off, as advertisement of success and order thereupon could not go and come between, was chiefly, for that his Majesty, from whom the overture of that first moved, did write but of a few hours, that

\* Cicero, Epist. ad Atticum, Lib. XIII. Ep. 40. uses this word, *εὐαγγέλιον*; which signifies both good news, and the reward given to him who brings good news. See Lib. II. Epist. 3.

† The earl of Somerset's.

‡ John, of whom there are several letters in Winwood's Memorials, Vol. II.

‡ John Whiting, D. D. rector of St. Martin Vintry, in

this should be done, which I turned into days. Secondly, because the hope I had of effect by that mean, was rather of attempting him at his arraignment, than of confession before his arraignment. But I submit it to his Majesty's better judgment.

The person, by your first description, which was without name, I thought had been meant of Packer:‡ but now I perceive it is another, to me unknown, but as it seemeth, very fit. I doubt not but he came with sufficient warrant to Mr. Lieutenant to have access. In this I have no more to do, but to expect to hear from his Majesty how this worketh.

The letter from his Majesty to myself and the serjeants I have received, such as I wished; and I will speak with the commissioners, that he may, by the lieutenant, understand his Majesty's care of him, and the tokens herein of his Majesty's compassion towards him.

I ever had a purpose to make use of that circumstance, that Overbury, the person murdered, was his Majesty's prisoner in the Tower; which indeed is a strong pressure of his Majesty's justice. For Overbury is the first prisoner murdered in the Tower, since the murder of the young princes by Richard the third, the tyrant.

I would not trouble his Majesty with any points of preamble, nor of the evidence itself, more than that part nakedly, wherein was the tenderness, in which I am glad his Majesty, by his postils, which he returned to me, approveth my judgment.

Now I am warranted, I will not stick to say openly, I am commanded, not to exasperate, nor to aggravate the matter in question of the im poisoning with any other collateral charge of disloyalty, or otherwise; wherein, besides his Majesty's principal intention, there will be some use to save the former bruits of Spanish matters.

There is a direction given to Mr. Lieutenant by my lord chancellor and myself, that as yesterday Mr. Whiting§ the preacher, a discreet man, and one that was used to Helwisse, should preach before the lady,|| and teach her, and move her generally to a clear confession. That after the same preacher should speak as much to him at his going away in private: and so proof to be made, whether this good mean, and the last night's thoughts, will produce any thing. And that this day the lieutenant should declare to her the time of her trial, and likewise of his trial, and persuade her, not only upon christian duty, but as good for them both, that she deal clearly touching him, whereof no use can be made, nor need to be made, for evidence, but much use may be made for their comfort.

It is thought, at the day of her trial the lady will confess the indictment; which if she do, no evidence ought to be given. But because it shall not be a dumb show, and for his Majesty's honour in so

London, and Vicar of East-Ham in Essex, prebendary of Ealdstreet in the church of St. Paul's, and chaplain to king James I. He attended Sir Gervase Helwisse, who had been lieutenant of the Tower, at his execution upon Tower-Hill, on Monday the 20th of November, 1615, for the murder of Sir Thomas Overbury.

|| Frances, countess of Somerset.

solemn an assembly, I purpose to make a declaration of the proceedings of this great work of justice, from the beginning to the end, wherein, nevertheless, I will be careful no ways to prevent or discover the evidence of the next day.

In this my lord chancellor and I have likewise used a point of providence: for I did forecast, that if in that narrative, by the connexion of things, any thing should be spoken, that should show him guilty, she might break forth into passionate protestations for his clearing; which, though it may be justly made light of, yet it is better avoided. Therefore my lord chancellor and I have devised, that upon the entrance into that declaration she shall, in respect of her weakness, and not to add farther affliction, be withdrawn.

It is impossible, neither is it needful, for me, to express all the particulars of my care in this business. But I divide myself into all cogitations as far as I can foresee; being very glad to find, that his Majesty doth not only accept well of my care and advices, but that he applieth his directions so fitly, as guideth me from time to time.

I have received the commissions signed.

I am not forgetful of the goods and estate of Somerset, as far as is seasonable to inquire at this time. My lord Coke taketh upon him to answer for the jewels, being the chief part of his movable value: and this, I think, is done with his Majesty's privacy. But my lord Coke is a good man to answer for it.

God ever preserve and prosper you. I rest

Your true and devoted servant,

FR. BACON.

May 10, Friday at 7 of the clock  
in the morning [1616].

*The Charge of the Attorney-General, Sir FRANCIS BACON, against FRANCES, Countess of SOMERSET, intended to have been spoken by him at her arraignment, on Friday, May 24, 1616, in case she had pleaded not guilty.\**

It may please your Grace, my lord high steward of England,† and you my lords the peers,

You have heard the indictment against this lady well opened; and likewise the point in law, that might make some doubt, declared and solved; wherein certainly the policy of the law of England is much to be esteemed, which requireth and respecteth form in the indictment, and substance in the proof.

This scruple it may be hath moved this lady to plead not guilty, though for the proof I shall not need much more than her own confession, which she hath formerly made, free and voluntary, and therein given glory to God and justice. And certainly confession, as it is the strongest foundation of

\* She pleaded guilty, on which occasion the attorney-general spoke a charge somewhat different from this, printed in his works.

justice, so it is a kind of corner-stone, whereupon justice and mercy may meet.

The proofs, which I shall read in the end for the ground of your verdict and sentence, will be very short; and, as much as may, serve to satisfy your honours and consciences for the conviction of this lady, without wasting of time in a case clear and confessed; or ripping up guiltiness against one, that hath prostrated herself by confession; or preventing or deflowering too much of the evidence. And therefore the occasion itself doth admonish me to spend this day rather in declaration, than in evidence, giving God and the king the honour, and your lordships and the hearers the contentment, to set before you the proceeding of this excellent work of the king's justice, from the beginning to the end; and so to conclude with the reading the confessions and proofs.

My lords, this is now the second time † within the space of thirteen years reign of our happy sovereign, that this high tribunal-seat of justice, ordained for the trial by peers, hath been opened and erected; and that, with a rare event, supplied and exercised by one and the same person; which is a great honour to you, my lord steward.

In all this mean time, the king hath reigned in his white robe, not sprinkled with any drop of blood of any of his nobles of this kingdom. Nay, such hath been the depths of his mercy, as even those noblemen's bloods, (against whom the proceeding was at Winchester,) Cobham and Grey, were attainted and corrupted, but not spilt or taken away; but that they remained rather spectacles of justice in their continual imprisonment, than monuments of justice in the memory of their suffering.

It is true, that the objects of his justice then and now were very differing. For then, it was the revenge of an offence against his own person and crown, and upon persons that were malcontents, and contraries to the state and government. But now, it is the revenge of the blood and death of a particular subject, and the cry of a prisoner. It is upon persons, that were highly in his favour; whereby his Majesty, to his great honour, hath showed to the world, as if it were written in a sunbeam, that he is truly the lieutenant of Him, with whom there is no respect of persons; that his affections royal are above his affections private; that his favours and nearness about him are not like popish sanctuaries to privilege malefactors; and that his being the best master of the world doth not let him from being the best king of the world. His people, on the other side, may say to themselves, "I will lie down in peace; for God and the king and the law protect me against great and small." It may be a discipline also to great men, especially such as are swoln in fortunes from small beginnings, that the king is as well able to level mountains, as to fill valleys, if such be their desert.

But to come to the present case; the great frame of justice, my lords, in this present action, hath a

† Thomas Egerton, viscount Ellesmere, lord high chancellor.  
‡ The first time was on the trials of the lords Cobham and Grey, in November, 1603.

vault, and it hath a stage: a vault, wherein these works of darkness were contrived; and a stage with steps, by which they were brought to light. And therefore I will bring this work of justice to the period of this day; and then go on with this day's work.

Sir Thomas Overbury was murdered by poison in the 15th of September, 1613, 11 *Reg.* This foul and cruel murder did, for a time, cry secretly in the ears of God: but God gave no answer to it otherwise than by that voice, which sometimes he useth, which is *vox populi*, the speech of the people. For there went then a murmur, that Overbury was poisoned; and yet this same submissive and soft voice of God, the speech of the vulgar people, was not without a counter-tenor or counter-blast of the devil, who is the common author both of murder and slander: for it was given out, that Overbury was dead of a foul disease, and his body, which they had made a *corpus Judaicum* with their poisons, so as it had no whole part, must be said to be leprosed with vice, and so his name poisoned as well as his body. For as to dissoluteness, I never heard the gentleman noted with it: his faults were insolency, and turbulency, and the like of that kind: the other part of the soul, not the voluptuous.

Meantime, there was some industry used, of which I will not now speak, to lull asleep those, that were the revengers of blood; the father and the brother of the murdered. And in these terms things stood by the space almost of two years: during which time, God so blinded the two great procurers, and dazzled them with their own greatness, and bind and nail fast the actors and instruments, with security upon their protection, as neither the one looked about them, nor the other stirred or fled, nor were conveyed away; but remained here still, as under a privy arrest of God's judgments; insomuch as Frankin, that should have been sent over to the Palsgrave with good store of money, was, by God's providence, and the accident of a marriage of his, diverted and stayed.

But about the beginning of the progress last summer, God's judgments began to come out of their depths: and as the revealing of murders is commonly such, as a man may say, a *Domino hoc factum est*; it is God's work, and it is marvellous in our eyes; so in this particular it was most admirable; for it came forth by a compliment and matter of courtesy.

My lord of Shrewsbury,\* that is now with God, recommended to a counsellor of state, of especial trust by his place, the late lieutenant Helwisse,† only for acquaintance as an honest worthy gentleman; and desired him to know him, and to be acquainted with him. That counsellor answered him civilly, that my lord did him a favour; and that he

\* Gilbert, earl of Shrewsbury, knight of the garter, who died May 8, 1616.

† Sir Gervase Helwisse, appointed lieutenant of the Tower, upon the removal of Sir William Waad, on the 6th of May, 1613. [*Reliquia Wottoniana*, p. 412, 3d edit. 1672.] Mr. Chamberlain, in a M.S. letter to Sir Dudley Carleton, dated at London, May 13, 1613, speaks of Sir Gervase's promotion in these terms: "One Sir Gervase Helwisse of Lincolnshire, somewhat an unknown man, is put into the place [of Sir W.

should embrace it willingly; but he must let his lordship know, that there did lie a heavy imputation upon that gentleman, Helwisse; for that Sir Thomas Overbury, his prisoner, was thought to have come to a violent and untimely death. When this speech was reported back by my lord of Shrewsbury to Helwisse, *percussit illico animum*, he was stricken with it; and being a politic man, and of likelihood doubting, that the matter would break forth at one time or other, and that others might have the start of him, and thinking to make his own case by his own tale, resolved with himself, upon this occasion, to discover to my lord of Shrewsbury and that counsellor, that there was an attempt, whereto he was privy, to have poisoned Overbury by the hands of his under-keeper, Weston; but that he checked it, and put it by, and dissuaded it, and related so much to him indeed: but then he left it thus, that was but an attempt, or untimely birth, never executed; and, as if his own fault had been no more, but that he was honest in forbidding, but fearful of revealing and impeaching or accusing great persons: and so with this fine point thought to save himself.

But that great counsellor of state wisely considering, that by the lieutenant's own tale it could not be simply a permission or weakness; for that Weston was never displaced by the lieutenant, notwithstanding that attempt; and coupling the sequel by the beginning, thought it matter fit to be brought before his Majesty, by whose appointment Helwisse set down the like declaration in writing.

Upon this ground, the king playeth Solomon's part, *Gloria Dei celare rem; et Gloria Regis investigare rem*; and sets down certain papers of his own hand, which I might term to be *claves justitiæ*, keys of justice; and may serve for a precedent both for princes to imitate, and for a direction for judges to follow: and his Majesty carried the balance with a constant and steady hand, evenly and without prejudice, whether it were a true accusation of the one part, or a practice and factious device of the other: which writing, because I am not able to express according to the worth thereof, I will desire your lordship anon to hear read.

This excellent foundation of justice being laid by his Majesty's own hand, it was referred unto some counsellors to examine farther, who gained some degrees of light from Weston, but yet left it imperfect.

After it was referred to Sir Edward Coke, chief justice of the king's bench, as a person best practised in legal examinations, who took a great deal of indefatigable pains in it, without intermission, having, as I have heard him say, taken at least three hundred examinations in this business.

But these things were not done in a corner. I need not speak of them. It is true, that my lord

Waad's] by the favour of the lord chamberlain [earl of Somerset] and his lady. The gentleman is of too mild and gentle a disposition for such an office. He is my old friend and acquaintance in France, and lately renewed in town, where he hath lived past a year, nor followed the court many a day." Sir Henry Wotton, in a letter of the fourteenth of May, 1613, [*ubi supra*, p. 13.] says, that Sir Gervase had been before *one of the pensioners*.

chief justice, in the dawning and opening of the light, finding, that the matter touched upon these great persons, very discreetly became suitor to the king to have greater persons than his own rank joined with him. Whereupon, your lordship, my lord high steward of England, to whom the king commonly resorteth *in arduis*, and my lord steward of the king's house, and my lord Zouch, were joined with him.

Neither wanted there this while practice to suppress testimony, to deface writings, to weaken the king's resolution, to slander the justice, and the like. Nay, when it came to the first solemn act of justice, which was the arraignment of Weston, he had his lesson to stand mute; which had arrested the wheel of justice. But this dumb devil, by the means of some discreet divines, and the potent charm of justice, together, was cast out. Neither did this poisonous adder stop his ear to those charms, but relented, and yielded to his trial.

Then follow the proceedings of justice against the other offenders, Turner, Helwisse, Franklin.

But all these being but the organs and instruments of this fact, the actors and not the authors, justice could not have been crowned without this last act against these great persons. Else Weston's censure or prediction might have been verified, when he said, he hoped the small flies should not be caught, and the great escape. Wherein the king being in great straits, between the defacing of his honour and of his creature, hath, according as he useth to do, chosen the better part, reserving always mercy to himself.

The time also of this justice hath had its true motions. The time until this lady's deliverance was due unto honour, christianity, and humanity, in respect of her great belly. The time since was due to another kind of deliverance too; which was, that some causes of estate, that were in the womb, might likewise be brought forth, not for matter of justice, but for reason of state. Likewise this last procrastination of days had the like weighty grounds and causes. And this is the true and brief representation of this extreme work of the king's justice.

Now for the evidence against this lady, I am sorry I must rip it up. I shall first show you the purveyance or provisions of the poisons; that they were seven in number brought to this lady, and by her billeted and laid up till they might be used; and this done with an oath or vow of secrecy, which is like the Egyptian darkness, a gross and palpable darkness, that may be felt.

Secondly, I shall show you the exhibiting and sorting of this same number or volley of poisons. White arsenic was fit for salt, because it is of like body and colour. The poison of great spiders, and of the venomous fly cantharides, was fit for pigs' sauce, or partridge sauce, because it resembled pepper. As for mercury-water and other poisons they might be fit for tarts, which is a kind of hotch-pot, wherein no one colour is so proper: and some of these were delivered by the hands of this lady, and some by her direction.

Thirdly, I shall prove and observe unto you the

cautions of these poisons; that they might not be too swift, lest the world should startle at it by the suddenness of the despatch: but they must abide long in the body, and work by degrees: and for this purpose there must be essays of them upon poor beasts, &c.

And lastly, I shall show you the rewards of this impoisonment, first demanded by Weston, and denied, because the deed was not done; but after the deed done and perpetrated, that Overbury was dead, then performed and paid to the value of 180*l*.

And so without farther aggravation of that, which in itself bears its own tragedy, I will conclude with the confessions of this lady herself, which is the strongest support of justice; and yet is the foot-stool of mercy. For as the Scripture says, "mercy and truth have kissed each other;" there is no meeting or greeting of mercy, till there be a confession, or trial of truth. For these read,

The Countess's confession, January 8.

#### SIR FRANCIS BACON TO THE KING.\*

IT MAY PLEASE YOUR EXCELLENT MAJESTY,

ACCORDING to your Majesty's reference signified by Sir Roger Wilbraham, I have considered of the petition of Sir Gilbert Houghton, your Majesty's servant, for a licence of sole transportation of tallow, butter, and hides, &c. out of your realm of Ireland; and have had conference with the lord Chichester, late lord deputy of Ireland, and likewise with Sir John Davies, your Majesty's attorney there: And this is that which I find:

First, that hides and skins may not be meddled withal, being a staple commodity of the kingdom, wherein the towns are principally interested.

That for tallow, butter, beef, not understanding it of live cattle, and pipe-staves, for upon these things we fell, although they were not all contained in the petition, but in respect hides were more worth than all the rest, they were thought of by way of some supply; these commodities are such, as the kingdom may well spare, and in that respect fit to be transported; wherein nevertheless some consideration may be had of the profit, that shall be taken upon the licence. Neither do I find, that the farmers of the customs there, of which some of them were before me, did much stand upon it, but seemed rather to give way to it.

I find also, that at this time all these commodities are free to be transported by proclamation, so as no profit can be made of it, except there be first a restraint; which restraint I think fitter to be by

\* From the collections of the late Robert Stephens, Esq.

some prohibition in the letters patents, than by any new proclamation; and the said letters patents to pass rather here, than there, as it was in the licence of wines granted to the lady Arbella; but then those letters patents to be enrolled in the chancery of Ireland, whereby exemplifications of them may be taken to be sent to the ports.

All which nevertheless I submit to your Majesty's better judgment.

Your Majesty's most humble bounden subject  
and servant,

5 June, 1616.

FR. BACON.

MR. TOBIE MATTHEW, TO SIR FRANCIS  
BACON, ATTORNEY-GENERAL.

MAY IT PLEASE YOUR HONOUR,

SUCH as know your honour, may congratulate with you the favour, which you have lately received from his Majesty, of being made a counsellor of state; \* but as for me, I must have leave to congratulate with the council-table, in being so happy as to have you for an assessor. I hope these are but beginnings, and that the marriage, which now I perceive that fortune is about to make with virtue, will be consummate in your person. I cannot dissemble, though I am ashamed to mention, the excessive honour, which you have vouchsafed to do unto my picture. But shame ought not to be so hateful as sin; and without sin I know not how to conceal the extreme obligation into which I am entered thereby, which is incomparably more than I can express, and no less than as much as I am able to conceive. And as the copy is more fortunate than the original, because it hath the honour to be under your eye; so the original being much more truly yours than the copy can be, aspires by having the happiness to see you, to put the picture out of countenance.

I understand by Sir George Petre, † who is arrived here at the Spa, and is so wise as to honour you extremely, though he have not the fortune to be known to your honour, that he had heard how my lord of Canterbury had been moved in my behalf; and that he gave way unto my return. This, if it be true, cannot have happened without some endeavour of your honour; and therefore, howsoever I have not been particularly advertised, that your honour had delivered my letter to his Grace; yet now methinks I do as good as know it, and dare adventure to present you with my humblest thanks for the favour. But the main point is, how his Majesty should be moved: wherein my friends are straining courtesy; and unless I have your honour for a master of the ceremonies, to take order, who shall begin, all the benefit, that I can reap by this negotiation, will be to have the reputation of little judgment in attempting that which I was not able to obtain; and that howsoever I have shot fair, I know not how to hit the mark. I have been directed

by my lord Roos, who was the first mover of this stone, to write a letter, which himself would deliver to the master of the horse, ‡ who doth me the honour to wish me very well: and I have obeyed his lordship, and beseech your honour, that you will be pleased to prevent, or to accompany, or second it with your commendation, lest otherwise the many words, that I have used, have but the virtue of a single 0, or cypher. But indeed, if I had not been over-weighed by the authority of my lord Roos's commandment, I should rather have reserved the master of the horse's favour to some other use afterward. In conformity whereof, I have also written to his lordship; and perhaps he will thereupon forbear to deliver my letter to the master of the horse: whereas, I should be the less sorry, if your honour's self would not think it inconvenient to make the suit of my return to his Majesty; in which case I should, to my extreme contentment, have all my obligations to your honour only.

His Majesty's being now in progress will give some impediment to my suit, unless either it be my good fortune, that your honour do attend his person; or else that you will be pleased to command some one of the many servants your honour hath in court, to procure the expedition of my cause, wherein I can foresee no difficulty, when I consider the interest, which your honour alloweth me in your favour, and my innocent carriage abroad for so many years; whereunto all his Majesty's ministers, who have known me, I am sure, will give an attestation, according to the contents of my letter to his Grace of Canterbury.

If I durst, I would most humbly entreat your honour to be pleased, that some servant of yours may speedily advertise me, whether or no his Grace of Canterbury hath received my letter; what his answer was; and what I may hope in this my suit. I remember, that the last words, which I had the honour to hear from your mouth, were, that if I continued any time free both from disloyalty and priesthood, your honour would be pleased to make yourself the intercessor for my return. Any letter sent to Mr. Trumbull for me will come safely and speedily to my hands.

The term doth now last with your honour all the year long; and therefore the sooner I make an end, the better service I shall do you. I presume to kiss your hands, and continue

Your honour's most entirely, and humbly ever  
at commandment,

TOBIE MATTHEW.

Spa, this 16th of July, *stylo novo*, 1616.

POSTSC. It is no small penance that I am forced to apparel my mind in my man's hand, when it speaks to your honour. But God Almighty will have it so, through the shaking I have in my right hand; and I do little less than want the use of my fore finger.

\* Sir Francis Bacon was sworn at Greenwich of the privy council, June 9, 1616.

† Grandson of John, the first lord Petre, and son of William, second baron of that name.

‡ Sir George Villiers, who was appointed to that office, Jan. 4, 1615-16.

TO SIR FRANCIS BACON, ATTORNEY-  
GENERAL.

IT MAY PLEASE YOUR HONOUR,

I PRESUMED to importune your honour with a letter of the 16th of this month, whereby I signified how I had written to the master of the horse, that he would be pleased to move his Majesty for my return into England; and how that I had done it upon the direction of my lord Roos, who offered to be the deliverer thereof. Withal I told your honour, that I expressed thereby an act rather of obedience than prudence, as not holding his lordship a fit man, whom, by presenting that letter, the king might peradventure discover to be my favourer in this business. In regard whereof I besought him, that, howsoever I had complied with his command in writing, yet he would forbear the delivery; and I gave him divers reasons for it. And both in contemplation of those reasons, as also of the hazard of miscarriage, that letters do run into between these parts and those, I have now thought fit to send your honour this enclosed, accompanied with a most humble entreaty, that you will be pleased to put it into the master of the horse's hands, with such a recommendation as you can give. Having read it, your honour may be pleased to seal it: and if his honour have received the former by other hands, this may serve in the nature of a duplicate or copy: if not, it may be the original. And indeed, though it should be but the copy, if it may be touched by your honour, it would have both greater grace and greater life, than the principal itself; and therefore, howsoever, I humbly pray, that this may be delivered.

If my business should be remitted to the council table, which yet, I hope, will not be, I am most a stranger to my lord chancellor and my lord chamberlain,\* of whom yet I trust, by means of your honour's good word in my behalf, that I shall receive no impediment.

The bearer, Mr. Becher,† can say what my carriage hath been in France under the eye of several ambassadors; which makes me the more glad to use him in the delivery of this letter to your honour: and if your honour may be pleased to command me any thing, he will convey it to my knowledge.

I hear, to my unspeakable joy of heart, how much power you have with the master of the horse; and how much immediate favour you have also with his most excellent Majesty: so that I cannot but hope for all good success, when I consider withal the protection, whereinto you have been pleased to take me, the

Most humble and most obliged of your honour's  
many servants,

TOBIE MATTHEW.

Spa, this last of July, *style novo*, 1616.

\* William, earl of Pembroke.

† William, afterwards knighted. He had been secretary to Sir George Calvert, ambassador to the court of France, and

TO SIR FRANCIS BACON, ATTORNEY-  
GENERAL.

MAY IT PLEASE YOUR HONOUR,

I HAVE been made happy by your honour's noble and dear lines of the two and twentieth of July; and the joy that I took therein, was only kept from excess by the notice they gave me of some intentions and advices of your honour, which you have been pleased to impart to others of my friends, with a meaning, that they should acquaint me with them; whereof they have entirely failed. And therefore if still it should import me to understand what they were, I must be enforced to beg the knowledge of them from yourself. Your honour hath, by this short letter, delivered me otherwise from a great deal of laborious suspense. For, besides the great hope you give me of being so shortly able to do you reverence, I am come to know, that by the diligence of your favour towards me, my lord of Canterbury hath been drawn to give way, and the master of the horse hath been induced to move. That motion, I trust, will be granted howsoever; but I should be out of fear thereof, if when he moves the king, your honour would cast to be present; that if his Majesty should make any difficulty, some such reply, as is wont to come from you, in such cases, may have power to discharge it.

I have been told rather confidently than credibly, for in truth I am hardly drawn to believe it, that Sir Henry Goodere should under-hand, upon the reason of certain accounts, that run between him and me, wherein I might justly lose my right, if I had so little wit, as to trouble your honour's infinite business, by a particular relation thereof, oppose himself to my return; and perform ill offices in conformity of that unkind affection, which he is said to bear me. But, as I said, I cannot absolutely believe it, though yet I could not so far despise the information, as not to acquaint your honour with what I heard. I offer it not as a ruled case, but only as a query, as I have also done to Mr. Secretary Lake, in this letter, which I humbly pray your honour may be given him, together with your best advice, how my business is to be carried in this conjuncture of his Majesty's drawing near to London, at which time I shall receive my sentence. I have learned from your honour to be confident, that it will be pronounced in my favour; but if the will of God should be otherwise, I shall yet frame for myself a good proportion of contentment; since, howsoever I was so unfortunate, as that I might not enjoy my country, yet withal, I was so happy, as that my return thither was desired and negotiated by the affection, which such a person as yourself vouchsafed to bear me. When his Majesty shall be moved, if he chance to make difficulty about my return, and offer to impose any condition, which, it is known, I cannot draw myself to digest; I desire it may be remembered, that my case is common with many of his subjects, who

was afterwards agent at that court; and at last made clerk of the council.

breathe in the air of their country, and that my case is not common with many, since I have lived so long abroad with disgrace at home; and yet have ever been free not only from suspicion of practice, but from the least dependence upon foreign princes. My king is wise; and I hope, that he hath this just mercy in store for me. God Almighty make and keep your honour ever happy, and keep me so in his favour, as I will be sure to continue

Your honour's ever most obliged and devoted servant,

TOBIE MATTHEW.

Antwerp, this first of Sept. *style novo*, 1616.

POSTSCRIPT.

MAY IT PLEASE YOUR HONOUR,

I HAVE written to Sir John Digby; and I think he would do me all favour, if he were handsomely put upon it. My lady of Pembroke \* hath written, and that very earnestly, to my lord chamberlain in my behalf.

This letter goes by Mr. Robert Garret, to whom I am many ways beholden, for making me the best present, that ever I received, by delivering me your honour's last letter.

SIR FRANCIS BACON TO THE KING.

MAY IT PLEASE YOUR EXCELLENT MAJESTY,

BECAUSE I have ever found, that in business the consideration of persons, who are *instrumenta animata*, is no less weighty than of matters, I humbly pray your Majesty to peruse this enclosed paper, containing a diligence, which I have used in *omnem eventum*. If Towerson, † as a passionate man, have overcome himself in his opinion, so it is. But if his company make this good, then I am very glad to see in the case, wherein we now stand, there is this hope left, and your Majesty's honour preserved in the *entier*. God have your Majesty in his divine protection.

Your Majesty's most devoted, and most bounden servant, &c.

This is a secret to all men but my lord chancellor; and we go on this day with the new company, without discouraging them at all.

September 18, 1616.

Indorsed,

To the king, upon Towerson's propositions about the cloth business.

\* Mary, widow of Henry, earl of Pembroke, who died January 19, 1601-2, daughter of Sir Henry Sidney, and sister of Sir Philip. She died September 25, 1621.

† Whose brother, captain Gabriel Towerson, was one of the English merchants executed by the Dutch at Amboyna, in 1623.

‡ Born about 1570, entered a commoner of Broad-Gate's hall, now Pembroke-College, Oxford, in 1585, whence he

RICHARD MARTIN, ESQ. † TO SIR FRANCIS BACON.

RIGHT HONOURABLE,

MY attendance at court two days, in vain, considering the end of my journey, was no less unto me, seeing thereby I made the gain of the overture and assurance of your honour's affection. These comforts have given new life and strength to my hopes, which before began to faint. I know, what your honour promiseth, you will undertake; and what you undertake, you seldom fail to compass; for such proof of your prudence and industry your honour hath of late times given to the swaying world. There is, to my understanding, no great intricacy in my affair, in which I plainly descry the course to the shore I would land at; to which neither I nor any other can attain, without the direction of our great master-pilot, who will not stir much without the beloved mate sound the way. Both these none can so well set awork as yourself, who have not only their ear, but their affection, and that with good right as I hope, in time, to good and public purpose. It is fit likewise, that your honour know all my advantages. The present incumbent is tied to me by firm promise, which gives an impediment to the competitors, whereof one already, according to the heaviness of his name and nature, *petit deorsum*. And though I be a bad courtier, yet I know the style of gratitude, and shall learn as I am instructed. Whatsoever your honour shall undertake for me, I will make good. Therefore I humbly and earnestly entreat your best endeavour, to assure to yourself and your master a servant, who both can and will, though as yet mistaken, advance his honour and service with advantage. Your love and wisdom is my last address; and on the real nobleness of your nature, whereof there is so good proof, stands my last hope. If I now find a stop, I will resolve it is *fatum Carthaginiis*, and sit down in perpetual peace. In this business I desire all convenient silence; for though I can endure to be refused, yet it would trouble me to have my name blasted. If your honour return not, and you think it requisite, I will attend at court. Meantime, with all humble and hearty wishes for increase of all happiness, I kiss your honour's hands.

Your honour's humbly at command,

R. MARTIN.

September 27, 1616.

To the right honourable Sir Francis Bacon, knight, his Majesty's Attorney-General, and one of his Majesty's most honourable *privy council*, my singular patron at court.

removed to the Middle Temple. In the parliament of 1601, he served for the borough of Barnstaple in Devon; and in the first parliament of king James I. he served for Cirencester in Gloucestershire; he was chosen recorder of London in September, 1618; but died in the last day of the following month. He was much esteemed by the men of learning and genius of that age.

## TO THE KING.

IT MAY PLEASE YOUR MAJESTY,

THIS morning, according to your Majesty's command, we have had my lord chief justice of the king's bench \* before us, we being assisted by all our learned council, except serjeant Crew, who was then gone to attend your Majesty. It was delivered unto him, that your Majesty's pleasure was, that we should receive an account from him of the performance of a commandment of your Majesty laid upon him, which was, that he should enter into a view and retraction of such novelties, and errors, and offensive conceits, as were dispersed in his *Reports*: that he had had good time to do it; and we doubted not but he had used good endeavour in it, which we desired now in particular to receive from him.

His speech was, that there were of his *Reports* eleven books, that contained about five hundred cases: that heretofore in other *Reports*, as namely, those of Mr. Plowden, † which he revered much, there hath been found nevertheless errors, which the wisdom of the time had discovered, and later judgments controlled; and enumerated to us four cases in Plowden, which were erroneous: and thereupon delivered in to us the enclosed paper, wherein your Majesty may perceive, that my lord is a happy man, that there should be no more errors in his five hundred cases, than in a few cases of Plowden. Your Majesty may also perceive, that your Majesty's direction to my lord chancellor and myself, and the travail taken by us and Mr. Solicitor, ‡ in following and performing your direction, was not altogether lost; for that of those three heads, which we principally respected, which were the rights and liberties of the church, your prerogative, and the jurisdiction of other your courts, my lord hath scarcely fallen upon any, except it be the prince's case, which also yet seemeth to stand but upon the grammatical, of French and Latin.

My lord did also give his promise, which your Majesty shall find in the end of his writing, thus far in a kind of common place or thesis, that it was sin for a man to go against his own conscience, though erroneous, except his conscience be first informed and satisfied.

The lord chancellor in the conclusion signified to my lord Coke your Majesty's commandment, that until report made, and your pleasure thereupon known, he shall forbear his sitting at Westminster, &c. not restraining nevertheless any other exercise of his place of chief justice in private.

Thus having performed, to the best of our understanding, your royal commandment, we rest ever

Your Majesty's most faithful, and most bounden servants, &c.

\* Sir Edward Coke.

† Edmund Plowden, born of an ancient family of that name at Plowden in Shropshire, who as he tells us himself in the preface to his *Reports*, in the twentieth year of his age, and the thirtieth of the reign of Henry VIII. anno 1539, began his study of the common law in the Middle Temple. Wood adds, *ATA. Oxon. Vol. I. col. 219*, that he spent three years in the study of arts, philosophy, and physic, at Cambridge, and four

## THE LORD VISCOUNT VILLIERS TO SIR FRANCIS BACON, ATTORNEY-GENERAL.

SIR,

I HAVE acquainted his Majesty with my lord chancellor's and your report, touching my lord Coke; as also, with your opinion therein; which his Majesty doth dislike for these three reasons: first, because, that by this course you propound, the process cannot have a beginning, till after his Majesty's return; which, how long it may last after, no man knoweth. He therefore thinketh it too long and uncertain a delay, to keep the bench so long void from a chief justice. Secondly, although his Majesty did use the council's advice in dealing with the chief justice upon his other misdemeanors; yet he would be both to lessen his prerogative, in making the council judges, whether he should be turned out of his place or no, if the case should so require. Thirdly, for that my lord Coke hath sought means to kiss his Majesty's hands, and withal to acquaint him with some things of great importance to his service; he holdeth it not fit to admit him to his presence, before these points be determined, because that would be a grant of his pardon before he had his trial. And if those things, wherewith he is to acquaint his Majesty, be of such consequence, it would be dangerous and prejudicial to his Majesty, to delay him too long. Notwithstanding, if you shall advise of any other reasons to the contrary, his Majesty would have you, with all the speed you can, to send them unto him; and in the mean time to keep back his Majesty's letter, which is herein sent unto you, from my lord Coke's knowledge, until you receive his Majesty's further direction for your proceeding in his business.

And so I rest, your ever assured friend at command,

GEORGE VILLIERS.

Theobald's, the 3d of October, 1616.

To the right honourable Sir Francis Bacon, knight, his Majesty's Attorney-General, and of his most honourable privy council.

## TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

WE have considered of the letters, which we received from your Majesty, as well that written to us both, as that other written by my lord Villiers to me, the attorney, which I thought good to acquaint my lord chancellor withal, the better to give your Majesty satisfaction. And we most humbly desire your Majesty to think, that we are, and ever shall

at Oxford, where in November 1552 he was admitted to practise chirurgery and physic. In 1557 he became summer reader of the Middle Temple, and three years after Lent reader, having been made serjeant, October 27, 1558. He died February 6, 1584-5, at the age of sixty-seven, in the profession of the Roman catholic faith, and lies interred in the Temple church.

‡ Sir Henry Yelverton.

be, ready to perform and obey your Majesty's directions; towards which the first degree is to understand them well.

In answer therefore to both the said letters, as well concerning matter as concerning time, we shall in all humbleness offer to your Majesty's high wisdom the considerations following:

First, we did conceive, that after my lord Coke was sequestered from the table and his circuits,\* when your Majesty laid upon him your commandment for the expurging of his *Reports*, and commanded also our service to look into them, and into other novelties introduced into the government, your Majesty had in this your doing, two principal ends:

The one, to see, if upon so fair an occasion he would make an expiation of his former faults; and also show himself sensible of those things in his *Reports*, which he could not but know were the likeliest to be offensive to your Majesty.

The other, to perform *de vero* this right to your crown and succession, and your people also; that those errors and novelties might not run on, and authorize by time, but might be taken away, whether he consented to it or no.

But we did not conceive your Majesty would have had him charged with those faults of his book, or those other novelties; but only would have had them represented to you for your better information.

Now your Majesty seeth what he hath done, you can better judge of it than we can. If, upon this probation added to former matters, your Majesty think him not fit for your service, we must in all humbleness subscribe to your Majesty, and acknowledge that neither his displacing, considering he holdeth his place but during your will and pleasure, nor the choice of a fit man to be put in his room, are council-table matters, but are to proceed wholly from your Majesty's great wisdom and gracious pleasure. So that in this course, it is but the signification of your pleasure, and the business is at an end as to him. Only there remaineth the actual expurgation or animadversions of the books.

But if your Majesty understand it, that he shall be charged, then, as your Majesty best knoweth, justice requireth, that he be heard and called to his answer, and then your Majesty will be pleased to consider, before whom he shall be charged; whether before the body of your council, as formerly he was, or some selected commissioners; for we conceive your Majesty will not think it convenient it should be before us two only. Also the manner of his charge is considerable, whether it shall be verbal by your learned council, as it was last; or whether, in respect of the multiplicity of matters, he shall not have the collections we have made in writing, delivered to him. Also the matter of his charge is likewise considerable, whether any of those points of novelty, which by your Majesty's commandment we collected, shall be made part of his charge; or only the faults of his books, and the prohibitions

and *habeas corpus*, collected by my lord of Canterbury. In all which course we foresee length of time, not so much for your learned council to be prepared, for that is almost done already, but because himself, no doubt, will crave time of advice to peruse his own books, and to see, whether the collections be true, and that he be justly charged; and then to produce his proofs, that those things, which he shall be charged with, were not conceits or singularities of his own, but the acts of court, and other like things, tending to excusation or extenuation; wherein we do not see, how the time of divers days, if not of weeks, can be denied him.

Now for time, if this last course of charging him be taken, we may only inform your Majesty thus much, that the absence of a chief justice, though it should be for a whole term, as it hath been often upon sickness, can be no hinderance to common justice. For the business of the king's bench may be despatched by the rest of the judges; his voice in the star-chamber may be supplied by any other judge, that my lord chancellor shall call; and the trials by *nisi prius* may be supplied by commission.

But as for those great matters of discovery, we can say nothing more than this, that either they are old or new. If old, he is to blame for having kept them so long: if new, or whatsoever, he may advertise your Majesty of them by letter, or deliver them by word to such counsellor as your Majesty will assign.

Thus we hope your Majesty will accept of our sincerity, having dealt freely and openly with your Majesty, as becometh us: and when we shall receive your pleasure and direction, we shall execute and obey the same in all things: ending with our prayers for your Majesty, and resting

Your Majesty's most faithful, and most bounden servants,

T. ELLESMERE, CANC.  
FR. BACON.

October 6, 1616.

#### REMEMBRANCES OF HIS MAJESTY'S DECLARATION, TOUCHING THE LORD COKE.

THAT although the discharging and removing of his Majesty's officers and servants, as well as the choice and advancement of men to place, be no council-table matters, but belong to his Majesty's princely will and secret judgment; yet his Majesty will do his council this honour, that in his resolutions of that kind, his council shall know them first before others, and shall know them accompanied by their causes, making as it were a private manifesto, or revealing of himself to them without parables.

Then to have the report of the lords touching the business of the lord Coke, and the last order of the council read.

That done his Majesty farther to declare, that he might, upon the same three grounds in the order

\* On the 30th of June, 1616. *Camdeni Annales Regis Jacobi I.* p. 19; and Peck, *Desiderata Curiosa*, Vol. I. Lib. vi. p. 18.

mentioned, of deceit, contempt, and slander of his government, very justly have proceeded then, not only to have put him from his place of chief justice, but to have brought him in question in the star-chamber, which would have been his utter overthrow; but then his Majesty was pleased for that time only to put him off from the council-table, and from the public exercise of his place of chief justice, and to take farther time to deliberate.

That in his Majesty's deliberation, besides the present occasion, he had in some things looked back to the lord Coke's former carriage, and in some things looked forward, to make some farther trial of him.

That for things passed, his Majesty had noted in him a perpetual turbulent carriage, first towards the liberties of his church and estate ecclesiastical; towards his prerogative royal, and the branches thereof; and likewise towards all the settled jurisdictions of all his other courts, the high commission, the star-chamber, the chancery, the provincial councils, the admiralty, the duchy, the court of requests, the commission of inquiries, the new boroughs of Ireland; in all which he had raised troubles and new questions; and lastly, in that, which might concern the safety of his royal person, by his exposition of the laws in cases of high treason.

That, besides the actions themselves, his Majesty in his princely wisdom hath made two special observations of him; the one, that he having in his nature not one part of those things, which are popular in men, being neither civil, nor affable, nor magnificent, he hath made himself popular by design only, in pulling down government. The other, that whereas his Majesty might have expected a change in him, when he made him his own, by taking him to be of his council, it made no change at all, but to the worse, he holding on all his former channel, and running separate courses from the rest of his council, and rather busying himself in casting fears before his council, concerning what they could not do, than joining his advice what they should do.

That his Majesty, desirous yet to make a farther trial of him, had given him the summer's vacation to reform his *Reports*, wherein there be many dangerous conceits of his own uttered for law, to the prejudice of his crown, parliament, and subjects; and to see, whether by this he would in any part redeem his fault. But that his Majesty hath failed of the redemption he desired, but hath met with another kind of redemption from him, which he little expected. For as to the *Reports*, after three months time and consideration, he had offered his Majesty only five animadversions, being rather a scorn, than a satisfaction to his Majesty; whereof one was that in the prince's case he had found out the French statute, which was *filz aisé*, whereas the Latin was *primogenitus*; and so the prince is duke of Cornwall in French, and not duke of Cornwall in Latin. And another was, that he had set Montagu to be

chief justice in Henry VIII.'s time, when it should have been in Edward VI.'s, and such other stuff; not falling upon any of those things, which he could not but know were offensive.

That hereupon his Majesty thought good to refresh his memory, and out of many cases, which his Majesty caused to be collated, to require his answer to five, being all such, as were but expatiations of his own, and no judgments; whereunto he returned such an answer, as did either justify himself, or elude the matter, so as his Majesty seeth plainly *antiquum obtinet*.

---

TO SIR FRANCIS BACON, ATTORNEY-GENERAL.\*

SIR,

I HAVE kept your man here thus long, because I thought there would have been some occasion for me to write after Mr. Solicitor-General's being with the king. But he hath received so full instruction from his Majesty, that there is nothing left for me to add in the business. And so I rest

Your faithful servant,

GEORGE VILLIERS.

Royston, the 13th of Octob. 1616.

To the right honourable Sir Francis Bacon, knight, one of his Majesty's privy council, and his Attorney-general.

---

SIR EDMUND BACON† TO SIR FRANCIS BACON, ATTORNEY-GENERAL.

MY LORD,

I AM bold to present unto your hands by this bearer whom the law calls up, some salt of worm-wood, being uncertain, whether the regard of your health makes you still continue the use of that medicine. I could wish it otherwise; for I am persuaded that all diuretics, which carry with them that punctuous nature and caustic quality by calcination, are hurtful to the kidneys, if not enemies to the other principal parts of the body. Wherein if it shall please you for your better satisfaction, to call the advice of your learned physicians, and that they shall resolve of any medicine for your health, wherein my poor labour may avail you, you know where your faithful apothecary dwells, who will be ready at your commandment; as I am bound both by your favours to myself, as also by those to my nephew, whom you have brought out of darkness into light, and by what I hear, have already made him by your bounty, a subject of emulation to his elder brother. We are all partakers of this your

\* Harl. MSS. Vol. 7006.

† Nephew of Sir Francis Bacon, being eldest son of Sir Nicholas Bacon, lord keeper of the great seal. Sir Edmund

died without issue, April 10, 1649. There are several letters to him from Sir Henry Wotton, printed among the works of the latter.

kindness towards him; and for myself, I shall be ever ready to deserve it by any service that shall lie in the power of

Your lordship's poor nephew,

EDM. BACON.

Redgrave, this 19th of October, 1616.

*For the right honourable Sir Francis Bacon, knight, his Majesty's Attorney-General, and one of his most honourable privy counsellors, be these delivered at London.*

#### TO THE KING.

MAY IT PLEASE YOUR EXCELLENT MAJESTY,

I SEND your Majesty a form of discharge for my lord Coke from his place of chief justice of your bench.\*

I send also a warrant to the lord chancellor, for making forth a writ for a new chief justice, leaving a blank for the name to be supplied by your Majesty's presence; for I never received your Majesty's express pleasure in it.

If your Majesty resolve of Montagu † as I conceive and wish, it is very material, as these times are, that your Majesty have some care, that the recorder succeeding be a temperate and discreet man, and assured to your Majesty's service. If your Majesty, without too much harshness, can continue the place within your own servants, it is best; if not, the man upon whom the choice is like to fall, which is Coventry, ‡ I hold doubtful for your service; not but that he is a well learned, and an honest man; but he hath been, as it were, bred by lord Coke, and seasoned in his ways.

God preserve your Majesty.

Your Majesty's most humble and bounden servant,

FR. BACON.

I send not these things, which concern my lord Coke, by my lord Villiers, for such reasons as your Majesty may conceive.

November 13, at noon [1616].

\* Sir Edward Coke was removed from that post on the 15th of November, 1616.

† Sir Henry Montagu, recorder of London, who was made lord chief justice of the king's bench, November 16, 1616. He was afterwards made lord treasurer, and created earl of Manchester.

‡ Thomas Coventry, Esq. afterwards lord keeper of the great seal.

§ Sir Henry Montagu.

¶ This is just mentioned in a letter of Sir Francis Bacon to the lord viscount Villiers, printed in his works; but is more particularly stated in the *Reports* of Sir Henry Hobart, lord chief justice of the Common Pleas, pp. 120, 121, Edit. London 1658, fol. as follows. The lord Darcy of the North sued Gervase Markham, Esq. in the star-chamber, in 1616, on this occasion. They had hunted together, and the defendant and a servant of the plaintiff, one Beckwith, fell together by the ears in the field; and Beckwith threw him down, and was upon him cuffing him, when the lord Darcy took his servant off, and reproved him. However, Mr. Mark-

#### TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I SEND your Majesty, according to your commandment, the warrant for the review of Sir Edward Coke's *Reports*. I had prepared it before I received your Majesty's pleasure; but I was glad to see it was in your mind, as well as in my hands. In the nomination, which your Majesty made of the judges, to whom it should be directed, your Majesty could not name the lord chief justice, that now is, § because he was not then declared; but you could not leave him out now, without discountenance.

I send your Majesty the state of lord Darcy's cause || in the star-chamber, set down by Mr. Solicitor, ¶ and mentioned in the letters, which your Majesty received from the lords. I leave all in humbleness to your Majesty's royal judgment: but this is true, that it was the clear opinion of my lord chancellor, and myself, and the two chief justices, and others, that it is a cause most fit for the censure of the court, both for the repressing of duels, and the encouragement of complaints in courts of justice. If your Majesty be pleased it shall go on, there resteth but Wednesday for the hearing; for the last day of term is commonly left for orders, though sometimes, upon extraordinary occasion, it hath been set down for the hearing of some great cause.

I send your Majesty also baron Bromley's \*\* report, which your Majesty required; whereby your Majesty may perceive things go not so well in Cumberland, which is the seat of the party your Majesty named to me, as was conceived. And yet if there were land-winds, as there be sea-winds, to bind men in, I could wish he were a little wind-bound, to keep him in the south.

But while your Majesty passeth the accounts of judges in circuits, your Majesty will give me leave to think of the judges here in their upper region. And because Tacitus saith well, "opportuni magnis conatibus transitus rerum;" now upon this change, when he, that letteth, is gone, I shall endeavour, to the best of my power and skill, that there may be a consent and united mind in your judges to serve you and strengthen your business. For I am persuaded there cannot be a sacrifice, from which there may come up to you a sweeter odour of rest, than this effect, whereof I speak.

ham expressing some anger against his lordship, and charging him with maintaining his man, lord Darcy answered, that he had used Mr. Markham kindly; for if he had not rescued him from his man, the latter would have beaten him to rags. Mr. Markham, upon this, wrote five or six letters to lord Darcy, subscribing them with his name; but did not send them, and only dispersed them unsealed in the fields; the purport of them being this: that whereas the lord Darcy hath said, that, but for him, his servant Beckwith had beaten him to rags, he lied; and as often as he should speak it, he lied; and that he would maintain this with his life: adding, that he had dispersed those letters, that his lordship might find them, or somebody else bring them to him; and that if his lordship were desirous to speak with him, he might send his boy, who should be well used. For this offence, Mr. Markham was censured, and fined 500*l.* by the star-chamber.

¶ Sir Henry Yelverton.

\*\* Edward Bromley, made one of the barons of the exchequer, February 6, 1609-10.

For this wretched murderer Bertram,\* now gone to his place, I have, perceiving your Majesty's good liking of what I propounded, taken order, that there shall be a declaration concerning the cause in the king's bench, by occasion of punishment of the offence of his keeper; and another in chancery, upon the occasion of moving for an order, according to his just and righteous report. And yet withal, I have set on work a good pen,† and myself will overlook it, for making some little pamphlet fit to fly abroad in the country.

For your Majesty's proclamation touching the wearing of cloth, after I had drawn a form as near as I could to your Majesty's direction, I propounded it to the lords, my lord chancellor being then absent; and after their lordships' good approbation, and some points by them altered, I obtained leave of them to confer thereupon with my lord chancellor and some principal judges, which I did this afternoon; so as, it being now perfected, I shall offer it to the board to-morrow, and so send it to your Majesty.

So humbly craving your Majesty's pardon for troubling you with so long a letter, specially being accompanied with other papers, I ever rest

Your Majesty's most humble and bounden servant,

FR. BACON.

This 21st of November,  
at ten at night [1616].

#### REMEMBRANCES FOR THE KING BEFORE HIS GOING INTO SCOTLAND.

##### MAY IT PLEASE YOUR MAJESTY,

ALTHOUGH your journey be but as a long progress, and that your Majesty shall be still within your own land; and therefore any extraordinary course neither needful, nor in my opinion fit; yet nevertheless, I thought it agreeable to my duty and care of your service, to put you in mind of those points of form, which have relation, not so much to a journey into Scotland, as to an absence from your city of London for six months, or to a distance from your said city near three hundred miles; and that in an ordinary course, wherein I lead myself, by calling to consideration what things there are, that require your signature, and may seem not so fit to expect sending to and fro; and therefore to be supplied by some precedent warrants.

First, your ordinary commissions of justice, of assize, and the peace, need not your signature, but pass of course by your chancellor. And your commissions of lieutenancy, though they need your signature, yet if any of the lieutenants should die, your Majesty's choice and pleasure may be very well at-

tended. Only I should think fit, under your Majesty's correction, that such of your lord lieutenants, as do not attend your person, were commanded to abide within their counties respectively.

For grants, if there were a longer cessation, I think your Majesty will easily believe it will do no hurt. And yet if any be necessary, the continual despatches will supply that turn.

That, which is chiefly considerable, is proclamations, which all do require your Majesty's signature, except you leave some warrant under your great seal to your standing council here in London.

It is true, I cannot foresee any case of such sudden necessity, except it should be the apprehension of some great offenders, or the adjournment of the term upon sickness, or some riot in the city, such as hath been about the liberties of the Tower, or against strangers, &c. But your Majesty in your great wisdom, may perhaps think of many things, that I cannot remember or foresee: and therefore it was fit to refer those things to your better judgment.

Also my lord chancellor's age and health is such, as it doth not only admit, but require the accident of his death‡ to be thought of; which may fall in such a time, as the very commissions of ordinary justice before mentioned, and writs, which require present despatch, cannot well be put off. Therefore your Majesty may be pleased to take into consideration, whether you will not have such a commission, as was prepared about this time twelvemonth in my lord's extreme sickness, for the taking of the seal into custody, and for the seal of writs and commissions for ordinary justice, till you may advise of a chancellor or keeper of the great seal.

Your Majesty will graciously pardon my care, which is assiduous; and it is good to err in caring even rather too much than too little. These things for so much as concerneth forms, ought to proceed from my place, as attorney, unto which you have added some interest in matter, by making me of your privy council. But for the main they rest wholly in your princely judgment, being well informed; because miracles are ceased, though admiration will not cease, while you live.

Indorsed, February 21, 1616.

#### SIR EDWARD COKE TO THE KING.

##### MOST GRACIOUS SOVEREIGN,

I THINK it now my duty to inform your Majesty of the motives that induced the lord chancellor and judges to resolve, that a murder or felony, committed by one Englishman upon another in a foreign kingdom, shall be punished before the constable and marshal here in England.

2000. He hanged himself in prison on the 17th of that month.

† Mr. Trott.

‡ He died at the age of seventy, on the 15th of March, 1616-17, having resigned the great seal on the 3rd of that month; which was given on the 7th to Sir Francis Bacon.

\* John Bertram, a grave man, above seventy years of age, and of a clear reputation, according to Camden, *Annales Legis Jacobi I.* p. 21. He killed with a pistol, in Lincoln's-Inn, on the 12th of November, 1616, Sir John Tyndal, a master in chancery, for having made a report against him in a cause, wherein the sum contended for did not exceed

First, in the book case, in the 13th year of king Henry the fourth, in whose reign the statute was made, it is expressly said, one liege-man was killed in Scotland by another liege-man; and the wife of him that was killed did sue an appeal of murder in the constable's court of England. *Vide Statutum*, saith the book, *de primo Henrici V.* Cap. 14. *Et contemporanea expositio est fortissima in lege.* Stanford,\* an author without exception, saith thus, fol. 65, a. : "By the statute of Henry IV. Cap. 14, if any subject kill another subject in a foreign kingdom, the wife of him that is slain may have an appeal in England before the constable and marshal; which is a case in *terminis terminantibus*. And when the wife, if the party slain have any, shall have an appeal, there, if he hath no wife, his next heir shall have it."

If any fact be committed out of the kingdom, upon the high sea, the lord admiral shall determine it. If in a foreign kingdom, the cognizance belongeth to the constable, where the jurisdiction pertains to him.

And these authorities being seen by Bromley, chancellor, and the two chief justices, they clearly resolved the case, as before I have certified your Majesty.

I humbly desire I may be so happy as to kiss your Majesty's hands, and to my exceeding comfort to see your sacred person; and I shall ever rest

Your Majesty's faithful and loyal subject,  
EDW. COKE.

Feb. 25 [1616-17].

*To the King's most excellent Majesty.*

---

MAY IT PLEASE YOUR MOST EXCELLENT MAJESTY,

My continual meditations upon your Majesty's service and greatness have, amongst other things, produced this paper enclosed, which I most humbly pray your Majesty to excuse, being that, which, in my judgment, I think to be good both *de vero*, and *ad populum*. Your Majesty's humble servant, most devoted and most bounden,

FR. BACON.

March 23, 1616.

Indorsed,

*My lord keeper to his Majesty, with some additional instructions for Sir John Digby.*

---

*Additional instructions to Sir JOHN DIGBY. †*

BESIDES your instructions directory to the substance of the main errand, we would have you in the

\* Sir William, the most ancient writer on the pleas of the crown. He was born in Middlesex, August 22, 1509, educated in the university of Oxford, studied the law at Gray's Inn, in which he was elected autumn reader in 1545, made serjeant in 1552, the year following queen's serjeant, and, in 1554,

whole carriage and passages of the negotiation, as well with the king himself, as the duke of Lerma, and council there, intermix discourse upon fit occasions, that may express ourselves to the effect following:

That you doubt not, but that both kings, for that which concerns religion, will proceed sincerely, both being entire and perfect in their own belief and way. But that there are so many noble and excellent effects, which are equally acceptable to both religions, and for the good and happiness of the christian world, which may arise of this conjunction, as the union of both kings in actions of state, as may make the difference in religion as laid aside, and almost forgotten.

As first, that it will be a means utterly to extinguish and extirpate pirates, which are the common enemies of mankind, and do so much infest Europe at this time.

Also, that it may be a beginning and seed (for the like actions heretofore have had less beginnings) of a holy war against the Turk: whereunto it seems the events of time do invite christian kings, in respect of the great corruption and relaxation of discipline of war in that empire; and much more in respect of the utter ruin and enervation of the Grand Signor's navy and forces by sea; which openeth a way, with congregating vast armies by land, to suffocate and starve Constantinople, and thereby to put those provinces into mutiny and insurrection.

Also, that by the same conjunction there will be erected a tribunal, or pretorian power, to decide the controversies, which may arise amongst the princes and estates of christendom, without effusion of christian blood; for so much as any estate of christendom will hardly recede from that which the two kings shall meditate and determine.

Also, that whereas there doth, as it were, creep upon the ground a disposition in some places to make popular estates and leagues to the disadvantage of monarchies, the conjunction of the two kings will be able to stop and impede the growth of any such evil.

These discourses you shall do well frequently to treat upon, and therewithal to fill up the spaces of the active part of your negotiation; representing, that it stands well with the greatness and majesty of the two kings to extend their cogitations and the influence of their government, not only to their own subjects, but to the state of the whole world besides, specially the christian portion thereof.

---

*Account of Council Business.*

FOR remedy against the infestation of pirates, than which there is not a better work under heaven, and therefore worthy of the great care his Majesty hath expressed concerning the same, this is done:

one of the justices of the common pleas. He died August 28, 1558.

† His Majesty had begun his journey towards Scotland, on the 14th of March, 1616-17.

‡ Ambassador to the court of Spain.

First, Sir Thomas Smith \* hath certified in writing, on the behalf of the merchants of London, that there will be a contribution of 20,000*l.* a year, during two years space, towards the charge of repressing the pirates; wherein we do both conceive, that this, being as the first offer, will be increased. And we consider also, that the merchants of the West, who have sustained in proportion far greater damage than those of London, will come into the circle, and follow the example: and for that purpose letters are directed unto them.

Secondly, for the consultation *de modo* of the arming and proceeding against them, in respect that my lord admiral † cometh not yet abroad, the table hath referred it to my lord treasurer, ‡ the lord Carew, § and Mr. Chancellor of the exchequer, || who heretofore hath served as treasurer of the navy, to confer with the lord admiral, calling to that conference Sir Robert Mansell, and others expert in sea-service; and so to make report unto the board. At which time some principal merchants shall likewise attend for the lords better information.

So that, when this is done, his Majesty shall be advertised from the table: wherenpon his Majesty may be pleased to take into his royal consideration, both the business in itself, and as it may have relation to Sir John Digby's embassy.

For safety and caution against tumults and disorders in and near the city, in respect of some idle flying papers, that were cast abroad of a May-day, &c. the lords have wisely taken a course neither to nurse it, or nourish it, by too much apprehension, nor much less to neglect due provision to make all sure. And therefore order is given, that as well the trained bands, as the military bands newly erected, shall be in muster as well weekly, in the mean time, on every Thursday, which is the day upon which May-day falleth, as in the May-week itself, the Monday, Tuesday, Wednesday, and Thursday. Besides, that the strength of the watch shall that day be increased.

For the buildings in and about London, order is given for four selected aldermen, and four selected justices, to have the care and charge thereof laid upon them; and they answerable for the observing of his Majesty's proclamation, and for stop of all farther building; for which purposes the said *Estus* are warned to be before the board, where they shall receive a strait charge, and be tied to a continual account.

For the provosts marshals, there is already direction given for the city and the counties adjacent; and it shall be strengthened with farther commission, if there be cause.

\* Of Bborough in Kent, second son of Thomas Smith, of Ostenhanger, of that county, Esq. He had farmed the customs in the reign of queen Elizabeth, and was sent by king James I. ambassador to the court of Russia, in March 1604-5; from whence returning, he was made governor of the society of merchants trading to the East-Indies, Muscovy, the French and Summer Islands; and treasurer for the colony and company of Virginia. He built a magnificent house at Deptford, which was burnt on the 30th of January, 1618; and in April 1619, he was removed from his employment of governor and treasurer, upon several complaints of frauds committed by him.

† Charles Howard, earl of Nottingham.

‡ Thomas Howard, earl of Suffolk.

§ George, lord Carew, who had been president of Munster, in Ireland, and was now master of the ordnance. He was created earl of Totness by king Charles I. 1626.

For the proclamation, that lieutenants, not being counsellors, deputy lieutenants, justices of the peace, and gentlemen of quality, should depart the city, and reside in their countries: we find the city so dead of company of that kind for the present, as we account it out of season to command that, which is already done. But after men have attended their business the two next terms, in the end of Trinity-term, according to the custom, when the justices shall attend at the star-chamber, I shall give a charge concerning the same: and that shall be corroborated by a proclamation, if cause be.

For the information given against the Witheringtons, that they should countenance and abet the spoils and disorders in the middle shires; we find the informers to falter and fail in their accusation. Nevertheless, upon my motion, the table hath ordered, that the informer shall attend one of the clerks of the council, and set down articulately what he can speak, and how he can prove it, and against whom, either the Witheringtons or others.

For the causes of Ireland, and the late letters from the deputy, ¶ we have but entered into them, and have appointed Tuesday for a farther consultation of the same; and therefore of that subject I forbear to write more for this present

Indorsed,

March 30, 1617. *An account of council business.*

#### TO THE LORD KEEPER.\*\*

MY HONOURABLE LORD,

WHEREAS the late lord chancellor thought it fit to dismiss out of the chancery a cause touching Henry Skipwith to the common law, where he desireth it should be decided: these are to entreat your lordship †† in the gentleman's favour, that if the adverse party shall attempt to bring it now back again into your lordship's court, you would not retain it there, but let it rest in the place where now it is, that without more vexation unto him in posting him from one to another, he may have a final hearing and determination thereof. And so I rest

Your lordship's ever at command,

G. BUCKINGHAM.

MY LORD,

This is a business, wherein I spake to my lord chancellor; †† whereupon he dismissed the suit.

Lincoln, the 4th of April, 1617.

¶ Sir Fulk Greville.

¶ Sir Oliver St. John, afterwards viscount Grandison.

\*\* Harl. MSS. Vol. 7006.

†† This is the first of many letters, which the marquis of Buckingham wrote to lord Bacon in favour of persons, who had causes depending in, or likely to come into, the court of chancery. And it is not improbable, that such recommendations were considered in that age as less extraordinary and irregular, than they would appear now. The marquis made the same kind of applications to lord Bacon's successor, the lord keeper Williams, in whose *Life*, by bishop Hacket, Part I. p. 107, we are informed, that "there was not a cause of moment, but, as soon as it came to publication, one of the parties brought letters from this mighty peer, and the lord keeper's patron."

‡‡ Ellesmere.

TO THE REVEREND UNIVERSITY OF  
OXFORD.\*

Amongst the gratulations I have received, none are more welcome and agreeable to me than your letters, wherein the less I acknowledge of those attributes you give me, the more I must acknowledge of your affection, which bindeth me no less to you, than are professors of learning, than my own dedication doth to learning itself. And therefore you have no need to doubt, but I will emulate, as much as in me is, towards you the merits of him that is gone, by how much the more I take myself to have more propriety in the principal motive thereof. And for the equality you write of, I shall by the grace of God, far as may concern me, hold the balance as equally between the two universities, as I shall hold the balance of other justice between party and party. And yet in both cases I must meet with some inclinations of affection, which nevertheless shall not carry me aside. And so I commend you to God's goodness.

Your most loving and assured friend,

FR. BACON.

Gorhambury, April 12, 1617.

## TO THE LORD KEEPER.†

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letters, who liked all your proceedings well, saving only the point, for which you have since made amends, in obeying his pleasure touching the proclamation. His Majesty would have your lordship go thoroughly about the business of Ireland, whereinto you are so well entered, especially at this time, that the chief justice † is come over, who hath delivered his opinion thereof to his Majesty, and hath understood what his Majesty conceived of the same; wherewith he will acquaint your lordship, and with his own observation and judgment of the businesses of that country.

I give your lordship hearty thanks for your care to satisfy my lady of Rutland's‡ desire; and will be as careful, when I come to York, of recommending your suit to the bishop. ¶ So I rest

Your lordship's ever at command,

G. BUCKINGHAM.

Newark, the 5th of April, 1617.

To my very honourable lord, Sir Francis Bacon, knight, lord keeper of the great seal of England.

\* From the collections of the late Robert Stephens, Esq., historiographer royal, and John Locker, Esq., now in possession of the editor.

† Harl. MSS. vol. 7006.

‡ Sir John Denham, one of the lords justices of Ireland in 1616. He was made one of the barons of the Exchequer in England, May 2, 1617. He died January 6, 1638, in the eightieth year of his age. He was the first who set up customs in Ireland, (not but there were laws for the same before,) of which the first year's revenue amounted but to 500*l.*; but before his death, which was about twenty-two years after, they were let for 54,000*l.* per annum. *Borlase's Reduction of Ireland to the Crown of England*, p. 200. Edit. London, 1675.

¶ Frances, countess of Rutland, first wife of Francis, earl of Rutland, and daughter and coheir of Sir Henry Knevet, of

## TO THE LORD KEEPER.¶

MY VERY GOOD LORD,

I SPAKE at York with the archbishop,\*\* touching the house, which he hath wholly put into your hands, to do with it what your lordship shall be pleased.

I have heretofore, since we were in this journey, moved his Majesty for despatch of my lord Brackley's †† business: but because his Majesty never having heard of any precedent in the like case, was of opinion, that this would be of ill consequence in making that dignity as easy, as the pulling out of a sword to make a man a knight, and so make it of little esteem, he was desirous to be assured, first, that it was no new course, before he would do it in that fashion. But since he can receive no assurance from your lordship of any precedent in that kind, his Majesty intendeth not so to precipitate the business, as to expose that dignity to censure and contempt, in omitting the solemnities required, and usually belonging unto it.

His Majesty, though he were a while troubled with a little pain in his back, which hindered his hunting, is now, God be thanked, very well, and as merry as he ever was; and we have all held out well.

I showed his Majesty your letter, who taketh very well your care and desire to hear of his health.

Your lordship's most assured friend to do you service,

G. BUCKINGHAM.

Aukland, the 18th of April, 1617.

SINCE the writing of this letter, I have had some farther speech with his Majesty, touching my lord Brackley; and find, that if, in your lordship's information in the course, you write any thing, that may tend to the farthering of the despatch of it in that kind, he desireth it may be done.

## TO THE LORD KEEPER.††

MY HONOURABLE LORD,

I SEND your lordship the warrant for the queen §§ signed by his Majesty, to whom I have likewise delivered your lordship's letter. And touching the matter of the pirates, his Majesty cannot yet resolve; but within a day or two your lordship shall see a despatch, which he purposeth to send to the lords

Charleton in Wiltshire, knight. She had by the earl an only daughter and heir, Catharine, first married to George, marquis, and afterwards duke, of Buckingham; and secondly to Randolph Mac-Donald, earl, and afterwards marquis, of Antrim in Ireland.

¶ Relating to York-house.

† Harl. MSS. vol. 7006.

\*\* Dr. Tobie Matthew.

†† Who desired to be created earl in an unusual manner, by letters patents, without the delivering of the patent by the king's own hand, or without the ordinary solemnities of creation. He was accordingly created earl of Bridgewater, May 27, 1617. †† Harl. MSS. vol. 7006.

§§ Relating to her house. See the lord keeper's letter of April 7, 1617, printed in his works.

of his council in general, what his opinion and pleasure is in that point.

I would not omit this opportunity to let your lordship know, that his Majesty, God be thanked, is in very good health, and so well pleased with his journey, that I never saw him better, nor merrier. So I rest

Your lordship's ever at command,  
G. BUCKINGHAM.

From Newcastle, the 23d of Apr. 1617.

LORD KEEPER BACON TO MR. MAXEY,  
FELLOW OF TRINITY COLLEGE, CAM-  
BRIDGE.\*

AFTER my hearty commendations, I having heard of you, as a man well deserving, and of able gifts to become profitable in the church; and there being fallen within my gift the rectory of Frome St. Quintin with the chapel of Evershot, in Dorsetshire, which seems to be a thing of good value, 18*l.* in the king's books, and in a good country, I have thought good to make offer of it to you; the rather for that you are of Trinity college, whereof myself was some time: and my purpose is to make choice of men rather by care and inquiry, than by their own suits and commendatory letters. So I bid you farewell.

From your loving friend,

FR. BACON, C. S.

From Dorset-house, 23 April, 1617.

THE LORD KEEPER TO HIS NIECE, TOUCH-  
ING HER MARRIAGE.

GOOD NIECE,

AMONGST your other virtues, I know there wanteth not in you a mind to hearken to the advice of your friends. And therefore you will give me leave to move you again more seriously than before in the match with Mr. Comptroller.†

The state wherein you now are, is to be preferred before marriage, or changed for marriage, not simply the one or the other, but according as, by God's providence, the offers of marriage are more or less fit to be embraced. This gentleman is religious, a person of honour, being counsellor of state, a great officer, and in very good favour with his Majesty. He is of years and health fit to be comfortable to you, and to free you of burdensome cares. He is of good means, and a wise and provident man, and of a loving and excellent good nature; and, I find, hath set his affections upon you; so as I foresee you may sooner change your mind, which, as you told me, is not yet towards marriage, than find so happy a choice. I hear he is willing to visit you,

\* From the collections of the late Robert Stephens, Esq.

† Sir Thomas Edmonds, who had been appointed to that office, December 21, 1616; and January 19, 1617-18, was made treasurer of the household. He had been married to Magdalen, one of the daughters and coheirs of Sir John Wood,

before his going into France, which, by the king's commandment, is to be within some ten days: and I could wish you used him kindly and with respect. His return out of France is intended before Michaelmas. God direct you, and be with you. I rest

Your very loving uncle, and assured friend,

FR. BACON.

Dorset-house, this 28th of April, 1617.

TO THE LORD KEEPER.‡

MY HONOURABLE LORD,

I UNDERSTAND that Sir Lewis Tresham hath a suit depending in the chancery before your lordship; and therefore out of my love and respect toward him, I have thought fit to recommend him unto your favour so far only, as may stand with justice and equity, which is all he desireth, having to encounter a strong party. And because he is shortly to go into Spain, about some other business of his own, I farther desire your lordship to give him what expedition you can, that he may receive no prejudice by his journey.

Your lordship's ever at command,

G. BUCKINGHAM.

Indorsed May 6, 1616.

TO THE LORD KEEPER.§

MY HONOURABLE LORD,

I HAVE by reports heard that, which doth much grieve and trouble me; that your lordship hath, through a pain in one of your legs, been forced to keep your chamber. And being desirous to understand the true estate of your health, which reports do not always bring, I entreat your lordship to favour me with a word or two from yourself, which, I hope, will bring me the comfort I desire, who cannot but be very sensible of whatsoever happeneth to your lordship, as being

Your lordship's most affectionate to do you service,

G. BUCKINGHAM.

His Majesty, God be thanked, is very well, and safely returned from his hunting journey.

From Edinburgh, the 3d of June, 1617.

TO THE EARL OF BUCKINGHAM.

MY VERY GOOD LORD,

THIS day I have made even with the business of the kingdom for common justice; not one cause unheard; the lawyers drawn dry of all the motions

knight, clerk of the signet: which lady died at Paris, Dec. 31, 1614.

The proposal for a second marriage between him and the lord keeper's niece does not appear to have had success.

‡ Harl. MSS. Vol. 7006.

§ Ibid.

they were to make; not one petition unanswered. And this, I think, could not be said in our age before. This I speak not out of ostentation, but out of gladness when I have done my duty. I know men think I cannot continue, if I should thus oppress myself with business: but that account is made. The duties of life are more than life; and, if I die now, I shall die before the world will be weary of me, which in our times is somewhat rare. And all this while I have been a little imperfect in my foot. But I have taken pains more like the beast with four legs, than like a man with scarce two legs. But if it be a gout, which I do neither acknowledge, nor much disclaim, it is a good-natured gout; for I have no rage of it, and it goeth away quickly. I have hope, it is but an accident of changing from a field-air\* to a Thames-air; † or rather, I think, it is the distance of the king and your lordship from me, that doth congeal my humours and spirits.

When I had written this letter, I received your lordship's letter of the third of this present, wherein your lordship showeth your solicitous care of my health, which did wonderfully comfort me. And it is true, that at this present I am very well, and my supposed gout quite vanished.

I humbly pray you to commend my service, infinite in desire, howsoever limited in ability, to his Majesty, to hear of whose health and good disposition is to me the greatest beatitude, which I can receive in this world. And I humbly beseech his Majesty to pardon me, that I do not now send him my account of council business, and other his royal commands, till within these four days; because the flood of business of justice did hitherto wholly possess me; which, I know, worketh this effect, as it contenteth his subjects, and knitteth their hearts more and more to his Majesty, though, I must confess, my mind is upon other matters, as his Majesty shall know, by the grace of God, at his return. God ever bless and prosper you.

Your lordship's true and most devoted friend  
and servant,

FR. BACON.

Whitehall, this 8th of June, 1617.

TO THE LORD KEEPER. †

MY HONOURABLE LORD,

Your lordship will understand, by Sir Thomas Lake's letter, his Majesty's directions touching the surveyor's deputy of the court of wards. And though I assure myself of your lordship's care of the business, which his Majesty maketh his own; yet my respect to Sir Robert Naunton § maketh me add my recommendation thereof to your lordship, whom I desire to give all the fartherance and assistance you can to the business, that no prejudice or im-

putation may light upon Sir Robert Naunton, through his zealous affection to attend his Majesty in this journey.

I will not omit to let you know, that his Majesty is very well, and receiveth much contentment in his journey. And with this conclusion, I rest

Your lordship's most affectionate to do you service,

G. BUCKINGHAM.

Edinburgh, the 11th of June, 1617.

TO THE LORD VISCOUNT FENTON. ||

MY VERY GOOD LORD,

I THANK your lordship for your courteous letter; and if I were asked the question, I would always choose rather to have a letter of no news, than a letter of news; for news imports alteration: but letters of kindness and respect bring that, which, though it be no news amongst friends, is more welcome.

I am exceedingly glad to hear, that this journey of his Majesty, which I never esteemed more than a long progress, save that it had reason of state joined with pleasure, doth sort to be so joyful and so comfortable.

For your parliament, God speed it well; and for ours, you know the sea would be calm, if it were not for the winds: and I hope the king, whensoever that shall be, will find those winds reasonably well laid.

Now that the sun is got up a little higher, God ordains all things to the happiness of his Majesty, and his monarchy.

My health, I thank God, is good; and I hope this supposed gout was but an incomer. I ever rest

Your lordship's affectionate and assured friend,

FR. BACON.

Whitehall, June 18 [1617].

TO THE LORD KEEPER, WRITTEN FROM  
SCOTLAND, JUNE 28, 1618. ¶

I WILL begin to speak of the business of this day; *opus hujus diei in die suo*, which is of the parliament. It began on the 7th of this month, and ended this day, being the 28th of June. His Majesty, as I perceived by relation, rode thither in great state the first day. These eyes are witnesses, that he rode in an honourable fashion, as I have seen him in England, this day. All the lords rode in English robes: not an English lord on horseback, though all the parliament-house at his Majesty's elbow, but my lord of Buckingham, who waited upon the king's stirrup in his collar, but not in his robes. His Majesty the first day, by way of preparation to

|| Sir Thomas Erskine, who for his service to the king, in the attempt of the earl of Gowry, was, upon his Majesty's accession to the throne of England, made captain of his guard in the room of Sir Walter Raleigh. He was afterwards created earl of Kelly.

¶ From a copy in the Paper-office.

\* Gray's-Inn.

† Dorset-house, originally belonging to the bishops of Salisbury, afterwards the house of Sir Richard Sackville, and then of his son Sir Thomas, earl of Dorset, and lord treasurer.

‡ Harl. MSS. vol. 7006.

§ Surveyor of the court of wards.

the subject of the parliament, made a declaratory speech, wherein he expressed himself what he would not do, but what he would do. The relation is too prolix for a sheet of paper; and I am promised a copy of it, which I will bring myself unto your lordship with all the speed I may. But I may not be so reserved, as not to tell your lordship, that in that speech his Majesty was pleased to do England and Englishmen much honour and grace; and that he studied nothing so much, sleeping and waking, as to reduce the barbarity, I have warrant to use the king's own word, of this country unto the sweet civility of ours; adding farther, that if the Scottish nation would be as docible to learn the goodness of England, as they are teachable to limp after their ill, he might with facility prevail in his desire: for they had learned of the English to drink healths, to wear coaches and gay clothes, to take tobacco, and to speak neither Scottish nor English. Many such diseases of the times his Majesty was pleased to enumerate, not fit for my pen to remember, and graciously to recognise, how much he was beholden to the English nation for their love and conformity to his desires. The king did personally and infallibly sit amongst them of the parliament every day; so that there fell not a word amongst them, but his Majesty was of council with it.

The whole assembly, after the wonted manner, was abstracted into eight bishops, eight lords, eight gentlemen, knights of the shires, and eight lay burgesses for towns. And this epitome of the whole parliament did meet every day in one room to treat and debate of the great affairs of the kingdom. There was exception taken against some of the lower house, which were returned by the country, being pointed at as men averse in their appetites and humours to the business of the parliament, who were deposed of their attendance by the king's power; and others, better affected, by the king's election, placed in their room.

The greatest and weightiest articles, agitated in this parliament, were specially touching the government of the kirk and kirkmen, and for the abolishing of hereditary sheriffs to an annual charge; and to enable justices of the peace to have as well the real execution, as the title of their places. For now the sheriff doth hold *jura regalia* in his circuit without check or controlment; and the justices of the peace do want the staff of their authority. For the church and commonwealth, his Majesty doth strive to shape the frame of this kingdom to the method and degrees of the government of England, as by reading of the several acts it may appear. The king's desire and travel herein, though he did suffer a momentary opposition, (for his countrymen will speak boldly to him,) hath in part been profitable. For though he hath not fully and complementally prevailed in all things, yet he hath won ground in most things, and hath gained acts of parliament to authorize particular commissioners, to set down orders for the church and churchmen, and to treat with sheriffs for their offices by way of pecuniary composition. But all these proceedings are to have an inseparable reference to his Majesty. If any prove

unreasonably and undutifully refractory, his Majesty hath declared himself, that he will proceed against him by the warrant of the law, and by the strength of his royal power.

His Majesty's speech this day had a necessary connexion with his former discourse. He was pleased to declare what was done and determined in the progress of this parliament; his reasons for it; and that nothing was gotten by shouldering or wrestling, but by debate, judgment, and reason, without any interposition of his royal power in any thing. He commanded the lords in state of judicature, to give life, by a careful execution, unto the law, which otherwise was but *mortuum cadaver et bona peritura*.

Thus much touching the legal part of my advertisement unto you. I will give your lordship an account in two lines of the complement of the country, time, and place.

The country affords more profit and better contentment, than I could ever promise myself, by my reading of it.

The king was never more cheerful in body and mind, never so well pleased: and so are the English of all conditions.

The entertainment, very honourable, very general, and very full: every day feasts and invitations. I know not who paid for it. They strive, by direction, to give us all fair contentment, that we may know, that the country is not so contemptible, but that it is worth the cherishing.

The lord provost of this town, who in English is the mayor, did feast the king and all the lords this week; and another day all the gentlemen. And I confess, it was performed with state, with abundance, and with a general content.

There is a general, and a bold expectation, that Mr. John Murray shall be created a baron of this country; and some do chat, that my lord of Buckingham's Mr. Wray shall be a groom of the bed-chamber in his place.

There hath been yet no creation of lords, since his Majesty did touch Scotland: but of knights many, yet not so many as we heard in England; but it is thought all the pensioners will be knights tomorrow. Neither are there any more English lords sworn of the privy council here, save my lord of Buckingham.

The earl of Southampton, Montgomery, and Hay, are already gone for England.

I have made good profit of my journey hither; for I have gotten a transcript of the speech, which your lordship did deliver at your first and happy sitting in chancery; which I could not gain in England. It hath been showed to the king, and received due approbation. The God of heaven, all-wise and all-sufficient, guard and assist your lordship in all your actions: for I can read here whatsoever your lordship doth act there; and your courses be such, as you need not to fear to give copies of them. But the king's ears be wide and long, and he seeth with many eyes. All this works for your honour and comfort. I pray God nothing be soiled, heated, or cooled in the carriage. Envy sometimes attends

virtues, and not for good; and these bore certain proprieties and circumstances inherent to your lordship's mind; which men may admire, I cannot express. But I will wade no farther herein, lest I should seem eloquent. I have been too saucy with your lordship, and held you too long with my idleness. He that takes time from your lordship, robs the public. God give your body health, and your soul heaven.

My lord of Pembroke, my lord of Arundel, my lord Zouch, and Mr. Secretary Lake, were new sworn of the council here.

---

TO THE EARL OF BUCKINGHAM.

MY VERY GOOD LORD,

I HAVE sent enclosed a letter to his Majesty concerning the strangers; in which business I had formerly written to your lordship a joint letter with my lord of Canterbury, and my lord Privy Seal,\* and Mr. Secretary Winwood.

I am, I thank God, much relieved with my being in the country air, and the order I keep; so that of late years I have not found my health better.

Your lordship writeth seldomer than you were wont; but when you are once gotten into England, you will be more at leisure. God bless and prosper you.

Your lordship's true and devoted friend and servant.

FR. BACON.

Gorhambury, July 29, 1617.

---

TO THE LORD KEEPER.†

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter, who is this business of Sir John Bennet's,‡ hath altogether followed your lordship's direction.

His Majesty hath at length been pleased to dispatch Mr. Lowder,§ according to your lordship's desire, for the place in Ireland. What the cause of the stay was, I shall impart to your lordship, when I see you, being now too long to relate.

His Majesty hath not yet had leisure to read the little book you sent me to present unto him; but, as soon as I see the fittest opportunity, I will offer it to him again.

His Majesty, God be thanked, is very well; and I am exceeding glad to hear of your health, that you are of so good term-proof, which is the best of it, being you are in those businesses put most to the trial, which I wish may long continue in that strength, that you may still do his Majesty and your country

\* Edward, earl of Worcester.

‡ Of Godstow in Oxfordshire, who was sent to Brussels by the archduke, to expostulate with him concerning a libel on the king, imputed to Erycius Puteanus, and entitled, *Isaac Casauboni Corona Regia*.

§ He had been solicitor to the queen; but finding her dislike of him, he was willing to part with his place for that of

that good service, whereof we hear so general approbation, that it much rejoiceth me, who rest

Your lordship's ever at command,

G. BUCKINGHAM.

Falkland, the 5th of July, 1617.

---

TO THE KING.||

MAY IT PLEASE YOUR MOST EXCELLENT MAJESTY,

I DO very much thank your Majesty for your letter, and think myself much honoured by it. For though it contain some matter of dislike, in which respect it had grieved me more than any event which hath fallen out in my life; yet because I know reprehensions from the best masters to the best servants are necessary; and that no chastisement is pleasant for the time, but yet worketh good effects; and for that I find intermixed some passages of trust and grace; and find also in myself inwardly sincerity of intention, and conformity of will, howsoever I may have erred; I do not a little comfort myself, resting upon your Majesty's accustomed favour; and most humbly desiring, that any one of my particular notions may be expounded by the constant and direct course, which, your Majesty knoweth, I have ever held in your service.

And because it hath pleased your Majesty, of your singular grace and favour, to write fully and freely unto me; it is duty and decorum in me not to write shortly to your Majesty again, but with some length; not so much by way of defence or answer, which yet I know your Majesty would always graciously admit; as to show, that I have, as I ought, weighed every word of your Majesty's letter.

First, I do acknowledge, that this match of Sir John Villiers is *magnum in parvo* in both senses, that your Majesty speaketh. But your Majesty perceiveth well, that I took it to be in a farther degree, *major in parvo*, in respect of your service. But since your Majesty biddeth me to confide upon your act of empire, I have done. For, as the scripture saith, "to God all things are possible;" so certainly to wise kings much is possible. But for that second sense, that your Majesty speaketh of, *magnum in parvo*, in respect of the stir; albeit it being but a most lawful and ordinary thing, I most humbly pray your Majesty to pardon me, if I signify to you, that we here take the loud and vocal, and, as I may call it, streperous carriage, to have been far more on the other side, which indeed is inconvenient, rather than the thing itself.

Now for the manner of my affection to my lord of Buckingham, for whom I would spend my life, and that which is to me more, the cares of my life; I must humbly confess, that it was in this a little parent-like, this being no other term, than his lord-

one of the barons of the exchequer in Ireland; for which he was recommended by the lord keeper to the earl of Buckingham, in a letter dated at Whitehall, May 25, 1617.

|| This letter appears, from the indorsement of the king's answer to it, to have been written at Gorhambury, July 25, 1617. That printed with this date in his *Works*, should be August 2, 1617, as I find by the original draught of it.

ship hath heretofore vouchsafed to my counsels; but in truth, and it please your Majesty, without any grain of disesteem for his lordship's discretion. For I know him to be naturally a wise man, of a sound and staid wit, as I ever said unto your Majesty. And again, I know he hath the best tutor in Europe. But yet I was afraid, that the height of his fortune might make him too secure; and as the proverb is, a looker-on sometimes seeth more than a gamester.

For the particular part of a true friend, which your Majesty witnesseth, that the earl hath lately performed towards me, in palliating some errors of mine; it is no new thing with me to be more and more bound to his lordship; and I am most humbly to thank, whatsoever it was, both your Majesty and him; knowing well, that I may and do commit many errors, and must depend upon your Majesty's gracious countenance and favour for them, and shall have need of such a friend near your Majesty. For I am not so ignorant of mine own case, but that I know I am come in with as strong an envy of some particulars, as with the love of the general.

For my opposition to this business, which, it seemeth, hath been informed your Majesty, I think it was meant, if it be not a thing merely feigned, and without truth or ground, of one of these two things; for I will dissemble nothing with your Majesty. It is true, that in those matters, which by your Majesty's commandment and reference, came before the table concerning Sir Edward Coke, I was sometimes sharp, it may be too much; but it was with end to have your Majesty's will performed; or else, when methought he was more peremptory than became him, in respect of the honour of the table. It is true also, that I disliked the riot or violence, whereof we of your council gave your Majesty advertisement by our joint letter: and I disliked it the more, because he justified it to be law; which was his old song. But in that act of council, which was made thereupon, I did not see but all my lords were as forward as myself, as a thing most necessary for preservation of your peace, which had been so carefully and firmly kept in your absence. And all this had a fair end, in a reconciliation made by Mr. Attorney,\* whereby both husband and wife and child should have kept together. Which, if it had continued, I am persuaded the match had been in better and fairer forwardness, than now it is.

Now for the times of things, I beseech your Majesty to understand that which my lord of Buckingham will witness with me, that I never had any word of letter from his lordship of the business, till I wrote my letter of advice; nor again, after my letter of advice, till five weeks after, which was now within this sennight. So that although I did in truth presume, that the earl would do nothing without your Majesty's privity; yet I was in some doubt, by this his silence of his own mind, that he was not earnest in it, but only was content to embrace the officious offers and endeavours of others.

But, to conclude this point, after I had received, by a former letter of his lordship, knowledge of his mind, I think Sir Edward Coke himself, the last

\* Sir Henry Yelverton.

time he was before the lords, might particularly perceive an alteration in my carriage. And now that your Majesty hath been pleased to open yourself to me, I shall be willing to farther the match by any thing, that shall be desired of me, or that is in my power.

And whereas your Majesty conceiveth some dregs of spleen in me by the word *Mr. Bacon*; truly it was but to express in thankfulness the comparative of my fortune unto your Majesty, the author of the latter, to show how little I needed to fear, while I had your favour. For, I thank God, I was never vindicative nor implacable.

As for my opinion of prejudice to your Majesty's service, as I touched it before, I have done; I do humbly acquiesce in your Majesty's satisfaction, and rely upon your Majesty's judgment, who unto judgment have also power, so to mingle the elements, as may conserve the fabric.

For the interest which I have in the mother, I do not doubt but it was increased by this, that I in judgment, as I then stood, affected that which she did in passion. But I think the chief obligation was, that I stood so firmly to her in the matter of her assurance, wherein I supposed I did your Majesty service, and mentioned it in a memorial of council-business, as half craving thanks for it. And sure I am now, that, and the like, hath made Sir Edward Coke a convert, as I did write to your Majesty in my last.

For the collation of the two spirits, I shall easily subscribe to your Majesty's answer; for Solomon were no true man, if in matter of malice the woman should not be the superior.

To conclude, I have gone through, with the plainness of truth, the parts of your Majesty's letter, very humbly craving pardon for troubling your Majesty so long; and most humbly praying your Majesty to continue me in your grace and favour, which is the fruit of my life upon the root of a good conscience. And although time in this business have cast me upon a particular, which, I confess, may have probable show of passion or interest; yet God is my witness, that the thing that most moved me, was an anxious and solicitous care of your Majesty's state and service, out of consideration of the time past and present.

God ever preserve and bless your Majesty, and send you a joyful return, after your prosperous journey.

*The KING to the LORD KEEPER, in answer to his Lordship's letter from Gorkhambury, of July 25, 1617.*

JAMES R.

RIGHT trusty and well beloved counsellor, we greet you well.

Although our approach doth now begin to be near London, and that there doth not appear any great necessity of answering your last letter, since we are so shortly to be at home; yet we have thought good

to make some observations to you upon the same, that you may not err, by mistaking our meaning.

The first observation we are to make is, that, whereas you would invert the second sense, wherein we took your *magnum in parvo*, in accounting it to be made *magnum* by their streperous carriage, that were for the match, we cannot but show you your mistaking therein. For every wrong must be judged by the first violent and wrongous ground whereupon it proceeds. And was not the thesteous stealing away of the daughter from her own father \* the first ground whereupon all this great noise hath since proceeded? For the ground of her getting again came upon a lawful and ordinary warrant, subscribed by one of our council, † for redress of the former violence: and except the father of a child might be proved to be either lunatic, or idiot, we never read in any law, that either it could be lawful for any creature to steal his child from him; or that it was a matter of noise and streperous carriage for him to hunt for the recovery of his child again.

Our next observation is, that whereas you protest your affection to Buckingham, and thereafter confess, that it is in some sort *parent-like*; yet, after that you have praised his natural parts, we will not say, that you throw all down by a direct imputation upon him; but we are sure you do not deny to have had a greater jealousy of his discretion, than, so far as we conceive, he ever deserved at your or any man's hands. For you say, that you were afraid that the height of his fortune might make him too secure; and so, as a looker on, you might sometimes see more than a gamester. Now we know not how to interpret this in plain English otherwise, than that you were afraid, that the height of his fortune might make him misknow himself. And surely, if that be your *parent-like affection* toward him, he hath no obligation to you for it. And for our part, besides our own proof, that we find him farthest from that vice of any courtier, that ever we had so near about us; so do we fear, that you shall prove the only phenix in that jealousy of all the kingdom. For we would be very sorry, that the world should apprehend that conceit of him. But we cannot conceal, that we think it was least your part of any to enter into that jealousy of him, of whom we have heard you oft speak in a contrary style. And as for that error of yours, which he lately palliated, whereof you seem to pretend ignorance; the time is so short since you commended to him one ‡ to be of the barons of our exchequer in Ireland, as we cannot think you to be so

\* Lady Hatton had first removed her daughter to Sir Edmund Withipole's house, near Oatlands, without the knowledge of Sir Edward Coke; and from thence, according to a letter of Mr. Chamberlain, dated July 19, 1617, the young lady was privately conveyed to a house of the lord of Argyll's by Hampton-Court. "Whence," adds Mr. Chamberlain, "her father, with a warrant from Mr. Secretary [Winwood,] fetched her; but indeed went farther than his warrant, and brake open divers doors before he got her."

† Secretary Winwood, who, as Mr. Chamberlain observes in the letter cited in the note above, was treated with ill language at the council-board by the lord keeper, and threatened with a *premanire*, on account of his warrant granted to Sir Edward Coke. His lordship, at the same time, told the lady Compton, mother of the earl of Buckingham, that they wished well to her and her sons, and would be ready to serve the earl

short of memory, as to have forgotten how far you undertook in that business, before acquainting us with it; what a long journey you made the poor man undertake, together with the slight recommendation you sent of him; which drave us to those straits, that both the poor man had been undone, and your credit a little blasted, if Buckingham had not, by his importunity, made us both grant you more than suit, for you had already acted a part of it, and likewise run a hazard of the hinderance of your own service, by preferring a person to so important a place, whom you so slightly recommended.

Our third observation is upon the point of your opposition to this business, wherein you either do, or at least would seem to mistake us a little. For first, whereas you excuse yourself of the oppositions you made against Sir Edward Coke at the council-table, both for that, and other causes; we never took upon us such a patrociny of Sir Edward Coke, as if he were a man not to be meddled withal in any case. For whatsoever you did against him, by our employment and commendation, we ever allowed it, and still do, for good service on your part. *De bonis operibus non lapidamus vos.* But whereas you talk of the riot and violence committed by him, we wonder you make no mention of the riot and violence of them, that stole away his daughter, which was the first ground of all that noise, as we said before. For a man may be compelled by manifest wrong beyond his patience; and the first breach of that quietness, which hath ever been kept since the beginning of our journey, was made by them that committed the theft. And for your laying the burden of your opposition upon the council, we meddle not with that question; but the opposition, which we justly find fault with you, was the refusal to sign a warrant for the father to the recovery of his child, clad with those circumstances, as is reported, of your slight carriage to Buckingham's mother, when she repaired to you upon so reasonable an errand. What farther opposition you made in that business, we leave it to the due trial in the own time. But whereas you would distinguish of times, pretending ignorance either of our meaning or his, when you made your opposition; that would have served for a reasonable excuse not to have farthered such a business, till you had been first employed in it: but that can serve for no excuse of crossing any thing, that so nearly concerned one, whom you profess such friendship unto. We will not speak of obligation; for surely we think, even in good manners, you had reason not to have crossed any thing,

with all true affection; whereas others did it out of *faction* and *ambition*. Which words glancing directly at secretary Winwood, he alleged, that what he had done was by the direction of the queen and the other parties, and showed a letter of approbation of all his courses from the king, making the whole table judge what *faction* or *ambition* appeared in his carriage: to which no answer was returned. The queen, some time after, taking notice of the disgust, which the lord keeper had conceived against secretary Winwood, and asking his lordship, what occasion the secretary had given him to oppose himself so violently against him, his lordship answered, "Madam, I can say no more but he is proud, and I am proud." MS. letter of Mr. Chamberlain, October 11, 1617.

‡ Mr. Lowder. See the letter of the earl of Buckingham of the 5th of July.

wherein you had heard his name used, till you had heard from him. For if you had willingly given your consent and hand to the recovery of the young gentlewoman; and then written both to us, and to him, what inconvenience appeared to you to be in such a match; that had been the part indeed of a true servant to us, and a true friend to him. But first to make an opposition, and then to give advice by way of friendship, is to make the plough go before the horse.

Thus leaving all the particulars of your carriage, in this business, to the own proper time, which is ever the discoverer of truth, we commend you to God. Given under our signet at Nantwich, in the fifteenth year of our reign of Great Britain, &c.

---

TO THE LORD KEEPER BACON.\*

MY LORD,

IF your man had been addressed only to me, I should have been careful to have procured him a more speedy despatch: but now you have found another way of address, I am excused; and since you are grown weary of employing me, I can be no otherwise in being employed. In this business of my brother's that you over-trouble yourself with, I understand from London by some of my friends, that you have carried yourself with much scorn and neglect both toward myself and friends; which, if it prove true, I blame not you, but myself, who was ever

Your lordship's assured friend,

G. BUCKINGHAM.

[July, 1617.]

---

TO THE LORD KEEPER.

MY LORD,

I HAVE received your lordship's letter by your man; but having so lately imparted my mind to you in my former letters, I refer your lordship to those letters, without making a needless repetition, and rest

Your lordship's at command,

G. BUCKINGHAM.

Ashton, the 25th of Aug. 1617.

*To my honourable lord, Sir Francis Bacon, knight,  
Lord Keeper of the great seal of England.*

---

SIR HENRY YELVERTON, ATTORNEY-GENERAL, TO THE LORD KEEPER BACON.

MY MOST WORTHY AND HONOURABLE LORD,

I DARE not think my journey lost, because I have with joy seen the face of my master, the king, though more clouded towards me than I looked for.

Sir Edward Coke hath not forborne, by any engine, to heave at your honour, and at myself; and he

\* From the collections of Robert Stephens, Esq. deceased.

works by the weightiest instrument, the earl of Buckingham, who, as I see, sets him as close to him as his shirt, the earl speaking in Sir Edward's praise, and, as it were, menacing in his spirit.

My lord, I imboldened myself to assay the temper of my lord of Buckingham to myself, and found it very fervent, misled by information, which yet I find he embraced as truth, and did nobly and plainly tell me, he would not secretly bite; but whosoever had any interest, or tasted of the opposition to his brother's marriage, he would as openly oppose them to their faces, and they should discern what favour he had, by the power he would use.

In the passage between him and me, I stood with much confidence upon these grounds.

First, that neither your lordship nor myself had any way opposed, but many ways had farthered, the fair passage to the marriage.

Secondly, that we only wished the manner of Sir Edward's proceedings to have been more temperate, and more nearly resembling the earl's sweet disposition.

Thirdly, that the chiefest check in this business was Sir Edward himself, who listened to no advice, who was so transported with passion, as he purposely declined the even way, which your lordship and the rest of the lords left both him, his lady, and his daughter, in.

Fourthly, I was bold to stand upon my ground; and so I said I knew your lordship would, that these were slanders, which were brought him of us both, and that it stood not with his honour to give credit to them.

After I had passed these straits with the earl, leaving him leaning still to the first relation of envious and odious adversaries, I adventured to approach his Majesty, who graciously gave me his hand to kiss, but intermixed withal that I deserved not that favour, if three or four things were true, which he had to object against me. I was bold to crave his princely justice; first, to hear, then to judge; which he graciously granted, and said, he wished I could clear myself. I answered I would not appeal to his mercy in any of the points, but would endure the severest censure, if any of them were true. Whereupon he said, he would reserve his judgment till he heard me; which could not be then, his other occasions pressed him so much. All this was in the hearing of the earl; and I protest, I think the confidence in my innocency made me depart half justified; for I likewise kissed his Majesty's hand at his departure; and though out of his grace he commanded my attendance to Warwick, yet upon my suit he easily inclined to give me the choice, to wait on him at Windsor, or at London.

Now, my lord, give me leave, out of all my affections, that shall ever serve you, to intimate touching yourself.

1. That every courtier is acquainted, that the earl professeth openly against you, as forgetful of his kindness, and unfaithful to him in your love, and in your actions.

2. That he returneth the shame upon himself, in not listening to counsel, that dissuaded his affection

from you, and not to mount you so high, not forbearing in open speech, as divers have told me, and this bearer, your gentleman, hath heard also, to tax you, as if it were an inveterate custom with you, to be unfaithful to him, as you were to the earls of Essex and Somerset.

3. That it is too common in every man's mouth in court, that your greatness shall be abated; and as your tongue hath been as a razor to some, so shall theirs be to you.

4. That there are laid up for you, to make your burden the more grievous, many petitions to his Majesty against you.

My lord, Sir Edward Coke, as if he were already upon his wings, triumphs exceedingly; hath much private conference with his Majesty; and in public doth offer himself, and thrust upon the king, with as great boldness of speech, as heretofore.

It is thought, and much feared, that at Woodstock he will again be recalled to the council-table; for neither are the earl's ears, nor his thoughts, ever off him.

Sir Edward Coke, with much audacity, affirmeth his daughter to be most deeply in love with Sir John Villiers; that the contract pretended with the earl of Oxford is counterfeit; and the letter also, that is pretended to have come from the earl.

My noble lord, if I were worthy, being the meanest of all to interpose my weakness, I would humbly desire,

1. That your lordship fail not to be with his Majesty at Woodstock. The sight of you will fright some.

2. That you single not yourself from other lords; but justify the proceedings as all your joint acts; and I little fear but you pass conqueror.

3. That you retort the clamour and noise in this business upon Sir Edward Coke, by the violence of his carriage.

4. That you seem not dismayed, but open yourself bravely and confidently, wherein you can excel all subjects; by which means I know you shall amaze some, and daunt others.

I have abused your lordship's patience long; but my duty and affection towards your lordship shall have no end: but I will still wish your honour greater, and rest myself

Your honour's servant,

HENRY YELVERTON.

Daventry, Sept. 3, 1617.

I beseech your lordship burn this letter.

*To the right honourable his singular good lordship,  
the lord keeper of the great seal.*

TO THE LORD KEEPER.

MY LORD,

I HAVE received so many letters lately from your lordship, that I cannot answer them severally: but the ground of them all being only this, that your

lordship feareth I am so incensed against you, that I will hearken to every information that is made unto me; this one letter may well make answer unto them all. As his Majesty is not apt to give ear to any idle report against men of your place; so, for myself, I will answer, that it is far from my disposition, to take any advantage in that kind. And for your lordship's unkind dealing with me in this matter of my brother's, time will try all. His Majesty hath given me commandment to make this answer in his name to your letter to him, that he needeth not to make any other answer to you, than that which in that letter you make to yourself, that you know his Majesty to be so judicious, that whatsoever he heareth, he will keep one ear open to you. Which being indeed his own princely disposition, you may be assured of his gracious favour in that kind.

I will not trouble your lordship with any longer discourse at this time, being to meet you so shortly, where will be better trial of all that hath passed, than can be made by letters. So I rest

Your lordship's at command,

G. BUCKINGHAM.

Warwick, Sept. 5 [1617].

*To the right honourable Sir Francis Bacon, knight,  
lord keeper of the great seal of England.*

*Advice to the King, for reviving the Commission of Suits.*

THAT which for the present I would have spoken with his Majesty about, as a matter wherein time may be precious, being upon the tenderest point of all others. For though the particular occasion may be despised, and yet nothing ought to be despised in this kind, yet the counsel thereupon I conceive to be most sound and necessary, to avoid future perils.

There is an examination taken within these few days, by Mr. Attorney, concerning one Baynton, or Baynham, for his name is not yet certain, attested by two witnesses, that the said Baynton, without any apparent show of being overcome with drink, otherwise than so as might make him less wary to keep secrets, said, that he had been lately with the king, to petition him for reward of service; which was denied him. Whereupon it was twice in his mind to have killed his Majesty. The man is not yet apprehended, and said by some to be mad, or half mad; which, in my opinion, is not less dangerous; for such men commonly do most mischief; and the manner of his speaking imported no distraction. But the counsel I would out of my care ground hereupon, is, that his Majesty would revive the commission for suits, which hath been now for these three years, or more, laid down. For it may prevent any the like wicked cogitations, which the devil may put into the mind of a roarer or swaggerer, upon a denial: and besides, it will free his Majesty from much importunity, and save his coffers also. For I am sure when I was a commissioner, in three whole

years' space there passed scarce ten suits that were allowed. And I doubt now, upon his Majesty's coming home from this journey, he will be much troubled with petitions and suits; which maketh me think this remedy more seasonable. It is not meant, that suits generally should pass that way, but only such suits as his Majesty would be rid on.

Indorsed,

September 21, 1617.

To revive the commission of suits. For the King.

THE EARL OF BUCKINGHAM TO THE LORD  
KEEPER, SIR FRANCIS BACON.\*

MY LORD,

I HAVE made his Majesty acquainted with your note concerning that wicked fellow's speeches, which his Majesty contemneth, as is usual to his great spirit in these cases. But, notwithstanding, his Majesty is pleased, that it shall be exactly tried, whether this foul-mouthed fellow was taken either with drunkenness or madness, when he spake it. And as for your lordship's advice for setting up again the commissioners for suits, his Majesty saith, there will be time enough for thinking upon that, at his coming to Hampton-Court.

But his Majesty's direction, in answer of your letter, hath given me occasion to join hereunto a discovery upon the discourse you had with me this day.† For I do freely confess, that your offer of submission unto me, and in writing, if so I would have it, battered so the unkindness, that I had conceived in my heart for your behaviour towards me in my absence, as out of the sparks of my old affection towards you, I went to sound his Majesty's intention towards you, specially in any public meeting; where I found, on the one part, his Majesty so little satisfied with your late answer unto him, which he counted, for I protest I use his own terms, *confused and childish*, and his rigorous resolution, on the other part, so fixed, that he would put some public exemplary mark upon you; as I protest the sight of his deep-conceived indignation quenched my passion, making me upon the instant change from the person of a party into a peace-maker; so as I was forced upon my knees to beg of his Majesty, that he would put no public act of disgrace upon you. And as, I dare say, no other person would have been patiently heard in this suit by his Majesty but myself; so did I, though not without difficulty, obtain thus much, that he would not so far disable you from the merit of your future service, as to put any particular mark of disgrace upon your person. Only thus far his Majesty protesteth, that upon the conscience of his office he cannot omit, though laying aside all passion, to give a kindly reprimand, at his first sitting in council, to so many of his counsellors as were then here behind, and were actors in this business, for their ill behaviour

in it. Some of the particular errors committed in this business he will name, but without accusing any particular persons by name.

Thus your lordship seeth the fruits of my natural inclination. I protest, all this time past it was no small grief unto me to hear the mouth of so many, upon this occasion, open to load you with innumerable malicious and detracting speeches, as if no music were more pleasing to my ear, than to rail of you; which made me rather regret the ill nature of mankind, that, like dogs, love to set upon them that they see snatched at.

And to conclude, my lord, you have hereby a fair occasion so to make good hereafter your reputation, by your sincere service to his Majesty, as also by your firm and constant kindness to your friends, as I may, your lordship's old friend, participate of the comfort and honour that will thereby come to you. Thus I rest at last

Your lordship's faithful friend and servant,

G. B.

The force of your old kindness hath made me set down this in writing unto you, which some, that have deserved ill of me in this action, would be glad to obtain by word of mouth, though they be far enough from it, for ought I yet see. But I beseech your lordship to reserve this secretly to yourself only, till our meeting at Hampton-Court, lest his Majesty should be highly offended, for a cause that I know.

Indorsed,

A letter of reconciliation from lord Buckingham,  
after his Majesty's return from Scotland.

TO THE EARL OF BUCKINGHAM.

MY VERY GOOD LORD,

It may please your lordship to let his Majesty understand, that I have spoken with all the judges, signifying to them his Majesty's pleasure touching the commendams. They all *una voce* did reaffirm, that his Majesty's powers, neither the power of the crown, nor the practised power by the archbishop, as well in the commendam *ad recipiendum*, as the commendam *ad retinendum*, are intended to be touched; but that the judgment is built upon the particular defects and informalities of this commendam now before them. They received with much comfort, that his Majesty took so well at their hands the former stay, and were very well content and desirous, that when judgment is given, there be a faithful report made of the reason thereof.

The accounts of the summer circuits, as well as that of the lent circuit, shall be ready against his Majesty's coming. They will also be ready with some account of their labours concerning Sir Edward Coke's Reports: wherein I told them his Majesty's meaning was, not to disgrace the person, but to rec-

\* This seems to be the letter to which the lord keeper returned an answer, September 22, 1617, printed in his works.

† At Windsor, according to Sir Antony Weldon, who may

perhaps be believed in such a circumstance as this. See *Court and Character of King James I.* p. 122.

tify the work, having in his royal contemplation rather posterity than the present.

The two points touching the peace of the middle shires, I have put to a consult with some selected judges.

The cause of the Egertons I have put off, and shall presently enter into the treaty of accord, according to his Majesty's commandment, which is well tasted abroad in respect of his compassion towards those ancient families.

God ever preserve and prosper your lordship, according to the faithful and fervent wishes of

Your lordship's true friend and devoted servant,

FR. BACON.

York-house, Oct. 11, 1617.

#### TO THE EARL OF BUCKINGHAM.

MY VERY GOOD LORD,

I HAVE reformed the ordinance according to his Majesty's corrections, which were very material. And for the first of *phrasis non placet*, I understand his Majesty, nay farther, I understand myself, the better for it. I send your lordship therefore six privy seals; for every court will look to have their several warrant. I send also two bills for letters patents to the two reporters: and for the persons, I send also four names, with my commendations of those two, for which I will answer upon my knowledge. The names must be filled in the blanks: and so they are to be returned.

For the business of the court of wards, your lordship's letter found me in the care of it. Therefore, according to his Majesty's commandment, by you signified, I have sent a letter for his Majesty's signature. And the directions themselves are also to be signed. These are not to be returned to me, lest the secret come out; but to be sent to my lord of Wallingford, as the packets used to be sent.

I do much rejoice to hear of his Majesty's health and good disposition. For me, though I am incessantly in business, yet the reintegration of your love maketh me find all things easy.

God preserve and prosper you.

Your lordship's true friend and devoted servant,

FR. BACON.

York-house, Oct. 18, 1617.

#### TO THE LORD KEEPER.\*

MY HONOURABLE LORD,

I HAVE delivered the judges' advice, touching the

middle shires, unto his Majesty, who liketh it very well. As for the point of law, his Majesty will consider of it at more leisure, and then send you his opinion thereof. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Hinchinbroke, the 22nd  
of Oct. 1617.

#### TO THE LORD KEEPER.†

MY HONOURABLE LORD,

His Majesty hath spent some time with Sir Lionel Cranfield about his own business, wherewith he acquainted his Majesty. He hath had some conference with your lordship, upon whose report to his Majesty of your zeal and care of his service, which his Majesty accepteth very well at your hands, he hath commanded Sir L. Cranfield to attend your lordship, to signify his farther pleasure for the fartherance of his service; unto whose relation I refer you. Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Oct. 26, 1617.

#### SIR FRANCIS ENGLEFYLD; TO THE LORD KEEPER.

RIGHT HONOURABLE,

GIVE me leave, I beseech your lordship, for want of other means, by this paper to let your lordship understand, that notwithstanding I rest in no contempt, nor have to my knowledge broken any order made by your lordship concerning the trust, either for the payment of money, or assignment of land; yet, by reason of my close imprisonment, and the unusual carriage of this cause against me, I can get no counsel, who will in open court deliver my case unto your lordship. I must therefore humbly leave unto your lordship's wisdom, how far your lordship will, upon my adversary's fraudulent bill exhibited by the wife without her husband's privity, extend the most powerful arm of your authority against me, who desire nothing but the honest performance of a trust, which I know not how to leave, if I would. So, nothing doubting but your lordship will do what appertaineth to justice, and the emi-

he could prove this holy bishop judge had been bribed by some that fared well in their causes. A few days after the sentence in the star-chamber, the lord keeper sent for Sir Francis, and told him, he would refute his foul aspersions, and prove upon him, that he scorned the pelf of the world, or to exact, or make lucre of any man; and that for his own part, he forgave him every penny of his fine, and would crave the same mercy towards him from the king. Bishop Hacket's *Life of Archbishop Williams*, Part I. pp. 83, 84.

\* Harl. MSS. Vol. 7006.

† Ibid.

‡ This gentleman was very unfortunate in his behaviour, with regard to those who had the great seal; for in Hilary term of the year 1623-4, he was fined 3000*l.* by the star-chamber, for casting an imputation of bribery on the lord keeper Williams, bishop of Lincoln. MS. Letter of Mr. Chamberlain to Sir Dudley Carleton, dated at London, 1623-4. Sir Francis had been committed to the Fleet for a contempt of a decree in chancery; upon which he was charged, by Sir John Bennet, with having said before sufficient witness, that

nent place of equity your lordship holdeth, I must, since I cannot understand from your lordship the cause of my late close restraint, rest, during your lordship's pleasure,

Your lordship's close prisoner in the Fleet,  
FR. ENGLEFYLD.

Oct. 28, 1617.

TO THE LORD KEEPER.\*

MY HONOURABLE LORD,

I HAVE thought good to renew my motion to your lordship, in the behalf of my lord Huntingdon, my lord Stanhope, and Sir Thomas Gerard; for that I am more particularly acquainted with their desires; they only seeking the true advancement of the charitable uses, unto which the land, given by their grandfather, was intended: which, as I am informed, was meant by way of a corporation, and by this means, that it might be settled upon the school-master, usher, and poor, and the coheirs to be visitors. The tenants might be conscionably dealt withal; and so it will be out of the power of any feoffees to abuse the trust; which, it hath been lately proved, have been hitherto the hinderance of this good work. These coheirs desire only the honour of their ancestor's gift, and wish the money, misemployed and ordered to be paid into court by Sir John Harper, may rather be bestowed by your lordship's discretion for the augmentation of the foundation of their ancestors, than by the censure of any other. And so I rest

Your lordship's servant,  
G. BUCKINGHAM.

Theobald's, November 12.

Indorsed, 1617.

TO THE LORD KEEPER.†

MY HONOURABLE LORD,

THOUGH I had resolved to give your lordship no more trouble in matters of controversy depending before you, with what importance soever my letters had been; yet the respect I bear unto this gentleman hath so far forced my resolution, as to recommend unto your lordship the suit, which, I am informed by him, is to receive a hearing before you on Monday next, between Barnsby Leigh and Sir Edward Dyer, plaintiffs, and Sir Thomas Thynne † defendant; wherein I desire your lordship's favour on the plaintiffs so far only as the justice of their cause shall require. And so I rest

Your lordship's faithful servant,  
G. BUCKINGHAM.

Newmarket, the 15th of Nov.

Indorsed, 1617.

TO THE LORD KEEPER.§

MY HONOURABLE LORD,

THE certificate being returned upon the commission touching Sir Richard Haughton's alum-mine, I have thought fit to desire your lordship's fartherance in the business, which his Majesty, as your lordship will see by his letter, much affecteth as a bargain for his advantage, and for the present relief of Sir Richard Haughton. What favour your lordship shall do him therein, I will not fail to acknowledge, and will ever rest

Your lordship's faithful servant,  
G. BUCKINGHAM.

Indorsed,

Received November 16, 1617.

TO THE LORD KEEPER.||

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your lordship's letter, who liketh well of the judges' opinion you sent unto him, and hath pricked the sheriff of Buckinghamshire in the roll you sent, which I return signed unto your lordship.

His Majesty takes very well the pains you have taken in sending to Sir Lionel Cranfield; and desireth you to send to him again, and to quicken him in the business.

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

His Majesty liketh well the course taken about his household, wherewith he would have your lordship, and the rest of his council, to go forward.

Newmarket, the 17th of November, 1617.

Indorsed,

*My lord of Buckingham, showing his Majesty's approbation of the courses held touching the household.*

TO THE LORD KEEPER.¶

MY HONOURABLE LORD,

UNDERSTANDING that Thomas Hukeley, a merchant of London, of whom I have heard a good report, intendeth to bring before your lordship in chancery a cause depending between him, in right of his wife, daughter of William Austen, and one John Horsmendon, who married another daughter of the said Austen; I have thought fit to desire your lordship to give the said Thomas Hukeley a favourable hearing when his cause shall come before you; and so far to respect him for my sake, as your lord-

Thomas Thynne, Esq. assassinated by the followers of Count Coningsmark, February 12, 1682-3.

|| Ibid.

¶ Ibid.

ship shall see him grounded upon equity and reason; which is no more than, I assure myself, your lordship will grant readily, as it is desired by

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

Indorsed,  
November 17, 1617.

TO THE EARL OF BUCKINGHAM.\*

MY VERY GOOD LORD,

THE last letter of my lord's, whereof the conclusion indeed is a little *blunt*, as the king calleth it, was concluded in my absence, which hath been but once since I came to this town; and brought me by the clerk of the council, as I sat in chancery. Whereupon I retired to a little closet I have there, and signed it, not thinking fit to sever.

For my opinion, I despatched it the morrow following. And till Sir Lionel Cranfield† be able to execute his part in the sub-commission, it will, in my opinion, not be so fit to direct it. He crept to me yesternight, but he is not well. I did his Majesty's message to him touching the tobacco; and he said he would give his Majesty very real and solid satisfaction touching the same.

This is all for the present I shall trouble your lordship withal, resting ever

Your lordship's true friend and devoted servant,  
FR. BACON.

November 20, 1617.

TO THE LORD KEEPER.‡

MY HONOURABLE LORD,

HIS Majesty liketh very well of the draught your lordship sent of the letter for the sub-commission, and hath signed it, as it was, without any alteration, and sent it to the lords. Which is all I have to write at this time, but that I ever rest

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

Newmarket, the 2d of Decemb. 1617.

TO THE LORD KEEPER.§

MY HONOURABLE LORD,

HIS Majesty hath been pleased to refer a petition of one Sir Thomas Blackstones to your lordship, who being brother-in-law to a gentleman whom I much respect, Sir Henry Constable, I have at his

request yielded to recommend his business so far to your lordship's favour, as you shall find his case to deserve compassion, and may stand with the rules of equity. And so I rest

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

Newmarket, the 4th of December.

Indorsed, 1617.

TO THE EARL OF BUCKINGHAM.

MY VERY GOOD LORD,

YOUR lordship may marvel, that together with the letter from the board, which you see passed so well, there came no particular letter from myself; wherein, though it be true, that now this very evening I have made even with the causes of chancery, and comparing with the causes heard by my lord,|| that dead is, of Michaelmas term was twelve-month, I find them to be double so many and one more; besides that the causes that I despatch do seldom turn upon me again, as his many times did; yet nevertheless I do assure your lordship, that should have been no excuse to me, who shall ever assign both to the causes of the subject, yea, and to my health, but the leavings of times after his Majesty's business done. But the truth is, I could not speak with Sir Lionel Cranfield, with whom of necessity I was to confer about the names, till this afternoon.

First, therefore, I send the names, by his advice, and with mine own good allowance of those, which we wish his Majesty should select; wherein I have had respect somewhat to form, more to the avoiding of opposition, but most to the service.

Two most important effects his Majesty's letter hath wrought already: the one, that we perceive his Majesty will go through stitch; which goeth to the root of our disease. The other, that it awaketh the particular officers, and will make their own endeavours and propositions less perfunctory, and more solid and true for the future. Somewhat is to be done presently, and somewhat by seasonable degrees. For the present, my advice is, his Majesty would be pleased to write back to the table, that he doth well approve, that we did not put back or retard the good ways we were in of ourselves; and that we understood his Majesty's right: that his late direction was to give help, and not hinderance, to the former courses; and that he doth expect the propositions we have in hand, when they are finished: and that for the sub-commissions, he hath sent us the names he hath chosen out of those by us sent and propounded; and that he leaveth the particular directions from time to time, in the use of sub-commissioners, wholly to the table.

treasurer, baron Cranfield, and earl of Middlesex; but being accused by the house of commons for misdemeanors in his office, he had a severe sentence passed upon him by the lords, in 1624.

† Harl. MSS. Vol. 7006.

‡ Ibid.

§ Chancellor Ellesmere.

\* In answer to his lordship's letter from Newmarket, November 19, 1617, printed in lord Bacon's works.

† He was originally a merchant in the city of London, introduced to the king's knowledge by the earl of Northampton, and into his service by the earl of Buckingham, being the great projector for reforming the king's household, advancing the customs, and other services; for which he was made lord

This I conceive to be the fairest way; first to seal the sub-commission without opening the nature of their employments, and without seeming that they should have any immediate dependence upon his Majesty, but merely upon the table.

As for that which is to be kept in breast, and to come forth by parts, the degrees are these:

First, to employ the sub-commissioners in the reconsidering of those branches, which the several officers shall propound.

Next, in taking consideration of other branches of retrenchment, besides those which shall be propounded.

The third, to take into consideration the great and huge arrears and debts in every office; whether there be cause to abate them upon deceit or abuse; and at least how to settle them best, both for the king's honour, and avoiding of clamour, and for the taking away, as much as may be, that same ill influence and effect, whereby the arrear past destroys the good husbandry and reformation to come.

The fourth is to proceed from the consideration of the retrenchments and arrears to the improvements. All these four, at least the last three, I wish not to be stirred in till his Majesty's coming. God ever preserve and prosper you.

Your lordship's true friend and devoted servant,  
FR. BACON.

Your lordship will be pleased to have a little care of the bestowing of this letter.

York-house, this 6th of December, 1617.

terity, upon the church and commonwealth, may never fail. I pray you do me the favour to present it to his highness, with my best and humble service.

Your most affectionate and assured friend,

FR. BACON, C. S.

TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I HAVE heretofore recommended unto your lordship the determination of the cause between Sir Rowland Egerton and Edward Egerton, † who, I understand, did both agree, being before your lordship, upon the values of the whole lands. And as your lordship hath already made so good an entrance into the business, I doubt not but you will be as noble in farthering the full agreement between the parties: whereunto, I am informed, Sir Rowland Egerton is very forward, offering on his part that, which to me seemeth very reasonable, either to divide the lands, and his adverse party to choose, or the other to divide, and he to choose. Whereupon my desire to your lordship is, that you would accordingly make a final end between them, in making a division, and setting forth the lands, according to the values agreed upon by the parties themselves. Wherein, besides the charitable work your lordship shall do in making an end of a controversy between those, whom name and blood should tie together, and keep in unity, I will acknowledge your favour as unto myself, and will ever rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Theobald's, January 3, 1617.

TO THE LORD CHANCELLOR. †

MY HONOURABLE LORD,

His Majesty having given order to Mr. Solicitor to acquaint your lordship with a business touching ale-houses, that upon consideration thereof you might give your opinion unto his Majesty, whether it should be granted or not; I have thought your lordship to give it what favour and assistance you may, if you find it reasonable and beneficial to his Majesty's service, because it is a business of Mr. Patrick Maule, and my brother,

Francis Bacon had that title given him January 4. It was one of the causes mentioned in the charge of the Commons against the lord Bacon; in his answer to which he acknowledged, that some days after perfecting his petition, which was done with the advice and consent of the lord Justice Hobart, and publishing it to the parties, he received of Mr. Edward Egerton, by whom, soon after his death, the seal, he had likewise been presented with 400*l*.

MSS. Vol. 7006.

Thomas Coventry.

Lord Chancellor, in his letter to the marquis of Buckingham, dated January 25, 1617, printed in his works, has the following passage: "For the suit of the ale-houses, which was presented to your brother, Mr. Christopher Villiers, and Mr.

Christopher Villiers, whose benefit I have reason to wish and advance by any just courses. And so I rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Royston, Jan. 11th, 1617.

TO THE LORD CHANCELLOR. †

MY HONOURABLE LORD,

SIR JOHN COTTON\*\* having acquainted me with a petition he intended to exhibit to his Majesty, that without any apparent fault committed by him, he was put from his office of *Custos Rotulorum*; I have persuaded him to forbear the presenting of his petition, until I had written to your lordship, and received your answer. I have therefore thought fit to signify unto your lordship, that he is a gentleman, of whom his Majesty maketh good esteem, and hath often occasion to use his service; and therefore, besides that he is a man of good years, and hath served long in the place, I know his Majesty, out of these respects, will be loth he should receive any disgrace. I desire therefore to understand from your lordship the reasons of his remove, that, if I cannot give satisfaction to the gentleman himself, I may at least make answer to his Majesty for that act of your lordship's, which is alleged to be very unusual, unless upon some precedent misdemeanor of the party. Thus, having in this point discharged my part in taking the best course I could, that no complaint should come against you to the king, I rest

Your lordship's faithful friend,

G. BUCKINGHAM.

Newmarket, Jan. 16, 1617.

TO SIR HENRY YELVERTON, ATTORNEY-GENERAL.

MR. ATTORNEY,

WHEREAS there dependeth before me in chancery a great cause of tithes concerning the benefices of London, though in a particular, yet, by consequence leading to a general; his Majesty, out of a great religious care of the state, both of church and city, is graciously pleased, that before any judicial sen-

Patrick Maule, I have conferred with my lord chief justice and Mr. Solicitor thereupon, and there is a scruple in it, that it should be one of the grievances put down in parliament; which if it be, I may not, in my duty and love to you, advise you to deal in it; if it be not, I will mould in the best manner, and help it forward." A patent for licensing ale-houses being afterwards granted to Sir Giles Mompesson and Sir Francis Mitchel, and greatly abused by them, they were punished for those abuses by the parliament, which met January 30, 1620-1.

† Harl. MSS. Vol. 7006.

\*\* Of Lanwade, in Cambridgeshire, knight. He served many years as knight of the shire for that county, and died in 1620, at the age of seventy-seven. His eldest son, Sir John Cotton, was created a baronet, July, 14, 1641.

tence be pronounced in chancery, there be a commission directed unto me, the lord chancellor, lord treasurer, the lord privy-seal, and the lord chamberlain; and likewise to the lord archbishop, the lord bishop of Winchester\* and the bishop of Ely,† and also to the master of the rolls,‡ the two lord chief justices,§ justice Dodderidge, and justice Hutton, who formerly assisted me in the cause, to treat of some concord in a reasonable moderation between the ministers and the mayor and the commonalty of London in behalf of the citizens; and to make some pact and transaction between them by consent, if it may be; or otherwise to hear and certify their opinions touching the cause, that thereupon his Majesty may take such farther order, by directing of a proceeding in chancery, or by some other cause, as to his wisdom shall seem fit.

You will have care to draw the commission with some preface of honour to his Majesty, and likewise to insert in the beginning of the commission, that it was *de advisamento cancellaris*, (as it was indeed,) lest it should seem to be taken from the court. So I commit you to God's, &c.

FR. BACON, CANC.

January 19th, 1617.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I do not easily fail towards gentlemen of quality to disgrace them. For I take myself to have some interest in the good wills of the gentlemen of England, which I keep and cherish for his Majesty's special service. And for this gentleman of whom you write, Sir John Cotton, I know no cause in the world why I should have displaced him, but that it was certified unto me, that it was his own desire to resign: wherein if I was abused, I will restore him. But if he did consent, and now it is done, changeth his mind, then I would be loth to disgrace the other, that is come in. Therefore I pray your lordship, that I may know and be informed from himself what passed touching his consent; and I will do him reason.

Thus, with my thanks to your lordship, I will ever rest

Your lordship's true friend and most devoted servant,

FR. BACON, CANC.

Jan. 20, 1617.

Indorsed,

To the Marquis of Buckingham, concerning Sir John Cotton's resigning the place of Custos Rotulorum of Cambridgeshire.

TO THE LORD CHANCELLOR.¶

MY HONOURABLE LORD,

I THANK your lordship for your favour to Sir

\* Dr. James Montagu. † Dr. Lancelot Andrews.  
‡ Sir Julius Cæsar.

George Tipping, in giving liberty unto him to make his appearance before you after the holy-days, at my request; who, as I understand by some friends of mine, who moved me to recommend him to your lordship's favour, is willing to conform himself in performance of the decree made in the chancery by your lordship's predecessor, but that he is persuaded, that presently, upon the performance thereof, his son will make away the land that shall be conveyed unto him: which being come to Sir George from his ancestors, he desireth to preserve to his posterity. I desire your lordship's farther favour therefore unto him, that you will find out some course, how he may be exempted from that fear of the sale of his lands, whereof he is ready to acknowledge a fine to his son, and to his heirs by Anne Pigot; and, they failing, to his son's heirs males, and, for want thereof, to any of his son's or brethren's heirs males, and so to the heirs general of his father and himself, by lineal descent, and the remainder to the crown. This offer, which seemeth very reasonable, and for his Majesty's advantage, I desire your lordship to take into your consideration, and to show him what favour you may for my sake; which I will readily acknowledge, and ever rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, Jan. 23, 1617.

TO THE LORD CHANCELLOR.¶

MY HONOURABLE LORD,

SINCE I received your lordship's letter, Sir Lionel Cranfield being here, hath informed his Majesty of the whole proceeding in his business of the household; which his Majesty liketh very well, and is glad it is approved by your lordship, of whose care and pains therein he receiveth very good satisfaction.

In the business touching Sir John Cotton, your lordship dealeth as nobly as can be desired; and so, if it should come in question before his Majesty, I would answer in your behalf. I have Sir John Cotton to inform your lordship by his letter of the business, and ever rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, Jan. 24, 1617.

TO THE LORD CHANCELLOR.¶

MY HONOURABLE LORD,

I HAVE been entreated by a gentleman, whom I much respect, to recommend to your lordship's favour Mr. John Huddy, between whom and Mr. Richard Huddy there is, as I am informed, a cause

§ Sir Henry Montagu of the king's bench, and Sir Henry Hobart of the common pleas.  
¶ Harl. MSS. Vol. 7006. ¶ Ibid. • Ibid.

to be heard before your lordship, in the chancery, on Saturday next. My desire unto your lordship is, that you would show the said John Huddy what favour you lawfully may, and as his cause will bear, when it cometh before you, for my sake. Which I will not fail to acknowledge, ever resting

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, Jan. 28, 1617.

TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I UNDERSTAND that his Majesty hath been pleased to refer a suit unto him by two of his servants, Robert Maxwell and John Hunt, for the making of sheriffs and escheators patents, to your lordship's consideration. My desire unto your lordship on their behalf is, that you would show them thus much favour for my sake, and with as much expedition as may be, and your lordship's other occasions may permit, to certify your opinion thereof unto his Majesty; which I will be ready to acknowledge, and ever rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, Feb. 4, 1617.

TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

THOUGH I had resolved not to write to your lordship in any matter between party and party; yet at the earnest request of my noble friend, the lord Norris, to whom I account myself much beholden, I could not but recommend unto your lordship's favour a special friend of his, Sir Thomas Monk, who hath a suit before your lordship in the chancery † with Sir Robert Basset; which, upon the report made unto me thereof, seemeth so reasonable, that I doubt not but the cause itself will move your lordship to favour him, if upon the hearing thereof it shall appear the same unto your lordship, as at the first sight it doth unto me. I therefore desire your lordship to show in this particular what favour you lawfully may, for my sake, who will account it as done unto myself; and will ever rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, Feb. 4, 1617.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I HAVE sent enclosed a letter to his Majesty about the public charge I am to give the last star-chamber day, which is this day sevensnight, to the judges and justices before the circuit. I pray deliver it to his Majesty with speed. I send also some papers appertaining to that business, which I pray your lordship to have in readiness, if his Majesty call for them. I ever rest

Your lordship's true friend and devoted servant,

FR. BACON, CANC.

February 6, 1617.

TO THE LORD CHANCELLOR.§

MY HONOURABLE LORD,

HIS Majesty marvelleth, that he heareth nothing of the business touching the gold and silver thread; || and therefore hath commanded me to write unto your lordship to hasten the despatch of it; and to give him as speedy an account thereof as you can. And so I rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, Feb. 7.

Indorsed, 1617.

TO THE LORD CHANCELLOR.¶

MY HONOURABLE LORD,

I UNDERSTAND by this bearer, Edward Hawkins, how great pains your lordship hath taken, in the business which I recommended to you concerning him, and how favourably your lordship hath used him for my sake. For which I give your lordship many thanks, and will be ever ready to acknowledge your favour toward him by all the testimonies of

Your lordship's faithful friend,

G. BUCKINGHAM.

Theobald's, Feb. 12, 1617.

TO THE LORD CHANCELLOR.\*\*

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter, who liketh well of the course you mention in the end of your letter, and will speak with you farther

|| A patent for the monopoly of which was granted to Sir Giles Mompesson and Sir Francis Mitchel, who were punished for the abuse of that patent by the parliament, which met January 30, 1620-1.

TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

UNDERSTANDING that there is a suit depending before your lordship, between Sir Rowland Cotton,\*\* plaintiff, and Sir John Gawen, defendant, which is shortly to come to a hearing; and having been likewise informed, that Sir Rowland Cotton hath undertaken it in the behalf of certain poor people; which charitable endeavour of his, I assure myself, will find so good acceptance with your lordship, that there shall be no other use of recommendation: yet, at the earnest request of some friends of mine, I have thought fit to write to your lordship in his behalf, desiring you to show him what favour you lawfully may, and the cause may bear, in the speedy despatch of his business; which I shall be ever ready to acknowledge, and rest

Your lordship's most devoted to serve you,

G. BUCKINGHAM.

Whitehall, April 20, 1618.

TO THE LORD CHANCELLOR.††

MY HONOURABLE LORD,

I WILL not go about to excuse mine own fault, by making you believe his Majesty was backward in your business; but upon the first motion, he gave me directions for it; which it was my negligence, as I freely confess, that I have no sooner performed, having not been slack in moving his Majesty, but in despatching your man. All is done, which your lordship desired, and I will give order, according to his Majesty's directions, so that your lordship shall not need to trouble yourself any farther, but only to expect the speedy performance of his Majesty's gracious pleasure.

I will take the first opportunity to acquaint his Majesty with the other business, and will ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Theobald's, May 8, [1618].

TO THE LORD CHANCELLOR.‡‡

MY HONOURABLE GOOD LORD,

WHEREAS in Mr. Hansbye's cause,§§ which formerly, by my means, both his Majesty and myself

came to live at London at the request of Sir Allen Cotton, his father's younger brother, who was lord mayor of that city in 1625. Sir Rowland was the first patron of the learned Dr. Lightfoot, and encouraged him in the prosecution of his studies of the Hebrew language and antiquities.

†† Harl. MSS. Vol. 7006.

‡‡ Ibid.

§§ This seems to be one of the causes, on account of which lord Bacon was afterwards accused by the house of commons; in answer to whose charge he admits, that in the cause of Sir Ralph Hansbye there being two degrees, one for the inheritance, and the other for goods and chattels; some time after the first decree, and before the second, there was 500*l.* delivered to him by Mr. Tobie Mathew; nor could his lordship deny, that this was upon the matter *pendente lite*.

recommended to your lordship's favour, your lordship thought good, upon a hearing thereof, to decree some part for the young gentleman, and to refer to some masters of the chancery, for your farther satisfaction, the examination of witnesses to this point; which seemed to your lordship to be the main thing your lordship doubted of, whether or no the leases, conveyed by old Hansbye to young Hansbye by deed, were to be liable to the legacies, which he gave by will; and that now I am credibly informed, that it will appear upon their report, and by the depositions of witnesses, without all exception, that the said leases are no way liable to those legacies; these shall be earnestly to entreat your lordship, that upon consideration of the report of the masters, and depositions of the witnesses, you will, for my sake, show as much favour and expedition to young Mr. Hansbye in this cause, as the justness thereof will permit. And I shall receive it at your lordship's hands as a particular favour.

So I take my leave of your lordship, and rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Greenwich, June 12, 1618.

TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

UNDERSTANDING, that the cause depending in the chancery between the lady Vernon and the officers of his Majesty's household is now ready for a decree; though I doubt not, but, as is Majesty hath been satisfied of the equity of the cause on his officers' behalf, who have undergone the business, by his Majesty's command, your lordship will also find their cause worthy of your favour; yet I have thought fit once again to recommend it to your lordship, desiring you to give them a speedy end of it, that both his Majesty may be freed from farther importunity, and they from the charge and trouble of following it: which I will be ever ready to acknowledge as a favour done unto myself, and always rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Greenwich, June 15, 1618.

TO THE LORD CHANCELLOR †

MY HONOURABLE LORD,

I WROTE unto your lordship lately in the behalf of Sir Rowland Cotton, that then had a suit in dependence before your lordship and the rest of my lords in the star-chamber. The cause, I understand, hath gone contrary to his expectation; yet he acknowledges himself much bound to your lordship for the noble and patient hearing he did then receive; and he rests satisfied, and I much beholden to your lordship, for any favour it pleased your lordship to afford

\* Harl. MSS. Vol. 7006.

him for my cause. It now rests only in your lordship's power for the assessing of costs; which, because, I am certainly informed, Sir Rowland Cotton had just cause of complaint, I hope your lordship will not give any against him. And I do the rather move your lordship to respect him in it, because it concerns him in his reputation, which I know he tenders, and not the money which might be imposed upon him; which can be but a trifle. Thus presuming of your lordship's favour herein, which I shall be ready ever to account to your lordship for, I rest

Your lordship's most devoted to serve you,

G. BUCKINGHAM.

June 19, 1618.

TO THE LORD CHANCELLOR; †

MY HONOURABLE LORD,

WHEREAS it hath pleased his Majesty to recommend unto your consideration a petition exhibited by Mr. Fowle, together with the grievances and request for the rectifying of the work of gold and silver thread; and now understandeth, that your lordship hath called unto you the other commissioners in that case, and spent some time to hear what the opposers could object, and perceiveth by a relation of a good entrance you have made into the business; and is now informed, that there remaineth great store of gold and silver thread in the merchants' hands brought from foreign parts, besides that which is brought in daily by stealth, and wrought here by underhand workers; so that the agents want vent, with which inconveniences, it seemeth the ordinary course of law cannot so well meet: and yet they are enforced, for freeing of clamour, to set great numbers of people on work; so that the commodity lying dead in their hands, will in a very short time grow to a very great sum of money: To the end therefore, that the undertakers may not be disheartened by these wrongs and losses, his Majesty hath commanded me to write unto your lordship, to the end you might bestow more time this vacation in prosecuting the course you have so worthily begun, that all differences being reconciled, the defects of the commission may be also amended, for prevention of farther abuses therein; so as the agents may receive encouragement to go on quietly in the work without disturbance. And I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

From Bewly, the 20th day of Aug. 1618.

TO THE LORD CHANCELLOR.

MOST HONOURABLE LORD,

HEREWITH I presume to send a note enclosed, both of my business in chancery, and with my lord Roos, which it pleased your lordship to demand of

† Ibid.

† Ibid.

me, that so you might better do me good in *utroque genere*. It may please your lordship, after having perused it, to commend it over to the care of Mr. Meautys for better custody.

At my parting last from your lordship, the grief I had to leave your lordship's presence, though but for a little time, was such, as that being accompanied with some small corporal indisposition, that I was in, made me forgetful to say that, which now for his Majesty's service I thought myself bound not to silence. I was credibly informed and assured, when the Spanish ambassador went away, that howsoever Raleigh and the prentices\* should fall out to be proceeded withal, no more instances would be made hereafter on the part of Spain for justice to be done ever in these particulars; but that if slackness were used here, they would be laid up in the deck, and would serve for materials (this was the very word) of future and final discontentments. Now as the humour and design of some may carry them towards troubling of the waters; so I know your lordship's both nature and great place require an appeasing them at your hands. And I have not presumed to say this little out of any mind at all that I may have to meddle with matters so far above me, but out of a thought I had, that I was tied in duty to lay thus much under your lordship's eye; because I know and consider of whom I heard that speech, and with how great circumstances it was delivered.

I beseech Jesus to give continuance and increase to your lordship's happiness; and that, if it may stand with his will, myself may one day have the honour of casting some small mite into that rich treasury. So I humbly do your lordship reverence, and continue

The most obliged of your lordship's many faithful servants,

TOBIE MATTHEW.

Nottingham, August 21, 1618.

TO MR. (AFTERWARDS SIR) ISAAC WAKE,  
HIS MAJESTY'S AGENT AT THE COURT OF  
SAVOY.

MR. WAKE,

I HAVE received some letters from you; and hearing from my lord Cavendish † how well he affects you, and taking notice also of your good abilities and services in his Majesty's affairs, and not forgetting the knowledge I had, when young, of your good father, ‡ I thought myself in some measure tied not to keep from you my good opinion of you,

\* Who on the 12th of July, 1618, had insulted Gondomar, the Spanish ambassador, on account of a boy's being hurt by him as he was riding. [*Camdreni Annales Regis Jacobi I. p. 33.*] They were proceeded against by commissioners at Guildhall on Wednesday the 12th of August following; seven being found guilty, and adjudged to six months' imprisonment, and to pay 500*l.* a piece. Two others were acquitted. MS. letter of Mr. Chamberlain to Sir Dudley Carleton, London, August 15, 1618.

† William Cavendish, son and heir of William, created

and my desire to give you any fartherance in your fortunes and occasions, whereof you may take knowledge and liberty to use me for your good. Fare you well.

Your very loving friend,

FR. VERULAM, § CANC.

York-house, this 1st of Sept. 1618.

TO THE LORD CHANCELLOR, ¶

MY HONOURABLE LORD,

His Majesty is desirous to be satisfied of the fitness and conveniency of the gold and silver thread business; as also of the profit, that shall any way accrue unto him thereby. Wherefore his pleasure is, that you shall, with all convenient speed, call unto you the lord chief justice of the king's bench, ¶ the attorney-general, \*\* and the solicitor, †† and consider with them of every of the said particulars, and return them to his Majesty, that thereupon he may resolve what present course to take for the advancement of the execution thereof. And so I rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Theobald's, the 4th October, 1618.

TO THE LORD CHANCELLOR, ††

MY HONOURABLE LORD,

I HAVE been desired, by some friends of mine, in the behalf of Sir Francis Englefyld, to recommend his cause so far unto your lordship, that a peremptory day being given by your lordship's order for the perfecting of his account, and for the assignment of the trust, your lordship would take such course therein, that the gentleman's estate may be redeemed from farther trouble, and secured from all danger, by engaging those, to whom the trust is now transferred by your lordship's order, to the performance of that, whereunto he was tied. And so not doubting but your lordship will do him what lawful favour you may herein, I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Indorsed,

†† Sir Thomas Coventry.

TO THE KING, CONCERNING THE FORM AND MANNER OF PROCEEDING AGAINST SIR WALTER RALEGH.\*

MAY IT PLEASE YOUR MOST EXCELLENT MAJESTY,

ACCORDING to your commandment given unto us, we have upon divers meetings and conferences, considered what form and manner of proceeding against Sir Walter Raleigh might best stand with your Majesty's justice and honour, if you shall be pleased, that the law shall pass upon him.

And, first, we are of opinion, that Sir Walter Raleigh being attainted of high-treason, which is the highest and last work of law, he cannot be drawn in question judicially for any crime or offence since committed. And therefore we humbly present two forms of proceeding to your Majesty: the one, that together with the warrant to the lieutenant of the Tower, if your Majesty shall so please, for his execution, to publish a narrative in print of his late crimes and offences: which, albeit your Majesty is not bound to give an account of your actions in these to any but only to God alone, we humbly offer to your Majesty's consideration, as well in respect of the great effluxion of time since his attainder, and of his employment by your Majesty's commission, as for that his late crimes and offences are not yet publicly known. The other form, whereunto, if your Majesty so please, we rather incline, is, that where your Majesty is so renowned for your justice, it may have such a proceeding, as is nearest to legal proceeding; which is, that he be called before the whole body of your council of state, and your principal judges, in your council-chamber; and that some of the nobility and gentlemen of quality be admitted to be present to hear the whole proceeding, as in like cases hath been used. And after the assembly of all these, that some of your Majesty's counsellors of state, that are best acquainted with the case, should openly declare, that this form of proceeding against Sir Walter is holden, for that he is civilly dead. After this your Majesty's council learned to charge his acts of hostility, depredation, abuse as well of your Majesty's commission, as of your subjects under his charge, impostures, attempt of escape, and other his misdemeanors. But for that which concerns the French, wherein he was rather passive than active, and without which the charge is complete, we humbly refer to your Majesty's consideration, how far that shall be touched. After which charge so given, the examinations read, and Sir Walter heard, and some to be confronted against him, if need be, then he is to be withdrawn and sent back; for that no sentence is, or can be, given against him. And after he is gone, then the lords of the council and judges to give their advice to your Majesty, whether in respect of these subse-

quent offences upon the whole matter, your Majesty, if you so please, may not with justice and honour give warrant for his execution upon his attainder. And of this whole proceeding we are of opinion, that a solemn act of council should be made, with a memorial of the whole presence. But before this be done, that your Majesty may be pleased to signify your gracious direction herein to your council of state; and that your council learned, before the calling of Sir Walter, should deliver the heads of the matter, together with the principal examinations touching the same, wherewith Sir Walter is to be charged, unto them, that they may be perfectly informed of the true state of the case, and give their advice accordingly. All which nevertheless we, in all humbleness, present and submit to your princely wisdom and judgment, and shall follow whatsoever it shall please your Majesty to direct us herein, with all dutiful readiness.

Your Majesty's most humble and faithful servants, &c.

York-house, this 18th of October, 1618.

TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

WHEREAS there is a cause depending in the court of chancery between one Mr. Francis Foliambe and Francis Hornsby, the which already hath received a decree, and is now to have another hearing before yourself; I have thought fit to desire you to show so much favour therein, seeing it concerns the gentleman's whole estate, as to make a full arbitration and final end, either by taking the pains in ending it yourself, or preferring it to some other whom your lordship shall think fit: which I shall acknowledge as a courtesy from your lordship; and ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Hinchinbroke, the 22d of October, 1618.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I SEND the commission for making Lincoln's Inn-Fields into walks for his Majesty's signature. It is without charge to his Majesty.

We have had my lord of Ormonde † before us. We could not yet get him to answer directly, whether he would obey the king's award or no. After we had endured his importunity and impertinences, and yet let him down to this, that his Majesty's award

right was contested by Sir Richard Preston lord Dingwell, supported by the favour of king James I. who made an award, which Walter, earl of Ormonde, conceiving to be unjust, refused to submit to, and was, by the king's order, committed to the Fleet, where he remained eight years before the death of that king; but in 1625 recovered his liberty.

\* He was beheaded October 29, 1618, the day of the inauguration of the lord mayor of London.

† Harl. MSS. Vol. 7006.

‡ Walter, earl of Ormonde, grandfather of James the first duke of Ormonde. This earl, upon the death of Thomas, earl of Ormonde and Ossory, succeeding to those honours, should have inherited likewise the greatest part of the estate: but his

was not only just and within his submission, but in his favour; we concluded in few words, that the award must be obeyed, and if he did refuse or impugn the execution of it in Ireland, he was to be punished by the justice of Ireland; if he did murmur or scandalize it here, or trouble his Majesty any more, he was to be punished in England. Then he asked, whether he might be gone. For that, we told him, his Majesty's pleasure was to be known.

Sir Robert Mansell hath promised to bring his summer account this day seven-night. God preserve and prosper you.

Your lordship's most obliged friend, and faithful servant,

FR. VERULAM, CANC.

November 12, 1618.

TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I SEND your lordship the commission signed by his Majesty, which he was very willing to despatch as a business very commendable and worthy to be taken in hand.

For the earl of Ormonde, his Majesty made no other answer, but that he hopeth that he is not so unmannerly, as to go away without taking leave of his Majesty.

For Sir Robert Mansell's account, his Majesty saith he is very slow, especially being but a summary account, and that he promised to bring it in before: and therefore would have him tied to the day he hath now set, without any farther delay.

This last his Majesty commanded me to put in after I had written and signed my letter.

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, the 13th of November, 1618.

TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

HAVING formerly moved your lordship in the business of this bearer, Mr. Wyche, of whom, as I understand, your lordship hath had a special care to do him favour, according to the equity of his cause; now seeing that the cause is shortly to be heard, I have thought fit to continue my recommendation of the business unto you, desiring your lordship to show what favour you lawfully may unto Mr. Wyche, according as the justness of the cause shall require: which I will acknowledge as a courtesy from your lordship, and ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, the 18th of November, 1618.

\* Harl. MSS. Vol. 7006.

† Ibid. † Ibid.

§ "Declaration of the Demeanor and Carriage of Sir Walter

TO THE LORD CHANCELLOR;

MY HONOURABLE LORD,

I SEND your lordship the bill of the sheriff of Hereford and Leicester, pricked and signed by his Majesty, who hath likewise commanded me to send unto your lordship these additions of instructions, sent unto him by the surveyor and receiver of the court of wards; wherein, because he knoweth not what to prescribe without understanding what objections can be made, his pleasure is, that your lordship advise and consider of them, and send him your opinion of them, that he may then take such course therein, as shall be fit.

His Majesty commanded me to give you thanks for your care of his service: and so I rest

Your lordship's faithful servant,

G. BUCKINGHAM.

Newmarket, 22d of November.

Indorsed, 1618.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

WE have put the *Declaration* § touching Raleigh to the press with his Majesty's additions, which were very material, and fit to proceed from his Majesty.

For the prisoners, we have taken an account, given a charge, and put some particulars in examination for punishment and example.

For the pursuivants, we staid a good while for Sir Edward Coke's health; but he being not yet come abroad, we have entered into it; and we find faults, and mean to select cases for example: but in this swarm of priests and recusants we are careful not to discourage in general. But the punishment of some, that are notoriously corrupt, concern not the good, and will keep in awe those that are but indifferent.

The balance of the king's estate is in hand, whereof I have great care, but no great help.

The sub-committees for the several branches of treasure are well chosen and charged.

This matter of the king's estate for means is like a quarry, which digs and works hard; but then, when I consider it buildeth, I think no pains too much; and after term it shall be my chief care.

For the mint, by my next I will give account, for our day is Wednesday.

God ever preserve and prosper you.

Your lordship's

FR. VERULAM, CANC.

Indorsed,

*Of council-business.*

Raleigh, Knight, as well in his Voyage, as in and since his return, &c. printed at London 1618, in quarto.

## TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I HAVING understood by Dr. Steward, that your lordship hath made a decree against him in the chancery, which he thinks very hard for him to perform: although I know it is unusual to your lordship to make any alterations, when things are so far past; yet in regard I owe him a good turn, which I know not how to perform but this way, I desire your lordship, if there be any place left for mitigation, your lordship would show him what favour you may, for my sake, in his desires, which I shall be ready to acknowledge as a great courtesy done unto myself; and will ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, the 2nd of December, 1618.

## TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

I HAVE written a letter unto your lordship, which will be delivered unto you in behalf of Dr. Steward; and besides, have thought fit to use all freedom with you in that, as in other things; and therefore have thought fit to tell you, that he being a man of very good reputation, and a stout man, that will not yield to any thing, wherein he conceiveth any hard course against him, I should be sorry he should make any complaint against you. And therefore, if you can advise of any course, how you may be eased of that burden, and freed from his complaint, without show of any fear of him, or any thing he can say, I will be ready to join with you for the accomplishment thereof: And so desiring you to excuse the long stay of your man, I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

From Newmarket, 3d of December, 1618.

MY VERY GOOD LORD,

YESTERNIGHT we despatched the lord Ridgeway's account. Good service is done. Seven or eight thousand pounds are coming to the king, and a good precedent set for accounts.

There came to the seal about a fortnight since a strange book passed by Mr. Attorney to one Mr. Hall; and it is to make subjects, for so is denization, and this to go to a private use, till some thousand pounds be made of it. The number one hundred denizens. And whereas all books of that nature had an exception of merchants, which importeth the king not much in his customs only, for that is provided for in the book, but many other ways, this takes in merchants and all. I acquainted the commissioners with it, and by one consent it is stayed. But let me

\* Harl. MSS. Vol. 7006.

† Ibid.

counsel his Majesty to grant forth a commission of this nature, so to raise money for himself, being a flower of the crown: and Hall may be rewarded out of it; and it would be to principal persons, that it may be carried with election and discretion, whom to admit to denization, and whom not.

God ever bless and prosper you.

Your lordship's most faithful and obliged friend and servant,

December 8, 1618. FR. VERULAM, CANC.

## TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

I THANK your lordship for the favour, which, I understand, Sir Francis Englefyld hath received from your lordship upon my last letter, whereunto I desire your lordship to add this one favour more, which is the same that I understand your lordship granted him at Christmas last, to give him liberty, for the space of a fortnight, to follow his business in his own person; whereby he may bring it to the more speedy end, putting in security, according to the ordinary course, to render himself prisoner again, as soon as that time is expired: which is all that I desire for him, and in which I will acknowledge your lordship's favour towards him; and ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, the 10th of Decemb. 1618.

MY VERY GOOD LORD,

I SEND you herewith the copy of a letter, which we, the commissioners for Ormonde's cause, have written to the deputy of Ireland, according to his Majesty's pleasure signified by Sir Francis Blundell; which I humbly desire his Majesty would peruse, that if it do not attain his meaning, as we conveyed it, we may second it with a new letter.

We have appointed Monday morning for these mint businesses, referred by his Majesty to certain commissioners, and we will carry it *sine strepitu*.

The patent touching Guinea and Bynny for the trade of gold, staid first by myself, and after by his Majesty's commandment, we have now settled by consent of all parties.

Mr. Attorney, by my direction, hath made, upon his information exhibited into the star-chamber, a thundering motion against the transportation of gold by the Dutch; which all the town is glad of; and I have granted divers writs of *ne exeat regnum*, according to his Majesty's warrant.

Sir Edward Coke keeps in still, and we have miss of him; but I supply it as I may by my farther diligence. God ever bless you and keep you.

Your lordship's most faithful and bounden friend and servant,

December 11, 1618. FR. VERULAM, CANC.

‡ Ibid.

§ Ibid.

I forget not your doctor's \* matter. I shall speak with him to-day, having received your lordship's letter; and what is possible, shall be done. I pray pardon my scribbling in haste.

TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letters, who is very well pleased with your care of his service, in making stay of the grant of denizens upon the reason you allege, whereof his Majesty will speak farther with you at his return.

The letter, which you sent me about my lord of Ormonde's son, is not according to his Majesty's meaning; but I would have you frame another to my lord deputy to this purpose: "That his Majesty having seen a letter of his to Sir Francis Blundell, advertising, that the earl of Ormonde's son, and some other of his kindred, did victual and fortify their houses; his Majesty hath thereupon commanded you to write unto him, that if the ground of his information be true, which he may best know, that then he send for the said earl's son, and the principal of his kindred, to appear before him; and if they appear, and give him satisfaction, it is well; but if they refuse to appear, or give him not satisfaction though they appear, that then he assemble what forces he can, be they never so few, and go against them, that he may crush the rebellion in the egg."

I have remembered his Majesty, as I promised your lordship, about the naming you for a commissioner to treat with the Hollanders: But besides that you have so many businesses, both of the star-chamber, and others in the term-time, when this must be attended as well as in the vacation, whereby this would be either too great a toil to you, or a hinderance to his Majesty's service; he thinketh it could not stand with the honour of your place to be balanced with those that are sent from the state, so far unequal to his Majesty, and being themselves none of the greatest of the state. Therefore his Majesty holdeth it not fit or worthy of you to put you into such an employment, in which none of your predecessors, or any of the chief counsellors, have been ever used in this kind, but only in a treaty of marriage or conclusion of a peace; as when the constable of Castile was here, when the commissioners on both sides had their authority under the great seal of either kingdom, with direct relation to their sovereigns, far differing from this commission, which is now given to these men, and whereunto his Majesty is to frame the course of his. As for the part which concerneth Scotland, the choice hath not been made of the chancellor or archbishop of St. Andrew's, but of men nearer the rank of those, that come hither to treat. As yet his Majesty delayeth to give any commission at all, because he would first be informed from the lords, both of the points and form of their commission, which his Majesty hitherto understandeth to be, with authority to over-rule and

\* Steward's. See above, p. 209.

direct their merchants in what they shall think fit; which if it be so, then his Majesty holdeth it fit, for his part, to appoint the whole body of the council with like power over his merchants. As for me, I shall be ever ready upon any occasion to show myself

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, the 14th of December, 1618.

TO THE LADY CLIFFORD.

MY GOOD LADY AND COUSIN,

I SHALL not be wanting in any thing, that may express my good affection and wishes towards your ladyship, being so near unto me, and the daughter of a father, to whom I was in the passages of my fortune much obliged. So with my loving commendations, in the midst of business, I rest

Your affectionate kinsman and assured friend,

FR. VERULAM, CANCELLOR.

York-house, this 25th of January, 1618.

TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

LEST my often writing may make your lordship conceive, that this letter hath been drawn from you by importunity, I have thought fit for preventing of any such conceit, to let your lordship know, that Sir John Wentworth, whose business I now recommend, is a gentleman, whom I esteem in more than an ordinary degree. And therefore I desire your lordship to show him what favour you can for my sake in his suit, which his Majesty hath referred to your lordship: which I will acknowledge as a courtesy unto me, and rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, January 26th, 1618.

TO THE LORD CHANCELLOR.§

MY HONOURABLE LORD,

I BEING desired by a special friend of mine to recommend unto your lordship's favour the case of this petitioner, have thought fit to desire you, for my sake, to show him all the favour you may in this his desire, as you shall find it in reason to deserve; which I shall take as a courtesy from your lordship, and ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

I thank your lordship for your favour to Sir John Wentworth, in the despatch of his business.

Newmarket, March 15, 1618.

† Harl. MSS. Vol. 7006.

‡ Ibid.

§ Ibid.

## TO THE LORD CHANCELLOR.\*

MOST HONOURABLE LORD,

It may please your lordship, there was with me this day one Mr. Richard White, who hath spent some little time at Florence, and is now going into England. He tells me, that Galileo had answered your discourse concerning the flux and reflux of the sea, and was sending it unto me; but that Mr. White hindered him, because his answer was grounded upon a false supposition, namely, that there was in the ocean a full sea but once in twenty-four hours. But now I will call upon Galileo again. This Mr. White is a discreet and understanding gentleman, though he seem a little soft, if not slow: and he hath in his hands all the works, as I take it, of Galileo, some printed, and some unprinted. He hath his discourse of the flux and reflux of the sea, which was never printed; as also a discourse of the mixture of metals. Those which are printed in his hand are these: the *Nuncius siderius*; the *Macchie solari*; and a third, *Delle Cose, che stanno su l'aqua*, by occasion of a disputation, that was amongst learned men in Florence about that which Archimedes wrote, *de insidentibus humido*.

I have conceived, that your lordship would not be sorry to see these discourses of that man; and therefore I have thought it belonging to my service to your lordship to give him a letter of this date, though it will not be there so soon as this. The gentleman hath no pretence or business before your lordship, but is willing to do your lordship all humble service; and therefore both for this reason, as also upon my humble request, I beseech your lordship to bestow a countenance of grace upon him. I am beholden to this gentleman; and, if your lordship shall vouchsafe to ask him of me, I shall receive honour by it. And I most humbly do your lordship reverence.

Your lordship's most obliged servant,

TOBIE MATTHEW.

Brussels, from my bed, the 14th of April, 1619.

## TO THE LORD CHANCELLOR. †

MY HONOURABLE LORD,

His Majesty hath commanded me to signify unto your lordship, that it is his pleasure you put off the hearing of the cause between Sir Arthur Manwaring and Gabriel Dennis till toward the end of the term; because his Majesty is graciously pleased to be at the hearing thereof himself. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, April 13, 1619.

TO THE LORD CHANCELLOR, AND SIR LI-  
ONEL TANFIELD, LORD CHIEF BARON OF  
THE EXCHEQUER. †

MY LORDS,

His Majesty having been moved by the duke of Savoy's ambassador in the behalf of Philip Bernardi, whom he is to send about some special employment over the seas to the duke of Savoy, that before his going, the business mentioned in this petition may be ended, hath commanded me to recommend the same unto your lordships' care, that with all expedition the cause may be heard and ended by your lordships, according to his Majesty's reference; or left to the determination of the court of chancery, where it is depending, and where the party assureth himself of a speedy end. And so I rest

Your lordship's very assured friend at command,

G. BUCKINGHAM.

Royston, the 19th of April, 1619.

## TO THE MARQUIS OF BUCKINGHAM. §

MY VERY GOOD LORD,

I THINK fit to let your lordship understand what passed yesterday in the star-chamber touching Suffolk's || business.

There came to me the clerk of the court in the inner chamber, and told me, that my lord of Suffolk desired to be heard by his council at the \*\* sitting of the court, because it was pen \* \* \* him.

I marvelled I heard not of it by Mr. Attorney, who should have let me know as much, that I might not be taken on the sudden in a cause of that weight.

I called presently Mr. Attorney to me, and asked him whether he knew of the motion, and what it was, and how he was provided to answer it. He signified to me, that my lord would desire to have the commission for examinations in Ireland to be returnable in Michaelmas term. I said, it might not be, and presently drew the council then present to me, and made Mr. Attorney repeat to them the passages past, and settled it, that the commission should be returnable the first day of the next term, and then republication granted, that it might, if accidents of wind and weather permit, come to hearing in the term. And upon motion in open court it was ordered accordingly.

God ever preserve and prosper you. I pray God this great easterly wind agree well with his Majesty.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I AM much bounden to his Majesty, and likewise to your lordship. I see, by the late accesses I have had with his Majesty, and now by his royal and real favour,\* that he loveth me, and acknowledgeth me for the servant I am, or desire to be. This in me must turn to a great alacrity to honour and serve him with a mind less troubled and divided. And for your lordship, may and doth daily receive addition, but cannot, nor never could, receive alteration. I pray present my humble thanks to his Majesty; and I am very glad his health confirmeth; and I hope to see him this summer at Gorbambury: there is sweet air as any is. God preserve and prosper you both. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

May 9, 1619.

MINUTE OF A LETTER TO THE COUNT  
PALATINE OF THE RHINE.

MONSIEUR,

Je me tiens a grand honneur, qu'il plaise à vostre altesse de me cognoistre pour tel, que je suis, ou pour le moins voudrois être, envers vous et vostre service: et m'estimeray heureux, si par mes conseils auprès du roy, ou autre devoir, je pourroy contribuer à vostre grandeur, dont il semble que Dieu vous a basti de belles occasions, ayant en contemplation vostre tres-illustre personne, non seulement comme tres cher allié de mon maistre, mais aussi, comme le meilleur appui, apres les roys de Grande Bretagne, de la plus saine partie de la Chrestienté.

Je ne puis aussi passer sous silence la grande raison, que vostre altesse fait a vostre propre honneur en choisissant tels conseillers et ministres d'estat, comme se monstre tres-bien estre monsieur le baron de Dhona et Monsieur de Plessen, estants personnes si graves, discrettes et habiles; en quoy vostre jugement reluict assez.

Vostre altesse de vostre grace excusera la faulte de mon langage François, ayant esté tant versé es vieilles loix de Normandie: mais le cœur supplera la plume, en priant Dieu de vous tenir en sa digne et sainte garde,

Monsieur,

De vostre altesse le plus humble et plus affectionné serviteur.

‡ Sir Randolph Crew, made chief justice of the king's bench, Jan. 26, 1624.

TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

HIS Majesty was pleased, at the suit of some who have near relation unto me, to grant a licence for transportation of butter out of Wales unto one Lewis and Williams; who, in consideration that the patent should be passed in their names, entered into articles for the performance of certain conditions agreed upon between them, which, now that the patent is under the great seal, they utterly refuse to perform. My desire therefore to your lordship is, that you would call the said Lewis and Williams before you, with the other parties, or some of them, who shall be ready at all times to attend your lordship; and out of your consideration of the matter, according to equity to take such course therein, that either the said agreement may be performed, or that they which refuse it may receive no benefit of the patent; which upon reason thereof was passed in their names. And herein I desire your lordship to make what expedition you can; because now is the season to make provision of the butter, that for this year is to be transported, whereof they take advantage to stand out. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Greenwich, May 14, 1619.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THOUGH it be nothing, and all is but duty; yet I pray show his Majesty the paper enclosed, that his Majesty may see how careful his poor servant is upon every emergent occasion to do him what honour he can. The motion made in court by the king's serjeant, Crew,‡ that the declaration might be made parcel of the record, and that I hear otherwise of the great satisfaction abroad, encourage me to let his Majesty know what passed.

God ever preserve and prosper you both.

Your lordship's obliged friend and faithful servant,

FR. VERULAM, CANC.

Indorsed, June 29, 1619.

*My lord to my lord marquis, enclosing the form of a declaration used in point of acknowledgment in the lady Exeter's § cause.*

§ Countess of Exeter, accused of incest and other crimes by the lady Lake, wife of secretary Lake, and their daughter the lady Roos.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I PURPOSED to have seen you to-day, and receive your commandments before the progress. But I came not to London till it was late, and found you were gone before I came. Nevertheless, I would not fail to let your lordship understand, that as I find every day more and more occasions, whereby you bind me to you; so this morning the king of himself did tell me some testimony, that your lordship gave of me to his Majesty even now, when you went from him, of so great affection and commendation, for I must ascribe your commendation to affection, being above my merit, as I must do contrary to that that painters do; for they desire to make the picture to the life, and I must endeavour to make the life to the picture, it hath pleased you to make so honourable a description of me. I can be but yours, and desire to better myself, that I may be of more worth to such an owner.

I hope to give the king a good account of my time this vacation.

If your lordship pass back by London, I desire to wait on you, and discourse a little with you: if not, my prayers shall go progress with you, and my letters attend you, as occasion serveth.

God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

July 19, 1619.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THIS day, according to the first appointment, I thought to have waited upon his Majesty, and to have given him an account of my cares and preparations for his service, which is my progress. And therefore, since his coming to Windsor is prolonged, I thought to keep day by letter, praying your lordship to commend my most humble service to his Majesty, and to let him know, that since I see his Majesty doth me the honour, as to rely upon my care and service, I lose no time in that which may pertain thereunto. I see the straits, and I see the way out; and what lieth in one man, whom he hath made great, and trained, shall not be wanting. And I hope, if God give me life for a year or two, to give his Majesty cause to think of me seven years after I am dead.

I am glad the time approacheth, when I shall have the happiness to kiss his Majesty's hands, and to embrace your lordship, ever resting

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

York-house, August 28, 1619.

## TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

HIS Majesty, upon a petition delivered by Mr. Thomas Digby, wherein he complaineth of great wrongs done unto him, hath been pleased, for his more speedy relief and redress, if it prove as he allegeth, to refer the consideration thereof unto your lordship. And because he is a gentleman, whom I have long known and loved, I could not but add my desire to your lordship, that if you find he hath been wronged, you would do him so much favour, as to give him such remedy, as the equity of his case may require. For which I will ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, Octob. 8, 1619.

## TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter, who hath given order to Mr. Secretary Calvert, to signify his pleasure for the proceeding in that business, whereof you write, without any farther delay, as your lordship will more fully understand by Mr. Secretary, who for that purpose is to return to London against the day of hearing.

I have no answer to make to your former letter, and will add no more to this, but that his Majesty hath a great confidence in your care of his service. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, Oct. 10, 1619.

Indorsed,

*Showing his Majesty's acceptation of your lordship's care, in particular in the business against the earl of Suffolk.*

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

AFTER my last letter yesterday, we entered into conference, touching the Suffolk cause, myself, and the commissioners, and the two chief justices.† The fruit of this conference is, that we all conceive the proceedings against my lord himself to be not only just and honourable, but in some principal parts plausible in regard of the public: as namely, those three points, which touch upon the ordnance, the army of Ireland, and the money of the cautionary towns; and the two chief justices are firm in it.

I did also, in this cause, by the assent of my lords, remove a part: for Mr. Attorney had laid it upon

† Sir Henry Montagu of the king's bench, and Sir Henry Hobart of the common pleas.

\* Harl. MSS. Vol. 7006.

† Ibid.

serjeant Davies\* to open the information, which is that which gives much life or coldness to the cause. But I will have none but trained men in this cause; and I cannot forget, that the allotting of the opening of the information in this cause of the Dutch, I mean the main cause, to a mean fellow, one Hughes, did hurt, and was never well recovered.

By my next I will write of the king's estate: and I ever rest,

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

October 14, 1619.

---

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THIS morning the duke † came to me, and told me the king's cause was yesterday left fair; and if ever there were a time for my lord of Suffolk's submission, it was now; and that, if my lord of Suffolk should come into the court, and openly acknowledge his delinquency, he thought it was a thing considerable. My answer was, I would not meddle in it; and, if I did, it must be to dissuade any such course; for that all would be but a play upon the stage, if justice went not on in the right course. This I thought it my duty to let the king know by your lordship.

I cannot express the care I have had of this cause in a number of circumstances and discretions, which, though they may seem but small matters, yet they do the business, and guide it right.

God ever keep your lordship.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

October 21, 1619.

---

TO THE MARQUIS OF BUCKINGHAM.

I AM double bounden to the king, for his Majesty's trust and acceptation; whereof the one I will never deceive; the other, though I cannot deserve, yet I will do my best, and perhaps as much as another man.

This day the evidence went well; for the solicitor † did his part substantially: and, a little to warm the business, when the misemployment of treasure, which had relation to the army of Ireland, was handled, I spake a word, that he, that did draw or milk treasure from Ireland, did not *emulgere*, milk money, but blood. But this is but one of the little things, that I wrote of before.

The king, under pardon, must come hither with

\* Sir John Davies, author of *Nosce teipsum*, knighted in February, 1607-8, and made serjeant at law in 1612. He had been attorney-general of Ireland.

† Lodowick, duke of Lenox. He was created duke of Richmond, May 17, 1623; and died February 11, 1623-4.

two resolutions: the one, to remit all importunity, touching this cause, to the lords in court of justice; the other, to pursue the designs first taken at Windsor, and then at Hampton-Court, for his commission of treasury: wherein I do my part, and it is reasonably well: but better would it be, if instruments were not impediments. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

October 27, Wednesday.

Friday will not end the business; for to-morrow will but go through with the king's evidence.

---

TO THE LORD CHANCELLOR. §

MY HONOURABLE LORD,

THIS bearer, a Frenchman belonging to the ambassador, having put an Englishman in suit for some matters between them, is much hindered and molested by often removing of the cause from one court to another. Your lordship knows, that the French are not acquainted with our manner of proceedings in the law, and must therefore be ignorant of the remedy in such a case. His course was to his Majesty; but I thought it more proper, that your lordship would be pleased to hear and understand this case from himself, and then to advise and take order for his relief, as your lordship in your wisdom shall think fit. So commending him to your honourable favour, I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, 27th of October, 1619.

Your lordship shall do well to be informed of every particular, because his Majesty will have account of it at his coming.

---

TO THE LORD CHANCELLOR. ||

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter, who commanded me to give your lordship thanks for your speed in advertising those things that pass, and for the great care he seeth you ever have of his service.

I send your lordship back the bill of sheriffs for Sussex, wherein his Majesty hath pricked the first, as your lordship wished.

His Majesty would not have you omit this opportunity of so gross an oversight in the judges, to admonish them of their negligence in suffering such a thing to come to his Majesty, which needed his amending afterward: and withal, to let them know,

† Sir Thomas Coventry, afterwards lord keeper of the great seal.

§ Harl. MSS. Vol. 7006.

|| Ibid.

that his Majesty observeth, that every year they grow more and more careless of presenting fit men unto him for that place; and that you advise them to be more wary hereafter, that they may give his Majesty better satisfaction. And so I rest

G. BUCKINGHAM.

Royston, November 14, 1619.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THIS day afternoon, upon our meeting in council, we have planed those rubs and knots, which were mentioned in my last, whereof I thought good presently to advertise his Majesty. The days hold without all question, and all delays diverted and quieted.

Sir Edward Coke was at Friday's hearing, but in his night-cap; and complained to me, he was ambulant, and not current. I would be sorry he should fail us in this cause. Therefore I desired his Majesty to signify to him by your lordship, taking knowledge of some light indisposition of his, how much he should think his service disadvantaged in this cause, if he should be at any day away; for then he cannot sentence.

By my next I will give his Majesty some account of the tobacco and the currants. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

November 20, at evening, 1619.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I KNOW well his Majesty taketh to heart this business of the Dutch,\* as he hath great reason, in respect both of honour and profit. And because my first letter was written in the epistasis, or trouble of the business; and my second in the beginning of the catastrophe, or calming thereof, wherein nevertheless I was fain to bear up strongly into the weather before the calm followed; and since every day hath been better and better, I thought good to signify so much, that his Majesty may be less in suspense.

The great labour was to get entrance into the business; but now the portcullis is drawn up. And though, I must say, there were some blots in the tables, yet, by well playing, the game is good.

Rowland is passing well justified; for both his credit is, by very constant and weighty testimony, proved; and those vast quantities, which were thought incredible, or at least improbable, are now made manifest truth.

Yet I find a little of the old leaven towards the

\* Merchants, accused in the star-chamber for exporting the gold and silver coin.

† Harl. MSS. Vol. 7006.

‡ Lord Bacon, in his letter of November 22, 1619, mentions,

first defendants, carried in this style and character; "I would this, that appears now, had appeared at first. But this cometh of haste and precipitation;" and the like. But yet I hope, the corruption and practice upon the *ore tenus* and the rectifying of Rowland's credit, will satisfy my lords upon the former proofs. For I would be very sorry, that these new defendants, which, except one or two, are the smaller flies, should be in the net; and the old defendants, which are the greater flies, should get through. God preserve you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

This November 26, 1619.

Indorsed,

*Touching the Dutch business.*

MY HONOURABLE LORD,

I DO, from time to time, acquaint his Majesty with your letters, wherein he ever perceiveth your vigilant care in any thing that concerneth his service; and hath commanded me to give you thanks in his name, who is sure your endeavours will never be wanting, when any thing is to be done for the advancement of his affairs.

According to your lordship's advice, his Majesty hath written to the commissioners of the treasury, both touching the currants and the tobacco,‡ the plantation whereof his Majesty is fully resolved to restrain; and hath given them order forthwith to set out a proclamation to that effect; not intending in that point to stand upon any doubt of law, nor to expect the judges' interpretation; nor to allow any freehold in that case; but holding this the safest rule, "*Salus reipublicæ suprema lex esto.*" And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Newmarket, Nov. 27, 1619.

TO THE LORD CHANCELLOR.§

Your lordship's humble servant

G. BUCKINGHAM.

Indorsed,

*Touching the submissions of Sir Thomas Lake and his lady.*

that there was offered 2000*l.* increase yearly for the tobacco, to begin at Michaelmas, as it now is, and 3000*l.* increase, if the plantations here within land be restrained.

§ Harl. MSS. Vol. 7006.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I ACQUAINTED this day the bearer with his Majesty's pleasure touching Lake's\* submission; which whether it should be done in person, or in writing, his Majesty signified his will thus, that it should be spared in open court, if my lady of Exeter should consent, and the board think fit. The board liked it well, and appointed my lord Digby and secretary Calvert to speak with my lady, who returned her answer in substance, that she would, in this and all things, be commanded by his Majesty: but if his Majesty left it to her liberty and election, she humbly prayed to be excused. And though it was told her, that this answer would be cause, that it could not be performed this term; yet she seemed willing rather it should be delayed, than dispensed with.

This day also Traske,† in open court, made a retraction of his wicked opinions in writing. The form was as good as may be. I declared to him, that this court was the judgment-seat; the mercy-seat was his Majesty: but the court would commend him to his Majesty: and I humbly pray his Majesty to signify his pleasure speedily, because of the misery of the man; and it is a rare thing for a secretary, that hath once suffered smart and shame, to turn so unfeignedly, as he seemed to do.

God ever bless and keep you.

Your most obliged friend and faithful servant,

FR. VERULAM, CANC.

December 1, 1619.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

ON Friday I left London, to hide myself at Kew; for two months and a half together to be strong-bent is too much for my bow. And yet, that the king may perceive that in my times of leisure I am not idle, I took down with me Sir Giles Mompesson,‡ and with him I have quietly conferred of that proposition which was given me in charge by his Majesty, and after seconded by your lordship. Wherein I find some things I like very well, and some other that I would set by. And one thing is much to my liking, that the proposition for bringing in his Majesty's revenue with small charge is no invention, but was on foot heretofore in king Philip's and queen Mary's

\* Sir Thomas Lake's.

† John Traske, a minister, who was prosecuted in the star-chamber for maintaining, as we find mentioned in the Reports of the lord chief justice Hobart, p. 236, that the Jewish Sabbath ought to be observed, and not ours; and that we ought to abstain from all manner of swine's flesh, and those meats which the Jews were forbidden in Leviticus, according to bishop Andrews, in his speech, in the star-chamber on that occasion, printed among his lordship's works. Mr. Traske being examined in that court, confessed, that he had divulged those opinions, and had laboured to bring as many to them as he could; and had also written a letter to the king, wherein he seemed to tax his Majesty with hypocrisy, and expressly inveighed against the bishops high commissioners, as bloody and cruel in their proceedings against him, and a papal clergy. He was sentenced to fine and imprisonment, not for holding those opinions, for those were examinable in the ecclesiastical

time, and had a grave and mighty opinion for it. The rest I leave to his relation, and mine own attendance.

I hope his Majesty will look to it, that the fines now to come in may do him most good. Both causes produce fines of one hundred and fourscore thousand pounds, whereof one hundred thousand may clear the anticipations, and then the assignments may pass under the great seal, to be enrollable; so as we shall need to think of nothing but the arrears in a manner, of which I wish the 20,000*l.* to the strangers, with the interest, be presently satisfied. The remain may serve for the king's present and urgent occasions. And if the king intend any gifts, let them stay for the second course, for all is not yet done, but nothing out of these, except the king should give me the 20,000*l.* I owe Peter Vanlore out of his fine, which is the chief debt I owe. But this I speak merrily. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

Kew, December 12, 1619.

After I had written this letter, I received from your lordship, by my servant, his Majesty's acceptance of my poor services; for which I pray your lordship to present to his Majesty my most humble thanks. I have now other things in my mind for his Majesty's service, that no time be lost.

## TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

HIS Majesty hath been pleased, out of his gracious care of Sir Robert Killigrew, to refer a suit of his, for certain concealed lands, to your lordship and the rest of the commissioners for the treasury; the like whereof hath been heretofore granted to many others. My desire to your lordship is, that he being a gentleman, whom I love and wish very well unto, your lordship would show him, for my sake, all the favour you can, in farthering his suit. Wherein your lordship shall do me a courtesy, for which I will ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, December 25, 1619.

court, and not there, but for making of conventicles and motions, and for scandalizing the king, the bishops, and clergy. Dr. Fuller, in his Church History of Britain, Book X. p. 77. § 64, mentions his having heard Mr. Traske preach, and remarks, that his voice had more strength than any thing else he delivered; and that after his recantation he relapsed, notwithstanding the same, but other opinions, rather humorous than hurtful, and died obscurely at Lambeth in the reign of king Charles I.

‡ Who in the parliament, which began January 30, 1620-1, was sentenced to be degraded and rendered incapable of bearing any office, for practising several abuses, in setting up new inns and alehouses, and exacting great sums of money of the people, by pretence of letters patents granted him for that purpose. But he fled into foreign parts, finding himself abandoned by the marquis of Buckingham, on whom he had depended for protection.

§ Harl. MSS. Vol. 7006.

## TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter, who for that business, whereof Mr. Chancellor of the Exchequer brought the message to his Majesty to Theobald's, returned the answer by him.

As for that, whereof Sir Giles Mompesson spake to your lordship, his Majesty liketh very well, and so do all others, with whom his Majesty hath spoken of it; and therefore he recommendeth it to your care, not doubting but your lordship will give all your fartherance to it, being your own work, and so much concerning his Majesty's honour and profit; and will speak farther with your lordship of it at his return to London.

For those other businesses of the star-chamber, which his Majesty hath recommended to your lordship, he hopeth you will keep the clock still going, his profit being so much interested therein, especially seeing Mr. Chancellor of the Exchequer † hath promised his Majesty, that he will be no more sick, whereby you shall have this comfort, that the burden will not lie upon your lordship alone.

The little leisure I had at Theobald's made me bring your man down hither for this answer, which I hope your lordship will excuse; and ever hold me for

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, Jan. 19.

Indorsed, 1619.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

IN the midst of business, as in the midst of a way, one should not stay long, especially when I crave no direction, but only advertise.

This day we met about the commission, the commonwealth's commission, for the poor and vagabonds, &c. We have put it into an exceeding good way, and have appointed meetings once in fourteen days, because it shall not be a-slack. I was glad to hear from the two chief justices, that whatsoever appears in the country to come from *primum mobile*, that is, the king's care, works better than if it came from the law. Therefore we have ordered, that this commission shall be published in the several circuits in the charges of the judges. For the rest hereafter.

For the proposition of Sir Giles Mompesson, we have met once. Exchequer-men will be exchequer-men still; but we shall do good.

For the account, or rather imparting, of the commissioners of treasury to the council, I think it will but end in a compliment. But the real care, and I hope good purpose, I will not give over, the better because I am not alone.

For the star-chamber business, I shall, as you write, keep the clock on going, which is hard to do, when sometimes the wheels are too many, and sometimes too few. But we shall do well, especially if those, whom the king hath hitherto made bond-men, (I mean, which have given bonds for their fines,) he do not hereafter make free-men.

For Suffolk's business it is a little strange, that the attorney made it a question to the commissioners of treasury, whether Suffolk should not be admitted to the lease of the extent of his own land, which is the way to encourage him not to pay his fine. But when it was told him that the contrary course was held with the earl of Northumberland, and that thereby he was brought to agree for his fine; then he turned, as his manner is.

For the errors, we have yet so much use of the service of Sir Henry Britten in bringing in the fines, indeed more than of the attorney, as we cannot, without prejudice to his Majesty's service, enter yet into them; and besides, Sir Edward Coke comes not abroad.

Mr. Kirkham hath communicated with me, as matter of profit to his Majesty, upon the coals referred by his Majesty to us of the treasury, wherein I hope we shall do good, the rather, because I am not alone.

The proclamation for light gold, Mr. Secretary Calvert, I know, hath sent to his Majesty; and therefore of that I say no more.

For the raising of silver by ordinance, and not by proclamation, and that for the time to come, we have given order to finish it. I hear a whispering, that thereupon the commissioners of the navy, the officers of the household, the wardrobe, may take occasion to break the book and the undertakings, because the prices may rise, which I thought good to signify to his Majesty. And to speak plainly, I fear more the pretence, than the natural effect. God evermore preserve your lordship. I rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

January 20, 1619.

## TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

I HAVE acquainted his Majesty with your letter, who is very well pleased therewith, finding in you a continual care of his service. In that point of the star-chamber business, his Majesty saith, there is a mistaking; for he meant not the Dutchmen's business, but that motion, which your lordship made unto him, of sitting in the star-chamber about the commissions, which he had not leisure to read till he came down to Royston, and hath reason to give you thanks for it, desiring you to prepare it, and study the point, of which he will speak more with

He had been created lord Brooke of Beauchamp's Court, Jan. 9, 1620-1.

‡ Harl. MSS. Vol. 7006.

\* Harl. MSS. Vol. 7006.

† Sir Fulke Greville, who surrendered that office in September, 1621, being succeeded in it by Sir Richard Weston.

you at his return to London, being a matter worthy your thinking on, and his Majesty's practice.

For the last point of your letter, his Majesty saith, it cannot but proceed of malice, that there should be any such plot, which he will not endure, but he will account those, that whisper of it in that sort, enemies of his service; and will put them out of their places, that practise it. And so I rest

Your lordship's faithful friend and servant,  
G. BUCKINGHAM.

Newmarket, Jan. 22, 1619.

TO MR. SECRETARY CALVERT.\*

MR. SECRETARY,

I HAVE received your letter of the 3d of this present, signifying his Majesty's pleasure touching Peacock's† examinations, of which I will have special care.

My lord Coke is come to town, and hath sent me word, he will be with me on Monday, though he be somewhat lame. Howsoever, the service shall be done.

I was made acquainted, by your letter to secretary Naunton, with his Majesty's dislike of the sending to him of the jolly letter from Zealand. I will now speak for myself, that, when it was received, I turned to the master of the wards,‡ and said, "Well, I think you and I shall ever advise the king to do more for a Burlamachi, when he seeketh to his Majesty by supplication and supplying the king at the first word, than for all the rest upon any bravadoes from the burgomasters of Holland and Zealand;" who answered very honestly, that it was in the king's power to make them alter their style when he would. But when another of us said, we could not but in our own discharge send the king the letter, *scilicet negandum non fuit*; though indeed my way is otherwise.

I have at last recovered from these companions, Harrison and Dale, a copy of my lord of Bangor's § book, the great one, and will presently set in hand the examinations. God keep you.

Your assured Friend,

FR. VERULAM, CANC.

February 5, 1619.

TO THE KING.

MAY IT PLEASE YOUR MAJESTY,

SIR Edward Coke is now a-foot, and, according to your command, signified by Mr. Secretary Calvert, we proceed in Peacock's examinations. For al-

\* Harl. MSS. Vol. 7006.

† He was a minister of the University of Cambridge. He was committed to the Tower, for pretending that he had, by sorcery, infatuated the king's judgment in the cause of Sir Thomas Lake. Camd. Annal. Regis Jacobi I. p. 54.

‡ Sir Lionel Cranfield.

§ Dr. Lewis Bayly, born at Caermarthen, in Wales, and educated in Exeter College, Oxford. He had been minister of Evesham, in Worcestershire, and chaplain to prince Henry, and rector of St. Matthew's, Friday-street, in London. He

though there had been very good diligence used, yet certainly we are not at the bottom; and he, that would not use the utmost of his line to sound such a business as this, should not have due regard, neither to your Majesty's honour nor safety.

A man would think he were in Luke Hutton's case again; for as my lady Roos personated Luke Hutton, so, it seemeth, Peacock personateth Atkins. But I make no judgment yet, but will go on with all diligence: and, if it may not be done otherwise, it is fit Peacock be put to torture. He deserveth it as well as Peacham did.

I beseech your Majesty not to think I am more bitter, because my name is in it; for, besides that I always make my particular a cypher, when there is question of your Majesty's honour and service, I think myself honoured for being brought into so good company. And as, without flattery, I think your Majesty the best of kings, and my noble lord of Buckingham the best of persons favoured; so I hope, without presumption, for my honest and true intentions to state and justice, and my love to my master, I am not the worst of chancellors.

God ever preserve your Majesty.

Your Majesty's most obliged and most obedient servant,

FR. VERULAM, CANC.

Feb. 10, 1619.

TO THE LORD CHANCELLOR.

MOST HONOURED LORD,

I PRESUME, now after term, if there be any such thing as an after-term with your lordship, to offer this enclosed paper || to your sight, concerning the duke of Lerma; which, if your lordship have not already read, will not, I think, be altogether displeasing, because it is full of particular circumstances. I know not how commonly it passeth up and down more or less. My friend, Mr. Gage, sent it me lately out of Spain. But howsoever I build upon a sure ground; for though it should be vulgar, yet, for my desire to serve your lordship, I cannot demerit so much, as not to deserve a pardon at your lordship's most noble hand.

Before the departure of the duke of Lerma from that court, there was written upon the gate for a pasquinade, that the house was governed "por el Padre, y el Hijo, y un Santo;" as in Paris about the same time was written upon the Louvre-Gate, "C'est icy l'hostel des troys Roys;" for Luynes's brother is almost as great as himself. But the while there is good store of kings now in christendom, though there be one fewer than there was.

was promoted to the bishopric of Bangor in 1616. On the 15th of July, 1621, he was committed to the Fleet, but on what account is not related by Camden, *Annales Regis Jacobi I.* p. 72, who mentions the circumstance of the bishop's imprisonment, but that he was soon after set at liberty. He was the author of the well-known book, *the Practice of Piety*.

|| I have, out of a ragged hand in Spanish, translated it, and accompanied it with some marginal notes, for your lordship's greater ease. Note of Mr. Matthew.

In Spain there are very extraordinary preparations for a great armada. Here is lately in this court a current speech, as that the enterprise, whatsoever it should have been, is laid wholly aside: but that were strange. Yet this is certain, that the forces of men, to the number of almost two thousand, which were to have gone into Spain from hence, are discharged, together with some munition, which was also upon the point of being sent. Another thing is also certain, that both in the court of Spain and this, there is at this time a strange straitness of money; which I do not conceive, for my part, to proceed so much from want, as design to employ it. The rendezvous, where the forces were to meet, was at Malaga within the straits; which makes the enterprise upon Algiers most likely to be intended. For I take that to be a wild conceit, which thinks of going by the Adriatic *per far in un viaggio duoi seruitii*; as the giving a blow to Venice, and the landing of forces in aid of the king of Bohemia about Trieste.

Perhaps the king of Spain would be glad to let the world see, that now he is *hors de paye*; and by showing himself in some action, to entitle the duke of Lerma to all his former sloth; or perhaps he now makes a great preparation, upon the pretence of some enterprise, that he will let fall, that so he may with the less noise assemble great forces some other year, for some other attempt not spoken of now.

My lord Compton\* is in this court, and goes shortly towards Italy. His fashion is sweet, and his disposition noble, and his conversation fair and honest.

Diego, my lord Roos's man, is come hither. I pray God it be to do me any good towards the recovery of the debt his lord owes me.

Most honoured lord, I am here at good leisure to look back upon your lordship's great and noble goodness towards me, which may go for a great example in this age; and so it doth. That which I am sure of, is, that my poor heart, such as it is, doth not only beat, but even boil in the desires it hath to do your lordship all humble service.

I crave leave, though it be against good manners, that I may ever present my humblest service to my most honoured lady, my lady Verulam, and lady Constable, with my best respects to my dear friend, Sir John Constable; who, if your lordship want the leisure, would perhaps cast an eye upon the enclosed paper.

I do, with more confidence, presume to address this other letter to Mr. Meautys, because the contents thereof concern your lordship's service.

I beseech sweet Jesus to make and keep your lordship entirely happy. So I humbly do you reverence, remaining ever

Your lordship's most obliged servant,

TOBIE MATTHEW.

Post. I should be glad to receive some of your lordship's philosophical labours, if your lordship

\* Spencer, lord Compton, only son of William, earl of Northampton. This nobleman, who succeeded his father in his title and estate, in June 1630, was killed at Hopton-Heath,

could so think fit. I do now receive a letter from the Conde de Gondomar, who, thinking that it should find me in England, saith thus: "Beso las manos mil vezes a mi sennor, el sennor Gran Chancilor, con my coracon; como estoy en su buena gracia." The empress is dead long since, and the emperor is so sickly, or rather so sick, that they forbear to bury her with solemnity, as conceiving, that he will save charge by dying shortly. They say here, that the business of Bohemia is growing towards an end by composition.

Brussels, this 14th of Feb. 1619.

#### TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

FOR the services committed to Sir Lionel Cranfield, after his Majesty hath spoken with him, I shall attend and follow his Majesty's pleasure and directions, and yield my best care, advice, and endeavour for performance.

In the pretermitted duty I have some profit, and more was to have had if queen Anne had lived. Wherefore I shall become an humble suitor to his Majesty, that I may become no loser, specially seeing the business had been many a time and oft quite overthrown, if it had not been upheld only, or chiefly, by myself; so that whatsoever service hath been since done, is upon my foundation.

Mr. Attorney † groweth pretty pert with me of late; and I see well who they are that maintain him. But be they flies, or be they wasps, I neither care for buzzies nor stings, more especially in any thing that concerneth my duty to his Majesty, or my love to your lordship.

I forgot not, in my public charge, the last star-chamber day, to publish his Majesty's honour for his late commission for the relief of the poor, and suppressing vagabonds; as also his gracious intention touching informers, which, I perceive, was received with much applause. That of projectors I spake not of, because it is not yet ripe, neither doth it concern the execution of any law, for which my speech was proper. God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

February 17, 1619.

#### TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I SEND, by post, this sealed packet, containing my lord of Suffolk's answer in the star-chamber. I received it this evening at six of the clock, by the hands of the master of the rolls, † sealed as it is with my lord of Suffolk's seal, and the master's of

near Stafford, on Sunday, March 19, 1642-3, fighting for king Charles I.

† Sir Henry Yelvorton.

† Sir Julius Cæsar.

the rolls. But neither I, nor the master of the rolls, know what is in it; but it cometh first to his Majesty's sight. Only I did direct, that because the authentic copy, unto which my lord is sworn, according to the course of the court, is not so fit for his Majesty's reading, my lord of Suffolk should send withal a paper copy, which his Majesty might read with less trouble.

My lady Suffolk is so ill of the small-pox, as she is not yet fit to make any answer.

Bingley's\* answer is come in, a long one; and, as I perceive, with some things impertinent, yea, and unfit. Of that I confer with Mr. Solicitor † tomorrow; and then I will farther advertise your lordship.

God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

York-house, this 23d of Feb. 1619,  
at nine of the clock [1619-20.]

TO THE LORD CHANCELLOR.

MOST HONOURED LORD,

I do even now receive this letter from the Conde de Gondomar, with direction I should send it, since I am not there to deliver it, to Mr. Wyche, that so he may present it to your lordship's hand at such time, as it may be of most use to him. He commands me besides, that for his sake I should become an humble solicitor to your lordship for this friend of his; which I presume to do the more willingly, because this party is a great friend of mine, and so are also many of his friends my friends. Besides he wills me to represent his great thanks to your lordship, for the just favours you have been pleased to vouchsafe to Mr. Wyche already, the rather in contemplation of the Conde, as he hath been informed. And if in the company, or rather in the attendance of so great an intercessor, it be not an unpardonable kind of ill manners to intrude myself, I presume to cast myself at your lordship's feet, with protestation, that I shall be very particularly bound to your lordship's goodness for any favour, with justice, that he shall obtain.

I beseech Jesus keep your lordship ever entirely happy; and so doing all humble reverence, I take leave.

Your lordship's most humble and most obliged servant,

TOBIE MATTHEW.

Brussels, this 26th of Feb. 1619.

TO THE LORD CHANCELLOR. †

MY HONOURABLE LORD,

UNDERSTANDING that there hath been a long and tedious suit depending in the chancery between Robert D'Oyley and his wife, plaintiffs, and Leonard Lovace, defendant; which cause hath been hereto-

\* Sir John Bingley's.

† Sir Thomas Coventry.

fore ended by award, but is now revived again, and was, in Michaelmas term last, fully heard before your lordship; at which hearing your lordship did not give your opinion thereof, but were pleased to defer it, until breviats were delivered on both sides; which, as I am informed, hath been done accordingly: now my desire unto your lordship is, that you will be pleased to take some time, as speedily as your lordship may, to give your opinion thereof, and so make a final end, as your lordship shall find the same in equity to deserve. For which I will ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Windsor, May 18, 1620.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I WENT to Kew for pleasure, but I met with pain. But neither pleasure nor pain can withdraw my mind from thinking of his Majesty's service. And because his Majesty shall see how I was occupied at Kew, I send him these papers of rules for the star-chamber, wherein his Majesty shall erect one of the noblest and durablest pillars for the justice of his kingdom in perpetuity, that can be, after, by his own wisdom, and the advice of his lords, he shall have revised them, and established them. The manner and circumstances I refer to my attending his Majesty. The rules are not all set down; but I will do the rest within two or three days. I ever remain

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

June 9, 1620.

TO THE LORD CHANCELLOR. §

MY VERY GOOD LORD,

SUCH is my haste at this time, that I cannot write so largely to yourself, as I would, in the business of the steel, in which once already I sent to your lordship, and in which I only desire the good of the commonwealth, and the service of my master. I therefore have sent this bearer, my servant, unto you, and committed the relation of the business to him. And I do entreat your lordship to give credit to what he shall deliver your lordship therein, with your lawful assistance of my desires; wherein I doubt not but you shall do a very good office. And I shall rest ready to requite your courtesy; and, with my best wishes, continue

Your very loving friend,

G. BUCKINGHAM.

Egham, July 6, 1620.

Indorsed,

*My Lord Marquis in the behalf of his servant, Mr. Porter, and Mr. Dullington.*

‡ Harl. MSS. Vol. 7006.

§ Ibid.

## TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

His Majesty having made a reference of business to your lordship, concerning Sir Robert Douglas and Mr. David Ramsay, two of his highness's servants, whom he loveth, and whom I wish very well unto; I have thought fit to desire you to show them all the favour your lordship may therein: which I will acknowledge, and ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

The reference comes in the name of my brother Christopher, because they thought it would succeed the better: but the prince wisheth well to it.

Indorsed,

*Touching the business of wills.*

## TO THE KING.†

AMONGST the counsels, which, since the time I had the honour to be first of your learned, and after of your privy council, I have given your Majesty faithfully, according to my small ability: I do take comfort in none more, than that I was the first, that advised you to come in person into the star-chamber; knowing very well, that those virtues of your Majesty, which I saw near hand, would out of that throne, both, as out of a sphere, illustrate your own honour, and, as out of a fountain, water and refresh your whole land. And because your Majesty, in that you have already done, hath so well effected that, which I foresaw and desired, even beyond my expectation; it is no marvel, if I resort still to the branches of that counsel, that hath borne so good fruit.

The star-chamber, in the institution thereof, hath two uses; the one as a supreme court of judicature; the other as an open council. In the first kind, your Majesty hath sat there now twice; the first time, in a cause of force, concerning the duels; the second time, in a cause of fraud, concerning the forgeries and conspiracies against the lady of Exeter; which two natures of crimes, force and fraud, are the proper objects of that court.

In the second kind, your Majesty came the first time of all, when you did set in frame and fabric the several jurisdictions of your courts. There wants a fourth part of the square to make all complete, which is, if your Majesty will be pleased to publish certain commonwealth commissions; which, as your Majesty hath well begun to do in some things, and to speak of in some others; so, if your Majesty will be pleased to make a solemn declaration of them in that place, this will follow:

First, that your Majesty shall do yourself an

infinite honour, and win the hearts of your people to acknowledge you, as well the most politic king, as the most just.

Secondly, it will oblige your commissioners to a more strict account, when they shall be engaged by such a public charge and commandment. And, thirdly, it will invite and direct any man, that finds himself to know any thing concerning those commissions, to bring in their informations. So as I am persuaded it will eternize your name and merit, and that king James's commissions will be spoken of, and put in ure, as long as Britain lasts; at the least, in the reign of all good kings.

For the particulars, besides the two commissions of the navy, and the buildings about London, wherein your Majesty may consider, whether you will have any thing altered or supplied, I wish these following to be added.

Commission for advancing the clothing of England, as well the old drapery as the new, and all the incidents thereunto.

Commission for staying treasure within the realm, and the reiglement of moneys.

Commission for the provision of the realm with corn and grain, and the government of the exportation and importation thereof; and directing of public granaries, if cause be.

Commission for introducing and nourishing manufactures within the realm, for the setting people a-work, and the considering of all grants and privileges of that nature.

Commission to prevent the depopulation of towns and houses of husbandry, and for nuisances and highways.

Commission for the recovery of drowned lands.

Commission for the suppression of the grievances of informers.

Commission for the better proceedings in the plantations of Ireland.

Commission for the provision of the realm with all kind of warlike defence, ordnance, powder, munition, and armour.

Of these you may take and leave, as it shall please you: and I wish the articles concerning every one of them, first allowed by your council, to be read openly, and the commissioners' names.

For the good, that comes of particular and select committees and commissions, I need not commonplace, for your Majesty hath found the good of them: but nothing to that that will be, when such things are published; because it will vindicate them from neglect, and make many good spirits, that we little think of, co-operate in them.

I know very well, that the world, that commonly is apt to think, that the care of the commonwealth is but a pretext in matters of state, will perhaps conceive, that this is but a preparative to a parliament. But let not that hinder your Majesty's magnanimity, *in opere operato*, that is so good; and besides, that opinion, for many respects, will do no hurt to your affairs.

in the star-chamber, in January 1619-20, and before the resolution of calling the parliament which met January 30, 1620-1.

\* Harl. MSS. Vol. 7006.

† This letter appears to have been written after the proceedings against Sir Thomas Lake, and his lady and daughter,

## TO THE LORD CHANCELLOR.\*

MY VERY GOOD LORD,

By his Majesty's directions Sir Francis Blundell will deliver you a petition of Sir Francis Annesley, his Majesty's secretary of Ireland, with his Majesty's pleasure thereupon. To the gentleman I wish very well, and do therefore recommend him and his cause to your lordship's good favour; and your respect of him, in his absence, I will thankfully acknowledge. So I take my leave.

Your lordship's very loving friend,

G. BUCKINGHAM.

Theobald's, the 2d of Oct. 1620.

## TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

It being a thing to speak or write, specially to a king, in public, another in private, although I have dedicated a work,† or rather a portion of a work, which, at last, I have overcome, to your Majesty by a public epistle, where I speak to you in the hearing of others; yet I thought fit also humbly to seek access for the same, not so much to your person as to your judgment, by these private lines.

The work, in what colours soever it may be set forth, is no more but a new logic, teaching to invent and judge by induction, as finding syllogism incompetent for sciences of nature; and thereby to make philosophy and sciences both more true and more active.

This tending to enlarge the bounds of reason, and to endow man's estate with new value, was no improper oblation to your Majesty, who, of men, is the greatest master of reason, and author of beneficence.

There be two of your council, and one other bishop‡ of this land, that know I have been about some such work near thirty years;§ so as I made no haste. And the reason why I have published it now, specially being unperfect, is, to speak plainly, because I number my days, and would have it saved. There is another reason of my so doing, which is to try whether I can get help in one intended part of

\* Harl. MSS. Vol. 7006.

† *Novum Organum*. In the library of the late Thomas, earl of Leicester, the descendant of Sir Edward Coke, at Holkham in Norfolk, is a copy of this work, entitled *Instauratio Magna*, printed by John Bill, in 1620, presented to Sir Edward, who at the top of the title-page has written, *Edw. C. ex dono auctoris*.

"Auctori Consilium.

Instaurare paras veterum documenta sophorum :

Instaura Leges Justitiamq; prius."

And over the device of the ship passing between Hercules's Pillars, Sir Edward has written the two following verses :

"It deserveth not to be read in Schooles,  
But to be freighted in the *Ship of Fools*."

Alluding to a famous book of Sebastian Brand, born at Strasburgh, about 1460, written in Latin and High Dutch verse, and translated into English in 1508, by Alexander Barklay, and printed at London the year following, by Richard Pynson, printer to Henry VII. and Henry VIII. in folio, with the fol-

this work, namely, the compiling of a natural and experimental history, which must be the main foundation of a true and active philosophy.

This work is but a new body of clay, whereinto your Majesty, by your countenance and protection, may breathe life. And, to tell your Majesty, truly what I think, I account your favour may be to this work as much as a hundred years time: for I am persuaded the work will gain upon men's minds in ages, but your gracing it may make it take hold more swiftly; which I would be very glad of, it being a work meant not for praise or glory, but for practice, and the good of men. One thing, I confess, I am ambitious of, with hope, which is, that after these beginnings, and the wheel once set on going, men shall seek more truth out of christian pens, than hitherto they have done out of heathen. I say with hope; because I hear my former book of the "Advancement of Learning," is well tasted in the universities here, and the English colleges abroad: and this is the same argument sunk deeper.

And so I ever humbly rest in prayers, and all other duties,

Your Majesty's most bounden and devoted servant,

FR. VERULAM, CANC.

York-house, this 12th of Oct. 1620.

## TO THE LORD CHANCELLOR.||

MY HONOURABLE LORD,

THERE is a business in your lordship's hands, with which Sir Robert Lloyd did acquaint your lordship; whereof the prince hath demanded of me what account is given. And because I cannot inform his highness of any proceeding therein, I desire your lordship to use all expedition that may be, in making your answer to me, that I may give his highness some satisfaction, who is very desirous thereof. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, 14th of October, 1620.

Indorsed,

*Touching the register of wills.*

lowing title: "The Shyp of Fols of the world: Translated in the Coll. of Saynt Mary Otery, in the counte of Devonshyre, out of Latin, Frenche, and Doche, into Engleshe tongue, by Alex. Barklay, preste and chaplen in the said College, M.CCCC.VIII." It was dedicated by the translator to Thomas Cornish, bishop of Tine, and suffragan bishop of Wells, and adorned with great variety of wooden cuts.

† Dr. Lancelot Andrews, bishop of Winchester.

§ Mr. Chamberlain, in a letter to Sir Dudley Carleton, ambassador at Holland, dated at London, October 28, 1620, mentions, that Mr. Henry Cuffe, who had been secretary to Robert, earl of Essex, and executed for being concerned in his treasons, *having long since perused this work, gave this censure, that a fool could not have written such a work, and a wise man would not*. And, in another letter, dated Feb. 3, 1620-1, Mr. Chamberlain takes notice, that the king could not forbear sometimes, in reading that book, to say, *that it was like the peace of God, that passeth all understanding*.

|| Harl. MSS. Vol. 7006.

## TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

I DESIRE your lordship to continue your favour to Sir Thomas Gerrard, in the business concerning him, wherein I signified his Majesty's pleasure to your lordship. And one favour more I am to entreat of your lordship in his behalf, that you will be pleased to speak to one of the assistants of the chancellor of the duchy, in whose court he hath a cause depending, as he will more fully inform your lordship himself, to see that he may have a fair proceeding, according to justice: for which I will ever rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Royston, 15th of October, 1620.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

YOUR lordship desiring to understand what cometh of the business, after which the prince hearkeneth, I was in doubt which of the two businesses you meant; that of the Duchy or that of the Prerogative-Court for wills; for both are recommended from the prince. But be it one, or be it the other, no time hath been lost in either; for Mr. Secretary Naunc and I have entered into both. For the Duchy, we have already stayed all proceeding to the king's disservice for those manors, which are not already passed under seal. For that which is passed, we have heard the attorney† with none or little satisfaction hitherto. The chancellor‡ is not yet come, though sent for. For the other, we have heard Sir John Bennet,§ and given him leave to acquaint my lord of Canterbury; and have required the solicitor|| to come well prepared for the king. So that in neither we can certify yet; and to trouble your lordship, while business is but in passage, were time lost. I ever rest

Your lordship's most obliged friend and faithful servant,

October 16, 1620. FR. VERULAM, CANC.

## TO THE KING, THANKING HIS MAJESTY FOR HIS GRACIOUS ACCEPTANCE OF HIS BOOK.

MAY IT PLEASE YOUR MAJESTY,

I CANNOT express, how much comfort I received by your last letter of your own royal hand.¶ I see your Majesty is a star, that hath benevolent aspect and gracious influence upon all things that tend to a general good.

"Daphni, quid antiquos signorum suspicis ortus?  
Ecce Dionæi processit Cæsaris astrum;  
Astrum, quo segetes gauderent frugibus, et quo  
Duceret apricis in collibus uva colorem."\*\*

\* Harl. MSS. Vol. 7000. † Sir Henry Yelverton.  
‡ Sir Humphrey May, made chancellor of the duchy, March 9, 1617-18.

§ Judge of the prerogative-court of Canterbury. In 1621

This work, which is for the bettering of men's bread and wine, which are the characters of temporal blessings and sacraments of eternal, I hope, by God's holy providence, will be ripened by Cæsar's star.

Your Majesty shall not only do to myself a singular favour, but to your business a material help, if you will be graciously pleased to open yourself to me in those things wherein you may be unsatisfied. For though this work, as by position and principle, doth disclaim to be tried by any thing but by experience, and the results of experience in a true way; yet the sharpness and profoundness of your Majesty's judgment ought to be an exception to this general rule; and your questions, observations, and admonishments, may do infinite good.

This comfortable beginning makes me hope farther, that your Majesty will be aiding to me, in setting men on work for the collecting of a natural and experimental history; which is *basis totius negotii*, a thing which I assure myself will be, from time to time, an excellent recreation unto you; I say, to that admirable spirit of yours, that delighteth in light: and I hope well, that even in your times many noble inventions may be discovered for man's use. For who can tell, now this mine of truth is opened, how the veins go; and what lieth higher, and what lieth lower? But let me trouble your Majesty no farther at this time. God ever preserve and prosper your Majesty.

[October 19, 1620.]

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I SEND now only to give his Majesty thanks for the singular comfort which I received by his Majesty's letter of his own hand, touching my book. And I must also give your lordship of my best thanks for your letter so kindly and affectionately written.

I did even now receive your lordship's letter touching the proclamation, and do approve his Majesty's judgment and foresight about mine own. Neither would I have thought of inserting matter of state for the vulgar, but that now-a-days there is no vulgar, but all statesmen. But, as his Majesty doth excellently consider, the time of it is not yet proper. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

October 19, 1620.

Indorsed,

*In answer to his Majesty's directions touching the proclamation for a parliament.*

he was fined 20,000*l.* for bribery, corruption, and exaction in that office. He died in 1627.

¶ Sir Thomas Coventry.

¶ Of the 16th of October, 1620, printed in Lord Bacon's works.

\*\* Virgil, Eclog. IX. vers. 46—50.

*Notes of a Speech of the LORD CHANCELLOR in the Star-Chamber, in the cause of SIR HENRY YELVERTON, Attorney-General.\**

SORRY for the person, being a gentleman that I lived with in Gray's-Inn; served with him when I was attorney; joined with him in many services, and one, that ever gave me more attributes in public than I deserved; and, besides, a man of very good parts, which with me is friendship at first sight; much more joined with so ancient an acquaintance.

But, as a judge, I hold the offence very great, and that without pressing measure; upon which I will only make a few observations, and so leave it.

1. First I observe the danger and consequence of the offence: for if it be suffered, that the learned council shall practise the art of multiplication upon their warrants, the crown will be destroyed in small time. The great seal, the privy seal, signet, are solemn things; but they follow the king's hand. It is the bill drawn by the learned council and the docquet, that leads the king's hand.

2. Next I note the nature of the defence. As first, that it was error in judgment: for this surely, if the offence were small, though clear or great, but doubtful, I should hardly sentence it. For it is hard to draw a straight line by steadiness of hand; but it could not be the swerving of the hand. And herein I note the wisdom of the law of England, which termeth the highest contempts and excesses of authority, *misprisions*; which if you take the sound and derivation of the words, is but *mistaken*: but if you take the use and acceptance of the word, it is high and heinous contempts and usurpations of authority; whereof the reason I take to be, and the name excellently imposed; for that main mistaking, it is ever joined with contempt; for he, that reveres, will not easily mistake; but he, that slights, and thinks more of the greatness of his place than of the duty of his place, will soon commit misprisions.

Indorsed,

Star-chamber, October 24, 1620. *Notes upon Mr. Attorney's cause.*

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

IT may be, your lordship will expect to hear from me what passed yesterday in the star-chamber, touching Yelverton's cause, though we desired secretary Calvert to acquaint his Majesty therewith.

To make short, at the motion of the attorney, in person at the bar, and at the motion of my lord steward† in court, the day of proceeding is deferred

\* He was prosecuted in the star-chamber, for having passed certain clauses in a charter, lately granted to the city of London, not agreeable to his Majesty's warrant, and derogatory to his honour. But the chief reason of the severity against him was thought to be the marquis of Buckingham's resentment against him, for having opposed, according to the duty of his office, some oppressive, if not illegal, patents, which the projectors of those times were busy in preparing.

till the king's pleasure is known. This was against my opinion then declared plain enough; but put to votes, and ruled by the major part, though some concurred with me.

I do not like of this course, in respect that it puts the king in a strait; for either the note of severity must rest upon his Majesty, if he go on; or the thanks of clemency is in some part taken away, if his Majesty go not on.

I have *cor unum et via una*; and therefore did my part as a judge and the king's chancellor. What is farther to be done, I will advise the king faithfully, when I see his Majesty and your lordship. But before I give advice, I must ask a question first.

God ever preserve and prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

October 28, 1620.

LORD CHANCELLOR BACON TO THE

MY VERY GOOD LORD,

YESTERNIGHT we made an end of Sir Henry Yelverton's cause. I have almost killed myself with sitting almost eight hours. But I was resolved to sit it through. He is sentenced to imprisonment in the Tower during the king's pleasure. The fine of 4000*l.* and discharge of his place, by way of opinion of the court, referring it to the king's pleasure. How I stirred the court, I leave it to others to speak; but things passed to his Majesty's great honour. I would not for any thing but he had made his defence; for many chief points of the charge were deeper printed by the defence. But yet I like it not in him; the less because he retained Holt, who is ever retained but to play the fool. God ever prosper you.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

11 Nov. 1620.

TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

IN performance of your royal pleasure, signified by Sir John Suckling;§ we have at several times considered of the petition of Mr. Christopher Villiers,|| and have heard, as well the registers and ministers of the prerogative-court of Canterbury, and their council, as also the council of the lord archbishop of Canterbury. And setting aside such other points, as are desired by the petition, we do

† The duke of Lenox.

‡ From the collections of the late Robert Stephens, Esq.

§ He was afterwards comptroller of the household to king Charles I. and father of the poet of the same name.

|| Youngest brother to the marquis of Buckingham. He was created, April 23, 1623, baron of Daventry and earl of Anglesey. He died September 24, 1624.

think, that your Majesty may by law, and without inconvenience, appoint an officer, that shall have the engrossing of the transcripts of all wills to be sealed with the seal of either of the prerogative-courts, which shall be proved *in communi forma*; and likewise of all inventories, to be exhibited in the same courts.

We see it necessary, that all wills, which are not judicially controverted, be engrossed before the probate. Yet as the law now stands, no officer of those courts can lawfully take any fee or reward for engrossing the said wills and inventories, the statute of the 21st of king Henry VIIIth restraining them. Wherefore we hold it much more convenient, that it should be done by a lawful officer, to be appointed by your Majesty, than in a cause not warrantable by law. Yet our humble opinion and advice is, that good consideration be had in passing this book, as well touching a moderate proportion of fees to be allowed for the pains and travel of the officer, as for the expedition of the suitor, in such sort that, the subject may find himself in better case than he is now, and not in worse.

But however we conceive this may be convenient in the two courts of prerogative, where there is much business, yet in the ordinary course of the bishops diocesans, we hold the same will be inconvenient, in regard of the small employment.

Your Majesty's most faithful and obedient servants,

FR. VERULAM, CANC.  
ROBERT NAUNTON.  
HENRY MONTAGU.\*

November 15, 1620.

TO THE LORD CHANCELLOR.†

AFTER my very hearty commendations, I have acquainted his Majesty with your letter, who commanded me to tell you, that he had been thinking upon the same point, whereof you write, three or four days ago, being so far from making any question of it, that he every day expected when a writ should come down. For at the creation of prince Henry, the lords of the council and judges assured his Majesty of as much, as the precedents, mentioned in your letter, speak of. And so I rest

Your lordship's very loving friend at command,

G. BUCKINGHAM.

Newmarket, the 24th of Novemb. 1620.

Indorsed,

Showing his Majesty is satisfied with precedents, touching the prince's summons to parliament.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

Your lordship may find that in the number of

\* Lord chief justice of the king's bench, who, on the 3d of December following, was advanced to the post of high treasurer.

patents, which we have represented to his Majesty, as like to be stirred in by the lower house of parliament, we have set down three, which may concern some of your lordship's special friends, which I account as mine own friends; and so showed myself, when they were in suit. The one, that to Sir Giles Mompesson, touching the inns; the second to Mr. Christopher Villiers and Mr. Maule, touching the recognizances for ale-houses; the third, to Mr. Lieutenant of the Tower, touching the cask. These in duty could not be omitted, for that specially the two first of them are more rumoured, both by the vulgar and by the gentlemen, yea, and by the judges themselves, than any other patents at this day. Therefore I thought it appertained to the singular love and affection, which I bear you upon so many obligations, to wish and advise, that your lordship, whom God hath made in all things so fit to be beloved, would put off the envy of these things, which I think in themselves bear no great fruit; and rather take the thanks for ceasing them, than the note for maintaining them. But howsoever let me know your mind, and your lordship shall find I will go your way.

I cannot express, how much comfort I take in the choice his Majesty hath made of my lord chief justice to be lord treasurer; not for his sake, nor for my sake, but for the king's sake; hoping, that now a number of counsels, which I have given for the establishment of his Majesty's estate, and have lain dead and deeper than this snow, may now spring up and bear fruit; the rather, for that I persuade myself, he and I shall run one way. And yet I know well, that in this doubling world *cor unum et via una* is rare in one man, but more rare between two. And therefore, if it please his Majesty, according to his prudent custom in such cases, to cast out, now at his coming down, some words, which may the better knit us in conjunction to do him service, I suppose it will be to no idle purpose.

And as an old truant in the commission of the treasury, let me put his Majesty in remembrance of three things now upon his entrance, which he is presently to go in hand with: the first, to make Ireland to bear the charge thereof; the second, to bring all accounts to one purse in the exchequer; the third, by all possible means to endeavour the taking off of the anticipations. There be a thousand things more; but these being his Majesty's last commands to the commissioners of the treasury, with such as in his Majesty's princely judgment shall occur, will do well to season his place.

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

November 29, 1620.

As soon as I had written this letter, I received your lordship's letter, touching my lord chief justice, which redoubled my comfort, to see how his Majesty's thoughts and mine, his poor servant's, and your lordship's meet.

† Harl. MSS. Vol. 7000.

I send enclosed names for the speaker; and if his Majesty, or your lordship, demand our opinion, which of them, my lord chief justice will tell you. It were well it were despatched; for else I will not dine with the speaker; for his drink will not be laid in time enough.

I beseech your lordship, care may be taken, that our general letter may be kept secret, whereof my lord chief justice will tell you the reason.

---

TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

ACCORDING to your commandment, we have heard once more the proctors of the prerogative-court, what they could say; and find no reason to alter, in any part, our former certificate. Thus much withal we think fit to note to your Majesty, that our former certificate, which we now ratify, is principally grounded upon a point in law, upon the statute of 21 Henry VIII. wherein we the chancellor and treasurer, for our own opinions, do conceive the law is clear; and your solicitor-general\* concurs.

Now whether your Majesty will be pleased to rest in our opinions, and so to pass the patents; or give us leave to assist ourselves with the opinion of some principal judges now in town, whereby the law may be the better resolved, to avoid farther question hereafter; we leave it to your Majesty's royal pleasure. This we represent the rather, because we discern such a confidence in the proctors, and those upon whom they depend, as, it is not unlike, they will bring it to a legal question.

And so we humbly kiss your Majesty's hands, praying for your preservation.

Your Majesty's most humble and obedient servants,

FR. VERULAM, CANC.  
HENRY MONTAGU,  
ROBERT NAUNTON.

York-house, December 12, 1620.

---

THE LORD CHANCELLOR AND TWO CHIEF JUSTICES† TO THE MARQUIS OF BUCKINGHAM.

OUR VERY GOOD LORD,

IT may please his Majesty to call to mind, that when we gave his Majesty our last account of parliament business in his presence, we went over the grievances of the last parliament in 7mo,† with our opinion by way of probable conjecture, which of them are likely to fall off, and which may perchance stick and be renewed. And we did also then acquaint his Majesty, that we thought it no less fit

\* Sir Thomas Coventry, who was made attorney-general, Jan. 14, 1620-1.

† Sir Henry Montagu of the king's bench, and Sir Henry Hobart of the common pleas.

to take into consideration grievances of like nature, which have sprung up since the said last session, which are the more like to be called upon, by how much they are the more fresh, signifying withal, that they were of two kinds; some proclamations and commissions, and many patents; which nevertheless, we did not trouble his Majesty withal in particular: partly, for that we were not then fully prepared, as being a work of some length, and partly, for that we then desired and obtained leave of his Majesty to communicate them with the council-table. But now since I, the chancellor, received his Majesty's pleasure by secretary Calvert, that we should first present them to his Majesty with some advice thereupon provisionally, and as we are capable, and thereupon know his Majesty's pleasure before they be brought to the table, which is the work of this despatch.

And hereupon his Majesty may be likewise pleased to call to mind, that we then said, and do now also humbly make remonstrance to his Majesty, that in this we do not so much express the sense of our own minds or judgments upon the particulars, as we do personate the lower house, and cast with ourselves what is like to be stirred there. And therefore if there be any thing, either in respect of the matter or the persons, that stands not so well with his Majesty's good liking, that his Majesty would be graciously pleased not to impute it unto us; and withal to consider, that it is to this good end, that his Majesty may either remove such of them, as in his own princely judgment, or with the advice of his council, he shall think fit to be removed; or be the better provided to carry through such of them, as he shall think fit to be maintained, in case they should be moved; and so the less surprised.

First, therefore, to begin with the patents, we find three sorts of patents, and those somewhat frequent, since the session of 7mo, which *in genere* we conceive may be most subject to exception of grievance; patents of old debts, patents of concealments, and patents of monopolies, and forfeitures for dispensations of penal laws, together with some other particulars, which fall not so properly under any one head.

In these three heads, we do humbly advise several courses to be taken: for the first two, of old debts and concealments, for that they are in a sort legal, though there may be found out some point in law to overthrow them; yet it would be a long business by course of law, and a matter unusual by act of council, to call them in. But that, that moves us chiefly to avoid the questioning them at the council-table, is, because if they shall be taken away by the king's act, it may let in upon him a flood of suitors for recompence; whereas, if they be taken away at the suit of the parliament, and a law thereupon made, it frees the king, and leaves him to give recompence only where he shall be pleased to intend grace. Wherefore we conceive

† That which began February 9, 1609; and was prorogued July 23, 1610.

the most convenient way will be, if some grave and discreet gentleman of the country, such as have lost relation to the court, make, at fit times, some modest motion touching the same; and that his Majesty would be graciously pleased to permit some law to pass, for the time past only, no ways touching his Majesty's regal power, to free the subjects from the same; and so his Majesty, after due consultation, to give way unto it.

For the third, we do humbly advise, that such of them, as his Majesty shall give way to have called in, may be questioned before the council-table, either as granted contrary to his Majesty's book of bounty, or found since to have been abused in the execution, or otherwise by experience discovered to be burdensome to the country. But herein we shall add this farther humble advice, that it be not done as matter of preparation to a parliament; but that occasion be taken, partly upon revising of the book of bounty, and partly upon the fresh examples in Sir Henry Yelverton's case of abuse and surreption in obtaining of patents; and likewise, that it be but a continuance in conformity of the council's former diligence and vigilancy, which hath already stayed and revoked divers patents of like nature, whereof we are ready to show the examples. Thus, we conceive, his Majesty shall keep his greatness, and somewhat shall be done in parliament, and somewhat out of parliament, as the nature of the subject and business require.

We have sent his Majesty herewith a schedule of the particulars of these three kinds; wherein, for the first two, we have set down all that we could at this time discover: but in the latter, we have chosen out but some, that are most in speech, and do most tend, either to the vexation of the common people, or the discountenancing of our gentlemen and justices, the one being the original, the other the representative of the commons.

There being many more of like nature, but not of like weight, nor so much rumoured, which, to take away now in a blaze, will give more scandal, than such things were granted, than thanks, that they be now revoked.

And because all things may appear to his Majesty in the true light, we have set down, as well the suitors as the grants, and not only those in whose names the patents were taken, but those whom they concern, as far as comes to our knowledge.

For proclamations and commissions, they are tender things; and we are willing to meddle with them sparingly. For as for such as do but wait upon patents, wherein his Majesty, as we conceived, gave some approbation to have them taken away, it is better they fall away, by taking away the patent itself, than otherwise; for a proclamation cannot be revoked but by proclamation, which we avoid.

For those commonwealth bills, which his Majesty approved to be put in readiness, and some other things, there will be time enough hereafter to give his Majesty account, and amongst them, of the extent of his Majesty's pardon, which, if his subjects do their part, as we hope they will, we do wish

may be more liberal than of later times, a pardon being the ancient remuneration in parliament.

Thus hoping his Majesty, out of his gracious and accustomed benignity, will accept of our faithful endeavours, and supply the rest by his own princely wisdom and direction; and also humbly praying his Majesty, that when he hath himself considered of our humble propositions, he will give us leave to impart them all, or as much as he shall think fit, to the lords of his council, for the better strength of his service, we conclude with our prayers for his Majesty's happy preservation, and always rest, &c.

Indorsed,

*The lord chancellor and the two chief justices to the king, concerning parliament business.*

---

TO THE LORD CHANCELLOR, AND THE LORD MANDEVILLE, LORD TREASURER OF ENGLAND.\*

MY HONOURABLE LORDS,

His Majesty is pleased, according to your lordships' certificate, to rely upon your judgments, and hath made choice of Sir Robert Lloyd, knight, to be patentee and master of the office of engrossing the transcripts of all wills and inventories in the prerogative-courts, during his highness's pleasure, and to be accountable unto his Majesty for such profits as shall arise out of the same office. And his Majesty's farther pleasure is, that your lordship forthwith proportion and set down, as well a reasonable rate of fees for the subject to pay for engrossing the said transcripts, as also such fees, as your lordship shall conceive fit to be allowed to the said patentee for the charge of clerks and ministers for execution of the said office. And to this effect his Majesty hath commanded me to signify his pleasure to his solicitor-general† to prepare a book for his Majesty's signature. And so I bid your lordship heartily well to fare, and remain

Your lordship's very loving friend,

G. BUCKINGHAM.

Royston, December 17, 1620.

---

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I was so full of cold, as I could not attend his Majesty to-day. Yesterday I despatched the proclamation with the council. There was a motion to have sharpened it; but better none, than over sharp at first. I moved the council also for supplying the committee for drawing of bills and some other matters, in regard of my lord Hobart's † sickness, who, I think, will hardly escape; which, though it be happiness for him, yet it is loss for us.

Meanwhile, as I propounded to the king, which

† Lord chief justice of the common-pleas.

\* Harl. MSS. Vol. 7000.

† Sir Thomas Coventry.

he allowed well, I have broken the main of the parliament into questions and parts, which I send. It may be, it is an over-diligence; but still methinks there is a middle thing between art and chance: I think they call it providence, or some such thing, which good servants owe to their sovereign, especially in cases of importance and straits of occasions. And those huffing elections, and general licence of speech, ought to make us the better provided. The way will be, if his Majesty will be pleased to peruse these questions advisedly, and give me leave to wait on him; and then refer it to some few of the council, a little to advise upon it. I ever rest

Your lordship's most obliged friend and faithful servant,

FR. VERULAM, CANC.

December 23, 1620.

TO THE LORD CHANCELLOR.\*

MY HONOURABLE LORD,

His Majesty hath commanded me to signify his pleasure unto your lordship, that Sir Thomas Coventry, now his solicitor-general, be forthwith made his attorney-general; and that your lordship give order to the clerk of the crown to draw up a grant of the said place unto him accordingly. And so I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Whitehall, 9th of January, 1620.

TO THE LORD CHANCELLOR.†

MY HONOURABLE LORD,

I HAVE been entreated to recommend unto your lordship the distressed case of the lady Martin, widow of Sir Richard Martin, deceased, who hath a cause to be heard before your lordship in the chancery, at your first sitting in the next term, between her and one Archer, and others, upon an ancient statute, due long since unto her husband; which cause, I am informed, hath received three verdicts for her in the common law, a decree in the exchequer chamber, and a dismissal before your lordship: which I was the more willing to do, because I have seen a letter of his Majesty to the said Sir Richard Martin, acknowledging the good service that he did him in this kingdom, at the time of his Majesty's being in Scotland. And therefore I desire your lordship, that you would give her a full and fair hearing of her cause, and a speedy despatch thereof, her poverty being such, that having nothing to live on but her husband's debts, if her suit long depend, she shall be enforced to lose her cause for want of means to follow it: wherein I acknowledge your lordship's favour, and rest

G. BUCKINGHAM.

Whitehall, the 13th of January, 1620.

\* Harl. MSS. Vol. 7000.

† Ibid.

‡ Ibid.

TO THE LORD CHANCELLOR.‡

MY HONOURABLE LORD,

His Majesty hath commanded me to signify his pleasure unto you, that you give present order to the clerk of the crown to draw a bill to be signed by his Majesty for Robert Heath, late recorder of London, to be his Majesty's solicitor-general. So I rest

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

Theobald's, 20th of January, 1620.

TO THE KING.§

MAY IT PLEASE YOUR MAJESTY,

I THANK God I number days, both in thankfulness to him, and in warning to myself. I should likewise number your Majesty's benefits, which, as, to take them in all kinds, they are without number; so even in this kind of steps and degrees of advancement, they are in greater number, than scarcely any other of your subjects can say. For this is now the eighth time that your Majesty hath raised me.

You formed me of the learned council extraordinary, without patent or fee, a kind of *individuum vagum*. You established me, and brought me into ordinary. Soon after you placed me solicitor, where I served seven years. Then your Majesty made me your attorney, or procurator-general; then privy counsellor, while I was attorney; a kind of miracle of your favour, that had not been in many ages; thence keeper of your seal; and, because that was a kind of planet, and not fixed, chancellor: and when your Majesty could raise me no higher, it was your grace to illustrate me with beams of honour, first making me baron Verulam, and now viscount St. Alban. So this is the eighth rise or reach, a diapason in music, even a good number, and accord for a close. And so I may, without superstition, be buried in St. Alban's habit or vestment.

Besides the number, the obligation is increased by three notes or marks: first, that they proceed from such a king; for honours from some kings are but great chancels, or counters, set high; but from your Majesty, they are indeed dignities, by the co-operation of your grace. Secondly, in respect of the continuance of your Majesty's favour, which proceedeth, as the Divine favour, from grace to grace. And, thirdly, these splendours of honour are like your freest patents, *absque aliquid inde reddendo*. Offices have burden of cares and labours; but honours have no burden but thankfulness, which doth rather raise men's spirits, than *accable* them, or press them down.

Then I must say, *quid retribuam?* I have nothing of mine own. That that God hath given me, I shall present unto your Majesty; which is care and diligence, and assiduous endeavour, and that,

§ This seems to have been written by lord St. Alban, just after he was created a viscount by that title, January 27, 1621.

which is the chief, *cor unum et viam unam*; hoping, that your Majesty will do as your superior doth; that is, finding my heart upright, you will bear with my other imperfections. And lastly, your Majesty shall have the best of my time, which, I assure myself, I shall conclude in your favour, and survive in your remembrance. And that is my prayer for myself. The rest shall be in prayers for your Majesty.

---

TO THE LORD CHANCELLOR.\*

MY NOBLE LORD,

I HAVE showed your letter of thanks to his Majesty, who saith there are too many thanks in it for so small a favour; which he holdeth too little to encourage so well a deserving servant. For myself, I shall ever rejoice at the manifestation of his Majesty's favour towards you, and will contribute all, that is in me, to the increasing of his good opinion; ever resting

Your lordship's faithful friend and servant,

G. BUCKINGHAM.

---

*Speech of the Lord Viscount ST. ALBAN, Lord Chancellor, to the Parliament, January 30, 1620.*

MY LORDS AND MASTERS,

You have heard the king's speech; and it makes me call to mind what Solomon saith, who was also a king: "The words of the wise are as nails and pins, driven in and fastened by the masters of assemblies." The king is the master of this assembly; and though his words, in regard of the sweetness of them, do not prick; yet, in regard of the weight and wisdom of them, I know they pierce through and through; that is, both into your memories, and into your affections; and there I leave them.

As the king himself hath declared unto you the causes of the convoking of this parliament; so he hath commanded me to set before you the true institution and use of a parliament, that thereby you may take your aim, and govern yourselves the better in parliament matters: for then are all things in best state, when they are preserved in their primitive institution; for otherwise ye know the principle of philosophy to be, that the corruption or degeneration of the best things is the worst.

The kings of this realm have used to summon their parliaments or estates for three ends or purposes; for advice, for assent, and for aid.

For advice, it is no doubt great surety for kings to take advice and information from their parliament. It is advice, that proceedeth out of experience; it is not speculative or abstract. It is a well-tryed advice, and that passeth many revenues, and hath

\* Harl. MSS. Vol. 7000.

† On Monday the 5th of March, 1620-1, the house of lords received a message from the commons, desiring a conference touching certain grievances, principally concerning Sir Giles Mompesson. See Journal of the House of Lords.

Argus's eyes. It is an advice, that commonly is free from private and particular ends, which is the bane of counsel. For although some particular members of parliament may have their private ends; yet one man sets another upright; so that the resultate of their counsels is, for the most part, direct and sincere. But this advice is to be given with distinction of the subjects: they are to tender and offer their advice by bill or petition, as the case requires. But in those things, that are *Arcana Imperii*, and reserved points of sovereignty, as making of war and peace, or the like, there they are to apply their advice to that, which shall be communicated unto them by the king, without pressing farther within the veil, or reaching forth to the forbidden fruit of knowledge. In these things the rule holds, "tantum permissum quantum commissum."

---

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

WITH due thanks to your last visit, this day is a play day for me. But I will wait on your lordship, if it be necessary.

I do hear from divers of judgment, that tomorrow's conference † is like to pass in a calm, as to the referees. † Sir Lionel Cranfield, who hath been formerly the trumpet, said yesterday, that he did now incline to Sir John Walter's opinion and motion, not to have the referees meddled with otherwise than to discount it from the king; and so not to look back, but to the future. And I do hear almost all men of judgment in the house wish now that way. I woo nobody: I do but listen, and I have doubt only of Sir Edward Coke, who, I wish, had some round caveat given him from the king; for your lordship hath no great power with him; but I think a word from the king mates him.

If things be carried fair by the committees of the lower house, I am in some doubt, whether there will be occasion for your lordship to speak tomorrow; though, I confess, I incline to wish you did, chiefly because you are fortunate in that kind; and, to be plain also, for our better countenance, when your lordship, according to your noble proposition, shall show more regard of the fraternity you have with great counsellors, than of the interest of your natural brother.

Always, good my lord, let us think of times out of parliament, as well as the present time in parliament, and let us not all be put *es pourpoint*. Fair and moderate courses are ever best in causes of estate: the rather, because I wish this parliament, by the sweet and united passages thereof, may increase the king's reputation with foreigners, who may make a far other judgment than we mean, of a beginning to question great counsellors and officers of the crown, by courts, or assemblies of estates.

† Those, to whom the king referred the petitions, to consider, whether they were fit to be granted or no. This explanation of the word *referees*, I owe to a note in a MS. letter, written to the celebrated Mr. Joseph Mead, of Christ's College, Cambridge.

But the reflection upon my particular in this makes me more sparing, than perhaps, as a counsellor, I ought to be. God ever preserve and prosper you.

Your lordship's true servant all and ever,

FR. ST. ALBAN, CANC.

March 7, the day I received the seal, 1620.

TO THE KING.\*

IT MAY PLEASE YOUR MAJESTY,

I RECEIVED your Majesty's letter about midnight: and because it was stronger than the ancient summons of the exchequer, which is *sicut teipsum et omnia tua diligitis*; whereas this was *sicut me diligitis*; I used all possible care to effect your Majesty's good will and pleasure.

I sent early to the prince, and to my lord treasurer: and we attended his highness soon after seven of the clock, at Whitehall, to avoid farther note. We agreed, that, if the message came, we would put the lords into this way, that the answer should be, that we understood they came prepared both with examination and precedent; and we likewise desired to be alike prepared, that the conference might be with more fruit.

I did farther speak with my lord of Canterbury, when I came to the house, not letting him know any part of the business, that he would go on with a motion, which he had told me of the day before, that the lords house might not sit Wednesday and Friday, because they were convocation-days; and so was the former custom of parliament.

As good luck was, the house read two bills, and had no other business at all: whereupon my lord of Canterbury made his motion; and I adjourned the house till Saturday. It was no sooner done, but came the message from the lower house. But the *consummatum est* was past, though I perceived a great willingness, in many of the lords, to have recalled it, if it might have been.

So with my best prayers for your Majesty's preservation, I rest

Your Majesty's most bounden and most devoted servant,

FR. ST. ALBAN, CANC.

Thursday, at eleven of our forenoon [March 8, 1620].

\* The date of this letter is determined to be the 8th of March 1620-1, from the circumstance of its being mentioned to have been written on that Thursday, on which the house of lords adjourned to the Saturday following. It appears from the journal of that house, that on the 8th of March 1620, the said house, at which were present the prince of Wales and marquis of Buckingham, was adjourned to Saturday the 10th, on which day a conference of both houses was held relating to the complaint of that of the commons against Sir Giles Mompesson. Of this conference the lord chancellor made report on Monday, March 12, to the house of lords, remarking, that "the inducement to this conference was to clear the king's honour, touching grants to Sir Giles, and the passages in procuring the same." After this report of the conference, the lord chamberlain, William earl of Pembroke, complained to the house, that *two great lords*, meaning the lord chancellor, and the lord treasurer, the lord viscount Mandeville, had, in that conference, *spoke in their own defence, not being allowed to do so when the committees were named*. Upon which both the lords acknowledged their error, and begged pardon of the house.

TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

YOUR lordship spoke of purgatory. I am now in it; but my mind is in a calm; for my fortune is not my felicity. I know I have clean hands, and a clean heart; and, I hope, a clean house for friends or servants. But Job himself, or whosoever was the justest judge, by such hunting for matters against him, as hath been used against me, may for a time seem foul, especially in a time, when greatness is the mark, and accusation is the game. And if this be to be a chancellor, I think, if the great seal lay upon Hounslow Heath, nobody would take it up. But the king and your lordship will, I hope, put an end to these my straits one way or other. And in troth that, which I fear most, is, lest continual attendance and business, together with these cares, and want of time to do my weak body right this spring by diet and physick, will cast me down; and that it will be thought feigning, or fainting. But I hope in God I shall hold out. God prosper you.

TO THE CHANCELLOR OF THE DUCHY, SIR HUMPHREY MAY.

GOOD MR. CHANCELLOR,

THERE will come, upon Friday, before you a patent‡ of his Majesty's for the separation of the company of apothecaries from the company of grocers, and their survey, and the erecting them into a corporation of themselves under the survey of the physicians. It is, as I conceive, a fair business both for law and conveniency, and a work, which the king made his own, and did, and, as I hear, doth take much to heart. It is *in favorem vitæ*, where the other part is *in favorem lucri*. You may perhaps think me partial to apothecaries, that have been ever puddering in physick all my life. But there is a circumstance, that touches upon me *post diem*, for it is comprehended in the charge and sentence passed upon me. It is true, that after I had put the seal to the patent, the apothecaries § presented me with a hundred pounds. It was no judicial affair. But howsoever, as it may not be defended, so I would be glad it were not raked up

† This letter seems to have been written soon after lord St. Alban began to be accused of abuses in his office of chancellor.

‡ The patent for incorporating the apothecaries by themselves, by the appellation of "The masters, wardens, and society of the art and mystery of apothecaries of London," was dated December 6, 1617. They had been incorporated with the company of grocers, April 9, 1606.

§ His lordship being charged by the house of commons, that he had received 100*l.* of the *new company of apothecaries, that stood against the grocers*, as likewise a taster of gold worth between 400 and 500*l.* with a present of ambergrise, from the *apothecaries that stood with the grocers*, and 200*l.* of the grocers; he admits the several sums to have been received of the three parties, but alleges, that he considered those presents as no judicial business, but a concord of composition between the parties; and as he thought they had all three received good, and they were all common purses, he thought it the less matter to receive what they voluntarily presented; for if he had taken it in the nature of a bribe, he knew it could not be concealed, because it must be put to the account of the three several companies.

more than needs. I doubt only the chair \* because I hear he useth names sharply ; and besides, it may be, he hath a tooth at me yet, which is not fallen out with age. But the best is, as one saith, "satis est lapos non erigere; urgere vero jacentes, aut precipitantes impellere, certe est inhumanum." Mr. Chancellor, if you will be nobly pleased to grace me upon this occasion, by showing tenderness of my name, and commiseration of my fortune, there is no man in that assembly, from whose mouth I had rather it should come.\* I hope it will be no dishonour to you. It will oblige me much, and be a worthy fruit of our last reintegration of friendship. I rest

Your faithful friend to do you service.

*Memoranda of what the LORD CHANCELLOR intended to deliver to the KING, April 16, 1621,† upon his first access to his Majesty, after his troubles.*

THAT howsoever it goeth with me, I think myself infinitely bound to his Majesty for admitting me to touch the hem of his garment; and that, according to my faith, so be it unto me.

That I ought also humbly to thank his Majesty for that, in that excellent speech of his which is printed, that speech of so great maturity, wherein the elements are so well mingled, by kindling affection, by washing away aspersion, by establishing of opinion, and yet giving way to opinion, I do find some passages, which I do construe to my advantage.

And lastly, I have heard from my friends, that, notwithstanding these waves of information, his Majesty mentions my name with grace and favour.

In the next place, I am to make an oblation of myself into his Majesty's hands, that, as I wrote to him, I am as *clay in his hands*, his Majesty may make a vessel of honour or dishonour of me, as I

\* Sir Robert Philips was chairman of the committee of the house of commons for inquiring into the abuses of the courts of justice. He was son of Sir Edward Philips, Master of the Rolls, who died September 11, 1614, being succeeded by Sir Julius Caesar, to whom the king had given, January 16, 1610-11, under the great seal, the reversion of that post.

† A committee of the house of commons had been appointed about the 12th of March, 1620-1, to inspect the abuses of the courts of justice, of which Sir Edward Sackville was named the chairman, but by reason of some indisposition, Sir Robert Philips was chosen in his room. The first thing they fell upon was bribery and corruption, of which the lord chancellor was accused by Mr. Christopher Aubrey and Mr. Edward Egerton; who affirmed, that they had procured money to be given to his lordship to promote their causes depending before him. This charge being corroborated by some circumstances, a report of it was made from the committee to the house, on Thursday, the 15th of March; and a second on the 17th, of other matters of the same nature, charged upon his lordship. The heads of the accusation having been drawn up were presented by the commons to the lords, in a conference, on Monday, the 19th of the same month. The subject of this conference being reported, the next day, to the house of lords, by the lord treasurer, the marquis of Buckingham presented to their lordships a letter to them from the lord chancellor, dated that day. Upon this letter, answer was sent from the lords to the lord chancellor, on the 20th, that they had received his letter and intended to proceed in his cause, now before them, according to the rule of justice, desiring his lordship to provide for his just defence. The next day, March 21, the commons sent to the lords a farther charge against the lord chancellor; and their lordships, in the mean time, examined the complaints against him, and witnesses in the house, and appointed a select committee of themselves to take examinations likewise. Towards the latter end of March the session was

find favour in his eyes; and that I submit myself wholly to his grace and mercy, and to be governed both in my cause and fortunes by his direction, knowing that his heart is inscrutable for good. Only I may express myself thus far, that my desire is, that the thread, or line, of my life, may be no longer than the thread, or line, of my service: I mean, that I may be of use to your Majesty in one kind or other.

Now for any farther speech, I would humbly pray his Majesty, that whatsoever the law of nature shall teach me to speak for my own preservation, your Majesty will understand it to be in such sort, as I do nevertheless depend wholly upon your will and pleasure. And under this submission, if your Majesty will graciously give me the hearing, I will open my heart unto you, both touching my fault, and fortune.

For the former of these, I shall deal ingenuously with your Majesty, without seeking fig-leaves or subterfuges.

There be three degrees, or cases, as I conceive, of gifts and rewards given to a judge:

The first is of bargain, contract, or promise of reward, *pendente lite*. And this is properly called "venalis sententia," or "baratria," or "corruptelæ munerum." And of this my heart tells me, I am innocent, that I had no bribe or reward in my eye or thought, when I pronounced any sentence or order.

The second is a neglect in the judge to inform himself whether the cause be fully at an end or no, what time he receives the gift; but takes it upon the credit of the party, that all is done; or otherwise omits to inquire.

And the third is, when it is received *sine fraude*, after the cause ended; which, it seems by the opinion of the civilians, is no offence. Look into the case of simony, &c.

discontinued for some time, in hopes, as it was imagined, of softening the lord chancellor's fall; but upon the re-assembling of the parliament, more complaints being daily represented, on Wednesday, April 24, the prince signified unto the lords, that his lordship had sent a submission, dated the 22nd. Which the lords having considered and heard the collection of corruptions charged on him, and the proofs read, they sent a copy of the same, without the proofs, to him, by baron Denham and Mr. Attorney-general, with this message, that his lordship's confession was not fully set down by him; and that they had therefore sent him the particular charge, and expected his answer to it with all convenient expedition. To which he answered, that he would return their lordships an answer with speed. On the 25th of April, the lords considered of this said answer, and sent a second message by the same persons, that having received a doubtful answer to their message, sent him the day before, they now sent to him again, to know directly and presently, whether his lordship would make his confession, or stand upon his defence. His answer, returned by the same messengers, was, that he would make no manner of defence, but meant to acknowledge corruption, and to make a particular confession to every point, and after that an humble submission; but humbly craved liberty, that where the charge was more full than he finds the truth of the fact, he may make declaration of the truth in such particulars, the charge being brief, and containing not all circumstances. The lords sent the same messengers, to let him know, that they granted him time to do this till the Monday following; when he sent his confession and submission; which being avowed by him to several lords, sent to him, the lords resolved, on the 2nd of May, to proceed to sentence him the next morning, and summoned him to attend; which he excusing on account of being confined to his bed by sickness, they gave judgment accordingly on the 3d of May, 1621.

*Draught of another paper to the same purpose.*

THERE be three degrees, or cases, of bribery, charged or supposed, in a judge :

The first, of bargain, or contract, for reward to pervert justice.

The second, where the judge conceives the cause to be at an end, by the information of the party, or otherwise, useth not such diligence, as he ought, to inquire of it. And the third, when the cause is really ended, and it is *sine fraude*, without relation to any precedent promise.

Now if I might see the particulars of my charge, I should deal plainly with your Majesty, in whether of these degrees every particular case falls.

But for the first of them, I take myself to be as innocent, as any born upon St. Innocents' day, in my heart.

For the second, I doubt in some particulars I may be faulty.

And for the last, I conceived it to be no fault; but therein I desire to be better informed, that I may be twice penitent, once for the fact, and again for the error. For I had rather be a briber, than a defender of bribes.

I must likewise confess to your Majesty, that at new-year's tides, and likewise at my first coming in, which was, as it were, my wedding, I did not so precisely, as perhaps I ought, examine whether those, that presented me, had causes before me, yea or no.

And this is simply all, that I can say for the present, concerning my charge, until I may receive it more particularly. And all this while, I do not fly to that, as to say, that these things are *vitia temporis* and not *vitia hominis*.

For my fortune, *summa summorum* with me is, that I may not be made altogether unprofitable to do your Majesty service, or honour. If your Majesty continue me as I am, I hope I shall be a new man, and shall reform things out of feeling, more than another can do out of example. If I cast part of my burden, I shall be more strong and *delivré* to bear the rest. And, to tell your Majesty what my thoughts run upon, I think of writing a story of England, and of recompiling of your laws into a better digest.

But to conclude, I most humbly pray your Majesty's directions and advice. For as your Majesty hath used to give me the attribute of care of your business, so I must now cast the care of myself upon God and you.

*Notes upon MICHAEL DE LA POLE'S Case.\**

10 Rich. 2. THE offences were of three natures :  
1. Deceits to the king.

2. Misgovernance in point of estate, whereby the ordinances made by ten commissioners for reform-

\* This paper was probably drawn up on occasion of the proceedings and judgment passed upon the lord viscount St. Alban, by the house of lords, May 3, 1621.

ation of the state were frustrated, and the city of Ghent, in foreign parts, lost.

3. And his setting the seal to pardons for murders, and other enormous crimes.

The judgment was imprisonment, fine, and ransom, and restitution to the king, but no disablement, nor making him incapable, no degrading in honour mentioned in the judgment; but contrariwise, in the clause, that restitution should be made and levied out of his lands and goods, it is expressly said, that because his honour of earl was not taken from him, therefore his 20*l.* per annum creation money should not be meddled with.

*Observations upon THORPE'S Case.*

24. Edw. 3. His offence was taking of money from five several persons, that were felons, for staying their process of exigent; for that it made him a kind of accessory of felony, and touched upon matter capital.

The judgment was the judgment of felony: but the proceeding had made things strong and new; first, the proceeding was by commission of *oyer* and *terminer*, and by jury; and not by parliament.

The judgment is recited to be given in the king's high and sovereign power.

It is recited likewise, that the king, when he made him chief justice, and increased his wages, did *ore tenus* say to him, in the presence of his council, that now if he bribed he would hang him: unto which penance, for so the record called it, he submitted himself. So it was a judgment by contract.

His oath likewise, which was devised some few years before, which is very strict in words, that he shall take no reward, neither before nor after, is chiefly insisted upon. And that, which is more to be observed, there is a precise proviso, that the judgment and proceeding shall not be drawn into example against any, and specially not against any who have not taken the like oath: which the lord chancellor, lord treasurer, master of the wards, &c. take not, but only the judges of both benches, and baron of the exchequer.

The king pardoned him presently after, doubting, as it seems, that the judgment was erroneous, both in matter and form of proceeding; brought it before the lords of parliament, who affirmed the judgment, and gave authority to the king in the like cases, for the time to come, to call to him what lords it pleased him, and to adjudge them.

*Notes upon Sir JOHN LEE'S Case, Steward of the King's Household.*

44 Edw. 3. His offences were, great oppressions in usurpation of authority, in attacking and imprisoning in the Tower, and other prisons, numbers of the king's subjects, for causes no ways appertaining to his jurisdiction; and for discharging an appellant of felony without warrant, and for deceit of the king, and extortions.

His judgment was only imprisonment in the

Tower, until he had made a fine and ransom at the king's will; and no more.

*Notes upon Lord LATIMER's Case.*

50 *Edw.* 3. His offences were very high and heinous, drawing upon high treason: as the extortions taking of victuals at Bretagne, to a great value, without paying any thing; and for ransoming divers parishes there to the sum of 83,000*l.* contrary to the articles of truce proclaimed by the king; for suffering his deputies and lieutenants in Bretagne to exact, upon the towns and countries there, divers sums of money, to the sum of 150,000 crowns; for sharing with Richard Lyons in his deceit of the king; for enlarging, by his own authority, divers felons; and divers other exorbitant offences.

Notwithstanding all this, his judgment was only to be committed to the Marshalsea, and to make fine and ransom at the king's will.

But after, at the suit of the commons, in regard of those horrible and treasonable offences, he was displaced from his office, and disabled to be of the king's council; but his honours not touched, and he was presently bailed by some of the lords, and suffered to go at large.

*JOHN Lord NEVILLE's Case.*

50 *Edw.* 3. His offences were, the not supplying the full number of the soldiers in Bretagne, according to the allowance of the king's pay. And the second was for buying certain debts, due from the king, to his own lucre, and giving the parties small recompence, and specially in a case of the lady Ravensholme.

And it was prayed by the commons, that he might be put out of office about the king: but there was no judgment given upon that prayer, but only of restitution to the lady, and a general clause of being punished according to his demerits.

TO THE COUNT GONDOMAR, AMBASSADOR  
FROM THE COURT OF SPAIN.

ILLUSTRISSIMO DOMINO LEGATO,

AMORUM illustrissimæ Dominationis tuæ erga me, ejusque et fervorem et candorem, tam in prosperis rebus, quam in adversis, equabili tenore constantem perspexi. Quo nomine tibi meritas et debitas gratias ago. Me vero jam vocat et ætas, et fortuna, atque etiam genius meus, cui adhuc satis morose satisfeci, ut excedens e theatro rerum civilium literis me dedam, et ipsos actores instruam, et posteritati serviam. Id mihi fortasse honori erit, et degam tanquam in atriis vitæ melioris.

\* In the "Letters, Memoirs, &c. of the lord chancellor Bacon," published by Mr. Stephens, in 1736, p. 517, is a Spanish letter to him from count Gondomar, dated at London, June 14, 1621.

Deus illustrissimam Dominationem tuam incolu-  
mem servet et prosperam.

Servus tuus,

Junii 6, 1621.

FR. ST. ALBAN.

TO COUNT GONDOMAR.\*

ILLUSTRISSIMO ET EXCELLENTISSIMO DOMINO,

PERSPEXI et agnosco providentiam divinam, quod in tanta solitudine mihi tanquam cœlitus suscitaverit talem amicum, qui tantis implicatus negotiis, et in tantis temporis angustiis, curam mei habuerit, idque pro me effecerit, quod alii amici mei aut non ausi sint tentare, aut obtinere non potuerint. Atque illustrissimæ Dominationi tuæ reddent fructum proprium et perpetuum mores tui tam generosi, et erga omnia officia humanitatis et honoris propensi; neque erit fortasse inter opera tua hoc minimum, quod me, qui et aliquis fui apud vivos, neque omnino intermoriar apud posteros, ope et gratia tua exeris, confirmaris. Ego quid possum? Ero tandem tuus, si minus usufructu, al saltem affectu, voto. Sub cineribus fortunæ vivi erunt semper ignes amoris. Te igitur humillime saluto, tibi valedico, omnia prospera exopto, gratitudinem testor, observantiam polliceor.

*Illustrissimo et excellentissimo Do. Do. Didaco Sarmiento de Acunna, Comiti de Gondomar, Legato Regis Hispaniarum extraordinario in Anglia.*

TO THE MARQUIS OF BUCKINGHAM.†

MY VERY GOOD LORD,

I HUMBLY thank your lordship for the grace and favour which you did both to the message and messenger, in bringing Mr. Meautys to kiss his Majesty's hands, and to receive his pleasure. My riches in my adversity hath been, that I have had a good master, a good friend, and a good servant.

Perceiving, by Mr. Meautys, his Majesty's inclination, it shall be, as it hath ever used to be to me, instead of a direction; and therefore I purpose to go forthwith to Gorchambury, humbly thanking his Majesty nevertheless, that he was graciously pleased to have acquainted my lords with my desire, if it had stood me so much upon. But his Majesty knoweth best the times and seasons; and to his grace I submit myself, desiring his Majesty and your lordship to take my letters from the Tower, as written *de profundis*, and those I continue to write to be *ex aquis salsis*.

[June 22, 1621.]

Indorsed,

*To Lord Buckingham, upon bringing Mr. Meautys to him to kiss the king's hands.*

† This letter is reprinted here, because it differs, in some respects, from that published in "Letters, Memoirs, Parliamentary Affairs, State Papers," &c. by Robert Stephens, Esq. p. 151. Edit. London, 1736, 4to.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I HAVE written, as I thought it decent in me to do, to his Majesty, the letter I send enclosed. I have great faith, that your lordship, now nobly and like yourself, will effect with his Majesty. In this the king is of himself, and it hath no relation to parliament. I have written also, as your lordship advised me, only touching that point of means. I have lived hitherto upon the scraps of my former fortunes; and I shall not be able to hold out longer. Therefore I hope your lordship will now, according to the loving promises and hopes given, settle my poor fortunes, or rather my being. I am much fallen in love with a private life; but yet I shall so spend my time, as shall not decay my abilities for use.

God preserve and prosper your lordship.

[Sept. 5, 1621.]

## TO THE PRINCE.

MAY IT PLEASE YOUR HIGHNESS,

I CANNOT too oft acknowledge your highness's favour in my troubles; but acknowledgment now is but begging of new favour. Yet even that is not inconvenient; for thanksgiving and petition go well together, even to God himself. My humble suit to your highness, that I may be thought on for means to subsist; and to that purpose, that your highness will join with my noble friend to the king. That done, I shall ever be ready, either at God's call, or his Majesty's, and as happy, to my thinking, as a man can be, that must leave to serve such a king.

God preserve and prosper your highness.

*On the back of the draughts of the three preceding letters were written the following MEMORANDA.*

Bishops Winchester,\* Durham,† London.‡  
Lord Duke,§ Lord Hunsdon.

Lord chamberlain,|| to thank him for his kind remembrance by you; and though in this private fortune I shall have use of few friends, yet I cannot but acknowledge the moderation and affection his lordship showed in my business, and desire, that of those few his lordship will still be one for my comfort, in whatsoever may cross his way, for the fartherance of my private life and fortune.

Mr. John Murray. If there be any thing that may concern me, that is fit for him to speak, and me to know, that I may receive it by you.

Mr. Maxwell. That I am sorry, that so soon as I came to know him, and to be beholden to him, I wanted power to be of use to him.

Lord of Kelly; and to acquaint him with that part touching the confinement.

\* Dr. Andrews. † Dr. Richard Neile.  
‡ Dr. George Mountain. § Lenox.

## TO THE KING.

IT MAY PLEASE YOUR MAJESTY,

NOW that your Majesty hath passed the recreation of your progress, there is nevertheless one kind of recreation, which, I know, remaineth with your Majesty all the year, which is to do good, and to exercise your clemency and beneficence. I shall never measure my poor service by the merit, which perhaps is small, but by the acceptation, which hath been always favourably great. I have served your Majesty now seventeen years; and since my first service, which was in the commission of the union, I received from your Majesty never chiding or rebuke, but always sweetness and thanks. Neither was I, in these seventeen years, ever chargeable to your Majesty, but got my means in an honourable sweat of my labour, save that of late your Majesty was graciously pleased to bestow upon me the pension of twelve hundred pounds for a few years. For in that other poor prop of my estate, which is the farming of the petty writs, I improved your Majesty's revenue by four hundred pounds the year. And likewise, when I received the seal, I left both the attorney's place, which was a gainful place, and the clerkship of the star-chamber, which was queen Elizabeth's favour, and was worth twelve hundred pounds by the year, which would have been a good *commendam*. The honours which your Majesty hath done me, have put me above the means to get my living; and the misery I am fallen into hath put me below the means to subsist as I am. I hope my courses shall be such, for this little end of my thread which remaineth, as your Majesty, in doing me good, may do good to many, both that live now, and shall be born hereafter. I have been the keeper of your seal, and now am your beadsman. Let your own royal heart, and my noble friend, speak the rest.

God preserve and prosper your Majesty.

Your Majesty's faithful poor servant and beadsman,

FR. ST. ALBAN.

September 5, 1621.

Cardinal Wolsey said, that if he had pleased God as he pleased the king, he had not been ruined. My conscience saith no such thing; for I know not but in serving you I have served God in one. But it may be, if I had pleased God, as I had pleased you, it would have been better with me.

## TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I DO very humbly thank your Majesty for your gracious remission of my fine. I can now, I thank God and you, die, and make a will.

I desire to do, for the little time God shall send me life, like the merchants of London, which, when they give over trade, lay out their money upon land.

|| William, earl of Pembroke.

So, being freed from civil business, I lay forth my poor talent upon those things which may be perpetual, still having relation to do you honour with those powers I have left.

I have therefore chosen to write the reign of king Henry the VIIth, who was in a sort your forerunner, and whose spirit, as well as his blood, is doubled upon your Majesty.

I durst not have presumed to entreat your Majesty to look over the book, and correct it, or at least to signify what you would have amended. But since you are pleased to send for the book, I will hope for it.

[God knoweth, whether ever I shall see you again; but I will pray for you to the last gasp, resting\*]

The same, your true beadsman,

FR. ST. ALBAN.

October 8, 1621.

*Grant of Pardon to the Viscount St. Alban, under the privy seal.†*

A SPECIAL pardon granted unto Francis, Viscount St. Alban, for all felonies done and committed against the common laws and statutes of this realm; and for all offences of præmunire; and for all misprisions, riots, &c. with the restitution of all his lands and goods forfeited by reason of any of the premises; except out of the same pardon all treasons, murders, rapes, incest; and except also all fines, imprisonments, penalties, and forfeitures, adjudged against the said Viscount St. Alban, by a sentence lately made in the parliament. Teste Rege apud Westm. 17 die Octob. anno Regni sui 19.

Per lettre de privato sigillo.

DR. WILLIAMS, BISHOP OF LINCOLN ELECT,  
AND LORD KEEPER OF THE GREAT SEAL,  
TO THE VISCOUNT ST. ALBAN.

MY VERY GOOD LORD,

HAVING perused a privy seal, containing a pardon for your lordship, and thought seriously thereupon, I find, that the passing of the same, the assembly in parliament so near approaching, † cannot but be much prejudicial to the service of the king, to the honour of my lord of Buckingham, to that commiseration which otherwise would be had of your lordship's present estate, and especially to my judgment and fidelity. I have ever affectionately loved your lordship's many and moest excellent good parts and endowments; nor had ever cause to disaffect your lordship's person. So as no respect in the world, beside the former considerations, could have drawn

me to add the least affliction, or discontentment, unto your lordship's present fortune. May it therefore please your lordship to suspend the passing of this pardon, until the next assembly be over and dissolved; and I will be then as ready to seal it as your lordship to accept of it; and, in the mean time, undertake, that the king and my lord admiral shall interpret this short delay as a service and respect issuing wholly from your lordship; and rest, in all other offices whatsoever,

Your lordship's faithful servant,

JO. LINCOLN, ELECT. CUSTOS SIGILLI.

Westminster-College, October 18, 1621.

*To the right honourable his very good lord, the lord viscount St. Alban.*

TO THE LORD KEEPER.

MY VERY GOOD LORD,

I KNOW the reasons must appear to your lordship many and weighty, which should move you to stop the king's grace, or to dissuade it; and somewhat the more in respect of my person, being, I hope, no unfit subject for noble dealing. The message I received by Mr. Meautys did import inconvenience, in the form of the pardon; your lordship's last letter, in the time: for, as for the matter, it lay so fair for his Majesty's and my lord of Buckingham's own knowledge, as I conceive your lordship doth not aim at that. My affliction hath made me understand myself better, and not worse; yet loving advice, I know, helps well. Therefore I sent Mr. Meautys to your lordship, that I might reap so much fruit of your lordship's professed good affection, as to know in some more particular fashion, what it is that your lordship doubteth, or disliketh, § that I may the better endeavour your satisfaction, or acquiescence, if there be cause. So I rest

Your lordship's to do you service,

FR. ST. ALBAN.

October 18, 1621.

*Petition of the Lord Viscount St. Alban, intended for the House of Lords.*

MY RIGHT HONOURABLE VERY GOOD LORDS,

IN all humbleness, acknowledging your lordships' justice, I do now in like manner crave and implore your grace and compassion. I am old, weak, ruined, in want, a very subject of pity. My only suit to your lordships is, to show me your noble favour towards the release of my confinement, so every confinement is, and to me, I protest, worse than the Tower. || There I could have had company, phy-

London, 1654, gives his reasons, why he hesitated to seal that pardon.

|| He had been committed to the Tower, in May, 1621, and discharged after two days' confinement there, according to Camden, *Annales Regis Jac. I.* p. 71. There is a letter of his lordship to the marquis of Buckingham, dated from the

\* This passage has a line drawn over it.

† Cotton Library, Titus Book VII.

‡ It met November 24, 1621; and was dissolved February 8, 1621-2.

§ The lord keeper, in a letter to the marquis of Buckingham, dated October 27, 1621, printed in the *Cubala*, p. 60. Edit.

sicians, conference with my creditors and friends about my debts, and the necessities of my estate, helps for my studies and the writings I have in hand. Here I live upon the sword-point of a sharp air, endangered if I go abroad, dulled if I stay within, solitary and comfortless without company, banished from all opportunities to treat with any to do myself good, and to help out any wrecks; and that, which is one of my greatest griefs, my wife, that hath been no partaker of my offending, must be partaker of this misery of my restraint.

May it please your lordships, therefore, since there is a time for justice, and a time for mercy, to think with compassion upon that which I have already suffered, which is not little; and to recommend this my humble, and as I hope, modest suit to his most excellent Majesty, the fountain of grace, of whose mercy, for so much as concerns himself merely, I have already tasted, and likewise of his favour of this very kind, by some small temporary dispensations.

Herein your lordships shall do a work of charity and nobility: you shall do me good; you shall do my creditors good; and, it may be, you shall do posterity good, if out of the carcass of dead and rotten greatness, as out of Samson's lion, there may be honey gathered for the use of future times.

God bless your persons and counsels.

Your lordships' supplicant and servant,

FR. ST. ALBAN.

Indorsed,

*Copy of the petition intended for the house of parliament.*

TO JOHN LORD DIGBY.\*

MY VERY GOOD LORD,

RECEIVING, by Mr. Johnson, your loving salutations, it made me call to mind many of your lordship's tokens, yea and pledges, of good and hearty affection in both my fortunes; for which I shall be ever yours. I pray, my lord, if occasion serve, give me your good word to the king, for the release of my confinement, which is to me a very strait kind of imprisonment. I am no Jesuit, nor no leper, but one that served his Majesty these sixteen years, even from the commission of the union till this last parliament, and ever had many thanks of his Majesty, and was never chidden. This his Majesty, I know, will remember, at one time or other; for I am his man still.

God keep your lordship.

Your lordship's most affectionate to do you service,

FR. ST. ALBAN.

Gorhambury, this last of December, 1621.

Tower, May 31, 1621, desiring his lordship to procure his discharge that day.

\* Created so in November, 1618, and in September, 1622, earl of Bristol.

† Harl. MSS. Vol. 7000.

TO THE LORD VISCOUNT ST. ALBAN.†

MY HONOURABLE LORD,

I HAVE received your lordship's letter, and have been long thinking upon it, and the longer, the less able to make answer unto it. Therefore if your lordship will be pleased to send any understanding man unto me, to whom I may, in discourse, open myself, I will, by that means, so discover my heart with all freedom, which were too long to do by letter, especially in this time of parliament business, that your lordship shall receive satisfaction. In the mean time I rest

Your lordship's faithful servant,

Royston, Dec. 16 [1621]. G. BUCKINGHAM.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THE reason why I was so desirous to have had conference with your lordship at London, was indeed to save you the trouble of writing; I mean, the reason in the second place; for the chief was to see your lordship. But since you are pleased to give me the liberty to send to your lordship one, to whom you will deliver your mind, I take that in so good part, as I think myself tied the more to use that liberty modestly. Wherefore, if your lordship will vouchsafe to send me one of your own, except I might have leave to come to London, either Mr. Packer, my ancient friend, or Mr. Aylesbury,‡ of whose good affection towards me I have heard report; to me it shall be indifferent. But if your lordship will have one of my nomination, if I might presume so far, I would name before all others, my lord of Falkland. But because perhaps it may cost him a journey, which I may not in good manners desire, I have thought of Sir Edward Sackville, Sir Robert Mansel, my brother, Mr. Solicitor-general,§ who, though he be almost a stranger to me, yet, as my case now is, I had rather employ a man of good nature than a friend, and Sir Arthur Ingram, notwithstanding he be great with my lord treasurer. Of these, if your lordship will be pleased to prick one, I hope well I shall entreat him to attend your lordship, and to be sorry never a whit of the employment. Your lordship may take your own time to signify your will, in regard of the present business of parliament. But my time was confined, by due respect, to write a present answer to a letter, which I construed to be a kind letter, and such as giveth me yet hope to show myself to your lordship,

Your lordship's most obliged friend, and faithful servant,

FR. ST. ALBAN.

Indorsed,

*To the lord of Buckingham, in answer to his of the 16th of December.*

‡ Thomas Aylesbury, Esq. secretary to the Marquis of Buckingham as lord high admiral. He was created a baronet in 1627. Lord chancellor Clarendon married his daughter Frances.

§ Sir Robert Heath, made solicitor in January, 1620-1.

*A Memorial of Conference, when the Lord Viscount ST. ALBAN expected the Marquis of BUCKINGHAM.*

MY LORD MARQUIS,

*Inducement.*] AFFLICTIONS are truly called trials; trials of a man's self, and trials of friends. For the first, I am not guilty to myself of any unworthiness, except perhaps too much softness in the beginning of my troubles. But since, I praise God, I have not lived like a drone, nor like a mal-content, nor like a man confused. But though the world hath taken her talent from me, yet God's talent I put to use.

For trial of friends, he cannot have many friends, that hath chosen to rely upon one. So that is in a small room, ending in yourself. My suit therefore to you is, that you would now, upon this vouchsafed conference, open yourself to me, whether I stand in your favour and affection, as I have done; and if there be an alteration, what is the cause; and, if none, what effects I may expect for the future of your friendship and favour, my state being not unknown to you.

*Reasons of doubting.*] The reasons, why I should doubt of your lordship's coolness towards me, or falling from me, are either out of judgment and discourse, or out of experience, and somewhat that I find. My judgment telleth, that when a man is out of sight and out of use, it is a nobleness somewhat above this age to continue a constant friend: that some, that are thought to have your ear, or more, love me not, and may either disvalue me, or distaste your lordship with me. Besides, your lordship hath now so many, either new-purchased friends, or reconciled enemies, as there is scarce room for an old friend specially set aside. And lastly, I may doubt, that that, for which I was fittest, which was to carry things *suavibus modis*, and not to bristle, or undertake, or give venturous counsels, is out of fashion and request.

As for that, I find your lordship knoweth, as well as I, what promises you made me, and iterated them back by message, and from your mouth, consisting of three things: the pardon of the whole sentence; some help for my debts; and an annual pension, which your lordship did set at 2000*l.* as obtained, and 3000*l.* in hope. Of these being promises undesired, as well as favours undeserved, there is effected only the remission of the fine, and the pardon now stayed. From me I know there hath proceeded nothing, that may cause the change. These I lay before you, desiring to know what I may hope for; for hopes are racks, and your lordship, that would not condemn me to the Tower, I know will not condemn me to the rack.

*The pardon stayed.*] I have, though it be a thing trivial, and that at a coronation one might have it for five marks, and after a parliament for nothing,

\* He had been secretary to the lord viscount St. Alban, while his lordship had the great seal, and was afterwards clerk of the council, and knighted. He succeeded his patron in the manor of Gorbambury, which, after the death of Sir Thomas, came to his cousin and heir, Sir Thomas Meautys, who married Anne, daughter of Sir Nathaniel Bacon of Culford-Hall, in Suffolk, knight; which lady married a second husband, Sir Harbottle Grimstone, baronet, and master of

yet have great reason to desire it, specially being now stirred: chiefly, first, because I have been so sifted; and now it is time there were an end. Secondly, because I mean to live a retired life; and so cannot be at hand to shake off any clamour.

For any offence the parliament should take, it is rather honour, that in a thing wherein the king is absolute, yet he will not interpose in that, which the parliament hath handled; and the king hath already restored judicature, after a long intermission: but for matter of his grace, his Majesty shall have reason to keep it entire.

I do not think any, except a Turk or Tartar, would wish to have another chop out of me. But the best is, it will be found there is a time for envy, and a time for pity; and cold fragments will not serve, if the stomach be on edge. For me, if they judge by that which is past, they judge of the weather of this year by an almanack of the old year; they rather repent of that they have done, and think they have but served the turns of a few.

THOMAS MEAUTYS, ESQ.\* TO THE LORD  
VISCOUNT ST. ALBAN.

MAY IT PLEASE YOUR LORDSHIP,

As soon as I came to London, I repaired to Sir Edward Sackville,† whom I find very zealous, as I told your lordship. I left him to do you service, in any particular you shall command him, to my lord marquis, though it were with some adventure; and withal he imparted to me what advice he had given to my lady this afternoon, upon his visiting of her at York-house, when Mr. Packer also, as it fell out, was come, at the same time, to see my lady, and seemed to concur with Sir Edward Sackville in the same ways; which were, for my lady to become a suitor to my lady Buckingham,‡ and my lady marchioness,§ to work my lord marquis for obtaining of the king some bounty towards your lordship; and in particular, that of the thousand pounds for the small writs. If I may speak my opinion to your lordship, it is not amiss to begin any way, or with any particular, though but small game at first, only to set a rusty clock a going, and then haply it may go right for a time, enough to bring on the rest of your lordship's requests. Yet because your lordship directed me to wish my lady, from you, by no means, to act any thing, but only to open her mind, in discourse unto friends, until she should receive your farther direction; it became not me to be too forward in putting it on too fast with Sir Edward; and my lady was pleased to tell me since, that she hath written to your lordship at large.

I inquired, even now, of Benbow, whether the proclamation for dissolving the parliament were com-

the rolls; who purchased the reversion of Gorbambury, from Sir Hercules Meautys, nephew of the second Sir Thomas.

† Afterwards earl of Dorset, well known for his duel in 1613, with the lord Kinloss, in which the latter was killed.

‡ Mary, countess of Buckingham, mother of the marquis.

§ Catharine, marchioness of Buckingham, wife of the marquis, and only daughter and heir of Francis, earl of Rutland.

ing forth. He tells me he knows no more certainty of it than that Mr. Secretary commanded him yesterday to be ready for despatching of the writs, when he should be called for; but since then he hears it sticks, and endures some qualms; but they speak it still loud at court, that the king is resolved of it.

Benbow tells me likewise, that he hath attended, these two days, upon a committee of the lords, with the book of the commission of peace; and that their work is to empty the commission in some counties by the score, and many of them parliament-men: which course sure helps to ring the passing-bell to the parliament.

Mr. Borough\* tells me, he is at this present fain to attend some service for the king; but about Saturday he hopes to be at liberty to wait upon your lordship. I humbly rest

Your lordship's for ever to honour and serve,

T. MEAUTYS.

January 3, 1621.

*To the Right Honourable my most honoured Lord,  
the Lord Viscount St. Alban.*

TO THE LORD VISCOUNT ST. ALBAN.

MAY IT PLEASE YOUR LORDSHIP,

THIS afternoon my lady found access to my lord marquis, procured for her by my lord of Montgomery† and Sir Edward Sackville, who seemed to contend which of them should show most patience in waiting, which they did a whole afternoon, the opportunity to bring my lord to his chamber, where my lady attended him. But when he was come, she found time enough to speak at large: and though my lord spake so loud, as that what passed was no secret to me and some others, that were within hearing; yet, because my lady told me she purposeth to write to your lordship the whole passage, it becomes not me to anticipate, by these, any part of her ladyship's relation.

I send your lordship herewith the proclamation for dissolving the parliament; wherein there is nothing forgotten, that we † have done amiss: but for most of those things, that we have well done, we must be fain, I see, to commend ourselves.

I delivered your lordship's to my lord of Montgomery, and Mr. Matthew, who was even then come to York-house to visit my lady, when I received the letter; and, as soon as he had read it, he said, that he had rather your lordship had sent him a challenge; and that it had been easier to answer, than so noble and kind a letter. He intends to see your lordship some time this week; and so doth Sir

\* John Borough, educated in common law at Gray's-Inn, keeper of the Records of the Tower of London, secretary to the earl marshal, in 1623 made Norroy; in July the year following knighted, and on the 23d of December, the same year, made garter king at arms in the place of Sir William Segar. He died October 21, 1643.

† Philip, afterwards earl of Pembroke.

‡ Mr. Meautys was member, in this parliament, for the town of Cambridge.

§ Either John Murray of the king's bed-chamber, men-

Edward Sackville, who is forward to make my lady a way by the prince, if your lordship advise it.

There are packets newly come out of Spain: and the king, they say, seems well pleased with the contents; wherein there is an absolute promise, and undertaking, for restitution of the Palatinate; the dispensation returned already from the pope, and the match hastened on their parts. My lord Digby goes shortly; and Mr. Matthew tells me, he means, before his going, to write by him to your lordship.

The king goes not till Wednesday, and the prince certainly goes with him. My lord marquis, in person, christens my lord of Falkland's child tomorrow, at his house by Watford.

Mr. Murray§ tells me, the king hath given your book || to my lord Brooke,¶ and enjoined him to read it, recommending it much to him: and then my lord Brooke is to return it to your lordship; and so it may go to the press, when your lordship pleases, with such amendments as the king hath made, which I have seen, and are very few, and those rather words, as *epidemic*, and *mild* instead of *debonnaire*, &c. Only that of persons attainted, enabled to serve in parliament by a bare reversal of their attainder, the king by all means will have left out. I met with my lord Brooke, and told him, that Mr. Murray had directed me to wait upon him for the book, when he had done with it. He desired to be spared this week, as being to him a week of much business, and the next week I should have it: and he ended in a compliment, that care should be taken, by all means, for good ink and paper to print it in; for that the book deserveth it.

I beg leave to kiss your lordship's hands.

Your lordship's in all humbleness to honour and serve,

T. MEAUTYS.

January 7, 1621-2.

This proclamation is not yet sealed; and therefore your lordship may please, as yet, to keep it in your own hands.

TO THE LORD VISCOUNT ST. ALBAN.

MY MOST HONOURED LORD,

I MET, even now, with a piece of news so unexpected, and yet so certainly true, as that, howsoever I had much ado, at first, to desire the relater to speak probably; yet now I dare send it your lordship upon my credit. It is my lord of Somerset's and his lady's coming out of the Tower, on Saturday last,\*\* fetched forth by my lord of Falkland, and without the usual degrees of confinement, at first to some one place,†† but absolute and free to go where

tioned above in the letter of 21 January, 1614, or Thomas Murray, tutor and secretary to the prince, made provost of Eton-College, in the room of Sir Henry Saville, who died February 19, 1621-2. Mr. Murray died likewise, April 1, 1623.

|| "The History of the Reign of King Henry the Seventh."

¶ Fulk Grevile.

\*\* January 6, 1621-2. Camdeni Annales Regis Jacobi I. p. 77.

†† Camden, *ubi supra*, says, "that the earl was ordered to

they please. I know not how peradventure this might occasion you to cast your thoughts, touching yourself, into some new mould, though not in the main, yet in something on the bye.

I beg leave to kiss your lordship's hands.

Your lordship's in all humbleness for ever to honour and serve you.

T. MEAUTYS.

LODOWIC STEWART, DUKE OF LENOX, TO  
THE LORD VISCOUNT ST. ALBAN.

MY LORD,

It is not unknown to your lordship, that in respect I am now a married man, I have more reason than before to think of providing me some house in London, whereof I am yet destitute; and for that purpose, I have resolved to entreat your lordship, that I may deal with you for York-house; wherein I will not offer any conditions to your loss. And, in respect I have understood, that the consideration of your lady's wanting a house hath bred some difficulty in your lordship to part with it, I will for that make offer unto your lordship and your lady, to use the house in Cannon-row, late the earl of Hertford's, being a very commodious and capable house, wherein I and my wife have absolute power; and whereof your lordship shall have as long time as you can challenge or desire of York-house. In this I do freelier deal with your lordship, in respect I know you are well assured of my well-wishes to you in general; and that in this particular, though I have not been without thoughts of this house before your lordship had it, yet I was willing to give way to your lordship's more pressing use thereof then. And as I do not doubt of your lordship's endeavour to gratify me in this; so I shall esteem it as an extraordinary courtesy, which I will study to requite by all means.

So, with my best wishes to your lordship, I rest

Your lordship's most loving friend,

LENOX.

In respect my lord of Buckingham was once desirous to have had this house, I would not deal for it till now, that he is otherwise provided.

Whitehall, the 29th of January, 1621.

*To the right honourable my very good lord, my lord viscount St. Alban.*

ANSWER OF THE LORD VISCOUNT ST.  
ALBAN.

MY VERY GOOD LORD,

I am sorry to deny your Grace any thing; but in this you will pardon me. York-house is the house,

confinde himself to the lord viscount Wallingford's house or neighbourhood."

\* Mr. Chamberlain, in a MS. letter to Sir Dudley Carle-

wherein my father died, and wherein I first breathed; and there will I yield my last breath, if so please God, and the king will give me leave; though I be now by fortune, as the old proverb is, like a bear in a monk's hood. At least no money, no value, shall make me part with it. Besides, as I never denied it to my lord marquis, so yet the difficulty I made was so like a denial, as I owe unto my great love and respect to his lordship a denial to all my other friends; among whom, in a very near place next his lordship, I ever account of your Grace. So not doubting, that you will continue me in your former love and good affection, I rest

Your Grace's, to do you humble service affectionate, &c.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

As my hopes, since my misfortunes, have proceeded of your lordship's mere motion, without any petition of mine; so I leave the times and the ways to the same good mind of yours. True it is, a small matter for my debts would do me more good now, than double a twelvemonth hence. I have lost six thousand pounds by year, besides caps and courtesies. But now a very moderate proportion would suffice: for still I bear a little of the mind of a commissioner of the treasury, not to be over chargeable to his Majesty; and two things I may assure your lordship of; the one, that I shall lead such a course of life, as whatsoever the king doth for me, shall rather sort to his Majesty's and your lordship's honour, than to envy; the other, that whatsoever men talk, I can play the good husband, and the king's bounty shall not be lost. If your lordship think good, the prince should come in to help; I know his highness wisheth me well; if you will let me know when, and how, he may be used. But the king is the fountain, who, I know, is good.

God prosper you.

Your lordship's most bounden and faithful

FR. ST. ALBAN.

Gorhambury, January 30, 1621.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

Your lordship dealeth honourably with me in giving me notice, that your lordship is provided of a house,\* whereby you discontinue the treaty your lordship had with me for York-house, although I shall make no use of this notice, as to deal with any other. For I was ever resolved your lordship should have had it, or no man. But your lordship doth yet more nobly, in assuring me, you never

ton, dated at London, January 19, 1621-2, mentions, that the marquis of Buckingham had contracted with the lord and lady Wallingford, for *their house near Whitehall*, for some money

meant it with any the least inconvenience to myself. May it please your lordship likewise to be assured from me, that I ever desired you should have it, and do still continue of the same mind.

I humbly pray your lordship, to move his Majesty to take some commiseration of my long imprisonment. When I was in the Tower, I was nearer help of physic; I could parley with my creditors; I could deal with friends about my business; I could have helps at hand for my writings and studies, wherein I spend my time; all which here fail me. Good my lord, deliver me out of this; me who am his Majesty's devout beadsman, and

Your lordship's most obliged friend and faithful servant,

FR. ST. ALBAN.

Gorhambury, this 3rd of Feb. 1621.

JOHN SELDEN, ESQ. TO THE LORD VISCOUNT ST. ALBAN.

MY MOST HONOURABLE LORD,

AT your last going to Gorhambury, you were pleased to have speech with me about some passages of parliament; touching which, I conceived, by your lordship, that I should have had farther direction by a gentleman, to whom you committed some care and consideration of your lordship's intentions therein. I can only give this account of it, that never was any man more willing or ready to do your lordship service, than myself; and in that you then spake of, I had been most forward to have done whatsoever I had been, by farther direction, used in. But I understood, that your lordship's pleasure that way was changed. Since, my lord, I was advised with, touching the judgments given in the late parliament. For them, if it please your lordship to hear my weak judgment expressed freely to you, I conceive thus. First, that admitting it were no session, but only a *convention*, as the proclamation calls it; yet the judgments given in the upper house, if no other reason be against them, are good; for they are given by the lords, or the upper house, by virtue of that ordinary authority, which they have as the supreme court of judicature; which is easily to be conceived, without any relation to the matter of session, which consists only in the passing of acts, or not passing them, with the royal assent. And though no session of the three estates together be without such acts so passed; yet every part of the parliament severally did its own acts legally enough to continue, as the acts of other courts of justice are done. And why should any doubts be, but that a judgment out of the king's bench, or exchequer-chamber, reversed there, had been good, although no session? For there was truly a parliament, truly an upper house, which exercised by itself this power of judicature, although no session. Yet withal, my lord, I doubt, it will fall out, upon fuller consideration, to be thought a session also. Were it not for the proclamation, I should be clearly of that mind; neither doth the clause, in the act of

subsidy, hinder it. For that only prevented the determination of the session at that instant; but did not prevent the being of a session, whensoever the parliament should be dissolved. But because that point was resolved in the proclamation, and also in the commission of dissolution on the 8th of February, I will rest satisfied.

But there are also examples of former times, that may direct us in that point of the judgment, in regard there is store of judgments of parliament, especially under Edward I. and Edward II. in such conventions, as never had, for aught appears, any act passed in them.

Next, my lord, I conceive thus; that by reason there is no record of those judgments, it may be justly thought, that they are of no force. For thus it stands. The lower house exhibited the declarations in paper; and the lords, receiving them, proceeded to judgment verbally; and the notes of their judgments are taken by the clerk, in the journal only; which, as I think, is no record of itself, neither was it ever used as one. Now the record, that in former times was of the judgments and proceedings there, was in this form. The accusation was exhibited in parchment; and being so received, and indorsed, was the first record; and that remained filed among the bills of parliament, it being of itself as the bills in the king's bench. Then out of this there was a formal judgment, with the accusation entered into that roll, or second record, which the clerk transcribes by ancient use, and sends into the chancery.

But in this case there are none of these: neither doth any thing seem to help to make a record of it, than only this, that the clerk may enter it, now after the parliament; which, I doubt, he cannot. Because, although in other courts the clerks enter all, and make their records after the term; yet in this parliamentary proceeding it falls out, that the court being dissolved, the clerk cannot be said to have such a relation to the parliament, which is not then at all in being, as the prothonotaries of the courts of Westminster have to their courts, which stand only adjourned. Besides, there cannot be an example found, by which it may appear, that ever any record of the first kind, where the transcript is into the chancery, was made in parliament; but only sitting the house, and in their view. But this I offer to your lordship's farther consideration, desiring your favourable censure of my fancy herein; which, with whatsoever ability I may pretend to, shall ever be desirous to serve you, to whom I shall perpetually own myself

Your lordship's most humble servant,

J. SELDEN.

From the Temple, February XIV. 1621.

MY LORD,

IF your lordship have done with that *Mascardus de Interpretatione Statutorum*,\* I shall be glad that

\* Alderani Mascardi communes conclusiones utriusque juris ad generalem statutorum interpretationem accommodatæ. Printed at Ferrara, 1608.

you would give order that I might use it. And for that of 12 Hen. 7. touching the grand council in the manuscript, I have since seen a privy seal of the time of Henry 7. (without a year) directed to borrow for the king; and in it there is a recital of a grand council, which thought, that such a sum was fit to be levied; whereof the lords gave 40,000*l.* and the rest was to be gotten by privy seal upon loan. Doubtless, my lord, this interprets that of the manuscript story.

*On the back of this letter are the following notes by the lord viscount St. Alban.*

"The case of the judgment in parliament, upon a writ of error put by Just. Hu.\*

"The case of no judgment entered into the court of augmentations, or survey of first fruits; which are dissolved, where there may be an entry after, out of a paper-book.

"*Mem.* All the acts of my proceeding were after the royal assent to the subsidy."

TO MR. TOBIE MATTHEW.†

GOOD MR. MATTHEW,

In this solitude of friends, which is the base court‡ of adversity, where almost nobody will be seen stirring, I have often remembered a saying of my lord ambassador of Spain,§ "Amor sin fin no tiene fin."|| This moveth me to make choice of his excellent lordship for his noble succours towards not the aspiring but the respiring of my fortunes.

I, that am a man of books, have observed his lordship to have the magnanimity of his own nation, and the cordiality of ours; and, by this time, I think he hath the wit of both. Sure I am, that for myself I have found him, in both my fortunes, to esteem me so much above value, and to love me so much above possibility of deserving, or obliging on my part, as if he were a friend reserved for such a time as this. I have known his lordship likewise, while I stood in a stand where I might look about, a most faithful and respective friend to my lord marquis; who, next the king and the prince, was my raiser, and must be, he or none, I do not say my restorer, but my reliever.

I have, as I made you acquainted at your being with me, a purpose to present my lord marquis with an offer of my house and lands here at Gorham-bury; a thing, which, as it is the best means I have now left to demonstrate my affection to his lordship, so I hope it will be acceptable to him. This proposition I desire to put into no other hand but my lord ambassador's, as judging his hand to be the safest, the most honourable, and the most effectual for my good, if my lord will be pleased to deal in it. And when I had thus resolved, I never sought, nor thought of any mean but yourself, being so pri-

vate, faithful, and discreet a friend to us both. I desire you therefore, good Mr. Matthew, to acquaint my lord ambassador with this overture; and both to use yourself, and desire at his lordship's hands, secrecy therein; and withal to let his lordship know, that in this business, whatsoever in particular you shall treat with him, I shall not fail, in all points, to make good and perform.

Commend my humble service to his lordship. I ever rest

Your most affectionate and assured friend,

FR. ST. ALBAN.

Gorhambury, Feb. 28, 1621.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THOUGH I have returned answer to your lordship's last letter by the same way, by which I received it; yet I humbly pray your lordship to give me leave to add these few lines.

My lord, as God above is witness, that I ever have loved and honoured your lordship, as much, I think, as any son of Adam can love or honour any subject, and continue in as hearty and strong wishes of felicity to be heaped and fixed upon you, as ever; so, as low as I am, I had rather sojourn in a college in Cambridge, than recover a good fortune by any other but yourself. Marry, to recover yourself to me, if I have you not, or to ease your lordship in any thing, wherein your lordship would not so fully appear, or to be made participant of your favours in your own way, I would use any man, that were your lordship's friend; and therefore, good my lord, in that let me not be mistaken. Secondly, if in any of my former letters I have given your lordship any distaste by the style of them, or any particular passages, I humbly pray your lordship's benign construction and pardon. For, I confess, it is my fault, though it be some happiness to me withal, that I do most times forget my adversity. But I shall never forget to be

Your lordship's most obliged friend and faithful servant,

FR. ST. ALBAN.

March 5, 1621.

*Fragments of several kinds.*

My meaning was, if my lord should obtain for me, by his noble mediation, in consideration of my services past, and other respects, to do that, for my relief, which I was suitor for by my lord's noble mediation, and whereof I was in good hope, to have presented my lord with Gorhambury in possession, out of gratitude and love, for nothing.

‡ *Basse cour.*

§ Count Gondomar, who returned to Spain about March 1621-2.

|| "Love without ends hath no end."

\* Hutton.

† This, and the following letter of March 5, 1621-2, to the marquis of Buckingham, are inserted from the originals, much more complete and exact, than the copies of them printed in his works.

My meaning was, if my lord should prevail for me in my suit to the king for reward of services, and relief of my poor estate, to have presented him with Gorhambury, out of gratitude and love, for nothing, except some satisfaction to my wife, for her interest.

If my lord like better to proceed by way of bargain, so I find that I may but subsist, I will deserve of his honour, and express my love in a friendly pennyworth.

The third point to be added :

*This as his work.*] The more for kissing the king's hands presently.

The reasons, stalling my debts.

Willingness in my friends to help me.

None will be so bold as to oppress me.

The pretence, that the king would give me direction, in what nature of writings to expend my time.

The letter to expect yet, and the manner of the delivery.

That my lord do not impute it, if he hear I deal with others; for he shall better perceive the value, and I shall make it good to his lordship, being my state requireth speed.

---

TO THE LORD VISCOUNT ST. ALBAN.

MAY IT PLEASE YOUR LORDSHIP,

REMEMBERING, that the letter your lordship put yesterday into my hand was locked up under two or three seals, it ran in my head, that it might be business of importance and require haste; and not finding Mr. Matthew in town, nor any certainty of his return till Monday or Tuesday, I thought it became me to let your lordship know it, that so I might receive your lordship's pleasure, if need were, to send it by as safe a hand as if it had three seals more.

My lord, I saw Sir Arthur Ingram, who let fall somewhat as if he could have been contented to have received a letter by me from your lordship, with something in it like an acknowledgment to my lord treasurer,\* that by his means you had received a kind letter from my lord marquis. But, in the close, he came about, and fell rather to excuse what was left out of the letter, than to please himself much with what was in it. Only indeed he looked upon me, as if he did a little distrust my good meaning in it. But that is all one to me; for I have been used to it, of late, from others, as well as from him. But persons apt to be suspicious may well be borne with; for certainly they trouble themselves most, and lose most by it. For of such it is a hard question, whether those be fewest whom they trust or those who trust them. But for him, and some others, I will end in a wish, that as to your lordship's service, they might prove but half so much honest, as they think themselves wiser, than other men.

\* Lionel, lord Cranfield, made lord treasurer in Oct. 1621.

It is doubtful, whether the king will come to-morrow or not; for they say he is full of pain in his feet.

My lord marquis came late to town last night, and goeth back this evening: and Sir Edward Sackville watcheth an opportunity to speak with him before he go.

However, he wisheth that your lordship would lose no time in returning an answer, made all of sweetmeats, to my lord marquis's letter, which, he is confident, will be both tasted and digested by him. And Sir Edward wisheth, that the other letter to my lord marquis, for presenting your discourse of laws to his Majesty, might follow the first. I humbly rest

Your lordship's for ever truly to honour and serve you,

THO. MEAUTYS.

Martii 3, 1621.

---

TO THE LORD VISCOUNT ST. ALBAN.

MAY IT PLEASE YOUR LORDSHIP,

I HAD not failed to appear this night upon your lordship's summons, but that my stay till to-morrow I knew would mend my welcome, by bringing Mr. Matthew, who means to dine with your lordship only, and so to rebound back to London, by reason my lord Digby's journey calls for him on the sudden. Neither yet was this all that stayed me; for I hear somewhat, that I like reasonably well; and yet I hope it will mend too; which is, that my lord marquis hath sent you a message by my lord of Falkland, which is a far better hand than my lord treasurer's, that gives you leave to come presently to Highgate: and Sir Edward Sackville, speaking for the other five miles, my lord commended his care and zeal for your lordship, but silenced him thus: "Let my lord be ruled by me: it will be never the worse for him." But my lord marquis saying farther to him, "Sir Edward, however you play a good friend's part for my lord St. Alban, yet I must tell you, I have not been well used by him." And Sir Edward desiring of him to open himself in whatsoever he might take offence at; and withal, taking upon him to have known so much from time to time, of your lordship's heart, and endeavours towards his lordship, as that he doubted not but he was able to clear any mist, that had been cast before his lordship's eyes by your enemies; my lord marquis, by this time being ready to go to the Spanish ambassador's to dinner, broke off with Sir Edward, and told him that after dinner he would be back at Wallingford-house, and then he would tell Sir Edward more of his mind; with whom I have had newly conference at large, and traced out to him, as he desired me, some particulars of that, which they call a treaty with my lord treasurer about York-house, which Sir Edward Sackville knows how to put together, and make a smooth tale of it for your lordship; and this night I shall know all from him,

and to-morrow by dinner, I shall not fail to attend your lordship: till when, and ever, I rest

Your lordship's in all truth to honour and serve you,

T. MEAUTYS.

Indorsed,  
Received March 11.

TO HENRY CARY, LORD VISCOUNT  
FALKLAND.\*

MY VERY GOOD LORD,

YOUR lordship's letter was the best letter I received this good while, except the last kind letter from my lord of Buckingham, which this confirmeth. It is the best accident, one of them, amongst men, when they hap to be obliged to those, whom naturally and personally they love, as I ever did your lordship; in troth not many between my lord marquis and yourself; so that the sparks of my affection shall ever rest quick, under the ashes of my fortune, to do you service; and wishing to your fortune and family all good.

Your lordship's most affectionate and much obliged, &c.

I pray your lordship to present my humble service and thanks to my lord marquis, to whom, when I have a little paused, I purpose to write; as likewise to his Majesty, for whose health and happiness, as his true beadsman, I most frequently pray.

Indorsed,

March 11, *Copy of my Answer to Lord Falkland.*

TO THE LORD TREASURER.†

MY VERY GOOD LORD,

I HAVE received, by my noble friend, my lord viscount Falkland, advertisement, as from my lord marquis, of three things; the one, that, upon his lordship's motion to his Majesty, he is graciously pleased to grant some degree of release of my confinement. The second, that if I shall gratify your lordship, who, my lord understandeth, are desirous to treat with me about my house at London, with the same, his lordship will take it as well, as if it was done to himself. The third, that his Majesty hath referred unto your lordship the consideration of the relief of my poor estate. I have it also from other part, yet by such, as have taken it immediately from my lord marquis, that your lordship hath done me to the king very good offices. My lord, I am much bounden to you: wherefore if you shall be pleased to send Sir Arthur Ingram, who formerly moved me in it for your lordship, to treat farther with me, I shall let your lordship see how affectionately I am desirous to pleasure your lordship after my lord of Buckingham.

So wishing your lordship's weighty affairs, for his Majesty's service, a happy return to his Majesty's contentment, and your honour, I rest

Your lordship's very affectionate to do you service,

FR. ST. ALBAN.

Indorsed,  
March 12. *To the Lord Treasurer.*

TO THE LORD TREASURER.

MY VERY GOOD LORD,

THE honourable correspondence, which your lordship hath been pleased to hold with my noble and constant friend, my lord marquis, in farthering his Majesty's grace towards me, as well concerning my liberty, as the consideration of my poor estate, hath very much obliged me to your lordship, the more by how much the less likelihood there is, that I shall be able to merit it at your lordship's hands. Yet thus much I am glad of, that this course, your lordship holds with me, doth carry this much upon itself, that the world shall see in this, amongst other things, that you have a great and noble heart.

For the particular business of York-house, Sir Arthur Ingram can bear me witness, that I was ready to leave the conditions to your lordship's own making: but since he tells me plainly, that your lordship will by no means have to be so, you will give me leave to refer it to Sir Arthur Ingram, who is so much your lordship's servant, and no less faithful friend to me, and understands values well, to set a price between us.

For the reference his Majesty hath been graciously pleased, at my lord marquis's suit, to make unto your lordship, touching the relief of my poor estate,‡ which my lord of Falkland's letter hath signified, warranting me likewise to address myself to your lordship touching the same; I humbly pray your lordship to give it despatch, my age, health, and fortunes, making time to me therein precious. Wherefore, if your lordship, who knoweth best what the king may best do, have thought of any particular, I would desire to know from your good lordship: otherwise I have fallen myself upon a particular, which I have related to Sir Arthur, and, I hope, will seem modest, for my help to live and subsist. As for somewhat towards the paying off my debts, which are now my chief care, and without charge of the king's coffers, I will not now trouble your lordship; but purposing to be at Chiswick, where I have taken a house, within this sevensnight, I hope to wait upon your lordship, and to gather some violets in your garden, and will then impart unto you, if I have thought of any thing of that nature for my good.

So I ever rest, &c.

from Gorhambury, 20th of March, 1621-2, thanks his Majesty for referring the consideration of his broken estate to his good lord the lord treasurer.

\* Appointed lord deputy of Ireland, September 8, 1622.

† Lionel, Lord Cranfield.

‡ The lord viscount St. Alban, in a letter to the king,

THOMAS MEAUTYS, ESQ. TO THE LORD  
VISCOUNT ST. ALBAN.

MAY IT PLEASE YOUR LORDSHIP,

I HAVE been attending upon my lord marquis's minutes for the signing of the warrant. This day he purposed in earnest to have done it: but it falls out untowardly, for the warrant was drawn, as your lordship remembers, in haste, at Gorhambury, and in as much haste delivered to Sir Edward Sackville, as soon as I alighted from my house, who instantly put it into my lord marquis's hands, so that no copy could possibly be taken of it by me. Now his lordship hath searched much for it, and is yet at a loss, which I knew not till six this evening: and because your lordship drew it with caution, I dare not venture it upon my memory to carry level what your lordship wrote, and therefore despatched away this messenger, that so your lordship, by a fresh post, for this will hardly do it, may send a warrant to your mind, ready drawn, to be here to-morrow by seven o'clock, as Sir Arthur \* tells me my lord marquis hath directed: for the king goes early to Hampton-Court, and will be here on Saturday.

Your books † are ready, and passing well bound up. If your lordship's letters to the king, prince, and my lord marquis were ready, I think it were good to lose no time in their delivery; for the printer's fingers itch to be selling.

My lady hath seen the house at Chiswick, and may make a shift to like it: only she means to come to your lordship thither, and not go first: and therefore your lordship may please to make the more haste, for the great lords long to be in York-house.

Mr. Johnson will be with your lordship to-morrow; and then I shall write the rest.

Your lordship's in all humbleness and honour  
to serve you.

TO THOMAS MEAUTYS, ESQ.

GOOD MR. MEAUTYS,

FOR the difference of the warrant, it is not material at the first. But I may not stir till I have it; and therefore I expect it to-morrow.

For my lord of London's ‡ stay, there may be an error in my book; § but I am sure there is none in me, since the king had it three months by him, and allowed it: if there be any thing to be mended, it is better to be espied now than hereafter.

I send you the copies of the three letters, which you have; and, in mine own opinion, this demur, as you term it, in my lord of London, maketh it more necessary than before, that they were delivered, specially in regard they contain withal my thanks. It may be signified they were sent before I knew of any stay; and being but in those three hands, they

\* Ingram.

are private enough. But this I leave merely at your discretion, resting

Your most affectionate and assured friend,

FR. ST. ALBAN.

March 21, 1621.

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

I DO make account, God willing, to be at Chiswick on Saturday; or, because this weather is terrible to one, that hath kept much in, Monday.

In my letter of thanks to my lord marquis, which is not yet delivered, but to be forthwith delivered, I have not forgotten to mention, that I have received signification of his noble favour and affection, amongst other ways, from yourself by name. If, upon your repair to the court, whereof I am right glad, you have any speech with the marquis of me, I pray place the alphabet, as you can do it right well, in a frame, to express my love faithful and ardent towards him. And for York-house, that whether in a straight line, or a compass line, I meant it his lordship in the way, which I thought might please him best. I ever rest

Your most affectionate and assured friend,

FR. ST. ALBAN.

March 21, 1621.

Though your journey to court be before your receipt of this letter, yet it may serve for another time.

TO THE QUEEN OF BOHEMIA.

IT MAY PLEASE YOUR MAJESTY,

I FIND in books, and books I dare allege to your Majesty, in regard of your singular ability to read and judge of them even above your sex, that it is accounted a great bliss for a man to have leisure with honour. That was never my fortune, nor is. For time was, I had honour without leisure; and now I have leisure without honour. And I cannot say so neither altogether, considering there remain with me the marks and stamp of the king's your father's grace, though I go not for so much in value as I have done. But my desire is now to have leisure without loitering, and not to become an abbey-lubber, as the old proverb was, but to yield some fruit of my private life. Having therefore written the reign of your Majesty's famous ancestor, king Henry the Seventh; and it having passed the file of his Majesty's judgment, and been graciously also accepted of the prince, your brother, to whom it is dedicated, I could not forget my duty so far to your excellent Majesty, to whom, for that I know and have heard, I have been at all times so much bound, as you are ever present with me, both in affection and admiration, as not to make unto you, in all humbleness,

† Dr. George Mountain.

‡ His "History of the Reign of King Henry VII."

a present thereof, as now being not able to give you tribute of any service. If king Henry the Seventh were alive again, I hope verily he could not be so angry with me for not flattering him, as well pleased in seeing himself so truly described in colours that will last and be believed. I most humbly pray your Majesty graciously to accept of my good will; and so, with all reverence, kiss your hands, praying to God above, by his divine and most benign providence, to conduct your affairs to happy issue; and resting

Your Majesty's most humble and devoted servant,

FR. ST. ALBAN.

April 20, 1622.

SIR EDWARD SACKVILLE TO THE LORD  
VISCOUNT ST. ALBAN.

MY VERY HONOURED LORD,

LONGING to yield an account of my stewardship, and that I had not buried your talent in the ground, I waited yesterday the marquis's pleasure, until I found a fit opportunity to importune some return of his lordship's resolution. The morning could not afford it; for time only allowed leave to tell him, I would say something. In the afternoon I had amends for all. In the forenoon he laid the law, but in the afternoon he preached the gospel; when, after some revivations of the old distaste concerning York-house, he most nobly opened his heart unto me, wherein I read that which argued much good towards you. After which revelation, the book was again sealed up, and must, in his own time, only by himself be again manifested unto you. I have leave to remember some of the vision, and am not forbidden to write it. He vowed, not court-like, but constantly, to appear your friend so much, as if his Majesty should abandon the care of you, you should share his fortune with him. He pleased to tell me, how much he had been beholden to you; how well he loved you; how unkindly he took the denial of your house, for so he will needs understand it. But the close, for all this, was harmonious, since he protested he would seriously begin to study your ends, now that the world should see he had no ends on you. He is in hand with the work, and therefore will, by no means, accept of your offer; though, I can assure you, the tender hath much won upon him, and mellowed his heart towards you; and your genius directed you right, when you wrote that letter of denial unto the duke.\* The king saw it, and all the rest; which made him say unto the marquis, you played an after-game well; and that now he had no reason to be much offended.

I have already talked of the revelation, and now am to speak in apocalyptic language, which I hope you will rightly comment; whereof, if you make difficulty, the bearer † can help you with the key of the cypher.

My lord Falkland, by this time, hath showed you London from Highgate. If York-house were gone,

the town were yours; and all your straitest shackles cleared off, besides more comfort than the city air only. The marquis would be exceedingly glad the treasurer had it. This I know; but this you must not know from me. Bargain with him presently, upon as good conditions as you can procure, so you have direct motion from the marquis to let him have it. Seem not to dive into the secret of it; though you are purblind if you see not through it. I have told Mr. Meautys how I would wish your lordship to make an end of it. From him, I beseech you, take it, and from me only the advice to perform it. If you part not speedily with it, you may defer the good which is approaching near you, and disappointing other aims, which must either shortly receive content, or never, perhaps, anew yield matter of discontent, though you may be, indeed, as innocent as before. Make the treasurer believe, that since the marquis will by no means accept of it, and that you must part with it, you are more willing to pleasure him than any body else, because you are given to understand my lord marquis so inclines; which inclination, if the treasurer shortly send unto you about it, desire may be more clearly manifested than as yet it hath been; since, as I remember, none hitherto hath told you *in terminis terminantibus*, that the marquis desires you should gratify the treasurer. I know that way the hare runs; and that my lord marquis longs until Cranfield hath it; and so I wish too, for your good, yet would not it were absolutely passed, until my lord marquis did send, or write, unto you, to let him have it; for then his so disposing of it were but the next degree removed from the immediate acceptance of it, and your lordship freed from doing it otherwise than to please him, and to comply with his own will and way.

I have no more to say, but that I am, and ever will be

Your lordship's most affectionate friend and  
humble servant,

E. SACKVILLE.

Indorsed,

*Received the 11th May, 1622.*

TO THE LORD KEEPER, DR. WILLIAMS,  
BISHOP OF LINCOLN.

MY VERY GOOD LORD,

I UNDERSTAND, there is an extent prayed against me, and a surety of mine, by the executors of one Harris, a goldsmith. The statute is twelve years old, and falleth to an executor, or an executor of an executor, I know not whether. And it was sure a statute collected out of a shop debt, and much of it paid. I humbly pray your lordship, according to justice and equity, to stay the extent, being likewise upon a double penalty, till I may better inform myself touching a matter so long past, and if it be requisite, put in a bill, that the truth of the

\* Of Lenox, of the 30th of January, 1621-2.

† Probably Mr. Meautys.

account appearing, such satisfaction may be made as shall be fit. So I rest

Your lordship's affectionate to do you faithful service,

FR. ST. ALBAN.

May 30, 1622.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I THOUGHT it appertained to my duty, both as a subject, and as he that took once the oath of a counsellor, to make known to your lordship an advertisement, which came to me this morning. A gentleman, a dear friend of mine, whom your lordship cannot but imagine, though I name him not, told me thus much, that some English priests, that negotiated at Rome to facilitate the dispensation, did their own business, that was his phrase; for they negotiated with the pope to erect some titular bishops for England, that might ordain, and have other spiritual faculties; saying withal most honestly, that he thought himself bound to impart this to some counsellor, both as a loyal subject, and as a catholic; for that he doubted it might be a cause to cross the graces and mercies, which the catholics now enjoy, if it be not prevented; and he asked my advice, whether he should make it known to your lordship, or to my lord keeper,\* when he came back to London. I commended his loyalty and discretion, and wished him to address himself to your lordship, who might communicate it with my lord keeper, if you saw cause, and that he repaired to your lordship presently, which he resolved to do. Nevertheless, I did not think mine own particular duty acquitted, except I certified it also myself, borrowing so much of private friendship in a cause of state, as not to tell him I would do so much.

Indorsed,

*My letter to my lord marquis, touching business of estate advertised by Mr. Matthew.†*

TO THE LORD VISCOUNT ST. ALBAN.

MY MOST HONOURED LORD,

I COME in these to your lordship with the voice of thanksgiving, for the continuance of your accustomed noble care of me and my good, which overtakes me, I find, whithersoever I go. But for the present itself, whereof your lordship writes, whether or no it be better than that I was wont to bring

\* Dr. Williams, bishop of Lincoln.

† The date of this letter may be pretty nearly determined by one of the lord keeper to the marquis of Buckingham, dated August 23, 1622, and printed in the *Cabala*. The postscript to that letter is as follows: "The Spanish ambassador took the alarm very speedily of the titular Roman bishop; and before my departure from his house at Islington, whither I went privately to him, did write both to Rome and Spain to prevent it. But I am afraid that Tobie will prove but an apocryphal, and no canonical, intelligencer, acquainting the

your lordship, the end only can prove. For I have yet no more to show for it than good words, of which many times I brought your lordship good store. But because *modicefideans* were not made to thrive in court, I mean to lose no time from assailing my lord marquis, for which purpose I am now hovering about Newhall,‡ where his lordship is expected, but not the king, this day, or to-morrow; which place, as your lordship adviseth, may not be ill chosen for my business. For, if his lordship be not very thick of hearing, sure Newhall will be heard to speak for me.

And now, my good lord, if any thing make me diffident, or indeed almost indifferent, how it succeeds, it is this; that my sole ambition having ever been, and still is, to grow up only under your lordship, it is become preposterous, even to my nature and habit, to think of prospering or receiving any growth, either without or besides your lordship. And therefore let me claim of your lordship to do me this right, as to believe that, which my heart says, or rather swears to me, namely, that what addition soever, by God's good providence, comes at any time to my life or fortune, it is, in my account, but to enable me the more to serve your lordship in both; at whose feet I shall ever humbly lay down all that I have, or am, never to rise thence other than

Your lordship's in all duty and reverent affections,

T. MEAUTYS.

September 11, 1622.

TO THE COUNTESS OF BUCKINGHAM,§ MOTHER TO THE MARQUIS OF BUCKINGHAM.

MY VERY HONOURABLE GOOD LADY,

YOUR ladyship's late favour and noble usage towards me were such, as I think your absence a great part of my misfortunes. And the more I find my most noble lord, your son, to increase in favour towards me, the more, out of my love to him, I wish he had often by him so loving and wise a mother. For, if my lord were never so wise, as wise as Solomon; yet, I find that Solomon himself, in the end of his Proverbs, sets down a whole chapter of advices, that his mother taught him.

Madam, I can but receive your remembrance with affection, and use your name with honour, and intend you my best service, if I be able, ever resting

Your ladyship's humble and affectionate servant,

FR. ST. ALBAN.

Bedford-house, this 29th of October, 1622.

state with this project for the Jesuits, rather than for Jesus's sake."

‡ In Essex.

§ Mary, daughter of Anthony Beaumont, a younger son of William Beaumont, of Cole-Orton, in Leicestershire. She was thrice married; 1. to Sir George Villiers, father of the duke of Buckingham; 2. to Sir William Rayner; and 3. to Sir Thomas Compton, knight of the Bath, a younger brother of William, earl of Northampton. She was created countess of Buckingham, July 1, 1618, and died April 19, 1632.

## TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I HAVE many things to thank your lordship for, since I had the happiness to see you; that your lordship, before your going out of town, sent my memorial to my lord treasurer: that your lordship offered, and received, and presented my petition to the king, and procured me a reference: that your lordship moved his Majesty, and obtained for me access to him, against his Majesty comes next, which in mine own opinion, is better than if it had been now, and will be a great comfort to me, though I should die next day after: that your lordship gave me so good English for my Latin book. My humble request is, at this time, that because my lord treasurer keepeth yet his answer in suspense, though by one, he useth to me, he speaketh me fair, that your lordship would nick it with a word: for if he do me good, I doubt it may not be altogether of his own.

God ever prosper you.

Your lordship's most bounden and faithful servant,

FR. ST. ALBAN.

4th of November, 1622.

*Memorial of Access.\**

IT MAY PLEASE YOUR MAJESTY,

I MAY NOW in a manner sing *nunc dimittis*, now I have seen you. Before methought I was scant in state of grace, but in a kind of utter darkness. And therefore, among other your mercies and favours, I do principally thank your Majesty for this admission of me to kiss your hands.

I may not forget also to thank your Majesty for your remission of my fine, for granting of my *quietus*, and general pardon; and your late recommendation of my debts; favours not small, specially to a servant out of sight, and out of use.

I beseech your Majesty to give me leave to tell you what had, in my misfortunes, sustained me. Aristotle says, "Old men live by remembrance, young men by hope." And so it is true, that young men live by hope, and fallen men by remembrance. Two remembrances have sustained me: the one, that since I had the prime vote in the lower house, to be first commissioner for the union, until the last assembly of parliament, I was chosen messenger of both houses, in the petitions of religion, which were my two first and last services, having passed a number of services of importance, your Majesty never chid me; neither did ever any public service miscarry in my hands. This was the finishing act of my prosperity. The second was of my adversity, which, in few words, is this, that as my fault was not against your Majesty, so my fall was not your act; and therefore I hope I shall live and die in your favour.

\* This paper was written in Greek characters, soon after his access to king James I. which had been promised him in

I have this farther to say in the nature of a humble oblation; for things once dedicated and vowed cannot lose their character, nor be made common. I ever vowed myself to your service. Therefore,

First, if your Majesty do at any time think it fit, for your affairs, to employ me again publicly upon the stage, I shall so live and spend my time, as neither discontinuance shall disable me, nor adversity shall discourage me, nor any thing, that I shall do, give any scandal or envy upon me.

Secondly, if your Majesty shall not hold that fit; yet, if it shall please you at any time to ask my opinion, or require my propositions privately by my lord marquis, or any of your counsellors, that is my friend, touching any commission or business; for, as Ovid said, "Est aliquid luce patente minus;" I shall be glad to be a labourer, or pioneer in your service.

Lastly, and chiefly, because your Majesty is an universal scholar, or rather master, and my pen (as I may \* it, passed \*) gained upon the world, your Majesty would appoint me some task, or literary province, that I may serve you *calamo*, if not *consilio*.

I know that I am censured of some conceit of mine ability or worth: but I pray your Majesty, impute it to desire, *possunt quia posse videntur*. And again, I should do some wrong to your Majesty's school, if, in sixteen years access and near service, I should think I had learned, or laid in, nothing.

May it please your Majesty, I have borne your image in metal; and I shall keep it in my heart, while I live.

That his Majesty's business never miscarried in my hands, I do not impute to any extraordinary ability in myself; but to my freedom from particular, either friends, or ends, and my careful receipt of his Majesty's directions, being, as I have formerly said to him, but as a bucket and cistern to that fountain; a bucket to draw forth, a cistern to preserve.

I may allude to the three petitions of the Litany, "Libera nos, Domine; parce mihi, Domine; et exaudi nos, Domine." First, the first, I am persuaded, his Majesty hath a mind to do it, and could not conveniently in respect of his affairs. For the second, he had done it in my fine and pardon. For the third, I had likewise performed, in restoring to the light of his countenance.

There be mountebanks, as well in the civil body as in the natural. I ever served his Majesty with modesty; no shouldering, no undertaking.

Seneca saith, "Tam otii debet constare ratio quam negotii." So I make his Majesty oblation of both.

For envy, it is an almanack of the last year; and as a friend of mine said, the parliament died penitent towards me.

Of my offences, far be it from me to say, "dat veniam corvis, vexat censura Columbas:" but I will say that I have good warrant for; "they were not the greatest offenders in Israel, upon whom the wall of Shilo fell."

What the king bestowed upon me, will be farther seen, than upon Paul's steeple.

a letter of the marquis of Buckingham, from Newmarket, November 13, 1622.

My story is proud, I may thank your Majesty ; for I heard him note of Tasso, that he could know which poem he made when he was in good condition, and which when he was a beggar. I doubt he could make no such observation of me.

My lord hath done many things to show his greatness. This of mine is one of them, that shows his goodness.

*Patron*  
I am like ground fresh. If I be left to myself, I will grow and bear natural philosophy : but if the king will plough me up again, and sow me on, I hope to give him some yield.)

Kings do raise and pull down with reason ; but the greatest work is reasoning.

For my hap, I seek an *otium*, and, if it may be, a fat *otium*.

I am said to have a feather in my head. I pray God some are not wild in their head, that gird not well.

I am too old, and the seas are too long, for me to double the Cape of Good Hope.

Ashes are good for somewhat ; for lees, for salts. But I hope I am rather embers than ashes, having the heat of good affections, under the ashes of my fortunes.

Your Majesty hath power : I have faith. Therefore a miracle may be soon wrought.

I would live to study, and not study to live ; yet I am prepared for *dats obolum Belisario* ; and I that have borne a bag, can bear a wallet.

#### FOR MY PEN :

- If active, 1. The reconciling of laws.  
2. The disposing of wards, and generally education of youth.  
3. Limiting the jurisdiction of courts, and prescribing rules for every of them.

#### REGLEMENT OF TRADE.

- If contemplative, 1. Going on with the story of Henry the eighth.  
2. General Treatise of *de Legibus et Justitia*.  
3. The Holy War.

#### FOR MY LORD OF BUCKINGHAM.

These I rank high amongst his favours.

To the king of \* \* \* that the goodness of his nature may strive with the goodness of his fortune.

He had but one fault, and that is, that you cannot mar him with any accumulating of honours upon him.

Now after this sunshine, and little dew, that save war.

Whales will overturn your boat, or bark, or of admiral, or other.

#### FOR THE PRINCE.

Ever my chief patron.

The work of the Father is creation ; of the Son redemption.

You would have drawn me out of the fire ; now out of the mire.

To ask leave of the king to kiss the prince's hands if he be not now present.

Indorsed,  
*Mem. of access.*

TO THE LORD VISCOUNT ST. ALBAN.

MY MOST HONOURED LORD,

SINCE my last to your lordship, I find, by Mr. Johnson, that my lord treasurer is not twice in one mind, or Sir Arthur Ingram not twice in one tale. For Sir Arthur, contrary to his speech but yesterday with me, puts himself now, as it seems, in new hopes to prevail with my lord treasurer for your lordship's good and advantage, by a proposition, sent by Mr. Johnson, for the altering of your patent to a new mould, more safe than the other, which he seemed to dissuade, as I wrote to your lordship. I like my lord treasurer's heart to your lordship, so much every day worse than other, especially for his coarse usage of your lordship's name in his last speech, as that I cannot imagine he means you any good. And therefore, good my lord, what directions you shall give herein to Sir Arthur Ingram, let them be as safe ones, as you can think upon : and that your lordship surrender not your old patent, till you have the new under seal, lest my lord keeper should take toy, and stop it there. And I know your lordship cannot forget they have such a savage word among them, as *fleecing*. God in heaven bless your lordship from such hands and tongues ; and then things will mend of themselves.

Your lordship's, in all humbleness to honour and serve you,

T. MEAUTYS.

This Sunday morning.

Indorsed,  
25th of November [1622].

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I FIND my lord treasurer, after so many days and appointments, and such certain messages and promises, doth but mean to coax me, it is his own word of old, and to saw me asunder, and to do just nothing upon his Majesty's gracious reference, nobly procured by your lordship for this poor remnant. My lord, let it be your own deed ; and, to use the prayers of the Litany, good Lord deliver me from this servile dependence ; for I had rather beg and starve, than be fed at that door.

God ever prosper your lordship.

Your lordship's most bounden and faithful servant,

FR. ST. ALBAN.

Bedford-house, this

Indorsed,

To Buckingham, about lord treasurer Cranfield's using of him.

*Remembrances of the Lord Viscount St. Alban, upon his going to the lord treasurer.\**

MY LORD,

For past matters, they are memorial with me. I thank God I am so far from thinking to retrieve a fortune, as I did not mark where the game fell. I ascribe all to Providence. Your lordship hath greatness; and I hope you will line it with goodness. Of me you can have no use; but you may have honour by me, in using me well: for my fortune is much in your hands.

For Sir G. I heard by Sir Arthur,† you thought well of my dealing to him; for so Ingram told me.

But I doubt he reported somewhat amiss of me, that procured that warrant; since which he thinks he may bring me to his own conditions, never comes to me, flies from that he had agreed; so to conclude with the letter upon even terms.

For the king, I must submit. Ingram told me there should be a favour in it, till I might sue to the king.

The sequestration as much as a resumption; for if it be as in the king's hands, all will go back; so it requires a farmer.

My pension and that the rewards of my long service, and relief of my present means. In parliament he said, he would not have me know what want meant.

L.A. B.‡

Of York-house garden:

Of New-hall:

Of my being with my lord treasurer:

Of my business.

It is well begun: I desire it may be your act.

It is nothing out of the king's purse: it laid fair; a third part of the profit.

The king bestows honour upon reward, one honour upon alms and charity.

Time, I hope, will work this, or a better.

I know my lord will not forsake me.

He can have but one mother. Friends wayfarers, some to Waltham, some to Ware, and where the ways part, farewell.

I do not desire to stage myself, nor pretensions, but for the comfort of a private life. Yet will I be ever at your and the king's call. Malcontent or busy-body, I scorn to be.

Though my lord shall have no use of me, yet he shall have honour by me.

For envy, the almanack of that year, is past.

You may observe last parliament, though a high-aiming parliament, yet not a petition, not a clamour, not a motion, not a mention of me. Visitations by all the noblemen about the town.

A little will make me happy; the debts I have paid.

\* These are written in Greek characters. † Ingram.

‡ Lady Buckingham, mother of the duke.

§ Henry Cary, viscount Falkland.

¶ Two days before the marquis of Buckingham set out privately, with the prince, for Spain.

I shall honour my lord with pen and words; and be ready to give him faithful and free counsel, as ready as when I had the seal; and mine ever *sua-vibus modis* for safety, as well as for greatness.

The king and the prince, I hear for certain, well affected.

To dine with:

To go to New-hall.

TO THE MARQUIS OF BUCKINGHAM.

EXCELLENT LORD,

I PERCEIVE this day, by Mr. Comptroller,§ that I live continually in your lordship's remembrance and noble purposes concerning my fortunes, as well for the comfort of my estate, as for countenancing me otherwise by his Majesty's employments and graces; for which I most humbly kiss your hands, leaving the times to your good lordship; which, considering my age and wants, I assure myself, your lordship will the sooner take into your care. And for my house at Gorchambury, I do infinitely desire your lordship should have it; and howsoever I may treat, I will conclude with none, till I know your lordship's farther pleasure, ever resting

Your lordship's most obliged and faithful servant,

Bedford-house, this 5th of Feb. 1622.||

TO THE LORD VISCOUNT ST. ALBAN.

MY VERY GOOD LORD,

I HAVE received, by this bearer, the privy seal for the survey of coals, which I will lay aside, until I shall hear farther from my lord steward,¶ and the rest of the lords.

I am ready to do as much as your lordship desireth, in keeping Mr. Cotton\*\* off from the violence of those creditors: only himself is, as yet, wanting in some particular directions.

I heartily thank your lordship for your book; and all other symbols of your love and affection, which I will endeavour upon all opportunities to deserve: and, in the mean time, do rest

Your lordship's assured faithful poor friend and servant,

JO. LINCOLN, C. S.

Westminster-college, this 7th of February, 1622.

To the right honourable his very good lord, the lord viscount St. Alban.

¶ Duke of Lenox.

\*\* Probably the surety of lord Bacon, for the debt to Harris the goldsmith, mentioned in his lordship's letter of May 30, 1622.

## TO THE MARQUIS OF BUCKINGHAM.

EXCELLENT LORD,

THOUGH your lordship's absence\* fall out in an ill time for myself; yet because I hope in God this noble adventure will make your lordship a rich return in honour, abroad and at home, and chiefly in the inestimable treasure of the love and trust of that thrice-excellent prince; I confess I am so glad of it, as I could not abstain from your lordship's trouble in seeing it expressed by these few and hasty lines.

I beseech your lordship, of your nobleness vouchsafe to present my most humble duty to his highness, who, I hope, ere long will make me leave king Henry the Eighth, and set me on work in relation of his highness's adventures.

I very humbly kiss your lordship's hands, resting ever

Your lordship's most obliged friend and servant.

February 21, 1622.

## TO THE MARQUIS OF BUCKINGHAM.

EXCELLENT LORD,

UPON the repair of my lord of Rochford unto your lordship, whom I have ever known so fast and true a friend and servant unto you; and who knows likewise so much of my mind and affection towards your lordship, I could not but kiss your lordship's hands, by the duty of these few lines.

My lord, I hope in God, that this your noble adventure will make you a rich return, especially in the inestimable treasure of the love and trust of that thrice-excellent prince. And although, to a man that loves your lordship so dearly as I do, and knows somewhat of the world, it cannot be, but that in my thoughts there should arise many fears, or shadows of fears, concerning so rare an accident; yet nevertheless, I believe well, that this your lordship's absence will rather be a glass unto you, to show you many things, whereof you may make use hereafter, than otherwise any hurt or hazard to your fortunes, which God grant. For myself, I am but a man desolate till your return, and have taken a course accordingly. Vouchsafe, of your nobleness, to remember my most humble duty to his highness. And so God, and his holy angels, guard you both going and coming.

Indorsed, March 10, 1622.

\* In Spain.

† He was son and heir of Walter Vaughan, of Golden Grove, in Caermarthenshire, Esq. and was created lord Vaughan, in the year 1620. The lord St. Alban, after he was delivered from his confinement in the Tower, was permitted to stay at Sir John Vaughan's house, at Parson's Green, near Fulham.

‡ In a MS. letter of Mr. Chamberlain to Sir Dudley Carleton, dated at London, March 8, 1622-3, is the following passage: "The lord of St. Alban is in his old remitter, and came to lie in his old lodgings at Gray's-Inn; which is the fulfilling of a prophecy of one Locke, a familiar of his of the same

## TO SIR FRANCIS COTTINGTON, SECRETARY TO THE PRINCE.

GOOD MR. SECRETARY,

THOUGH I wrote so lately unto you by lord Rochford; yet upon the going of my lord Vaughan,† the prince's worthy and trusty servant, and my approved friend, and your so near ally, I could not but put this letter into his hand, commending myself and my fortunes unto you. You know the difference of obliging men in prosperity and adversity, as much as the sowing upon a pavement and upon a furrow new made. Myself for quiet, and the better to hold out, am retired to Gray's-Inn:‡ for when my chief friends were gone so far off, it was time for me to go to a cell. God send us a good return of you all.

I ever rest, &c.

My humble service to my lord marquis, to whom I have written twice. I would not cloy him. My service also to the count Gondomar, and lord of Bristol.

Indorsed,

To Mr. Secretary, Sir Francis Cottington, March 22, 1622.

## TO THE KING.

IT MAY PLEASE YOUR MAJESTY,

Now that my friend is absent, for so I may call him still, since your Majesty, when I waited on you, told me, that fortune made no difference, your Majesty remaineth to me king, and master, and friend, and all. Your beadsman, therefore, addresseth himself to your Majesty for a cell to retire into. The particular I have expressed to my very friend, Mr. Secretary Conway. This help, which costs your Majesty nothing, may reserve me to do your Majesty service, without being chargeable unto you: for I will never deny, but my desire to serve your Majesty is of the nature of the heart, that will be *ultimum moriens* with me.

God preserve your Majesty, and send you a good return of the treasure abroad, which passeth all Indian fleets.

Your Majesty's most humble and devoted servant,

FR. ST. ALBAN.

March 25, 1623.

Indorsed,

To the king touching the provostship of Eton.§

house, that knew him *istius et is cute*; who, seeing him go thence in pomp, with the great seal before him, said to divers of his friends, "We shall live to have him here again."

§ Mr. Thomas Murray, the provost of that college, having been cut for the stone, died April 1, 1623. The lord keeper Williams, in an unpublished letter to the marquis of Buckingham, dated 11 April, 1623, has the following passage: "Mr. Murray, the provost of Eton, is now dead: the place stayed by the fellows and myself until your lordship's pleasure be known. Whomever your lordship shall name I shall like of, though it be Sir William Becher, though this provostship never descended so low. The king named unto

TO MR. SECRETARY CONWAY.

GOOD MR. SECRETARY,

WHEN you did me the honour and favour to visit me, you did not only in general terms express your love unto me, but, as a real friend, asked me whether I had any particular occasion, wherein I might make use of you? At that time I had none: now there is one fallen. It is, that Mr. Thomas Murray, provost of Eton, whom I love very well, is like to die. It were a pretty cell for my fortune. The college and school, I do not doubt, but I shall make to flourish. His Majesty, when I waited on him, took notice of my wants, and said to me, that as he was a king, he would have care of me. This is a thing somebody would have; and costs his Majesty nothing. I have written two or three words to his Majesty, which I would pray you to deliver. I have not expressed this particular to his Majesty, but referred it to your relation. My most noble friend, the marquis, is now absent. Next to him, I could not think of a better address than to yourself, as one likeliest to put on his affection. I rest

Your honour's very affectionate friend,

FR. ST. ALBAN.

Gray's-Inn, the 25th of March, 1623.

SECRETARY CONWAY, TO THE LORD  
VISCOUNT ST. ALBAN.\*

RIGHT HONOURABLE,

I DO so well remember the motives, why I presented you so with my humble service, and particular application of it to your particular use, as I neither forget nor repent the offer. And I must confess a greater quickening could not have been added to my resolution to serve you, than the challenge you lay to my duty, to follow, in his absence, the affection of your most noble and hearty friend the marquis.

I lost no time to deliver your letter, and to contribute the most advantageous arguments I could. It seems your motion had been more than enough, if a former engagement to Sir William Becher upon the marquis his score had not opposed it.

I will give you his Majesty's answer, which was; That he could not value you so little, or conceive you would have humbled your desires and your worth so low: That it had been a great deal of ease to him to have had such a scantling of your mind; to which he could never have laid so unequal a measure. His Majesty adding farther, that since your intentions moved that way, he would study your accommodation. And it is not out of hope, but that he may give some other contentment to Sir William Becher in due time, to accommodate your lordship,

of whom, to your comfort, it is my duty to tell you, his Majesty declared a good opinion, and princely care and respect.

I will not fail to use time and opportunity to your advantage: and if you can think of any thing to instruct my affection and industry, your lordship may have the more quick and handsome proof of my sure and real intentions to serve you, being indeed

Your lordship's affectionate servant,

ED. CONWAY.

Royston, March 27, 1623.

TO COUNT GONDOMAR, THEN IN SPAIN.

ILLUSTRISSIME COMES,

MULTA sunt, quæ mihi animos addunt, et quandam alacritatem conciliant, ut dominationem tuam illustrissimam hoc tempore de meis fortunis compellam et deprecer. Primum, idque vel maximum, quod cum tam arcta regum nostrorum conjunctio jam habeatur pro transacta, inde et tu factus sis intercessor tanto potentior; et mihi nullus jam subsit scrupulus universas fortunas meas viro tanto, licet extero, debendi et acceptas referendi. Secundum, quod cum ea, quæ dominatio tua illustrissima de me promisso tenus præsens impetraveras, neque ullam repulsam passa sint, neque tamen ad exitum perducta; videatur hoc innuere providentia divina, ut hoc opus me a calamitate erigendi plane tuum sit initio et fine. Tertium, quod stellæ duæ, quæ mihi semper fuerunt propitiæ, major et minor, jam splendent in urbe vestra, unde per radios auxiliares et benignos amoris erga me tui eum possint nancisci influxum, qui me in aliquo non indigno priore fortuna gradu collocet. Quartum, quod perspexi ex literis, quas ad amicum meum intimum dominum Tobiam Matthæum nuper scripsisti, memoriam mei apud te vivere et vigere, neque tanta negotiorum arduorum et sublimium mole, quanta dom. tuæ incumbit, obrutam esse aut extinctam. Postremum accidit et illud, quod postquam ex favore excellent. Domini marchionis ad regis mei conspectum et colloquium admisus fuerim, videar mihi in statu gratiæ collocatus. Non me allocutus est rex ut criminis, sed ut hominem tempestate dejectum; et simul constantem meum et perpetuum in sermone suo industriæ et integritatis tenorem prolixè agnovit, cum insigni, ut videbatur, affectu: unde major mihi oboritur spes, manente ejus erga me gratia, et extincta omni ex diuturnitate invidia, labores illustr. domin. tuæ pro me non incassum fore. Ipse interim nec otio me dedi, nec rebus me importune immiscui, sed in iis vivo, et ea tracto, quæ nec priores, quos gessi, honores dedecant, et posteris memoriam nominis mei haud ingratam fortasse relinquent. Itaque spero me non indignam fore materiam, in qua et potentiæ et amicitiae tuæ vis elucescat et celebretur; ut non minus in privata

me yesterday morning Sir Albertus Morton, Sir Dudley Carleton, and Sir [Robert] Aiton, our late queen's secretary. But in my opinion, though he named him last, his Majesty inclined to this Aiton most. It will rest wholly upon your lordship to name the man. It is somewhat necessary he be a

good scholar, but more that he be a good husband, and careful manager, and a stayed man; which no man can be, that is so much indebted as the lord of St. Alban's."

\* From the collections of Robert Stephens, Esq. deceased.

hominis fortuna potuisse videaris, quam in negotiis publicis. Deus illustriss. dominationem tuam incolumem servet et felicitate cumulet.

Indorsed,

*My lord St. Alban's first letter to Gondomar, into Spain, March 28, 1623.*

TO THE MARQUIS OF BUCKINGHAM, IN SPAIN.

EXCELLENT LORD,

FINDING so trusty a messenger as Sir John Epsley, I thought it my duty to put these few lines into his hands. I thank God, that those shadows, which either mine own melancholy, or my extreme love to your lordship, did put into my mind concerning this voyage of the prince and your lordship, rather vanish and diminish, than otherwise. The gross fear is past of the passage of France. I think you had the ring, which they write of, that, when the seal was turned to the palm of the hand, made men go invisible. Neither do I hear of any novelty here worth the esteeming.

There is a general opinion here, that your lordship is like enough to return, and go again, before the prince come: which opinion, whether the business lead you to do so or no, doth no hurt; for it keeps men in awe.

I find, I thank God, some glimmering of the king's favour, which your lordship's noble work of my access, no doubt, did chiefly cherish. I am much bound to Mr. Secretary Conway. It is wholly for your lordship's sake; for I had no acquaintance with him in the world. By that I see of him, he is a man fit to serve a great king, and fit to be a friend and servant to your lordship. Good my lord, write two or three words to him, both of thanks, and a general recommendation of me unto him.

Vouchsafe, of your nobleness, to present my most humble duty to his highness. We hear he is fresh in his person, and becomes this brave journey in all things. God provide all things for the best.

I ever rest, &c.

Indorsed, March 30, 1623.

TO MR. SECRETARY CONWAY.

GOOD MR. SECRETARY,

I AM much comforted by your last letter, wherein I find, that his Majesty, of his mere grace and goodness, vouchsafeth to have a care of me, a man out of sight, out of use; but yet his, as the Scripture

\* Sir William had not, however, that post; but, in lieu of it, the promise of 2500*l.* upon the fall of the first of the six clerks places, and was permitted to keep his clerkship of the council. MS. letter of Mr. Chamberlain to Sir Dudley Carleton, dated at London, July 24, 1624. The provostship was given to Sir Henry Wotton, who was instituted into it the 26th of that month, having purchased it by a surrender of a grant of the reversion of the mastership of the rolls, and of another office, which was fit to be turned into present money, which he then,

saith, God knows those that are his. In particular, I am very much bound to his Majesty, and I pray you, Sir, thank his Majesty most humbly for it, that, notwithstanding the former designment of Sir William Becher,\* his Majesty, as you write, is not out of hope, in due time, to accommodate me of this cell, and to satisfy him otherwise. Many conditions, no doubt, may be as contenting to that gentleman, and his years may expect them. But there will hardly fall, especially in the spent hour-glass of my life, any thing so fit for me, being a retreat to a place of study so near London, and where, if I sell my house at Gorbambury, as I purpose to do, to put myself in some convenient plenty, I may be accommodated of a dwelling for summer time. And therefore, good Mr. Secretary, further this his Majesty's good intention, by all means, if the place fall.

For yourself, you have obliged me much. I will endeavour to deserve it: at least your nobleness is never lost: and my noble friend, the marquis, I know, will thank you for it.

I was looking of some short papers of mine touching usury,† to grind the teeth of it, and yet make it grind to his Majesty's mill in good sort, without discontentment or perturbation. If you think good, I will send it to his Majesty, as the fruit of my leisure. But yet I would not have it come from me, not for any tenderness in the thing, but because I know, in courts of princes, it is usual, *non res, sed displicet auctor.* God keep your honour, &c.

Indorsed,

*To Mr. Secretary Conway, touching the provostship of Eton, March 31, 1623.*

TO COUNT GONDOMAR.

ILLUSTRISSIME COMES,

PRIMO loco, ut debeo, gratulor dominationi tue illustrissimæ novum honoris tui gradum per se sublimem, sed ex causa, propter quam evectus es, haud parum nobilitatum. Profectio dom. Tobix Mathæi, qui mihi est tanquam alter ego, ut dominatio tua illustrissima optimè novit, in illas partes, memoriam mihi renovat eximii tui erga me favoris, cum me pluries, paulo ante discessum tuum, in campis, in urbe visitares, et prolixè de voluntate tua erga fortunas meas polliceris. Quinetiam tam apud regem meum quam apud marchionem de illis sedulo ageres, ut etiam promissum ab illis de postulatis meis obtinueris. Quod si illo tempore quis mihi genius aut vates in aurem insurrasset et dixisset, Mitte ista in præsens: Britannia est regio paulo frigidior: differ rem donec princeps Gallix et marchio Buckinghamix et comes de Gondomar conveniant in

and afterwards, much wanted [Life of him by Mr. Isaac Walton]: for when he went to the election at Eton, soon after his being made provost, he was so ill provided, that the fellows of the college were obliged to furnish his bare walls, and whatever else was wanting. MS. letter of Mr. Chamberlain, Aug. 7, 1624.

† In his works is published, "A Draught of an Act against an usurious Shift of Gain, in delivering of Commodities instead of Money."

Hispania, ubi hujusmodi fructus clementius maturascant: quin et viderit idem dom. Tob. Matthæum, qui illic, quemadmodum nunc, instabit, et negotium promovebit: scilicet risissem, sed fidem prorsus non adhibuissem. Quare, illustrissime comes, cum talia miracula edideris in fortuna publica, etiam in fortuna amici et servi tui privata eniteat virtus tua. Miraculum enim potentiæ et fidei proles est. Tu potentiam habes, ego fide abundo, si modo digna sit res ad quam dominatio tua illustrissima manum salutarem porrigat. Id tempus optime demonstrabit.

Cum nuper ad dominationem tuam illustrissimam scripserim, eo brevior fio. Hoc tantum a te peto, ut etiam inter negotia, quæ feliciter administras, consuetam digneris dom. Matthæo libertatem proponendi et consulendi apud te ea, quæ in rem meam fore videbimus.

Deus illustrissimam tuam dominationem servet incolumem, ut enixe optat, etc.

---

TO THE EARL OF BRISTOL, AMBASSADOR  
IN SPAIN.

MY VERY GOOD LORD,

THOUGH I have written to your lordship lately, yet I could not omit to put a letter into so good a hand as Mr. Matthew's, being one, that hath often made known unto me how much I am beholden to your lordship: and knoweth likewise in what estimation I have ever had your lordship, not according to your fortunes, but according to your inward value. Therefore, not to hold your lordship in this time of so great business, and where I have so good a mean as Mr. Matthew, who, if there be any thing that concerns my fortune, can better express it than myself, I humbly commend myself and my service to your lordship, resting, &c.

---

TO THE PRINCE.

GOOD MR. SECRETARY,

THOUGH I think I have cloyed you with letters, yet had I written a thousand before, I must add one more by the hands of Mr. Matthew, being as true a friend as any you or I have; and one, that made me so happy, as to have the assurance of our friendship; which if there be any stirring for my good, I pray practise in so good a conjunction as his.

I ever rest, &c.

---

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

BECAUSE Mr. Clarke is the first, that hath been sent since your departure, who gave me also the

\* The title of duke, conferred on him May 18, 1623.

comfortable news, that he met you well, I could not but visit you with my letters, who have so often visited me with your kind conferences.

My health, I thank God, is better than when you left me; and, to my thinking, better than before my last sickness. This is all I need to write of myself to such a friend.

We hope well, and it is generally rather spoken, than believed, that his highness will return very speedily. But they be not the best pieces in painting, that are dashed out in haste. I hope, if any thing want in the speed of time, it will be compensated in the fruit of time, that all may sort to the best.

I have written a few words of duty and respect only to my lord marquis, and Mr. Secretary. I pray you kiss the count of Gondomar's hand.

God keep you.

FR. ST. ALBAN.

May 2, 1623.

---

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

I WRITE now only to congratulate with your Grace your new honour;\* which because I reckon to be no great matter to your fortune, though you are the first English duke that hath been created since I was born, my compliment shall be the shorter. So having turned almost my hopes of your Grace's return, by July, into wishes, and not to them neither, if it should be any hazard to your health, I rest, &c.

Vouchsafe, of your nobleness, to present my most humble duty to his highness. Summer is a thirsty time; and sure I am, I shall infinitely thirst to see his highness's and your Grace's return.

---

THE DUKE OF BUCKINGHAM TO THE LORD  
VISCOUNT ST. ALBAN.

MY GOOD LORD,

I HAVE received your hearty congratulation for the great honour and gracious favour which his Majesty hath done me; and I do well believe, that no man is more glad of it than yourself.

Tobie Matthew is here; but what with the journey, and what with the affliction he endures, to find, as he says, that reason prevails nothing with these people, he is grown extreme lean, and looks as sharp as an eyas.† Only he comforts himself with a conceit, that he is now gotten on the other side of the water, where the same reason, that is valuable in other parts of the world, is of no validity here; but rather something else, which yet he hath not found out.

I have let his highness see the good expressions of your lordship's care and faithful affection to his

† A young hawk, just taken out of the nest.

person; and shall ever be ready to do you, in all things, the best service that I can.

So wishing your lordship much happiness, I rest  
Your lordship's faithful friend and humble  
servant,

G. BUCKINGHAM.

Madrid, this 29th of May, 1623, *st. vet.*

TO THE DUKE OF BUCKINGHAM, IN SPAIN.

EXCELLENT LORD,

I HUMBLY thank your Grace for your letter of the 29th of May; and that your Grace doth believe, that no man is gladder of the increase of your honour and fortune, than I am; as, on the other part, no man should be more sorry, if it should in the least degree decline, nor more careful, if it should so much as labour. But of the first, I speak as a thing that is: but of the two latter, it is but a case put, which I hope I shall never see. And, to be plain with your Grace, I am not a little comforted to observe, that, although in common sense and experience, a man would have doubted, that some things might have sorted to your prejudice; yet in particulars we find nothing of it. For a man might reasonably have feared, that absence and discontinuance might have lessened his Majesty's favour: no such thing has followed. So likewise, that any, that might not wish you well, should have been bolder with you. But all is continued in good compass. Again, who might not have feared, that your Grace being there to manage, in great part, the most important business of Europe, so far from the king, and not strengthened with advice there, except that of the prince himself, and thus to deal with so politic a state as Spain, you should be able to go through as you do? and yet nothing, as we hear, but for your honour, and that you do your part. Surely, my lord, though your virtues be great, yet these things could not be, but that the blessing of God, which is over the king and the prince, doth likewise descend upon you as a faithful servant; and you are the more to be thankful to God for it.

I humbly thank your Grace, that you make me live in his highness's remembrance, whom I shall ever bear a heart to honour and serve. And I much joy to hear of the great and fair reputation, which at all hands are given him.

For Mr. Matthew, I hope by this time he hath gathered up his crumbs; which importeth much, I assure your Grace, if his cure must be, either by finding better reason on that side the line, or by discovering what is the motion that moveth the wheels, that, if reason do not, we must all pray for his being in good point. But in truth, my lord, I am glad he is there; for I know his virtues, and particularly his devotion to your lordship.

God return his highness and your Grace unto us safe and sound, and according to your heart's desires.

\* N. S.

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

I HAVE received your letter of the 10th of June,\* and am exceeding glad to hear you are in so good health. For that, which may concern myself, I neither doubt of your judgment in choosing the fittest time, nor of your affection in taking the first time you shall find it. For the public business, I will not turn my hopes into wishes yet, since you write as you do; and I am very glad you are there, and, as I guess, you went in good time to his lordship.

For your action of the case, it will fall to the ground; for I have not heard from the duke, neither by letter nor message, at this time.

God keep you. I rest always

Your most affectionate and faithful servant,

FR. ST. ALBAN.

Gray's-Inn, 17th of June, 1623.

I do hear from Sir Robert Ker, and others, how much beholden I am to you.

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

I THANK you for your letter of the 26th of June, and commend myself unto your friendship, knowing your word is good assurance, and thinking I cannot wish myself a better wish, than that your power may grow to your will.

Since you say the prince hath not forgot his commandment, touching my History of Henry VIII. I may not forget my duty. But I find Sir Robert Cotton, who poured forth what he had, in my other work, somewhat dainty of his materials in this.

It is true, my labours are now most set to have those works, which I had formerly published, as that of "Advancement of Learning," that of "Henry VII." that of the "Essays," being retractate, and made more perfect, well translated into Latin by the help of some good pens, which forsake me not, for these modern languages will, at one time or other, play the bankrupts with books; and since I have lost much time with this age, I would be glad, as God shall give me leave, to recover it with posterity.

For the essay of friendship, while I took your speech of it for a cursory request, I took my promise for a compliment. But since you call for it, I shall perform it.†

I am much beholden to Mr. Gage for many expressions of his love to me: and his company, in itself very acceptable, is the more pleasing to me, because it retaineth the memory of yourself.

This letter of yours, of the 26th, lay not so long by you, but it hath been as speedily answered by me, so as with Sir Francis Cottington I have had no speech since the receipt of it. Your former let-

† Among his "Essays," published in quarto, and dedicated to the duke of Buckingham, is one upon "Friendship."

ters, which I received from Mr. Griesley, I had answered before, and put my letter into a good hand.

For the great business, God conduct it well. Mine own fortune hath taught me expectation.

God keep you.

Indorsed,

*To Mr. Matthew, into Spain.*

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

I HAVE received your letter sent by my lord of Andover; and, as I acknowledged your care, so I cannot fit it with any thing, that I can think on for myself: for since Gondomar, who was my voluntary friend, is in no credit, neither with the prince, nor with the duke, I do not see what may be done for me there; except that which Gondomar hath lost, you have found; and then I am sure my case is amended; so, as with a great deal of confidence, I commend myself to you, hoping that you will do what in you lieth, to prepare the prince and duke to think of me upon their return. And if you have any relation to the infanta, I doubt not but it shall be also to my use.

God keep you.

Your most affectionate and assured friend, &c.

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

THOUGH I have formerly given your Grace thanks for your last letter, yet being much refreshed to hear things go so well, whereby we hope to see you here shortly, your errand done, and the prince within the veil; I could not contain, but congratulate with your lordship, seeing good fortune, that is God's blessing, still follow you. I hope I have still place in your love and favour; which if I have, for other place, it shall not trouble me. I ever rest

Your Grace's most obliged and faithful servant.

July, 22, 1623.

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

UPON Mr. Clarke's despatch, in troth I was ill in health, as he might partly perceive. Therefore I wrote to my true friend, and your Grace's devoted servant, Mr. Matthew, to excuse me to your Grace for not writing. Since, I thank God, I am pretty well recovered; for I have lain at two wards, one against my disease, the other against my physicians, who are strange creatures.

My lord, it rejoiceth me much, that I understand from Mr. Matthew, that I live in your Grace's remembrance; and that I shall be the first man, that

you will think on upon your return: which if your Grace perform, I hope God Almighty, who hath hitherto extraordinarily blessed you in this rocky business, will bless you the more for my sake. For I have had extraordinary tokens of his divine favour towards me, both in sickness and in health, prosperity and adversity.

Vouchsafe to present my most humble duty to his highness, whose happy arrival will be a bright morning to all. I ever rest

Your Grace's most obliged and faithful servant,

FR. ST. ALBAN.

Gray's-Inn, Aug. 29, 1623.

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

I HAVE gotten a little health; I praise God for it. I have therefore now written to his Grace, that I formerly, upon Mr. Clarke's despatch, desired you to excuse me for not writing, and taken knowledge, that I have understood from you, that I live in his Grace's remembrance; and that I shall be his first man, that he will have care of upon his return. And although your absence be to me as uncomfortable to my mind, as God may make it helpful to my fortunes; yet it is somewhat supplied by the love, freedom, and often visitations of Mr. Gage; so as when I have him, I think I want you not altogether.

God keep you.

Your most affectionate and much obliged friend, &c,

*Minutes of a Letter to the Duke of Buckingham.*

THAT I am exceeding glad his Grace is come home\* with so fair a reputation of a sound protestant, and so constant for the king's honour and errand.

His Grace is now to consider, that his reputation will vanish like a dream, except now, upon his return, he do some remarkable act to fix it, and bind it in.

They have a good wise proverb in the country, whence he cometh, taken I think from a gentlewoman's sampler, "Qui en no da nudo, pierdo punto," "He that tieth not a knot upon his thread, loseth his stitch."

Any particular I, that live in darkness, cannot propound. Let his Grace, who seeth clear, make his choice: but let some such thing be done, and then this reputation will stick by him; and his Grace may afterwards be at the better liberty to take and leave off the future occasions, that shall present.

\* The prince and duke arrived from Spain in London, October 6, 1623.

## TO THE KING.

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

I SEND, in all humbleness, to your Majesty, the poor fruits of my leisure. This book \* was the first thing that ever I presented to your Majesty; † and it may be, will be the last. For I had thought it should have been *posthuma proles*. But God hath otherwise disposed for a while. It is a translation, but almost enlarged to a new work. I had good helps for the language. I have been also mine own *index expurgatorius*, that it may read in all places. For since my end of putting it into Latin was to have it read every where, it had been an absurd contradiction to free it in the language, and to pen it up in the matter. Your Majesty will vouchsafe graciously to receive these poor sacrifices of him, that shall ever desire to do you honour while he breathes, and fulfilleth the rest in prayers.

Your Majesty's true beadsman, and most humble servant, &c.

*Todos duelos con pan son buenos: itaque det vestra Majestas obolum Belisario.*

## TO THE PRINCE.

IT MAY PLEASE YOUR EXCELLENT HIGHNESS,

I SEND your highness, in all humbleness, my book of "Advancement of Learning," translated into Latin, but so enlarged as it may go for a new work. It is a book, I think, will live, and be a citizen of the world, as English books are not. For Henry the Eighth, to deal truly with your highness, I did so despair of my health this summer, as I was glad to choose some such work, as I might compass within days; so far was I from entering into a work of length. Your highness's return hath been my restorative. When I shall wait upon your highness, I shall give you a farther account. So I most humbly kiss your highness's hands, resting

Your highness's most devoted servant.

I would, as I wrote to the duke in Spain, I could do your highness's journey any honour with my pen. It began like a fable of the poets; but it deserveth all in a piece a worthy narration.

*Conf. Buc. †*

MY LORD,

MY counsels bear not so high an elevation, as to have for their mark business of estate. That, which I level at, is your standing and greatness, which nevertheless I hold for a main pillar of the king's service.

For a parliament, I hold it then fit, when there

\* "De Augmentis Scientiarum," printed in London, 1623, in folio. The present to king James I. is in the royal library in the British Museum.

† "The two books of Sir Francis Bacon of the Proficiency

have passed some more visible demonstrations of your power with the king, and your constancy in the way you are in: before not.

There are considerable, in this state, three sorts of men: the party of the papists, which hate you; the party of the protestants, including those they call puritans, whose love is yet but green towards you; and particular great persons, which are most of them reconciled enemies, or discontented friends: and you must think there are a great many that will magnify you, and make use of you for the breaking of the match, or putting the realm into a war, which after will return to their old bias.

For particulars, it is good to carry yourself fair; but neither to trust too far, nor to apply too much, but keep a good distance, and to play your own game, showing yourself to have, as the bee hath, both of the honey and of the sting.

The speech now abroad is, "My lord of Buckingham's head is full of thoughts: he hath a great task; either he must break, or the match must break. He was wont to go to the king's ways; but now he goeth cross his way, he will easily lose his way."

There is a point nice to be managed, yea, and tender to be spoken of, which is your carriage between the king and the prince; so that you may lose no manner of ground with the prince, and yet the king may not think himself the more solitary, nor that you adore too much the sun-rising. Though this you may set down, that the way to have the king sure unto you is to keep great with the prince.

*Conf. with Buc. December 17, 1623.*

You march bravely: but methinks you do not draw up your troops.

You must beware of these your pardons. If we make men less in awe, and respect you, "urina chiara fa fico al medico."

The points of the general advice.

If a war be proceeded in; to treat a strait league with France, under name of a renovation of a match with France. Three secret articles, the liberty of the German nation, whereof there is a fresh precedent of Henry the second of France, that took it into protection prosperously, and to the arrest of the emperor Charles's greatness. 2. The conservation of the liberties of the Low-Countries for the United Provinces, and open trade into the East and West Indies.

Offer of mine own service upon a commission into France.

My lord hath against him these disadvantages; the catholic party; the Spaniard; the envy and fear of particular great men; the nice point of carrying himself between the king and the prince.

The knot, which is to be tied for his reputation, must either be advancing or depressing of persons, or putting by or forwarding of actions.

and Advancement of Learning, Divine and Human:" printed at London, 1605, in quarto.

† "Conference with Buckingham."

*Conf. Buc. qu. and old store, January 2, 1623.*

THERE is not an honest man in court than Montgomery.\*

To have some opportunity by the D.'s means, to speak with the prince in presence of the duke.

To think, whether it be fit for me to speak with the king, and to seek access before parliament; if then.

The offer of my service to live a summer, as upon mine own delight, at Paris, to settle a fast intelligence between France and us.

I have somewhat of the French: I love birds, as the king doth, and have some childish-mindedness, wherein we shall consent.

To think of Belfast's sending over into Ireland. Those, that find themselves obnoxious to parliament, will do all they can, that those things, which are liket to distaste the king, be first handled.

It is not to be forgotten, that as long as great men were in question, as in my case, all things went sweetly for the king. But the second meeting, when no such thing was, the pack went higher.

Weeding time is not yet come. Cott. Car.  
qu. of Car.

The battery will be chiefly laid on the prince's part, if they find any entry.

To be the author of some counsel to the prince, that tasteth of religion and virtue, lest it be imputed, that he entertains him only in pleasures, like a Pe. Ga.

The things remarkable for your Grace, to fix and bind in the reputation which you have gained, must be either persons, or matters.

The doubt the prince is *mollis cera*, and formed *di ultima impression*. Therefore good to have sure persons about him, or at least none dangerous.

For the pardons to proceed, it is a tender business. First, whatsoever useth to be done in parliament is thankless. Then it is not good for his Grace. It will make men bolder with him. "Urina chiara fa feco al medico." Lastly, remove the envy from others, it may beat upon my lord himself, or the king.

*Conf. B. January 2, 1623.*

You have now tied a knot, as I wished you; "qui en no da nudo, pierdo punto;"† a jolly one, the parliament. Although I could have wished, that before a parliament, some remarkable thing had been done, whereby the world might have taken notice, that you stand the same in grace and power with the king. But there is time enough for that between this and parliament.‡ And besides, the very prevailing for a parliament showeth your power with the king.

\* Philip, earl of Montgomery, afterwards of Pembroke.

† "He that tieth not a knot upon his thread, lose'h his stitch."

‡ It met February 19, 1623-4.

§ William, earl of Pembroke.

¶ Sir Robert Naunton, who had been secretary of state, and was now master of the court of wards.

You march bravely. Do you draw up your troops so well?

One of these days I shall turn my lord Brooke, and say to you, "O brave Buckingham."

I will commend you to all others, and censure you only to yourself.

You bowl well, if you do not horse the bowl a hand too much. You know the fine bowler is knee almost to ground in the delivery of the cast.

Nay, and the king will put a hook in the nostrils of Spain, and lay a foundation of greatness here to his children, in these west parts. The call for me, it is book-learning. You know the king was wont to do me the honour, as to say of me, "de minimis non curat lex:" if good for any thing, for great volumes, I cannot thread needles so well.

The chamberlain:§ for his person, not effectual; but some dependences he hath, which are drawn with him. Besides, he can take no reputation from you.

Montgomery is an honest man, and a good observer. Can you do nothing with Naunton?|| Who would think now, that I name Naunton to my lord of Buckingham? But I speak to you point blank: no crooked end, either for myself, or for others' turn.

The French treaty, besides alliance, is to have three secret articles: the one, the protection of the liberty of Germany, and to avoid from it all forces thence, like to that which was concluded between the princes of Germany and Henry II.,¶ the last king except Henry IV. of value in France; for the race of the Valois were *faitneants*; and, in the name of Germany, to conclude the Grisons and Valtoline. The second, the conserving the liberties of the Low-Countries. The third, the free trade into all parts of both East and West Indies. All these import no invasive hostility, but only the uniting of the states of Europe against the growing ambition of Spain. Neither do any of these touch upon the cause of religion.

I am persuaded, the hinge of the king's affairs, for his safety and greatness, is now in Spain. I would the king had an abler instrument.

Above all, you must look to the safety of Ireland, both because it is most dangerous for this state, for the disease will ever fall to the weakest part; and besides, this early declaration against Spain, which the popish party call abrupt, and is your Grace's work, may be thought to be the danger of Ireland. It were good you called to you Belfast\*\* and Grandison,†† and ask their opinions, what is best to be done for the safety of Ireland, either by increasing the list of companies, and by contenting those that are in arrear, by paying; or by altering any governor there; or by having companies ready mustered and trained here, towards the coast of Ireland; or by having shipping in readiness, &c. For this gown commission, I like it well; but it is but paper-shot for defence.

¶ This league first arrested the greatness of the emperor, and cloistered him. *Notes of Lord Bacon.*

\*\* Arthur Chichester, baron of Belfast, who had been made lord deputy of Ireland in 1604.

†† Oliver St. John viscount Grandison, made lord deputy of Ireland in August, 1616.

If the papists be put in despair, it both endangereth Ireland, and maketh a greater difficulty in the treaty and alliance with France.

To think of a difference to be put between the Jesuits and other priests and papists, as to reduce, in some moderation, the banishment of the one, though not of the other: but to remember, that they were the reasonablest, as I take it, in the consult; and it may draw the blow of an assassin against Buckingham.

At least the going on with the parliament hath gained this, that the discourse is ceased, "My lord of Buckingham hath a great task. His head is full: either the match breaks, or his fortune breaks. He has run his courses with the stream of the king's ways; but now he goeth cross-way, he may soon lose his own way."

If your Grace go not now constantly on for religion, and round dealing with Spain, men will either think they were mistaken in you, or that you are brought about; or that your will is good, but you have no power.

Your Grace hath a great party against you, and a good rough way. The Spaniards hate you; the papists little better. In the opinion of the people, you are green, and not yet at a gage. Particulars are, for the most part, discontented friends or reconciled enemies; and that nice dividing between the *sol orient* and *occident*.

---

#### TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

I DESIRE in this, which I now presume to write to your Grace, to be understood, that my bow carrieth not so high, as to aim to advise touching any of the great affairs now on foot, and so to pass it to his Majesty through your hands; though it be true, that my good affection towards his Majesty and the prince and the public is that which will last die in me; and though I think also his Majesty would take it but well, if having been that man I have been, my honest and loyal mind should sometimes feed upon those thoughts. But my level is no farther, but to do the part of a true friend, in advising yourself for your own greatness and safety; although, even in this also, I assure myself I perform a good duty to the public service, unto which I reckon your standing and power to be a firm and sound pillar of support.

First, therefore, my lord, call to mind oft, and consider duly, how infinitely your Grace is bound to God in this one point, which I find to be a most rare piece, and wherein, either of ancient or late times, there are few examples; that is, that you are beloved so dearly, both by the king and the prince. You are not as a Lerma, or an Olivares, and many others the like, who have insinuated themselves into the favours of young princes, during the kings, their fathers, time, against the bent and inclination of the kings: but contrariwise, the king himself hath knit the knot of trust and favour between the prince

and your Grace, wherein you are not so much to take comfort in that you may seem to have two lives in your own greatness, as in this, that hereby you are enabled to be a noble instrument for the service, contentment, and heart's-ease, both of father and son. For where there is so loving and indulgent a father, and so respective and obedient a son, and a faithful and worthy servant, interested in both their favours upon all occasions, it cannot be but a comfortable house. This point your Grace is principally to acknowledge and cherish.

Next, that, which I should have placed first, save that the laying open of God's benefits is a good preparation to religion and godliness, your Grace is to maintain yourself firm and constant in the way you have begun; which is, in being, and showing yourself to be, a true and sound protestant. This is your soul's health. This is that you owe to God above, for his singular favours; and this is that which hath brought you into the good opinion and good will of the realm in general. So that, as your case differeth, as I said, from the case of other favourites, in that you have both king and prince; so in this, that you have also now the hearts of the best subjects, for I do not love the word *people*, your case differeth from your own, as it stood before. And because I would have your reputation in this point complete, let me advise you, that the name of Puritans in a papist's mouth do not make you to withdraw your favour from such as are honest and religious men; so that they be not so turbulent and factious spirits, or adverse to the government of the church, though they be traduced by that name. For of this kind is the greatest part of the body of the subjects; and besides, which is not to be forgotten, it is safest for the king and his service, that such men have their dependence upon your Grace, who are entirely the king's, rather than upon any other subject.

For the papists, it is not unknown to your Grace, that you are not, at this time, much in their books. But be you like yourself; and far be it from you, under a king and prince of that clemency, to be inclined to rigour or persecution.

But three things must be looked unto; the first, that they be suppressed in any insolency, which may tend either to disquiet the civil estate, or scandalize our church in fact; for otherwise, all their doctrine doth it in opinion. The second, that there be an end, or limit, of those graces, which shall be thought fit for them, and that there be not every day new demands hearkened to. The third, that for those cases and graces, which they have received, or shall receive, of the state, the thanks go the right way; that is, to the king and prince, and not to any foreigner. For this is certain, that if they acknowledge them from the state, they may perhaps sit down when they are well. But if they have a dependence upon a foreigner, there will be no end of their growing desires and hopes. And in this point also, your lordship's wisdom and moderation may do much good.

For the match with Spain, it is too great and dark a business for me to judge of. But as it hath rela-

tion to concern yourself, I will, as in the rest, deal freely with your Grace.

My lord, you owe, in this matter, two debts to the king: the one, that, if in your conscience and judgment you be persuaded it be dangerous and prejudicial to him and his kingdoms, you deliver your soul, and in the freedom of a faithful counsellor, joined with the humbleness of a dutiful servant, you declare yourself accordingly, and show your reasons. The other, that if the king in his high judgment, or the prince in his settled affection, be resolved to have it go on, that then you move in their orb, as far as they shall lay it upon you. But meanwhile, let me tell your Grace that I am not of the general opinion abroad, that the match must break, or else my lord of Buckingham's fortune must break. I am of another opinion; and yet perhaps it will be hard to make you believe it, because both sides will persuade you to the contrary. For they that would not have it go on will work upon that conceit, to make you oppose it more strongly. They that would have it go on will do the same, to make you take up betimes, and come about. But I having good affiance in your Grace's judgment, will tell you my reasons why I thus think, and so leave it. If the match should go on, and put case against your counsel and opinion, doth any man think, that so profound a king, and so well seen in the science of reigning, and so understanding a prince, will ever suffer the whole sway of affairs and greatness to go that way? And, if not, who should be a fitter person to keep the balance even than your Grace, whom the king and prince know to be so entirely their own, and have found so nobly independent upon any other? Surely my opinion is, you are likely to be greater by counterpoise against the Spanish dependence, than you will by concurrence. And therefore, in God's name, do your duty faithfully and wisely; for behaving yourself well otherwise, as I know you will, your fortune is like to be well either way.

For that excellent lady, whose fortune is so distant from her merits and virtue, the queen of Bohemia, your Grace, being as it were the first-born or prime man of the king's creatures, must in consequence owe the most to his children and generations; whereof I know your noble heart hath far greater sense than any man's words can infuse into you. And therefore whatsoever liveth within the compass of your duty, and of possibility, will no doubt spring from you out of that fountain.

It is open to every man's discourse, that there are but two ways for the restitution of the Palatinate, treaty and arms. It is good, therefore, to consider of the middle acts, which may make either of these ways desperate, to the end they may be avoided in that way which shall be chosen. If no match, either this with Spain, or perhaps some other with Austria, no restitution by treaty. If the Dutch, either be ruined, or grow to a peace, of themselves, with Spain, no restitution by war.

But these things your Grace understandeth far

\* The duke's answer to this letter, dated at Newmarket, the 29th of January, 1623, is printed page 133.

† Henry Vere, who died in 1625. He was lord great chamberlain of England.

better than myself. And, as I said before, the points of state I aim not at farther, than they may concern your Grace, to whom while I live, and shall find it acceptable to you, I shall ever be ready to give the tribute of a true friend and servant, and shall always think my counsels given you happy, if you shall pardon them when they are free, and follow them when they are good. God preserve and prosper you.

---

TO THE DUKE OF BUCKINGHAM.\*

EXCELLENT LORD,

THERE is a suit, whereunto I may, as it were, claim kindred, and which may be of credit and profit unto me; and it is an old arrear, which is called upon, from Sir Nicholas Bacon, my eldest brother. It may be worth to me perhaps two thousand pounds; and yet I may deal kindly with my brother, and also reward liberally, as I mean to do, the officers of the exchequer, which have brought it to light. Good my lord, obtain it of the king, and be earnest in it for me. It will acquit the king somewhat of his promise, that he would have care of my wants; for hitherto, since my misfortunes, I have tasted of his Majesty's mercy, but not of his bounty. But your lordship may be pleased in this, to clear the coast with my lord treasurer; else there it will have a stop. I am almost at last cast for means; and yet it grieveth me most, that at such a time as this I should not be rather serviceable to your Grace, than troublesome.

God preserve and prosper your Grace.

Your Grace's most obliged and faithful servant,

FR. ST. ALBAN.

This 23d of January, 1623.

---

TO THE EARL OF OXFORD.†

MY VERY GOOD LORD,

LET me be an humble suitor to your lordship, for your noble favour. I would be glad to receive my writ this parliament,‡ that I may not die in dishonour; but by no means, except it should be with the love and consent of my lords to re-admit me, if their lordships vouchsafe to think me worthy of their company; or if they think that which I have suffered now these three years, in loss of place, in loss of means, and in loss of liberty for a great time, to be a sufficient expiation for my faults, whereby I may now seem in their eyes to be a fit subject of their grace, as I have been before of their justice. My good lord, the good, which the commonwealth might reap of my suffering, is already in. Justice is done; an example is made for reformation; the authority of the house for judicature is established. There can

‡ That met February 19, 1623, and was prorogued May 29, 1624.

be no farther use of my misery ; perhaps some little may be of my service ; for, I hope I shall be found a man humbled as a christian, though not dejected as a worldling. I have great opinion of your lordship's power, and great hope, for many reasons, of your favour ; which if I may obtain, I can say no more but nobleness is ever requited in itself ; and God, whose special favour in my afflictions I have manifestly found to my comfort, will, I trust, be my pay-master of that, which cannot be requited by

Your lordship's affectionate humble servant, &c.

Indorsed, February 2, 1623.

TO SIR FRANCIS BARNHAM.\*

GOOD COUSIN,

UPON a little searching, made touching the patents of the survey of coals, I find matter not only to acquit myself, but likewise to do myself much right.

Any reference to me, or any certificate of mine, I find not. Neither is it very likely I made any ; for that, when it came to the great seal, I stayed it. I did not only stay it, but brought it before the council-table, as not willing to pass it, except their lordships allowed it. The lords gave hearing to the business, I remember, two several days ; and in the end disallowed it, and commended my care and circumspection, and ordered, that it should continue stayed ; and so it did all my time.

About a twelvemonth since, my lord duke of Lenox, now deceased, † wrote to me to have the privy seal ; which, though I respected his lordship much, I refused to deliver to him, but was content to put it into the right hand ; that is, to send it to my lord keeper, ‡ giving knowledge how it had been stayed. My lord keeper received it by mine own servant, writeth back to me, acknowledging the receipt, and adding, that he would lay it aside until his lordship heard farther from my lord steward, § and the rest of the lords. Whether this first privy seal went to the great seal, or that it went about again, I know not ; but all my part is, that I have related. I ever rest

Your faithful friend and cousin,

FR. ST. ALBAN.

March 14, 1623.

MY LORD,

I AM now full three years old in misery ; neither hath there been any thing done for me, whereby I might die out of ignominy, or live out of want. But now that your Grace, God's name be praised for it, hath recovered your health, and are come to the court, and the parliament business hath also inter-

\* He appears to be a relation of his lordship's lady, who was daughter of Benedict Barnham, Esq. alderman of the city of London. Sir Francis was appointed by his lordship one of the executors of his last will.

† He died suddenly, February 12, 1623-4.

mission, I firmly hope your Grace will deal with his Majesty, that, as I have tasted of his mercy, I may also taste of his bounty. Your Grace, I know, for a business of a private man, cannot win yourself more honour ; and I hope I shall yet live to do you service. For my fortune hath, I thank God, made no alteration in my mind, but to the better. I ever rest humbly

Your Grace's most obliged and faithful servant,

If I may know, by two or three words from your Grace, that you will set in for me, I will propound somewhat that shall be modest, and leave it to your Grace, whether you will move his Majesty yourself, or recommend it by some of your lordship's friends, that wish me well ; [as my lord of Arundel, or Secretary Conway, or Mr. James Maxwell.]||

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

I UNDERSTAND, by Sir John Suckling, that he attended yesterday at Greenwich, hoping, according to your Grace's appointment, to have found you there, and to have received your Grace's pleasure touching my suit, but missed of you : and this day he sitteth upon the subsidy at Brentford, and shall not be at court this week : which causeth me to use these few lines, to hear from your Grace, I hope, to my comfort : humbly praying pardon, if I number thus the days, that misery should exceed modesty. I ever rest

Your Grace's most faithful and obliged servant,

FR. ST. ALBAN.

June 30, 1624.

TO SIR RICHARD WESTON, CHANCELLOR OF THE EXCHEQUER.

MR. CHANCELLOR,

THIS way, by Mr. Myn, besides a number of little difficulties it hath, amounteth to this, that I shall pay interest for mine own money. Besides, I must confess, I cannot bow my mind to be a suitor, much less a shifter, for that means, which I enjoy by his Majesty's grace and bounty. And therefore I am rather ashamed of that I have done, than minded to go forward. So that I leave it to yourself, what you think fit to be done in your honour and my case, resting

Your very loving friend,

FR. ST. ALBAN.

London, this 7th of July, 1624.

† See his letter to lord St. Alban, of February 7, 1622.

‡ James, marquis of Hamilton, who died March 2, 1624-5.

|| The words included in brackets have a line drawn after them.

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

Now that your Grace hath the king private, and at better leisure, the noise of soldiers, ambassadors, parliaments, a little ceasing, I hope you will remember your servant; for at so good a time,\* and after so long a time, to forget him, were almost to forsake him. But, howsoever, I shall still remain

Your Grace's most obliged and faithful servant,  
FR. ST. ALBAN.

I am bold to put into my good friend, Sir Tobie Matthew's hand, a copy of my petition, which your Grace had sent to Sir John Suckling.

Indorsed, August, 1624.

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

I AM infinitely bound to your Grace for your late favours. I send your Grace a copy of your letter, signifying his Majesty's pleasure, and of the petition. The course, I take it, must be, to make a warrant for the execution of the same, by way of reference to Mr. Chancellor of the exchequer, and Mr. Attorney.† I most humbly pray your Grace likewise, to prostrate me at his Majesty's feet, with most humble thanks for the grant of my petition, whose sweet presence since I discontinued, methinks I am neither amongst the living, nor amongst the dead.

I cannot but likewise gratulate his Majesty on the extreme prosperous success of his business, since this time twelvemonth. I know I speak it in a dangerous time, because the die of the Low-Countries

is upon the throw. But yet that is all one. For if it should be a blow, which I hope in God it shall not, yet it would have been ten times worse, if former courses had not been taken. But this is the raving of a hot ague.

God evermore bless his Majesty's person and designs, and likewise make your Grace a spectacle of prosperity, as you have hitherto been.

Your Grace's most faithful and obliged, and by you revived servant,

FR. ST. ALBAN.

Gray's-Inn, 9th of October, 1624.

TO THE CHANCELLOR OF THE DUCHY,  
SIR HUMPHREY MAY.

GOOD MR. CHANCELLOR,

I do approve very well of your forbearance to move my suits, in regard the duke's return § is so near at hand, which I thought would have been a longer matter; and I imagine there is a *gratiastitium* till he come. I do not doubt but you shall find his Grace nobly disposed. The last time you spake with him about me, I remember you sent me word, he thanked you for being so forward for me. Yet I could wish, that you took some occasion to speak with him, generally to my advantage, before you move to him any particular suit; and to let me know how you find him.

My lord treasurer sent me a good answer touching my moneys. I pray you continue to quicken him, that the king may once clear with me. A fire of old wood needeth no blowing; but old men do. I ever rest

Yours to do you service.

*Consultations in Parliament anno 1 Caroli Regis, at Westminster, anno Domini 1625.*||

[Found among Lord Bacon's Papers.]

THE consultations now in parliament may be regulated into these four heads following.

- |                                                                |                                                                                                                                                     |                                               |                                                                                                                                                                                                                                                   |

What now it is in clear revenue, either by | Lands;                                                                                                                                                                                                                                            |
|                                                                |                                                                                                                                                     |                                               | Customs and impositions;                                                                                                                                                                                                                          |
|                                                                |                                                                                                                                                     |                                               | Casualties.                                                                                                                                                                                                                                       |
| 3. The means how it is abated by                               | 2. Formerly in taxes by parliament.                                                                                                                 | 2. Now in                                     | Gifts of land, <i>ex mero motu</i> , and no valuable consideration. This may be revoked.                                                                                                                                                          |
|                                                                |                                                                                                                                                     |                                               | Grants of pensions, now £120,000, before but £18,000. Good times have resumed them upon necessity.                                                                                                                                                |
|                                                                |                                                                                                                                                     |                                               | Increase of household, from £45,000 to £80,000.                                                                                                                                                                                                   |
| 2. The condition of the subject in his freedom and fortune.    | 1. Formerly in taxes by parliament.                                                                                                                 | 2. Now in                                     | The purveyors more, and the tables less furnished than formerly.                                                                                                                                                                                  |
|                                                                |                                                                                                                                                     |                                               | Fruitless embassages with larger allowance than formerly. To reduce them to the ordinary of the late queen.                                                                                                                                       |
|                                                                |                                                                                                                                                     |                                               | Treble increase of the privy purse. Double increase of the treasury of the chamber and great wardrobe. In all, by not using the best course of assignments, whereby the creditor is delayed in his payment, and the king surcharged in the price. |
|                                                                |                                                                                                                                                     |                                               | The exchequer-man making his best profit from the king's wants.                                                                                                                                                                                   |
|                                                                |                                                                                                                                                     |                                               | Subsidies and fifteenths, spent only in defence of the states, or aid of our allies.                                                                                                                                                              |
|                                                                |                                                                                                                                                     |                                               | Tonnage and poundage employed in guard of the seas. Loans rarely, and that employed entirely for the public. Imposition by prerogative of old custom, rated easily by the book of rates, if any, either limited to time or measure.               |
|                                                                |                                                                                                                                                     |                                               | Custom enhanced by the new books of rates. Impositions and monopolies multiplied; and this settled to continue by grants.                                                                                                                         |
|                                                                |                                                                                                                                                     |                                               | Tonnage and poundage levied, though no act of parliament, nor the seas guarded. The times, the ways, and the persons, that induce these.                                                                                                          |

\* This seems to refer to the anniversary thanksgiving-day for the king's delivery from the Gowry conspiracy, on the 5th of August, 1600.

† Sir Thomas Coventry. ‡ This letter is indorsed, 1625.

§ From Paris, whither the duke of Buckingham went in May, 1625, to conduct the new queen to England.

|| This parliament met on the 18th of June, and was dissolved August 12, 1625.

3. The employ- ment or waste of treasure.	{ 1. Public treasure is to be examined.  2. The king's sub- jects.	{ What sums have been granted for the defence of the state these last three years. How in particular spent and where. By what advice, as by direction of	{ 1. The council of war appointed by parliament. 2. By full order of the council. 3. By any other than those, and by whom.
		{ How many and when transported, or employed, as to	{ 1. The Palatinate. 2. Count Mansfield. 3. Land soldiers in the last fleet. The design, where they were sent. The council that directed it. The success of the action, and the return of the persons in number, and the loss.
3. In ships and munition of	{ 4. Our own.  5. Strangers, as prize.	{ The number and quantity employed severally. The manner of embarking these ships, and what prejudice and discouragement of trade. The council, that directed such employments. The several successes, as at Algier, and Cadiz.	{ Hired by contract to serve, and how used : or Taken as prize : if so, How then delivered and dealt withal in the course of justice. What success hath followed upon injustice done them : as the arrest of our goods in France and Germany, whereby our goods are at a stand for vent.
		{ 6. Allies.	{ The number and true value of the goods. The account made to his Majesty or his officers for it.
		{ 7. Enemies.	{ The dismissing and dis- charging of any of them and the goods, namely,

*Under this head will fall the complaint of Dover.*

4. Honour of the king and state, which, as in all other, consists more in fama than vi.	{ 1. How formerly we stood.  2. The cause of the good success then.  3. In what condi- tion.  Condition we now stand by.	{ A nation feared, renowned, victorious. It made the Netherlands there a state when it was none. Recovered Henry IV. of France's kingdom, when he had nothing left but the town of Dieppe. Conquered the invincible navy of Spain in 1588. Took towns in Portugal in the year following, and marched 100 miles upon the firm land.	{ Fired, or brought away, the Spanish navy before Cadiz, and sacked the town. Took the Spanish ships daily, and spoiled the Port-Towns of the West-Indies, never losing but one ship during all the Spanish wars. Reduced the ambition of that king for a fifth monarchy to so low an ebb, that in one year he paid 2500 millions of ducats for interest, so as after he was enforced to beg treaties of peace, in low terms, at the last queen regent's hand. A carriage and readiness in the people to assist their sovereign in their purse and person.
		{ A wisdom and gravity of council, who ordered nothing but by public debate, and then assisted by the military professors, either by land or sea, of the best repute, and such only employed.	{ 4. Loss in reputation by the ill success.
		{ In the voyage of Algier. In the Palatinate. In the journey with Mansfield. In this last to Cadiz.*	{ 5. The reasons.
		{ The uncheerfulness we have either to adventure our purses or goods, occasioned by a distrust we have of the successes. The want of the like courses and counsels, that were for- merly used.	

I could wish, that for every of these four heads there were a particular committee to examine an apt report for the houses; and the houses, upon every report, to put itself into a committee of the whole assembly; and after a full and deliberate debate, to order a model, or form, for a conference with the lords: and so, together, humbly to present unto his Majesty a remonstrance of their labour; offering withal a serious consultation and debate amongst themselves for the finding out the fittest manner both for the defence of the state and our allies, reformation of the errors, and a constant way to raise such supplies of money and necessaries, as may enable his Majesty to proceed cheerfully, and I hope assuredly, in this his glorious action, not only for himself and the state, but for all that profess the same religion, and are like to be overwhelmed in the ambition of the Spanish monarchy.

TO SIR ROBERT PYE.

Good SIR ROBERT PYE,

LET me entreat you to despatch that warrant of

\* In October, 1625.

† From Gorhambury.

‡ Sir James Lord Ley, advanced from the post of lord chief justice of the king's bench, on the 20th of December, 1624, to that of lord treasurer; and created earl of Marlborough on the 5th of February, 1625-6.

a petty sum, that it may help to bear my charge of coming up† to London. The duke, you know, loveth me, and my lord treasurer ‡ standeth now towards me in very good affection and respect. § You that are the third person in these businesses, I

§ His lordship had not been always in that disposition towards the lord viscount St. Alban; for the latter, in a letter to this lord treasurer, severely expostulated with him about his unkindness and injustice.

assure myself, will not be wanting; for you have professed and showed, ever since I lost the seal, your good will towards me. I rest

Your affectionate and assured friend, &c.

Indorsed,

To Sir Robert Pye. Gor. 1625.

---

TO THE EARL OF DORSET.\*

MY VERY GOOD LORD,

This gentleman, the bearer hereof, Mr. Colles by name, is my neighbour. He is commended for a civil young man. I think he wanteth no metal, but he is peaceable. It was his hap to fall out with Mr. Matthew Francis, serjeant at arms, about a toy; the one affirming, that a hare was fair killed, and the other foul. Words multiplied, and some blows passed on either side. But since the first falling out, the serjeant hath used towards him divers threats and affronts; and, which is a point of danger, sent to him a letter of challenge: but Mr. Colles, doubting the contents of the letter, refused to receive it. Motions have been made also of reconciliation, or of reference to some gentlemen of the country not partial: but the serjeant hath refused all, and now, at last, sueth him in the earl marshal's court. The gentleman saith, he distrusteth not his cause upon the hearing; but would be glad to undergo restraint, or long and chargeable attendance. Let me therefore pray your good lordship to move the noble earl † in that kind, to carry a favourable hand towards him, such as may stand with justice and the order of that court. I ever rest

Your lordship's faithful friend and servant.

Indorsed,

To E. Dorset. Gor. 1625.

---

SIR THOMAS COVENTRY, ATTORNEY-GENERAL, TO THE LORD VISCOUNT ST. ALBAN.

MY VERY GOOD LORD,

I RECEIVED from your lordship two letters, the one of the 23d, the other of the 28th of this month. To the former I do assure your lordship I have not heard any thing of any suits or motion, either touching the reversion of your honours, or the rent of your farm of petty writs; and, if I had heard any thing thereof, I would not have been unmindful of that caveat, which heretofore you gave in by former letters, nor slack to do you the best service I might.

The debt of Sir Nicholas Bacon resteth as it did; for in the latter end of king James's time, it exhibited a *quo warranto* in the exchequer, touching

\* Sir Edward Sackville succeeded to that title on the death of his brother Richard, March 28, 1624.

† Arundel, earl marshal.

‡ That of the great seal, of which Sir Thomas Coventry was three days after made lord keeper, on the 1st of November, 1625.

that liberty, against Sir Nicholas, which abated by his death; then another against Sir Edmund, which by the demise of the king, and by reason of the adjournment of the late term, hath had no farther proceeding, but that day is given to plead.

Concerning your other letter, I humbly thank your lordship for your favourable and good wishes to me, though I, knowing my own unaptness to so great an employment, † should be most heartily glad, if his Majesty had, or yet would choose, a man of more merit. But, if otherwise, humbleness and submission becomes the servant, and to stand in that station where his Majesty will have him. But as for the request you make for your servant, though I protest I am not yet engaged by promise to any, because I hold it too much boldness towards my master, and discourtesy towards my lord keeper, ‡ to dispose of places while he had the seal: yet in respect I have some servants, and some of my kindred, apt for the place you write of, and have been already so much importuned by noble persons, when I lately was with his Majesty at Salisbury, as it will be hard for me to give them all denial; I am not able to discern how I can accommodate your servant; though for your sake, and in respect of the former knowledge myself have had of the merit and worth of the gentleman, I should be most ready and willing to perform your desire, if it were in my power. And so, with remembrance of my service to your lordship, I remain,

At your lordship's commandment,

THO. COVENTRY.

Kingsbury, October 29, 1625.

To the right honourable and my very good lord the viscount St. Alban.

---

TO MR. ROGER PALMER.

GOOD MR. ROGER PALMER,

I THANK God, by means of the sweet air of the country, I have obtained some degree of health. Sending to the court, I thought I would salute you: and I would be glad, in this solitary time and place, to hear a little from you how the world goeth, according to your friendly manner heretofore.

Fare ye well most heartily.

Your very affectionate and assured friend,

FR. ST. ALBAN.

Gorhambury, Oct. 29, 1625.

---

TO THE DUKE OF BUCKINGHAM.

EXCELLENT LORD,

I COULD not but signify unto your Grace my rejoicing, that God hath sent your Grace a son and

§ Bishop Williams, who had resigned the great seal on the 25th of October, 1625, to Sir John Suckling, who brought his Majesty's warrant to receive it, dated at Salisbury on the 23d of that month.

heir,\* and that you are fortunate as well in your house, as in the state of the kingdom. These blessings come from God; as I do not doubt but your Grace doth, with all thankfulness, acknowledge, vowing to him your service. Myself, I praise his Divine Majesty, have gotten some step into health. My wants are great; but yet I want not a desire to do your Grace service; and I marvel, that your Grace should think to pull down the monarchy of Spain without my good help. Your Grace will give me leave to be merry, however the world goeth with me. I ever rest

Your Grace's most faithful and obliged servant, &c.

I wish your Grace a good new year.

TO SIR HUMPHREY MAY, CHANCELLOR  
OF THE DUCHY OF LANCASTER.

GOOD MR. CHANCELLOR,

I DID wonder what was become of you, and was very glad to hear you were come to court; which, methinks, as the times go, should miss you as well as I.

I send you another letter, which I wrote to you of an old date, to avoid repetition; and I continue my request then to you, to sound the duke of Buckingham's good affection towards me, before you do move him in the particular petition. Only the present occasion doth invite me to desire, that his Grace would procure me a pardon of the king of the whole sentence. My writ for parliament I have now had twice before the time, and that without any express restraint not to use it. It is true, that I shall not be able, in respect of my health, to attend in parliament; but yet I might make a proxy. Time hath turned envy to pity; and I have a long cleansing week of five years expectation and more. Sir John Bennet hath his pardon; and my lord of Somerset hath his pardon, and, they say, shall sit in parliament. My lord of Suffolk cometh to parliament, though not to council. I hope I deserve not to be the only outcast.

God keep you. I ever rest

Your most affectionate friend to do you service.

I wish you a good new year.

Indorsed,

To the chancellor of the Duchy. Gor. 1625.

TO THE MARQUIS D'EFFIAT, THE FRENCH  
AMBASSADOR.

MONS. L'AMBASSEUR, MON FILS,

Vous sçavez que le commencement est la moitié du fait. Voyla pourquoy je vous ay escrit ce petit mot de lettre, vous priant de vous souvenir de vostre noble promesse de me mettre en la bonne grace de

\* Born November 17, 1625, and named Charles. Diary of the Life of Archbishop Laud, published by Mr. Wharton, p. 24. This son of the duke died the 16th of March, 1626-7. Ibid. p. 40.

nostre tres-excellente Royne, & m'en faire recevoir quelque gracieuse demonstration. Vostre Excellence prendra aussi, s'il vous plaist, quelque occasion de prescher un peu à mon avantage en l'oreille du Duc de Buckingham en general. Dieu vous ayt en sa sainte garde.

Vostre tres-affectionné et tres humble serviteur,  
FR. ST. ALBAN.

January 18, 1625.

The following letters, wanting both date and circumstances to determine such dates, are placed here together.

TO THE LORD TREASURER.†

IT MAY PLEASE YOUR HONOURABLE LORDSHIP,

I ACCOUNT myself much bound to your lordship for your favour showed to Mr. Higgins upon my commendations about Pawlet's wardship; the effect of which your lordship's favour, though it hath been intercepted by my lord deputy's suit, yet the signification remains: and I must in all reason consent and acknowledge, that your lordship had as just and good cause to satisfy my lord deputy's request, as I did think it unlikely, that my lord would have been suitor for so mean a matter.

So this being to none other end but to give your lordship humble thanks for your intended favour, I commend your lordship to the preservation of the Divine Majesty.

From Gray's-Inn.

TO SIR FRANCIS VERE.‡

SIR,

I AM to recommend to your favour one Mr. John Ashe, as to serve under you, as agent of your company: whose desire how much I do affect, you may perceive if it be but in this, that myself being no farther interested in you, by acquaintance or deserving, yet have intruded myself into this commendation; which, if it shall take place, I shall by so much the more find cause to take it kindly, by how much I find less cause in myself to take upon me the part of a mover or commender towards you, whom nevertheless I will not so far estrange myself from, but that in a general or mutual respect, incident to persons of our qualities and service, and not without particular inducements of friendship, I might, without breaking decorum, offer to you a request of this nature, the rather honouring you so much for your virtues, I would gladly take occasion to be beholden to you; yet no more gladly than to have occasion to do you any good office. And so this being to no other end, I commend you to God's goodness.

From my chamber at the

† From the original draught in the library of Queen's college, Oxford, Arch. D. 2.

‡ Ibid.

TO MR. CAWFELDE.\*

SIR,

I MADE full account to have seen you here this reading, but your neither coming nor sending the interr. as you undertook, I may perceive † of a wonder. And you know *super mirari cœperunt philosophari*. The redemption of both these consisteth in the vouchsafing of your coming up now, as soon as you conveniently can; for now is the time of conference and counsel. Besides, if the course of the court be held *super interrogat. judicis*, then must the interr. be ready ere the commission be sealed; and if the commission proceed not forthwith, then will it be caught hold of for farther delay. I will not, by way of admittance, desire you to send with all speed the interr. because I presume much of your coming, which I hold necessary; and accordingly, *pro more amicitie*, I desire you earnestly to have regard both of the matter itself, and my so conceiving. And so, &c.

Your friend particularly.

TO MY LORD MONTJOYE. †

MY VERY GOOD LORD,

FINDING by my last going to my lodge at Twickenham and tossing over my papers, somewhat that I thought might like you, I had neither leisure to perfect them, nor the patience to expect leisure; so desirous I was to make demonstration of my honour and love towards you, and to increase your good love towards me. And I would not have your lordship conceive, though it be my manner and rule to keep state in contemplative matters, "si quis venerit nomine suo, eum recipietis," that I think so well of the collection as I seem to do: and yet I dare not take too much from it, because I have chosen to dedicate it to you. To be short, it is the honour I can do to you at this time. And so I commend me to your love and honourable friendship.

TO KING JAMES I.

MAY IT PLEASE YOUR MAJESTY,

THINKING often, as I ought, of your Majesty's virtue and fortune, I do observe, not without admiration, that those civil acts of sovereignty which are of the greatest merit, and therefore of truest glory, are by the providence of God manifestly put into your hands as a chosen vessel to receive from God, and an excellent instrument to work amongst men the best and noblest things. The highest degree of sovereign honour is to be founder of a kingdom or estate; for, as in the acts of God, the creation is

more than the conservation; and as among men the birth-day is accounted the chiefest of the days of life; so, to found a kingdom is more worthy, than to augment, or to administer the same. And this is an honour that no man can take from your Majesty, that the day of your coming to the crown of England was as the birth-day of the kingdom entire Britain.

The next degree of sovereign honour is the plantation of a country or territory, and the reduction of a nation, from waste soil and barbarous manners, to a civil population. And in this kind also your Majesty hath made a fair and prosperous beginning in your realm of Ireland.

The third eminent act of sovereignty, is to be a lawgiver, whereof he speaketh,

"Pace data terris, animum ad civilia vertit  
Jura suum, legesque tulit justissimus author."

And another saith, "Ecquid est, quod tam proprie dici potest actum ejus, qui togatus in republica cum potestate imperioque versatur, quam lex? Quære acta Gracchi; leges Sempronie proferentur: quære Syllæ, Cornelie quid? Cneii Pompeii tertius consulatus in quibus actis consistit? Nempe legibus. A Cæsare ipso si quæreres quidnam egisset in urbe et toga; leges multas se respondeat et præclaras tulisse."

TO THE KING.

IT MAY PLEASE YOUR MAJESTY,

(A FULL heart is like a full pen: it can hardly make any distinguished work. The more I look upon my own weakness, the more I must magnify your favours; and the more I behold your favours, the more I must consider mine own weakness. This is my hope, that God, who hath moved your heart to favour me, will write your service in my heart. Two things I may promise; for, though they be not mine own, yet they are surer than mine own, because they are God's gifts; that is, integrity and industry. And therefore, whensoever I shall make my account to you, I shall do it in these words, *ecce tibi lucrifeci*, and not *ecce mihi lucrifeci*. And for industry, I shall take to me, in this procuration, not Martha's part, to be busied in many things, but Mary's part, which is to intend your service; for the less my abilities are, the more they ought to be contracted *ad unum*. For the present, I humbly pray your Majesty to accept my most humble thanks and vows as the forerunners of your service, which I shall always perform with a faithful heart.

Your Majesty's most obedient servant,

FR. BACON.

\* From the original draught in the library of Queen's college, Oxford, Arch. D. 2.

† Query whether perceive.

‡ From the original draught in the library of Queen's College, Oxford, Arch. D. 2.

TO THE KING'S MOST EXCELLENT  
MAJESTY.

*The humble petition of the Lord VERULAM, Viscount  
ST. ALBAN.*

THAT whereas your supplicant, for reward of full sixteen years' service in the painfulest places of your kingdom, how acceptable or useful, he appealeth to your Majesty's gracious remembrance, had of your Majesty's gracious bounty two grants, both under the great seal of England; the one a pension of 1200*l.* the other a farm of the petty writs, about 600*l.* per annum in value, which was long since assigned to your supplicant's wife's friends in trust for her maintenance: which two grants are now the substance of your supplicant's and his wife's means, and the only remains of your Majesty's former favours, except his dignities, which without means are but burdens to his fortunes:

So it is, most gracious sovereign, that both these are now taken from him; the pension stopped, the lease seized: the pension being, at this present, in arrear 500*l.* and at Michaelmas 800*l.* is stopped, as he conceiveth, upon the general stop of pensions; though he hopeth assuredly, that your Majesty, that looketh with the gracious eye of a king, and not the strict eye of an officer, will behold his case as especial, if not singular. The latter was first seized for satisfaction of a private gentleman, your supplicant unheard, and without any shadow of a legal course. Since it hath been continued, in respect of a debt to your Majesty for the arrear of rent upon the same farm, amounting to 1500*l.* But whereas your Majesty's farmers debtors for their rents, and other your debtors, have usually favours, sometimes of stallment, sometimes upon equity, if their farms decay, or at least when they are called upon, have days given, put in security, or the like; your supplicant was never so much as sent to, no warnings to provide, no days given, but put out of possession suddenly by a private and peremptory warrant, without any spark of those favours used to the meanest subjects. So that now your supplicant having left little or no annual income, is in great extremity, having spread the remnant of his former fortunes in jewels and plate, and the like, upon his poor creditors, having scarce left bread to himself and family.

In tender consideration whereof, your supplicant, and overthrown servant, doth implore your Majesty's grace and goodness felt by so many, known to all, and whereof he cannot live to despair: first, in general, that your Majesty will not suffer him, upon whose arm your princely arm hath so often been, when you presided in council, so near he was, and who hath borne your image in metal, but more in his heart, utterly to perish; or, which is worse, to live in his last days in an abject and sordid condition. Next, in particular, that your Majesty would be graciously pleased to take present order to have the arrear of his pension paid, and likewise that for the future it may be settled, that he be not at courtesy, nor to beg at that door, which is like enough to be

shut against him. Secondly, that the possession of his wife's lease may be restored to her; and this bit of arrear to your Majesty, that you will be pleased to remit it, according to your Majesty's gracious and pious promise, when you admitted him to you in the night of his troubles, which was, that you would not meddle with his estate, but to mend it. In the restoring the possession, you shall remove your hand of arms; in the remitting of the rent, you shall extend your hand of grace: and if he be not worthy of so much favour, as to have it released yet, that it may be respited for some good time, that he may make somewhat of that his father left him, and keep himself out of want, in such sort, that your supplicant, that aspireth but to live to study, be not put to study to live. And he, according to his bounden duty, shall not intermit, as he ever hath done, to pray to God for your Majesty's health and happiness.

---

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I HEAR yesterday was a day of very great honour to his Majesty, which I do congratulate. I hope also his Majesty may reap honour out of my adversity; as he hath done strength out of my prosperity. His Majesty knows best his own ways; and for me to despair of him, were a sin not to be forgiven. I thank God I have overcome the bitterness of this cup by christian resolution; so that worldly matters are but mint and cumin.

God ever preserve you.

Indorsed,

*To my Lord Buckingham after my troubles.*

---

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

I THOUGHT it my duty to take knowledge to his Majesty, from your lordship, by the enclosed, that, much to my comfort, I understand his Majesty doth not forget me nor forsake me, but hath a gracious inclination to me, and taketh care of me; and to thank his Majesty for the same. I perceive, by some speech, that passed between your lordship and Mr. Meautys, that some wretched detractor hath told you, that it were strange I should be in debt; for that I could not but have received a hundred thousand pounds gift since I had the seal; which is an abominable falsehood. Such tales as these made St. James say, that the "tongue is a fire," and "itself fired from hell," whither, when these tongues shall return, they will "beg a drop of water to cool them." I praise God for it, I never took penny for any benefice or ecclesiastical living; I never took penny for releasing any thing I stopped at the seal; I never took penny for any commission, or things of that nature; I never shared with any servant for any second or inferior profit. My offences have

myself recorded, wherein I studied, as a good confessor, guiltiness, and not excuse; and therefore I hope it leaves me fair to the king's grace, and will turn many men's hearts to me.

As for my debts, I showed them your lordship, when you saw the little house and the farm, besides a little wood or desert, which you saw not.

If these things were not true, although the joys of the penitent be sometimes more than the joys of the innocent, I could not be as I am.

God bless you, and reward you for your constant love to me. I rest, &c.

*Draught of a letter to the Marquis of Buckingham not sent.\**

MY LORD,

I SAY to myself, that your lordship hath forsaken me; and I think I am one of the last that findeth it, and in nothing more, than that twice at London your lordship would not vouchsafe to see me, though the latter time I begged it of you. If your lordship lack any justification about York-house, good my lord, think of it better; for I assure your lordship, that motion to me was to me as a second sentence; for I conceived it sentenced me to the loss of that, which I thought was saved from the former sentence, which is your love and favour. But sure it could not be that pelting matter, but the being out of sight, out of use, and the ill offices done me, perhaps, by such as have your ear. Thus I think, and thus I speak; for I am far enough from any baseness or detracting, but shall ever love and honour you, howsoever I be

Your forsaken friend and freed servant,  
FR. ST. ALBAN.

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

IT is in vain to cure the accidents of a disease, except the cause be found and removed. I know adversity is apprehensive; but I fear it is too true, that now I have lost honour, power, profit, and liberty, I have, in the end, lost that, which, to me, was more dear than all the rest, which is my friend. A change there is apparent and great; and nothing is more sure, than that nothing hath proceeded from and since my troubles, either towards your lordship or towards the world, which hath made me unworthy of your undeserved favours or undesired promises. Good my lord, deal so nobly with me, as to let me know, whether I stand upright in your favour, that either I may enjoy my wonted comfort, or see my griefs together, that I may the better order them; though, if your lordship should never think more of me, yet your former favours should bind me to be

Your lordship's most obliged and faithful servant,

TO THE MARQUIS OF BUCKINGHAM.

MY VERY GOOD LORD,

THIS extreme winter hath turned, with me, a weakness of body into a state that I cannot call health, but rather sickness, and that more dangerous than felt, as whereby I am not likely to be able to wait upon your lordship, as I desired, your lordship being the person of whom I promise myself more almost than of any other; and, again, to whom, in all loving affection, I desire no less to approve myself a true friend and servant. My desire to your lordship is to admit this gentleman, my kinsman and approved friend, to explain to you my business, whereby to save farther length of letter, or the trouble of your lordship's writing back.

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

THE event of the business, whereof you write, is, it may be, for the best; for seeing my lord, of himself, beginneth to come about, *quorsum* as yet? I could not in my heart suffer my lord Digby to go hence without my thanks and acknowledgments. I send my letter open, which I pray seal and deliver. Particulars I would not touch.

Your most affectionate and assured friend,  
FR. ST. ALBAN.

TO MR. TOBIE MATTHEW.

GOOD MR. MATTHEW,

WHEN you write by pieces, it showeth your continual care; for a flush of memory is not so much; and I shall be always, on my part, ready to watch for you, as you for me.

I will not fail, when I write to the lord marquis, to thank his lordship for the message, and to name the nuntius. And, to tell you plainly, this care, they speak of, concerning my estate, was more than I looked for at this time; and it is that, which pleaseth me best. For my desires reach but to a fat *otium*. That is truth; and so would I have all men think, except the greatest: for I know patents, *absque aliquid inde reddendo*, are not so easily granted.

I pray my service to the Spanish ambassador, and present him my humble thanks for his favour. I am much his servant; and ashes may be good for somewhat. I ever rest

Your most affectionate and assured friend,  
FR. ST. ALBAN.

I have sought for your little book, and cannot find it. I had it one day with me in my coach. But sure it is safe: for I seldom lose books or papers.

\* Among lord Bacon's printed letters, is one without a date, in which he complains, as in this, that he, "being

twice now in London," the marquis "did not vouchsafe to see him."

## TO THE LORD VISCOUNT ST. ALBAN.

MOST HONOURED LORD,

I HAVE received your great and noble token and favour of the 9th of April, and can but return the humblest of my thanks for your lordship's vouchsafing so to visit this poorest and unworthiest of your servants. It doth me good at heart, that, although I be not where I was in place, yet I am in the fortune of your lordship's favour, if I may call that fortune, which I observe to be so unchangeable. I pray hard that it may once come in my power to serve you for it; and who can tell, but that, as *fortis imaginatio general casum*, so strange desires may do as much? Sure I am that mine are ever waiting on your lordship; and wishing as much happiness as is due to your incomparable virtue, I humbly do your lordship reverence.

Your lordship's most obliged and humble servant,

TOBIE MATTHEW.

POSTSC. The most prodigious wit, that ever I knew of my nation, and of this side of the sea, is of your lordship's name, though he be known by another.

## TO THE LORD ARCHBISHOP OF YORK.\*

MY VERY GOOD LORD,

I MUST use a better style than mine own, in saying, "Amor tuus undequaque se ostendit ex literis tuis proximis," for which I give your Grace many thanks, and so, with more confidence, continue my suit to your lordship for a lease absolute for twenty-one years of the house, being the number of years which my father and my predecessors fulfilled in it. A good fine requires certainty of term: and I am well assured, that the charge I have expended, in reparations, amounting to 1000 marks at least already, is more than hath been laid out by the tenants that have been in it since my remembrance, answerable to my particular circumstance, that I was born there, and am like to end my days there. Neither can I hold my hand, but, upon this encouragement, am like to be doing still, which tendeth to the improvement, in great measure, of the inheritance of your see by superlapidations, if I may so call it, instead of dilapidations, wherewith otherwise it might be charged.

And whereas a state for life is a certainty, and not so well seen how it wears, a term of years makes me more depending upon you and your succession.

For the providing of your lordship and your successors a house, it is part of the former covenant, wherein I desired not to be released.

So assuring myself of your grant and perfecting of this my suit; and assuring your Grace of my earnest desire and continual readiness to deserve well of you and yours chiefly, and likewise of the see in any of the causes or pre-eminences thereof, I commend your Grace to God's goodness, resting, &c.

\* Dr. Tobie Matthew.

*The following Papers, containing Lord Chancellor ELLESMERE'S Exceptions to Sir EDWARD COKE'S Reports, and Sir Edward's Answers, having never been printed, though Mr. STEPHENS, who had copied them from the Originals, designed to have given them to the public, they are subjoined here in justice to the memory of that great lawyer and judge; especially as the offence taken at his Reports by King JAMES, is mentioned above in the Letter of the Lord Chancellor and Sir FRANCIS BACON, of October 16, 1616, to that King.*

## TO THE KING'S MOST EXCELLENT MAJESTY.†

IT MAY PLEASE YOUR MOST EXCELLENT MAJESTY,

ACCORDING to your Majesty's directions signified unto me by Mr. Solicitor, I called the lord chief justice before me on Thursday the 17th of this instant, in the presence of Mr. Attorney and others of your learned counsel. I did let him know your Majesty's acceptance of the few animadversions, which, upon review of his own labours, he had sent, though fewer than you expected, and his excuses other than you expected, as namely, in the prince's case, the want of the original in French, as though, if the original had been *primogenitus* in Latin, then he had not in that committed any error. I told him farther, that because his books were many, and the cases therein, as he saith, 500, your Majesty, out of your gracious favour, was pleased, that his memory should be refreshed; and that he should be put in mind of some passages dispersed in his books, which your Majesty, being made acquainted with, doth as yet distaste, until you hear his explanation and judgment concerning the same. And that out of many some few should be selected, and that at this time he should not be pressed with more, and these few not to be the special and principal points of the cases, which were judged, but things delivered by discourse, and, as it were, by expatiation, which might have been spared and forborne, without prejudice to the judgment in the principal cases.

Of this sort Mr. Attorney and Mr. Solicitor made choice of five specially, which were read distinctly to the lord chief justice. He heard them with good attention, and took notes thereof in writing, and, lest there might be any mistaking either in the declaring thereof unto him, or in his misconceiving of the same, it was thought good to deliver unto him a true copy. Upon consideration whereof, and upon advised deliberation, he did yesterday in the afternoon return unto me, in the presence of all your learned counsel, a copy of the five points before mentioned, and his answer at large to the same, which I make bold to present herewith to your Majesty, who can best discern and judge both of this little which is done, and what may be expected of the multiplicity of other cases of the like sort, if they shall be brought to farther examination. All that I have done in this hath been by your Majesty's commandment and direction, in presence of all your learned counsel, and by the special assistance and advice of your attorney and solicitor.

† From the originals.

I know obedience is better than sacrifice: for otherwise I would have been an humble suitor to your Majesty to have been spared in all service concerning the lord chief justice. I thank God, I forget not the fifth petition, *Dimitte nobis debita nostra sicut, etc.* but withal I have learned this distinction: there is, 1. *Remissio vindictæ.* 2. *Remissio pænæ.* 3. *Remissio iudicii.* The two first I am past, and have freely and clearly remitted. But the last, which is of judgment and discretion, I trust I may in christianity and good conscience retain, and not to trust too far, &c.

I must beseech your Majesty's favour to excuse me for all that I have here before written, but specially for this last needless passage; wherein I fear your Majesty will note me to play the divine, without learning, and out of season. So with my continual prayers to God to preserve your Majesty with long, healthful, and happy life, and all earthly and heavenly felicity, I rest

Your Majesty's humble and faithful subject  
and servant,

T. ELLESMERE, CANC.

At York-house, 22 Oct. 1616.

QUESTIONS demanded of the Chief Justice of the King's Bench by his Majesty's commandment.

1. IN the case of the isle of Ely, whether his lordship thinks that resolution there spoken of to be law; That a general taxation upon a town, to pay so much towards the repair of the sea-banks, is not warranted to be done by the commissioners of sewers; but that the same must be upon every particular person, according to the quantity of his land, and by number of acres and perches; and according to the portion of the profit, which every one hath there.\*

2. In Darcy's case, whether his lordship's judgment be as he reporteth it to be resolved; that the dispensation or licence of queen Elizabeth to Darcy to have the sole importation of cards, notwithstanding the statute, 3 E. 4, is against law.†

3. In Godfrey's case, what he means by this passage, Some courts cannot imprison, fine, or amerce, as ecclesiastical courts before the ordinary archdeacon, &c. or other commissioners, and such like, which proceed according to the canon or civil law.‡

4. In Dr. Bonham's case, what he means by this passage, That in many cases the common law shall control acts of parliament, and sometimes shall judge them to be merely void: For where an act of parliament is against common right and reason, the law shall control it, and adjudge it void.§

5. In Bagges's case, to explain himself where he saith, That to the court of king's bench belongs authority, not only to correct errors in judicial proceedings, but other errors and misdemeanors extrajudicial, tending to the breach of peace, oppression of subjects, or to the raising of faction, controversies,

debate, or to any manner of misgovernment. So no wrong or injury can be done, but, that this shall be reformed or punished by due course of law.||

I received these questions the 17th of this instant October, being Thursday; and this 21st day of the same month I made these answers following:

*The humble and direct Answer to the Questions upon the Case of the Isle of Ely.*

THE statute of the 23 H. VIII. cap. 5, prescribeth the commission of sewers to be according to the manner, form, tenure, and effect hereafter ensuing, namely, to inquire by the oath of men, &c. who hath any lands or tenements, or common of pasture, or hath, or may have, any loss, &c. and all these persons to tax, distrain, and punish, &c. after the quantity of lands, tenements, and rents, by the number of acres and perches, after the rate of every person's portion or profit, or after the quantity of common of pasture, or common of fishing, or other commodity there, by such ways and means, and in such manner and form, as to you, or six of you, shall seem most convenient.

The commissioners of sewers within the isle of Ely did tax Fendrayton, Samsey, and other towns generally, namely, one entire sum upon the town of Fendrayton, another upon Samsey, &c. The lords of the council wrote to myself, the chief justice of the common pleas, and unto justice Daniel and justice Foster, to certify our opinions, whether such a general taxation were good in law. Another question was also referred to us, whereof no question is now made: and as to this question we certified, and so I have reported as followeth, That the taxation ought to have these qualities: 1. It ought to be according to the quantity of lands, tenements, and rents, and by number of acres and perches. 2. According to the rate of every person's portion, tenure or profit, or of the quantity of common of pasture, fishing, or other commodity, wherein we erred not, for they be the very words and texts of the law, and of the commission. Therefore we concluded, that the said taxation of an entire sum in gross upon town is not warranted by their commission, &c. And being demanded by your Majesty's commandment, whether I do think the said resolution concerning the said general taxation to be law, I could have wished, that I could have heard council learned again on both sides, as I and the other judges did, when we resolved this point: and now being seven years past since the said resolution, and by all this time I never hearing any objection against it, I have considered of this case, as seriously as I could within this short time, and without conference with any; and mine humble answer is, That for any thing that I can conceive to the contrary, I remain still of my former opinion, and have, 1. As I take it, the express text and meaning of the law to warrant mine opinion. 2. Seeing that one town is of greater value, and subject to more danger, than another, the general taxation

\* Lib. 10.

† Lib. 11.

‡ Ibid.

§ Lib. 8.

|| Lib. 11.

of a town cannot, as I take it, be just, unless the particular lands, &c. and loss be known, for the total must rise upon the particulars; and if the particulars be known, then may the taxations be in particular. As it ought, as I take it, to be according to the express words of the act and commission.

3. The makers of the act did thereby provide, That every man should be equally charged, according to his benefit or loss; but if the general taxations should be good, then might the entire tax set upon the town be levied of any one man or some few men of that town; which should be unequal, and against the express words of the act and commission; and if it should be in the power of their officer to levy the whole taxation upon whom he will, it would be a means of much corruption and inconvenience; all which the makers of the act did wisely foresee by the express words of the act.

4. If the taxation be in particular, according to the number of acres, &c. which may easily be known, it may, as I take it, be easily done.

5. It was not only the resolution of the said three judges, but it hath been ruled and adjudged by divers other judges in other rates accordingly.

All which notwithstanding I most humbly submit myself herein to your Majesty's princely censure and judgment.

EDW. COKE.

*The humble and direct Answer to the Questions upon D'ARCY'S Case.*

THE statute of 3 of E. 4. cap. 4. at the humble petition of the card-makers, &c. within England, prohibiteth, amongst other things, the bringing into the realm of all foreign playing cards upon certain penalties. Queen Elizabeth, in the fortieth year of her reign, granted to Sir Ed. D'Arcy, his executors, deputies, and assigns, for twenty-one years, to have the sole making of playing cards within the realm, and the sole importation of foreign playing cards: and that no other should either make any such cards, within the realm, or import any foreign cards, but only the said Sir Ed. D'Arcy, his executors, deputies, and assigns, notwithstanding the said act.

The point concerning the sole making of cards within the realm is not questioned; the only question now is concerning the sole importation.

It was resolved, that the dispensation or licence to have the sole importation or merchandizing of cards, without any limitation or stint, is utterly against the law.

And your Majesty's commandment having been signified to me, to know, whether my judgment be, as I report it to be resolved, in most humble manner I offer this answer to your Majesty; That I am of opinion, that without all question the late queen by her prerogative might, as your Majesty may, grant licence to any man to import any quantity of the said manufacture whatsoever, with a *non obstante* of the said statute: and for proof thereof I have cited about fifteen book cases in my report of this case. And the first of those book cases is the

2 H. 7. fol. 6. by the which it appeareth, that if a penal statute should add a clause, That the king should not grant any dispensation thereof, *non obstante* the statute; yet the king, notwithstanding that clause of restraint, might grant dispensations at his pleasure with a *non obstante* thereof. Therefore seeing this royal prerogative and power to grant dispensations to penal laws is so incident and inseparable to the crown, as a clause in an act of parliament cannot restrain it, I am of opinion, that when the late queen granted to Sir Ed. D'Arcy to have the sole importation of this manufacture without limitation, and that no other should import any of the same during 21 years, that the same was not of force either against the late queen, or is of force against your Majesty: for if the said grant were of force, then could not the late queen or your Majesty, during the said term, grant any dispensation of this statute concerning this manufacture to any other for any cause whatsoever; which is utterly against your Majesty's inseparable prerogative, and consequently utterly void; which falleth not out where the licence hath a certain limitation of quantity or stint; for there the crown is not restrained to grant any other licence.

And therefore where it was resolved by Popham chief justice, and the court of king's bench, before I was a judge, That the said dispensation or licence to have the sole importation and merchandizing of cards without any limitation or stint, should be void, I am of the same opinion; for that it is neither against your Majesty's prerogative, nor power in granting of such dispensations; but tendeth to the maintenance of your Majesty's prerogative royal, and may, if it stand with your Majesty's pleasure, be so explained.

Wherein in all humbleness I submit myself to your Majesty's princely censure and judgment.

EDW. COKE.

*The humble and direct Answer to the Question rising upon GODFREY'S Case.*

SOME courts cannot imprison, fine, nor amerce, as ecclesiastical courts holden before the ordinary, archdeacon, or their commissaries and such like, which proceed according to the common or civil law.

And being commanded to explain what I meant by this passage, I answer, that I intended only those ecclesiastical courts there named and such like, that is, such like ecclesiastical courts, as peculiars, &c.

And within these words, (And such like,) I never did nor could intend thereby the high commission; for that is grounded upon an act of parliament, and the king's letters patents under the great seal. Therefore these words *commissaries* and *such like* cannot be extended to the high commission, but, as I have said, to inferior ecclesiastical courts.

Neither did I thereby intend the court of the admiralty; for that is not a like court to the courts before named; for those be ecclesiastical courts, and this is temporal. But I referred the reader to the

case in Brooks's Abridgement, pla. 77, where it is that, if the admiral, who proceeded by the civil law, hold plea of any thing done upon the land, that it is void and *coram non iudice*; and that an action of transgressions in that case doth lie, as by the said case it appeareth. And therefore that in that case he can neither fine nor imprison. And therewith agree divers acts of parliament; and so it may be explained, as it was truly intended.

All which I most humbly submit to your Majesty's princely judgment.

EDW. COKE.

*The humble and direct Answer to the Fourth Question arising out of Dr. BONHAM'S Case.*

In this case I am required to deliver what I mean by this passage therein, That in many cases the common law shall control acts of parliament; and sometimes shall adjudge them to be merely void; for where an act of parliament is against common right and reason, the common law shall control it, and adjudge it to be void.

The words of my report do not import any new opinion, but only a relation of such authorities of law, as had been adjudged and resolved in ancient and former times, and were cited in the argument of Bonham's case; and therefore the words of my book are these, "It appeareth in our books, that in many cases the common law shall control acts of parliament, and sometimes shall adjudge them to be utterly void; for when an act of parliament is against common right and reason, or repugnant or impossible to be performed, the common law shall control this, and adjudge such act to be void." And therefore in 8 E. 3. 30, Thomas Tregor's case, upon the statute of West. 2. cap. 38, *et artic. super cart.* cap. 9, Herle saith, Some statutes are made against law and right, which they, that made them, perceiving, would not put them in execution.

The statute of H. 2. cap. 21, gives a writ of "*Cessavit hæredi petenti super hæredem tenent et super eos, quibus alienatum fuerit hujusmodi tenementum.*" And yet it is adjudged in 33 E. 3. *tit. cessavit* 42, where the case was, Two co-partners, lords and tenant by fealty and certain rent; the one co-partner hath issue, and dieth, the aunt and the niece shall not join in a *cessavit*, because that the heir shall not have a *cessavit*, for the cessor in his ancestor's time. Fitz. N. B. 209, F. and herewith accords Plow. com. 110. And the reason is, because that in a *cessavit*, the tenant, before judgment, may render the arrearages and damages, &c. and retain his land: and this he cannot do, when the heir bringeth a *cessavit* for the cessor in the time of his ancestor; for the arrearages incurred in the life of his ancestor do not belong to the heir.

And because that this is against common right and reason, the common law adjudges the said act of parliament as to this point void. The statute of Carlisle made *anno* 35 E. 1. enacteth, That the order of the Cisterians and Augustins have a convent and

common seal; that the common seal shall be in the custody of the prior, which is under the abbot, and four others of the discreetest of the house; and that any deed sealed with the common seal, that is not so kept, shall be void. And the opinion in the 27 H. 6. *tit. Annuity* 41, was, that this statute is void; for the words of the book are, it is impertinent to be observed: for the seal being in their custody, the abbot cannot seal any thing with it; and when it is in the hands of the abbot, it is out of their custody *ipso facto*. And if the statute should be observed, every common seal might be defeated by a simple surmise, which cannot be. Note, reader, the words of the said statute made at Carlisle, *anno* 35 E. 1. which is called *Statutum Religiosorum*, are these: "Et insuper ordinavit dominus rex et statuit, quod abbates Cistercienses et Præmonstratenses ordinum religiosorum, etc. de cetero habeant sigillum commune, et illud in custodia prioris monasterii seu domus et quatuor de dignioribus et discretioribus ejusdem loci conventus sub privato sigillo abbatis ipsius loci custod. deponend. Et si forsan aliqua scripta obligationum, donationum, emptionum, venditionum, alienationum, seu aliorum quorumcumque contractuum alio sigillo quam tali sigillo communi sicut præmittitur custodit, inveniatur amodo, sigillata pro nullo penitus habeantur, omnique careant firmitate." So the statute of 1 E. 6. cap. 14, gives chantries, &c. to the king, saving to the donor, &c. all such rents, services, &c. and the common law controls this, and adjudges it void as to the services; and the donor shall have the rent as a rent-seck to distrain of common right; for it should be against common right and reason, that the king should hold of any, or do suit to any of his subjects, 14 Eliz. Dyer, 318. And so it was adjudged Mich. 16 and 17 Eliz. in the common place in Stroud's case. So if any act of parliament give to any to hold, or to have consance of all manner of pleas before him arising within his manor of D. yet he shall hold no plea whereunto himself is a party, for *Iniquum est aliquem suæ rei esse judicem*.

Which cases being cited in the argument of this case, and I finding them truly vouched, I reported them in this case, as my part was, and had no other meaning than so far as those particular cases there cited do extend unto. And therefore the beginning is, It appeareth in our books, &c. And so it may be explained, as it was truly intended.

In all which I most humbly submit myself to your Majesty's princely censure and judgment.

EDW. COKE.

*The humble and direct Answer to the last Question arising upon BAGO'S Case.*

It was resolved, that to this court of the king's bench belongeth authority not only to correct errors in judicial proceedings, but other errors and misdemeanors tending to the breach of the peace, or oppression of the subjects, or to the raising of faction or other misgovernment: so that no wrong or

injury either public or private can be done, but it shall be reformed and punished by law.

Being commanded to explain myself concerning these words, and principally concerning this word, *misgovernment* ;

I answer, that the subject-matter of that case concerned the misgovernment of the mayors and other the magistrates of Plymouth.

And I intended for the persons the misgovernment of such inferior magistrates for the matters in committing wrong or injury, either public or private, punishable by law, and therefore the last clause was added, " And so no wrong or injury, either public or private, can be done, but it shall be reformed and punished by law ;" and the rule is " *Verba intelligenda sunt secundum subjectam materiam.*"

And that they and other corporations might know, that factions and other misgovernments amongst them, either by oppression, bribery, unjust disfranchisements, or other wrong or injury, public or private, are to be redressed and punished by law, it was so reported.

But if any scruple remains to clear it, these words may be added, " by inferior magistrates ;" and so the sense shall be by faction or misgovernment of inferior magistrates, so as no wrong or injury, &c.

All which I most humbly submit to your Majesty's princely judgment.

EDW. COKE.

MAY IT PLEASE YOUR LORDSHIP,

ABOVE a year past, in my late lord chancellor's time, information was given to his Majesty, that I having published in eleven works or books of Reports, containing above 600 cases one with another, had written many things against his Majesty's prerogative. And I being by his Majesty's gracious favour called thereunto, all the exceptions, that could be taken to so many cases in so many books, fell to five, and the most of them too were by passages in general words ; all which I offered to explain in such sort, as no shadow should remain against his Majesty's prerogative, as in truth there did not ; which whether it were related to his Majesty, I know not. But thereupon the matter hath slept all this time ; and now the matter, after this ever blessed marriage, is revived, and two judges are called by my lord keeper to the former, that were named. My humble suit to your lordship is, that if his Majesty shall not be satisfied with my former offer, viz. by advice of the judges to explain and publish as is aforesaid those five points, so as no shadow may remain against his prerogative ; that then all

the judges of England may be called hereunto. 2. That they may certify also what cases I have published for his Majesty's prerogative and benefit, for the good of the church, and quieting of men's inheritances, and good of the commonwealth ; for which purpose I have drawn a minute of a letter to the judges, which I assure myself your lordship will judge reasonable ; and so reposing myself upon your lordship's protection I shall ever remain

Your most bounden servant,

EDW. COKE.

Superscribed,

*To the Right Honourable his singular good Lord, the Earl of Buckingham, of his Majesty's Privy Council.\**

*The Letter to the Judges.*

WHEREAS in the time of the late lord chancellor intimation was given unto us, that divers cases were published in Sir Edward's Coke's Reports, tending to the prejudice of our prerogative royal ; whereupon we caring for nothing more, as by our kingly office we are bounden, than the preservation of prerogative royal, referred the same ; and thereupon, as we are informed, the said Sir Edward Coke being called thereunto, the objections were reduced to five only, and most of them consisting in general terms ; all which Sir Edward offered, as we are informed, to explain and publish, so as no shadow might remain against our prerogative. And whereas of late two other judges are called to the others formerly named. Now our pleasure and intention being to be informed of the whole truth, and that right be done to all, do think it fit, that all the judges of England, and barons of the exchequer, who have principal care of our prerogative and benefit, do assemble together concerning the discussing of that, which, as is aforesaid, was formerly referred ; and also what cases Sir Edward Coke hath published to the maintenance of our prerogative and benefit, for the safety and increase of the revenues of the church, and for the quieting of men's inheritances, and the general good of the commonwealth : in all which we require your advice and careful considerations ; and that before you make any certificate to us you confer with the said Sir Edward, so as all things may be the better cleared.

*To all the Judges of England, and Barons of the Exchequer.*

\* There is no date to this letter, but I conceive it written in October or November, 1617. Note by Mr. Stephens.

# THE LAST WILL

OF

FRANCIS BACON, VISCOUNT ST. ALBAN.

FIRST, I bequeath my soul and body into the hands of God by the blessed oblation of my Saviour; the one at the time of my dissolution, the other at the time of my resurrection. For my burial, I desire it may be in St. Michael's church, near St. Alban's: there was my mother buried, and it is the parish church of my mansion-house of Gorhambury, and it is the only christian church within the walls of old Verulam. I would have the charge of my funeral not to exceed three hundred pounds at the most.

For my name and memory I leave it to men's charitable speeches, and to foreign nations, and the next ages. But, as to that durable part of my memory, which consisteth in my works and writings, I desire my executors, and especially Sir John Constable and my very good friend Mr. Bosvile, to take care that of all my writings, both of English and of Latin, there may be books fair bound and placed in the king's library, and in the library of the university of Cambridge, and in the library of Trinity College, where myself was bred, and in the library of Bennett College, where my father was bred, and in the library of the university of Oxford, and in the library of my lord of Canterbury, and in the library of Eaton.

Also, whereas I have made up two register-books, the one of my orations or speeches, the other of my epistles or letters, whereof there may be use; and yet because they touch upon business of state, they are not fit to be put into the hands but of some counsellor, I do devise and bequeath them to the right honourable my very good lord bishop of Lincoln, and the chancellor of his Majesty's duchy of Lancaster. Also I desire my executors, especially my brother Constable, and also Mr. Bosvile, presently after my decease, to take into their hands all my papers whatsoever, which are either in cabinets, boxes, or presses, and them to seal up until they may at their leisure peruse them.

I give and bequeath unto the poor of the parishes where I have at any time rested in my pilgrimage, some little relief according to my poor means: to the poor of St. Martin in the Fields, where I was born, and lived in my first and last days, forty pounds; to the poor of St. Michael's near St. Alban's, where I desire to be buried, because the day of death is better than the day of birth, fifty pounds; to the poor of St. Andrew's in Holborn, in respect of my long abode in Grays-Inn, thirty pounds; to the poor of the abbey church parish in St. Alban's, twenty pounds; to the poor of St. Peter's there, twenty pounds; to the poor of St. Stephen's there, twenty pounds; to the poor of Redborn, twenty

pounds; to the poor of Hempstead, where I heard sermons and prayers to my comfort in the time of the former great plague, twenty pounds; to the poor of Twickenham, where I lived some time at Twickenham Park, twenty pounds. I intreat Mr. Shute, of Lombard-street, to preach my funeral sermon, and to him in that respect I give twenty pounds; or if he cannot be had, Mr. Peterson, my late chaplain, or his brother.

Devises and legacies to my wife: I give, grant, and confirm to my loving wife, by this my last will, whatsoever hath been assured to her, or mentioned or intended to be assured to her by any former deed, be it either my lands in Hertfordshire, or the farm of the seal, or the gift of goods, in accomplishment of my covenants of marriage; and I give her also the ordinary stuff at Gorhambury, as wainscot tables, stools, bedding, and the like (always reserving and excepting the rich hangings with their covers, the table-carpets, and the long cushions, and all other stuff which was or is used in the long gallery; and also a rich chair, which was my niece Cæsar's gift, and also the armour, and also all tables of marble and towch). I give also to my wife my four coach geldings, and my best caroache, and her own coach mares and caroache; I give also and grant to my wife the one half of the rent which was reserved upon Read's lease for her life; which rent although I intended to her merely for her better maintenance while she lived at her own charge, and not to continue after my death; yet because she has begun to receive it, I am content to continue it to her: and I conceive by this advancement, which first and last I have left her, besides her own inheritance, I have made her of competent abilities to maintain the estate of a viscountess, and give sufficient tokens of my love and liberality towards her; for I do reckon, and that with the least, that Gorhambury and my lands in Hertfordshire will be worth unto her seven hundred pounds *per annum*, besides woodfells, and the leases of the houses, whereof five hundred pounds *per annum* only I was tied unto by covenants upon marriage; so as the two hundred pounds and better was mere benevolence; the six hundred pounds *per annum* upon the farm of the writs, was likewise mere benevolence; her own inheritance also, with that she purchased with part of her portion, is two hundred pounds *per annum* and better, besides the wealth she hath in jewels, plate, or otherwise, wherein I was never strait-handed. All which I here set down, not because I think it too much, but because others may not think it less than it is.

Legacies to my friends: I give unto the right honourable my worthy friend the marquis Fiatt, late lord ambassador of France, my books of orizons or psalms curiously rhymed; I give unto the right honourable my noble friend Edward earl of Dorset, my ring, with the crushed diamond, which the king that now is gave me when he was prince; I give unto my right honourable friend the lord Cavendish, my casting-bottle of gold; I give to my brother Constable all my books, and one hundred pounds to be presented to him in gold; I give to my sister Constable some jewels to be bought for her, of the value of fifty pounds; I give to Nall, her daughter, some jewels, to be bought for her, of the value of forty pounds; I give to my lady Cooke some jewels, to be bought for her, of the value of fifty pounds; and to her daughter, Ann Cooke, to buy her a jewel, forty pounds; and to her son, Charles, some little jewel, to the value of thirty pounds. I will also, that my executors sell my chambers in Gray's-Inn, which, now the lease is full, I conceive may yield some three hundred pounds; one hundred pounds for the ground story, and two hundred pounds for the third and fourth stories; which money, or whatsoever it be, I desire my executors to bestow for some little present relief, upon twenty-five poor scholars in both universities, fifteen in Cambridge, and ten in Oxford. I give to Mr. Thomas Meautys some jewel to be bought for him, of the value of fifty pounds, and my foot-cloth horse. I give to my ancient good friend, Sir Tobie Matthew, some ring, to be bought for him, of the value of thirty pounds. I give to my very good friend, Sir Christopher Darcy, some ring, to be bought for him, of the value of thirty pounds. I give to Mr. Henry Percy one hundred pounds. I give to Mr. Henry Goodricke forty pounds. I give to my godson, Francis Lowe, son of Humphrey Lowe, one hundred and fifty pounds. I give to my godson, Francis Hatcher, son of Mr. William Hatcher, one hundred pounds. I give to my godson, Francis Fleetwood, son of Henry Fleetwood, Esq. fifty pounds. I give to my godson, Philips, son of auditor Philips, twenty pounds. I give to every of my executors a piece of plate of thirty pounds value.

Legacies to my servants now, or late servants: I give to my servant, Robert Halpeny, four hundred pounds, and the one half of my provisions of hay, firewood, and timber, which shall remain at the time of my decease. I give to my servant, Stephen Paise, three hundred and fifty pounds, and my bed with the appurtenances, bed-linen, and apparel-linen, as shirts, pillow-biers, sheets, caps, handkerchiefs, &c. I give to my servant, Wood, three hundred and thirty pounds, with all my apparel, as doublets, hose; and to his wife, ten pounds. I give to my late servant, Francis Edney, two hundred pounds, and my rich gown. I give to my ancient servant, Troughton, one hundred pounds. I give to my chaplain, Dr. Rawleigh, one hundred pounds. I give to my ancient servant, Welles, one hundred pounds. I give to my ancient servant, Fletcher, one hundred pounds; and to his brother ten pounds; and if my servant Fletcher be dead, then the whole to his brother. I give to my wife's late waiting-gentlewoman, Mrs.

Wagstaffe, one hundred pounds. I give to Morrice Davis one hundred pounds. I give to old John Bays one hundred pounds. I give to my ancient servant, Woder, threescore and ten pounds. I give to my ancient servant, Guilman, threescore pounds. I give to my ancient servant, Faldo, forty pounds. I give to London, my coachman, forty pounds. I give to Harsnep, my groom, forty pounds. I give to Abraham, my footman, forty pounds. I give to Smith, my bailiff, and his wife, forty pounds. I give to my ancient servant, Bowes, thirty pounds. I give to my servant, Atkins, thirty pounds. I give to old Thomas Gotherum, who was bred with me from a child, thirty pounds. I give to my servant, Plomer, twenty pounds. I give to Daty, my cook, twenty pounds. I give to Henry Brown twenty pounds. I give to Richard Smith twenty pounds. I give to William Sayers ten pounds. I give to John Large twenty pounds. I give to old goodwife Smith ten pounds. I give to Peter Radford's wife five pounds. I give to every mean servant that attends me, and is not already named, five pounds.

The general devise and bequest of all my lands and goods to the performance of my will.

Whereas by former assurance made to Sir John Constable, knight, my brother-in-law, and to Sir Thomas Crew and Sir Thomas Hedley, knights and serjeants at law, and some other persons now deceased, all my lands and tenements in Hertfordshire were by me conveyed in trust: and whereas of late my fine, and the whole benefit thereof, was by his Majesty's letters patents conveyed to Mr. Justice Hutton, Mr. Justice Chamberlain, Sir Francis Barnham, and Sir Thomas Crewe, knight, persons by me named in trust; I do devise by this my will, and declare that the trust by me reposed, as well touching the said lands as upon the said letters patents, is, that all and every the said persons so trusted, shall perform all acts and assurances that by my executors, or the survivor or survivors of them, shall be thought fit and required, for the payment and satisfaction of my debts, and legacies, and performance of my will, having a charitable care that the poorest either of my creditors or legataries be first satisfied.

I do farther give and devise all my goods, chattels, and debts due to me whatsoever, as well my pension of twelve hundred pounds *per annum* from the king, for certain years yet to come; as all my plate, jewels, household-stuff, goods and chattels whatsoever, except such as by this my last will I have especially bequeathed, to my executors, for the better and more ready payment of my debts, and performance of my will.

And because I conceive there will be upon the moneys raised by sale of my lands, leases, goods and chattels, a good round surplusage, over and above that which may serve to satisfy my debts and legacies, and perform my will, I do devise and declare, that my executors shall employ the said surplusage in manner and form following: that is to say, that they purchase therewith so much land of inheritance, as may erect and endow two lectures in either of the universities; one of which lectures shall be of natural philosophy, and the sciences in

general thereunto belonging; hoping that the stipends or salaries of the lectures may amount to two hundred pounds a year for either of them; and for the ordering of the said lectures, and the election of the lecturers from time to time, I leave it to the care of my executors, to be established by the advice of the lords bishops of Lincoln and Coventry and Litchfield.

Nevertheless, thus much do I direct, that none shall be lecturer if he be English, except he be master of arts of seven years standing, and that he be not professed in divinity, law, or physic, as long as he remains lecturer; and that it be without difference whether [he] be a stranger or English: and I wish my executors to consider of the precedent of Sir Henry Savil's lectures, for their better instruction.

I constitute and appoint for my executors of this my last will and testament, my approved good friend the right honourable Sir Humphrey Maye, chancellor of his Majesty's duchy of Lancaster, Mr. Justice Hutton, Sir Thomas Crewe, Sir Francis Barneham, Sir John Constable, and Sir Euball Thelwall; and I name and entreat to be one of my supervisors, my most noble, constant, and true friend, the duke of Buckingham, unto whom I do most humbly make this my last request, that he will reach forth his hand of grace to assist the just performance of this my will; and likewise that he will be graciously pleased for my sake to protect and help such of my good servants, as my executors shall at any time recommend to his Grace's favour: and also I do desire his Grace, in all humbleness, to commend the memory of my long-continued and faithful service unto my most gracious sovereign, who ever, when he was prince, was my patron, as I shall, who have now, I praise God, one foot in heaven, pray for him while I have breath.

And because of his Grace's great business, I presume also to name for another of my supervisors, my good friend and near ally the master of the rolls.

And I do most earnestly entreat both my executors and supervisors, that although I know well it is matter of trouble and travail unto them, yet considering what I have been, that they would vouchsafe to do this last office to my memory and good name, and to the discharge of mine honour and conscience; that all men may be duly paid their own, that my good mind by their good care may effect that good work.

Whatsoever I have given, granted, confirmed, or

appointed to my wife, in the former part of this my will, I do now, for just and great causes, utterly revoke and make void, and leave her to her right only.

I desire my executors to have special care to discharge a debt by bond, now made in my sickness to Mr. Thomas Meautys, he discharging me fully towards Sir Robert Dowglass, and to procure Sir Robert Dowglass his patent to be delivered to him.

# FRANCISCI DE VERULAMIO,

SUMMI ANGLIÆ CANCELLARII,

## INSTAURATIO MAGNA.

### NOBILISSIMI AUCTORIS VITA.

FRANCISCUS BACONUS, seculi et gentis suæ decus, ornator, et ornamentum literarum, natus est in palatio Eboracensi, infra plateam dictam Le Strand, juxta Londinum, *xxii*<sup>o</sup> Januarii, anno salutis humanæ *MDLX*. Patrem habuit illustrem illum Elizabethæ reginæ consiliarium, regni ejus (dum ipse vixit) columen alterum, dominum Nicolaum Baconum, equitem auratum, magni sigilli Angliæ custodem, heroem perspectæ prudentiæ, judicii, moderationis, et integritatis; matrem, Annam Cocam, Antonii Coci, equitis itidem aurati (qui eruditioni Edwardi sexti Angliæ regis præfuit) e filiabus unam; foemina lectissimam, tam pietate et virtute, quam doctrina, præpollentem; necnon Græcæ et Romanæ linguæ peritia non mediocriter, pro sexu muliebri, imbutam. His ortus parentibus, in qualem prolem evasurus esset, etiam tum facile conjicere licuit; cui nulla, vel a natura, vel ab educatione adjumenta defuere.

Annos pueritiæ teneriores non sine eximiis præcellentiæ speciminibus transegit; qua ætate, ea indole et ingenii acumine præditus fuit, ut spem magnam iniecerit profundæ illius et universalis apprehensionis, qua postea inclauerit, et in notitiam procerum complurium, aliorumque, tam dignitate quam officiis eminentium virorum, induxerint; ante omnes autem reginæ ipsius, cui (ut a fide dignis accepi) cum eo colloqui, et quæstionibus difficilioribus tentare, sæpiuscule volupe fuit: ille autem tanta gravitate et judicii maturitate, supra ætatem, se expedire valebat, ut regina eum dominum custodem sigilli minorem appellare solita sit. Interroganti, Quot annos natus esset? ingeniose, etiam puer adhuc, respondit, "Se regimine ejus felici duobus annis juniorem fuisse."

Ætate academicæ literaturæ pro more idonea, vel potius paulo maturius, in album collegii Sanctæ et individuæ Trinitatis Cantabrigiæ, patris jussu, relatus est, sub tutela reverendissimi viri, domini Joannis Whitgifti, sacræ theologiæ doctoris, eo tempore collegii illius præfecti, postea autem percelebris archiepiscopi Cantuariensis, præsulis magnitudinis primæ, sanctitate, doctrina, patientia, et humilitate fulgentissimi; sub quo in artibus et studiis liberalibus,

præ aliis contemporaneis suis, mirifice profecisse deprehensus est. Dum adhuc in academia studiis incubuit, tantum non sexdecim annos ætatis nato (prout dominationi suæ mihi seorsum impertire placuit) philosophia Aristotelica primum insipida visa fuit; non propter vilipendium auctoris, quem summis semper laudibus evehere in more habuit, sed propter inefficacitatem vitæ; ejusmodi nimirum cum esset hæc philosophia (sicut dominationi suæ sæpius inculcare visum est) quæ ad disputationes et contentiones solummodo nata, ad productionem autem operum pro vitæ humanæ commodis sterilis omnino fuerit. In qua mente ad extremum usque spiritum perstitit.

Postquam artium liberalium encyclopædiam emensus fuerat, operæ pretium patri visum est eum ad artes politicas effingere atque formare: cujus rei gratia, in Galliam in comitatu Amicii Powletti, equestri dignitatis viri, ad regem Galliæ eo tempore legati ordinarii designati, mittendum curavit. A quo non ita multo post idoneus habitus est qui in Angliam ad nuncium aliquem reginæ perferendum remitteretur. Quo quidem negotio perfunctus, non sine gratiis a regina redditus, in Galliam secundo remeavit; eo consilio, ut non nisi post annos aliquot exactos Angliam denuo inviseret. Dum in Galliis peregrinatus est, pater ejus, dominus custos magni sigilli, diem suum obiit; relicta (sicut a quibusdam ejus rei gnaris accepi) satis ampla nummorum vi, ad id congesta, ut latifundia aliqua in usum hujusce filii sui natu minimi coëmeret et compararet; qui solus sine patrimonio post obitum patris remansit: et quamvis in bonis paternis, in affectu tamen paterno, non infimum locum tenuit. Verum cum ejusmodi terrarum coëmptio, superstite adhuc patre, designata tantum et non perimpta fuerit, non plus ei cessit, quam pro rata pecuniæ inter quinque fratres distribuendæ. Quod in causa fuit, ut fortuna aliquantulum dura, ætate juniore usus sit. Neque enim præclarum illud et peramœnum prædium Gorbamburiense, nisi multis postea annis, adeptus est; per mortem scilicet carissimi fratris sui germani, Antonii Baconi, magni nominis viri, et in aulis principum externorum versatissimi, celsitudine quidem

ingenii paris, sed in artium liberalium scientia fratri concedentis; inter quos magna necessitudo intervenerat: siquidem qui, præter eandem paternam originem, unius matris nexu arctius conjungerentur.

Reverso e Gallis, de genere vitæ statuendum fuit. Itaque juris Angliæ municipalis studio et professioni se addixit. In qua sparta ornanda eximios brevi progressus fecit, licet (ut ipsius verbis utar) peritiam illam, tanquam accessoriam, sive subsidiariam, non tanquam principalem, amplexus sit. Varios tractatus circa hoc argumentum a principio emisit. In quibus, quamvis ab aliquibus professionis illius coryphæis mole et casuum numero forte superetur; pondere tamen, et fundamentorum ac mysteriorum juris scientia, nemini cessit. Nondum tyrocinium in lege egressus, a regina in concilium suum doctum extraordinarium adscitus est; gratiam (uti accepi) vix cuiquam antea indultam. Sedem sibi delegit, studiis suis et officio advocati commodam, inter honorabilem societatem hospitii Greiensi: in cujus societatis numerum sese adscripsit; ubi elegans illud ædificium sive structuram erexit, quæ hodie baronis Baconi nomine innotescit; quam per vices maximam partem vitæ (paucis solummodo annis exemptis) usque in diem mortis incoluit. In qua societate ea demum suavitate, comitate, et animi generositate usus est, ut magnum exinde amorem et reverentiam ab hospitii illius senioribus et alumnis sibi conciliaverit.

Quamvis autem legis consultorum professioni pro vitæ et convictus sui exigentia astrictus esset, animo tamen et affectu in artes politicas et officia status magis propendebat; quibus sane, si majestati tunc anguste placuisset, cum primis habilis fuit. Ætate adhuc integra, in numerum eorum, qui rebus nobilibus illius sed infelicis herois, comitis Essexiæ, studebant, se adscripsit; cui, tanquam intimus et fidissimus consultor, omnibus viribus inservivit, et in id incubuit, ut tuta tantum et honorifica monita animo ejus instillaret: donec ad extremum comes ille, temerarium quorundam et furiosorum hominum consiliiis aures præbens, in exitium se præcipitaverit.

Natalibus atque ingenus animi sui dotibus hoc debuit, ut facilius ei et liberius ante reliquos professionis ejusdem aditus pateret ad aulam principis, adeoque in conspectum reginæ ipsius; quæ sermones cum eo seorsum et summa cum facilitate miscere (quoties commodum erat) non aspernata est, non solum circa professionis ejus res et materias juridicas, sed etiam circa ardua negotia status regni; cujus responsis de tempore in tempus libentissime acquievit. Veruntamen quamvis benigntate vultus sui eum abunde refocillaverit, nunquam tamen refocillavit benignitate manus; utpote quæ ad nullum publicum munus, sive honoris sive emolumentum, eundem promoverit; dempta una reversione sicca officii registrarii in camera stellata, annui ut putabatur valoris mille et sexcentarum librarum, in cujus possessionem non ante annos viginti aut circiter devenit: de quo officio dominatio sua Elizabethæ tempore festive dixit, "Illud sibi esse instar fundi alieni ædibus suis adjacentis, qui prospectum meliorare, horreum autem ejus replere non possit." Verum, regnante Jacobo, illo tandem officio potitus est, et per deputatum administravit. Hoc autem tribui possit nullo modo

malevolo aut infenso in eum reginæ ipsius animo, sed artibus et æmulationi cujusdam et proceribus ea tempestate apud reginam potentis, qui eum omnibus modis deprimere et coercere sedulo curavit, ne, si ad fastigium aliquod attoleretur, propria per eum gloria obfuscaretur.

Quamvis autem tempore dominæ suæ Elizabethæ reginæ retardationem diutinam passus sit, post regiminis tamen mutationem, et ingressum domini sui novi Jacobi regis, incitato gradu perrexit: a quo fiduciæ, honoris, et proventuum muniis eximie co-honestatus est. Ipse vidi literas quasdam, propria manu ad Jacobum regem conscriptas, quibus "talem illum fuisse erga se dominum agnoscit, qui repetitis subinde favoribus novies cumulasset; ter honoribus, sexies autem officiis." Officia, quæ intelligit (ut puto) hæc erant, consilium doctum extraordinarium regis majestati suæ, (quo loco antea inservivit majestati reginæ,) regis solicator generalis, attornatus regis generalis sive procurator primarius, cooptatus in sanctius regis concilium dum adhuc attornati locum gessit, dominus custos magni sigilli Angliæ, ultimo dominus cancellarius Angliæ. Quæ quidem munera posteriora duo licet auctoritate et potestate eadem sint, diplomatibus tamen, fastigio, et favore principis differunt. A cujus magistratu successorum nullus domini cancellarii Angliæ titulo in hunc usque diem decoratus est. Honores erant, primo, eques auratus; dein, baro Verulamius; postremo, vice-comes Sancti Albani: præter alia dona magnifica et manus benigntates, quibus eum dotare majestati suæ visum fuit, tam ex proventibus magni sigilli, quam ex officio alienationis.

Circa annos magis propitios de matrimonio contrahendo consilium cepit. Itaque in uxorem duxit Aliciam, filiam, et heredum unam Benedicti Barnhami, armigeri, et aldermanni Londinensis: cum qua dotem satis amplam et lautam, tam in terris, quam in pecuniis numeratis, recepit. Liberos ex ea suscepit nullos: qui quamvis adjumento sint ad nomen nostrum post obitum perpetuandum; illi tamen alia propagine ad nomen suum perpetuandum bearum contigit, propagine scilicet cerebri sui, in qua semper felix et mirabilis fuit; instar Jovis, cum Pallada enixus sit. Neque vero liberorum defectus ullo pacto amorem ejus erga nuptam imminuit, quam summa semper dilectione conjugali et amoris indicibus prosecutus est; suppellectili lauta, monilibus variis, et fundis insuper donavit: addita etiam trabea honoraria maritali, quam viginti plus minus annos post obitum ejus gestavit. Totidem enim annis honoratissimo marito superstes fuit.

Quinquennium extremum vitæ suæ, a negotiis civilibus et vita activa retractus, studiis et contemplationibus insumpsit. Quæ res sane visa est ei maxime cordi fuisse; ac si in umbra potius, quam in luce, commori optasset. Cujus etiam non obscura indicia in operibus ejus perlegendis reperire licet. Quo temporis spatio, librorum suorum, tam Anglicano quam Romano sermone conscriptorum, maximam partem exaravit. Quos jam juxta temporis seriem, quo conscripti erant (quam præsens observavi) enumerare satagam. Ii sic se habuerunt.

'*Historia regni Henrici septimi regis Angliæ,*' sermone patrio. '*Abecedarium naturæ,*' scriptum metaphysicum; quod, nescio quo malo fato, periit. '*Historia ventorum.*' '*Historia vitæ et mortis.*' '*Historia densi et rari,*' jam primum typis mandata. '*Historia gravis et levis,*' quæ itidem periit. Hi libri stylo Romano elucubrati. Dein fragmenta quædam Anglicana, quæ fuerunt, '*Dissertatio de bello cum Hispanis gerendo.*' '*Dialogus de bello sacro.*' '*Fabula Novæ Atlantidis.*' '*Præfatio digesto de legibus Angliæ,*' præfigenda. Initium '*Historiæ regni Henrici octavi regis Angliæ.*' Intervenerat opus '*De augmentis scientiarum,*' in quo e lingua vernacula, proprio Marte, in Latinam transferendo honoratissimus auctor plurimum desudavit, et multis subinde ac variis additionibus locupletavit. Postea, '*Consilia civilia et moralia*' (antea '*Delibationes*' dictæ) tunc autem et numero et pondere aucta, idiomate Anglicano. '*Psalmorum Davidis nonnulli, in rhythmos Anglicanos compositi.*' Iterum, versio quorundam e scriptis suis de patrio in sermonem Romanum: quæ fuerunt, '*Historia regni Henrici septimi regis Angliæ.*' '*Consilia civilia et moralia,*' exinde dicti, '*Sermones fideles, sive interiora rerum.*' '*Dialogus de bello sacro:*' et '*Fabula Novæ Atlantidis;*' in gratiam exterorum, apud quos expeti inaudiverat. Liber '*De sapientia veterum*' recognitus. '*Inquisitio de magnetæ.*' '*Topica inquisitionis de luce et lumine.*' Ultimum locum tenuit '*Sylva sylvarum, sive historia naturalis,*' opus Anglicum. Atque hi fructus fuerunt, qui in umbra annorum quinque memoratorum maturerunt. Libros ante quinquennium illud elaboratos non hic recito. Quin et propositum illi fuit (mandante serenissimo nuper rege Carolo) '*Historiam Henrici octavi Angliæ regis,*' contexuisse: sed opus illud ultra designationem solam non processit, Deo ulteriorem vitam celeberrimo auctori minime largiente. Extat tamen specimen quoddam historiæ illius, quam paucæ unius diei horulæ matutinæ olim parturierunt, inter opera ejus historica Anglice edita; per quod ex ungue leonem dignoscere possis.

Virtutes et animi dotes non minus, quam curriculum vitæ, in heroë isto commemorando locum sibi vendicant. Facultates illæ, quas in aliis non infimi ingenii hominibus dissociatas fere et solitarias reperies, in illo conjunctæ, et quasi connubio copulatæ eminebant. Eæ fuerunt ingenii acumen, memoria fida, iudicium penetrans, et elocutio profluens. Ac de prioribus illis tribus libri ejus abunde testantur; de quibus (ut de Julio Cæsare Hirtius) "quam bene atque emendate, cæteri iudicent; nos etiam, quam facile atque celeriter, eas præscriperit, scimus." Sed de quarta (puta elocutione) illud effari libet, quod ipse audivi insignem illum Gualtherum Raleighum, virum equestri dignitate et singularibus virtutibus ornatum (cujus iudicio non immerito fidendum est) semel disserentem: nimirum, "Comitem Sarisburiensem oratorem bonum fuisse, scriptorem malum; e contra, comitem Northamptoniensem scriptorem bonum fuisse, oratorem malum; sed dominum Franciscum Baconum in utroque, tam dicendo, quam scribendo, præcelluisse."

Non raro mentem subiit cogitatio, Deum, si ullum

mortalium novissimis his temporibus radio quodam scientiæ humanæ illuminare dignatus sit, illum procul dubio illuminasse: quanquam enim sedulo libros evolverat, ex libris tamen solis scientiam suam deprompsisse haudquaquam concedere licet, sed ex principiis et notionibus quibusdam, intra se accensis; quas nihilominus non temere, sed cante admodum, et lente, propalavit. Opus illud '*Novi Organi*' (cui ipse inter opera sua primas tribuit) neququam sane cogitatio umbratilis, aut cerebri proprii commentum fuit; sed veluti fixa et radicata notio, multorum annorum et laboris improbi proles. Ipse reperi, in archivis dominationis suæ, autographa plus minus duodecim '*Organi novi,*' de anno in annum elaborati, et ad incudem revocati; et singulis annis, ulteriore lima subinde politi et castigati; donec in illud tandem corpus adoleverat, quo in lucem editum fuit: sicut multa ex animalibus fœtus lambere consuescunt, usque quo ad membrorum firmitudinem eos perducant.

In libris suis componendis, verborum vigorem et perspicuitatem præcipue sectabatur; non elegantiam, aut concinnitatem sermonis: et inter scribendum, aut dictandum, sæpe interrogavit, num sensus ejus clare admodum et perspicue redditus esset? Quippe qui sciret æquum esse ut verba famularentur rebus, non res verbis. Et si in stylo forsitan politiore incidisset (siquidem apud nostrates eloqui Anglicani artifex habitus est) id evenit, quia evitare arduum ei erat. Neque vero verborum minutis, et allusionibus capiebatur; sed eas semper ex composito, et de industria, effugit; probe sciens ejusmodi futilitates nihil aliud esse, quam deviationes et aberrationes a scopo proposito, et gravitati et dignitati styli non modicum officere et detrudere.

Legendo usque ad satietatem aut tædium non immerabatur. Quamvis enim multum lægerit, idque summo cum iudicio, et rejectione omnis scoriæ, quæ in scriptoribus plurimis sese offert; commodam tamen animi relaxationem studiis suis intermiscuit: veluti, deambulationem lenem, unctionem in rheda, equitationem, non citam sed lentam, globeorum lusum; et alia id genus exercitia. Neque vero jacturam temporis ullam fecit: quamprimum enim domum redierit, confestim et absque ulla mora lectioni aut meditationi renovandæ incubuit: sicque nullum momentum, aut temporis segmentum, perire et intercidere passus est.

Mensam ejus refectionem aurium diceres, æque ac ventris: non absimilem noctibus illis Atticis, aut conviviis deipnosophistarum; in quibus mente et intellectu refici licebat, non minus quam corpore. Novi etiam nonnullos sublimioris ingenii viros, qui ad pugillares se recepisse professi sint, quoties a mensa ejus surrexerint. Convivantium neminem, aut alias colloquentium, pudore suffundere gloriæ sibi duxit, sicut nonnulli gestiunt; sed facultates eorum qualescunque fovere et provehere paratus erat. Quin et sermonis licentiam sibi soli arripere in more non erat; sed et aliis simul consentibus libertatem et vicissitudinem loquendi permittere: hoc etiam addendo, quod in arte unumquemque propria lubentissime audiret; et ad ejusmodi dissertationem pellicere et provocare consueverit. Ipse

autem nullius observationes contempsit; sed ad candelam cujuslibet lampada suam accendere non erubuit.

Dicta, et pronunciata ejus, vix unquam in dubium vocata sunt; eumque disserentem omnes audierunt, nullus se opposuit; ac si oracula magis, quam eloquia, protulisset. Quod quidem, sive exactæ sententiæ suæ, antequam declarasset, in lance veritatis, et rationis librationi; sive existimationi, qua ab omnibus habitus fuit, ut nemo contraireret, tribuendum censeo. Unde argumentationis genus illud, qua in utramque partem disceptatur, mensa ejus hæud novit; aut si aliqua forte intervenerit, eadem cum magna submissione, et moderatione, agitata fuit.

Sæpe observavi, neque virorum quorundam illustrium notitiam effugit; quod si occasio forte interveniret sermonis alieni inter colloquendum repetendi, ea facultate præditum fuisse, ut novis subinde et melioribus vestibus indutum proferret: adeo ut auctor ipse sermonem proprium ornato cultiorem cerneret; sensu autem, et materia minime mulctatum; ac si formulis bonis uti res esset ei a natura indita: id quod in carminibus componendis de se cecinit Ovidius,

“ Et quod tentabam scribere, versus erat.”

Quotiescunque ex officio premebatur reum aliquem peragere (quod muneris regis majestatis consilio docto incumbere) sive in criminalibus, sive in capitalibus, nunquam se superbum, aut fastuosum, versus delinquentem præbuit; sed semper lenem, et decenti temperie affectum: et quamquam sciebat ex munere suo esse pro parte regis crimen adversus reum, pro virili sua, urgere et aggravare; ita tamen se gessit, ut severitatis oculo exemplum, misericordiæ oculo personam, intueretur. In negotiis autem status, quando in sanctius regis concilium ascitus fuit, optimum consulendi modum tenuit; non implicando dominum suum in consiliis aliquibus temerariis, aut populo gravioribus, sed temperatis, et æqualibus: Jacobo rege hoc eum testimonio ornante, “ Illum viam calluisse negotia ejus tractandi suavibus modis; atque id majestati suæ maxime cordi fuisse, pronuntiavit.”

Neque vero (cum occasio tulerat) minus gratus apud subditos regni fuit, quam apud regem ipsum. Comitibus parlamentariis inferioribus consessus, dum in ea domo sedit, pergratus semper fuit; in qua sæpe peroravit, non sine magno applausu. Postquam ad munus atturnati generalis evectus fuisset, et ad locum in parlamento electus, libertas inter ipsos consultandi communi suffragio ei concessa est; quæ aliis atturnatis generalibus minime indulta.

Sicut autem erga herum suum servi boni laudem reportavit; siquidem in annorum novendecim administratione (prout ipse asseruit) in reprehensionem regis propter aliquam offensam in majestatem regiam immediate admissam nunquam incurrerat; ita erga servos proprios heri boni nomen obtinuit; et servitia eorum diuturna præclaris officiis, cum in potestatem suam devenerunt, gratis compensavit. Quæ res in causa fuit cur tot melioris notæ juvenes, e claris familiis oriundos, in numerum asseclarum suorum recipere precibus pene fatigatus sit. Quod si eorum

aliqui gratia, et favore ejus perperam usi sint, id solummodo errori bonitatis suæ nativæ, eorum autem perpetuæ infamiæ et intemperantiæ tribuendum est.

Heros iste divini Numinis cultor fuit. Quamvis enim viris politicis, et ingenii præaltis, atheismi notam inurere vulgo inoleverat; ille tamen Deum et agnovit, et coluit. Id quod ex variis testimoniis, per filum operum suorum sparsis, liquidissime apparet. Alias enim principia propria destruxisset et evertisset; quæ fuerunt, “ Philosophiam primoribus tantum labiis degustatam a Deo abducere; utpote, quæ causas secundas ultra debitum magni faceret: philosophiam autem plene haustam ad Deum denuo reducere.” Illum autem philosophum profundum extitisse nemo, opinor, est, qui neget. Neque hoc solum, sed et “ omni poscenti rationem reddere de ea, quæ in illo erat, spe,” et potens et paratus fuit. Hocque opus illud “ confessionis fidei” abunde testatum reliquit. Interesse frequenter solebat (cum per valetudinem liceret) divinis officiis, sive privatim, sive publice celebratis; concionibus audiendis; sacræ eucharistiæ participandæ; et tandem in fide vera, in ecclesia Anglicana stabilita, placide obdormivit.

Hoc pro certo ponendum est, eum malevolentia omnis penitus expertem fuisse; quam (ut ipse dixerat) neque parturivit, neque pavit. De injuriarum vindicta ne cogitavit quidem: ad quam si ita animo affectus fuisset, et opportunitate et potestate armatus fuit. Deturbator officiariorum a muneribus adeptis neutiquam fuit; ac si exitio, et ruina aliorum se impinguasset. Calumniator apud principem non cluit. Die quodam, cum quidam e ministris status primariis, neutiquam ei favens, nuper defunctus fuisset, rex eum percontatus est, quid de domino illo, jam fati functo, sentiret? Cui respondit, “ Ejusmodi eum fuisse, qui majestatis tuæ res nunquam promovisset, aut auctiores fecisset; verum a præcipitio et declinatione servare haud dubie satagisset.” Neque enim duriorum de eo sententiam proferre voluit. Quam quidem non inter virtutes illius morales, sed Christianas, numero.

Nomen ejus magis foris, et apud externos, quam domi, inter populares suos, celebratum est, et inclaudit: veluti id quod oraculo illi divino etiam subicitur, “ Non est propheta sine honore, nisi in patria sua, et in domo sua.” In qua re, paucula quædam ex epistola, ab Italia (ingeniorum politorum apotheca) ad comitem nuper Devoniensem, eo tempore baronem Candishium, missa, excerptam: quæ sic se habuerunt; “ *Delibationes* novas domini cancellarii Baconi, nec non *Historiam* ejus, et quicquid aliud jam molitur, ingenti cum animi ardore expectabo: speciatim autem in *Historia* sua opus perfectum, et limatum, mihi spondeo; præsertim in Henrici septimi rebus gestis; in quibus enarrandis acuminis sui divini talentum exercere licebit. Dominus iste indies in majus innoscescit, et opera ejus magis magisque apud nos in deliciis habentur; atque ii, qui in rebus humanis ultra vulgare sapiunt, eum inter ingenia seculi hujus capacissima et celsissima reputant: et sic revera est.” Jam fama ejus diuturnitate non deflorescit, sed potius augescit. Librorum ejus plurimi alias linguas, tam eruditæ quam modernas, et pridem et nuper, callere edocti

sunt ab illarum nationum indigenis. Viri primarii aliquot, dum adhuc in vivis fuit, nullam aliam ob causam huc in Angliam transfretarunt, quam ut eum conspicerent, et cum eo coram loquendi opportunitatem captarent, quorum unum pictura sua, a capite ad pedes usque delineata, in Galliam secum portanda donavit: quam hospes ille tanquam rem gratissimam conterraneis suis futuram fassus est; ut ita imagine personæ non secus, ac imaginibus cerebri (libris nimirum) potirentur. Inter cæteros marchio Fiatus, nobilis Gallus, qui legatus in Angliam venerat anno primo Mariæ reginæ, Caroli regis nuptiæ, ingenti animi ardore eum invisendi captus est. Ad quam rem opportunitatem nactus, et cubiculum ingressus præ infirmitate in lectulo decumbentis, stylo aliquantum grandiore eum adortus est, "Dominationem suam sibi semper angelis similem fuisse; de quibus multa ad illius aures pervenerunt, et in libris similiter lectitarit, sed eos nunquam coram conspiciere concessum fuit." A quo congressu tanta inter eos amicitia inita fuit, et marchio eum tanta reverentia prosecutus est, ut præter visitationes crebras, literæ invicem sub nominibus et titulis patris et filii intercesserint. Quod ad salutationes innumeras per epistolas, ab exterarum nationum viris primariis, sapientiæ aut bonarum artium studio deditis, missas, nihil hic addo; utpote rem aliis melioris notæ hominibus cum eo communem.

Jam vero cum de fama ejus dissero, intelligi velim, ac si in stylo non exclusivo, sed comparativo tantum scriberem: fama enim ejus etiam apud Anglos suos non flaccida aut enervis, sed vivida et vegeta est; præcipue apud eos, qui ingenio acutiore et sublimiore, emineant. Cujus rei testimonia tantum duo inserere libet, et non plura. Prius est, cum "Historia regni Henrici septimi" jam prælo matura fuerit, Fulconi baroni Brooko a Jacobo rege perlegenda tradita est: is, cum totam absolvisset, hoc elogio ad auctorem remisit, "Commendatum me habes dominationi suæ; et exora eum, ut de papyro et atramento bono comparando curam suscipiat; opus enim ipsum supereminet." Alterum doctoris Samuelis Collini, in inclyta academia Cantabrigiensi nuper et theologiæ professoris regii, et collegii regalis præpositi, viri minime vulgaris ingenii; qui mihi ipsi (sive festive, sive serio) affirmavit, "Quod postquam librum *De profectu scientiarum* perlegisset, eo se adactum putaverit, ut studia sua de integro renovare necesse fuerit; et quod oleum et operam antea impensam perdidit."

Efflagitatum a nonnullis est ut de diætâ ejus, et regimine valetudinis, quedam insererentur; eo, quod, propter universalem ejus in rebus naturalibus cognitionem, poterit fortasse quibusdam exemplo suo præire. Quod ad diætâ; plena potius et liberali usus est, prout stomachus ferebat, quam tenui aut parca: quam etiam in "Historia vitæ et mortis" alicubi collaudavit. Ætate juniore, cibis delicatioribus et levioribus (veluti carnis volatilium et hujusmodi) præcipue vescebatur; sed experientia edoctus, carnes fortiores, quales in macello veneunt, potius probavit; utpote, quæ succos corporis magis firmos et solidos, et (ut ipsius verbis utar) minus dissipabiles prognerent; ex quibus solis sæpenumero

pasebatur, licet mensa ejus ferculis aliis non destitueretur. Persuasum habes, illud nullatenus ipsum neglexisse quod in scriptis suis toties decantatum reperies, usum nimirum crebrum nitri; cujus quidem grana circiter tria quotidie in jusculo tenui et tepido, per triginta ad minus annos immediate mortem ejus antecedentes, mane sumpsit. Quantum ad medicinam; verum est, medice eum vixisse, sed non misere. Siquidem rhabarbari sesqui-drachmam, et non amplius, in haustu cerevisiæ et vini albi simul commixtorum ad spatium semi-horæ infusi et macerati (sex aut septem diebus interjectis) continuo sumpserit: idque paulo ante cibum (sive prandium, sive cœnam) quo minus corpus desiccaret: quod (sicut ipse asseruit) humores excrementitios corporis sæpius asportaret; spiritus autem exhalare non provocaret; sicut sudores repetiti faciunt. Jam tantillum medicinæ sumere, miserum non fuit. Aliis autem medicamentis (quicquid vulgo jactatum fuit) non omnino assuevit. Remedium adversus podagram, cujus ipse auctor fuit, quodque intra spatium horarum duarum, sæpius experto, dolorem lenivit, extat in fine "Historiæ naturalis."

Verisimile est, lunam in themate ejus natalitio præcipuum aliquem locum (veluti in horoscopo, aut medio cœli) tenuisse. Quoties enim luna defecit, aut eclipsim passa est, repentino animi deliquio correptus fuit: idque etiam si nullam defectiōnis lunaris notitiam præviam habuisset. Quamprimum autem luna luminis priori restituta fuisset, confestim refocillatus est, et convaluit.

Obiti ix<sup>o</sup> die Aprilis, anno MDCXXVI, summo mane illius diei qui in festum resurrectionis Domini tunc illuxit, ætatis sexagesimo sexto, apud ædes comitis Arundeliæ in villa de High-gate prope Londinum; ad quem locum, animi reficiendi, non commorandi gratia, ante dies octo casu devenit, Deo sic ordinante, ut illic animam efflaret, e febris lenta, una cum catarrho vehemente; unde humor adeo copiose ad pectus ejus defluxit, ut per suffocationem extinctus sit. Sepultus autem est in ecclesia Sancti Michaelis, fano Sancti Albani vicina, loco supremis tabulis sepulturæ suæ destinato: tum quia matris ejus corpus in eadem ecclesia humatum recumbat; tum quia ecclesia illa ex urbis vetustæ Verulamii ruderibus hodie sola superstes sit. Ubi monumentum præclarum e marmore candido in memoriam illius exstructum est (cura et gratitudine Thomæ Meutesii, equitis aurati, et administratoris ultimi ipsius testamenti, quondam dominationi suæ a secretis, postea concilii regis sanctioris sub regibus duobus clerici) exhibens effigiem suam in cathedra sedentis, et studio incumbentis; una cum epitaphio, quod lectissimus ille, et nitidioris ingenii, nec non equestris dignitatis, vir, Henricus Wottonus, amoris et admirationis ergo, composuit.

Quamvis autem corpus, quod deposuit, mortale fuerit, libri tamen ejus, et memoria, haud dubie perennes erunt; neque prius fatis cessuri, quam orbis terrarum machina dissolvatur. Quo permotus, quantulacunque hæc, pro tenuitate mea, colligere visum est, ut nomini ejus in posterum propagando quoquo modo inservirem.

A. D. MDCLVIII.

GUL. RAWLEY.

# FRANCISCUS DE VERULAMIO,

## SIC COGITAVIT,

TALEMQUE APUD SE RATIONEM INSTITUIT; QUAM VIVENTIBUS ET POSTERIS NOTAM FIERI, IPSORUM INTERESSE PUTAVIT.

Cum illi pro comperto esset, intellectum humanum sibi ipsi negotium facessere, neque auxiliis veris (quæ in hominis potestate sunt) uti sobrie et comode; unde multiplex rerum ignoratio, et ex ignorantia rerum detrimenta innumera: omni ope connitendum existimavit, si quo modo commercium istud mentis et rerum (cui vix aliquid in terris, aut saltem in terrenis, se ostendit simile) restitui posset in integrum, aut saltem in melius deduci. Ut vero errores qui invaluerunt, quique in æternum invalituri sunt, alii post alios (si mens sibi permittatur) ipsi se corrigerent, vel ex vi intellectus propria, vel ex auxiliis atque adminiculis dialecticæ, nulla prorsus suberat spes; propterea quod notiones rerum primæ, quas mens haustu facili et supino excipit, recondit, atque accumulat (unde reliqua omnia fluunt) vitiosæ sint, et confusæ, et temere a rebus abstractæ; neque minor sit in secundis et reliquis libido et inconstantia: ex quo fit, ut universa ista ratio humana, qua utimur quoad inquisitionem naturæ, non bene congesta et ædificata sit, sed tanquam moles aliqua magna sine fundamento. Dum enim falsas mentis vires mirantur homines et celebrant, veras ejusdem, quæ esse possint (si debita ei adhibeantur auxilia, atque ipsa rebus morigera sit, nec impotenter rebus insultet) prætereunt et perdunt: restabat illud unum, ut res de integro tentetur melioribus præsiidiis; atque fiat scientiarum et artium, atque omnis humanæ doctrinæ, in universum instauratio, a debitis excitata fundamentis. Hoc vero licet aggressu infinitum quiddam videri possit, ac supra vires mortales;

tamen idem tractatu sanum invenietur, ac sobrium magis, quam ea, quæ adhuc facta sunt. Exitus enim hujus rei est nonnullus. In iis vero, quæ jam fiunt circa scientias, est vertigo quædam, et agitatio perpetua, et circulus. Neque eum fugit quanta in solitudine versetur hoc experimentum, et quam durum et incredibile sit ad faciendam fidem. Nihilominus, nec rem, nec seipsum deserendum putavit; quin viam, quæ una humanæ menti pervia est, tentaret atque iniret: præstat enim principium dare rei, quæ exitum habere possit, quam in iis, quæ exitum nullum habent, perpetua contentione et studio implicari. Viæ autem contemplativæ viis illis activis decantatis fere respondent; ut altera, ab initio ardua et difficilis, desinat in apertum; altera, primo intuitu expedita et proclivis, ducat in avia et præcipitia. Cum autem incertus esset, quando hæc alicui posthac in mentem ventura sint; eo potissimum usus argumento, quod neminem hactenus invenit, qui ad similes cogitationes animum applicuerit; decrevit prima quæque, quæ perficere licuit, in publicum edere. Neque hæc festinatio ambitiosa fuit, sed sollicita; ut si quid illi humanitus accideret, extaret tamen designatio quædam, ac destinatio rei, quam animo complexus est; utque extaret simul signum aliquod honestæ suæ et propensæ in generis humani commoda voluntatis. Certe aliam quamcunque ambitionem inferiorem duxit re, quam præ manibus habuit: aut enim hoc, quod agitur, nihil est; aut tantum, ut merito ipso contentum esse debeat, nec fructum extra querere.

SERENISSIMO POTENTISSIMOQUE

PRINCIPI AC DOMINO NOSTRO

JACOBO,

DEI GRATIA MAGNÆ BRITANNIÆ, FRANCIÆ, ET HIBERNIÆ REGI, FIDEI DEFENSORI, ETC.

SERENISSIME, POTENTISSIMEQUE REX,

POTERIT fortasse majestas tua me furti incusare, quod tantum temporis, quantum ad hæc sufficiat, negotiis tuis suffuratus sim. Non habeo quod dicam. Temporibus enim non fit restitutio; nisi forte quod detractum fuerit temporis rebus tuis, id memoriæ nominis tui et honori seculi tui reponi possit; si modo hæc alicujus sint pretii. Sunt certe prorsus nova; etiam toto genere: sed descripta ex veteri admodum exemplari, mundo scilicet ipso, et natura rerum et mentis. Ipse certe (ut ingenue fatear) soleo æstimare hoc opus magis pro parte temporis, quam ingenii. Illud enim in eo solummodo mirabile est; initia rei, et tantas de iis, quæ invaluerunt suspiciones, alicui in mentem venire potuisse. Cætera non illibenter sequuntur. At versatur proculdubio casus (ut loquimur) et quiddam quasi fortuitum, non minus in iis, quæ cogitant homines, quam in iis, quæ agunt aut loquuntur. Verum hunc casum (de quo loquor) ita intelligi volo, ut si quid in his, quæ afferro, sit boni, id immensæ misericordiæ et bonitati divinæ, et felicitati temporum tuorum tribuatur: cui et vivus integerrimo affectu servivi, et mortuus fortasse id effecero, ut illa posteritati, nova hac accensa face in philosophiæ tenebris, præluce possint. Merito autem temporibus regis omnium sapientissimi et doctissimi *regeneratio* ista et *instauratio* scientiarum debetur. Superest petitio, majestate tua non indigna; et maxime omnium faciens ad id quod agitur: ea est, ut quando Salomonem in plurimis referas, judiciorum gravitate, regno pacifico, cordis latitudine, librorum denique, quos composuisti, nobili varietate: etiam hoc ad ejusdem regis exemplum addas, ut cures historiam naturalem et experimentalem, veram et severam (missis philologicis) et quæ sit in ordine ad condendam philosophiam, denique qualem suo loco describemus; congeri et perfici: ut tandem post tot mundi ætates, philosophiæ et scientiæ non sint amplius pensiles et aëreæ, sed solidis experientiæ omnigenæ, ejusdemque bene pensitatæ, nitantur fundamentis. Equidem *Organum* præbui: verum materies a rebus ipsis petenda est. Deus Opt. Max. majestatem tuam diu servet incolumem.

Serenissimæ Majestati tuæ

Servus devinctissimus,

et devotissimus,

FRANCISCUS VERULAM,  
CANCELLARIUS.

---

## PRÆFATIO,

DE STATU SCIENTIARUM, QUOD NON SIT FELIX, AUT MAJOREM IN MODUM AUCTUS; QUODQUE ALIA OMNINO, QUAM PRIORIBUS COGNITA FUERIT, VIA APERIENDA SIT INTELLECTUI HUMANO; ET ALIA COMPARANDA AUXILIA, UT MENS SUO JURE IN RERUM NATURAM UTI POSSIT.

VIDENTUR nobis homines, nec opes, nec vires suas bene nosse; verum de illis majora, quam par est, de his minora, credere. Ita fit, ut aut artes receptas insanis pretiis æstimantes, nil amplius quærant; aut seipso plus æquo contemnentes, vires suas in levioribus consumant; in iis, quæ ad summam rei faciant, non experiantur. Quare sunt et sæ scientiis columnæ, tanquam fatales; cum ad ulterius penetrandum, homines nec desiderio, nec spe excitentur. Atque, cum opinio copiæ inter maximas causas inopiæ sit; quumque ex fiducia præsentium, vera auxilia negligantur in posterum; ex usu est, et plane ex necessitate, ut ab illis, quæ adhuc inventa sunt, in ipso operis nostri limine (idque relictis ambagibus, et non dissimu-

lanter) honoris et admirationis excessus tollatur; utili monito, ne homines eorum aut copiam, aut utilitatem, in majus accipiant, aut celebrant. Nam si quis in omnem illam librorum varietatem, qua artes et scientiæ exultant, diligentius introspectat, ubique inveniet ejusdem rei repetitiones infinitas, tractandi modis diversas, inventionem præoccupatas; ut omnia primo intuitu numerosa, facto examine, pauca reperiantur. Et de utilitate aperte dicendum est; sapientiam istam, quam a Græcis potissimum hausimus, pueritiam quandam scientiæ videri, atque habere quod proprium est puerorum; ut ad garriendum prompta, ad generandum invalida et immatura sit. Controversiarum enim ferax, operum effœta est. Adeo ut fabula illa de Scylla, in literarum statum, qualis habetur, ad vivum quadrare videatur; quæ virginis os et vultum extulit, ad uterum vero monstra latrantia succingebantur et adhærebant. Ita habent et scientiæ, quibus insuevimus, generalia quædam blandientia et speciosa; sed cum ad particularia ventum sit, veluti ad partes generationis, ut fructum et opera ex se edant, tum contentiones et oblatrantes disputationes exoriuntur, in quas desinunt, et quæ partus locum obtinent. Præterea, si hujusmodi scientiæ plane res mortua non essent, id minime videtur eventurum fuisse, quod per multa jam secula usu venit; ut illæ suis immotæ fere hæreant vestigiis, nec incrementa genere humano digna sumant: eo usque, ut sæpenumero non solum assertio maneat assertio, sed etiam quæstio maneat quæstio, et per disputationes non solvatur, sed figatur et alatur: omnisque traditio et successio disciplinarum repræsentet et exhibeat personas magistri et auditoris, non inventoris, et ejus, qui inventis aliquid eximium adjiciat. In artibus autem mechanicis, contrarium evenire videmus: quæ, ac si auræ cujusdam vitalis forent participes, quotidie crescunt et perficiuntur; et in primis auctoribus rudes plerumque et fere onerosæ et informes apparent, postea vero novas virtutes et commoditatem quandam adipiscuntur, eo usque ut citius studia hominum et cupiditates deficiant et mutantur, quam illæ ad culmen et perfectionem suam pervenerint. Philosophia contra et scientiæ intellectuales, statuarum more, adorantur et celebrantur, sed non promoventur: quin etiam in primo nonnunquam auctore maxime vigent, et deinceps degenerant. Nam postquam homines dedititii facti sint, et in unius sententiam (tanquam pedarii senatores) coierint, scientiis ipsis amplitudinem non addunt, sed in certis auctoribus ornandis et stipendiis, servili officio funguntur. Neque illud afferat quispiam; Scientias paulatim succrescentes, tandem ad statum quandam pervenisse, et tum demum (quasi confectis spatiis legitimis) in operibus paucorum sedes fixas posuisse; atque postquam nil melius inveniri potuerit, restare scilicet, ut, quæ inventa sint, exornentur et colantur. Atque optandum quidem esset, hæc ita se habuisse. Rectius illud et verius; istas scientiarum mancipationes nil aliud esse, quam rem ex paucorum hominum confidentia, et reliquorum socordia et inertia natam: postquam enim scientiæ, per partes diligenter fortasse excultæ et tractatæ fuerint, tum forte exortus est aliquis, ingenio audax et propter methodi compendia acceptus et celebratus, qui specie tenuis auctor constituerit, revera veterum labores corruperit. Id tamen posteris gratum esse solet, propter usum operis expeditum, et inquisitionis novæ tædium, et impatientiam. Quod si quis, consensu jam inveterato, tanquam temporis judicio moveatur; sciat se ratione admodum fallaci et infirma niti. Neque enim nobis magna ex parte notum est, quid in scientiis et artibus, variis seculis et locis, innotuerit, et in publicum emanarit; multo minus, quid a singulis tentatum sit, et secreto agitatum. Itaque nec temporis partus, nec abortus extant in fastis. Neque ipse consensus, ejusque diuturnitas magni prorsus æstimandus est. Utinamque enim varia sint genera politiarum, unicus est status scientiarum, isque semper fuit, et mansurus est popularis. Atque apud populum plurimum vigent doctrinæ, aut contentiosæ et pugnaces, aut speciosæ et inanes; quales videlicet assensum aut illaqueant, aut demulcent. Itaque maxima ingenia proculdubio per singulas ætates vim passa sunt; dum viri capti et intellectu non vulgares, nihilo secius existimationi suæ consulentes, temporis et multitudinis judicio se submiserint. Quamobrem altiores contemplationes, si forte usquam emicuerunt, opinionum vulgarium ventis subinde agitatæ sunt, et extinctæ: adeo ut tempus, tanquam fluvius, levia et inflata ad nos devexerit, gravia et solida demerserit. Quin et illi ipsi auctores, qui dictaturam quandam in scientiis invaserunt, et tanta confidentia de rebus pronuntiant; cum tamen per intervalla ad se redeunt, ad querimonias de subtilitate naturæ, veritatis recessibus, rerum obscuritate, causarum implicatione, ingenii humani infirmitate se convertunt: in hoc nihilo tamen modestiores, cum malint communem hominum et rerum conditionem causari, quam de seipsis confiteri. Quin illis hoc fere solenne est, ut quequid ars aliqua non attingat, id ipsum ex eadem arte impossibile esse statuant. Neque vero damnari potest ars, quum ipsa disceptet, et judicet. Itaque id agitur, ut ignorantia etiam ab ignominia liberetur. Atque quæ tradita et recepta sunt, ad hunc fere modum se habent: quoad opera sterilia, quæstionum plena; incrementis suis tarda et languida; perfectionem in toto simulantia, sed per partes male impleta; delectu autem popularia et auctoribus ipsis suspecta, ideoque artificii quibusdam munita, et ostentata. Qui autem et ipsi experiri, et se scientiis addere, earumque fines proferre statuerunt, nec illi a receptis prorsus desciscere ausi sunt, nec fontes rerum petere. Verum se magnum quiddam consequutos putant, si aliquid ex proprio inserant et adjiciant; prudenter secum reputantes, se in assentiendo modestiam, in adjiciendo libertatem tueri posse. Verum dum opinionibus et moribus consulitur, mediocritates istæ laudatæ in magnum scientiarum detrimentum cedunt: Vix enim datur, auctores simul et admirari, et superare. Sed fit aquarum more, quæ non altius ascendunt, quam ex quo descenderunt. Itaque hujusmodi homines emendant nonnulla, sed parum promovent; et proficiunt in melius, non in majus. Neque tamen defuerunt, qui ausu majore, omnia integra sibi duxerunt, et ingenii impetu usi, priora prosternendo, et destruendo, aditum sibi et placitis suis fecerunt; quorum tumultu non magnopere profectum est; quum philosophiam et artes non re ac opere amplificare, sed placita tantum permutare, atque regnum opinionum in se transferre contenderint: exiguo sane fructu, quum inter errores oppositos, errandi causæ sint fere communes. Si qui autem nec alienis, nec propriis

placitis obnoxii, sed libertati faventes, ita animati fuere, ut alios secum simul quærere cuperent; illi sane affectu honesti, sed conatu invalidi fuerunt. Probabiles enim tantum rationes sequuti videntur, et argumentorum vertigine circumaguntur, et promiscua quærendi licentia severitatem inquisitionis enervarunt. Nemo autem reperitur, qui in rebus ipsis et experientia moram fecerit legitimam. Atque nonnulli rursus, qui experientiæ undis se commiserunt, et fere mechanici facti sunt; tamen in ipsa experientia erraticam quandam inquisitionem exercent, nec ei certa lege militanti: quin et plerique pusilla quædam pensa sibi proponere, pro magno ducentes, si unum aliquid inventum erueri possint; instituto non minus tenui, quam imperito. Nemo enim rei alicujus naturam, in ipsa re recte aut feliciter perscrutatur; verum post laboriosam experientiarum variationem, non acquiescit, sed invenit quod ulterius quærat. Neque illud imprimis omittendum est, quod omnis in experiendo industria, statim ab initio opera quædam destinata præpropere et intempestivo studio captavit; fructifera (inquam) experimenta, non lucifera, quæsit; nec ordinem divinum imitata est, qui primo die lucem tantum creavit, eique unum diem integrum attribuit; neque illo die quicquam materiati operis produxit, verum sequentibus diebus ad ea descendit. At, qui summas dialecticæ partes tribuerunt, atque inde fidissima scientiis præsidia comparari putarunt, verissime et optime viderunt, intellectum humanum sibi permissum, merito suspectum esse debere. Verum infirmior omnino est malo medicina; nec ipsa mali expert: siquidem dialectica, quæ recepta est, licet ad civilia, et artes, quæ in sermone et opinione positæ sunt, rectissime adhibeatur; naturæ tamen subtilitatem longo intervallo non attingit; et prensando quod non capit, ad errores potius stabiliendos, et quasi figendos, quam ad viam veritati aperiendam valuit.

Quare, ut quæ dicta sunt complectamur, non videtur hominibus aut aliena fides, aut industria propria, circa scientias hactenus feliciter illuxisse; præsertim quum et in demonstrationibus et in experimentis adhuc cognitis, parum sit præsidii. Ædificium autem hujus universi, structura sua, intellectui humano contemplanti, instar labyrinthi est; ubi tot ambigua viarum, tam fallaces rerum et signorum similitudines, tam obliquæ et implexæ naturarum spiræ et nodi, undequaque se ostendunt: iter autem, sub incerto sensus lumine, interdum affulgente, interdum se condente, per experientiæ et rerum particularium sylvas, perpetuo faciendum est. Quin etiam duces itineris (ut dictum est) qui se offerunt, et ipsi implicantur; atque errorum et errantium numerum augent. In rebus tam duris de judicio hominum ex vi propria, aut etiam de facilitate fortuita, desperandum est: neque enim ingeniorum quantacunque excellentia, neque experiendi alea sæpius repetita, ista vincere queat. Vestigia filo regenda sunt: omnisque via, usque a primis ipsis sensuum perceptionibus, certa ratione munienda. Neque hæc ita accipienda sunt, ac si nihil omnino tot sæculis, tantis laboribus actum sit: neque enim eorum, quæ inventa sunt, nos pœnitent. Atque antiqui certe in iis, quæ in ingenio et meditatione abstracta posita sunt, mirabiles se viros præstitere. Verum, quemadmodum sæculis prioribus, cum homines in navigando per stellarum tantum observationes cursum dirigebant, veteris sane continentis oras legere potuerunt, aut maria aliqua minora et mediterranea trajicere; priusquam autem oceanus trajiceretur, et novi orbis regiones detegerentur, necesse fuit, usum acus nauticæ, ut ducem viæ magis fidum et certum, innotuisse: simili prorsus ratione, quæ hucusque in artibus et scientiis inventa sunt, ea hujusmodi sunt, ut usu, meditatione, observando, argumentando, reperiri potuerint; utpote quæ sensibus propiora sint et communibus notionibus fere subjaceant: antequam vero ad remotiora et occultiora naturæ liceat appellere, necessario requiritur, ut melior et perfectior mentis et intellectus humani usus et adoperatio introducat.

Nos certe æterno veritatis amore devicti, viarum incertis, et arduis, et solitudinibus nos commisimus: et divino auxilio freti et innixi, mentem nostram et contra opinionum violentias et quasi instructas acies, et contra proprias et internas hæsitaciones et scrupulos, et contra rerum caligines et nubes, et undequaque volantes phantasias, sustinimus; ut tandem magis fida et secunda indicia viventibus et posteris comparare possemus. Qua in re si quid profecerimus, non alia sane ratio nobis viam aperuit, quam vera et legitima spiritus humani humiliatio. Omnes enim ante nos, qui ad artes inveniendas se applicuerunt, conjectis paulisper in res, et exempla, et experientiam oculis, statim, quasi inventio nil aliud esset, quam quædam excogitatio, spiritus proprios, ut sibi oracula exhiberent, quodammodo invocarunt. Nos vero inter res caste et perpetuo versantes, intellectum longius a rebus non abstrahimus, quam ut rerum imagines et radii (ut in sensu fit) coire possint; unde fit, ut ingenii viribus et excellentiæ non multum relinquatur. Atque quam in inveniendis adhibemus humilitatem, eandem et in docendo sequuti sumus. Neque enim aut confutationum triumphis, aut antiquitatis advocacionibus, aut auctoritatis usurpatione quadam, aut etiam obscuritatis velo, aliquam his nostris inventis majestatem imponere aut conciliare conamur; qualia reperire non difficile esset ei, qui nomini suo, non animis aliorum lumen affundere conaretur. Non (inquam) ullam aut vim, aut insidias hominum judiciis fecimus aut paramus; verum eos ad res ipsas, et rerum fœdera adducimus; ut ipsi videant, quid habeant, quid arguant, quid addant, atque in commune conferant. Nos autem, si qua in re vel male credidimus, vel obdormivimus, vel minus attendimus, vel defecimus in via, et inquisitionem abruptimus; nihilominus iis modis, res nudas et apertas exhibemus, ut errores nostri, antequam scientiæ massam altius inficiant, notari et separari possint; atque etiam ut facilis et expedita sit laborum nostrorum continuatio. Atque hoc modo, inter empiricam et rationalem facultatem (quarum morosa et inauspicata divortia et repudia, omnia in humana familia turbavere) conjugium verum et legitimum, in perpetuum, nos firmasse existimamus.

Quamobrem, quum hæc arbitrii nostri non sint; in principio operis, ad Deum Patrem, Deum Verbum, Deum Spiritum, preces fundimus humillimas et ardentissimas, ut humani generis ærumnarum memores et

peregrinationis istius vitæ, in qua dies paucos et malos terimus; novis suis eleemosynis, per manus nostras, familiam humanam dotare dignentur. Atque illud insuper supplices rogamus, ne humana divinis officiant; neve ex reseratione viarum sensus, et accensione majore luminis naturalis, aliquid incredulitatis et noctis, animis nostris, erga divina mysteria oboriatur: sed potius, ut ab intellectu puro, a phantasiis et vanitate repurgato, et divinis oraculis nihilominus subdito et prorsus deditio, fidei dentur, quæ fidei sunt. Postremo, ut scientiæ venemo, a serpente infuso, quo animus humanus tumet et inflatur, deposito, nec alium sapiamus, nec ultra sobrium, sed veritatem in charitate colamus.

Peractis autem votis, ad homines conversi, quædam et salutaria monemus, et æqua postulamus. Moneamus primum (quod etiam precati sumus) ut homines sensum in officio, quoad divina, contineant. Sensus enim (instar solis) globi terrestris faciem aperit, cœlestis claudit, et obsignat. Rursus, ne, hujusce mali fuga, in contrarium peccent; quod certe fiet, si naturæ inquisitionem ulla ex parte, veluti interdicto, separatam putant. Neque enim pura illa et immaculata scientia naturalis, per quam Adam nomina ex proprietate rebus imposuit, principium aut occasionem lapsui dedit: sed ambitiosa illa et imperativa scientiæ moralis, de bono et malo dijudicantis, cupiditas, ad hoc ut homo a Deo deficeret, et sibi ipsi leges daret, ea demum ratio atque modus tentationis fuit. De scientiis autem, quæ naturam contemplantur, sanctus ille philosophus pronuntiat, "gloriam Dei esse celare rem; gloriam regis autem rem invenire:" non aliter, ac si divina natura, innocenti et benevolo puerorum ludo delectaretur, qui ideo se abscondunt ut inveniantur; atque animam humanam sibi collusorem in hoc ludo, pro sua in homines indulgentia et bonitate, cooptaverit. Postremo omnes in universum monitos volumus, ut scientiæ veros fines cogitent; nec eam aut animi causa petant, aut ad contentionem, aut ut alios despiciant, aut ad commodum, aut ad famam, aut ad potentiam, aut hujusmodi inferiora, sed ad meritum, et usus vitæ, eamque in charitate perficiant, et regant. Ex appetitu enim potentiæ, angeli lapsi sunt; ex appetitu scientiæ, homines: sed charitatis non est excessus; neque angelus, aut homo, per eam unquam in periculum venit.

Postulata autem nostra, quæ afferimus, talia sunt. De nobis ipsis silemus: de re autem, quæ agitur, petimus; ut homines eam non opinionem, sed opus esse cogitent; ac pro certo habeant, non sectæ nos alicujus, aut placiti, sed utilitatis et amplitudinis humanæ fundamenta moliri. Deinde, ut suis commodis æqui, exutis opinionum zelis et præjudiciis, in commune consulant, ac ab erroribus viarum atque impedimentis, nostris præsidii et auxiliis, liberati et muniti, laborum, qui restant, et ipsi in partem veniant. Præterea, ut bene sperent, neque "Instaurationem" nostram, ut quiddam infinitum, et ultra mortale, fingant, et animo concipiant; quum revera sit infiniti erroris finis, et terminus legitimus; mortalitatis autem et humanitatis non sit immemor, quum rem non intra unius ætatis curriculum omnino perfici posse confidat, sed successioni destinat; denique scientias, non per arrogantiam in humani ingenii cellulis, sed submissæ in mundo majore quærat. Vasta vero, ut plurimum, solent esse, quæ inania: solida contrahuntur maxime, et in parvo sita sunt. Postremo etiam petendum videtur (ne forte quis rei ipsius periculo nobis iniquus esse velit) ut videant homines, quatenus ex eo, quod nobis asserere necesse sit (si modo nobis ipsi constare velimus) de his nostris opinandi, aut sententiam ferendi, sibi jus permissum putent: quum nos omnem istam rationem humanam præmaturam, anticipantem, et a rebus temere, et citius quam oportuit, abstractam (quatenus ad inquisitionem naturæ) ut rem variam, et perturbatam, et male extractam, rejiciamus: neque postulandam est, ut ejus judicio stetur, quæ ipsa in iudicium vocatur.

## DISTRIBUTIO OPERIS.

### EJUS CONSTITUUNTUR PARTES SEX.

PRIMA, PARTITIONES SCIENTIARUM.	QUARTA, SCALA INTELLECTUS.
SECUNDA, NOVUM ORGANUM, SIVE INDICIA DE INTERPRETATIONE NATURÆ.	QUINTA, PRODROMI, SIVE ANTICIPATIONES PHILOSOPHIÆ SECUNDÆ.
TERCIA, PHENOMENA UNIVERŒ, SIVE HISTORIA NATURALIS ET EXPERIMENTALIS AD CONDENDAM PHILOSOPHIAM.	SEXTA, PHILOSOPHIA SECUNDA, SIVE SCIENTIA ACTIVA.

### SINGULARUM ARGUMENTA.

Pars autem instituti nostri est, ut omnia, quantum fieri potest, aperte et perspicue proponantur. Nuditas enim animi, ut olim corporis, innocentiae et simplicitatis comes est. Pateat itaque primo ordo operis, atque ratio ejus. Partes operis a nobis constituuntur sex.

Prima pars exhibet scientiæ ejus sive doctrinæ, in cujus possessione humanum genus hactenus versatur, summam, sive descriptionem universalem. Visum enim est nobis, etiam in iis quæ recepta sunt, nonnullam facere moram: eo nimirum consilio, ut facilius et veteribus perfectio, et novis aditus detur.

Pari enim fere studio ferimur et ad vetera excolenda, et ad ulteriora assequenda. Pertinet etiam hoc ad faciendam fidem; juxta illud: "Non accipit indocutus verba scientiæ, nisi prius ea dixeris, quæ versantur in corde ejus." Itaque scientiarum atque artium receptorum oras legere, necnon utilia quædam in illas importare, tanquam in transitu, non negligemus.

Partitiones tamen scientiarum adhibemus eas, quæ non tantum jam inventa et nota, sed hactenus omissa et debita complectantur. Etenim inveniuntur in globo intellectuali, quemadmodum in terrestri, et culta pariter, et deserta. Itaque nil mirum videri debet, si a divisionibus usitatis quandoque recedamus. Adjectio enim, dum totum variat, etiam partes earumque sectiones necessario variat: receptæ autem divisiones, receptæ summæ scientiarum, qualis nunc est, tantum competunt.

Circa ea vero, quæ ceu omissa notabimus, ita nos geremus, ut non leves tantum titulos et argumenta concisa eorum, quæ desiderantur, proponamus: nam siquid inter omissa retulerimus (modo sit dignioris subjecti) cujus ratio paulo videatur obscurior (adeo ut merito suspicari possimus, homines non facile intellecturos, quid nobis velimus, aut quale sit illud opus, quod animo et cogitatione complectimur): perpetuo nobis curæ erit aut præcepta hujusmodi operis conficiendi, aut etiam partem operis ipsius jam a nobis confectam, ad exemplum totius subjungere; ut in singulis aut opera aut consilio juvemus. Etenim, etiam ad nostram existimationem, non solum aliorum utilitatem pertinere putavimus; ne quis arbitretur, levem aliquam de istiusmodi rebus notionem mentem nostram perstrinxisse; atque esse illa, quæ desideramus ac prensamus, tanquam votis similia. Ea vero talia sunt, quorum et penes homines (nisi sibi ipsi desint) potestas plane sit, et nos apud nosmet rationem quandam certam et explicatam habeamus. Neque enim regiones metiri animo, ut augures, auspiciorum causa: sed intrare, ut duces, promerendi studio, suscepimus.

Atque hæc prima operis pars est.

Porro prætervecti artes veteres, intellectum humanum ad trajiciendum instruemus. Destinatur itaque parti secundæ, doctrina de meliore et perfectiore usu rationis in rerum inquisitione, et de auxiliis veris intellectus: ut per hoc (quantum conditio humanitatis ac mortalitatis patitur) exaltetur intellectus et facultate amplificetur ad naturæ ardua et obscura superanda. Atque est ea, quam adducimus, ars (quam "Interpretationem naturæ" appellare consuevimus) ex genere logicæ; licet plurimum, atque adeo immensum quiddam intersit. Nam et ipsa illa logica vulgaris auxilia et præsidia intellectui moliri ac parare proficitur: et in hoc uno consentiunt. Differt autem plane a vulgari, rebus præcipue tribus: viz. ipso fine, ordine demonstrandi, et inquirendi initiis.

Nam huic nostræ scientiæ finis proponitur; ut inveniuntur non argumenta, sed artes; nec principiis consentanea, sed ipsa principia; nec rationes probabiles, sed designationes et indicationes operum. Itaque ex intentione diversa, diversus sequitur ef-

fectus. Illic enim adversarius disputatione vincitur et constringitur: hic natura, opere.

Atque cum hujusmodi fine conveniunt demonstrationum ipsarum natura et ordo. In logica enim vulgari opera fere universa circa syllogismum consumitur. De inductione vero dialectici vix serio cogitasse videntur; levi mentione eam transmittentes, et ad disputandi formulas properantes. At nos demonstrationem per syllogismum rejicimus, quod confusius agat, et naturam emittat e manibus. Tametsi enim nemini dubium esse possit, quin, quæ in medio termino conveniunt, ea et inter se conveniant (quod est mathematicæ cujusdam certitudinis) nihilominus hoc subest fraudis, quod syllogismus ex propositionibus constat, propositiones ex verbis, verba autem notionum tesserae et signa sint. Itaque si notiones ipsæ mentis (quæ verborum quasi anima sunt et totius hujusmodi structuræ ac fabricæ basis) male ac temere a rebus abstractæ et vagæ, nec satis definitæ et circumscriptæ, denique multis modis vitiosæ fuerint, omnia ruunt. Rejicimus igitur syllogismum; neque id solum quoad principia (ad quæ nec illi eam adhibent) sed etiam quoad propositiones medias: quas educit sane atque parturit, utcumque syllogismus; sed operum steriles, et a practica remotas, et plane quoad partem activam scientiarum incompetentes. Quamvis igitur relinquamus syllogismo, et hujusmodi demonstrationibus famosis ac jactatis, jurisdictionem in artes populares et opinabiles (nil enim in hac parte movemus) tamen ad naturam rerum, inductione per omnia, et tam ad minores propositiones, quam ad majores, utimur. Inductionem enim censemus eam esse demonstrandi formam, quæ sensum tuetur, et naturam premit, et operibus imminet ac fere immiscetur.

Itaque ordo quoque demonstrandi plane invertitur. Adhuc enim res ita geri consuevit; ut a sensu et particularibus primo loco ad maxime generalia advoletur, tanquam ad polos fixos, circa quos disputationes vertantur; ab illis cætera per media deriventur: via certe compendiaria, sed præcipiti; et ad naturam impervia, ad disputationes vero proclivis et accommodata. At, secundum nos, axiomata continenter et gradatim excitantur, ut nonnisi postremo loco ad generalissimam veniantur: ea vero generalissima evadunt, non notionalia, sed bene terminata; et talia, quæ natura ut revera sibi notiora agnoscat, quæque rebus hæreant in medullis.

At in forma ipsa quoque inductionis, et judicio, quod per eam fit, opus longe maximum movemus. Ea enim, de qua dialectici loquuntur, quæ procedit per enumerationem simplicem, puerile quiddam est, et precario concludit, et periculo ab instantia contradictoria exponitur, et consueta tantum intuetur; nec exitum reperit.

Atqui opus est ad scientias inductionis forma tali, quæ experientiam solvat, et separet, et per exclusiones ac rejectiones debitas necessario concludat. Quod si judicium illud vulgatum dialecticorum tam operosum fuerit, et tanta ingenia exercuerit; quanto magis laborandum est in hoc altero, quod non tantum ex mentis penetrabilibus, sed etiam ex nature visceribus extrahitur?

Neque tamen hic finis. Nam fundamenta quoque

scientiarum fortius deprimimus et solidamus, atque initia inquirendi altius sumimus, quam adhuc homines fecerunt: ea subiciendo examini, quæ logica vulgaris tanquam fide aliena recipit. Etenim dialectici principia scientiarum a scientiis singulis tanquam mutuo sumunt; rursus notiones mentis primas venerantur: postremo informationibus immediatis sensus bene dispositi acquiescunt. At nos logicam veram, singulas scientiarum provincias, majore cum imperio, quam penes ipsarum principia sit, debere ingredi decrevimus; atque illa ipsa principia putativa ad rationes reddendas compellere, quousque plane consent. Quod vero attinet ad notiones primas intellectus; nihil est eorum, quæ intellectus sibi permixtus concessit, quin nobis pro suspecto sit: nec ullo modo ratum, nisi novo iudicio se stiterit, et secundum illud pronuntiatum fuerit. Quinetiam sensus ipsius informationes multis modis excutimus. Sensus enim fallunt utique; sed et errores suos indicant: verum errores præsto, indicia eorum longe petita sunt.

Duplex autem est sensus culpa: aut enim destituit nos, aut decipit. Nam primo, plurimæ sunt res, quæ sensum etiam recte dispositum, nec ullo modo impeditum, effugiunt; aut subtilitate totius corporis, aut partium minutis, aut loci distantia, aut tarditate atque etiam velocitate motus, aut familiaritate objecti, aut alias ob causas. Neque rursus, ubi sensus rem tenet, prehensiones ejus admodum firmæ sunt. Nam testimonium et informatio sensus semper est ex analogia hominis, non ex analogia universi: atque magno prorsus errore asseritur, sensum esse mensuram rerum.

Itaque ut his occurratur; nos multo et fido ministerio auxilia sensui undique conquisivimus, et contraximus: ut destitutionibus substitutiones, variationibus rectificationes suppeditentur. Neque id molimur tam instrumentis, quam experimentis. Etiam experimentorum longe major est subtilitas, quam sensus ipsius, licet instrumentis exquisitis adjuti: (de iis loquimur experimentis, quæ ad intentionem ejus, quod quæritur, perite, et secundum artem excogitata et apposita sunt). Itaque perceptioni sensus immediatæ ac propriæ non multum tribuimus: sed eo rem deducimus, ut sensus tantum de experimento, experimentum de re judicet. Quare existimamus nos sensus (a quo omnia in naturalibus petenda sunt, nisi forte libeat insanire) antistites religiosos, at oraculorum ejus non imperitos interpretes nos præstitisse: ut alii professione quadam, nos re ipsa sensum tueri ac colere videamur. Atque hujusmodi sunt ea, quæ ad lumen ipsum naturæ, ejusque accensionem et immissionem paramus: quæ per se sufficere possent, si intellectus humanus æquus et instar tabulæ abrasæ esset. Sed cum mentes hominum miris modis adeo obsessæ sint, ut ad veros rerum radios excipiendos sincera et polita area præstare desit; necessitas quædam incumbit, ut etiam hæc rei remedium quaerendum esse putemus.

Idola autem, a quibus occupatur mens, vel adscititia sunt, vel innata. Adscititia vero immigrarunt in mentes hominum, vel ex philosophorum placitis et sectis, vel ex perversis legibus demonstrationum. At innata in hærent naturæ ipsius intellectus, qui ad

errorem longe proclivior esse deprehenditur, quam sensus. Utcunque enim homines sibi placeant, et in admirationem mentis humanæ ac fere adorationem ruant, illud certissimum est; sicut speculum inæquale rerum radios ex figura et sectione propria immutat; ita et mentem, cum a rebus per sensum patitur, in notionibus suis expediendis et comminiscendis, haud optima fide rerum naturæ suam naturam inserere et immiscere.

Atque priora illa duo idolorum genera, ægre; postrema vero hæc nullo modo evelli possunt. Id tantum relinquitur, ut indicentur; atque ut vis ista mentis insidiatrix notetur et convincatur, ne forte a destructione veterum, novi subinde errorum surculi ex ipsa mala complexione mentis pullulent; eoque res recidat, ut errores non extinguantur, sed permulentur: verum e contra, ut illud tandem in æternum ratum et fixum sit, intellectum nisi per inductionem, ejusque formam legitimam, judicare non posse. Itaque doctrina ista de expurgatione intellectus, ut ipse ad veritatem habilis sit, tribus redargutionibus absolvitur: redargutione philosophiarum, redargutione demonstrationum, et redargutione rationis humanæ nativæ. His vero explicatis, ac postquam demum patuerit, quid rerum natura, quid mentis natura ferat; existimamus nos thalamum mentis et universi, pronuba divina bonitate, stravisse et ornasse. Epithalamii autem votum sit, ut ex eo connubio auxilia humana, et stirps inventorum, quæ necessitates ac miseras hominum aliqua ex parte doment et subigant, suscipiatur. Hæc vero est operis pars secunda.

At vias non solum monstrare et munire, sed inire quoque consilium est. Itaque tertia pars operis complectitur Phænomena Universi; hoc est, omnigenam experientiam, atque historiam naturalem, ejus generis, quæ possit esse ad condendam philosophiam fundamentalis. Neque enim excellens aliqua demonstrandi via, sive naturam interpretandi forma, ut mentem ab errore et lapsu defendere ac sustinere, ita ei materiam ad sciendum præbere et subministrare possit. Verum iis, quibus non conjicere et hariolari, sed invenire et scire propositum est; quique non simiolas et fabulas mundorum comminisci, sed hujus ipsius veri mundi naturam introspicere et velut dissecare in animo habent; omnia a rebus ipsis petenda sunt. Neque huic labori, et inquisitioni, ac mundanæ perambulationi, ulla ingenii, aut meditationis, aut argumentationis substitutio, aut compensatio sufficere potest; non si omnia omnium ingenia coierint. Itaque aut hoc prorsus habendum, aut negotium in perpetuum deserendum. Ad hunc vero usque diem ita cum hominibus actum est, ut minime mirum sit, si natura sui copiam non faciat.

Nam primo, sensus ipsius informatio, et deserens et fallens: observatio, indiligens et inæqualis, et tanquam fortuita; traditio, vana et ex rumore: practica, operi intenta et servilis: vis experimentalis, caeca, stupida, vaga, et prærupta: denique historia naturalis, levis et inops; vitiosissimam materiam intellectui ad philosophiam et scientias congresserunt.

Deinde, præpostera argumentandi subtilitas et

ventilatio, serum rebus plane desperatis tentat remedium: nec negotium ullo modo restituit, aut errores separat. Itaque nulla spes majoris augmenti ac progressus sita est, nisi in restauratione quadam scientiarum.

Hujus autem exordia omnino a naturali historia sumenda sunt, eaque ipsa novi cujusdam generis et apparatus. Frustra enim fuerit speculum expolire, si desint imagines: et plane materia idonea præparanda est intellectui, non solum præsidia fida comparanda. Differt vero rursus historia nostra (quemadmodum logica nostra) ab ea, quæ habetur, multis rebus: fine, sive officio; ipsa mole et congerie; dein subtilitate; etiam delectu, et constitutione in ordine ad ea, quæ sequuntur.

Primo enim eam proponimus historiam naturalem, quæ non tam aut rerum varietate delectet, aut præsentem experimentorum fructu juvet; quam lucem inventioni causarum affundat, et philosophiæ enutriendæ primam mammam præbeat. Licet enim opera, atque activam scientiarum partem præcipue sequamur, tamen messis tempus expectamus, nec muscum et segetem herbida demetere conamur. Satis enim scimus axiomata recte inventa, tota agmina operum secum trahere; atque opera non sparsim, sed confertim exhibere. Intempestivum autem illum et puerilem affectum, ut pignora aliqua novorum operum propere captentur, prorsus damnamus et amovemus, ceu pomum Atalantæ, quod cursum retardat. Atque historiæ nostræ naturalis officium tale est.

Quoad congeriem vero, conficimus historiam non solum naturæ liberæ ac solutæ (cum scilicet illa sponte fluit, et opus suum peragit; qualis est historia cælestium, meteororum, terræ et maris, mineralium, plantarum, animalium) sed multo magis naturæ constrictæ et vexatæ; nempe, cum per artem et ministerium humanum de statu suo detruditur, atque premitur et fingitur. Itaque omnia artium mechanicarum, omnia operativæ partis liberalium, omnia practicarum complurium, quæ in artem propriam non coaluerunt, experimenta (quantum inquirere licuit, et quantum ad finem nostrum faciunt) perscribimus. Quin etiam (ut quod res est, eloquamur) fastum hominum et speciosa nil morati, multo plus et operæ et præsidii in hac parte, quam in illa altera, ponimus: quandoquidem natura rerum magis se prodit per vexationes artis, quam in libertate propria.

Neque corporum tantum historiam exhibemus, sed diligentiam insuper nostræ esse putavimus, etiam virtutum ipsarum (illarum dicimus, quæ tanquam cardinales in natura censi possint, et in quibus naturæ primordia plane constituuntur; utpote materia primis passionibus ac desideris; viz. denso, raro, calido, frigido, consistenti, fluido, gravi, levi, aliisque haud paucis) historiam seorsum comparare.

Enimvero, ut de subtilitate dicamus, plane conquirimus genus experimentorum longe subtilius et simplicius, quam sunt ea, quæ occurrunt. Complura enim a tenebris educimus et eruimus, quæ nulli in mentem venisset investigare, nisi qui certo et constanti tramite ad inventionem causarum pergeret; cum in se nullius magnopere sint usus; ut liquido appareat, ea non propter se quæsitæ esse; sed ita

prorsus se habere illa ad res et opera, quemadmodum literæ alphabeti se habeant ad orationem et verba; quæ licet per se inutiles, eadem tamen omnis sermonis elementa sunt.

In delectu autem narrationum et experimentorum melius hominibus cavisse nos arbitramur, quam qui adhuc in historia naturali versati sunt. Nam omnia fide occulata, aut saltem perspecta, et summa quadam cum severitate recipimus: ita ut nil referatur auctum miraculi causa, sed quæ narramus, a fabulis et vanitate casta et intemerata sint. Quinetiam et recepta quæque ac jactata mendacia (quæ mirabili quodam neglectu per secula multa obtinuerunt, et inveterata sunt) nominatim proscribimus et notamus, ne scientiis amplius molesta sint. Quod enim prudenter animadvertit quidam; fabulas et superstitiones, et nugas, quas nutriculæ pueris instillant, mentes eorum etiam serio depravare: ita eadem nos movit ratio, ut solliciti atque etiam anxii simus, ne ab initio, cum veluti infantiam philosophiæ sub historia naturali tractemus et curemus, illa alicui vanitati assuescat. At in omni experimento novo et paulo subtiliore, licet (ut nobis videtur) certo ac probato, modum tamen experimenti, quo usi sumus, aperte subjungimus: ut, postquam patefactum sit, quomodo singula nobis constiterint, videant homines quid erroris subesse et adhærere possit; atque ad probationes magis fidas, et magis exquisitas (si quæ sint) expergiscantur: denique ubique monita, et scrupulos, et cautiones aspergimus, religione quadam, et tanquam exorcismo omnia phantasmata ejicientes, ac cohibentes.

Postremo, cum nobis exploratum sit, quantopere experientia et historia aciem mentis humanæ diareget; et quam difficile sit (præsertim animis vel teneris, vel præoccupatis) a principio cum natura consuescere; adjungimus sæpius observationes nostras, tanquam primas quasdam conversiones et inclinationes, ac veluti aspectus historiæ ad philosophiam: ut et pignoris loco hominibus sint, eos in historiæ fluctibus perpetuo non detentum iri; utque, cum ad opus intellectus deveniatur, omnia sint magis in procinctu. Atque per hujusmodi (qualem describimus) historiam naturalem, aditum quandam fieri posse ad naturam tutum et commodum; atque materiam intellectui præberi probam et præparatam censemus.

POSTQUAM vero et intellectum fidissimis auxiliis ac præsiidiis stipavimus, et justum divinorum operum exercitum severissimo delectu comparavimus; nil amplius superesse videtur, nisi ut philosophiam ipsam aggrediamur. Attamen in re tam ardua et suspensa sunt quædam, quæ necessario videntur interponenda; partim docendi gratia, partim in usum præsentem.

Horum primum est, ut exempla proponantur inquirendi et inveniendi, secundum nostram rationem ac viam, in aliquibus subjectis representata: sumendo ea potissimum subjecta, quæ et inter ea, quæ quærentur, sunt nobilissima, et inter se maxime diversa; ut in unoquoque genere exemplum non desit. Neque de iis exemplis loquimur, quæ singulis præceptis ac regulis, illustrandi gratia, adjiciuntur (hoc enim in

secunda parte operis abunde præstitimus) sed plane typos intelligimus et plasmata, quæ universum mentis processum, atque inveniendi continuatam fabricam et ordinem in certis subjectis, iisque variis et insignibus, tanquam sub oculos ponant. Etenim nobis in mentem venit, in mathematicis, astante machina, sequi demonstrationem facilem et perspicuam: contra, absque hac commoditate, omnia videri involuta, et, quam revera sunt, subtiliora. Itaque hujusmodi exemplis quartam partem nostri operis attribuimus: quæ revera nil aliud est, quam secundæ partis applicatione particularis et explicata.

At quinta pars ad tempus tantum, donec reliqua perficiantur, adhibetur: et tanquam fœnus redditur, usque dum sors haberi possit. Neque enim finem nostrum ita petimus occæcati; ut, quæ occurrunt in via utilia, negligamus. Quamobrem quintam partem operis ex iis conficimus, quæ a nobis aut inventa, aut probata, aut addita sunt: neque id tamen ex rationibus atque præscriptis interpretandi; sed ex eodem intellectus usu, quem alii in inquirendo et inveniendi adhibere consueverunt. Etenim cum, ex perpetua nostra cum natura consuetudine, majora de meditationibus nostris, quam pro ingenii viribus, speramus; tum poterunt ista veluti tabernaculorum in via positurorum vice fungi, ut mens ad certiora contendens in iis paulisper acquiescat. Attamen testamur interim, nos illis ipsis, quod ex vera interpretandi forma non sint inventa, aut probata, teneri minime velle. Istam vero iudicii suspensionem, non est quod exhorreat quisquam in doctrina, quæ non simpliciter nil sciri posse, sed nil nisi certo ordine et certa via sciri posse asserit: atque interea tamen certos certitudinis gradus ad usum et levamen constituit; donec mens in causarum explicatione consistat. Neque enim illæ ipsæ scholæ philosophorum, qui Acatalepsiæ simpliciter tenuerunt, inferiores fuere istis, quæ pronuntiandi licentiam usurparunt. Illæ tamen sensui et intellectui auxilia non paraverunt, quod nos fecimus: sed fidem et auctoritatem plane sustulerunt; quod longe alia res est, et fere opposita.

Sexta tandem pars operis nostri (cui reliquæ inserviunt ac ministrant) eam demum recludit et proponit philosophiam, quæ ex hujusmodi (qualem ante docuimus et paravimus) inquisitione legitima, et casta, et severa educitur et constituitur. Hanc vero postremam partem perficere et ad exitum perducere, res est et supra vires, et ultra spes nostras collocata. Nos ei initia (ut speramus) non contemnenda, exitum generis humani fortuna dabit; qualem forte homines, in hoc rerum et animorum statu, haud facile animo capere aut metiri queant. Neque enim agitur solum felicitas contemplativa, sed vere res humanæ et fortunæ, atque omnis operum potentia. Homo enim, naturæ minister et interpres, tantum facit et intelligit, quantum de naturæ ordine, opere, vel mente, observaverit: nec amplius scit, aut potest. Neque enim ullæ vires causarum catenam solvere aut perfringere possunt: neque natura aliter, quam parendo, vincitur. Itaque intentiones geminæ illæ, humanæ scilicet scientiæ et potentiæ, vere in idem coincidunt: et frustratio operum maxime fit ex ignorance causarum.

Atque in eo sunt omnia, siquis oculos mentis a rebus ipsis nunquam dejiciens, earum imagines plane ut sunt, excipiat. Neque enim hoc siverit Deus, ut phantasiæ nostræ somnium pro exemplari mundi edamus: sed potius benigne faveat, ut apocalypsim, ac veram visionem vestigiorum et sigillorum Creatoris super creaturas, scribamus.

Itaque tu, Pater, qui lucem visibilem primitias creaturæ dedisti, et lucem intellectualem ad fastigium operum tuorum in faciem hominis inspirasti; opus hoc, quod a tua bonitate profectum, tuam gloriam repetit, tuere et rege. Tu, postquam conversus es ad spectandum opera, quæ fecerunt manus tuæ, vidisti quod omnia essent bona valde; et requievisti. At homo, conversus ad opera, quæ fecerunt manus suæ, vidit quod omnia essent vanitas et vexatio spiritus; nec ullo modo requievit. Quare si in operibus tuis sudabimus, facies nos visionis tuæ et sabbati tui participes. Supplices petimus, ut hæc mens nobis constet: utque novis eleemosynis per manus nostras et aliorum, quibus eandem mentem largieris, familiam humanam dotatam velis.

## GULIELMUS RAWLEY,

SACRÆ THEOLOGIÆ PROFESSOR,

### ILLUSTRISSIMI DOMINI D. FRANCISCI,

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI, SACELLANUS,

#### LECTORI S.

Cum Domino meo placuerit, eo me dignari honore, ut in edendis operibus suis opera mea usus sit; non ab re fore existimavi, si lectorem de aliquibus, quæ ad hunc primum tomum pertinent, breviter moneam. Tractatum istum, "De dignitate et augmentis Scientiarum," ante annos octodecim, edidit dominatio suæ,

lingua patria, in duos tantummodo libros distributum; et regiæ suæ majestati dicavit, quod et nunc facit. Non ita pridem animum adjecit, ut in Latinam linguam verteretur: inaudiverat siquidem illud apud externos expeti: quin etiam solebat subinde dicere, libros modernis linguis conscriptos, non ita

multo post decocturos. Ejus igitur translationem, ab insignioribus quibusdam eloquentia viris elaboratam, propria quoque recensione castigatam, jam emittit. Ac liber primus certe, quasi mera translatio est, in paucis admodum mutatus: at reliqui octo, qui partitiones scientiarum tradunt, atque unico ante libro continebantur, ut novum opus, et nunc primum editum, prodit. Causa autem præcipua, quæ dominationem suam movit, ut opus hoc retractaret, et in plurimis amplificaret, ea fuit; quod in "Instauratione Magna" (quam diu postea edidit) Partitiones scientiarum, pro prima "Instaurationis" parte constituit; quam sequeretur "Novum Organum;" dein "Historia Naturalis;" et sic deinceps. Cum igitur

reperiret partem eam de Partitionibus scientiarum jam pridem elaboratam (licet minus solide quam argumenti dignitas postulare) optimum fore putavit, si retractaretur, et redigeretur in opus justum et completum. Atque hoc pacto, fidem suam liberari intelligit, de prima parte "Instaurationis" præstitam. Quantum ad opus ipsum, non est tenuitatis meæ, de eo aliquid præfari. Præconium ei, quod optime conveniat, existimo futurum illud, quod Demosthenes interdum dicere solebat de rebus gestis Atheniensium veterum; "Laudatorem iis dignum esse solummodo tempus." Deum Opt. Max. obnixè precor, ut, pro dignitate operis, fructus uberes diuturnique et auctori et lectori contingant.

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER PRIMUS.

AD REGEM SUUM.

SUB veteri lege, rex optime, erant et spontaneæ oblationes, et quotidiana sacrificia; hæc ex rituali cultu, illæ ex pia alacritate profectæ. Arbitror equidem deberi tale quidpiam regibus a servis suis; ut scilicet quisque non solum muneris sui tributa, sed et amoris pignora deferat. Atque in prioribus illis spero me minime defuturum; in posteriori autem genere dubitavi, quid potissimum sumerem: satius autem visum est, hujusmodi aliquid deligere, quod potius ad personæ tuæ excellentiam, quam ad negotia coronæ spectaret.

Ego sæpissime de majestate tua, ut debeo, cogitans (missis aliis sive virtutis, sive fortunæ tuæ dotibus) magna prorsus afficior admiratione, cum intueor excellentiam earum in te virtutum, facultatumque, quas philosophi intellectuales vocant: capacitatem ingenii tot et tanta complexam, firmitudinem memoriæ, prehensionis velocitatem, judicii penetrationem, elocutionisque ordinem simul et facilitatem. Subit profecto animum quandoque dogma illud Platonicum, quo asseritur, "Scientiam nihil aliud esse, quam reminiscentiam; animumque naturaliter omnia cognoscere, nativæ luci, quam specus corporis obumbraverat, subinde redditum." Certe hujus rei (si in quo alio) relucet in majestate tua exemplum insigne; cui adeo prompta est mens ad concipiendam flammam, ubi vel levissima eam excitaverit objecta occasio, vel minima aliæ cognitionis scintilla affluserit. Quemadmodum igitur, de regum sapientissimo, sacra perhibet Scriptura, "Cor illi fuisse, tanquam arenam maris:" cujus quanquam

massa prægrandis, partes tamen minutissimæ; sic mentis indidit Deus majestati tuæ crasim plane mirabilem, quæ cum maxima quæque complectatur, minima tamen prehendat, nec patiatur effluere: cum perdifficile videatur, vel potius impossibile in natura, ut idem instrumentum et grandia opera, et pusilla apte disponat. Quantum ad elocutionem tuam, occurrit illud Cornelii Taciti de Augusto Cæsare; "Augusto," inquit, "profluens, et quæ principem virum deceret, eloquentia fuit." Sane si recte rem perpendamus, omnis oratio aut laboriosa, aut affectata, aut imitatrix, quamvis alioquin excellens, nescio quid servile olet, nec sui juris est. Tuum autem dicendi genus vere regium est, profluens tanquam a fonte, et nihilominus, sicut naturæ ordo postulat, rivis diductum suis, plenum facilitatis felicitatisque, imitans neminem, nemini imitabile. Atque sicut in rebus tuis, quæ tam ad regnum quam ad domum tuam spectant, virtus videtur cum fortuna certare; mores scilicet optimi cum felici regimine; spes tuæ olim patienter et pie cohibitæ, cum fausta et opportuna speratorum adeptione; thori conjugalibus sancta fides, cum fructu conjugii beato, in sobole pulcherrima; pia, et principe Christiano dignissima ad pacem propensio, cum simili vicinorum principum inclinatione, in idem votum feliciter conspirantium: sic et in intellectus tui dotibus non levior exoritur lis et æmulatio, si eas, quæ a natura ipsa præbitæ sunt et infusæ, cum instructissima gaza multiplicis eruditionis, et plurimarum artium scientia committamus. Neque vero facile fuerit, regem aliquem post Chris-

tum natum reperire, qui fuerit Majestati tuæ literarum divinarum et humanarum varietate, et cultura comparandus. Percurrat, qui voluerit, imperatorum et rerum seriem, et juxta mecum sentiet. Magnum certe quiddam præstare reges videntur, si delibantes aliorum ingenia ex compendio sapiant, aut in cortice doctrinæ aliquatenus hæreant, aut denique literatos ament evehantque. At regem, et regem natum, veros eruditionis fontes hausisse, imo ipsimet fontem eruditionis esse, prope abest a miraculo. Tuæ vero Majestati etiam illud accedit, quod in eodem pectoris tui scrinio sacræ literæ cum profanis recondantur; adeo ut, cum Hermete illo Trismegisto, triplici gloria insigniariis, potestate regis, illuminatione sacerdotis, eruditione philosophi. Cum igitur alios reges longe hac laude (proprie quæ tua est) superes; æquum est, ut non solum præsentis sæculi fama, et admiratione celebretur, aut etiam historiarum lumine posteritati transmittatur, verum ut solido aliquo in opere incidatur, quod et regis magni potentiam denotet, et regis tam insigniter docti imaginem referat.

Quare (ut ad inceptum revertar) nulla potior mihi visa est oblatio, quam tractatus aliquis eo spectans. Hujus argumentum duobus constabit partibus. In priori (quæ levior est, neque tamen ullo modo præmittenda) de scientiæ et literarum per omnia excellentia agendum est; et simul de merito eorum, qui in iisdem provehendis operam strenue et cum judicio impendunt. Posterior vero pars (quod caput rei est) proponet, quid in hoc genere huc usque actum sit, et perfectum; insuper et ea perstringet quæ videntur desiderari; ut quamvis non ausim seponere aut deligere, tuæ quod præcipue Majestati commendem, tamen multa et varia repræsentando, regias tuas cogitationes excitare possim, ut proprios pectoris tui thesauros excutias, atque inde pro magnanimitate tua atque sapientia, optima quæque, ad artium et scientiarum terminos proferendos, depromas.

In ipso vestibulo prioris partis, ad purgandam viam, et quasi indicendum silentium, quo melius audiantur testimonia de dignitate literarum, absque oblatione tacitarum objectionum, statui primo loco liberare literas opprobriis et vilipendiis, quibus impetit eas ignorantia; sed ignorantia, sub non uno schemate: modo in theologorum zelotypia, modo in politicorum supercilio, modo in ipsorum literarum erroribus sese ostentans, et prodens. Audio primos dicentes, scientiam inter ea esse, quæ parce cauteque admittenda sunt: scientiæ nimium appetitum fuisse primum peccatum, unde hominis lapsus; hodieque hæerere serpentinum quid in ea, siquidem ingrediens tumorem inducit; "Scientia inflat." Salomonem censere, "Faciendi libros nullum esse finem, multamque lectionem carnis esse afflictionem;" et alibi, "In multa sapientia multam esse indignationem;" et "Qui auget scientiam, augere et dolorem;" D. Pauli monitum esse, "Ne decipiamur per inanem philosophiam;" quin et experientia notam esse, doctissimos viros, hæreticorum Coryphæos, doctissima secula in atheismum proclivis fuisse; contemplationem denique secundarum causarum auctoritati primæ causæ derogare.

Ut igitur falsitatem hujus dogmatis, fundamentaque ejus male jacta aperiamus; cuivis obviam est istos non percipere, scientiam, quæ lapsum peperit, non fuisse puram illam primigeniamque scientiam naturalem, cujus lumine homo animalibus, in paradiso adductis, nomina ex natura imposuit; sed superbam illam *boni et mali*, per quam excutere Deum, sibi ipse legem figere ambivit. Neque certe vis ulla scientiæ, quanta quanta sit, inflat mentem, cum nihil implere animum, nedum distendere possit, præter Deum, Deique contemplationem. Quare Salomon, de duobus palmariis inventionis sensibus (visu atque auditu) loquens; ait, "Oculum videndo, aurem audiendo non satiari." Quod si non sit impletio, sequitur, continens majus esse contento. Haud aliter de scientia ipsa, animoque humano (cui sensus sunt tanquam emissarii) definit his verbis, quæ calendario suo ephemeridique, omnium rerum tempora describenti, subnectit, ita concludens; "Omnia Deus condidit, ut unumquodque pulchrum sit in tempore suo: mundum quoque ipsum indidit cordi eorum: invenire tamen homo non potest opus, quod operatus est Deus, ab initio usque ad finem." Quibus verbis haud obscure innuit, Deum fabricatum esse animum humanum instar speculi, totius mundi capacem, ejusque non minus sitientem, quam oculum luminis: neque gentientem solum conspiciere varietates vicissitudinesque temporum, verum etiam perscrutandi explorandique immotas atque inviolabiles naturæ leges, et decreta, ambitiosum. Et quamvis innuere videatur, summam illam naturæ œconomiam (quam appellat "Opus, quod operatur Deus, ab initio usque ad finem") non posse inveniri ab homine; hoc non detrahit captui humano, sed in impedimenta doctrinæ rejiciendum; qualia sunt vitæ brevitatis, studiorum divortia, scientiarum traditio prava et infida, plurimaque alia incommoda, quibus humana conditio irretitur: siquidem nullam universi partem ab humana disquisitione alienam esse, satis clare alibi docet, inquiens, "Spiritus hominis est tanquam lucerna Dei," qua intima arcana explorat. Quare si tanta sit amplitudo captus humani, manifestum est, nullum esse periculum a quantitate scientiæ, ut ut diffusa, ne aut tumorem inducat, aut excessum: sed a qualitate tantum, quæ quantalacunque sit, si absque antidoto sua sumatur, malignum quid habet, atque venenosum, flatuosis symptomatis plenissimum. Hæc antidotus, sive aroma (cujus mixtio temperat scientiam, eamque saluberrimam efficit) est charitas. Quod etiam priori clausulæ subjungit Apostolus, dicens, "Scientia inflat, charitas autem ædificat." Cui consonum est, quod alibi docet: "Si," inquit, "linguis loquar angelorum, vel hominum, charitatem autem non habeam, factus sum velut æs resonans, aut cymbalum tinniens." Non quin eximium quid sit loqui linguis angelorum et hominum, sed quia, si segregetur a charitate, neque ad commune humani generis bonum dirigatur, potius inanem gloriam exhibebit, quam solidum fructum. Censuram quod attinet Salomonis, de excessu legendi scribebique libros, et cruciatus spiritus et scientia oriundo; monitumque etiam Paulinum, "Ne decipiamur per inanem philosophiam:" si recte explicentur ea loca, optime ostendent veros cancellos,

et limites, quibus humana scientia circumsepitur; ita tamen ut liberum sit ei, absque omni coarctatione universam rerum naturam amplecti. Sunt enim limites tres. Primus, ne ita felicitatem collochemus in scientia, ut interim mortalitatis nostræ oblivio subrepat. Secundus, ne sic utamur scientia, ut anxietatem pariat, non animi tranquillitatem. Tertius, ne putemus, posse nos, per naturæ contemplationem, mysteria divina assequi. Nam quantum ad primum, optime in eodem libro alibi se Salomon explicat: "Satis," inquit, "perspexi, sapientiam tantum recedere a stultitiâ, quantum lucem a tenebris. Sapientis oculi in capite ejus, stultus in tenebris oberrat; sed simul didici moriendi necessitatem utrique esse communem." De secundo certum est, nullam animi anxietatem, aut perturbationem oriri e scientia, nisi tantum per accidens. Omnis enim scientia, et admiratio (quæ et semen scientiæ), per se jucunda est. Cum autem conclusiones inde deducuntur, quæ oblique rebus nostris applicatæ, vel infirmos metus gignunt, vel immodicas cupiditates, tum demum nascitur cruciatus ille, et perturbatio mentis, qua de loquimur: tunc enim scientia non est amplius lumen siccum (ut voluit Heraclitus ille obscurus, "Lumen siccum optima anima"); sed fit lumen madidum, atque humoribus affectuum maceratum. Tertia regula accuratior paulo disquisitionem postulat, neque sicco pede prætereunda est. Siquis enim ex rerum sensibilibus et materialium intuitu, tantum luminis assequi speret, quantum ad patefaciendam divinam naturam, aut voluntatem sufficiet, næ iste decipitur per inanem philosophiam. Etenim contemplatio creaturarum, quantum ad creaturas ipsas, producit scientiam; quantum ad Deum, admirationem tantum; quæ est quasi abrupta scientia. Ideoque scitissime dixit quidam Platonius; "Sensus humanos solem referre, qui quidem revelat terrestrem globum, cœlestem vero et stellas obsignat." Sic sensus reserant naturalia, divina occludunt. Atque hinc evenit, nonnullos e doctiorum manipulo in hæresin lapsos esse, quum, ceratis sensuum alis innixi, ad divina evolare contenderent. Namque eos, qui autumant nimiam scientiam inclinare mentem in atheismum, ignorantiamque secundarum causarum pietati erga primam obstetricari, libenter compellarem Jobi quæstione: "An oporteat mentiri pro Deo, et ejus gratia dolum loqui conveniat, ut ipsi gratificemur?" Liqueat enim, Deum nihil operari ordinario in natura, nisi per secundas causas, cujus diversum credi si vellent, impostura mera esset, quasi in gratiam Dei, et nihil aliud, quam auctori veritatis immundam mendacii hostiam immolare. Quin potius certissimum est, atque experientia comprobatum, leves gustus in philosophia movere fortasse ad atheismum, sed pleniore haustus ad religionem reducere. Namque in limine philosophiæ, cum secundæ causæ, tanquam sensibus proximæ, ingerant se menti humanæ, mensque ipsa in illis hæreat atque commoretur, oblivio primæ causæ obrepere possit: sin quis ulterius pergat, causarumque dependentiam, seriem, et concatenationem, atque opera providentiæ intueatur, tunc, secundum poëtarum mythologiam, facile credet summum naturalis catenæ annulum pedi solii Jovis affigi. Ut semel

dicam, nemo, male applicatæ sobrietatis moderationisque famam captans, posse nos nimium progredi; in libris sive Scripturarum, sive creaturarum, theologia, aut philosophia, existimet; quinimo excitent se homines, et infinitos profectus audacter urgeant utrobique, et persequantur; caventes tantum ne scientia utantur ad tumorem, non ad charitatem, ad ostentationem, non ad usum; et rursus, ne distinctas illas theologiæ philosophiæque doctrinas, earumque latices imperite misceant ac confundant.

ACCEDAMUS nunc ad opprobria, quibus literas aspergunt politici. Illa ejusmodi sunt: artes emollire animos, militarique gloriæ ineptos reddere: tum in politicis quoque corrumpere ingenia; quæ vel nimis curiosa efficiunt ex varietate lectionis; vel nimis pertinacia ex rigore regularum; vel nimis tumida ex magnitudine exemplorum; vel nimis extravagantia ex dissimilitudine exemplorum; quin saltem utcumque avertere, et alienare animos a negotiis, et actione, otii ac secessus amorem instillant: dein rebus publicis inducere disciplinæ relaxationem, dum unusquisque promptior est ad disputandum, quam ad obtemperandum. Unde Cato Censorius, cum primis mortalium sapiens, ubi juventus Romana ad Carneadem philosophum, qui venerat Romam legatus, dulcedine atque majestate eloquentiæ ejus capta, undique conflueret, frequenti senatu auctor fuit, ut, expeditis negotiis, primo quoque tempore dimitterent hominem, ne civium animos inficeret, et fascinaret, et nec opinantibus morum consuetudinumque patriarum mutationem induceret. Hoc etiam permovit Virgilium (dum studia sua patriæ existimationi posthaberet) ut artes politicas a literariis segregaret; illas Romanis vendicans, has Græcis relinquens, in versibus illis decantatis:

Tu regere imperio populos, Romane, memento:  
Hæ tibi erunt artes. ÆN. vi. 851.

Videmus etiam Anytum, Socratis accusatorem, pro crimine ei objecisse, quod vi et varietate sermonum, ac disputationum suarum, auctoritatem et reverentiam legum consuetudinumque patriarum, apud adolescentes immineret; quodque artem profiteretur perniciosam et periculo plenam, qua quis instructus, deteriorem causam meliorem faceret, veritatemque ipsam eloquentiæ apparatu obrueret.

Verum hæ criminaciones, cæteræque ejusdem farinae, potius personatam gravitatem præ se ferunt, quam veritatis candorem. Testatur enim experientia, sicut unus atque eisdem homines, sic una eademque tempora, et rerum bellicarum, et optimarum artium gloria floruisse. Viros quod attinet, exemplo sit nobile par imperatorum, Alexander Magnus, et Julius Cæsar dictator, alter Aristotelis in philosophia discipulus, alter Ciceronis in dicendo rivalis. Aut si quis requirat potius literatos, qui in claros imperatores evaserunt, quam imperatores, qui insigniter docti fuerunt; præsto est Epaminondas Thebanus, aut Xenophon Atheniensis: quorum ille primus fuit, qui fregit potentiam Spartanorum; hic autem primus, qui stravit viam ad eversionem monarchiæ Persarum. Istud vero armorum literarumque quasi conjugium, clarius adhuc in temporibus, quam

in personis, elucescit, quanto nimirum seculum homine objectum grandius est. Ipsa quippe eademque tempora, apud Ægyptios, Assyrios, Persas, Græcos, Romanosque, quæ propter bellicam virtutem maxime celebrantur, etiam et literis plurimum fuerunt nobilitata; adeo ut gravissimi auctores philosophique, et clarissimi duces atque imperatores, eodem seculo vixerint. Nec sane aliter fieri potest: quandoquidem ut in homine vigor corporis animique simul fere maturescunt, nisi quod ille hunc paulo antevertat; sic in rebus publicis militaris gloria literataque (quarum illa corpori respondet, hæc animo) aut cœva sunt, aut se proxime consequuntur.

Jam vero, eruditionem politicis impedimento esse potius quam adjumento, nil minus probabile. Fate-mur omnes, temerarium quiddam esse empiricis medicis corpus et valetudinis curam tradere; qui solent pauca quædam medicamenta, quæ illis videntur panchresta, venditare, quorum fiducia nihil non audent tentare: cum tamen neque causas morborum, neque ægrotorum habitus, neque symptomatum pericula, neque veram sanandi methodum calleant. Videmus pariter errare eos, qui ad causas et lites suas expediendas adhibent leguleios, in practica potius, quam in libris juris versatos, quibus os facile oblinitur, si quid novum, aut extra experientiæ suæ calles tritos occurrat: consimiliter non potest non esse periculosissimum, quoties summa rerum empiricis consiliariis præcipue mandatur. E contra, vix exemplum adduci possit reipublicæ infeliciter administratæ, ad clavum sedentibus viris eruditis. Quamvis enim in more sit politicis, literatos pædænorum nomine elevare; historia tamen, veritatis magistra, in plurimis fidem facit, pupillares principes adultis longe præstitisse (non obstante ætatis incommodo) ea ipsa de causa, quam politici sugillant, quod scilicet tunc temporis a pædagogis administratum sit imperium. Quis ignorat, per decantatum illud quinquennium Neronis, onus rerum incubuisse Senecæ pædago? Quin et Gordianus junior decennium laudis Misitheo pædago debuit. Neque infelicis imperium gessit Severus Alexander, dum minor fuit: quo tempore omnia procurabant mulieres, sædæ consilio præceptorum. Imo convertamus oculos ad regimen pontificium, ac nominatim Pii Quinti vel Sixti Quinti, nostro seculo, qui sub initiis suis habitus sunt pro fraterculis rerum imperitis: reperimusque acta paparum ejus generis magis esse solere memorabilia, quam eorum, qui in negotiis civilibus et principum aulis enutriti ad papatum ascenderint. Quamvis enim, qui in literis vitam maxime traduxerunt minus solertes sint atque versatiles in occasionibus prensandis, atque accommodandis rebus; quo spectant ea, quæ ab Italis *ragioni di stato* dicuntur, quorum nomen ipsum aversatus est Pius Quintus, solitus dicere; "Esse mera malorum hominum commenta, quæ opponerentur religioni, et virtutibus moralibus;" in eo tamen abunde fit compensatio, quod per tutum planumque iter religionis, justitiæ, honestatis, virtutumque moralium prompte atque expedite incedant: quam viam qui constanter tenuerint, illis alteris remediis non magis indigebunt, quam corpus sanum medicina. Porro autem curriculum vitæ in uno homine suppeditare non potest

exemplorum copiam, ad regendos eventus vitæ, etiam in uno homine. Sicut enim interdum fit ut nepos vel pronepos, avum vel proavum magis referat, quam patrem; eodem modo haud raro evenit, ut negotia præsentia magis quadrent cum exemplis vetustioribus, quam cum recentioribus. Postremo unius ingenium tantum cedit amplitudini literarum, quantum privati reditus ærario.

Quod si detur, depravationes illas et impedimenta, quæ a politicis imputantur literis, aliquid virium habere et veritatis; attamen simul monendum, eruditionem in singulis plus remedii, quam mali, asserere. Esto enim, literæ tacita quadam vi animum reddunt incertum atque perplexum; at certe liquido præcipiunt quomodo cogitationes sint expediendæ, et quousque sit deliberandum, quando demum statuendum; imo ostendunt, quomodo res interim absque periculo trahi possint, et suspendi. Esto etiam, animos efficiunt magis pertinaces, et difficiles; at simul docent, quæ res demonstrationibus, quæ conjecturis innituntur; neque minus distinctionum et exceptionum usum, quam canonum et principiorum constantiam, proponunt. Esto rursus, seducunt et detorquent animos exemplorum vel imparitate vel dissimilitudine; nescio; sed satis novi, eas, tam circumstantiarum efficacias, quam comparisonum errores, et applicationum cautiones, explicare; adeo ut in universum magis corrigant animos, quam corrumpant. Hæc autem remedia insinuant undequaque literæ, magna vi, et varietate exemplorum. Perpendat quis errores Clementis septimi, a Guicciardino, qui ei fuit quasi domesticus, tam luculenter depictos; aut vacillationes Ciceronis, in epistolis ad Atticum, manu propria ad vivum resectas; omnino inconstantiam et crebras consiliorum mutationes vitabit: inspicat errores Phocionis; perviciaciam exhorrebit: fabulam Ixionis legat; et nimias spes, et hujusmodi fumos, ac nebulas dispellet: intueatur Catonem secundum; neque unquam migrabit ad antipodas, et contraria præsentis seculo vestigia figet.

Jam qui putant literas desidiæ amicas esse, otiique et secessus dulcedine perfundere animum; mirum præstabit, si, quæ assuefaciunt mentem perpetuæ agitationi, socordiæ patronas ostendant: cum contra vere affirmari possit, inter omnia hominum genera nullum negotia amare propter ipsa negotia, præter literatum. Alii enim res et negotia diligunt quæstus gratia, ut conductitii opus propter mercedem: alii honoris ergo; etenim dum res gerunt, vivunt in oculis hominum, existimationique suæ inserviunt, alioqui evanituræ: alii propter potentiam, et fortunæ prærogativam, ut amicos remunerare, inimicos ulcisci possint: alii ut facultatem aliquam suam, quam adamant, exerceant, ac sibi ipsis hoc nomine sæpius gratulentur, et arrideant: alii denique ut alios suos fines consequantur. Adeo ut, quod de gloriosis dici solet, eorum fortitudinem sitam esse in spectantium oculis, sic hujusmodi hominum diligentia et strenuitas hoc videtur agere, aut ut alii plaudant, aut ut ipsi intra se gestiant. Soli literati negotiis et occupationibus delectantur, tanquam actionibus naturæ consentaneis, et non minus salubribus animo, quam exercitatio est corpori, ipsam rem, non emolumentum, intuentes: ita ut omnium minime sint defatigabiles,

si modo res sit hujusmodi, ut animum pro dignitate ejus impleat, et detineat. Quod si reperiantur interdum nonnulli, in legendo strenui, in agendo cessatores; non hoc a literis ortum habet, sed imbecillitate et mollitie quadam corporis animive; quales notat Seneca: "Quidam," inquit, "tam sunt umbratiles, ut putent in turbido esse, quicquid in luce est." Usuvenire poterit fortasse, ut hujusmodi ingenii sibi conscii, se dent literis; eruditio autem ipsa hujusmodi ingenia minime indit, aut progignit. Quod si quis illud nihilominus mordicus teneat, literas nimium absumere temporis, quod alias rectius impendi possit; aio, neminem adeo distringi negotiis, quin habeat sua otii intervalla, donec agendi vices atque æstus refluant, nisi aut admodum hebes sit in expediendis negotiis, aut parum cum dignitate ambitiosus in negotiis cujuscunque generis captandis. Restat igitur querendum, qua in re et quomodo has subsecivas horas collocare oporteat; studii an voluptatibus, genio an ingenio indulgendum. Sicut recte respondit Demosthenes Æschini, homini voluptatibus dedito: qui cum per contumeliam objecisset, "Orationes ejus lucernam olere: Pol," inquit, "multum interest inter ea, quæ ego ac tu ad lucernam facimus." Quare neutiquam metuendum, ne literas eliminent negotia; quin potius vindicant animum ab otio et voluptate, quæ alias sensim ad utriusque damnum, et negotiorum, et literarum, subintrare solent.

Dein, quod oggerunt, literas reverentiam legum atque imperii convellere, calumnia mera est, nec probabiliter ad criminandum inducta. Nam qui cæcæ obedientiam fortius obligare contenderit, quam officium oculatum; una opera asserat, cæcum manu ductum certius incedere, quam qui luce et oculis utitur. Immo citra omnem controversiam, artes emolliunt mores, teneros reddunt, sequaces, cereos, et ad mandata imperii ductiles: ignorantia contra, contumaces, refractarios, seditiosos: quod ex historia clarissime patet, quandoquidem tempora maxime indocta, inculta, barbara, tumultibus, seditiionibus, mutationibusque maxime obnoxia fuerint.

De Catonis Censoris judicio, hoc dictum esto, merittissimas enim blasphemias in literas luisse ponas, cum septuagenario major, quasi repuerascens, Græcam linguam cupidissime addisceret. Ex quo liquet, priorem illum censuram Græcæ literaturæ, ex affectata potius gravitate, quam quod ita penitus sentiret, fluxisse. Ad Virgilio vero carmina quod attinet, utcumque illi libitum fuerit universo mundo insultare, Romanis asserendo artes imperandi, cæteras tanquam populares aliis relinquendo; in hoc tamen manifesto tenetur, Romanos nunquam imperii fastigium conscendisse, donec ad artium culmen simul pervenisent. Namque duobus primis Cæsaribus, viris imperandi peritissimis, contemporanei erant optimus poëta ille ipse Virgilius Maro, optimus historicus Titus Livius, optimus antiquarius Marcus Varro, optimus, aut optimo proximus orator Marcus Cicero; principes certe, ex omni memoria, in sua quique facultate. Postremo, quantum ad Socratis accusationem, id dico tantum; recordemur temporum, quibus intentata est; nimirum sub triginta tyrannis, mortalium omnium crudelissimis, sceleratissimis, imperioque indignissimis: qui, rerum et temporum

orbis postquam circumactus esset, Socrates ille (flagitiosus scilicet) heroibus annumeratus est, et memoria ejus hominibus tam divinis, quam humanis, honoribus cumulata: quin disputationes ejus, tanquam corruptrices morum prius habitæ, pro præsentissimis mentis morumque antidotis ab omni posteritate celebrabantur. Atque hæc sufficienter ad respondendum politicis, qui superciliosa severitate, aut fucata gravitate, ausi sunt literas incessere contumeliis; quæ tamen confutatio impræsentiarum, nisi quod nesciamus an ad posteros permanaturi sint labores nostri, minus necessaria videatur; cum aspectus et favor duorum literatissimorum principum, Elizabethæ reginæ et Majestatis tuæ, tanquam Castoris et Pollucis, lucidorum siderum, tantum apud nos in Britannia literis amorem reverentiamque conciliaverint.

Nunc ad tertium vituperationum genus pervenimus, quod a literatis ipsis in literas redundat, aliusque cæteris solet hæere: æ vel a fortuna, vel a moribus, vel a studiis ipsorum originem ducunt: quarum prima extra potestatem ipsorum est, secunda extra rem, ut tertia sola proprie in disquisitionem venire videatur. Quia tamen non tam de vero rerum pondere, quam de vulgi æstimatione, sermo instituendus est, haud abs re fuerit, etiam de alteris duabus pauca quædam innuere.

Quapropter dignitatis imminutiones, et quasi dishonestamenta, quæ a literatorum fortuna literis imponuntur, sumuntur aut a paupertate et inopia ipsorum, aut a vitæ genere obscuro et umbratili, aut ab occupationum, in quibus versantur, subjecto non admodum nobili.

Quantum ad paupertatem pertinet, quodque frequenter usuveniat, ut literati inopes sint, et tenui plerumque origine, neque tam prope ditescant, ac alii, qui quæstui solum inhiant: consultum foret, hunc locum de laude paupertatis, fratribus mendicantibus (pace eorum dixerim) exornandum tradere; quibus Machiavellus non parum tribuebat, cum diceret: "jamdudum actum esse de regno sacerdotum, nisi reverentia erga fratres ac monachos, episcoporum luxum et excessum compensasset:" pariter dicat quis, felicitatem et magnificentiam principum et nobilium, jam olim recidere potuisse in barbarium et sordes, nisi deberent literatis istis pauperibus civilis vitæ culturam et decus. Sed missis his laudum aucupis, notatu dignum est, quam sacra atque veneranda res, per aliquot apud Romanos secula, paupertas ipsa habita fuerit; quæ tamen respublica nihil trahebat ex paradoxis. Sic enim præfatur T. Livius: "Aut me amor negotii suscepti fallit, aut nulla unquam respublica nec major, nec sanctorum, nec bonis exemplis ditior fuit, nec in quam tam seræ avaritia luxuriaque immigraverint, nec ubi tantus ac tamdiu paupertati ac parsimonias honos fuerit." Quin etiam, postquam Roma jam degenerasset, legimus, cum Cæsar dictator collapsam rempublicam instauraturum se profiteretur, quandam ex amicis ejus promississe sententiam, nihil tam expeditum esse ad id, quod ageret, quam si divitiarum honos quoquo modo tolleretur. "Verum," inquit, "hæc, et omnia mala pariter cum honore pecuniæ desinent, si neque

magistratus, neque alia vulgocupienda, venalia erunt." Denique quemadmodum vere dictum est, "a roborem esse colorem virtutis," licet quandoque oriatur ex culpa; ita recte statuas, paupertatem esse virtutis fortunam, quamvis interdum a luxu et incuria accersatur. Salomonis certe hæc est sententia, "Qui festinat ad divitias, non erit insons:" et præceptum, "Veritatem eme, et noli vendere; similiter scientiam, et prudentiam;" quasi æquum judicet, opes impendendas ut doctrina pareatur; non doctrinam eo vendendam ut opes congerantur.

Quid attinet dicere de vita illa privata et obscura, quam literatis objiciunt? Adeo tritum thema est, atque ab omnibus jactatum, otium et secessum (modo absint desidia et luxus) præponere vitæ forensi et occupatæ, propter securitatem, libertatem, dulcedinem, dignitatem, aut saltem ab indignitatibus immunitatem, ut nemo tractet hunc locum, quin bene tractet; ita humanis conceptibus in experiendo, et consensibus in approbando consonat. Hoc tantum adjiciam, eruditos, latentes in rebuspublicis, et sub oculis hominum minime degentes, similes esse imaginibus Cassii et Bruti, de quibus, in elatione Junie non gestatis, cum aliæ plurimæ ducerentur, Tacitus; "Eo ipso," inquit, "præfulgebant, quod non visebantur."

De occupationum, quæ literatis committuntur, vilitate, illud occurrit, quod demandetur iisdem puerorum ac juniorum institutio, cujus ætatis contemptus in magistros ipsos redundat. Cæterum, quam injusta sit hæc obtretractio, si non ex vulgi opinione, sed ex sano judicio res pendatur, inde licet æstimare, quod diligentiores sint omnes in imbuenda testa recenti, quam veteri; magisque solliciti sint, qualem admoveant terram teneræ plantæ, quam adultæ: unde liquet, præcipuum curam circa rerum et corporum initia versari. Rabbini, si placet, porrigite aurem: "Juvenes vestri visiones videbunt, et senes somniabunt somnia." Ex hoc textu colligunt, juventutem esse ætatem digniorem; quanto nimirum revelatio accedat clarior per visiones, quam per somnia. Illud vero notatu omnino dignum, quod licet pædagogi, velut simiæ tyrannidiæ, scenæ sint ludibria, et temporum incuria in delectu ipsorum veluti obdormierit, vetus tamen querela sit, inde usque ab optimis et prudentissimis seculis deducta, respublicas circa leges quidem nimium satagere, circa educationem indiligentes esse. Quæ nobilissima pars priscæ disciplinæ revocata est aliquatenus, quasi postliminio, in Jesuitarum collegiis; quorum cum intueor industriam solertiamque, tam in doctrina excolenda, quam in moribus informandis, illud occurrit Agesilai de Pharnabazo, "Talis cum sis, utinam noster esses." Atque hactenus de opprobriis e literatorum fortuna et conditione desumptis.

Quod ad literatorum mores, res est ista potius ad peras, quam ad studia, spectans. Reperiuntur præcudubio inter eos, quemadmodum in omnibus vitæ ordinibus et generibus, tam mali, quam boni; neque propterea non verum est (quod asseritur) "abire studia in mores;" atque literas, nisi incidant in ingenia admodum depravata, corrigere prorsus naturam, et mutare in melius.

Veruntamen diligenter mihi atque ingenue rem

ætimenti, nullum occurrit dedecus literis, ex literatorum moribus, quatenus sunt literati, adhærens: nisi forte hoc vitio vertatur (cujus Demosthenes, Cicero, Cato secundus, Seneca, pluresque alii insimulantur) quod cum plerunque tempora, de quibus legunt, illis in quibus vivunt, et quæ præcipiuntur, illis quæ aguntur, meliora sint; ultra quam par est contendant morum corruptelas ad præceptorum et dogmatum honestatem retrahere, et priscæ severitatis mores temporibus dissolutis impunere: de quo tamen abunde e propriis fontibus admoneri possunt. Solon enim interrogatus, an optimas civibus suis dedisset leges? "Optimas," inquit, "ex illis, quas ipsi voluissent accipere." Ita Plato, videns corruptiores suorum civium mores, quam ut ipse ferre posset, ab omni publico munere abstinuit, dicens: "Sic cum patria agendum esse, ut cum parentibus; hoc est, suasu, non violentia; obtestando, non contestando." Atque hoc ipsum cavet ille, qui a consiliis Cæsari: "Non," inquit, "ad vetera instituta revocamus, quæ jampridem corruptis moribus ludibrio sunt." Cicero etiam hujus erroris arguit Catonem secundum, Attico suo scribens; "Cato optime sentit, sed nocet interdum reipublicæ; loquitur enim tanquam in republica Platonis, non tanquam in sæce Romuli." Idem Cicero molli interpretatione excusat philosophorum dicta et decreta duriora: "Isti," inquit, "ipsi præceptores et magistri videntur fines officiorum paulo longius, quam natura vellet, protulisse, ut cum ad ultimum animo contendissemus, ibi tamen, ubi oportet, consisteremus." Ipsemet tamen potuit dicere, "Monitis sum minor ipse meis:" quippe qui in eundem lapidem ipse, licet non tam graviter, impigerit.

Aliud, quod eruditis non immerito fortasse objicitur vitium, hujusmodi est; quod honori aut emolumento patriarum suarum, aut dominiorum, proprias fortunas aut præsidia postposuerint. Sic enim Demosthenes Atheniensibus suis, "Mea," inquit, "consilia, si recte attendatis, non sunt ejus generis, per quæ ego inter vos magnus, vos inter Græcos despectui sitis; sed talia, ut mihi sæpenumero ea haud tutum sit dare, vobis autem semper utile amplecti." Haud aliter Seneca, postquam quinquennium illud Neronis æternæ eruditorum magistrorum consecrasset gloriæ, dominum suum, omnibus jam flagitiis inquinatissimum, libere, atque fidenter monere non destitit, magno suo periculo, ac postremo præcipitio. Neque aliter potest se habere res: siquidem humanam mentem doctrina imbuat vero sensu fragilitatis suæ, instabilitatis fortunæ, dignitatis animæ et muneris sui; quarum rerum memores, nullo modo sibi persuadere possunt, fortunæ propriæ amplitudinem, tanquam præcipuum sibi bonorum finem statui posse. Quare sic vivunt, tanquam rationem reddituri Deo, et dominis post Deum, sive regibus, sive rebuspublicis, hac formula, "Ecce tibi lucrifeci;" non autem illa, "Ecce mihi lucrifeci." At politicorum turba, quorum mentes in doctrina officiorum, et in contemplatione boni universalis non sunt institutæ, et confirmatæ, omnia ad se referunt; gerentes se pro centro mundi, ac si omnes lineæ in se suisque fortunis debeant concurrere; de reipublicæ navi, licet tempestatibus jactata, neutiquam solliciti, modo ipsis in

scapha rerum suarum receptus detur et effugium. At contra, qui officiorum pondera, et philautiæ limites didicerunt, munia sua stationesque, licet cum periculo, tuentur. Quod si forte incolumes permanent in seditionibus, et rerum mutationibus, non id artibus aut versatili ingenio, sed reverentiæ quam probitas etiam ab hostibus extorquet, tribuendum. Cæterum, quod attinet ad fidei constantiam, et officiorum religionem, quas certe animis hominum inserit eruditio, utcumque eæ quandoque a fortuna mulctentur, aut ex malesanis politicorum principiis condemnentur, tamen palam scilicet apud omnes laudem referent, ut, in hac re, longa defensione non sit opus.

Aliud vitium literatis familiare, quod facilius excusari potest, quam negari: illud nimirum, quod non facile se applicant, et accommodent, erga personas, quibuscum negotiantur, aut vivunt. Qui defectus e duabus oritur causis. Prima est animi ipsius magnitudo, propter quam ægre se demittere possunt ad observantiam unius alicujus hominis. Amantis verba sunt, non sapientis: "Satis magnum alter alteri theatrum sumus." Neque tamen inficias ibo, illum, qui aciem animi, instar oculi, non possit æque contrahere, ac dilatare, insigni facultate ad res gerendas esse orbatum. Secunda vero causa est probitas morum et simplicitas; quæ tamen delectum iudicii, non defectum, in illis arguit. Veri enim et legitimi observantiæ erga aliquam personam limites non ultra-porrigunt se, quam ita nosse illius mores, ut absque offensione cum eo versari, eumque consilio, si opus sit, juvare, nobisque interim ipsis in omnibus cavere possimus: verum alienos affectus rimari, eo fine, ut illum infectas, verses, et ad libitum circumagas, hominis est parum candidi, sed potius astuti et bifidi; id quod in amicitia vitiosum fuerit, erga principes etiam inofficiosum. Mos enim orientis, quo nefas habetur oculos in reges defigere, ritu quidem barbarus est, sed significatione bonus: neque enim subditos decet, corda regum suorum, quæ sacræ Scripturæ inscrutabilia docent, curiosius rimari.

Supereat etiamnum aliud vitium (quocum hanc partem concludam) literatis sæpius imputatum, videlicet quod in rebus exiguis et externis, (vultu, gestu, inessu, sermonibus quotidianis, et hujusmodi,) deficiant in observando decore: unde homines imperiti, ex istis minutis leviculisque erroribus, quanti sint in rebus majoribus tractandis conjecturam capiunt. Verum fallit eos plerunque hujusmodi iudicium; imo sciunt, responsum sibi esse a Themistocle: qui cum rogatus esset, ut fidibus caneret, arrogantem satis ipse de se, sed ad præsens institutum perquam apposite respondit: "Se quidem fidium rudem esse, sed quo pacto oppidum parvum in civitatem magnam evadere posset, satis nosse." Et sunt proculdubio multi politicarum artium apprime gnari, quibus tamen in communi vita et quotidianis reculis nihil imperitius. Quin etiam hujusmodi sugillatores amandandi sunt ad Platonis elogium de præceptore suo Socrate, quem haud absimilem dixit pharmacopolarum pyxidibus, quæ exterius inducebantur simiis, ululis, satyrisque, intus vero pretiosos liquores, et nobilia medicamenta recondita habebant:

fatando scilicet, quod ad vulgi captum, et famam popularem, præ se ferret nonnulla levia, atque etiam deformia, cum tamen animi interiora summis tam facultatibus, quam virtutibus essent repleta. Atque de moribus literatorum hæc hactenus.

Interim monere placet, nos nihil minus agere, quam ut patrocinemur quibusdam professorum institutis abjectis et sordidis, quibus et se ipsos, et literas dehonestarunt: quales erant apud Romanos, sæculis posterioribus, philosophi quidam in familiis divitum, mensarumque eorum assecræ, quos haud absurde dicas barbatos parasitos. Cujus generis quandam lepide describit Lucianus, quem matrona nobilis catulum suum Melitæum in rheda gestare voluit: quod cum ille officiose, sed indecenter faceret, pusio subsannans: "Vereor," inquit, "ne philosophus noster e Stoico fiat Cynicus." Ante omnia vero, nihil tam offecit literarum dignitati, quam crassa et turpis adulatio, ad quam multi, neque hi indocti, et calamos et ingenia submisere, "Hecubam in Helenam, Faustina in Lucretiam" (ut ait Du-Bartas) transformantes. Neque vero nimis laudo morem illum receptum libros patronis nuncupandi, cum libri, præsertim qui hoc nomine dignandi, in veritatis tantum et rationis clientelam se dare debeant. Melius veteres, qui non alii, quam amicis atque æqualibus, scripta sua dicare solebant, aut etiam nomina ejusmodi amicorum tractatibus suis imponere: quod si forte regibus, aut magnatibus opus nuncuparent, tum demum hoc factum est, cum argumentum libri personæ tali conveniret. Hæc autem, et similia reprehensionem potius merentur, quam defensionem.

Neque hoc dico, quasi literatos culpem, si ad beatos et potentes viros quandoque se applicant. Recte enim Diogenes cuidam cum irrisione roganti: "Qui fieret, quod philosophi divites sectarentur, non divites philosophos?" respondit, non sine morsu, "Hoc ideo fieri, quod philosophi, quibus rebus indigeant, probe intelligant; divites non item." Huic affine est illud Aristippi, cui, nescio quid petenti, cum non attenderet Dionysius, ille adorantis more abjecte se ad pedes ejus; qui tum demum auscultans petitioni annuit: sed paulo post, quidam dignitatis philosophiæ assertor increpuit Aristippum, quod demittendo se ad pedes tyranni pro tantilla re philosophiam ipsam contumelia affecisset: cui ille, "suam id culpam non fuisse," respondit, "sed Dionysii, qui aures gestaret in pedibus." Quin prudens ille, non pusillanimitas habitus est, qui in disputatione quadam cum Hadriano Cæsare vinci se passus est; excusans factum, "Quod æquum esset ei cedere, qui triginta imperaret legionibus." Atque propterea non sunt damnandi viri docti, ubi, cum res postulat, aliquid de gravitate sua remittant, sive imperante necessitate, sive impetrante occasione; quod quamvis humile videatur, atque servile primo intuitu, tamen verius rem æstimanti, censebuntur non personæ, sed temporis ipsi servire.

PERGAMUS nunc ad errores, atque inania, quæ in studiis ipsis virorum doctorum interveniunt, iisque se immiscent; id quod præcipue et proprie spectat ad præsens argumentum. Qua in re non est insti-

tuti nostri erroribus ipsis patrocinari, sed per eorum censuram et secretionem excutere quod sanum et solidum est, atque a calumnia vindicare. Videmus enim, in more, præsertim apud invidios, esse, propter ea, quæ depravata sunt, etiam ea, quæ impolluta et in statu suo manserunt, sugillare; quemadmodum ethnicus in primitiva ecclesia Christianos hæreticorum vitis aspergere solebant. Neque tamen consilium est mihi, examen aliquod accuratius instituere de erroribus et impedimentis literarum, quæ interiora et a captu vulgi remotiora; sed de illis tantum verba facere, quæ cadunt sub communi et populari observatione et nota, aut saltem ab ea non longe recedunt.

Quare tria præcipue deprehendo vana et inania in literis, quæ ansas præcipue præbuerunt ad obtrectandum. Eas enim res pro vanis ducimus, quæ aut falsæ sunt, aut frivolæ; in quibus scilicet aut veritas deficit, aut usus: illos etiam homines vanos et leves existimamus, qui aut ad falsa creduli, aut in rebus exigui usus curiosi. Curiositas autem, aut in rebus ipsis versatur, aut in verbis; quando nimirum, aut in rebus inanibus opera insumitur, aut circa verborum delicias nimium insudatur. Quocirca, non certæ magis experientiæ, quam rectæ etiam rationi, consonum videtur, ut tres ponantur doctrinarum intemperies. Prima est doctrina phantastica, secunda doctrina litigiosa, tertia doctrina fucata et mollis: vel sic; vanæ imaginationes, vanæ alterationes, vanæ affectationes. Ac quidem ordiari ab ultima.

Intemperies ista, in luxurie quadam orationis sita (licet olim per vices in pretio habita fuerit) circa Lutheri tempora miris modis invaluit. In causa præcipue fuit, quod fervor et efficacia concionum tunc temporis, ad populum demulcendum et allicendum maxime vigeat: illa autem populare genus orationis posebant. Accedebat odium et contemptus, illis ipsis temporibus, ortus erga scholasticos, qui stylo et scribendi genere utebantur valde diverso, verba licenter admodum eudentes nova et horrida, de orationis ornatu et elegantia parum solliciti, dummodo circuitationem evitarent, et sensus ac conceptus suos acute exprimerent: atque hinc factum est, ut paulo postea, major apud plurimos cœperit haberi verborum cura, quam rerum; plerisque magis comptam phrasim, teretem periodum, clausularum rhythmos, troporum stellulas; quam pondus rerum, rationum nervos, inventionis acumen, aut iudicii limam affectantibus. Tum demum floruit Osorii Lusitani episcopi luxurians et diluta oratio. Tunc Sturmus in Cicerone oratore et Hermogene rhetore infinitam et anxiam operam consumpsit. Tunc Carus et Aschamus apud nos, prælectionibus et scriptis suis Ciceronem et Demosthenem usque ad cælum erehentes, juvenes ad politum hoc et florens doctrinæ genus invitarunt. Tunc Erasmus arripuit anam introducendi ridiculam illam echo, "Decem annos consumpsi in legendo Cicerone:" cui echo respondit, "Ove, asine. Scholasticorum vero doctrina despectui prorsus haberi cœpit, tanquam aspera et barbara: denique, ut semel dicam, præcipua illorum temporum inclinatio, et studium, potius ad copiam, quam ad pondus, deflectit.

Hic itaque cernere est primam literarum intemperiem, quum, ut diximus, verbis studetur, non re-

bus: cujus, etsi e citimis tantum temporibus protulerim exempla, tamen secundum majus et minus, et olim placuerunt ejus generis ineptiæ, et deinceps placebunt. Jam verò fieri non potest, quin hoc ipsum multum faciat ad doctrinæ existimationem minuendam et elevandam, etiam apud vulgus imperitum, cum videant doctorum scripta, tanquam primam literam diplomatæ, quæ quamvis variis calami ductibus et flosculis variegata sit, litera tamen est unica. Ac mihi sane videtur perapposita hujusce vanitatis adumbratio, et quasi emblemata, Pygmalionis illa insania; quid enim aliud sunt verba, quam imagines rerum, ut nisi rationum vigore animata sint, adamare illa idem sit, ac statuam deperire?

Neque tamen temere damnandum est, si quis philosophiæ obscura et aspera verborum splendore illustret, et expoliat: hujus enim rei magna adsunt exempla in Xenophonte, Cicerone, Seneca, Plutarcho, ipsoque etiam Platone: nec minor est utilitas. Quamvis enim diligentem veri cognitionem, atque acre studium philosophiæ res hæc non nihil impediatur, quoniam præpropere mentem consopit, atque ulterioris disquisitionis sitim et ardorem restinguit; si quis tamen doctrinam ad usus civiles adhibeat (sermocinandi videlicet, consulendi, suadendi, argumentandi, et similibus) omnia, quæ cupiat, præparata et adornata in hujusmodi auctoribus reperiet. Veruntamen hujusce rei excessus adeo juste contemnitur, ut quemadmodum Hercules, cum videret in templo statuam Adonidis (Veneris deliciarum) indignabundus dixit, "Nil sacri es;" ita omnes Herculei literarum pugiles, id est, laboriosi atque constantes indagatores veritatis, hujusmodi delicias et lautitias, tanquam nil divini spirantes, facile spreverint.

Paulo sanius est aliud styli genus, neque tamen ipsum omnino vanitatis experta, quod copiæ illi, et luxuriæ orationis, tempore fere succedit. Illud tunc in eo est, ut verba sint aculeata, sententiæ concisæ, oratio denique potius versa, quam fusa; quo fit, ut omnia per hujusmodi artificium, magis ingeniosa videantur, quam revera sint. Tale invenitur in Seneca effusius, in Tacito et Plinio secundo moderatius; atque nostri temporis auribus cœpit esse non ita pridem accommodatum. Verum hoc ipsum mediocribus ingeniis gratum esse solet, adeo ut dignitatem quandam literis conciliet; attamen a iudiciis magis limatis merito fastiditur; et poni possit pro intemperie quadam doctrinæ, cum sit verborum etiam et eorum concinnitatis aucupium quoddam. Atque hæc de prima literarum intemperie dicta sunt.

Sequitur ea intemperies in rebus ipsis, quam posuimus mediam, et litigiosæ subtilitatis nomine designavimus: estque illa, de qua modo diximus, aliquanto deterior. Ut enim rerum dignitas verborum cultui præcellit, sic, e contrario, odiosior est vanitas in rebus, quam in verbis. Qua in re, increpatio illa Paulina, non magis ad suam ætatem referri, quam ad sequentia tempora deduci, potest; neque theologiam tantum, sed etiam omnes scientias respicere videtur. "Devita prophanas vocum novitates, et oppositiones falsi nominis scientiæ." His enim verbis duo signa indiciaque scientiæ suspecta atque

ementitæ proponit. Primum est, vocum novitas et insolentia; alterum, rigor dogmatum, qui necessario oppositionem, et dein altercationes, quæstionesque inducit. Certe quemadmodum complura corpora naturalia, dum valent integra, corrumpuntur sæpius, et abeunt in vermes; eodem modo sana et solida rerum cognitio sæpenumero putrescit, et solvitur in subtiles, vanas, insalubres, et (si ita loqui licet) vermiculatas quæstiones; quæ motu quodam et vivacitate nonnulla præditæ videntur, sed putidæ sunt, et nullius usus. Hoc genus doctrinæ minus sanæ, et seipsam corruptentis, invaluit præcipue apud multos ex scholasticis, qui summo otio abundantes, atque ingenio acres, lectione autem impares (quippe quorum mentes conclusæ essent in paucorum auctorum, præcipue Aristotelis dictatoris sui scriptis, non minus quam corpora ipsorum in cœnobiorum cellis) historiam vero et naturæ et temporis maxima ex parte ignorantes; ex non magno materiæ stamine, sed maxima spiritus, quasi radii, agitatione, operosissimas illas telas, quæ in libris eorum extant, confecerunt. Etenim, mens humana si agat in materiam, naturam rerum et opera Dei contemplando, pro modo materiæ operatur, atque ab eadem determinatur; sin ipsa in se vertatur (tanquam aranea texens telam) tum demum interminata est, et parit certe telas quasdam doctrinæ, tenuitate filii operisque admirabiles, sed quoad usum frivolas et inanes.

Hæc inutilis subtilitas sive curiositas duplex est: et spectatur aut in materia ipsa; qualis est inanis speculatio, sive controversia; cujus generis reperiuntur et in theologia et in philosophia haud paucæ: aut in modo et methodo tractandi; hæc apud scholasticos fere talis erat. Super unaquaque re proposita formabant objectiones; deinde objectionum illarum solutiones; quæ solutiones ut plurimum distinctiones tantum erant: cum tamen scientiarum omnium robor, instar fascis illius senis, non in singulis bacillis, sed in omnibus vinculo conjunctis consistat. Etenim symmetria scientiæ, singulis scilicet partibus se invicem sustententibus, est, et esse debet, vera atque expedita ratio refellendi objectiones minorum gentium: contra, si singula axiomata, tanquam baculos fascis, seorsum extrahas, facile erit ea infirmare, et pro libito aut flectere aut frangere: ut, quod de Seneca dictum erat, "Verborum minutiis rerum frangit pondera;" vere de scholasticis usurpari possit, "quæstionum minutiis scientiarum frangunt robor." Num non in aula spatiosa consultius foret, unum accendere cereum, aut lychnuchum suspendere, variis luminibus instructum, quo omnia simul perlustrentur, quam in singulos angulos quaquaversus exiguam circumferre lucernam? Atqui non absimilis est eorum ratio, qui non tam veritatem perspicuis argumentis, auctoritatibus, comparisonibus, exemplis illustrare nituntur; quam in hoc solum incumbunt, ut minutos quosque scrupulos eximant, et captiunculas expédiant, et dubitationes solvant; hoc pacto quæstionem ex quæstione gignentes; quemadmodum fit in superiori similitudine, ut lucerna in unum aliquem locum delata, alios circumquaque destituat et obscurat. Adeo ut Scyllæ fabula ad vivum exprimat hoc genus philosophiæ; cujus os et

pectus virginem formosam præferebant, infra vero fuisse aiunt,

Candida succinctam latrantibus inguina monstris.  
VIRG. ECL. VI. 75.

Sic generalia quædam apud scholasticos inveniam, quæ pulchra sunt dictu, et non perperam inventa; ubi autem ventum fuerit ad distinctiones decisionisque, pro sæcundo utero, ad vitæ humanæ commoda, in portentosas et latrantes quæstiones desinant. Itaque minime miram, si hoc genus doctrinæ, etiam apud vulgus hominum, contemptui obnoxium fuerit, qui fere solent veritatem propter controversias circa eam motas aspernari, atque existimare eos errare omnes, qui nunquam inter se conveniant; cumque videant doctos homines inter se digladiari de rebus nullius momenti, facile illud Dionysii Syracusani arripiant, "Verba ista sunt senum otiosorum." Nihilominus certissimum est, si modo scholastici ad inexplebilem sitim veritatis, et continuam agitationem ingenii, varietatem et multipliciter lectionis et contemplationum adjunxissent, insignia profecto illi extitissent lumina, omnesque artes et scientias mirifice provexissent. Hactenus de secunda literarum intemperie.

Ad tertiam quod attinet, quæ ad falsitatem et mendacium spectat; una hæc omnium turpissima est, quippe quæ ipsam naturam animamque destruit scientiæ; quæ nihil aliud est, quam veritatis imago. Nam veritas essendi et veritas cognoscendi, idem sunt; nec plus a se invicem differunt, quam radius directus et reflexus. Hoc vitium itaque duplex, vel potius duplicatum est, impostura et credulitas; hæc decipitur, illa decipit. Quæ licet videantur discrepantis naturæ, alteraque a calliditate quadam, altera a simplicitate profecta, plerunque tamen coeunt. Ut enim in carmine habetur,

"Percontatorem fugito; nam garrulus idem est."

innuendo, qui curiosus est, eundem esse et fatilem: pariter fit, ut qui facile credat, idem libenter decipiat. Quemadmodum quoque fieri videmus in fama et rumoribus; ut qui cito iisdem fidem habeat, pari facilitate eos auxerit: quod Tacitus prudenter innuit his verbis, "fingunt simul creduntque;" adeo finitimæ sunt, voluntas fallendi, et facilitas credendi.

Hæc credendi recipiendique omnia (licet levi auctoritate munita) facilitas, duorum generum est pro ratione subjectæ materiæ: aut enim creditur narrationi, sive facto, (ut loquuntur jurisconsulti,) aut dogmati. In priori genere videmus, quanto dignitatis detrimento hic error affecerit ex ecclesiasticis historiciis nonnullas; quæ nimis faciles se præbuerunt, in prodendis transcribendisque miraculis, a martyribus, eremitis, anachoretis, et aliis sanctis viris, atque ab eorum reliquiis, sepulchris, sacellis, imaginibus, editis. Eodem modo in naturali historia videmus multa temere, ac parum cum delectu aut iudicio recepta et descripta: ut liquet ex scriptis Plinii, Cardani, Alberti, et plurimorum ex Arabibus, quæ commentitiis et fabulosis narrationibus passim sciant, iisque non solum incertis, et neutiquam probatis, sed perspicue falsis et manifesto convictis; ingenti philosophiæ naturalis dedecore apud homines graves et sobrios. In quo sane elucescit Aristotelis

sapientia, et integritas, qui, cum diligentem scripserit acta accuratam historiam animalium, tam parce fita aut fabulosa admiscuerit: quin potius audiciones admirandas, quas memoratu dignas iudicavit, in unum commentariolum conjecit: prudenter perpiciens perspicue vera (quæ tanquam basis experientia solidæ, philosophiæ et scientiis substerni possint) haud temere esse cum rebus suspectæ fidei miscenda; et rursus etiam rara atque insolita, quæ plerisque incredibilia videntur, non omnino esse suppressenda, neque memoriæ posteriorum deneganda.

At illa altera credulitas, quæ non historiæ, aut narrationibus, sed artibus et opinionibus tribuitur, duplex est: aut cum artibus ipsis, aut cum auctoribus in arte nimium credimus. Artes ipsæ, quæ plus habent ex phantasia et fide, quam ex ratione et demonstrationibus, sunt præcipue tres, astrologia, naturalis magia, et alchemia; quarum tamen fines non sunt ignobiles. Profitetur enim astrologia superiorum in inferiora influxum et dominatum recludere: magia sibi proponit naturalem philosophiam a varietate speculationum ad magnitudinem operum revocare: chemia in se suscipit partes rerum heterogeneas, quæ in corporibus naturalibus latent et implicantur, separare et extrahere; corporaque ipsa inquinata depurare, impedita liberare, immatura perficere. Sed viæ atque rationes, quæ docere putantur ad hos fines, tam in theoria illarum artium quam in praxi, erroris et nugarum plenæ sunt. Neque adeo traditio ipsarum, ut plurimum, candida est, sed artificii et latebris munita. Chemicæ tamen hoc certe debetur, quod vere comparari possit agricolæ apud Æsopum, qui, e vita exiturus, dixit filiis, "Se illis vim magnam auri in vinea, nec satis meminisse quo loco, defossam reliquisse:" qui cum vineam diligenter ligonibus ubique invertissent, aurum quidem repererunt nullum, sed tamen vindemiam insequentis anni, propter fositionem circa radices vitium, tulerunt longe uberrimam; sic strenui illi chemistarum labores et molimina circa aurum consiciendum, haud paucis nobilibus inventis et experimentis, tum ad reserandam naturam, tum ad usus viæ apprime idoneis, quasi facem accenderunt.

Illæ autem credulitas, quæ certos scientiarum auctores dictatoria quadam potestate munivit ut edicant, non senatoria ut consulant, ingens damnum scientiis intulit, tanquam præcipua causa, quæ tantopere illas affixit, et depressit, ut, absque insigni aliquo augmento, exangues jacerent. Hinc nempe factum est, ut in artibus mechanicis primi inventores pauca excogitaverint, tempus reliqua suppleverit, et perfecit; at in scientiis, primi auctores longissime penetraverint, tempus plurima detriverit, et corruerit. Sic videmus, tormentariam, nauticam, typographicam, sub initiis imperfectas, et propemodum informes fuisse, et exercentibus onerosas, temporis vero progressu expolitas et accommodas. At contra philosophiæ et scientiæ Aristotelis, Platonis, Democriti, Hippocratiæ, Euclidiæ, Archimediæ, in ipsis illis auctoribus vigerunt, tractu temporis degenerarunt potius, et non minimum splendoris amiserunt: cujus rei non est alia ratio, quam quod in artibus mechanicis ingenia multorum in unum coierunt, in artibus et scientiis liberalibus ingenia multorum sub uno

succubuerunt: quem tamen ipsum sæpenumero successores sui potius depravarunt quam illustrarunt. Ut enim aqua non ascendit altius, quam caput fontis, a quo promanat; ita doctrina ab Aristotele deducta, supra doctrinam Aristotelis nunquam assurgit. Ideoque etsi non displiceat regula, oportet discentem credere; huic tamen conjungendum est, oportet jam edoctum iudicio suo uti. Discipuli enim debent magistris temporariam solum fidem, iudicii quæ suspensionem, donec penitus imbiberint artes; non autem plenam libertatis ejurationem, perpetuamque ingenii servitute. Quare, ut absolvam hanc partem, hoc tantum adjiciam; magnis auctoribus suis sic constet honos, ut auctori auctorum, et veritatis parenti, tempori, non derogetur.

EXPLICAVIMUS tandem tres doctrinæ intemperias, sive morbos; præter quos nonnulli sunt, non tam morbi confirmati, quam vitiosi humores: qui tamen non adeo occulti sunt, aut latentes, quin in multorum sensum et reprehensionem incurrant, ideoque neutiquam prætermittendi.

Horum primus est immodicum studium duorum extremorum, antiquitatis et novitatis. Quæ in re temporis filiæ male patrisant: ut enim tempus prolem devorat, sic hæc se invicem; dum antiquitas novis invidet augmentis, et novitas non sit contenta recentia adjicere, nisi vetera prorsus eliminet, et rejiciat. Certe consilium Prophetæ vera in hac re norma est: "State super vias antiquas, et videte quænam sit via recta, et bona, et ambulate in ea." Antiquitas eam meretur reverentiam, ut homines aliquandiu gradum sistere, et supra eam stare debeant, atque undequaque circumspicere, quæ sit via optima: quum autem de via bene constiterit, tunc demum non restitandum, sed alacriter progrediendum. Sane, ut verum dicamus, "Antiquitas seculi, juvenus mundi." Nostra profecto sunt antiqua tempora, cum mundus jam senuerit; non ea, quæ computantur ordine retrogrado, initium sumendo a seculo nostro.

Alius error, e priori oriundus, est suspicio quedam, et diffidentia, quæ nihil nunc posse inveniri autumat, quo mundus tam diu carere potuit: ac si illa obiectio conveniret erga tempus, quæ Lucianus impetit Jovem, cæterosque ethnicorum deos: "Miratur enim, cur tot olim genuerint liberos, nullos autem suo seculo? Interrogatque jocans, ecquid septuagenarii jam essent, aut lege Papiæ, contra senum nuptias lata, constricti?" Sic videntur homines subvereri, ne tempus effectum jam factum sit, et ad generationem ineptum. Quin potius levitas hominum atque inconstantia, hinc optime perspicitur potest, qui, donec res aliqua perfecta sit, eam mirantur fieri posse; postquam facta semel est, iterum mirantur eam jam pridem factam non fuisse. Ita Alexandri expeditio in Asiam habita est initio pro vasto et arduo admodum negotio; quam tamen postea placuit Livio in tantum elevare, ut diceret de Alexandro, "Nil aliud, quam bene ausus est vana contemnere." Idem Columbo evenit circa occidentalem navigationem. Sed in rebus intellectualibus hoc fit multo frequentius; uti videre est in plerisque propositionibus apud Euclidem, quæ antequam demonstrarentur, miræ videntur, et quibus quis non facile assenserit; post

demonstrationem autem factam arripit eas mens per retractionem quandam (ut loquuntur jurisconsulti) tanquam ante perspectas et cognitatas.

Alius error, superiori affinis, est eorum, qui omnium sectarum, atque hæresium veterum, postquam excussæ fuissent, et ventilatæ, optimam semper obtinuisse, posthabitis aliis, existimant. Itaque putant, si quis de integro institueret inquisitionem et examen, non posset non incidere in aliquas ex rejectis opinionibus, et post rejectionem amissis, et obliteratis: quasi vero multitudo, aut etiam sapientes, multitudinis delinendiæ gratia, non illud sæpe probarint, quod populare magis atque leve sit, quam quod solidum, atque alte radices agens. Tempus siquidem simile est fluvio, qui levita atque inflata ad nos devehit, solida autem, et pondus habentia submergit.

Alius error, a reliquis diversus, est præmatura, atque proterva reductio doctrinarum in artes et methodos; quod cum fit, plerunque scientia aut parum, aut nihil proficit. Nimirum ut ephebi, postquam membra et lineamenta corporis ipsorum perfecte efformata sunt, vix amplius crescunt; sic scientia, quamdiu in aphorismos, et observationes spargitur, crescere potest, et exurgere; sed methodis semel circumscripta et conclusa, expoliri forsân et illustrari, aut ad usus humanos edolari potest, non autem porro mole augetur.

Alius error succedens ipsi, quem postremo notavimus, est quod post singulas scientias et artes suas in classes distributas, mox a plerisque universali rerum cognitioni et philosophiæ primæ renunciatur; quod quidem profectui doctrinarum inimicissimum est. Prospectationes fiunt et turribus, aut locis præaltis; et impossibile est, ut quis exploret remotiores interioresque scientiæ alicujus partes, si stet super plano ejusdem scientiæ, neque altioris scientiæ veluti speculam ascendat.

Alius error fuit ex nimia reverentia et quasi adoratione intellectus humani; unde homines abduxere se a contemplatione naturæ, atque ab experientia, in propriis meditationibus, et ingenii commentis, susque deque volutantes. Cæterum præclaros hos opinatores, et (si ita loqui licet) intellectualistas, qui tamen pro maxime sublimibus, et divinis philosophis haberi solent, recte Heraclitus perstrinxit: "Homines," inquit, "quærent veritatem in microcosmis suis, non in mundo majori." Respuunt enim quasi abecedarium naturæ, primumque in operibus divinis tirocinium: quod si non facerent, potuissent fortasse gradatim et sensim, post literas simplices, et deinceps syllabas, ad textum et volumen ipsum creaturarum expeditè legendum ascendere. At illi contra, jugi mentis agitatione, urgent, et tanquam invocant suos genios, ut vaticinentur eis, edantque oracula, quibus merito, et suaviter decipiuntur.

Alius error huic posteriori finitimus est, quod homines sæpius imbuant, et inficiant meditationes et doctrinas suas opinionibus quibusdam et conceptibus propriis, quos potissimum in admiratione habent; aut artibus, quibus maxime addicti et consecrati sunt; cætera omnia illis deliciis inficientes, et quasi intingentes, licet fuco admodum fallaci. Sic sua philosophia immiscuit Plato theologiam, Aristoteles logicam, secunda schola Platonis (Proclus scilicet et reliqui)

mathematicas. Istas enim artes solebant illi tanquam filios suos primogenitos suaviari. At chemici et paucis experimentis ad foculum, et fornacem, novam philosophiam excuderunt. Et Gilbertus popularis noster philosophiam aliam ex magnete elicit. Sic Cicero, cum varias opiniones de natura animæ recensens, tandem in musicum incidisset, qui animam esse harmoniam statuebat, facete dixit, "hic ab arte sua non recessit." Sed de hoc genus erroribus apposite et prudenter ait Aristoteles, "Qui respiciunt ad pauca, de facili pronunciant."

Alius error est impatentia dubitandi, et cæca festinatio decernendi, absque debita et adulta suspensione judicii. Nam bivium contemplationis non est dissimile bivio actionis, a veteribus sæpius memorato: cujus altera via initio plana et facilis erat, sine autem impervia; altera ingredienti aspera erat et confragosa, ubi paulo processeris, expedita et æqualis. Haud secus in contemplationibus, si quis a certis ordiatur, in dubia desinet: sin a dubiis incipiat, eaque aliquandiu patienter toleret, in certis exitum reperiet.

Similis error se ostendit in modo tradendi doctrinam, qui, ut plurimum, est imperiosus et magistralis, non ingenuus et liberalis; ita demum compositus, ut potius fidem imperet, quam examini subiciatur. Non negaverim in summariis libellis, ad praxin destinatis, hanc formulam scribendi retineri posse; verum in justis tractatibus de scientiis utrumque extremum vitandum censeo, tam Velleii Epicurei, nil tam metuentis, quam ne dubitare de re aliqua videretur; quam Socratis, et Academicæ, omnia in dubio relinquentium. Candori potius studendum, resque majore aut minore contentione tradendæ, prout rationum momentis parcius aut plenius sint probatæ.

Alii errores sunt in scopis, quos homines præfigunt sibi, et in quos conatus suos et labores dirigunt. Cum enim diligentiores literarum coryphæi ad id collimare debeant præcipue, ut arti, quam profitentur, aliquid præclarum adjiciant: hi contra in secundis tantummodo consistere sat habent; vel subtilis interpretis, vel antagonistæ vehementis et nervosi, vel methodici abbreviatoris nomen ambientes; unde reditus, et vectigalia scientiarum augeti possunt, patrimonium et fundus minime.

Omnium autem gravissimus error in deviatione ab ultimo doctrinarum fine consistit. Appetunt enim homines scientiam, alii ex insita curiositate et irrequieta; alii animi causa et delectationis; alii existimationis gratia; alii contentions ergo, atque ut in disserendo superiores sint; plerique propter lucrum et victum; paucissimi, ut donum rationis divinitus datum in usus humani generis impendant. Plane, quasi in doctrina quæreretur lectulus, in quo tumultans ingenium et æstuans requiesceret; aut xystus sive porticus, in quo animus deambulare liber et vagus; aut turris alta et edita, de qua mens ambitiosa et superba despectaret; aut arx et propugnaculum ad contentiones et prælia; aut officina ad quæstum et mercatum: et non potius locuples armarium, et gazophylacium, ad Opificis rerum omnium gloriam, et vitæ humanæ subsidium. Hoc enim illud, est quod revera doctrinam atque artes condecoraret, et attolleret, si contemplatio et actio arctiore

quam adhuc vinculo copularentur. Quæ certe conjunctio talis foret, qualis est supremorum duorum planetarum syzygia, cum Saturnus, quietis et contemplationis dux, cum Jove, duce societatis agendique, conspirat. Quanquam cum de praxi atque actione loquor, nullo modo ad doctrinam professoriam et lucrosam innuo. Neque enim me fugit, quantopere hoc ipsum progressionem doctrinæ et amplificationem moretur; perinde quidem ut aureum malum ante oculos Atalantæ projectum, quod ut tollat, dum flectit se, cursus interea impeditur:

“Declinat cursus, aurumque volubile tollit.”

Neque rursus mihi in animo est, quod de Socrate dictum erat, “Philosophiam devocare de cælo, ut tantummodo versaretur in terris:” hoc est, physicam seponi, ut moralis philosophia, et politica celebraretur sola; sed quemadmodum cælum et terra simul conspirant et consentiunt, ad hominum tuendam vitam atque juvandam; ita sane hic finis esse debet utriusque philosophiæ, ut, rejectis vanis speculationibus, et quicquid inane ac sterile est, conservetur quicquid solidum est ac fructuosum; ut hoc pacto, scientia non sit tanquam scortum ad voluptatem, aut tanquam ancilla ad quæstum; sed tanquam sponsa ad generationem, fructum, atque solatium honestum.

JAM explicasse videor, et quasi dissectione quadam aperuisse, vitiosos illos humores, aut saltem eorum præcipuos, qui non solum obstiterent profectui literarum, verum etiam culpandis iisdem ansam dedere. Quod quidem si nimis ad vivum fecerim, meminisse oportet, “Fidelia vulnera amantia, sed dolosa oscula malignantis.” Utcunque hoc certe mihi videor assecutus, ut merear fidem in sequenti præonio, cum in superiori censura tam libere egerim. Neque tamen in animo est mihi panegyricum literarum scribere, aut hymnum Musis præcinere, licet forsitan diu jam sit, ex quo sacra earum rite celebrata sint: sed consilium est, absque pigmentis et hyperbolis, verum doctrinæ contra alias res pondus excipere, et perpendere, verumque ejus valorem et pretium, ex testimoniis divinis atque humanis, exquirere.

Primo igitur quæramus dignitatem scientiæ in archetypo sive exemplari: id est, in attributis atque actis Dei, quatenus revelantur homini, et sobrie indagari possunt. Qua in re non competit appellatio doctrinæ, cum omnis doctrina sit scientia acquisita: nulla autem cognitio in Deo acquisita est, sed originalis. Itaque aliud quærendum est nomen, sapientia scilicet, ut sacræ Scripturæ eam indignant.

Sic autem se res habet: in operibus creationis duplicem virtutis divinæ emanationem videmus, quarum una ad potentiam refertur, altera ad sapientiam: illa præcipue cernitur in creanda mole materiæ, hæc in pulchritudine formæ disponenda. Hoc posito, notandum est nihil in creationis historia obstare, quin fuerit confusa illa cæli terræque massa et materia, unico temporis momento creata; cui tamen disponendæ digerendæque sex dies fuerunt attributi: adeo signanter Deus opera potentiæ, ac sapientiæ discriminavit. Cui accedit, quod de materiæ creatione memoriæ proditum non sit, dixisse Deum,

“Fiat cælum et terra,” sicut de sequentibus operibus dictum est: sed nude atque actualiter, “Deus creavit cælum et terram:” ita ut materia videatur tanquam manu facta; formæ vero introductio stylum habeat legis, aut decreti.

Pergamus a Deo ad Angelos, quorum natura dignatione est Deo proxima. Videmus in ordinibus Angelorum (quatenus fides adhibenda cælesti illi hierarchiæ quæ Dionysii Areopagitæ nomine evulgatur) primum locum obtinere Seraphim, Angelos scilicet amoris; secundum Cherubim, Angelos illuminationis; tertium autem locum et sequentes, *Thronis, Principatibus*, cæteriisque Angelis potentiæ et ministerii concedi; ut ex hoc ipso ordine ac distributione clarum sit, Angelos scientiæ et illuminationis Angelis imperii et potentiæ præponi.

A spiritibus et intelligentiis ad formas sensibiles et materiatis descendentes, legimus primam formarum creatarum fuisse lucem; quæ in naturalibus et corporeis scientiæ in spiritualibus atque incorporeis respondet.

Sic in distributione dierum, videmus diem, qua requievit Deus et contemplatus est opera sua, benedictam fuisse supra omnes dies, quibus creata est et disposita fabrica universi.

Post creationem absolutam, legimus hominem collocari in paradiso, ut illic operaretur: quod quidem opus aliud esse non poterat, quam quale pertinet ad contemplandum: hoc est, cujus finis non ad necessitatem aliquam, sed ad delectationem et activitatem sine molestia, referri possit: cum enim tunc temporis nulla potuerit esse creaturæ reluctatio, nullus sudor vultus, necessario sequitur actiones humanas ad voluptatem et contemplationem, non ad laborem aut opus, comparatas fuisse. Rursus primæ hominis actiones, quas in paradiso exercuit, duas summarias scientiæ partes complexæ sunt: hæc erant inspectio creaturarum, et impositio nominum. Nam scientia illa, quæ lapsum introduxit (quod et ante monuimus) non erat naturalis scientia circa creaturas, sed moralis scientia de bono et malo; ex hac suppositione, quod Dei mandata, aut vetita, non essent principia boni et mali, sed quod alias haberent illa origines; quorum cognitionem affectavit homo, scilicet ut totaliter a Deo deficeret, et sibi ipsi suoque arbitrio prorsus inniteretur.

Veniamus ad ea, quæ statim post lapsum contingere. Videmus (ut innumera sunt sacrarum Scripturarum mysteria, salva semper veritate historica et literali) imaginem duarum vitarum, contemplativæ nimirum, et activæ, in personis Abelis et Caini, inque eorum institutis, et primitivis vivendi rationibus, delineatam: quorum alter pastor erat, (qui propter otium et quietem, liberumque cæli aspectum, typus est vitæ theoreticæ,) alter agricola (laboribus scilicet fatigatus, et aspectu in terram defixus): ubi cernere est favorem, electionemque divinam, ad pastorem accessisse, non ad agricolam.

Sic ante diluvium, Sacri Fasti, inter paucissima, quæ de eo seculo memorantur, dignati sunt memoriæ prodere inventores musicæ, atque operum metallicorum. Sequenti seculo post diluvium gravissima pœna, qua Deus humanam superbiam ultus est, fuit confusio linguarum, qua doctrinæ liberum com-

mercium, et literarum ad invicem communicatio maxime interclusa est.

Descendamus ad Moesem legialatorem et primum Dei notarium, quem Scripturæ ornant hoc elogio; quod "gnarus et peritus esset omnis doctrinæ Ægyptiorum:" quæ quidem gens inter vetustissimas mundi scholas numeratur. Sic enim Plato inducit Ægyptium sacerdotem dicentem Soloni; "Vos Græci semper pueri estis, nullam vel scientiam antiquitatis vel antiquitatem scientiæ habentes." Perlustremus ceremoniale legem Moesim, reperimusque, præter Christi præfigurationem, distinctionem populi Dei a gentibus, exercitium obedientiæ, aliosque ejusdem legis usus sacros: nonnullos doctissimorum Rabbiorum haud inutilem circa eam navasse operam, ut sedulo eruerent, quandoque naturalem, quandoque moralem sensum ceremoniarum et rituum. Exempli gratia, ubi de lepra dicitur, "Si effluerit discurrens lepra, homo mundus erit, et non recludetur: sin caro viva in eo erit, immunditiæ condemnabitur, et ad sacerdotis arbitrium separabitur." Ex hac lege colligit unus eorum axioma in natura; "Putredinem pestilentiorum esse ante, quam post maturitatem." Alius morale documentum elicit, "Homines flagitiis undique coopertos, minus corrumpere publicos mores, quam mediocriter et ex parte tantum malos:" adeo ut ex hoc et similibus locis ejus legis, præter sensum theologicum, haud pauca ad philosophiam spectantia spargi videantur.

Si quis etiam eximium illum Jobi librum diligenter evolverit, plenum eum, et tanquam gravidum, naturalis philosophiæ mysteriis deprehendet: exempli gratia; circa cosmographiam et rotunditatem terræ; illo loco, "Qui extendit aquilonem super vacuum, et appendit terram super nihilum." Ubi pensilis terra, polus arcticus, et cœli convexitas in extimis, haud obscure insinuantur. Rursus circa astronomiam et asterismos, illis verbis, "Spiritus ejus ornavit cœlos, et obstetricante manu ejus educatus est coluber tortuosus." Et alio loco, "Nunquid conjungere valebis micantes stellas Pleiadas, aut gyrum Arcturi poteris dissipare?" Ubi immota configuratio stellarum fixarum, paribus intervallis semper inter se distantium, elegantissime describitur. Item alio loco, "Qui facit Arcturum, et Oriona, et Hyadas, et interiora austri." Ubi iterum innuit depressionem antarctici poli, eamque designat nomine "interiorum austri," quia australes stellæ nostro hemisphærio non cernuntur. Circa generationem animalium: "Annon sicut lac mulsisti me, et sicut caseum coagulasti me?" &c. Circa rem metallicam, "Habet argentum venarum suarum principia, et auro locus est in quo conflatur: ferrum de terra tollitur, et lapis solutus calore in æs vertitur." Et sequentia in eodem capite.

Pariter et in persona regis Salomonis videmus donum sapientiæ, tum in petitione ipsius, tum in concessione divina, omnibus terrenæ et temporalis felicitatis bonis prælatum. Virtute cujus doni et concessionis, Salomon egregie instructus, non solum scripsit insignes illas parabolas, sive aphorismos, de divina atque morali philosophia; verum etiam composuit naturalem historiam omnium vegetabilium, "a cedro super montem, usque ad muscum super

murum" (quæ nihil est aliud, quam rudimentum plantæ, putredinis et herbæ medium) omniumque etiam, quæ respirant et moventur. Imo idem rex Salomon, quamvis excelluerit opibus, magnificentia ædificiorum, classe, famulatio, nominis celebritate, et reliquis quæ ad gloriam pertinent, nihil tamen, ex ista gloriæ segete, sibi ipsi decerpit aut assumit, præter decus inquirendi et inveniendi veritatem. Sic enim diserte ait; "Gloria Dei est celare verbum, et gloria regis investigare sermonem." Ac si Divina Majestas innoxio illo et benevolæ puerorum ludo delectaretur, qui ideo se abscondunt, ut inveniantur: quasque etiam nihil esset honorificentius regibus, quam Dei collusores esse in eodem ludo; præsertim cum tot ingeniis imperent, tantasque opes præsto habeant, quibus omnis secreti investigatio absolvi possit.

Nec vero aliter hæc dispensavit Deus, postquam Salvator noster in mundum venisset. Ille enim prius potentiam ostendit suam in profiganda ignorantia, ubi cum doctoribus et sacerdotibus dissereret in templo, quam in subjuganda natura, tot et tantis editis miraculis. Adventus quoque Spiritus Sancti præcipue adumbratus atque expressus fuit in similitudine ac domo linguarum, quæ sunt duntaxat vehicula scientiæ.

Ita in seligendis illis instrumentis, quæ adhibuit Deus ad fidem disseminandam, initio homines evocavit plane indoctos et illiteratos, præterquam quod Spiritus Sancti afflatu instructi fuissent; quo evidentius virtutem suam immediatam et divinam declararet, omnemque humanam sapientiam deprimeret. Quamprimum autem consilium suum in hac parte perimpletum esset, mox in proxima successione temporum divinam veritatem suam, aliis doctrinis, veluti pedisequis, comitatam, in mundum immisit. Itaque D. Pauli calamus (qui inter Apostolos solus literatus fuit) in Scripturis Novi Testamenti, præcipue a Deo adhibitus est.

Sic et novimus, complures ex antiquis Episcopis et Patribus egregie fuisse in omni ethnicorum eruditione versatos. Adeo ut edictum Juliani, quo cautum est, ne Christiani ad scholas et gymnasia mitterentur, perniciosior machina ad expugnandam fidem Christianam, quam cruentæ superiorum imperatorum persecutiones, habitum fuerit. Neque Gregorii primi, Episcopi Romani, (cætera viri egregii,) æmulatio et invidentia, qui ethnicorum auctorum et antiquitatum memoriam obliterare studebat, in bonam partem, etiam apud viros pios, accepta est. Quinimo sola Christiana Ecclesia, inter inundationes Scytharum a plagis septentrionalibus, et Saracenorum ab orientalibus, pretiosas gentilis eruditionis reliquias, jamjam funditus perituras, sinu et gremio suo conservavit. Nuper etiam intueri licet Jesuitas (qui partim studio proprio, partim ex æmulatione adversariorum, literis strenue incubuerunt) quantum subsidii, viriumque, Romanæ sedi reparandæ et stabiliendæ attulerint.

Quare ut absolvam hanc partem, duo sunt præcipua officia et ministeria, præter ornatum et illustrationem, quæ fidei religionique humaniores literæ persolvunt. Unum, quod efficacia sint incitamenta ad divinam gloriam exaltandam et celebrandam:

sicut enim Psalmi et aliæ Scripturæ crebro nos invitant ad contemplationem prædicationemque magnificorum et admirabilium operum Dei; ita, si tantum in eorum specie externa, sicut sensibus nostris se exhibent, hæreremus, eandem faceremus injuriam Majestati Divinæ, ac si de opulentiâ et copia nobilissimi gemmarii, ex iis, quæ palam exponuntur in pergula, judicaretur. Alterum, quod singulare remedium antidotumque exhibeat philosophia, contra infidelitatem et errores. Nam Salvator noster inquit, "Erratis, nescientes Scripturas et potentiam Dei." Ubi duos libros, ne in errores incidamus, proponit nobis evolvendos: primo volumen Scripturarum, quæ voluntatem Dei, dein, volumen creaturarum, quæ potentiam revelant: quorum posterior, veluti clavis est prioris, non solum intellectum nostrum aperiens ad genuinam Scripturarum mentem, ex generalibus regulis rationis et legibus sermonis expromendam; sed porro etiam præcipue fidem nostram reserans, ut in seriam ingrediamur omnipotentis divinæ meditationem, cujus characteres maxime insculpti ejus operibus et incisi sunt. Tantum de divinis testimoniis ac judiciis pro vera dignitate et pretio doctrinæ dictum sit.

Quantum ad humana testimonia et argumenta, tam latus aperitur campus, ut in tractatu hoc brevi et presso, delectum potius adhibere deceat, quam copiam. Primo itaque summus apud ethnicos honoris gradus fuit, divinam venerationem, cultumque consequi (quod quidem Christianis est tanquam fructus vetitus): nunc vero loquimur separatim de judiciis humanis. Itaque (ut cœpimus dicere) apud ethnicos, ille, quem Græci *Apotheosis*, Latini *Relationem inter deos* vocarunt, supremus honor fuit, qui homini ab homine tribui posset: præsertim ubi non ex decreto, aut edicto aliquo imperii (ut Cæsarius apud Romanos) sed ex opinione hominum et fide interna, ultro deferretur: cujus honoris tam excelsi gradus quidam erat, et terminus medius: quippe supra humanos honores, heroici numerabantur et divini. In quorum distributione hunc ordinem tenere veteres: rerumpublicarum conditores, leges, tyrannicidæ, patres patriæ, quique in rebus civilibus optime meruerunt, insigniti sunt titulo heroum tantum, aut semideorum: quales fuere Theæus, Minos, Romulus, cæterique. Ex altera parte, inventores et auctores novarum artium, quique vitam humanam novis commodis et accessionibus dotarunt, semper consecrati sunt inter deos ipsos majores; quod Cereri, Baccho, Mercurio, Apollini, et aliis contigit: quod certe jure, et sano cum judicio factum est. Nam priorum benemerita intra unius ætatis, aut nationis limites, fere cœrentur; nec absimilia sunt imbribus tempestivis et benignis, qui quamvis frugiferi sint, atque optabiles, tamen pro illa tempestate tantum, qua decidunt, atque pro amplitudine tractus terræ, quam irrigant, utiles sunt. Posteriorum vero beneficia, ut ipsius solis et cœlestium munera, temporibus perpetua, locis infinita sunt. Illa rursus, cum contentione et perturbatione, ut plurimum, conjuncta sunt; hæc habent verum characterem divinæ præsentis, veniuntque in aura leni, absque tumultu aut strepitu.

Neque sane doctrinæ meritum in civilibus, et in

reprimendis incommodis, quæ homo homini infert, multum cedit illi alteri, in sublevandis humanis necessitatibus, quæ ab ipsa natura imponuntur. Atque hoc genus meriti optime adumbratum fuit sub illa ficta narratione de theatro Orphei, ubi singulæ bestiæ avesque congregatæ sunt, quæ, appetituum suorum innatorum immemores, prædæ, ludi, pugnæ, amice, placideque una steterunt, citharæ concentu, et suavitate captæ: cujus sonus ubi aut cessaret, aut majori sonitu obrueretur, omnes illico animantes ad ingenium redibant. Qua in fabula eleganter describuntur ingenia et mores hominum, qui variis et indomitis cupiditatibus agitantur, lucri, libidinis, vindictæ: qui tamen quamdiu aures præbent præceptis et suasionibus religionis, legum, magistrorum, in libris, sermonibus, et concionibus, eloquenter et suaviter modulantibus, tam diu pacem colunt et societatem; sin ista sileant, aut seditiones et tumultus obstrepant, omnia dissiliunt, et in anarchiam atque confusionem relabuntur.

Sed enim hoc clarius cernitur, cum reges ipsi, aut magnates, aut præfecti eruditione præditi sint. Ut ut enim suis addictus nimium partibus videatur, qui dixit, "tum demum respublicas fore felices, cum aut philosophi regnant, aut reges philosophantur:" hoc tamen experientia notum est, sub eruditus principibus et custodibus reipublicæ secula maxime felicia fuisse. Quamvis enim reges ipsi suos habeant errores et vitia, affectibus scilicet et pravis consuetudinibus, pro more cæterorum hominum, obnoxii; tamen doctrinarum si accedat lumen, anticipatæ quædam notiones religionis, prudentiæ, honestatis, retinent eos, et ab omni præcipiti, et immedicabili excessu, et errore refrænant; aurem semper vellentem, etiam cum consiliarii et domestici silent. Quin senatores ipsi et consiliarii, qui literis exculti sunt, solidioribus innituntur principiis, quam qui ab experientia tantum edocti sunt; illis ex longinquo prospicientibus pericula et mature propulsantibus, cum isti tantum ex propinquo et cominus sapiant, nihil videntes, nisi quod imminet, et tunc demum agilitate ingenii sui, se in ipso periculorum articulo expedire et eripere posse confidentes.

Quæ felicitas temporum sub eruditus principibus (ut semper brevitati studeam, adhibens non nisi lectissima quæque exempla, et maxime illustria) præcipue cernitur eo in seculo, quod a morte Domitiani imperatoris, usque ad imperium Commodi defluxit: successionem sex principum eruditorum, aut certe eruditioni impense faventium, complectente; omniumque, si temporalia bona spectamus, quæ unquam vidit Roma, totius orbis tunc epitome, longe florentissimo. Id quod Domitiano, pridie ejus diei, quo interfectus est, in somnis præmonstratum erat. Quippe qui videre visus est, "Caput aureum sibi pone cervicem enatum esse:" quod sane vaticinium aureis illis subsequentibus seculis adimpletum est: de quibus sigillatim, sed brevissime, verba faciam.

Nerva vir doctus fuit, Apollonii illius Pythagorei familiaris, et quasi discipulus: qui etiam fere expiravit in versu illo Homeri,

"Telis, Phœbe, tuis lacrymas ulciscere nostras."

Trajanus non ipse quidem doctus, sed doctrinæ ad-

mirator, et erga literatos munificus, bibliothecarum institutor, et in cujus aula (licet imperatoris bellicosi) professores et pædagogos gratiosissimos fuisse, memoriæ proditum est. Adrianus curiosissimus mortaliū, et inexplebilis omnis varietatis et secreti investigator. Antoninus subtilis et quasi scholasticus, unde etiam cymini sector vocatus est. Ex divis fratribus autem Lucius Commodus, molliori literarum genere eruditus. Marcus etiam cognomine ipso Philosophus. Hi principes, ut doctissimi, ita et optimi fuerunt. Nerva clementissimus imperator, quique, si nihil aliud, orbi Trajanum dedit. Trajanus omnium, qui imperarunt, et belli et pacis artibus maxime florens: idem imperii fines longissime protulit; idem vim dominationis modestissime cohibuit: maximorum etiam extractor operum; unde a Constantino Parietaria per invidiam vocatus est, propter nomen ejus tot parietibus incisum. Adrianus temporis ipsius æmulus: injurias enim et ruinas temporis, in quoque genere, cura et munificentia sua, reparavit. Antoninus (ut etiam appellatus est) vir maxime Pius, nativa quadam et insita bonitate, omnibus ordinibus gratus, cujusque regnum (licet haud breve) omnis calamitatis expers. Lucius Commodus fratri quidem bonitate cedens, reliquos imperatores plurimos superans. Marcus vir ad exemplar virtutis compositus, cuique scurra ille, in convivio deorum, nihil habuit, quod objiceret, præter patientiam erga mores uxoris. In hac itaque continua sex principum serie, videre cuius liceat felicissimos fructus doctrinæ, in imperio collocatæ, in maxima orbis terrarum tabula depictos.

Jam vero doctrina, non in civilia tantum, atque artes pacis, influxum habet, sed et in militari virtute exercet vim suam ac potentiam; ut clare perspicitur in exemplis Alexandri Magni, et Cæsaris Dictatoris; quorum antea obiter meminimus, nunc vero ea paulo fusius retractabimus. Horum virtutes militares et res in bello gestas, supervacaneum esset notare, aut recensere, cum in eo genere mundi miracula extiterint: sed de amore ipsorum et studio erga literas, necnon in iisdem excellentia propria, non alienum erit, si pauca subjungamus.

Educatus fuit Alexander, edoctusque ab Aristotele, (philosopho certe magno,) qui nonnullos e libris suis philosophicis ei nuncupavit: a latere illius nunquam discedebat Callisthenes, aliique pereruditi viri, qui castra sequebantur, et perpetui erant omnium ejus itinerum et expeditionum comites: quo autem pretio literas habuerit, haud pauca liquido demonstrant: veluti invidia, qua dignam censuit Achillis fortunam, quod gestarum rerum, laudumque suarum, Homerum præconem invenerat: judicium de pretiosa Darii arcula, inter reliqua spolia reperta, de qua cum quæstio moveretur, quidnam potissimum dignum esset, quod in ea asservaretur, ipse, cum alii alia dicerent, pro Homeri operibus sententiam tulit: epistola objurgatoria ad Aristotelem missa, postquam libros physicorum edidisset, in qua expostulat, quod philosophiæ mysteria evulgasset; simulque rescribit, malle se omnibus doctrina et cognitione, quam potentia ac imperio, præcellere. Sunt et alia, quæ huc spectant. Ipse vero quam egregie animum excoluisset doctrina, in omnibus ejus dictis et responsis apparet, vel potius refulget, eruditione plenissimis;

in quibus, licet numero pauca sint, quæ adhuc supersint, singularum scientiarum vestigia alte impressa reperias.

In moralibus observetur primo Alexandri apophthegma circa Diogenem, et adverte (si placet) si forte non unam ex gravissimis quæstionibus moralis philosophiæ constituat: "Utrum qui fruitur externis bonis felicior sit, an qui contemnit?" Cum enim Diogenes cerneret tam parvo contentum, conversus ad circumstantes, qui ejus conditionem subsannabant: "Nisi essem," inquit, "Alexander, optarem esse Diogenes." At Seneca in hac comparatione Diogenem prætulit, cum diceret, "Plus erat, quod Diogenes nollet accipere, quam quod Alexander posset dare."

In naturalibus, observetur illud, quod crebro usurpabat, "In duabus se rebus mortalitatem suam maxime percipere, somno et libidine:" quod sane dictum ex intima naturali philosophia depromptum est, non tam Alexandrum, quam Aristotelem aut Democritum, sapiens, cum tam indigentia, quam redundantia nature, per illa duo designata, mortis sint tanquam arrhabones.

In poetiis, observetur dictum illud, quum, sanguine e vulneribus ejus effluente, accerseret unum ex adulatoribus, qui ei divinitatum tribuere solebat; "Specta," inquit, "hominis iste sanguis est, non talis liquor, quem dixit Homerus Veneris e manu manasse, valuerat a Diomede;" hoc dicto et poetas, et assentatores suos, et se ipsum ridens.

In dialecticis, accipe reprehensionem illam argumentarum dialecticarum, circa rejicienda et retorquenda argumenta, in dicto suo, quod perstrinxit Cassandrum delatores patris sui Antipatri repellentem. Cum enim Alexander forte dixisset, "Numquid putas, hos homines tam longum iter suscepturos fuisse, nisi justam doloris causam habuissent?" respondit Cassander, "Imo hoc ipsum animos eis dedit, quod sperabant longinquitatem viæ obstituram, quo minus calumnia proderetur." "Euge," inquit rex, "strophas Aristotelis, rem pro et contra detorquentes." Attamen hac ipsa, quam in alio carpebat, arte, cum res postulare, in commodum suum uti probe noverat. Ita enim accidit, ut Callisthenes (quem odio clam habebat, quod novæ ejus inter divos relationi refragaretur) in quodam convivio rogatus esset ab una discumbentibus, ut oblectationis gratia (cum esset vir eloquentissimus) thema aliquod pro arbitrio sibi sumeret, de quo subito diceret; ille autem annuens, et laudes gentis Macedoniæ eligens, mirifico cum omnium applausu disseruit: at neutiquam hoc delectatus Alexander, subjecit, "In bona causa, facile est cuilibet esse eloquenti; quin verte," inquit, "stylum, et quid contra nos possis, audiamus." Callisthenes negotium in se recepit, idque tam acerbe, tamque aculeate præstitit, ut Alexander interpellans diceret: "Etiam malus animus, æque ac bona causa, indit eloquentiam."

In rhetoricis, ad quæ tropi et ornamenta pertinent, ecce tibi elegantissimum metaphoræ usum, qua Antipatrum, imperiosum et tyrannicum præsidem, perstrinxit. Cum enim amicus quidam Antipatri laudaret eum coram Alexandro, quod tam moderatus esset, neque in Persicum, prout alii præfecti, luxum, usumque purpuræ, veteri Macedoniæ amictu

exuto, degeneraret: "At intus," inquit Alexander, "Antipater est totus purpureus." Etiam et illa metaphora insignis: cum Parmenio ad eum accederet, in campis Arbellæ; eique ingentem hostium exercitum monstraret, qui oculis subjacens noctu, propter infinitum numerum ignium, veluti alterum firmamentum stellatum representabat; ideoque consuleret, ut nocturno prælio illos invaderet: "Nolo," inquit Alexander, "suffurari victoriam."

In politicis, attende gravissimam illam et prudentissimam distinctionem (quam omnis posteritas amplexa est) qua duos ex præcipuis ejus amicis, Hephæstionem et Craterum, discrevit, quum diceret; "Alterum Alexandrum amare, alterum amare regem:" dissimilitudinem maximi ponderis, etiam inter fidelissimos regum servos constituens, quod alii magis dominorum suorum personas vero affectu prosequantur, alii potius moveantur officio erga principatum ipsum. Spectetur etiam quam eximie redargueret errorem, principum consiliariis familiarem, qui plerumque consilia pro modulo sui animi et fortunæ, non dominorum, suggerunt. Cum enim Darius magnas Alexandro offerret conditiones: Parmenio, "Ego," inquit, "si essem Alexander, acciperem." Subjecit Alexander, "Et ego quidem, si essem Parmenio." Postremo, excutitur acre illud atque acutum responsum, ad amicos interrogantes, quid sibi reservaret, cum tot et tanta donaret? "Spem," inquit; quippe qui probe sciret, subductis rationibus, spem veram esse sortem, et tanquam hæreditatem ad magna aspirantium. Hæc Julii Cæsaris sors, cum proficiscens in Galliam, universas opes profusis largitionibus exhausisset. Hæc etiam sors Henrici ducis Guisi, nobilissimi principis, licet nimium ambitiosi, de quo illud increbuit, "Fœneratorem eum fuisse unum omnium Gallorum maximum, eo quod omnes opes in nominibus haberet, atque patrimonium universum in obligationes convertisset." Cæterum admiratio hujus principis, dum eum mihi, non ut Alexandrum Magnum, sed ut Aristotelis discipulum propono, longius fortasse me provexit.

Quantum ad Julium Cæsarem, non est opus, ut de præstantia eruditionis ejus, aut ex educatione, aut ex familiaribus, aut ex responsis suis, conjecturam faciamus. Hæc siquidem eminet in ejus scriptis et libris: quorum alii extant, alii infelice desiderantur. Primo enim hodie in manibus habetur insignis illa bellorum suorum historia, cui nomen et titulum "Commentariorum" duntaxat præfixit: in quo omnes posteri solidum rerum pondus, et viva tam actionum quam personarum simulacra, cum castissima puritate sermonis, narrationisque perspicuitate eximia, conjuncta admirantur: quas quidem dotes, non a natura infusus fuisse, sed a præceptis insistentisque doctrinæ acquisitas, testatur liber ejus "De analogia:" qui nihil aliud erat, quam Grammaticalis quedam philosophia; in quo sedulo dedit operam, ut vox ad placitum, redderetur vox ad licitum; et consuetudo quoquomodo loquendi, ad congruitatem revocaretur emendate loquendi; et verba, quæ sunt rerum imagines, rebus ipsis convenirent, non vulgi prorsus arbitrium sequerentur.

Ita etiam, veluti monumentum doctrinæ, non minus quam potentiæ, emendatam ejus edicto habemus

computationem anni; quæ diserte testatur, æque eum gloriæ sibi duxisse, siderum in cælis leges pernosse, ac hominibus in terris leges dedisse.

Ex libro quoque, cui titulum præposuit "Anticato," facile constat, eum tanto studio accensum ad victoriam ingenii, quanto belli et armorum, obtinendam; certamen calami tum suscipientem contra maximum eo tempore pugilem, Ciceronem oratorem.

Rursus in libro "Apophtegmatum," quæ collegit, videmus, honorificentius sibi putasse, si seipsum tanquam in tabellas aut codicillos mutaret, in quos prudentia aliorum dicta graviaque referrentur; quam si dicta sua propria, velut oracula, sacraerentur, sicut inepti principes nonnulli, adulatione corrupti, sibi fieri gestiunt. Attamen si recensere vellem pleraque ejus dicta (ut feci in Alexandro) sunt ea certe hujusmodi, qualia notat Salomon, "Verba sapientum sunt tanquam aculei, et tanquam clavi in altum defixi." Itaque tria hic tantum proponam, non tam elegantia, quam vi et efficacia, mirabilia.

Primo igitur, magister sit, oportet, loquendi, qui unico verbo seditionem in exercitu comprimere potuit. Sic autem se res habuit. Romanis mos fuit, cum exercitum duces alloquerentur, Milites uti eos appellarent: cum magistratus populum, Quirites. Tumultuabantur milites Cæsaris, ac missionem seditione flagitabant: non quod hoc ipsi cuperent, sed ut hoc postulato Cæsarem ad alias conditiones adigerent; ille immotus atque inconcussus, silentio facto, sic exorsus est: "Ego, Quirites:" quo verbo, eos jam dimissos significabat. Eo percussi milites et plane obstupefacti, concionantem deinceps perpetuo obturbabant; et postulato illo missionis posthabito, contra obnixè petebant, ut militum appellatio eis restitueretur.

Secundum fuit hujusmodi. Regis nomen Cæsar summe affectabat: itaque subornati sunt nonnulli, qui prætereuntem populari acclamatione regem salutarerent. Ille sentiens acclamationem tenuem fuisse, ac raram; negotium joco transmisit, ac si erratum esset in cognomine, "Non rex sum," inquit, "sed Cæsar." Dictum sane hujusmodi, ut si diligenter excutiat, vigor ejus et pondus vix exprimi possit. Primum enim recusationem nominis præ se ferebat, sed neutiquam seriam: deinde ingentem quandam confidentiam et magnanimitatem monstrabat; ac si Cæsaris appellatio illustrior titulus esset, quam regis; quod haud secus evenit, et usque in hodiernum diem obtinuit. Sed quod illius maxime intererat, hoc dictum, summo artificio, finem suum urgebat. Hoc enim innuebat S. P. Q. R. de re levi, hoc est, nomine tantum (nam potestatem regiam jam pridem habebat) secum contendere; ac tali nomine, quale complures etiam ex familiis obscuris gerebant: nam cognomen Regis multis Romanorum gentilitium erat, quemadmodum et nos simile quiddam nostro idiomate habemus.

Ultimum, quod hoc loco repetere placet, tale fuit. Cum Cæsar, post bellum initum, Romam occupasset, atque sanctius ærarium reclusisset, ut pecunias ibi congestas in usus belli tolleret, restitit Metellus, utpote tunc temporis tribunus; cui Cæsar, "Si perstes," inquit, "mortuus es." Dein reprimens se paulum, subjecit, "Adolescens, durius est mihi hoc

dicere, quam facere." Dictum tam mirifice ex terrore et clementia conflatum, ut nihil supra.

Verum ut Cæsarem mittamus, perspicuum est, eum probe sibi conecium suæ eximie eruditionis fuisse; ut liquet ex eo, quod demirantibus nonnullis Lucii Syllæ consilium, in deponenda dictatura, cavillans dixit, "Sylla nescivit literas, dictare non potuit."

Nunc autem tempus videtur imponendi finem huic dissertationi de arcta conjunctione militaris virtutis et literariæ (quid enim in hoc genere post Alexandrum et Cæsarem afferri potest?) nisi quod moveor unius et alterius exempli dignitate et insolentia, eo quod tam subito transierit a Indibrio ad miraculum. Est autem Xenophontis philosophi, qui e Socratis ludo profectus est in Asiam, cum Cyro juniore, in expeditione contra regem Artaxerxem. Hic Xenophon eo tempore peradolescens fuit, et nunquam aciem aut castra viderat, neque tunc præfecturam aliquam in exercitu gerebat, sed tantum sponte, ob amicitiam Proxeni, proficiscebatur. Aderat forte fortuna, cum Falinus a magno rege legatus ad Græcos veniret, postquam Cyrus in acie occubisset, Græci autem (manipulus tantummodo hominum) duce orbat, in medio provinciarum Persiæ, a patria sua, plurimorum milliariarum intervallis, et fluminibus maximis atque altissimis, interclusi essent. Legatio huc spectabat, ut, positis armis atque deditis, se regiæ clementiæ submitterent. Cui legationi antequam publice responsum esset, complures ex exercitu familiariter cum Falino colloquebantur: inter quos Xenophon ita forte locutus est. "Imo," inquit, "Faline, hæc duo tantum nobis jam supersunt, arma et virtus; si igitur arma dedamus, cui usui, obsecro, nobis erit virtus?" At Falinus subridens: "Ni fallor," inquit, "Atheniensis es, adolescens, et philosophiæ incumbis, atque bellula sunt, quæ dicis; sed valde erras, si virtutem vestram regiis copiis parem esse arbitreris." Ecce ludibrium. Sequitur miraculum. Novitius iste ex schola et philosophus, postquam omnes duces et præfecti prodicione interempti essent, decem millia peditum Babylone in Græciam reduxit, per medias regis provincias, omnibus ejus copiis frustra obnitentibus: quo facto stuporem iniecit omnibus. Græcis autem ab eo tempore ingentes addidit animos et spiritus, ad Persarum regnum invadendum et subvertendum. Quod et mox cogitavit sane, et designavit Jason Thessalus; tentavit et inchoavit Agesilaus Spartanus; perfecit demum Alexander Macedo, omnes literati istius prævii egregio facinore incitati.

Pergamus ab imperatoria militarique virtute ad moralem, et eam, quæ est hominum privatorum. Primo, certissimum est illud poëtæ:

"Scilicet ingenuas didicisse fideliter artes  
Emollit mores, nec sinit esse feros."

Eruditio siquidem humanas mentes feritate atque barbarie exuit. Veruntamen opus est, ut accentus sit in voce illa *fideliter*. Nam tumultuaria cognitio flectit potius in contrarium. Eruditio, inquam, levitatem, temeritatem, atque insolentiam tollit, dum omnia pericula et ambigua simul cum re ipsa suggerit; rationum et argumentorum pondera in utram-

que partem librat; prima quæque, quæ se offerunt animo, eaque arrident, pro suspectis habet; iterque omne tanquam exploratum inire docet. Eadem admirationem rerum vanam et nimiam evellit, radicem ipsam omnis infirmi consilii: quippe admiramur res, vel quia novæ sunt, vel quia magnæ. Quantum ad novitatem, nemo est, qui literas, et rerum contemplationem penitus imberit, quin illud cordi impresum habeat, "Nil novi super terram." Neque enim puparum ludum quisquam magnopere mirabitur, qui pone aulaea caput inserens, organa, quibus moventur, et filamenta cernit. Quantum ad magnitudinem, quemadmodum Alexander Magnus, ingentibus proeliis et victoriis in Asia assuetus, cum interdum acciperet e Græcia literas, de expeditionibus et dimicationibus quibusdam illic factis, quæ plerumque propter pontem aliqueum, aut castellum, aut ad summum pro expugnatione oppidi alicujus suscipiebantur, dicere solebat; "Videri sibi nuncium allatum de ranarum et murium pugna, de qua Homerus:" sic certe, qui universitatem rerum, ejusque fabricam intueatur, illi terræ globus, cum hominibus superstantibus (si divinitatem animarum seponas) haud majus quidpiam videbitur, quam colliculus formicarum; quarum aliæ cum granis, aliæ cum ovis suis, aliæ vacuæ, omnes hinc inde circa exiguum pulvisculi acervum reptant, et cursitant. Porro eruditio aufert, aut saltem minuit timorem mortis, atque adversæ fortunæ, quo nihil magis virtutibus moribusque officere solet. Si enim animus cujuspiam, contemplatione mortalitatis, et rerum naturæ corruptibilis, imbutus fuerit et intinctus, juxta cum Epicureto sentiet; qui, cum pridie exiens, mulierculam ob fractam ollam plorantem cerneret, postridie etiam exiens aliam mortuum filium deflentem conspiceret, dixit; "Heri vidi fragilem frangi, hodie vidi mortalem mori." Quare optime et valde sapienter Virgilius, cognitionem causarum cum metus omnis profigatione copulavit, tanquam concomitantia:

"Felix qui potuit rerum cognoscere causas,  
Quique metus omnes et inexorabile fatum  
Subjecit pedibus, strepitumque Acherontis avari."

Nimis longum esset singula percurrere remedia, quæ singulis animi morbis doctrina suppeditat; aliquando vitiosos humores expurgans, nonnunquam obstructions aperiens, alias concoctionem juvans, alias appetitum excitans, non raro vulnera ejus et ulcera sanans, et similia. Quare concludam cum hoc, quod videtur rationem habere totius, ita nimirum animum doctrinam disponere, et flectere, ut nunquam protinus acquiescat et tanquam congeletur in defectibus suis, quin incitet se semper, progressumque spiret. Nescit illiteratus, quid sit in se descendere, aut secum inire rationes, aut quam suavis vita sit, quæ Indies sentit se fieri meliorem; si qua forte virtute præditus sit, eam venditabit scilicet, et ubique spectandam exponet, eaque utetur forsitan commode, quam tamen excolere et augere negligit. Rursus, si quo vitio laborat, artem atque industriam illud celandi atque occultandi, minime autem corrigendi, adhibebit; tanquam malus messor, qui perpetuo demetit, falcem autem nunquam excauit; literatus contra, non tantum utitur animo virtutesque exercet, sed continue emendat se, et in virtute proficit. Imo ut in summa

dicam, pro certo est veritatem et bonitatem distingui tantum, sicut sigillum et impressionem; nam veritas bonitatem signat: et contra, vitiorum ac perturbationum procellæ, ex erroris et falsitatis nubibus erumpunt.

A virtute transeamus ad potentiam et imperium, et dispiciamus si uspiam inveniatur tanta potentia et regnum, quanta eruditio hominis naturam investit et coronat. Videmus dignitatem imperandi sequi dignitatem ejus, cui imperatur. Imperium in belluas et pecora, quare bubulcorum, aut opilionum, res vilis: imperium in pueros, quale ludimagistrorum, minus honorificum: imperium in mancipia, potius dedecori est quam honori: neque multo præstantius est imperium tyrannorum, in populum servilem, atque animis et generosa indole exutum. Unde hoc semper manavit iudicium, honores liberis monarchiis, aut rebuspublicis suaviores esse, quam sub tyrannis; quia imperium honorificum magis supra volentes est, quam supra invitos et coactos. Ideoque Virgilius, cum ex intimo artificio inter humanos honores longe vellet optimos expromere, quos Augusto Cæsari assignaret, in hæc ipsa verba loquitur:

“Victorque volentes

Per populos dat jura, viamque affectat Olympo.”

Ast imperium scientiæ longe celsius est, quam imperium in voluntatem, licet liberam et non astrictam. Illa enim rationi, fidei, et intellectui ipsi dominatur, qui est altissima pars animi, et voluntatem ipsam regit. Etenim nulla proculdubio terrena est potestas, quæ in spiritibus hominum et animalibus, eorumque cogitationibus et phantasiis, assensu quoque et fide, thronum et quasi cathedram suam erigit et collocat, præter doctrinam et scientiam. Ac idecirco videmus detestabilem illam, et immensam delectationem, qua hæresiarchæ, falsi prophetæ, et impostores magni perfunduntur, et rapiuntur, postquam senserint in fide et conscientiis hominum cœpisse se regnare: tantam certe, ut qui eam semel degustaverit, nullis fere persecutionibus aut tormentis adici possit, ut hoc regno se abdicet. Sicut autem hoc illud est, quod in Apocalypsi dicitur, “abyssus sive profunda Satanae:” ita e contrario, justus et legitimus in animos hominum dominatus, veritatis ipsa evidentiæ ac commendatione dulcissima stabilitus, sane quam proxime ad potestatis divinæ similitudinem accedit.

Quod ad fortunas et honores spectat, munificentia doctrinæ non sic regna integra et respublicas locupletat, et ditat, ut non hominum etiam privatorum fortunas et opes amplifcet, et evehat. Vetus enim observatio est, Homerum pluribus suppeditasse victum, quam Syllam, Cæsarem, aut Augustum, licet tot congiaria, tot donativa, tot agrorum assignationes largiti sint. Certe difficile dictu est, arma an literæ plarium fortunas constituerint. Quin si de summa potestate loquamur, videmus, si arma, aut jus hæreditatis regnum contulerunt, at literarum sorti sæpius cessasse sacerdotium, quod regni semper fuit rivale.

Rursus, si delectationem jucunditatemque scientiæ intuearis, multum sane illa voluptates alias omnes exuperat. Quid enim? num forte affectuum voluptates tanto intervallo oblectamenta sensuum excedent, quanto voti assecutio felix cantiunculam aut cœnam:

et non pari gradatione intellectus voluptates, eas, quæ sunt affectuum, transcendent? In cæteris oblectationibus satietyas est finitima, et postquam paulo inveteraverint, flos ipsarum et venustas marcescit: quo docemur non illas liquidas revera voluptates ac sinceras fuisse, sed umbras tantum, et fallacias voluptatum, non tam qualitate sua, quam novitate, jucundas: unde et voluptarii sæpius fiunt monachi, et ambitiosorum principum senectus tristior fere est, et melancholia obsessa. Scientiæ autem non est satietyas, verum et fruendi, et appetendi perpetuo et subinde recurrens vicissitudo; ut necesse sit hujus delectationis bonum simplex esse, non ex accidente, aut cum fraude. Neque illa voluptas, quam depingit Lucretius, ultimum in animo locum sortitur:

“Suave mari magno turbantibus æquora ventis, &c.”

“Suave est spectaculum (inquit) stantem, aut ambulantem in littore, navem intueri tempestate in mari jactatam: suave itidem ex edita turri duos cernere acies concursantes in planitie: at nil dulcius est homini, quam mens per doctrinam in arce veritatis collocata, unde aliorum errores et labores dispicere possit.”

Denique, ut mittamus vulgaria illa argumenta, quod per doctrinam scilicet “homo homini in eo præstat, in quo ipse brutus:” quod ope doctrinæ ascendat homo intellectu usque ad cœlos, quo corpore non potest, et alia similia: cum eo concludamus bono hanc dissertationem de literarum excellentia, ad quod humana natura ante omnia aspirat, hoc est, immortalitate et æternitate. Huc enim spectant procreatio sobolis, nobilitatio familiæ, ædificia, fundationes, monumenta, fama, ac denique humanorum votorum summa. Atqui videmus monumenta ingenii et eruditionis, quanto diutius durent, quam ea, quæ opere et manu facta sunt. Annon Homeri carmina viginti quinque annorum centurias et supra, absque unius syllabæ, aut literæ jactura, duraverunt? quo spatio innumera palatia, templa, castella, urbes, collapsa sunt, aut diruta; picturæ ac statusæ Cyri, Alexandri, Cæsaris, imo regum et principum multo recentiorum, nullo jam sunt modo parabiles: archetypa enim ipsa, jamdudum confecta vetustate, perierunt; exempla autem indies primigenia similitudine mulctantur. At ingeniorum imagines perpetuo integræ manent in libris, nullis temporum injuriis obnoxia, utpote quæ jugem renovationem recipere possunt: quanquam nec imagines dici proprie possint, quia perpetuo generant quodammodo, seminaque sua in animos hominum spargunt, atque ætatis subsequentiibus infinitas actiones opinionisque suscitant, et progignunt. Quod si navis inventum res existimata tam nobilis et admirabilis fuerit, quæ opes mercesque hinc inde transportat, regiones, locis disjunctissimas, participatione fructuum et commodorum consociat; quanto rectius literæ celebrari debent, quæ, tanquam naves sulcantes oceanum temporis, remotissima secula ingeniorum et inventorum commercio et societate copulant? Porro videmus, nonnullos philosophorum, qui maxime immersi erant sensibus, minimeque divini, atque immortalitatem animæ præfracte negabant; hoc tamen vi veritatis adactos concessisse, quoscunque motus et actus anima

humana absque corporis organo præstare possit, eos etiam post mortem permanere probabile esse: quales nimirum erant intellectus, minime autem affectuum motus. Adeo scilicet scientia immortalis visa est res illis atque incorruptibilis. Nos autem, quibus divina revelatio illuxit, conculcantes hæc rudimenta atque officias sensuum, novimus non solum mentem, sed et affectus perpuratos, neque animam tantum, sed etiam corpus, ad immortalitatem assumptum iri suo tempore. Sed enim meminerint homines, et nunc et alias ubi opus fuerit, me in probationibus de dignitate scientiæ, inde ab initio sejunxisse testimonia divina ab humanis; quam methodum constanter retinui, separatim utrumque explicans.

Quamvis vero hæc ita sint, nequaquam tamen hoc mihi sumo, neque me consequi posse confido, ut

ulla causæ hujus pro doctrina peroratione, aut actione, judicia rescindam, vel *Æsopici galli*, qui granum hordei gemmæ prætulit; vel *Midæ*, qui cum arbiter factus esset inter *Apollinem Musarum*, et *Panem ovium præsidem*, opulentia palmam detulit; vel *Paridis*, qui, spreta sapientia ac potentia, primas voluptati et amori dedit; vel *Agrippinæ eligentis*, "occidat matrem, modo imperet," imperium licet cum conditione detestanda præoptantis; vel *Ulyssis*, "qui vetulam prætulit immortalitati;" typi certe eorum, qui consueva optimis præponunt; plurimæque ejusmodi judicia popularia: hæc enim antiquum obtinebunt: verum et illud etiam manebit, cui in-nixa est semper doctrina, tanquam firmissimo fundamento, quodque nonquam labefactari poterit, "Justificata est sapientia a filiis suis."

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER SECUNDUS.

### AD REGEM SUUM.

CONSENTANEUM videri possit, tametsi non raro secus eveniat (rex optime) ut, qui sobole numerosa aucti sunt, quique immortalitatem suam in posteris ipsorum quasi prospectant, præ cæteris mortalibus sint solliciti de statu futurorum temporum; utpote quibus, satis intelligunt, carissima illa sua tandem debere pignora transmitti. *Elizabetha regina*, propter vitam cœlibem, hospes potius in mundo, quam incola, fuit; sua quidem tempora ornavit, et in multis beavit. Enimvero tuæ majestati (cui Deus pro benignitate sua dedit tot suscipere liberos, dignos certe qui te perpetuent, cujusque ætas vigens, et torus fœcundus adhuc plures pollicetur) usquequaque convenit, non modo tuum (quod facis) seculum irradiare; verum etiam ad illa curas tuas extendere, quæ memoria omnis alat, quæque ipsa intueatur æternitas. Inter ea autem (nisi studium meum erga literas me fallit) nil dignius est, aut nobilium, quam si dotetur orbis terrarum augmentis scientiarum solidis et fructuosis. Quousque enim tandem paucos aliquos scriptores statuemus nobis, tanquam *Columnas Herculis*, ne plus ultra in doctrinis progrediamur, cum habeamus majestatem tuam, instar lucidi et benigni sideris, quod nos inter navigandum conducatur, et fortunet?

Ut igitur ad rem redeamus: recolamus jam, et

nobiscum perpendamus, quid principes viri aliique hucusque ad literarum amplificationem attulerint, quid prætermiserint? hoc autem presse et distincte excutiamus, sermone quodam activo et masculo, nusquam digrediendo, nil amplificando. Ponatur igitur illud (quod quisvis concedat) opera quæque maxima et difficillima, vel præmiorum amplitudine, vel consiliorum prudentia et sanitate, vel laborum junctione superari: quorum primum conatum exstimulat, secundum ambages et errores tollit, tertium mortalium fragilitati succurrit. At inter hæc tria merito primas tenet "Consilii prudentia et sanitas;" hoc est, monstratio et delineatio viæ rectæ et proclivis ad rem, quæ proponitur, peragendam. "*Claudus enim* (quod dici solet) in via antevertit cursorem extra viam;" et *Salomon* perapposite ad hanc rem: "Ferrum si retusum fuerit, viribus utendum majoribus: quod vero super omnia prævalet, est sapientia." Quibus verbis innuit, medii prudentem electionem efficacius conducere ad rem, quam virium aut intentionem, aut accumulationem. Hæc ut dicam illud impellit, quod (salvo semper eorum honore, qui de literis quomodocunque meruerunt) perspicio atque animadverto, opera eorum atque acta pleraque, ad magnificentiam potius et nominis sui memoriam, quam ad scientiarum ipsarum profectum et augmenta,

spectasse : et litterarum potius numerum auxisse, quam artibus ipsis multum incrementi attulisse.

Actiones autem et opera, quæ ad literas amplificandas pertinent, circa tria versantur objecta : circa litterarum sedes ; circa libros ; et circa personas eruditorum. Quemadmodum enim aqua, sive ex cœlesti rore descendens, sive ex fontibus scaturiens, facile disperditur, et dispergitur, nisi colligatur in aliqua receptacula, ubi per unionem et congregationem se sustentare, et fovere possit (quem in finem excogitavit solertia humana aquæductus, cisternas, stagna, eaque etiam variis ornamentis condecoravit, quæ magnificentiæ et dignitati, non minus quam usui et necessitati, deserviant) similiter liquor iste scientiæ pretiosissimus, sive a divina inspiratione destillet, sive e sensibus exiliat, mox periret omnis atque evanesceret, nisi conservaretur in libris, traditionibus, colloquiis, ac præcipue in locis certis his rebus destinatis, quales sunt academiæ, collegia, scholæ, ubi et permanentes habeat sedes, et crescendi insuper, et se congregandi copiam et facultatem.

Ac primo, opera, quæ ad Musarum sedes spectant, quatuor numerantur : ædificiorum structura ; preventuum dotatio ; privilegiorum concessio ; disciplinæ lex et institutio ; quæ omnia ad secessum et otium (ut plurimum) conferunt et ad vacationem a curis et molestiis : qualia sunt, quæ ad alvearia constituenda, in usum mellis, requirit Virgilius ;

“Principio sedes apibus, statioque petenda,  
Quo neque sit ventis aditus, etc.”

At opera circa libros duo sunt præcipua. Primum bibliothecæ, in quibus, tanquam mausoleis, priscorum sanctorum reliquiæ, virtutis plenæ, conditæ sunt. Secundo, novæ editiones auctorum, emendatioribus impressionibus, fidelioribus versionibus, utilioribus commentariis, annotationibus magis diligentibus, et hujusmodi famulitio, instructæ et ornatae.

Porro opera, quæ litterarum hominum personas respiciunt (præterquam quod ipsi ornandi sint et promovendi) sunt etiam duo : remuneratio et designatio lectorum, in artibus jamdudum inventis et cognitis ; et remuneratio ac designatio scriptorum, circa eas doctrinæ partes, quæ non satis hactenus excoltæ et elaboratæ sunt.

Hæc summam opera sunt et acta, in quibus inclytorum principum, aliorumque illustrium virorum promerita erga rem litterariam claruerunt. De particulari alicujus commemoratione, qui de literis bene meruit, cogitanti, occurrit illud Ciceronis, quod eum, post reditum suum, ad gratias promiscue agendas impulit ; “difficile non aliquem, ingratum quenquam præterire.” Potius (ex Scripturarum consilio) spatium intueamur, quod adhuc restat in stadio decurrendum ; quam oculos reflectamus ad ea, quæ a tergo jam pridem reliquimus.

Primum igitur, inter tot totius Europæ collegia, præclarissime fundata, omnia illa certis professionibus destinata esse demiror, nulla liberis atque universalibus artium et scientiarum studiis dedicata. Nam si quis judicet doctrinam omnem referendam esse ad usum et actionem, recte sapit : veruntamen facile est, isto modo prolabi in errorem illum, quem fabula perantiqua perstringit ; in qua cætera corporis

membra litem ventriculo intenderunt, quod neque motum præberet, ut artus, neque sensum, ut caput : quamvis interea alimentum coctum atque confectum vintrculus ille in reliquum corpus divideret : plane eodem modo, qui in philosophia ac contemplationibus universalibus positum omne studium, inane atque ignavum arbitratur, non animadvertit, singulis professionibus, et artibus exinde succum et robur suppeditari. Atque certe persuasum habeo, hanc ipsam haud minimam causam fuisse, cur felicior doctrinæ progressus hucusque retardatus sit ; quod opera hisce fundamentalibus scientiis navata sit tantum in transitu, neque haustus pleniores inde epti. Nam si arborem solito fructuosiore fieri cupias, de ramis medicandis frustra cogitaveris ; terra ipsa circa radicem subigenda, et gleba lætior admovenda, aut nihil egeres. Neque rursus silentio prætermittendum est, hanc collegiorum et societatum, in usum tantummodo doctrinæ professoriæ, dedicationem, non solum scientiarum incrementis inimicam fuisse, sed etiam in regnorum et rerumpublicarum detrimentum cecidisse. Hinc enim fieri solet ut principes, delectum habituri ministrorum, qui rebus civilibus tractandis sint idonei, ejusmodi hominum miram solitudinem circa se reperiant ; propterea quod non habeatur educatio aliqua collegiata, in hos usus destinata, ubi scilicet homines, a natura ad hoc facti et comparati (præter artes alias) historiæ, linguis modernis, libris et tractatibus politicis, præcipue incumbant ; ut inde ad civilia munera magis habiles et instructi accedant.

Quoniam vero fundatores collegiorum plantant, prælectionum vero rigant, sequitur jam ordine, ut dicam quid in publicis lectionibus desideretur : nimirum, improbo vel maxime tenuitatem stipendiorum, prælectoribus sive artium, sive professionum (præsertim apud nos) assignatam. Interest enim imprimis progressus in scientiis, ut lectores in unoquoque genere ex optimis instructissimisque eligantur : utpote quorum opera, non in usum transitorium, sed ad sufficiendam sobolem scientiæ in secula adhibeatur. Id fieri nequit, nisi præmia et conditiones tales constituentur, quibus eminentissimus quisque in ea arte plane contentus esse possit ; ut illi demum grave non sit, in eodem munere immori, neque practicam cogitet. Quocirca scientiæ ut floreant, militaris lex servanda Davidis ; “ut æqua esset pars descendens ad prælium, et manentis ad sarcinis :” sarcinis male aliter prospectum erit. Sic lectores in scientiis sunt tanquam conservatores et custodes totius literarii apparatus, unde praxis et militia deinceps scientiarum instruat : proinde æquum est, ut merces ipsorum lucra practicum exæquare possit. Aliter si patribus scientiarum præmia non constituentur satis ampla et luculenta, eveniet illud ;

“Et patrum invalidi referent jejunia nati.”

Defectum nunc notabo alium, in quo alchemista quispiam in auxilium advocandus foret ; cum id genus hominum studiosis auctores sint, ut libros vendant, fornaces extruant, Minervam ac Musas (tanquam virgines steriles) deserant, ac Vulcano se applicant. Fatendum est enimvero, tam ad penetralia contemplationis, quam ad operativæ fructum, in nonnullis

scientiis (præsertim naturali philosophia et medicina) haud unica subsidia e libris petenda esse. Qua in re neutiquam omnino cessavit munificentia hominum; quippe videmus, non libros magis, quam sphaeras, globos, astrolabia, mappas, et alia similia, ut adminicula quædam astronomiæ et cosmographiæ, comparari et studio præberi. Videmus etiam, loca nonnulla, medicinæ studio dicata, hortos habere pro simplicium cujusque generis inspectione et notitia; nec usu mortuorum corporum ad observationes anatomicas destitui. Cæterum hæc ad pauca spectant. In genere pro certo habeatur, magnos, in rebus naturæ abditis eruendis et reserandis, progressus vix fieri posse, nisi ad experimenta, sive Vulcani, sive Dædali (fornacis scilicet, aut machinæ, vel cujuscunque alterius generis) sumptus abunde suppeditentur. Ideoque sicut principum secretariis et emissariis conceditur exhibere rationes expansarum, pro diligentibus suis in explorando et eruendo res novas, et arcana civilia; similiter et exploratoribus ac speculatoribus naturæ satisfaciendum de expensis suis; alias de quamplurimis scitu dignissimis nunquam fies certiores. Si enim Alexander magnam vim pecuniæ suppeditavit Aristoteli, qua conduceret venatores, aucupes, piscatores, et alios, quo instructor accederet ad conscribendam historiam animalium, certe majus quiddam debetur iis, qui non in saltibus naturæ pererrant, sed in labyrinthis artium viam sibi aperiant.

Defectus etiamnum alius nobis observandus (magis certe momenti) neglectus quidam est, in academiæ rectoribus, consultationis; in regibus sive superioribus, visitationis, in hunc finem, ut diligenter consideretur et perpendatur, utrum prælectiones, disputationes, aliaque exercitia scholastica, antiquitus instituta, et ad nostra usque tempora usitata, continuare fuerit ex usu, vel potius antiquare, aliaque meliora substituere. Etenim inter majestatis tunc canones prudentissimos, illum reperio; "In omni vel consuetudine, vel exemplo, tempora spectanda sunt, quando primum res cœpta: in quibus, si vel confusio regnaverit vel inscitia, derogat illud imprimis auctoritati rerum, atque omnia reddit suspecta." Quamobrem, quandoquidem academiæ instituta plerunque originem traxerint a temporibus, hisce nostris haud paulo obscurioribus et indoctoribus; eo magis convenit, ut examini denuo subjiciantur. Exemplum in hoc genere unum aut alterum proponam; in rebus, quæ maxime obviæ videntur et familiares. Pro more receptum est (licet, uti mihi videtur, perperam) ut literarum studiosi logicam, et rhetoricam, præpropere nimis addiscant; artes sane provectoribus magis convenientes, quam pueris et tironibus. Etenim hæc duæ, si vere perpendatur, sunt ex artibus gravissimis; cum sint *artes artium*, altera ad iudicium, altera ad ornatum. Quinetiam regulam et normam continent, res et materiam subjectam vel disponendi, vel illustrandi. Ideoque id agere, ut mentes rerum ignaræ, et rudes (quæque nondum id collegerunt, quod a Cicerone sylva vel supellex appellatur, id est, materiam et copiam rerum) initium ab istis scientiis sumant (ac si quis discere vellet ponderare, vel metiri, vel ornare ventum) haud aliud profecto parit, quam ut harum

artium virtus et facultas (quæ permagnæ sunt et latissime diffusæ) fere contemptæ jaceant, atque vel in puerilia sophismata affectationesque ridiculas degeneraverint, vel saltem existimatione sua haud parum mulctatæ sint. Quinetiam præmatura et intempestiva ad has artes accessio dilutam earum atque jejunam traditionem ac tractationem necessario secum traxit, qualis nimirum captui puerorum adaptetur. Alterum exemplum (quod adducam) erroris, qui in academiis jam diu inveteravit, ejusmodi est; quod scilicet inventionis atque memoriæ, in exercitiis scholasticis, fieri solet nimio plus noxium divortium: illic siquidem orationes pleræque, aut omnino præmeditatae sunt, adeo ut conceptis verbis proferantur, et inventioni nihil relinquatur; aut plane extemporariæ, ut perperam relinquatur memoriæ (cum in vita communi et praxi, rarus sit alterutrius istorum usus seorsum, sed potius mixturæ ipsorum: id est, notarum sive commentariorum, atque dictionis subitæ) ita ut hoc pacto exercitia ad praxim haud sint accommodata, nec imago respondeat vitæ. Illud autem in exercitiis perpetuo tenendum est; ut omnia (quam fieri potest) maxime representent ea, quæ in vitæ agi solent: alioqui motus et facultates mentis pervertent, non præparabunt. Hujus autem rei veritas non obscure cernitur, cum academici ad praxim suarum professionum, vel alia civilis vitæ munia se accingant: quod cum faciunt, hunc, de quo loquimur, defectum, ipsi in se cito deprehendunt; sed citius etiamnum alii. Cæterum hanc partem, de institutorum academicorum emendatione, clausula illa (ex Cæsaris quadam ad Oppium et Balbum epistola desumpta) concludam: "Hoc quemadmodum fieri possit, nonnulla mihi in mentem veniunt, et multa reperiri possunt: de iis rebus rogo vos, ut cogitationem suscipiatis."

Alter defectus, quem observo, altius paulo, quam præcedens, ascendit. Quemadmodum enim doctrinarum progressio, haud parum in prudenti regimine et institutione academiæ singularum consistit; ita magnus ad hoc cumulus accedere possit, si academiæ universæ, per totam Europam sparsæ, arctiorem conjunctionem et necessitudinem contraherent. Sunt enim, uti videmus, multi ordines et sodalitia, quæ licet regnis et spatiis longinquis disjuncta sint, tamen societatem, et tanquam fraternitatem, inter se ineunt, et colunt; adeo ut habeant præfectos (alios provinciales, alios generales) quibus omnes parent. Et certe, quemadmodum natura creat fraternitatem in familiis; artes mechanicæ contrahunt fraternitatem in sodalitiis; unctio divina superinducit fraternitatem in regibus et episcopis; vota et regulæ conciliant fraternitatem in ordinibus: eodem modo fieri non potest, quin intercedat fraternitas illustris et generosa, inter homines, per doctrinas et illuminationes, quandoquidem Deus ipse Pater luminum nuncupetur.

Postremo illud queror (de quo superius nonnihil præmisi) quod vel nunquam, vel raro admodum, publica aliqua extiterit designatio virorum idoneorum, qui vel scriberent, vel inquisitionem instituerent, de illis scientiarum partibus, in quibus satis adhuc non fuerit elaboratum. Cui rei illud inserviet quam maxime, si tanquam lustrum condatur

doctrinarum; et census excipiatur, quæ ex illis locupletes sint, et majorem in modum auctæ, quæ autem inopes et destitutæ. Opinio enim copię, inter causas inopiæ est; atque multitudo librorum luxuriæ potius, quam penuriæ indicium quoddam præ se fert. Quæ tamen redundantia (si quis recte judicet) neutiquam delendis antehac scriptis libris, sed novis melioribus edendis tolli debet, qui ejus generis sint, ut, tanquam "serpens Moses, serpentes magorum" devent.

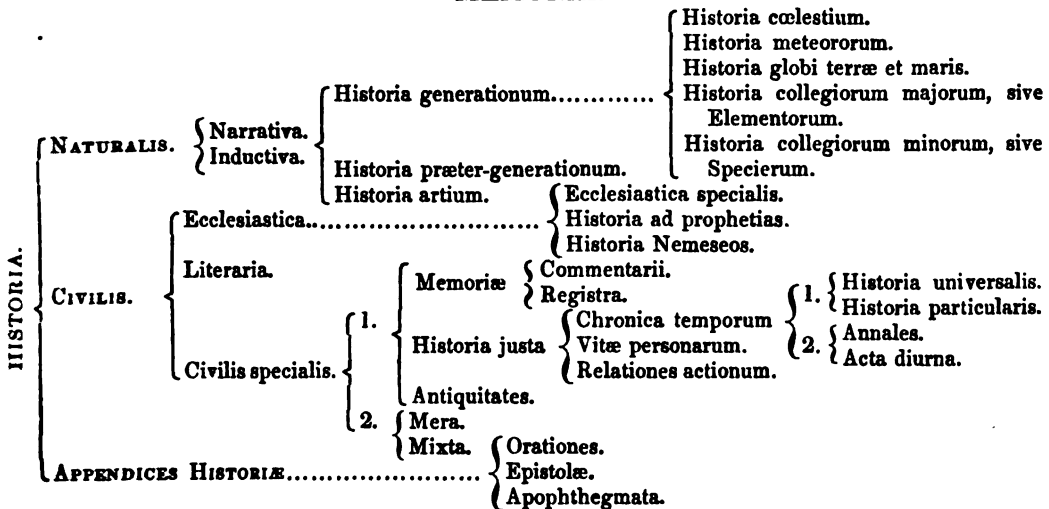

Horum, quos enumeravimus, omnium defectuum remedia, præter illius postremi, quin etiam ejusdem postremi, quoad partem ejus activam, quæ spectat ad designationem scribentium, opera sunt vere basilica: erga quæ privati alicujus conatus et industria fere sic se habeat, ut Mercurius in bivio: qui digitum potest in viam intendere, pedem inferre non potest. At speculativa illa pars, quæ ad examen doctrinarum (quid nimirum in singulis desideretur) pertinet, etiam industriæ hominis privati patet. Mihi igitur in animo est, perambulationem doctrinarum, et lustrationem generalem et fidelem aggredi, præcipue cum inquisitione sedula et accurata, quænam earum partes neglectæ incultæque jaceant, hominum industria nondum subactæ, et ad usum conversæ; ut hujusmodi delineatio et registratio, et publicis designationibus, et privatorum spontaneis laboribus facem accendat. In quo nihilominus consilium est, hoc tempore omissiones duntaxat, et desiderata notare: non autem errores et infelicitates redarguere: aliud enim est inculta loca indicare, aliud culturæ modum corrigere.

Quam quidem ad rem, cum me comparo, et accingor; non sum nescius, quantum opus moveam,

quamque difficilem provinciam sustineam; etiam quam sint vires minime voluntati pares: attamen magnam in spem venio, si ardentior meus erga literas amor me longius provexerit, usurum me excusatione affectus; quia non simul cuiquam conceditur, *amare et sapere*. Nescius equidem non sum, eandem judicii libertatem aliis relinquendam, quam ipse usurpaverim. Equidem libenter æque acceperim ab aliis, ac impertiverim, humanitatis illud officium: "Nam qui erranti comiter monstrat viam," etc. Prospicio etiam animo complura ex illis, quæ tanquam omissa et desiderata in registrum hoc nostrum referre visum fuerit, in diversas censuras incursum: alia scilicet quod sint dudum peracta, et jam extent: alia quod curiositatem sapiant, et fructum promittant perexilem: alia quod nimis ardua existant, et fere impossibilia, quæ ab hominibus absolvantur. Ad priora duo quod attinet, res ipsæ pro se causam agent; circa postremum de impossibilitate ita statuo: ea omnia possibilia et præstabilia censenda, quæ ab aliquibus perfici possint, licet non a quibusvis; et quæ a multis conjunctim, licet non ab uno; et quæ in successione seculorum, licet non eodem ævo; et denique quæ publica cura et sumptu, licet non opibus et industria singulorum. Si quis tamen sit, qui malit Salomonis illud usurpare: "Dicit piger, Leo est in via;" quam illud Virgilio: "Possunt, quia posse videntur:" satis mihi erit, si labores mei inter vota tantum sive optata melioris notæ habeantur. Sicut enim haud omnino rei imperitum esse oportet, qui quæstionem apposite instituat; ita nec sensus inops videatur, qui haud quam absurda optaverit.

## CAPUT PRIMUM.

*Partitio universalis doctrinæ humanæ in historiam, poësim, philosophiam, secundum tres intellectus, facultates, memoriam, phantasiam, rationem; quodque eadem partitio competat etiam theologicis.*

PARTITIO doctrinæ humanæ ea est verissima, quæ sumitur ex triplici facultate animæ rationalis, quæ doctrinæ sedes est: historia ad memoriam refertur, poësis ad phantasiam, philosophia ad rationem. Per poësim autem, hoc loco intelligimus non aliud, quam historiam confictam, sive fabulas. Carmen enim styli quidam character est, atque ad artificia orationis pertinet; de quo suo loco.

Historia proprie individuorum est, quæ circumscribuntur loco et tempore. Etsi enim historia naturalis circa species versari videatur; tamen hoc fit ob promiscuam rerum naturalium (in plurimis) sub una specie, similitudinem; ut, si unam noris, omnes noris. Sicubi autem individua reperiantur, quæ aut unica sunt in sua specie, veluti sol et luna; aut a specie insigniter deflectunt, ut monstra; non minus recte constituitur narratio de illis in historia naturali, quam de hominibus singularibus in historia civili. Hæc autem omnia ad memoriam spectant.

Poësis, eo sensu, quo dictum est, etiam individuorum est; confictorum ad similitudinem illorum, quæ in historia vera memorantur: ita tamen ut modum sæpius excedat, et quæ in rerum natura nunquam conventura, aut eventura fuissent, ad libitum componat et introducat; quemadmodum facit et pictoria. Quod quidam phantasie opus est.

Philosophia individua dimittit; neque impressiones primas individuorum, sed notiones ab illis abstractas complectitur; atque in iis componendis et dividendis, ex lege naturæ et rerum ipsarum evidentia, versatur. Atque hoc prorsus officium est atque opificium rationis.

Hæc autem ita se habere, si quis intellectualium origines petat, facile cernet. Individua sola sensum percillant, qui intellectus janua est. Individuorum eorum imagines, sive impressiones a sensu exceptæ, figuntur in memoria, atque abeunt in eam, a principio tanquam integræ, eodem, quo occurrunt, modo: eas postea recollit, et ruminat anima humana; quas deinceps aut simpliciter recenset; aut lusu quodam imitatur; aut componendo et dividendo digerit. Itaque liquido constat, ex tribus his fontibus, memoriæ, phantasie, et rationis, esse tres illas emanationes, historie, poëseos, et philosophiæ: nec alias aut plures esse posse. Etenim historiam et experientiam pro eadem re habemus; quemadmodum etiam philosophiam et scientias.

Neque alia censemus ad theologica partitione opus esse. Differunt certe informationes oraculi et sensus, et re et modo insinuandi: sed spiritus humanus unus est, ejusque arculæ et cellæ eadem. Fit itaque, ac si diversi liquores, atque per diversa infundibula, in unum atque idem vas recipiantur. Quare et theologia, aut ex historia sacra constat; aut ex parabolis, quæ instar divinæ poëseos sunt; aut ex præceptis et dogmatibus, tanquam perenni quadam

philosophia. Quod enim ad eam partem pertinet, quæ redundare videtur, prophetiam videlicet, ea historie genus est: quandoquidem historia divina, ea polleat supra humanam prærogativa, ut narratio factum præcedere, non minus quam sequi possit.

## CAPUT SECUNDUM.

*Partitio historie in naturalem et civilem, ecclesiasticam et literariam sub civili comprehensa. Partitio historie naturalis in historiam generationum, præter-generationum, et artium.*

HISTORIA aut naturalis est, aut civilis: in naturali, naturæ res gestæ et facinora memorantur; in civili, hominum. Elucet proculdubio divina in utrisque, sed magis in civilibus, ut etiam propriam historiam speciem constituent, quam sacram aut ecclesiasticam appellare consuevimus. Nobis vero etiam ea videtur literarum et artium dignitas, ut iis historia propria seorsum attribui debeat: quam sub historia civili (quemadmodum et ecclesiasticam) comprehendere intelligimus.

Partitionem historie naturalis moliemur ex statu et conditione ipsius naturæ, quæ in triplici statu posita invenitur, et tanquam regimen trinum subit. Aut enim libera est natura, et cursu consueto se explicans, ut in cælis, animalibus, plantis, et universo naturæ apparatu; aut a pravitatibus et insolentiis materiæ contumacis, et ab impedimentorum violentia, de statu suo detruitur, ut in monstris; aut denique ab arte et opera humana constringitur, et fingitur, et tanquam novatur, ut in artificialibus. Sic itaque partitio historie naturalis in historiam generationum, præter-generationum, et artium; quam postremam, etiam mechanicam, et experimentalem appellare consuevimus. Harum prima libertatem naturæ tractat: secunda errores: tertia vincula. Libenter autem historiam artium, ut historie naturalis specimen, constituimus: quia inveteravit prorsus opinio, ac si aliud quippiam esset ars a natura, artificialia a naturalibus: unde illud malum, quod plerique historie naturalis scriptores, perfunctos se putent, si historiam animalium, aut plantarum, aut mineralium confecerint, omissis artium mechanicarum experimentia. Sed et illabitur etiam animis hominum aliud subtilius malum; nempe, ut ars censeatur solummodo tanquam additamentum quoddam naturæ, cujus scilicet ea sit vis, ut naturam (sane) vel inchoatam perficere, vel in deterius vergentem emendare, vel impeditam liberare; minime vero penitus vertere, transmutare, aut in imis concutere possit: quod ipsum rebus humanis præproperam desperationem intulit. At contra, illud animis hominum penitus insidere debuerat; artificialia a naturalibus, non forma aut essentia, sed efficiente solummodo differre; homini quippe in naturam, nullius rei potestatem esse, præterquam motus, ut scilicet corpora naturalia aut admoveat, aut amoveat. Ubi igitur datur admotio corporum naturalium, aut remotio, conjungendo (ut vocant) activa passivis, omnia potest homo; ubi non datur, nihil: neque interest, si res ponantur in ordine ad aliquem effectum, utrum hoc fiat per hominem, vel absque homine. Aurum aliquando excoquitur igne,

aliquando in arenulis purum invenitur, ministrante sibi ipsi natura: iris similiter fit ex nube roscida in sublimi; fit etiam per aspersionem aquæ, hic apud nos. Itaque natura omnia regit: subordinantur autem illa tria; cursus naturæ; exspatiatio naturæ; et ars, sive additus rebus homo: ideoque in historia naturali, tria illa comprehendere par est; quod etiam C. Plinius magna ex parte fecit: qui historiam naturalem solum pro dignitate complexus est; sed complexam, minime ut decuit, imo potius indignis modis tractavit.

Harum prima habetur mediocriter exulta: sequentes duæ ita tenuiter et inutiliter tractantur, ut in desideratorum classe reponendæ sint. Neque enim reperias satis instructam et locupletem collectionem operum naturæ eorum, quæ a cursu ordinario generationum, productionum, et motuum aberrarunt, et deflexerunt: sive sint illi fœtus certarum regionum aut locorum singulares; sive temporum eventus insoliti; sive casuum (ut ait ille) ingenia; sive proprietatum abditarum effectus; sive monadica naturæ in sua specie. Non negaverim, inveniri libros nimio plures, fabulosis experimentis, commentitiis secretis, et frivolis imposturis, ad voluptatem et novitatem, refertos; cæterum narrationem gravem et severam, de heteroclitis et mirabilibus naturæ, diligenter examinatam ac fideliter descriptam, non, inquam, invenio: præsertim cum debita rejectione, et publica tanquam prescriptione mendaciorum et fabularum, quæ invaluerunt. Nam ut res se nunc habet, si forte mendacia aliqua circa res naturales obtinuerint, et celebrata sint (sive quod tantum possit reverentia antiquitatis, sive quod illa denuo examini subijcere sit molestum, sive quod mirifica scilicet ornamenta putantur orationis, propter similitudines et comparationes) nunquam postea exterminantur aut retractantur.

Finis hujusmodi operis, quod exemplo suo decoravit Aristoteles, nil minus est, quam ut curiosus et inanibus ingeniis gratificetur, sicut faciunt mirabillarii et prodigiastri: verum duas ob causas, utramque seriam et gravem; unam, ut axiomatum corrigatur iniquitas; quæ plerunque in exemplis tritis et vulgatis fundamentum habent; alteram, quod a miraculis naturæ ad miracula artis expeditus sit transitus et pervius. Neque enim huic rei plus inest negotii, præterquam ut naturæ vestigia persequaris sagaciter, cum ipsa sponte aberret; ut hoc pacto postea cum tibi liberit, eam eodem loci deducere, et compellere possis. Neque vero præceperim, ut ex historia ista mirabilium, superstitionis narrationes, de maleficiis, fascinationibus, incantationibus, somniis, divinationibus, et similibus, prorsus excludantur, ubi de facto et re gesta liquido constet. Nondum enim innotuit, quibus in rebus et quousque, effectus superstitioni attributi ex causis naturalibus participant. Ideoque licet hujusmodi artium usum et praxin merito damnandum censeamus, tamen a speculatione et consideratione ipsarum (si strenue excutiantur) notitiam haud inutilem consequemur, non solum ad delicta in hoc genere rerum rite judicanda; sed etiam ad naturæ secreta ulterius rimanda. Neque certe hæsitandum de ingressu et penetratione, intra hujusmodi antra et recessus, si

quis sibi unicam veritatis inquisitionem proponat; quod et majestas tua exemplo proprio confirmavit. Tu enim, duobus illis clarissimis et acutissimis religionis ac naturalis philosophiæ oculis, tales umbras prudenter ac perspicaciter perlustrasti; ut te soli simillimum probaveris, qui polluta loca ingreditur, nec tamen inquinatur. Cæterum illud monuerim, narrationes istas cum rebus superstitionis conjunctas, seorsum componi, neque cum puris et sinceris naturalibus commisceri oportere. Quod vero ad narrationes attinet, circa prodigia et miracula religionum; illa certe aut non utique vera sunt, aut nulla ex parte naturalia; ideoque ad historiam naturalem non pertinent.

Quantum ad historiam naturæ subactæ, et factitiæ, quam mechanicam appellare solemus; invenio sane collectiones quasdam de agricultura, etiam de artibus compluribus mechanicis: sed, quod pessimum est in hoc genere, semper negliguntur et rejiciuntur experimenta, in artibus singulis familiaria et vulgata; quæ tamen ad interpretationem naturæ æque aut plus faciunt, quam minus trita. Nam labe quædam literis aspergi videatur, si forte viri docti se submittant inquisitioni, aut observationi rerum mechanicarum, nisi fuerit earum, quæ pro arcanis artis, aut pro rebus admodum raris, aut subtilibus reputentur: quod tam inanis ac superciliosæ arrogantis vitium merito irrisit Plato, quando Hippium sophisticam jactabundum inducit cum Socrate disputantem, sincero et solido veritatis investigatore: qui, cum de pulchritudine sermo institutus esset, pro vago suo et soluto disputandi more, primum intulit exemplum virginis pulchræ, dein equæ pulchræ, postremo ollæ fictilis pulchræ et affabre factæ: hoc ultimo exemplo Hippias commotus, dixit: "Stomacharer certe, nisi humanitatis ratio me eo adigeret, cum quoquam disputare, qui exempla tam vilia et sordida allegaret." Cui Socrates, "Te quidem ita decet, cum tam nitidis sis amictus vestibus et pulchris calcis:" et alia per ironiam. Enimvero, illud pro certo asseri possit, grandia exempla haud optimam, aut tutissimam afferre informationem. Id quod exprimitur non insulse in pervulgata illa fabula de philosopho: qui cum stellas sublatis oculis intueretur, incidit in aquam: nam si oculos demisisset, stellas illico in aqua videre potuisset; verum suspiciens in cælum, aquam in stellis videre non potuit. Eodem modo sæpe accidit, ut res minutæ et humiles plus conferant ad notitiam grandium, quam grandes ad notitiam minutarum. Bene siquidem notavit Aristoteles, "cujusque rei naturam in portionibus ejus minimis optime cerni." Quam ob causam, reipublicæ naturam perscrutatur primo in familia, et in simplicissimis combinationibus societatis (mariti scilicet et uxoris, parentum et liberorum, domini et servi) quæ in quolibet tuguriolo occurrunt. Simili plane ratione natura hujusce magnæ civitatis (universitatis nimirum rerum) ejusque dispensatio, in prima quaque symbolizatione et minimis rerum portionibus investiganda est: uti fieri videmus, quod secretum illud naturæ (habitum pro maximo) de verticitate ferri, tactu magnetis exciti, ad polos, se conspiciendum præbuit, non in vectibus ferreis, sed in acubus.

Ego vero, si quod sit mei pondus judicii, sic plane

statuo; historiæ mechanicæ usum erga philosophiam naturalem, esse maxime radicale et fundamentalem. Talem intelligo philosophiam naturalem, quæ non abeat in fumos speculationum subtilium, aut sublimium: sed quæ efficaciter operetur, ad sublevanda vitæ humanæ incommoda. Neque enim ad præsens tantum juvabit, nectendo et transferendo observationes unius artis in usum aliarum, et inde novas commoditates eliciendo; quod necesse est fieri, cum experimenta diversarum artium in unius hominis observationem et considerationem venient; sed porro ad causas rerum indagandas, et artium axiomata deducenda, lucidiorum facem accendet, quam hactenus unquam affulsit. Quemadmodum enim ingenium alicujus haud bene noris, aut probaris, nisi eum irritaveris; neque Proteus se in varias rerum facies vertere solitus est, nisi manicis arcte comprehensus; similiter etiam natura arte irritata et vexata se clarius prodit, quam cum sibi libera permittitur.

Antequam vero hoc membrum historiæ naturalis (quod mechanicum atque experimentale vocamus) dimittamus, illud adjiciendum: corpus talis historiæ, non solum ex artibus ipsis mechanicis, verum et ex operativa parte scientiarum liberalium, ac simul ex practiciis compluribus (quæ in artem non coaluerunt) confici debere, ut nihil utile prætermittatur, quod ad informandum intellectum juvat. Atque hæc est historiæ naturalis partitio prima.

### CAPUT TERTIUM.

*Partitio historiæ naturalis secunda, ex usu et fine suo, in narrativam et inductivam: quodque finis nobilissimus historiæ naturalis sit, ut ministret et in ordine sit ad condendam philosophiam: quem finem intuetur inductiva. Partitio historiæ generationum in historiam celestium: historiam meteororum: historiam globi terræ et maris: historiam massarum sive collegiorum majorum: et historiam specierum sive collegiorum minorum.*

HISTORIA naturalis, ut subjecto triplex (quemadmodum diximus) ita usu duplex est: adhibetur enim, aut propter cognitionem rerum ipsarum, quæ historiæ mandantur; aut tanquam materia prima philosophiæ. Atque prior illa, quæ aut narrationum jucunditate delectat, aut experimentorum usu juvat, atque hujusmodi voluptatis aut fructus gratia quæsitæ est, longe inferioris notæ censenda, præ ea, quæ inductionis veræ et legitimæ sylvæ sit atque supellex, et primam philosophiæ mammam præbeat. Rufus itaque partiemur historiam naturalem in narrativam et inductivam: hanc autem posteriorem inter desiderata ponimus. Neque vero aciem mentis alicujus perstringant, aut magna antiquorum nomina, aut magna recentium volumina. Satis enim scimus, haberi historiam naturalem mole amplam, varietate gratam, diligentia sæpius curiosam. Attamen si quis ex ea fabulas, et antiquitatem, et auctorum citationes, et inanes controversias, philologiam denique et ornamenta eximat (quæ ad convivales sermones hominumque doctorum noctes, potius quam

ad instituendam philosophiam sint accommodata) ad nil magni res recidet. Longe autem profecto abest ab ea historia, quam animo metimur. Primo enim desiderantur duæ illæ historiæ naturalis partes (de quibus modo diximus) præter-generationum, et artium, in quibus nos plurimum ponimus: deinde in tertia illa (quæ reliqua est) parte generali, nimirum de generationibus, uni tantum ex quinque partibus ejus satisfacit. Siquidem historiæ generationum constituuntur partes subordinatæ quinque: prima celestium, quæ phænomena ipsa sincera complectitur, atque separata a dogmatibus: secunda meteororum (annuerando etiam cometas) et regionum, quas vocant, aëris: neque enim de cometa, meteoris ignitis, ventis, pluviis, tempestatibus, et reliquis, invenitur aliqua historia, quæ ullius sit pretii. Tertia terræ et maris (quatenus sunt universi partes integrales) montium, fluminum, æstuum, arenarum, sylvarum, insularum, denique figuræ ipsius continentium prout exporriguntur; in his omnibus, potius naturalia inquirendo et observando, quam cosmographica. Quarta, de massis materiæ communibus, quas collegia majora vocamus (vulgo elementa dicuntur); neque enim de igne, aëre, aqua, terra, eorumque naturis, motibus, operibus, impressionibus, narrationes reperiuntur, quæ corpus aliquod historiæ justum constituent. Quinta et ultima, de collectionibus materiæ exquisitis, quæ a nobis collegia minora, vulgo species appellantur. In hac autem postrema sola, industria scriptorum enituit; ita tamen ut potius luxuriata sit in superfluis (iconibus animalium, aut plantarum, et similibus intumescens) quam solidis et diligentibus observationibus ditata, quæ ubique in historia naturali subnecti debeant. Atque, ut verbo dicam, omnis, quam habemus, naturalis historia, tam inquisitione sua, quam congerie, nullo modo in ordine ad eum, quem diximus, finem (condendæ scilicet philosophiæ) aptata est. Quare historiam inductivam desiderari pronunciamus. Atque de naturali historia hactenus.

### CAPUT QUARTUM.

*Partitio historiæ civilis, in ecclesiasticam, literariam, et (quæ generis nomen retinet) civilem: quodque historia literaria desideretur: ejus conficiendæ præcepta.*

HISTORIAM civilem in tres species recte dividi putamus: primo sacram, sive ecclesiasticam: deinde eam, quæ generis nomen retinet, civilem: postremo literarum et artium. Ordiemur autem ab ea specie, quam postremo posuimus, quia reliquæ duæ habentur; illam autem inter desiderata referre visum est. Ea est historia literarum: atque certe historia mundi si hac parte fuerit destituta, non absimilis censeri possit statuae Polyphemi, eruto oculo; cum ea pars imaginis desit, quæ ingenium et indolem personæ maxime referat. Hanc licet desiderari statuamus, nos nihilominus minime fugit, in scientiis particularibus jurisconsultorum, mathematicorum, rhetorum, philosophorum, haberi levem aliquam mentionem, aut narrationes quasdam jejunas, de sectis, scholis,

libris, auctoribus, et successionibus hujusmodi scientiarum: inveniri etiam de rerum et artium inventoriis tractatus aliquos exiles et infructuosos; atamen justam atque universalem literarum historiam nullam adhuc editam asserimus. Ejus itaque et argumentum, et conficiendi modum, et usum proponemus.

Argumentum non aliud est, quam ut ex omni memoria repetatur, quæ doctrinæ et artes, quibus mundi ætatis et regionibus floruerint. Earum antiquitates, progressus, etiam peragrations per diversas orbis partes (migrant enim scientiæ, non secus ac populi) rursus declinationes, obliviones, instaurationes commemorantur. Observetur simul per singulas artes inventionis occasio et origo; tradendi mos et disciplina; colendi et exercendi ratio et instituta. Adjiciantur etiam sectæ et controversiæ maxime celebres, quæ homines doctos tenuerunt; calumniæ, quibus patuerunt; laudes et honores, quibus decoratæ sunt. Notentur auctores præcipui, libri præstantiores, scholæ, successiones, academiæ, societates, collegia, ordines; denique omnia, quæ ad statum literarum spectant. Ante omnia etiam id agi volumus (quod civilis historiæ decus est, et quasi anima) ut cum eventis causæ copulenter videlicet ut memorentur naturæ regionum ac populorum; indolesque apta et habilis, aut inepta et inhabilis ad disciplinas diversas; accidentia temporum, quæ scientiis adversa fuerint aut propitia; zeli et mixturæ religionum; malitiæ et favores legum; virtutes denique insignes et efficacia quorundam virorum, erga literas promovendas, et similia. At hæc omnia ita tractari præcipimus, ut non, criticorum more, in laude et censura tempus teratur; sed plane historice res ipsæ narrentur, judicium parcius interponatur.

De modo autem hujusmodi historiæ conficiendæ, illud imprimis monemus; ut materia et copia ejus, non tantum ab historiis et criticis petatur, verum etiam ut per singulas annorum centurias, aut etiam minora intervalla, seriatim (ab ultima antiquitate facto principio) libri præcipui, qui per ea temporis spatia conscripti sunt, in consilium adhibeantur; ut ex eorum non perfectione (id enim infinitum quiddam esset) sed degustatione, et observatione argumenti, styli, methodi, genius illius temporis literarius, veluti incantatione quadam, a mortuis evocetur.

Quod ad usum attinet, hæc eo spectant; non ut honor literarum et pompa per tot circumfusas imagines celebretur; nec quia pro flagrantissimo, quo literas prosequimur, amore, omnia, quæ ad eorum statum quoquo modo pertinent, usque ad curiositatem inquirere, et scire, et conservare avemus; sed præcipue ob causam magis seriam et gravem: ea est (ut verbo dicamus) quoniam per talem, qualem descripsimus, narrationem, ad virorum doctorum, in doctrinæ usu et administratione, prudentiam et solertiam, maximam accessionem fieri posse existimamus; et rerum intellectualium non minus quam civilium motus et perturbationes, vitiaque et virtutes, notari posse; et regimen inde optimum educi et institui. Neque enim B. Augustini, aut B. Ambrosii opera, ad prudentiam episcopi, aut theologi, tantum facere posse putamus, quantum si ecclesiastica historia diligenter inspiciatur et revolvatur: quod et

viris doctis ex historia literarum obventurum non dubitamus. Casum enim omnino recipit, et temeritati exponitur, quod exemplis et memoria rerum non fulcitur. Atque de historia literaria hæc dicta sint.

## CAPUT QUINTUM.

### *De dignitate et difficultate historiæ civilis.*

SEQUITUR historia civilis specialis, cujus dignitas atque auctoritas inter scripta humana eminent. Hujus enim fidei, exempla majorum, vicissitudines rerum, fundamenta prudentiæ civilis, hominum denique nomen et fama, commissa sunt. Ad dignitatem rei accedit difficultas non minor. Etenim animum in scribendo ad præterita retrahere, et veluti antiquum facere; temporum motus, personarum characteres, consiliorum trepidationes, actionum (tanquam aquarum) ductus, prætextuum interiora, imperii arcana, cum diligentia scrutari, cum fide et libertate referre, denique verborum lumine sub oculos ponere, magni utique laboris est et iudicii; præsertim cum antiquiora quæque incerta, recentiora periculo obnoxia reperiantur. Quamobrem et plurima historiam istam civilem circumstant vitia: dum plerique narrationes quasdam inopes et plebeias, et plane dedecora historiarum conscribant; alii particulares relationes et commentariolos, opera festinata, et textu inæquali consarciant; alii capita tantum rerum gestarum percurrant; alii contra, minima quæque et ad summas actionum nihil facientia persequantur; nonnulli, nimia erga ingenia propria indulgentia, plurima audacter confingant: ast alii, non tam ingeniorum suorum, quam affectuum, imaginem rebus imprimant et addant, partium suarum memores, rerum parum fideles testes: quidam politica, in quibus sibi complacent, ubique inculcent, et diverticula ad ostentationem quærendo, narrationem rerum nimis leviter interrumpant: alii in orationum et concionum, aut etiam actorum ipsorum prolixitate, parum cum iudicio nimii sint; adeo ut satis constet, non inveniri inter scripta hominum rarius quicquam, quam historiam legitimam et omnibus numeris suis absolutam. Verum nos in præsentī partitionem doctrinarum instituimus, ut omnia, non censuram, ut vitiosa notentur. Nunc partitiones historiæ civilis persequemur, easque diversorum generum: minus enim implicabuntur species, si partitiones diversæ proponantur, quam si una partitio curiose per membra deducatur.

## CAPUT SEXTUM.

### *Partitio prima historiæ civilis, in memorias, antiquitates, et historiam justam.*

HISTORIA civilis tripartita est, tribus picturarum aut imaginum generibus non absimilis. Videmus enim ex picturis, et imaginibus, alias imperfectas, ut quibus ultima manus non accesserit; alias perfectas; alias vero vetustate mutilatas et deformatas. Historiam similiter civilem (quæ imago rerum et temporum quædam est) in tres species, illis pictu-

rarum congruas, partiemur; memorias scilicet, historiam justam, et antiquitates. Memoriam sunt historia inchoata, aut prima et rudia historiae lineamenta; antiquitates vero historia deformata sunt, sive reliquiae historiae, quae casu e naufragio temporum ereptae sunt.

Memoriae, sive praeparationes ad historiam, duplicis generis sunt; quorum alterum commentarios, alterum registra vocare placet. Commentarii nudam actionum et eventuum seriem ac connexionem proponunt, praetermissis causis rerum et praetextibus, initiis quoque earundem et occasionibus, consiliis itidem, et orationibus, et reliquo actionum apparatu. Talis enim est propria commentariorum natura; licet Caesari, per modestiam quandam cum magnanimitate conjunctam, praestantissimae, inter eas, quae extant historiae, commentariorum nomen indere placuerit. At registra duplicis naturae sunt: complectuntur enim aut titulos rerum et personarum, in serie temporum; quales dicuntur fasti et chronologiae: aut actorum solennitates; cujus generis sunt, principum edicta, senatum decreta, judiciorum processus, orationes publicae habitae, epistolae publicae missae, et similia, absque narrationis contextu sive filo continuo.

Antiquitates, seu historiarum reliquiae, sunt (uti jam diximus) tanquam tabulae naufragii, cum, deficiente et fere submersa rerum memoria, nihilominus homines industrii et sagaces, pertinaci quadam et scrupulosa diligentia, ex genealogiis, fastis, titulis, monumentis, numismatibus, nominibus propriis et styliis, verborum etymologiis, proverbiiis, traditionibus, archivis, et instrumentis, tam publicis quam privatis, historiarum fragmentis, librorum neutiquam historicorum locis dispersis; ex his, inquam, omnibus, vel aliquibus, nonnulla a temporis diluvio eripiunt, et conservant. Res sane operosa, sed mortalibus grata, et cum reverentia quadam conjuncta; ac digna certe, quae, deletis fabulosis nationum originibus, in locum hujusmodi commentitiorum substituitur; sed tamen eo minus habens auctoritatem, quia paucorum licentiae subicitur, quod paucis curae est.

In his imperfectae historiae generibus, defectum aliquem non puto designandum, cum sint tanquam imperfecte mixta, ut defectus hujusmodi sit ex ipsa earum natura. Ad epitomas quod attinet (historiarum certe teredines et tineas) eas exulare volumus; quod etiam cum plurimis, qui maxime sani fuerunt iudicii, facimus; utpote quae complura nobilissimarum historiarum corpora exederint et corroderint, atque in faeces inutiles demum redegerint.

### CAPUT SEPTIMUM.

*Partitio historiae justae in chronica, vitas, et relationes; earumque partium explicatio.*

At historia justa trium est generum, pro ratione objecti, quod sibi proponit praesentandum. Aut enim portionem aliquam temporis praesentat; aut personam singularem memoria dignam; aut actionem aliquam sive rem gestam ex illustrioribus. Primum chronica sive annales appellamus; secundum vitas; tertiam relationes. Inter quae, chronica

celebritate et nomine excellere videntur; vitae autem fructu et exemplis; relationes rursus sinceritate et veritate. Chronica namque, amplitudinem actionum publicarum, et personarum facies externas, et in publicum versas, proponunt: minora autem, quae tum ad res, tum ad personas pertinent, omitunt, et silentio involvunt. Cum vero id artificii divini sit proprium, ut maxima e minimis suspendat, fit saepe numero, ut hujusmodi historia, majora tantum persecuta, negotiorum pompam potius et solennia, quam eorum veros fomites et texturas subtiliores ostendat; quinetiam, etsi consilia ipsa addat, atque immisceat, tamen granditate gaudens, plus gravitatis atque prudentiae, quam revera habent, humanis actionibus aspergat; ut satira aliqua possit esse verior humanae vitae tabula, quam nonnulla ex ejusmodi historiis. Contra, vitae, si diligenter et cum iudicio perscribantur (neque enim de elogiis et hujusmodi commemorationibus jejunis loquimur) quaedam personam singularem pro subjecto sibi proponant, in qua necesse est actiones, non minus leves quam graves, parvas quam grandes, privatas quam publicas, componi et commisceeri; sane magis vivas et fidas rerum narrationes, et quas ad exemplum tutius et felicius transferre possis, exhibent. At relationes actionum speciales (quales sunt bellum Peloponnesi, expeditio Cyri, conjuratio Catilinae, et similia) omnino puriore et magis sincero veritatis candore vestiri par est, quam historias justas temporum; quia argumentum in iis deligi et sumi potest habile et definitum; atque ejusmodi, ut de eo notitia et certitudo bona, et plena informatio haberi possit; cum contra historia temporis (praesertim quae aetate scriptoris multo antiquior sit) necessario in memoria rerum saepius fatiscat, et veluti spatia vacua contineat; quae ingenio et conjectura occupari, et suppleri satis licenter consueverunt. Hoc tamen ipsum, quod de relationum sinceritate dicimus, cum exceptione intelligendum est; nam fatendum certe est (cum humana omnia ex parte laborent, et commoda cum incommodis fere perpetuo conjuncta sint) hujusmodi relationes, praesertim si sub ipsa rerum gestarum tempora edantur (cum saepius vel ad gratiam, vel ad invidiam scribantur) omnium narrationum merito maxime suspectas esse. Sed rursus huic incommodo etiam illud connascitur remedium; quod illae ipsae relationes, cum non ex una parte solummodo, sed pro factionibus et partium studiis, ex utraque parte semper fere edantur, viam hoc pacto quandam veritati, tanquam inter extrema, aperiunt et muniunt; atque postquam contentiones animorum deferuerint, historico bono et prudenti non pessima historiae perfectioris materia et sementis sunt.

Quod vero ad ea, quae in his tribus historiae generibus desiderari videantur; dubium certe non est, quin plurimae historiae particulares (de talibus loquimur, quae esse possint) alicujus dignitatis, aut etiam mediocritatis, cum maximo regnorum et rerum publicarum, quibus debentur, honoris et nominis detrimento, hucusque praetermissae sint, quas notare perlongum esset. Caeterum exterarum nationum historias exterorum curae relinquens (ne forte sim in aliena republica curiosus) non possum non apud majestatem tuam conqueri, de historiae Angliae, quae

nunc habetur, vilitate et indignitate, quatenus ad corpus ejus integrum; nec non historiæ Scotiæ iniquitate et obliquitate, quatenus ad auctorem ejus recentissimum et uberrimum: reputans mecum, honorificum admodum majestati tuæ futurum, atque opus posteritati gratissimum; si quemadmodum insula hæc Magnæ Britanniæ, se nunc in unam monarchiam coalitam, ad sequentes ætates transmittit; ita in una historia descripta, a præteritis seculis repeteretur; eodem modo, quo historiæ decem tribuum regni Israël, et duarum tribuum regni Judæ, tanquam gemellam, sacra pagina deducit. Quod si moles hujusmodi historiæ, magna certe et ardua, quo minus exacte et pro dignitate perscribatur, videatur obfutura, ecce tibi memorabilem multo angustioris temporis periodum, quatenus ad historiæ Angliæ, nimirum ab unione rosarum ad unionem regnorum; spatium temporis, quod, meo quidem judicio, majorem recipit eventuum, quæ raro se ostendunt, varietatem, quam in pari successionum numero uspiam in regno hæreditario deprehendere licet. Incipit enim ab adeptione coronæ mixta, partim armis, partim jure: ingressum siquidem ferrum aperuit, stabilimentum attulerunt nuptiæ: secuta igitur sunt tempora illis initiis consentanea; simillima fluctibus, post magnam tempestatem, tumores et agitationes suas, sed absque aliqua immani procella, retinentibus, atque gubernatoris prudentia, qui unus inter antecessores reges consilio enituit, superatis. Ordine proximus succedit rex, cujus actiones, licet magis impetu quam consilio administratæ, non leve tamen in rebus Europæ momentum attulerunt, eas subinde librando et inclinando, prout ipsæ propendebant: quo etiam regnante, cœpit fieri ingens illa status ecclesiastici mutatio, qualis raro admodum prodit in theatrum. Secutus est rex minor. Dein tentamentum tyrannidis, licet illud brevissimum fuerit, instar febris ephemeræ. Dein regnum fœminæ extero regi nuptæ. Rursus regnum fœminæ solitariæ et cœlibis. Hæc omnia demum exepit eventus iste faustus et gloriosus; nimirum hujusce insulæ Britanniæ, a toto orbe divisæ, in semio; per quam vetus illud oraculum, Ænæ redditum, quod requiem ei præmonstrabat,

Antiquam exquirite matrem;

supra nobilissimas gentes Angliæ et Scotiæ in nomine illo Britanniæ, antiquæ suæ matris, jam convenientes, adimpletum sit; in pignus et tesseram metæ, et exitus errorum et peregrinationis jam reperti. Ita ut, quemadmodum corpora ponderosa jactata, antequam ponant et consistant, trepidationes quasdam experiuntur; eodem modo probabile videatur, divina providentia factum esse, ut monarchia ista, priusquam in tua majestate, regique tua sobole (in qua spero eam in perpetuum fore stabilitam) consisteret et confirmata esset, has tam varias mutationes et vicissitudines, tanquam præludia stabilitatis suæ, subiret.

De vitis cogitantem subit quædam admiratio, tempora ista nostra haud nosse bona sua; cum tam rara sit commemoratio et conscriptio vitarum, eorum, qui nostro seculo claruerunt. Etsi enim reges, et qui absolutum principatum obtineant, pauci esse possint; principes etiam in republica libera (tot rebus publicis in monarchiam conversis) haud multi;

utcumque tamen non defuerunt viri egregii (licet sub regibus) qui meliora merentur, quam incertam et vagam memoriæ suæ famam, aut elogia arida et jejuna. Etenim hac ex parte, inventum cujusdam ex poetis recentioribus, quo antiquam fabulam locupletavit, non inelegans est. Fingit ille, in extremitate filii Parcarum, numisma quoddam, seu monile pendere, in quo defuncti nomen impressum sit: Tempus autem cultrum Atropi præstolari, et, statim abscisso filo, numismata eripere, eaque asportata paulo post in fluvium Lethes ex gremio suo projicere: circa fluvium autem, magnam avium vim volitare, quæ numismata arripiunt, ac postquam in rostro ipsarum paulisper eadem circumtulerint, paulo post per incuriam in fluvium decidere permittunt: inter eas vero, cygnos reperiri nonnullos, qui si numisma aliquod cum nomine prehenderint, illico ad templum quoddam illud deferre solebant, immortalitati consecratum. Hujusmodi itaque cygni nostris temporibus fere defecerunt. Quamvis autem plurimi hominum, curis et studiis suis nimio plus quam corporibus mortales, nominis sui memoriam, veluti fumum aut auram despiciant,

“— animi nil magnæ laudis egentes;”

quorum scilicet philosophia et severitas ab ea radice pullulat, “Non prius laudes contempnimus, quam laudanda facere desivimus;” id tamen apud nos Salomonis judicio non præjudicabit, “Memoria justorum cum laudibus, at impiorum nomen putrescet:” altera perpetuo floret, alterum aut in oblivionem protinus abit, aut in odorem tetrum computrescit. Ac propterea in eo ipso stylo, vel loquendi formula, quæ recte admodum recepta est, ut defunctis tribuatur (“felices memoriæ, piæ memoriæ, bonæ memoriæ”) agnoscere videmur illud, quod Cicero (mutuatus id ipsum a Demosthene) protulit, “Bonam famam propriam esse possessionem defunctorum:” quam quidem possessionem non possum non notare nostro ævo incultam ut plurimum, et neglectam jacere.

Quantum ad relationes, optandum esset prorsus, ut multo major circa eas adhiberetur diligentia; quippe vix incidit aliqua actio paulo illustrior, cui non intersit calamus aliquis ex melioribus, qui eam excipere, et describere possit. Quoniam autem is perpaucorum hominum esse debet, qui historiæ justam pro dignitate conscribat (ut ex paucitate historicorum vel mediocrium satis liquet) ideoque si actiones particulares, sub tempore ipsum, quo geruntur, tolerabili aliquo scripto memoriæ mandarentur, sperandum esset, exorturos quandoque, qui historiæ justam, ope et auxilio illarum relationum, conscribere possent. Illæ enim instar seminarii esse possint, unde, cum usus foret, hortus amplius et magnificus consereretur.

## CAPUT OCTAVUM.

*Partitio historiæ temporum in historiam universalem et particularem, et utriusque commoda et incommoda.*

HISTORIA temporum aut universalis est aut particularis; hæc alicujus regni, vel reipublicæ, vel na-

tionis res gestas complectitur; illa universi orbis. Neque enim defuerunt, qui historiam mundi etiam ab origine scripsisse videri volunt; farraginem rerum et compendia narrationum pro historia exhibentes: Alii sui temporis res, per orbem terrarum memorabiles, tanquam justa historia complecti posse confisi sunt, conatu profecto magnanimo, atque fructu haud exiguo. Neque enim res humanæ ita imperiis aut regionibus divisæ sunt, ut non habeant multa connexa: quare juvat certe, facta, alicui seculo aut ætati destinata, veluti una tabula contenta et descripta intueri. Fit etiam ut plurima scripta non cotemnenda (qualia sunt eæ, de quibus antea locuti sumus, relationes) alias forte peritura, neque prelum sæpius passura, aut saltem capita ipsorum, in hujusmodi historiam generalem recipiantur, atque hoc pacto figantur et conserventur. Veruntamen, si quis rem rectius perpendat, animadvertet, tam severas esse historiæ justæ leges, ut eas in tanta argumenti vastitate exercere vix liceat; adeo ut minatur potius historiæ majestas molis granditate, quam amplificetur. Fiet enim ut, qui tam varia undequaque persequitur, is, informationis religione paulatim remissa, et diligentia sua, quæ ad tot res extenditur, in singulis elanguescente, auras populares et rumores captet; et ex relationibus non admodum authenticis, aut hujusmodi aliqua levidensi materia, historiam conficiat. Quinetiam necesse ei erit (ne opus in immensum excrescat) plurima relatu digna consulto prætermittere, atque ad epitomarum rationes sæpius delabi. Incumbit etiam aliud periculum non parvum, atque utilitati illi historiæ universalis ex diametro oppositum: quemadmodum enim universalis historia, narrationes aliquas, quæ alias forte fuissent perituræ, conservat; ita contra sæpenumero narrationes alias satis fructuosas, quæ aliter victuræ fuissent, propter grata mortalibus rerum compendia, perimit.

### CAPUT NONUM.

#### *Partitio alia historiæ temporum, in annales et acta diurna.*

ETIAM historia temporum recte dividitur in annales et diaria: quæ divisio, licet ex periodis temporum nomina sumat, tamen ad delectum rerum etiam pertinet. Recte enim Cornelius Tacitus, cum in mentionem magnificentiæ quarundam structurarum incidit, statim subdit: "Ex dignitate populi Romani repertum esse, res illustres annalibus, talia diurnis urbis actis mandare:" applicando annalibus res, quæ ad statum reipublicæ pertinent; acta vero et accidentia leviora, diariis. Meo utique iudicio, valere conveniret disciplinam quandam heraldicam, in disponendis non minus librorum, quam personarum, dignitatibus. Sicut enim nihil rebus civilibus magis detrahit, quam ordinem et graduum confusio; ita etiam auctoritati historiæ gravis haud parum derogat, si admisceantur politicis res levioris momenti; quales sunt pompæ, et solennitates, et spectacula, et hujusmodi. Atque sane optandum esset, ut illa ipsa distinctio in consuetudinem veniret. Nostris vero temporibus, diaria in navigationibus tantum et

expeditionibus bellicis, in usu sunt. Apud antiquos certe regum honori dabatur, ut acta palatii sui in diaria referrentur; quod videmus factum fuisse sub Ahasuero Persarum rege; qui cum noctem ageret insomnem, diaria proposcit; ubi conjurationem eunuchorum recognovit: at in Alexandri Magni diariis, tam pusilla continebantur, ut etiam, si forte ad mensam dormiret, in acta reponeretur. Neque enim sicut annales tantum gravia, ita diaria tantum levia complexa sunt; sed omnia promiscue et cursim diariis excipiebantur, seu majoris seu minoris momenti.

### CAPUT DECIMUM.

#### *Partitio secunda historiæ civilis, in meram et mixtam.*

POSTREMA vero partitio historiæ civilis ea sit, ut dividatur in meram, aut mixtam. Mixturæ celebres duæ. Altera ex scientia civili: altera præcipue ex naturali. Introductum est enim ab aliquibus genus scribendi, ut quis narrationes aliquas, non in serie historiæ continuatas, sed ex delectu auctoris excerptas conscribat; deinde easdem recolat, et tanquam ruminet; et sumpta ab ipsis occasione, de rebus politicis disserat. Quod genus historiæ ruminatæ nos sane magnopere probamus, modo hujusmodi scriptor hoc agat, et hoc se agere confiteatur. Historiam autem justam ex professo scribenti; politica ubique ingerere, atque per illa, filum historiæ interrompere, intempestivum quiddam et molestum est. Licet enim historia quæque prudentior, politicis præceptis et monitis veluti imprægnata sit, tamen scriptor ipse sibi obstetricari non debet.

Mixta etiam est historia cosmographica, idque multipliciter: habet enim ex historia naturali, regiones ipsas, atque earum situs et fructus; ex historia civili, urbes, imperia, mores: ex mathematicis, climata et configurationes cæli, quibus tractus mundi subjacent. In quo genere historiæ, sive scientiæ, est, quod seculo nostro gratulemur. Orbis enim terrarum factus est, hac nostra ætate, mirum in modum fenestratus atque patens. Antiqui certe zonas et antipodas noverant,

"Nosque ubi primus equis oriens afflavit anhelis  
Illic sera rubens accendit lumina vesper:"

idque ipsum magis per demonstrationes, quam per peregrinationes. Verum ut carina aliqua parva cælum ipsum æmuleretur; atque universum globum terrestrem, magis etiam obliquo et flexuoso, quam cælestia solent, itinere circumiverit, ea est nostri seculi prærogativa: ita ut præsens ætas jure in symbolo suo usurpare possit, non tantum illud Plus ultra, ubi antiqui usurpabant Non ultra; atque insuper illud Imitabile fulmen, ubi antiqui, Non imitabile fulmen;

"Demens qui nimbo et non imitabile fulmen:"

verum et illud, quod omnem admirationem superat, Imitabile cælum, propter navigationes nostras, quibus circa universum terræ ambitum, cælestium cor-

porum more, volvi et circumagi sæpius concessum fuit.

Atque hæc præclara, in re nautica atque orbe perlustrando, felicitas, de ulterioribus etiam progressibus et augmentis scientiarum, spem magnam facere possit; præsertim dum divino videatur consilio esse decretum, ut hæc duo coæva sint: sic enim Daniel propheta, de novissimis temporibus verba faciens, prædicit, "Plurimi pertransibunt, et augebitur scientia;" quasi pertransitus sive perlustratio mundi atque multiplex augmentum scientiarum eidem seculo destinarentur: sicut magna ex parte jam completum videmus; quandoquidem tempora nostra, duabus illis prioribus doctrinarum periodis, aut revolutionibus (alteri apud Græcos, alteri apud Romanos) eruditione non multum cedant, eas vero in aliquibus longe superent.

### CAPUT UNDECIMUM.

*Partitio historiæ ecclesiasticæ in ecclesiasticam specialem, historiam ad prophetias, et historiam Nemeseos.*

HISTORIA ecclesiastica in genere, easdem fere cum historia civili partitiones subit. Sunt enim chronica ecclesiastica, sunt vitæ patrum, sunt relationes de synodis, et reliquis ad Ecclesiam spectantibus. Proprio vero nomine, recte dividitur in historiam ecclesiasticam (generis nomine servato) et historiam ad prophetias, et historiam Nemeseos sive providentiæ. Prima Ecclesiæ militantis tempora et statum diversum memorat; sive illa fluctuet, ut arca in diluvio; sive itineretur, ut arca in eremo; sive consistat, ut arca in templo: hoc est, statum Ecclesiæ in persecutione, in motu, et in pace. In hac parte, defectum aliquem non invenio, quin supersunt in illa complura potius quam desunt: illud sane optarem, ut massæ tam prægrandi virtus quoque et sinceritas narrationum responderent.

Secunda pars, quæ est historia ad prophetias, ex duobus relativis constat, prophetia ipsa, et ejus adimpletione. Quapropter tale esse debet hujus operis institutum, ut cum singulis ex Scripturis prophetiis eventuum veritas conjungatur; idque per omnes mundi ætates, tum ad confirmationem fidei, tum ad instituendam disciplinam quandam et peritiam in interpretatione prophetiarum, quæ adhuc restant complendæ. Attamen in hac re, admittenda est illa latitudo, quæ divinis vaticiniis propria est et familiaris; ut adimpletiones eorum fiant et continenter et punctualiter: referunt enim auctoris sui naturam; "Cui unus dies tanquam mille anni, et mille anni tanquam unus dies:" atque licet plenitudo et fastigium complementi eorum, plerunque alicui certæ ætati vel etiam certo momento destinetur; attamen habent interim gradus nonnullos et scalas complementi, per diversas mundi ætates. Hoc opus desiderari statuo, verum tale est, ut magna cum sapientia, sobrietate, et reverentia tractandum sit, aut omnino dimittendum.

Tertia pars, quæ historia Nemeseos est, sane in calamos nonnullorum piorum virorum incidit, sed

non sine partium studio: occupata est autem in observanda divina illa convenientia, quæ nonnunquam intercedit inter Dei voluntatem revelatam et secretam. Quamvis enim tam obscura sint consilia et judicia Dei, ut homini animalis sint penitus inscrutabilia, quin etiam sæpius eorum oculis, qui prospiciunt e tabernaculo, se subducant; divinæ tamen sapientiæ visum, aliquando per vices, ad suorum confirmationem, et confusionem eorum, qui tanquam sine Deo sunt in mundo, ea quasi majoribus characteribus descripta, sic proponere conspicienda, uti (sicut loquitur propheta) "quivis etiam in cursu ea perlegere possit;" hoc est, ut homines mere sensuales et voluptarii, qui judicia illa divina prætervehi festinant, neque cogitationes suas in ea unquam defigunt, tamen, quamvis propere currant, et aliud agant, ipsa agnoscere cogantur. Talia sunt vindictæ seræ et inopinæ; salutes subito affulgentes et insperatæ; consilia divina per ambages rerum tortuosas, et stupendas spiras, tairdem se manifesto expedientia, et similia: quæ valent, non solum ad consolandos animos fidelium, sed ad percellendas et convincendas conscientias improborum.

### CAPUT DUODECIMUM.

*De appendicibus historiæ, quæ circa verba hominum (quemadmodum historia ipsa circa facta) versantur: partitio earum in orationes, epistolas, et apophthegmata.*

AT non factorum solummodo humani generis, verum etiam dictorum memoria servari debet. Neque tamen dubium, quin dicta illa quandoque historiæ ipsi inserantur, quatenus ad res gestas perspicue et graviter narrandas faciant et deserviant. Sed dicta sive verba humana proprie custodiunt libri orationum, epistolarum, et apophthegmatum. Atque orationes sane virorum prudentium, de negotiis et causis gravibus et arduis habitæ, tum ad rerum ipsarum notitiam, tum ad eloquentiam multum valent. Sed majora adhuc præstantur auxilia ad instruendam prudentiam civilem ab epistolis, quæ a viris magnis de negotiis seriis missæ sunt; etenim ex verbis hominum nil sanius aut præstantius, quam hujusmodi epistolæ. Habent enim plus nativi sensus, quam orationes; plus etiam maturitatis, quam colloquia subita. Eadem quando continuantur secundum seriem temporum (ut fit in illis, quæ a legatis, præfectis provinciarum, et aliis imperii ministris, ad reges, vel senatus, vel alios superiores suos mittuntur; aut vicissim ab imperantibus ad ministros) sunt certe ad historiam, præ omnibus, pretiosissima supellex. Neque apophthegmata ipsa ad delectationem et ornatum tantum prosunt, sed ad res gerendas etiam et usus civiles. Sunt enim (ut aiebat ille) veluti "securæ" aut "mucrones verborum," qui rerum et negotiorum nodos acumine quodam secant et penetrant: occasiones autem redeunt in orbem, et quod olim erat commodum, rursus adhiberi et prodesse potest; sive quis ea tanquam sua proferat, sive tanquam vetera. Neque certe de utilitate ejus rei ad civilia dubitari potest, quam Cæsar dictator opera

sua honestavit; cujus liber utinam extaret, cum ea, quæ usquam habentur in hoc genere, nobis parum cum defectu congesta videantur.

Atque hæc dicta sint de historia, ea scilicet parte doctrinæ, quæ respondet uni ex cellis sive domiciliis intellectus, quæ est memoria.

### CAPUT DECIMUM TERTIUM.

*De secundo membro principali doctrinæ, nempe pœsi.*

*Partitio pœseos in narrativam, dramaticam, et parabolicam. Exempla parabolicæ tria proponuntur.*

JAM ad pœsin veniamus. Pœsis est genus doctrinæ, verbis plerunque adstrictum, rebus solutum et licentiosum; itaque, ut initio diximus, ad phantasiam refertur, quæ iniqua et illicita prorsus rerum conjugia et divortia comminisci et machinari solet. Pœsis autem (ut supra innuimus) duplici accipitur sensu, quatenus ad verba, vel quatenus ad res respiciat. Priore sensu, sermonis quidem character est: carmen enim styli genus, et elocutionis formula quædam; nec ad res pertinet: nam et vera narratio carmine, et ficta oratione soluta conscribi potest. Posteriore vero sensu, constituimus eam, ab initio, doctrinæ membrum principale, eamque juxta historiam collocavimus, cum nihil aliud sit, quam historiæ imitatio ad placitum. Nos igitur in partitionibus nostris, veras doctrinarum venas indagantes et persequentes; neque consuetudini et divisionibus receptis (in multis) cedentes; satiras, et elegias, et epigrammata, et odas, et hujusmodi, ab instituto sermone removemus; atque ad philologiam et artes orationis rejicimus. Sub nomine autem pœseos, de historia ad plaeitum conficta, tantummodo tractamus.

Partitio pœseos verissima, atque maxime ex proprietate, præter illas divisiones, quæ sunt ei cum historia communes (sunt enim ficta chronica, vitæ fictæ, fictæ etiam relationes) ea est, ut sit aut narrativa; aut dramatica; aut parabolica. Narrativa prorsus historiam imitatur, ut fere fallat, nisi quod res extollat sæpius supra fidem. Dramatica est veluti historia spectabilis; nam constituit imaginem rerum tanquam præsentium; historia autem tanquam præteritarum. Parabolica vero est historia cum typo, quæ intellectualia deducit ad sensum.

Atque de pœsi narrativa, sive eam heroicam appellare placet, (modo hoc intelligas de materia non de versu,) ea a fundamento prorsus nobili excitata videtur, quod ad dignitatem humanæ naturæ imprimi spectat. Cum enim mundus sensibilis sit anima rationali dignitate inferior, videtur pœsis hæc humanæ naturæ largiri, quæ historia denegat; atque animo umbris rerum utcunque satisfacere, cum solida haberi non possint. Si quis enim rem acutius introspeciat, firmum ex pœsi sumitur argumentum, magnitudinem rerum magis illustrem, ordinem magis perfectum, et varietatem magis pulchram, animæ humanæ complacere, quam in natura ipsa, post lapsum, reperire ullo modo possit. Quapropter cum res gestæ, et eventus, qui veræ historiæ subjiciuntur, non sint ejus amplitudinis, in qua anima humana

sibi satisfaciatur, præsto est pœsis, quæ facta magis heroica confingat: cum historia vera successus rerum, minime pro meritis virtutum et scelerum, narret; corrigat eam pœsis, et exitus et fortunæ, secundum merita et ex lege Nemeseos, exhibet: cum historia vera, obvia rerum satietate et similitudine, animæ humanæ fastidio sit; reficit eam pœsis, inexpectata, et varia, et vicissitudinum plena canens. Adeo ut pœsis ista, non solum ad delectationem, sed etiam ad animi magnitudinem, et ad mores conferat. Quare et merito etiam divinitatis cujuspiam particeps videri possit; quia animum erigit, et in sublime rapit; rerum simulacra ad animi desideria accommodando, non animum rebus (quod ratio facit, et historia) submittendo. Atque his quidem illecebris et congruitate, qua animum humanum demulcet, addito etiam consortio musices, unde suavius insinuari possit, aditum sibi patefecit, ut honori fuerit etiam seculi plane rudibus et apud nationes barbaras, cum aliæ doctrinæ prorsus exclusæ essent.

Dramatica autem pœsis, quæ theatrum habet pro mundo, usu eximia est, si sana foret. Non parva enim esse posset theatri, et disciplina, et corruptela: atque corruptelarum in hoc genere, abunde est; disciplina plane nostris temporibus est neglecta. Attamen licet in rebus publicis modernis habeatur pro re ludicra actio theatralis, nisi forte nimium trahat e satira, et mordeat; tamen apud antiquos curæ fuit, ut animos hominum ad virtutem institueret. Quinetiam viris prudentibus et magnis philosophis veluti animorum plectrum quoddam censebatur. Atque sane verissimum est, et tanquam secretum quoddam naturæ, hominum animos, cum congregati sint, magis quam cum soli sint, affectibus et impressionibus patere.

At pœsis parabolica, inter reliquas eminent, et tanquam res sacra videtur, et augusta; cum præsertim religio ipsa ejus opera plerunque utatur, et per eam commercia divinorum cum humanis exerceat. Attamen et hæc quoque, ingeniorum circa allegorias levitate et indulgentia, contaminata invenitur. Est autem usus ambiguus, atque ad contraria adhibetur. Facit enim ad involucrem; facit etiam ad illustrationem. In hoc, docendi quædam ratio; in illo, occultandi artificium quæri videtur. Hæc autem docendi ratio, quæ facit ad illustrationem, antiquis seculis plurimum adhibebatur. Cum enim rationis humanæ inventa, et conclusiones (etiam eæ, quæ nunc tritæ et vulgatæ sunt) tunc temporis novæ et insuetæ essent, vix illam subtilitatem capiebant ingenia humana, nisi propius eæ ad sensum, per hujusmodi simulacra et exempla, deducerentur. Quare omnia apud illos, fabularum omnigenarum, et paraboliarum, et ænigmatum, et similitudinum, plena fuerunt. Hinc tessera Pythagoræ, ænigmata Sphingis, Æsopi fabulæ, et similia. Quinetiam apophthegmata veterum sapientum fere per similitudines rem demonstrabant. Hinc Menenius Agrippa apud Romanos (gentem eo seculo minime literatam) seditionem fabula repressit. Denique ut hieroglyphica literis, ita parabolæ argumentis erant antiquiores. Atque hodie etiam et semper eximius est, et fuit, paraboliarum vigor, cum nec argumenta tam perspicua, nec vera exempla tam apta esse possint.

Alter est usus poëseos parabolicæ, priori quasi contrarius, qui facit (ut diximus) ad involucrem; earum nempe rerum, quarum dignitas tanquam velo quodam discreta esse mereatur: hoc est, cum occulta et mysteria religionis, politicæ, et philosophiæ, fabulis et parabolis vestiuntur. Utrum vero fabulis veteribus poëtarum subsit aliquis sensus mysticus, dubitationem nonnullam habet; atque ipsi certe fatemur nos in eam sententiam propendere, ut non paucis antiquorum poëtarum fabulis mysterium infusum fuisse putemus. Neque nos movet, quod ista pueris fere et grammaticis relinquuntur, et vilescant, ut de illis contemptum sententiam feramus: quin contra, cum plane constet scripta illa, quæ fabulas istas recitant, ex scriptis hominum, post literas sacras, esse antiquissima, et longe his antiquiores fabulas ipsas (etenim tanquam prius creditæ et receptæ, non tanquam excogitatæ ab illis scriptoribus referuntur) videntur esse instar tenuis cujusdam auræ, quæ ex traditionibus nationum magis antiquarum in Græcorum fistulas inciderunt. Cum vero, quæ circa harum parabolarum interpretationem adhuc tentata sint, per homines scilicet imperitos, nec ultra locos communes doctos, nobis nullo modo satisfaciant; philosophiam secundum parabolas antiquas inter desiderata referre visum est. Ejus autem operis exemplum unum aut alterum subjungemus. Non quod res sit fortasse tanti, sed ut institutum nostrum seruemus. Id hujusmodi est, ut de operibus illis, quæ inter desiderata ponimus (si quid sit paulo obscurius) perpetuo aut præcepta ad opus illud instruendum, aut exempla proponamus: ne quis forte existimet levem aliquam tantum notionem de illis mentem nostram perstrinxisse, nosque regiones, sicut augures, animo tantum metiri, neque eas ingrediendi vias nosse. Aliam aliquam partem in poësi desiderari non invenimus; quin potius cum planta sit poësis, quæ veluti a terra luxuriante, abque certo semine, germinaverit, supra cæteras doctrinas excrevit, et diffusa est. Verum jam exempla proponemus, tria tantum numero, unum e naturalibus, e politicis unum, atque unum denique e moralibus.

EXEMPLUM PRIMUM PHILOSOPHIÆ, SECUNDUM PARABOLAS ANTIQUAS, IN NATURALIBUS.

*De universo, secundum fabulam Panis.*

Antiqui generationem Panis in dubio relinquunt; alii enim eum a Mercurio genitum: alii longe alium generationis modum ei tribuunt. Aiunt enim procos universos cum Penelope rem habuisse, ex quo promiscuo concubitu Pana communem filium ortum esse. Neque prætermittenda est tertia illa generationis explicatio: quidam enim prodiderunt, eum Jovis et Hybreos (id est, contumeliæ) filium fuisse. Utcunque orto, Parcæ illi sorores fuisse perhibentur: quæ in specu subterraneo habitabant: Pan autem morabatur sub dio. Effigies Panis talis ab antiquitate describitur; cornutus, cornibus in acutum surgentibus, et usque ad cælum fastigiatis; corpore toto hispidus et villosus; barba imprimis promissa; figura biformis, humana quoad superiora, sed semifera et in capræ

pedes desinente. Gestabat autem insignia potestatis; sinistra fistulam ex septem calamis compactam, dextra pedum sive baculum, superiorum curvum et inflexum. Induebatur chlamyde ex pelle pardalis. Potestates ei et munera ejusmodi attribuuntur, ut sit deus venatorum, etiam pastorum, et in universum ruricularum; præses item montium. Erat etiam proximus a Mercurio nuncius deorum. Habebatur etiam dux et imperator Nympharum, quæ circa eum perpetuo choreas ducere, et tripudiare solebant; comitabantur et Satyri, et his seniores Sileni. Habebat insuper potestatem terrores immittendi, præsertim inanes et supersticiosos, qui et Panici vocati sunt. Res gestæ autem ejus non multæ memorantur: illud præcipuum, quod Cupidinem provocavit ad luctam, a quo etiam in certamine victus est. Etiam Typhonem gigantem retibus implicavit et cohibuit: atque narrat insuper, cum Ceres mœsta, et ob raptam Proserpinam indignata, se abscondisset; atque dii omnes ad eam investigandam magnopere incubuissent, et se per varias vias dispersiti essent; Pani solummodo ex felicitate quadam contigisse, ut inter venandum eam inveniret et indicaret. Ausus est quoque cum Apolline de victoria musices decertare, atque etiam Mida iudice prælatus est; ob quod iudicium Midas asinas aures tulit, sed clam et secreto. Amores Panis nulli referuntur, aut saltem admodum rari; quod mirum, inter turbam deorum prorsus tam profuse amatoriam, videri possit. Illud solummodo ei datur, quod Echo adamaret, quæ etiam uxor ejus est habita; atque unam præterea nympham, Syringam nomine; in quam propter iram et vindictam Cupidinis (quem ad luctam provocare non reveritus esset) incensus est. Etiam Lunam quondam in altis sylvas sevocasse dicitur. Neque etiam prolem ullam suscepit, (quod similiter mirum est, cum dii, præsertim masculi, prolifici admodum essent,) nisi quod ei attribuitur tanquam filia, muliercula quædam ancilla, Iambe nomine; quæ ridiculis narratiunculis oblectare hospites solebat, ejusque proles ex conjuge Echo esse a nonnullis existimabatur. Parabola talis esse videtur.

PAN (ut et nomen ipsum etiam sonat) universum sive universitatem rerum repræsentat et proponit. De hujus origine duplex omnino sententia est, atque adeo esse potest. Aut enim a Mercurio est, verbo scilicet divino (quod et sacræ literæ extra controversiam ponunt; et philosophi ipsi, qui magis divini habitus sunt, viderunt) aut ex confusis rerum seminibus. Etenim quidam e philosophis semina rerum etiam substantia infinita statuerunt; unde opinio de homiomeriis fluxit, quam Anaxagoras aut invenit, aut celebravit. Nonnulli vero magis acute et sobrie censebant ad varietatem rerum expediendam sufficere, si semina, substantia eadem, figuris varia, sed certis et definitis, essent; et reliqua in positura et complexu seminum ad invicem ponebant: ex quo fonte opinio de atomis emanavit; ad quam Democritus se applicavit, cum Leucippus ejus auctor fuisset. At alii, licet unum rerum principium assererent (aquam Thales, aërem Anaximenes, ignem Heraclitus) tamen illud ipsum principium actu unicum, potentia varium et dispensabile posuerunt, ut in quo rerum omnium semina laterent. Qui vero

materiam omnino spoliatur et informem, et ad formas indifferentem introduxerunt (ut Plato et Aristoteles) multo etiam propius et propensius ad parabola figuram accesserunt. Posuerunt enim materiam tanquam publicam meretricem, formas vero tanquam procos: adeo ut omnes de rerum principiis opiniones huc redeant, et ad illam distributionem reducantur, ut mundus sit, vel a Mercurio, vel a Penelope et proci omnibus. Tertia autem generatio Panis ejusmodi est ut videantur Græci aliquid de Hebræis mysteriis, vel per Ægyptios internuncios, vel utcunque, inaudivisse. Pertinet enim ad statum mundi, non in meris natalibus suis, sed post lapsum Adami, morti et corruptioni expositum et obnoxium factum. Ille enim status, Dei, et peccati (sive contumeliæ) proles fuit, ac manet. Fuit enim peccatum Adami ex genere contumeliæ, cum Deo similis fieri vellet. Itaque triplex ista narratio de generatione Panis, etiam vera videri possit, si rite et rebus et temporibus distinguatur. Nam iste Pan (qualem eum nunc intuemur et complectimur) ex verbo divino, mediante confusa materia (quæ tamen ipsa Dei opus erat) et subintrante prævaricatione, et per eam corruptione, ortum habet.

Naturæ rerum, fata rerum, sorores vere perhibentur et ponuntur. Fata enim vocantur ortus rerum, et durationes, et interitus; atque depressiones etiam, et eminentiæ, et labores, et felicitates, denique conditiones quæcunque individui: quæ tamen nisi in individuo nobili (utpote homine, aut urbe, aut gente) fere non agnoscuntur. Atqui ad istas condiciones tam varias deducit individua illa singula Pan, rerum scilicet natura; ut tanquam eadem sit res (quatenus ad individua) catena naturæ et filum Parcarum. Ad hæc insuper finxerunt antiqui Panem semper sub dio morari, sed Parcæ sub specu ingenti subterraneo habitare, atque inde maxima pernicitate ad homines subito advolare: quia natura, atque universi facies, spectabilis est et aperta; at fata individuorum occulta et rapida. Quod si fatum accipiatur largius, ut omnem prorsus eventum, non illustriores tantum denotet, tamen utique et eo sensu optime convenit cum universitate rerum; cum ex ordine naturæ, nil tam exiguum sit, quod sine causa fiat; et rursus nil tam magnum, ut non aliunde pendeat; adeo ut fabrica ipsa naturæ suo sinu et gremio omnem eventum et minimum et maximum complectatur; et suo tempore certa lege prodatur. Itaque nil mirum si Parcæ ut Panis sorores introductæ sint, et certe legitime. Nam Fortuna vulgi filia est, et levioribus tantum philosophis placuit. Sane Epicurus, non solum profanum instituere sermonem, sed etiam desipere videtur, cum dixit, "Præstare credere fabulam Deorum, quam fatum asserere," ac si quicquam in universo esse possit instar insulæ, quod a rerum nexu separetur. Verum Epicurus philosophiam suam naturalem (ut ex ipsius verbis patet) morali suæ accommodans et subjiciens, nullam opinionem admittere voluit, quæ animum premeret et morderet, atque euthymiam illam (quam a Democrito accepit) lacerasset aut turbaret. Itaque suavitati cogitationum indulgens, potius quam veritatis patiens, plane jugum jactavit, et tam fati necessitatem, quam deorum metum, repudiavit. Verum de Parcarum germanitate cum Pane satis dictum est.

Cornua autem mundo attribuuntur, ab imo latiora, ad verticem acuta. Omnis enim rerum natura instar pyramidis acuta est. Quippe individua, in quibus basis naturæ exporrigitur, infinita sunt; ea colliguntur in species, et ipsas multiplices; species rursus insurgunt in genera, atque hæc quoque ascendendo in magis generalia contrahuntur; ut tandem natura tanquam in unum coire videatur; quod figura illa pyramidali cornuum Panis significatur. Mirum vero minime est Panis cornua etiam cælum ferre; cum excelsa naturæ, sive ideæ universales, ad divina quodammodo pertingant. Itaque et catena illa Homeri decantata (causarum scilicet naturalium) ad pedem solii Jovis fixa memorabatur; neque quisquam (ut videre est) metaphysicam, et quæ in natura æterna et immobilia sunt, tractavit, atque animum a fluxu rerum paulisper abduxit, qui non simul in theologiam naturalem incidit; adeo paratus et propinquus est transitus a vertice illa pyramidis ad divina.

Corpus autem naturæ elegantissime et verissime depingitur hirsutum, propter rerum radios. Radii enim sunt tanquam naturæ crines, sive villi: atque omnia fere vel magis vel minus radiosa sunt; quod in facultate visus manifestissimum est; nec minus in omni virtute magnetica, et operatione ad distans. Quicquid enim operatur ad distans, id etiam radios emittere recte dici potest. Sed maxime omnium prominet barba Panis, quia radii corporum cælestium, et præcipue solis, maxime ex longinquo operantur et penetrant; adeo ut superiora terræ, atque etiam interiora, ad distantiam nonnullam plane verterint et subegerint, et spiritu impleverint. Elegantior autem est figura de barba Panis, quod et sol ipse, quando, parte superiore ejus nube obvoluta, radii inferius erumpunt, ad aspectum barbatus cernitur.

Etiam corpus naturæ rectissime describitur biforme, ob differentiam corporum superiorum et inferiorum. Illa enim ob pulchritudinem, et motus æqualitatem, et constantiam, necnon imperium in terram et terrestria, merito sub humana figura representantur: cum natura humana ordinis et dominationis particeps sit: hæc autem ob perturbationem et motus incompósitos, et quod a cælestibus in plurimis regantur, bruti animalis figura contenta esse possunt. Porro eadem corporis biformis descriptio pertinet ad participationem specierum: nulla enim naturæ species, simplex videri potest, sed tanquam ex duobus participans, et concreta. Habet enim homo nonnihil ex bruto, brutum nonnihil ex planta, planta nonnihil ex corpore inanitato, omniaque revera biformia sunt, et ex specie superiore, et inferiore compacta. Acutissima autem est allegoria de pedibus capræ, propter ascensionem corporum terrestrium versus regiones aëris et cæli, ubi etiam pensilia fiunt, et inde deiciuntur magis quam descendunt. Capra enim animal scansorium est, eaque e rupibus pendere, atque in præcipiis hæere amat; similiter etiam res, licet inferiori globo destinata, faciunt, idque miris modis, ut in nubibus et meteoris manifestissimum est. Imo non sine causa Gilbertus, qui de magnete laboriosissime, et secundum viam experimentalem conscripsit, dubitationem

injecit; num non forte corpora gravia, post longam a terra distantiam, motum versus inferiora paulatim exuant?

Insignia autem in manibus Panis ponuntur duplicia; alterum harmoniæ, alterum imperii. Fistula enim ex septem calamis concentum rerum et harmoniam, sive concordiam cum discordia mixtam (quæ ex septem stellarum errantium motu conficitur) evidenter ostendit. Neque enim alii, præterquam septem planetarum, inveniuntur in cælo errores, sive expatiationes manifestæ, quæ cum æqualitate stellarum fixarum, earumque perpetua et invariabili ad se invicem distantia compositæ et temperatæ, tum constantiam specierum, tum fluxum individuorum tueri et cære possint. Si qui vero sint planetæ minores, qui non conspiciuntur; si qua etiam mutatio in cælo major (ut in cometis nonnullis superlunariibus) videntur illa profecto tanquam fistulæ, aut omnino mutæ, aut ad tempus tantum streperæ; utpote quarum operationes vel ad nos non perlabantur, vel harmoniam illam septem fistularum Panis non diu interturbent. Pedum autem illud imperii nobilis translatio est, propter vias naturæ partim rectas, partim obliquas. Atque baculum illum, sive virgæ, versus superiorem partem præcipue curva est, quia omnia providentiæ divinæ opera in mundo fere per ambages et circuitus fiunt, ut aliud agi videri possit, aliud revera agatur; sicut Josephi venditio in Ægyptum, et similia. Quinetiam in regimine humano omni prudentiore, qui ad gubernacula sedent, populo convenientia, per prætextus et vias obliquas, felicius quæ volunt, quam ex directo superinducunt et insinuunt. Etiam (quod mirum fortasse videri possit) in rebus mere naturalibus citius naturam fallas, quam premas: adeo, quæ ex directo fiunt, inepta sunt, et se ipsa impediunt; cum contra, via obliqua et insinuans molliter fluat, et effectum sortiatur. Vestis Panis et amiculum ingeniose admodum ex pelle pardalis fuisse fingitur, propter maculas ubique sparsas. Cælum enim stellis, maria insulis, tellus floribus consperguntur; etque etiam res particulares fere variegatæ esse solent circa superficiem, quæ veluti rei chlamys est.

Officium autem Panis nulla alia re, tam ad vivum proponi atque explicari potuerit, quam quod Deus venatorum sit. Omnis enim naturalis actio, atque adeo motus et progressio, nihil aliud quam venatio est. Nam et scientiæ et artes opera sua venantur; et consilia humana fines suos; atque res naturales omnes vel alimenta sua, ut conserventur, vel voluptates et delicias suas, ut perficiantur, venantur (omnis siquidem venatio est aut prædæ, aut animi causa) idque modis peritis et sagacibus:

“Torva læna lupum sequitur, lupus ipse capellam,  
Florentem cytisum sequitur lasciva capella.”

Etiam rucolarum in genere Pan Deus est, quia hujusmodi homines magis secundum naturam vivunt; cum in urbibus et aulis natura a cultu nimio corrumpatur, ut illud poetæ amatorum, verum, propter hujusmodi delicias, etiam de natura sit:

“—— Pars minima est ipsa puella sui.”

Montium autem imprimis præses dicitur Pan, quia

in montibus et locis editis natura rerum panditur, atque oculis et contemplationi magis subjicitur. Quod alter a Mercurio deorum nuncius sit Pan, ea allegoria plane divina est, cum proxime post verbum Dei, ipsa mundi imago, divinæ potentiae et sapientiae præconium sit. Quod et poeta divinus cecinit, “Cæli enarrant gloriam Dei, atque opera manuum ejus indicat firmamentum.”

At Pana oblectant Nymphæ, animæ scilicet: deliciae enim mundi animæ viventium sunt. Hic autem merito illarum imperator, cum illæ naturam quæque suam tanquam ducem sequantur, et circa eum infinita cum varietate, veluti singulæ more patrio, saltent, et choreas ducant, motu neutiquam cessante. Itaque acute quidam ex recentioribus, facultates animæ omnes ad motum reduxit, et nonnullorum ex antiquis fastidium et præcipationem notavit, qui memoriam et phantasiam, et rationem defixis præpropere oculis intuentes et contemplantes, vim cogitativam, quæ primas tenet, prætermiserunt. Nam et qui meminit, aut etiam reminiscitur, cogitat; et qui imaginatur, similiter cogitat; et qui ratiocinatur, utique cogitat: denique anima, sive a sensu monita, sive sibi permissa, sive in functionibus intellectus, sive affectuum et voluntatis, ad modulationem cogitationum saltat; quæ est illa Nympharum tripudiatio. Una vero perpetuo comitantur Satyri et Sileni, senectus scilicet et juvenus. Omnium enim rerum est ætas quædam hilaris et motu gaudens, atque rursus ætas tarda et bibula: utriusque autem ætatis studia vere contemplanti fortasse ridicula et deformia videantur, instar Satyri alucijus aut Sileni. De Panicis autem terroribus prudentissima doctrina proponitur. Natura enim rerum omnibus viventibus indidit metum et formidinem, vitæ atque essentiæ suæ conservatricem, ac mala ingruentia vitantem et depellentem. Veruntamen eadem natura modum tenera nescie est, sed timoribus salutaribus semper vanos et inanes admiscet; adeo ut omnia (si intus conspici darentur) Panicis terroribus plenissima sint; præsertim humana; et maxime omnium apud vulgum, qui superstitione (quæ vere nihil aliud quam Panicus terror est) in immensum laborat et agitur, præcipue temporibus duris, et trepidis, et adversis. Neque superstitio ista tantummodo in vulgo regnat, sed ab opinionibus vulgi etiam in sapientiores aliquando insilit, ut divine Epicurus (si cætera, quæ de diis disseruit, ad hanc normam fuissent) locutus sit: “Non deos vulgi negare profanum, sed vulgi opiniones diis applicare profanum.”

Quod vero attinet ad audaciam Panis et pugnam per provocationem cum Cupidine; id eo spectat, quia materia non caret inclinatione et appetitu ad dissolutionem mundi et recidivationem in illud chaos antiquum, nisi prævalida rerum concordia (per Amorem sive Cupidinem significata) malitia et impetus ejus cohiberetur, et in ordinem compelleretur. Itaque bono admodum hominum et rerum fato fit (vel potius immensa bonitate divina) ut Pan illud certamen adversum experiat, et victus abscedat. Eodem prorsus pertinet et illud de Typhone in retibus implicato, quia utcumque aliquando vasti et insoliti rerum tumores sint (id quod Typhon sonat) sive in-

tumescant maria, sive intumescant nubes, sive intumescat terra, sive alia, tamen rerum natura hujusmodi corporum exuberantias atque insolentias reti inextricabili implicat et coërcet, et veluti catena adamantina devincit.

Quod autem inventio Cereris huic deo attribuitur, idque inter venationem; reliquis autem diis negetur, licet sedulo quærentibus, et illud ipsum agentibus; monitum habet verum admodum et prudens: hoc scilicet, ne rerum utilium ad vitam et cultum inventio, a philosophiis abstractis, tanquam diis majoribus, expectetur, licet totis viribus in illud ipsum incumbant; sed tantummodo a Pane, id est, experientia sagaci, et rerum mundi notitia universali; quæ etiam casu quodam, ac veluti inter venandum, in hujusmodi inventa incidere solet. Utilissima enim quæque inventa experientiæ debentur, et veluti donaria quædam fuere casu in homines sparsa.

Illud autem musices certamen, ejusque eventus, salutarem exhibet doctrinam, atque eam, quæ rationi, et judicio humano gestienti, et se efferenti, sobrietatis vincula injicere possit. Duplex enim videtur esse harmonia, et quasi musica, altera sapientiæ divinæ, altera rationis humanæ. Judicio enim humano, ac veluti auribus mortalium, administratio mundi et rerum, et judicia divina secretiora, sonant aliquid durum et quasi absonum: quæ inscitia, licet asininis auribus merito insigniatur, tamen et illæ ipsæ aures secreto non palam gestantur. Neque enim hujusce rei deformitas a vulgo conspicitur aut notatur.

Postremo minime mirum est, si nulli amores Pani attribuantur, præter conjugium Echus; mundus enim se ipso, atque in se rebus omnibus fruitur: qui amat autem frui vult, neque in copia desiderio locus est. Itaque mundi amores esse nulli possunt, nec potiundi cupido (cum se ipse contentus sit) nisi fortasse amores sermonis. Ii sunt Nympha Echo, res non solida sed vocalis; aut si accuratiores sint, Syringa, quando scilicet verba et voces, numeris quibusdam sive poëticis, sive oratoriis, et tanquam modulamine, reguntur. Inter sermones autem sive voces excellenter ad conjugium mundi sumitur sola Echo: ea enim demum vera est philosophia, quæ mundi ipsius voces fidelissime reddit, et veluti dicantem mundo conscripta est; et nihil aliud est, quam ejusdem simulacrum et reflexio; neque addit quicquam de proprio, sed tantum iterat et resonat. Nam quod Lunam Pan in altis sylvas aliquando sevocasset, videtur pertinere ad congressum sensus cum rebus cœlestibus sive divinis. Nam alia est Endymionis ratio, alia Panis: Ad Endymionem dormientem sponte se demittit Luna; siquidem ad intellectum sopitum, et a sensibus abductum, quandoque sponte influunt divina: quod si accersantur, et vocentur a sensu, tanquam a Pane, tum vero non aliud lumen præbent quam illud,

“ Quale sub incertam lunam sub luce maligna  
Est iter in sylvis.”

Ad mundi etiam sufficientiam et perfectionem pertinet, quod prolem non edat. Ille enim per partes generat; per totum quomodo generare possit, cum corpus extra ipsum non sit? nam de muliercula illa lambe, filia Panis putativa, est sane ea adjectio quæ-

dam ad fabulam sapientissima. Per illam enim præsentantur eæ, quæ perpetuis temporibus passim vagantur, atque omnia implent, vaniloquæ de rerum natura doctrinæ, re ipsa infructuosæ, genere quasi subdititiæ, garrulitate vero interdum jucundæ, interdum molestæ et importunæ.

EXEMPLUM ALTERUM PHILOSOPHIÆ, SECUNDUM PARABOLAS ANTIQUAS, IN POLITICIS.

*De bello, secundum fabulam Persei.*

Perseus, orientalis cum fuisset, missus traditur a Pallade, ad obruncandam Medusam, quæ populis plurimis ad occidentem, in extremis Iberiæ partibus, maximæ calamitati fuit. Monstrum enim hoc, alias crudele et immane, etiam aspectu tam dirum atque horrendum fuit, ut eo solo homines in saxa verteret. Erat autem e Gorgonibus una, Medusa, ac sola inter eas mortalis, cum reliquæ passivæ non essent. Perseus igitur ad tam nobile facinus se comparans, arma ac dona a tribus diis mutuo accepit; alas a Mercurio, talares scilicet non axillares; a Plutone autem galeam; scutum denique a Pallade et speculum. Neque tamen (licet tanto apparatu instructus) ad Medusam recta perrexit, sed primum ad Græas divertit. Eæ sorores, ex altera parente, Gorgonibus erant; atque Grææ istæ canæ etiam a nativitate erant et tanquam vetulæ. Oculus autem iis tantummodo et dens erat omnibus unicus; quos prout exire foras quamque configerat, vicissim gestabant, reversæ autem deponere solebant. Hunc itaque oculum, atque hunc dentem illæ Perseo commodarunt. Tum demum cum se abunde ad destinata perficienda instructum judicaret, ad Medusam properavit; impiger et volans. Illam autem offendit dormientem, neque tamen aspectui ejus (si fors an evigilaret) se committere audebat, sed cervicæ reflexa, et in speculum illud Palladis inspiciens, atque hoc modo ictus dirigens, caput Medusæ abscidit: ex sanguine autem ejusdem in terram fuso, statim Pegasus alatus emicuit. Caput autem abscissum Perseus in scutum Palladis transtulit et inseruit: cui etiamnum sua mansit vis, ut ad ejus intuitum omnes ceu attoniti aut siderati obrigerent.

FABULA conficta videtur de belligerandi ratione et prudentia. Atque primo omnis belli susceptio debet esse tanquam missio a Pallade; non a Venere certe (ut bellum Trojanum fuit) aut alia levi ex causa; quippe cum in consiliis solidis decreta de bellis fundari oporteat. Deinde de genere belli eligendo, tria proponit fabula præcepta, sana admodum et gravia. Primum est, ut de “subjugatione nationum finitimarum” quis non magnopere laboret. Neque enim eadem est patrimonii et imperii amplificandi ratio. Nam in possessionibus privatus, vicinitas prædiorum spectatur, sed in propagando imperio occasio, et belli conficiendi facilitas et fructus, loco vicinitatis esse debent. Itaque Perseus, licet orientalis, tamen tam longinquam expeditionem, usque ad extremum occidentem, minime detrectavit. Hujus rei exemplum insigne est in belligerandi di-

versa ratione patris et filii regum, Philippi et Alexandri. Ille enim in finitimis bellis occupatus, urbes paucas imperio adjecit, idque non sine maxima contentione et periculo. Quippe qui et alias, et præcipue in prælio Charoneo, in ultimum discrimen adductus fuit: at Alexander longinquam expeditionem bene ausus in Persas, nationes infinitas subjugavit, magis itineribus quam præliis fatigatus. Hoc ipsum adhuc clarius cernitur, in propagatione imperii Romanorum; qui quo tempore, ex parte occidentis, vix ultra Liguriam armis penetraverant, eodem tempore orientis provincias usque ad montem Taurum armis et imperio complexi sunt. Etiam Carolus Octavus rex Galliæ, bellum Britannicum (quod matrimonio tandem compositum est) non admodum facile expertus, expeditionem illam Neapolitanam longinquam, admiranda, quadam facilitate et felicitate transegit. Habent certe hoc bella longinqua, ut cum iis manus conseratur, qui militiæ et armis invasoris minime sint assueti: quod in finitimis secus se habet. Etiam et apparatus in hujusmodi expeditionibus solet esse diligentior et instructor; et terror apud hostes ex ipso ausu et fiducia major. Neque etiam fere possit fieri in illis expeditionibus remotis per hostes, ad quos tam longo itinere pervenitur, diversio aliqua aut invasio reciproca, quæ in belligerandi ratione cum finitimis sæpius adhibetur. Caput autem rei est, quod in subjugandis finitimis, occasionum delectus in angusto veratur; at si quis longinquiora non detrectet, poterit pro arbitrio suo eo transferre bellum, ubi aut disciplina militaris maxime est enervata, aut vires nationis plurimum attritæ et consumptæ, aut dissidia civilia opportune oborta, aut aliæ hujusmodi commoditates se ostendant. Secundum est, ut semper subsit causa belli justa, et pia, et honorifica, et favorabilis: id enim alacritatem tum militibus, tum populis impensas conferentibus, addit, et societates aperit et conciliat, et plurimas denique commoditates habet. Inter causas autem belli, admodum favorabilis est ea, quæ ducit ad debellandas tyrannides, sub quibus populus succumbit, et prosternitur sine animis et vigore, tanquam sub aspectum Medusæ; quod etiam Herculi divinitatem conciliavit. Romanis certe magna religio fuit, strenue et impigre accurrere ad socios tuendos, si quoquo modo oppressi fuissent. Etiam bella ob vindictam justam fere semper felicia fuerunt; sicut bellum adversus Brutum et Cassium, ad vindicandam mortem Cæsaris; Severi ad vindicandam mortem Pertinacis; Junii Bruti ad vindicandam mortem Lucretiæ. Denique quicunque bello calamitates hominum et injurias aut levant aut vindicant, sub Perseo militant. Tertium ut in omni bello suscipiendo vera sit æstimatio virium; atque recte pendatur, utrum bellum sit tale, quod confici et ad exitum perducere possit, ne quis vastas et infinitas spes persequatur. Prudenter enim Perseus inter Gorgonas (per quas bella repræsentantur) eam delegit, quæ in sua natura mortalis erat, neque ad impossibilia animum adjecit. Atque de iis, quæ in suscipiendo bello deliberationem subeunt, hæc præcipit fabula, reliqua ad belligerationem ipsam pertinent.

In bello maxime omnium prosunt illa tria dona

deorum, adeo ut fortunam ipsam fere regant et trahant. Accepit enim Perseus celeritatem a Mercurio, occultationem consiliorum ab Orco, et providentiam a Pallade; neque caret allegoria, eaque prudentissima, quod alæ illæ celeritatis in rebus conficiendis (cum celeritas in bello plurimum possit) talares, non axillares fuerint, atque pedibus, non humeris additæ; quia non tam inprimis belli aggressibus, quam in iis, quæ sequuntur, et primis subsidio sunt, celeritas requiritur. Nullus enim error in bello magis frequens fuit, quam quod prosecutiones et subsidiarii impetus initiorum alacritati non respondeant. At galea Plutonis (quæ homines invisibiles reddere solebat) manifesta parabola est. Nam consiliorum occultatio post celeritatem maximi ad bellum est momenti: cujus etiam celeritas ipsa pars magna est. Celeritas enim consiliorum evulgationem prævertit. Ad galeam Plutonis spectant, ut unus bello præsit, cum mandatis liberis; consultationes enim cum multis, habent aliquid potius ex cristis Martis, quam ex galea Plutonis. Eodem spectant prætextus varii, et designationes ancipites, et famæ emissariæ, quæ oculos hominum aut perstringunt aut avertunt, atque vera consiliorum in obscuro ponunt. Etiam cautiones diligentes et suspicaces, de literis, de legatis, de perfugis, et complura alia, galeam Plutonis ornant et revinciunt. At non minus interest, consilia hostium explorare, quam sua occultare: itaque galeæ Plutonis adjungendum est speculum Palladis, per quod hostium vires, inopia, occulti fautores, dissidia et factiones, progressus, consilia cernantur. Quoniam vero tantum fortuitorum suscipit ratio belli, ut nec in consiliis propriis occultandis, nec in hostium explorandis, nec in celeritate ipsa, multum fiduciæ ponendum sit, ideo ante omnia sumendum Palladis scutum, providentiæ scilicet, ut quam minimum fortunæ relinquatur. Huc pertinent explorato vias inire, castra diligenter munire (quod in militia moderna in desuetudinem fere abiit; castra vero instar urbis munitæ, Romanis ad adversos prælii eventus erant) acies stabilis et ordinata, non nimium fiendo cohortibus levis armaturæ, aut etiam equitum turmis; denique omnia, quæ ad solidam et sollicitam defensivam spectant: cum plus valeat utique in bellis scutum Palladis, quam gladius ipse Martis. Verum Perseo utcumque copiis aut animis instructo, restat aliud quidpiam, maximi per omnia momenti, antequam bellum incipiatur: nimirum, ut divertat ad Græas. Grææ autem prodiones sunt, bellorum scilicet sorores, non germanæ illæ quidem, sed generis nobilitate quasi impares: bella enim generosa; prodiones degeneres et turpes. Earum descriptio elegans est, ut causæ a nativitate sint et tanquam vetulæ, propter perpetuas proditorum curas et trepidationes. Earum autem vis (antequam in manifestam defectionem erumpant) aut in oculo, aut in dente est: omnis enim factio, a statu quopiam alienata, et in prodionem propensa, et speculatur, et mordet. Atque hujusmodi oculus et dens tanquam communis est. Nam quicquid didicerunt et noverunt, fere per manus ab una ad alteram transit et percurrit. Et quod ad dentem attinet, uno quasi ore mordent, et eadem scandala jactant; ut si unam audias omnes

audias. Itaque Perseo sunt istæ Grææ conciliandæ, atque in auxilium adducendæ, præsertim ut oculus et dentem suum ei commodent; oculus ad indicia; dentem ad rumores serendos, et invidiam conflandam, et animos hominum sollicitandos. Postquam vero omnia bene fuerint ad bellum præparate disposita, illud imprimis curandum, quod Perseus fecit, ut Medusa dormiens inveniatur. Prudens enim belli susceptor semper fere hostem assequitur imparatum, et securitati propiore. Denique in ipsis belli actionibus atque insultibus, ille intuitus in speculum Palladis adoperandus est. Plurimi enim ante ipsa pericula res hostium acute et attente introspicere possunt; at in ipso periculi articulo, aut terrore offunduntur, aut pericula nimium præcipites et a fronte spectant; unde in illa temere ruunt, vincendi memores, vitandi obliiti. At neutrum horum fieri debet, sed in speculum Palladis, cervicæ reflexa, inspiciendum, ut impetus recte dirigatur, absque vel terrore, vel furore.

A bello perfecto et victoria, sequuntur effecta duo: Pegasi illa generatio et exsuscitatio; quæ satis evidentur famam denotat, quæ per omnia volat, et victoriam celebrat, et reliquias belli faciles et in votum cedentes efficit. Secundum, gestatio capitis Medusæ in scuto; siquidem nullum præsidii genus huic ob præstantiam comparari possit. Unicum enim facinus insigne et memorabile, feliciter gestum et perpetratum, omnes hostium motus obrigescere facit, atque malevolentiam ipsam stupidam reddit.

EXEMPLUM TERTIUM PHILOSOPHIÆ, SECUNDUM PARABOLAS ANTIQUAS, IN MORALIBUS.

*De cupiditate, secundum fabulam Dionysi.*

Narrant Semelem Jovis pellicem, postquam juramento eum inviolabili ad votum indefinitum obstrinxisset, petiisse, ut ad amplexus suos accederet talis, qualis cum Junone consuesset. Itaque illa ex conflagratione periit. Infans autem, quem in utero gestabat, a patre exceptus, in femur ejus insutus est, donec menses foetui destinatos completeret: ex quo tamen onere Jupiter interim nonnihil claudicabat. Itaque puer, quod Jovem, dum in femore ejus portaretur, gravaret et pungeret, Dionysi nomen accepit. Postquam autem editus esset, apud Proserpinam per aliquot annos nutritus est. Cum vero adultus esset, ore fere muliebri conspiciabatur, ut sexus videretur tanquam ambigui. Etiam extinctus et sepultus quondam erat ad tempus, et non ita multo post revixit. Atque prima juvena vitis culturam, atque adeo vini confectionem et usum primus invenit, et edocuit; ex quo celebris factus et inclytus, orbem terrarum subjugavit, et ad ultimos Indorum terminos perrexit. Curru autem vehebatur a tigribus tracto; circa eum subsultabant dæmones deformes, Cobali vocati, Acratus et alii. Quin et Musæ comitatui ejus se adjungebant: uxorem autem sibi sumpsit Ariadnem, a Theseo desertam et relictam. Arbor ei sacra erat hedera. Etiam sacrorum et ceremoniarum inventor et institutor habebatur: ejus tamen generis, quæ et fanaticæ erant, et plene corruptelarum, atque insuper crudeles. Furores

quoque immittendi potestatem habebat. Certe in orgiis ejus, a mulieribus furore percitis, duo viri insignes discerpti narrantur, Pentheus et Orpheus: ille, dum arbore conscensa spectator eorum, quæ agerentur, curiosus esse voluisset; hic, cum lyram suaviter et perite pulsaret: atque hujus dei res gestæ cum Jovis rebus fere confunduntur.

FABULA videtur ad mores pertinere, ut vix quicquam in philosophia morali melius inveniatur. Describitur autem sub persona Bacchi natura cupiditatis, sive affectuum et perturbationum animi. Primum igitur, quod ad natalia cupiditatis attinet; origo cupiditatis omnis, licet nocentissimæ, non alia est, quam bonum apparens. Sicut enim virtutis mater est bonum existens, similiter cupiditatis mater est bonum apparens. Altera Jovis (sub cujus persona anima humana representatur) uxor legitima, altera pellex: quæ tamen Junonis honores æmuletur, tanquam Semele. Concipitur vero cupiditas in voto illicito, prius temere concesso, quam rite intellecto et judicato. Atque postquam effervescente cœperit, mater ejus (natura scilicet et species boni) ex nimio incendio destruitur et perit. Processus autem cupiditatis a conceptu suo talis est: illa ab animo humano (qui ejus est genitor) et nutricatur, et occultatur, præcipue in inferiore parte ejus, tanquam femore; atque animum pungit, et convellit, et deprimit, adeo ut actiones et decreta ab ea impediuntur, et claudicent. Quinetiam postquam consensu et tempore confirmata est, et in actus erumpit, ut jam quasi menses compleverit, et edita plane sit atque nata, primo tamen ad tempus nonnullum apud Proserpinam educatur, id est, latebras quærit, atque clandestina est, et quasi subterranea; donec remotis pudoris et metus frænis, et coalita audacia, aut virtutis alicujus prætextum sumit, aut infamiam ipsam contemnit. Atque illud verissimum est, omnem affectum vehementiorem tanquam ambigui sexus esse. Habet enim impetum virilem, impotentiam autem muliebrem. Etiam illud præclare, "Bacchum mortuum reviviscere;" videntur enim affectus quandoque sopiti, atque extincti; sed nulla fides habenda est eis, ne sepultis quidem: siquidem præbita materia et occasione resurgunt.

De inventione vitis parabola prudens est: omnis enim affectus ingeniosus est admodum et sagax, ad investigandum ea, quæ ipsum alant et foveant. Atqui ante omnia, quæ hominibus innotuere, vinum ad perturbationes cujuscunque generis excitandas et inflammandas, potentissimum est, et maxime efficax; atque est cupiditatis in genere instar fomitis communis. Elegantissime autem ponitur affectus sive cupiditas, provinciarum subjugator, et expeditionis infinitæ susceptor: nunquam enim partis acquiescit, sed appetitu infinito, neque satiabili, ad ulteriora tendit, et novis semper inhiat. Etiam tigres apud affectus stabulant, et ad currum eorum subinde jugantur. Postquam enim affectus curulis esse cœperit, non pedestris, sed victor rationis, et quasi triumphator factus sit, in omnes, qui adversantur aut se opponunt, crudelis est, et indomitus ac immitis. Facetum autem est, quod circa currum Bacchi subsultant illi dæmones deformes et ridiculi. Omnis

enim affectus vehementior progignit motus in oculis, et ore ipso, et gestu, indecoros et inconditos, subsultorios et deformes; adeo ut qui sibi ipsi fortasse in aliquo affectu (veluti ira, arrogantia, amore) videatur magnificus et tumidus, aliis tamen appareat turpis et ridiculus. Conspiciuntur autem in cupiditatis comitatu Musæ: neque enim reperitur ullus fere affectus, tam pravus et vilis, cui non blandiatur aliqua doctrina. Hac enim in re, ingeniorum indulgentia et procacitas, Musarum majestatem in immensum minuit; ut cum duces vitæ et signiferi esse debeant, sint non raro cupiditatum pedissequæ et oblectatrices.

Imprimis vero nobilis est illa allegoria, Bacchum amores suos in eam effudisse, quæ ab alio relicta erat et fastidita. Certissimum enim est, affectus id petere atque ambire, quod experientia jam pridem repudiavit. Atque norint omnes, qui affectibus suis servientes et indulgentes, pretium potiundi in immensum argent (sive honores appetant, sive amores, sive gloriam, sive scientiam, sive alia quæcunque) se res relictas petere, et a compluribus, per omnia fere secula, post experimentum, dimissas et repudiatas. Neque mysterio caret, quod hedera Baccho sacra fuerit; hoc enim duplici modo convenit. Primum, quod hedera hieme virescat; deinde, quod circa tot res (arborea, parietes, ædificia) serpat, ac circumfundatur, et se attollat. Quod ad primum enim attinet, omnis cupiditas per renitentiam et vetitum, et tanquam antiperistasin (veluti per frigora brumæ hedera) virescit, ac vigorem acquirit: secundo, affectus aliquis in humana anima prædominans, omnes ejus actiones et decreta, tanquam hedera, cir-

cumsepit; neque fere quicquam purum invenias, quo illa claviculas suas non imprimat. Neque mirum est, si superstitiosi ritus Baccho attribuantur, cum omnis fere malesanus affectus in pravis religionibus luxuriatur: adeo ut hæreticorum colluvies Bacchanalia ethnicorum superarit; quorum etiam superstitiones, non minus cruentæ, quam turpes, extiterunt. Neque itidem mirum est, si furores a Baccho immitti putentur, cum et omnis affectus in excessu suo, veluti furor brevis sit, et, si vehementius obsideat et incumbat, in insania sæpius terminetur. Illud autem de Pentheo et Orpheo inter orgia Bacchi laceratis, evidentem parabolam habet; cum affectus quisque prævalidus erga duas res sit asperrimus atque infensissimus: quarum altera est inquisitio in eum curiosa, altera, admonitio salutaris et libera. Neque auxilio fuerit, si illa inquisitio fiat tantum contemplationis aut spectandi gratia, tanquam arbore conscensa, absque omni animi malignitate; neque rursus, si admonitio illa, multa cum suavitate et dexteritate adhibeatur; verum utcumque non tolerant orgia, aut Pentheum, aut Orpheum. Postremo, illa confusio personarum Jovis et Bacchi, ad parabolam recte traduci potest; quandoquidem res gestæ nobiles et claræ, atque merita insignia et gloriosa, interdum a virtute et recta ratione, et magnanimitate, interdum autem a latente affectu, et occulta cupiditate (utcumque famæ et laudis celebritate utraque res pariter gaudeat) proveniant; ut non facile sit distinguere facta Dionysi a factis Jovis.

Verum in theatro nimis diu moramur; transeamus ad palatium animi; cujus limina majori cum veneratione et cura ingredi convenit.

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER TERTIUS.

AD REGEM SUUM.

### CAPUT PRIMUM.

*Partitio scientiæ in theologiam et philosophiam. Partitio philosophiæ in doctrinas tres; de numine, de natura, de homine. Constitutio philosophiæ primæ, ut matris communis omnium.*

HISTORIA omnis (rex optime) humi incedit, et ducis potius officio, quam lucis, perfungitur: pœsis autem

doctrinæ tanquam somnium: res dulcis et varia, et volens videri aliquid in se habere divini; quod etiam somnia vendicant. Verum jam tempus est mihi, ut evigilem, et me humo attollam, philosophiæ et scientiarum liquidum æthera secans.

Scientia aquarum similis est: aquarum aliæ descendunt cœlitus, aliæ emanant et terra. Etiam scientiarum primaria partitio sumenda est ex fontibus suis: Horum alii in alto siti sunt, alii hic infra. Omnis enim scientia duplicem sortitur informa-

tionem. Una inspiratur divinitus, altera oritur a sensu. Nam quantum ad illam, quæ docendo infunditur, scientiam; cumulativa ea est, non originalis; sicut etiam fit in aquis, quæ præter fontes primarios, ex aliis rivulis in se receptis augetur. Partiemur igitur scientiam, in theologiam et philosophiam. Theologiam hic intelligimus inspiratam sive sacram; non naturalem, de qua paulo post dicturi sumus. At illam (inspiratam nimirum) ad ultimum locum reservabimus, ut cum ea sermones nostros claudamus; cum sit portus et sabbatum humanarum contemplationum omnium.

Philosophiæ autem objectum triplex, Deus, natura, homo: et triplex itidem radius rerum. Natura enim percutit intellectum radio directo; Deus autem propter medium inæquale (creaturas scilicet) radio refracto; homo vero sibi ipsi monstratus et exhibitus, radio reflexo. Convenit igitur partiri philosophiam in doctrinas tres; doctrinam de Numine, doctrinam de natura, doctrinam de homine. Quoniam autem partitiones scientiarum non sunt lineis diversis similes, quæ coeunt ad unum angulum; sed potius ramis arborum, qui conjunguntur in uno trunco (qui etiam truncus ad spatium nonnullum integer est et continuus, antequam se partiatur in ramos); ideoque postulat res, ut priusquam prioris partitionis membra persequamur, constituatur una scientia universalis, quæ sit mater reliquarum, et habeatur in progressu doctrinarum, tanquam portio viæ communis, antequam viæ se separent et disjungant. Hanc scientiam, philosophiæ primæ, sive etiam sapientiæ (quæ olim rerum divinarum atque humanarum scientia definiebatur) nomine insignimus. Huic autem scientiæ nulla alia opponitur; cum ab aliis scientiis, potius limitibus, intra quos continetur, quam rebus et subjecto, differat, fastigia scilicet rerum tantummodo tractans. Hanc ipsam utrum inter desiderata reponere oporteat, hæsito; sed arbitror tamen poni debere. Equidem invenio farraginem quandam et massam inconditam doctrinæ ex theologia naturali, ex logica, ex partibus quibusdam physiciæ (veluti de principiis, et de anima) compositam et congestam, et sublimitate quadam sermonis hominum, qui se ipsos admirari amant, tanquam in vertice scientiarum collocatam. Nos vero, misso fastu, id tantum volumus, ut designetur aliqua scientia, quæ sit receptaculum axiomatum, quæ particularium scientiarum non sint propria, sed pluribus earum in commune competant.

Plurima autem id genus axiomata esse nemo ambigit. Exempli gratia, "Si inæqualibus æqualia addas, omnia erunt inæqualia:" regula est mathematicis; eadem et in ethicis obtinet, quatenus ad justitiam distributivam; siquidem in justitia commutativa, ut paria imparibus tribuantur, ratio æquitatis postulat; at in distributiva, nisi imparia imparibus præstentur, iniquitas fuerit maxima. "Quæ in eodem tertio conveniunt, et inter se conveniunt:" regula est itidem ex mathematicis; verum simul tam potens in logica, ut syllogismi sit fundamentum. "Natura se potissimum prodit in minimis:" regula est in physicis, tam valida, ut etiam Democriti atomos produxerit; veruntamen eam recte adhibuit Aristoteles in politicis, qui contemplationem reipub-

licæ orditur a familia. "Omnia mutantur, nil interit:" regula itidem in physicis hoc modo prolata; "Quantum naturæ, nec minuitur, nec augetur:" eadem competit theologiæ naturali, sic variata; "Omnipotentia sunt opera, aliquid ex nihilo facere, et aliquid in nihilum redigere:" quod etiam Scriptura testatur, "Didici, quod omnia opera, quæ fecit Deus, perseverent in perpetuum; non possumus eis quicquam addere, nec auferre. Interitus rei arcetur per reductionem ejus ad principia:" regula est in physicis; eadem valet in politicis (ut recte notavit Machiavellus) cum illa, quæ interitum rerum publicarum maxime prohibent, nihil aliud fere sint, quam reformatio earum, et reductio ad antiquos mores. "Putredo serpens magis contagiosa est, quam matura:" regula est in physicis, eadem insignis etiam in moralibus; cum homines profligatissimi et maxime facinorosi, minus corruptelam inferant publicis moribus, quam qui aliquid videntur habere sanitatis et virtutis, et ex parte tantum mali sunt. "Quod conservativum est formæ majoris, id activitate potentius:" regula est in physicis. Etenim, ut non abscindatur ipse rerum nexus, nec detur (ut loquuntur) vacuum, facit ad conservandam fabricam universi. Ut vero gravia congregentur ad massam terræ, facit ad conservandam tantum regionem densorum. Itaque prior motus posteriorem domat. Eadem tenet in politicis: nam quæ faciunt ad conservandam ipsam politiam in sua natura, validiora sunt, quam quæ ad bene esse particularium in republica membrorum conducunt. Similiter eadem locum habet in theologia. Etenim in theologicis virtutibus, charitas, quæ est virtus maxime communicativa, præ reliquis omnibus eminet. "Augetur vis agentis per antiperistasin contrarii:" regula est in physicis. Eadem mira præstat in politicis; cum omnis factio, ex contraria ingruente, vehementer irritetur. "Tonus discors in concordem actutum desinens, concentum commendat:" regula est musicæ. Eadem in ethicis et affectibus obtinet. Tropus ille musicus, a clausula aut cadentia (quam vocant) cum jamjam adesse videatur, placide elabendi; convenit cum tropo rhetorico expectationem eludendi. "Fidium sonus tremulus" eandem affert auribus voluptatem, quam lumen, aquæ aut gemmæ insilient, oculis;

"—splendet tremulo sub lumine pontus."

"Organa sensuum cum organis reflexionum conveniunt. Hoc in perspectiva locum habet; oculus enim similis speculo sive aquis. Et in acustica; instrumentum enim auditus obici intra cavernam simile. Hæc pauca enumerasse sufficere ad exempla. Quinimo magia Persarum (quæ in tantum est celebrata) in eo potissimum versabatur, ut architecturas et fabricas rerum naturalium, et civillum, symbolizantes notare. Neque hæc omnia, quæ diximus, et alia hujus generis, similitudines meræ sunt (quales hominibus fortasse parum perspicacibus videri possint) sed plane una eademque naturæ vestigia aut signacula, diversis materiis et subjectis impressa. Atque hæc res adhuc sedulo tractata non est. Invenias fortasse in scriptis, quæ ab ingeniis celsioribus promanarunt, hujusmodi axiomata raro et sparsim

inserta, ex usu argumenti, quod tractant: corpus vero aliquod talium axiomatum, quæ vim habeant quandam primitivam et summariam ad scientias, nemo composuit; cum tamen sit res ejusmodi, quæ insigniter naturam unam faciat; quod philosophiæ primæ munus esse autumat.

Est et alia hujus philosophiæ primæ pars, quæ, si ad vocabula respicias, vetus est; si ad rem, quam designamus, nova. Est autem inquisitio de conditionibus adventitiis entium (quas transcendentis dicere possumus) pauco, multo; simili, diverso; possibili, impossibili; etiam ente, et non ente; atque ejusmodi. Quandoquidem enim ista sub physica proprie non cadant, dissertatio autem dialectica circa ea, magis ad argumentandi rationes, quam ad rerum existentiam, sit accomodata; consentaneum omnino est, ut hæc contemplatio (in qua non parum est dignitatis et utilitatis) haud deseratur prorsus, sed in scientiarum partitionibus nonnullum saltem inveniat locum: verum tamen hoc intelligimus fieri debere, longe alio, quam quo tractari solet, modo. Exempli gratia: nemo, qui de multo et pauco verba fecit, hoc egit, ut causa reddatur, cur alia in natura, tam numerosa et ampla sint, et esse possint, alia tam rara et modica: Nam certe fieri non potest, ut in rerum natura tanta sit copia auri, quanta ferri; tanta rosæ, quanta graminis; tanta specificati, quanta non specificati. Similiter nemo, qui de simili et diverso disseruit, satis explicavit, cur, quasi perpetuo inter species diversas, interponantur participia quædam, quæ sunt speciei ambigæ; veluti muscus inter putredinem et plantam; pisces, qui hærent, et loco non moventur, inter plantam et animal; sorices et mures, et alia nonnulla, inter animalia ex putredine, et ex semine prognata; vesperiliones inter aves et quadrupedes; pisces volantes (qui jam notissimi sunt) inter aves et pisces; phocæ inter pisces et quadrupedes; et alias hujusmodi. Neque rursus causam indagavit quispiam, cur cum similia similibus gaudeant, ferrum ferrum non trahat, quod magnes facit, neque aurum ipsum aurum, licet argentum vivum alliciat. Circa hæc et similia in disceptatione de transcendentibus illis, altum est silentium: orationis enim apices, non rerum subtilitates, secuti sunt homines. Quamobrem horum transcendentium, sive conditionum entium adventitiarum inquisitionem veram et solidam, secundum naturæ non sermonis leges, philosophiam primam recipere volumus. Atque de philosophia prima (sive de sophia) quam inter desiderata haud immerito retulimus, hæc dicta sint.

## CAPUT SECUNDUM.

*De theologia naturali: et doctrina de angelis et spiritibus; quæ ejusdem est appendix.*

COLLOCATA igitur sua in sede communi scientiarum parente, instar Berecynthiæ tanta gaudens cælesti sobole;

“Omnes collicolas, omnes supera alta tenentes;”

revertamur ad partitionem illam trium philosophiarum, divinæ, naturalis, et humanæ. Nam theologia

naturalis, philosophia etiam divina recte appellatur. Definitur autem hæc, ut sit talis scientia, seu potius scientiæ scintilla, qualis de Deo haberi potest, per lumen naturæ et contemplationem rerum creaturarum; et ratione objecti, sane divina, ratione informationis, naturalis censeri potest. Hujus scientiæ limites ita vere signantur, ut ad atheismum confutandum et convincendum, et ad legem naturæ informandam se extendant; ad religionem autem adstruendam non proferantur. Quamobrem nec Deus unquam edidit miraculum, quo converteretur atheus: quia poterat ipso naturæ lumine ad notitiam Dei perducere; verum miracula ad convertendos idololatrias et superstitiosos designata sunt, qui Numen agnoverunt, sed in cultu ejus aberrarunt; quoniam non sufficit lumen naturæ, Dei voluntati declarandæ, aut cultui ejus legitimo prodendo. Sicut enim opificis potentiam et peritiam ostendunt opera ejus, imaginem autem minime; sic opera Dei conditoris omnipotentiam et sapientiam ostendunt, imaginem ejus haudquaquam depingunt. Atque hac in re, ethnicorum opinio a sacra veritate recedit: illi siquidem mundum imaginem Dei statuebant, hominem mundi. At sacra literæ haud tali honore mundum dignantur, ut Dei uspiam imago dicatur, sed solummodo opus manuum ejus; hominem vero imaginem Dei immediate substituunt. Quocirca, quod sit Deus, quod rerum habenas tractet, quod summe potens, quod sapiens et præsciens, quod bonus, quod remunerator, quod vindex, quod adorandus, etiam ex operibus ejus demonstrari et evinci potest; et admirabilia complura secreta circa attributa ejus, et multo magis circa regimen et dispensationem super universum, etiam sobrie ex iisdem elici et manifestari queunt; estque istud argumentum a nonnullis utiliter pertractatum. Verum ex intuitu rerum naturalium, atque humanæ rationis principiis, de fidei mysteriis, vel ratiocinari, vel etiam suadere vehementius, aut rursus ea curiosius introspicere et ventilare, et de modo mysterii inquirere, haud tutum meo iudicio fuerit. “Da fidei quæ fidei sunt.” Nam vel ethnici, in illustri et divina, de aurea catena, fabula, hoc ipsum concedunt: “quod Jovem de cælo ad terras deducere nec homines poterunt, nec dii; e contrario, quod Jupiter pertrahere eos potuerit e terra ad cælum.” Quare frustra sudaverit, qui cælestia religionis arcana nostræ rationi adaptare conabitur: decebit potius, mentes nostras ad cælestis veritatis thronum adorandum attollere. In hac igitur parte theologiæ naturalis, tantum abest, ut defectum aliquem observem, ut excessum potius reperiam; ad quem subnotandum paulum sum digressus, propter maxima incommoda et pericula, quæ ex eo tum religioni, tum philosophiæ impendent; utpote qui et religionem hæreticam prodeat, et philosophiam phantasticam et superstitiosam.

Secus est, quod ad angelorum et spirituum naturam attinet; quæ nec inscrutabilis est, nec interdicta; ad quam etiam, ex affinitate, quam habet cum anima humana, aditus magna ex parte est patefactus. Præcipit certe Sacra Scriptura; “Nemo vos decipiat in sublimitate sermonum, et religione angelorum, ingerens se in ea, quæ non novit.” Attamen si hoc monitum diligenter perpendas, duo dumtaxat in eo vetita reperies; adorationem scilicet, qualis Deo de-

betur, Angelorum; et fanaticas de iis opiniones, vel ultra creaturæ sortem eos efferentes, vel ampliorem de iis cognitionem, quam quis revera adeptus sit, venditantes. Cæterum sobria circa illos inquisitio, quæ vel per rerum corporearum scalam ad eorum naturam pernoscendam ascendat, vel in anima humana, veluti in speculo, eam intueatur, neutiquam prohibetur. Idem de spiritibus statuendum immundis, qui a statu suo deciderunt. Consortium cum iis, atque usus operæ eorum, illicitus est; multo magis qualiscunque cultus vel veneratio. At contemplatio et cognitio illorum naturæ, potestatis, illusionum, non solum ex locis Scripturæ sacræ, sed ex ratione, aut experientia, haud postrema pars est sapientiæ spiritualis. Sic certe Apostolus, "stratagematum ejus non ignari sumus." Ac non minus dæmonum naturam investigare in theologia naturali conceditur, quam venenorum in physica, aut vitiorum in ethica. Hanc autem scientiæ partem de Angelis et dæmonibus inter desiderata numerare non licet, quippe quæ ab haud paucis sit tentata: æquius esset, ut scriptorum in hoc genere pars haud parva, aut vanitatis, aut superstitionis, aut subtilitatis inutilis, arguantur.

### CAPUT TERTIUM.

*Partitio naturalis philosophiæ in speculativam et operativam: quodque illæ duæ, et in intentione tractantis, et in corpore tractatus segregari debeant.*

Missa igitur theologia naturali (cui inquisitionem de spiritibus, ut appendicem attribuimus) accedamus ad secundam partem: videlicet illam de natura, sive philosophiam naturalem. Optime Democritus; "Scientiam de natura in profundis mineris, sive puteis, latere demersam." Non male chemici; "Vulcanum alteram naturam esse; quinetiam id celeriter perficere, quod natura per ambages et temporis moras solet." Quidni igitur philosophiam in duas partes secemus, fodinam et fornacem; et duo constituamus philosophorum munera, operarios in mineris, et fabros? Sane utcunque videamur hæc per lulum loqui; tamen hujus generis partitionem utilissimam esse censemus, cum proponetur vocabulis familiaribus et scholasticis; hoc est, ut dividatur "Doctrina de natura in inquisitionem causarum, et productionem effectuum; speculativam, et operativam." Altera naturæ viscera per scrutatur, altera naturam veluti super incudem efformat. Neque me fugit, quam arcto copulentur vinculo causæ et effectus, ut explicationem eorum aliquatenus conjungi sit necesse. Attamen quandoquidem omnis solida et fructuosa naturalis philosophia duplicem adhibeat scalam, eamque diversam, ascensoriam et descensoriam; ab experientia ad axiomata, et ab axiomatibus ad nova inventa; consultissimum judico ut hæc duæ partes, speculativa et operativa, et in intentione tractantis, et in corpore tractatus separentur.

### CAPUT QUARTUM.

*Partitio doctrinæ speculativæ de natura, in physicam specialem et metaphysicam: quarum physica causam efficientem et materiam, metaphysica causam finalem et formam inquirat. Partitio physicæ in doctrinas de principiis rerum, de fabrica rerum sive de mundo, et de varietate rerum. Partitio physicæ de varietate rerum in doctrinam de concretis, et doctrinam de abstractis. Partitio doctrinæ de concretis "rejicitur ad easdem partitiones, quas suscipit" historia naturalis. Partitio doctrinæ de abstractis in doctrinam de schematicis materiæ, et doctrinam de mortibus. Appendices duæ physicæ speculativæ, problemata naturalia, placita antiquorum philosophorum. Partitio metaphysicæ, in doctrinam de formis, et doctrinam de causis finalibus.*

NATURALIS philosophiæ partem, quæ speculativa est et theoretica, in physicam specialem et metaphysicam dividere placet. Atque in hac partitione attendant homines nos vocabulum metaphysicæ usurpare sensu, a recepto et vulgato discrepanti. Hic autem locus admonendi videtur, de nostro in genere, circa usum vocabulorum, instituto. Id hujusmodi est, ut tam in præmisso vocabulo metaphysicæ, quam in aliis, ubi conceptus et notiones nostræ novæ sunt, et a receptis recedunt, maxima certe cum religione antiqua vocabula retineamus. Cum enim futurum speremus, ut ordo ipse et dilucida rerum explicatio, quam subjungere conamur, nos a prava vocabulorum (quibus utimur) intelligentia liberent; in cæteris omnino avemus (quatenus sine veritatis ac scientiarum dispendio fieri possit) vel minimum ab antiquorum aut opinionibus, aut loquendi more deflectere. Qua in re Aristotelis confidentiam proinde subit mirari; qui impetu quodam percitus contradictionis, et bellum universæ antiquitati indicens, non solum nova artium vocabula pro libitu cudendi licentiam usurpavit; sed etiam priscam omnem sapientiam extinguere et delere annis est. Adeo ut neque nominet uspiam auctores antiquos, neque dogmatum eorum mentionem ullam faciat, nisi quo aut homines perstringeret, aut placita redargueret. Sane si famam nomini suo, ac sequacium turbam affectaverit, hoc rationibus suis imprimis accommodatum. Siquidem in veritate philosophica asserenda et recipienda, idem contingit, quod in veritate divina; "Veni in nomine Patris, nec recipitis me; si quis venerit in nomine suo, eum recipietis." Sed ex hoc cœlesti aphorismo, si, quem præcipue designaverit, spectemus; (nempe Antichristum omnium seculorum impostorem maximum) colligere licet, istud ipsum, "Venire in nomine suo," nulla antiquitatis, aut (si ita loqui licet) paternitatis habita ratione, rem mali ominis esse ad veritatem; utcunque eam sæpe numero comitetur illa fortuna, "Eum recipietis." Cæterum de viro tam eximio certe, et ob acumen ingenii mirabili, Aristotele, crediderim facile hanc ambitionem eum a discipulo suo accepisse, quem fortasse æmulatus est; ut si ille omnes nationes, hic omnes opiniones subigeret; et monarchiam quandam

in contemplationibus sibi conderet. Quanquam fieri possit, ut apud aliquos tetricos, et linguæ acerbæ, simili cum discipulo suo titulo insigniretur;

“Felix terrarum prædo, non utile mundo  
Editus exemplum:”

eadem modo,

“Felix doctrinæ prædo,” etc.

Nobis vero ex altera parte (quibus, quantum calamo valemus, inter vetera et nova in literis fœdus et commercium contrahere cordi est) decretum manet, antiquitatem comitari usque ad aras; atque vocabula antiqua retinere, quanquam sensum eorum et definitiones sæpius immutemus; secundum moderatum illum et laudatum in civilibus novandi modum, quo rerum statu novato, verborum tamen sœlennia durent; quod notat Tacitus, “Eadem magistratuum vocabula.”

Redeamus igitur ad acceptionem vocabuli metaphysicæ, nostro sensu. Patet ex iis, quæ supra disseruimus, disjungere nos philosophiam primam a metaphysica, quæ hactenus pro re eadem habitæ sunt. Illam communem scientiarum parentem, hanc naturalis philosophiæ portionem, posuimus. Atque philosophiæ primæ communia et promiscua scientiarum axiomata assignavimus. Etiam relativæ et adventitiæ entium conditiones (quas transcendentes nominavimus) multum, paucum; idem, diversum; possibile, impossibile; et hoc genus reliqua, eidem attribuimus; id solummodo cavendo, ut physice, non logice tractentur. At inquisitionem de Deo, uno, bono, angelis, spiritibus, ad theologiam naturalem retulimus. Merito igitur quæri possit, quid tandem sit, quod metaphysicæ relinquatur? Certe ultra naturam nihil, sed ipsius naturæ pars multo præstantissima. Atque profecto citra veritates dispendium, huc usque de veterum sententia respondere liceat, physicam ea tractare, quæ penitus in materia mersa sunt et mobilia, metaphysicam abstracta magis et constantia. Rursus physicam in natura supponere existentiam tantum, et motum, et naturalem necessitatem; at metaphysicam etiam mentem et ideam. Nam huc forte redit ea, quam dicemus, res. Verum nos eam, missa sermonis sublimitate, perspicue et familiariter proponemus. Partiti sumus naturalem philosophiam in causarum inquisitionem, et productionem effectuum. Inquisitionem causarum in theoreticam coniecimus. Eam in physicam et metaphysicam partiti sumus. Ergo necesse est, ut vera differentia harum sumatur ex natura causarum, quas inquirunt. Itaque absque aliqua obscuritate aut circuitione, physica est, quæ inquirat de efficiente et materia; metaphysica, quæ de forma et fine.

Physica igitur causarum vaga et incerta, et pro modo subjecti, mobilia complectitur; causarum constantiam non assequitur.

“Limus ut hic durescit, et hæc ut cera liquescit,  
Uno eodemque igne.”

Ignis duritiæ causa, sed in limo; ignis colliquationis causa, sed in cera. Partiemur autem physicam in doctrinas tres. Natura enim aut collecta in unum, aut fusa et sparsa est. Colligitur vero in unum

natura, aut propter communia rerum omnium principia; aut propter unicam integralem universi fabricam. Itaque hæc unio naturæ duas peperit physicæ partes: unam de principiis rerum; alteram de fabrica universi, sive de mundo; quas etiam doctrinas de summis appellare consuevimus. Tertia doctrina (quæ de natura sparsa sive fusa tractat) omnimodam rerum varietatem et summas minores exhibet. Ex his igitur patet tres omnino reperiri doctrinas physicas; de principiis rerum, de mundo sive de fabrica rerum, et de natura multiplici sive sparsa; quæ postrema (ut diximus) omnimodam rerum varietatem continet; estque veluti glossa prima, aut paraphrasis circa naturæ interpretationem. Harum trium partium desideratur totaliter nulla; cæterum quam vere et solide tractentur, non est hic definiendi locus.

At physicam sparsam sive de varietate rerum, rursus in duas partes dividemus; physicam de concretis, et physicam de abstractis; sive physicam de naturis. Altera (ut logicis vocabulis utamur) inquirat de substantiis, cum omni varietate suorum accidentium: altera de accidentibus per omnem varietatem substantiarum. Veluti si inquiratur de leone aut quercu, illa complura diversa accidentia suffulciunt; contra, si inquiratur de calore aut gravitate, illa plurimis distinctis substantiis insunt. Cum vero omnis physica sita sit in medio, inter historiam naturalem et metaphysicam; prior pars (si recte advertas) historiæ naturali propior est, posterior metaphysicæ. Physica autem concreta eandem subit divisionem, quam historia naturalis; ut sit vel circa cœlestia; vel circa meteora; vel circa globum terræ et magis; vel circa collegia majora, quæ elementa vocant; vel circa collegia minora, sive species; etiam circa prætergenerationes, et circa mechanica. Etenim in hisce omnibus historia naturalis factum ipsum perscrutatur et refert; at physica itidem causas: sed intellige hoc de causis fluxis, materia scilicet et efficiente. Inter hasce physicæ portiones, manca prorsus et imperfecta est ea, quæ inquirat de cœlestibus, cum tamen propter nobilitatem subjecti præcipue hominibus curæ esse deberet. Etenim astronomia fundata est in phænomenis non male; sed humilis est, et minime etiam solida: at astrologia in plurimis etiam fundamento caret. Certe astronomia talem offert humano intellectui victimam, qualem Prometheus olim, cum fraudem Jovi fecit: adduxit ille loco bovis veri pellem bovis grandis et pulchri, stramine, et foliis, et viminibus suffarcinatam. Exhibet similiter et astronomia exteriora cœlestium (astrorum dicimus numerum, situm, motus, periodos) tanquam pellem cœli, pulchram, et in systemata fabre concinnatam: at viscera desunt (rationes nempe physicæ) ex quibus (hypothesis astronomicis adjunctis) eruatur theoria; non quæ phænomenis tantum satisfaciât (cujus generis complures ingeniose confingi possent) sed quæ substantiam, et motum, et influxum cœlestium, prout revera sunt, proponat. Explosa enim fere jam pridem sunt illa; “raptus primi mobilis” et “soliditas cœli” (stellis in orbibus suis tanquam clavis in laquearibus infixis). Nec multo melius asseritur; quod sint diversi poli zodiaci et mundi; quod sit

secundum mobile renitentiae in adversum primi mobilis raptus; quod omnia in caelo ferantur per circulos perfectos; quod sint eccentrici et epicycli, quibus motuum in circulis perfectis constantia servetur; quod a luna in superius nulla sit mutatio, aut violentia; et hujusmodi. Atque harum suppositionum absurditas in motum terrae diurnum (quod nobis constat falsissimum esse) homines impigit. At vix quisquam est, qui inquisivit causas physicas, tum de substantia caelestium tam stellari, quam interstellari, tum de celeritate et tarditate corporum caelestium ad invicem, tum de incitatione motus diversa in eodem planeta, tum de motuum consecutione ab oriente in occidentem, aut e contra, deque progressionibus, stationibus, et retrogradationibus, tum de motuum sublacione, et casu, per apogaea et perigaea; tum de motuum obliquatione, vel per spiras se versus tropicos texendo et retexendo, vel per sinuationes, quas dracones vocant; tum de polis rotationum, cur magis in tali parte caeli siti sint, quam in alia; tum de alligatione quorundam planetarum ad distantiam certam a sole: hujus, inquam, generis inquisitio vix tentata est, sed in mathematicis tantum observationibus et demonstrationibus insudatur. Eae autem ostendunt, quomodo haec omnia ingeniose concinnari et extricari possint, non quomodo vere in natura subsistere: et motus tantum apparentes, et machinam ipsorum fictitiam, et ad placitum dispositam, non causas ipsas et veritatem rerum indicant. Quocirca male astronomia, qualis nunc habetur, inter artes mathematicas, non sine dignitate suae dispendio, numeratur; cum debeat potius, si proprias partes tueri velit, constitui physicae pars quasi nobilissima. Quicumque enim superlunarium et sublunarium conficta divortia contempserit, et materiae appetitus, et passiones maxime catholicas (quae in utroque globo validae sunt, et universitatem rerum transverberant) bene perspexerit; is ex illis, quae apud nos cernuntur, luculentam capiet de rebus caelestibus informationem; et ab iis e contra, quae in caelo fiunt, haud pauca de motibus inferioribus, qui nunc latent, perdiscet; non tantum quatenus hi ab illis regantur, sed quatenus habeant passiones communes. Quamobrem hanc partem astronomiae, quae physica est, desiderari statuimus. Eam astronomiam vivam nominabimus, ad differentiam bovis illius Promethei suffarcinati, et solummodo figura tenus bovis.

At astrologia multa superstitione referta est, ut vix aliquid sanum in ea reperiat. Attamen eam potius expurgandam, quam prorsus abjiciendam esse censemus. Quod si quis hanc scientiam non in ratione, aut contemplationibus physicis, sed in caeca experientia, et complurium seculorum observatione fundatam esse contendat, ideoque rationum physicarum examen rejiciat, quod jactabant Chaldaei: is eadem opera et auguria revocet, et aruspicinam, et exta, et omnigenas fabulas deglutiat; nam et haec omnia, ut diutinae experientiae, et per manus traditae disciplinae, dictamina fuisse asserebantur. Nos vero et, ut physicae portionem, astrologiam recipimus, et non plus ei, quam ratio et rerum evidentia concedit, tribuimus; demptis superstitionibus et commentis. Ut vero rem paulo attentius introspeciamus; primo, quam

inane illud commentum; quod singuli planetae vicissim per horas regnent, ut spatio viginti quatuor horarum regna sua ter repetant, praeter horas tres supernumerarias? Attamen hoc commentum nobis divisionem hebdomadae (rem tam antiquam, et tam late receptam) peperit, ut ex alternatione dierum manifestissime patet; cum in principio diei sequentis regnet semper planeta, a planeta prioris diei quartus; propter tres illas horas, quas diximus, supernumerarias. Secundo, pro commento vano rejicere non dubitamus doctrinam de thematibus caeli, ad puncta temporis certa, cum distributione domorum; ipsas scilicet astrologiae delicias; quae Bacchanalia quaedam in caelestibus exercuerunt: nec satis mirari possumus, viros quosdam egregios, et in astrologia principes, tam levi ad ista astruenda argumento in-nixos esse. Aiunt enim, quando illud prodit experientia ipsa, solstitia, aequinoctia, novilunia, plenilunia, et hujusmodi stellarum revolutiones majores, manifesto et insigniter operari super corpora naturalia; necesse esse, ut positurae stellarum magis exactae et subtiliores, effectus quoque magis exquisitos et occultiores producant. Illi vero seponere primo debuerant, operationes solis per calorem manifestum; et similiter lunae vim quandam magneticam, super incrementa aestuum semimenstrua: (nam fluxus et refluxus maris quotidianus alia res est:) his vero sepositis, reliquas planetarum vires super naturalia (quatenus experientia comprobantur) tenues admodum et infirmas, et quasi latitantes reperient, etiam in revolutionibus majoribus. Quare contrario prorsus modo concludere debuerant: nimirum; cum revolutiones illae majores tam parum possint; exactas illas et minutas positurarum differentias nihil omnino virium obtinere. Tertio, fatalia illa, quod hora nativitatis aut conceptionis fortunam foetus regat, hora inceptionis fortunam incepti, hora quaestionis fortunam rei inquisitae, atque (ut verbo dicamus) doctrinas de nativitatibus, electionibus, et quaestionibus, et istiusmodi levitates, maxima ex parte, nihil certi aut solidi habere, et rationibus physicis plane redargui et evinci, judicamus. Illud igitur magis attinet dicere, quid tandem in astrologis retineamus, aut probemus? atque in iis, quae probamus, quid desideremus? nam hujus postremae rei gratia (nempe ejus, quod desideratur) sermonem hunc instituimus, cum alias censuris (ut saepe diximus) non vacemus. Atque inter recepta certe, doctrinam de revolutionibus plus sanitatis, quam reliqua, habere censemus. Verum id optimum factu foret, si regulas quasdam praescribamus, ad quarum trutinam et normam astrologica examinentur; ut utilia retineantur, rejiciantur inania. Prima ea sit, de qua jam ante monuimus, "Revolutiones majores retineantur, valeant minores horoscoporum et domorum." Illae instar tormentorum grandium ictus suos a longinquo jacere queunt, haec tanquam arcus minores spatia evadere, et vires deferre non possunt. Secunda est; "Operatio caelestium in corpora omnigena non valet, sed tantum in teneriora," qualia sunt humores, aër, et spiritus: atque hic tamen exceipimus operationes caloris, solis et caelestium, qui et ad metalla, et ad plurima subterranea proculdubio penetrat. Tertia est: "Omnis operatio caelestium, potius ad massas rerum exten-

ditur, quam ad individua :” oblique tamen pervenit etiam ad individua nonnulla : illa scilicet, quæ ex individuis ejusdem speciei sunt maxime passibilia, et tanquam cera mollior ; veluti cum constitutio aëris pestilens corpora minus resistentia occupat, magis resistentia præterit. Quarta est præcedenti non dissimilis : “ Omnis operatio cælestium non in puncta temporum, aut angustias minutas, sed in spatia majora defluit et dominatur :” itaque prædictiones de temperaturis anni, veræ esse possint ; de diebus singulis, pro vanis merito habentur. Postrema est (quæ etiam prudentioribus astrologis semper placuit) quod “ nulla insit astris fatalis necessitas ;” sed quod inclinent ea potius, quam cogant. Addimus et illud (in quo in partes astrologiæ, si fuerit emendata, non obscure venire videbimur) nimirum quod nobis pro certo constet, cælestia in se habere alios quosdam influxus, præter calorem et lumen ; qui tamen ipsi, secundum regulas illas, quas jam posuimus, et non aliter, valent. Verum illi in intima physica latent, et longiore dissertationem postulant. Visum est igitur nobis (his, quæ diximus, rite pensis) inter desiderata reponere astrologiam his principiis nostris consentaneam : atque sicut astronomiam, quæ physicis rationibus nitatur, astronomiam vivam nominavimus ; ita et astrologiam, quæ per easdem regitur, astrologiam sanam appellare placet. Circa quam recte conficiendam, licet ea, quæ diximus, non parum profutura sint ; pauca tamen addemus more nostro, quæ liquido proponunt, et ex quibus sit cogmentanda, et ad quæ adhibenda. Primo in astrologiam sanam recipitur doctrina de commixtionibus radiorum, conjunctionibus scilicet et oppositionibus, et reliquis syzygiis, sive aspectibus planetarum inter se : planetarum autem per signa zodiaci pertransitum, et locationem sub iisdem signis, etiam huic parti de commixtionibus radiorum assignamus : locatio enim planetæ sub signo, est conjunctio quedam ejusdem cum stellis signi : quintetiam sicut conjunctiones, ita et oppositiones, et reliquæ syzygiæ planetarum, erga stellas signorum notandæ sunt ; quod adhuc plene factum non est. At commixtiones radiorum stellarum fixarum ad invicem, utiles quidem sunt ad contemplationem de fabrica mundi, et regionum subjacentium natura ; ad prædictiones minime, quia semper eodem modo se habent. Secundo recipiantur accessiones singulorum planetarum propius ad perpendicularum, aut recessiones ab ipso, secundum regionum climata : habent enim planetæ singuli, non minus quam sol, suas ætates, suas hiemes, in quibus fortius aut infirmius radios jactant, propter rationem perpendiculari. Etenim nobis dubium non est, quin luna posita in leone fortius operetur super corpora naturalia, apud nos, quam posita in piscibus : non quod luna sub leone ad cor respiciat, sub piscibus ad pedes (sicut fabulantur) ; sed propter elevationem versus perpendicularum, et approximationem ad stellas majores, eadem prorsus ratione, qua et sol. Tertio recipiantur apogæa et perigæa planetarum cum debita disquisitione, ad quæ pertineat planetæ vigor in se ipso, ad quæ vicinitas ad nos. Planeta enim in apogæo, sive exaltatione sua, magis alacer est ; in perigæo autem, sive casu suo, magis communicat. Quarto

recipiantur (ut summatim dicamus) omnia reliqua accidentia motus planetarum ; quales singulorum in itinere suo accelerationes, retardationes, progressus, stationes, retrogradationes ; quales distantia a sole, combustiones, augmenta et diminutiones luminis, eclipses ; et si quæ sint alia. Etenim faciunt hæc omnia, ut planetarum radii, vel fortius, vel debilius, diversis denique modis et virtutibus, operentur. Atque quatuor ista ad radiationes stellarum spectant. Quinto recipiantur, quæ naturas stellarum, sive erraticarum, sive fixarum, in propria sua essentia et activitate, reserare et detegere ullo modo queant : qualis magnitudo ; qualis color et aspectus ; qualis scintillatio et vibratio luminis ; qualis situs versus polos, aut æquinoctium : quales asterisimi ; quæ aliis stellis magis immixtæ, quæ magis solitariae ; quæ superiores, quæ inferiores ; quæ ex fixis intra vias solis et planetarum (zodiacum scilicet) quæ extra : quis ex planetis velocior, quis tardior : quis moveatur in ecliptica, quis pervagetur in latitudine : quis possit esse retrogradus, quis minime : quis patiar omnimodam distantiam a sole, quis alligetur : quis moveatur celerius in apogæo, quis in perigæo : denique anomalia Martis, expatiatio Veneris, et labores sive passionis admirandæ, quæ non semel et in sole et in Venere deprehensæ sunt, et si quæ sint alia ? Postremo recipiantur etiam ex traditione, naturæ et inclinationes planetarum particulares, atque etiam stellarum fixarum ; quæ, quandoquidem magno consensu tradantur, non leviter (præterquam ubi cum physicis rationibus plane discordant) rejiciendæ sunt. Atque ex talibus observationibus cogmentatur astrologia sana ; et secundum eas tantum, schemata cæli et componere, et interpretari oportet.

Adebitur autem astrologia sana, ad prædictiones fidentius, ad electiones cautius, ad utraque autem intra terminos debitos. Prædictiones fieri possint, de cometis futuris, qui (ut nostra fert conjectura) prænunciari possunt : et de omni genere meteororum, de diluviis, siccitatibus, arduoribus, conglaciationibus, terræ motibus, irruptionibus aquarum, eruptionibus ignium, ventis et pluviis majoribus, anni variis tempestatibus, pestilentis, morbis grassantibus, ubertate et caritate frugum, bellis, seditionibus, sectis, transmigrationibus populorum ; denique de omnibus rerum vel naturalium vel civilium motibus, aut innovationibus majoribus : ad magis autem specialia, et forte singularia, prædictiones istæ (licet minore certitudine) deduci possint, si repertis primo hujusmodi temporum inclinationibus generalibus, acri judicio, vel physico, vel politico, applicentur illis speciebus aut individuis, quæ hujusmodi accidentibus maxime sint obnoxia ; veluti si quis ex præcognitione tempestatum anni, eas reperiet (exempli gratia) magis oleis quam vitibus, magis phthisicis quam hepaticis, magis incolis collium quam vallium, magis monachis quam aulicis (propter victus rationem diversam) propitias aut perniciosas. Aut si quis ex cognitione influxus, quem cælestia habent super spiritus humanos, reperiat eum talem esse, ut magis populis quam regibus, magis viris doctis et curiosis quam animosis et militaribus, magis voluptariis quam negotiosis aut politicis, faveat aut adversetur. Hujus-

modi autem innumera sunt, sed (quemadmodum diximus) non tantum cognitionem illam generalem, quæ sumitur ex astris (quæ sunt agentia) verum etiam particularem subjectorum (quæ sunt passiva) requirunt. Neque electiones prorsus rejiciendæ sunt; sed parcius illis, quam prædictionibus, fidentur. Videmus enim in plantationibus, et seminationibus, et insitionibus, ætatum lunæ observationes non esse res omnino frivolas. Sunt et multa ejus generis. Verum et electiones istæ etiam magis, quam prædictiones, per nostras regulas cohibendæ sunt. Atque illud semper attendendum; valere electiones in illis tantum casibus, ubi et virtus cœlestium talis sit, quæ non subito transeat: et actio inferiorum similiter talis, quæ non statim absolvatur; quemadmodum fit in illis exemplis, quæ memoravimus: nam nec incrementa lunæ subito transiguntur, nec incrementa plantarum. Punctualitas vero temporis omnino repudianda. Inveniuntur autem et talia complura (quod quis minus putet) in electionibus circa civilia. Quod si quis nos compellat eo nomine, quod ex quibus ista astrologia emendata elici possit; et rursus, ad quæ utiliter adhiberi, aliquid monstravimus; quis vero sit eliciendi modus, neutiquam docuimus: ille minus æquus fuerit, cum artem ipsam (cujus debitores non sumus) a nobis exigat. Hoc tamen circa illud ipsum, quod petit, monebimus; quatuor tantum esse modos, quibus ad hanc scientiam via sternatur. Primo per experimenta futura; dein per experimenta præterita; rursus per traditiones; ultimo per rationes physicas. Atque quod ad experimenta futura, quid attinet dicere? cum illa seculis compluribus ad eorum copiam comparandam indigeant; ut de iisdem cogitationem suscipere frustra fuerit. Quod vero ad experimenta præterita; ea certe in manu hominum sunt; licet res sit laboriosa et multi otii. Possint enim astrologi (si sibi non desint) omnes casus majores (veluti inundationes, pestilentias, prælia, seditiones, mortes regum, si placet, et similia) ex historiarum fide deprimere; et situm cœlestium, non secundum thematum subtilitatem, sed juxta regulas eas revolutionum, quæ a nobis adumbratæ sunt, qualis fuerit sub iisdem temporibus, intueri: ut ubi manifestus fuerit eventuum consensus et conspiratio, ibi prædictionis norma probabilis constituatur. Quatenus ad traditiones; eas ita ventilare oportet, ut quæ cum rationibus physicis manifesto pugnent, e medio tollantur; quæ vero cum iis bene consentiant, etiam auctoritate sua valeant. Quantum denique ad physicas rationes; illæ maxime huic inquisitioni accommodatæ sunt, quæ de catholicis materiæ appetitibus et passionibus, et de motibus corporum simplicibus et genuinis inquirentur. His enim aliis ad cœlestia ista materiata ascenditur tutissime. Atque de astrologia sana hactenus.

Insaniæ autem astrologicæ (præter ea, quæ a principio notavimus, commenta) alia quædam portio superest non prætermittenda: quæ tamen ab astrologia secludi solet, et in magiam, quam vocant, cœlestem transferri. Ea nacta est mirum commentum ingenii humani, nimirum, ut benevolus aliquis situs astrorum in sigillis aut signaculis (puta metalli, aut gemmæ alicujus ad intentionem propriæ) excipiatur,

quæ horæ ejus felicitatem alias prætervolaturam detineant, et quasi volatilem figant. Quemadmodum graviter ille conqueritur, de tam nobili apud antiquos arte, jam pridem amissa:

“Annulus infuso non vivit mirus Olympo,  
Non magis ingentes humili sub lumine Phœbos  
Fert gemma, aut celso divulsas cardine lunas.”

Certe reliquias sanctorum, earumque virtutes, recepit ecclesia Romana (neque enim in divinis et immateriatis fluxus temporis obest) verum ut condantur reliquæ cœli, quo hora, quæ recessit et tanquam mortua est, reviviscat et continuetur, mera est superstitio. Missa igitur hæc faciamus, nisi forte Musæ aniculæ jam factæ sint.

Physicam abstractam in duas partes rectissime dividi posse statuimus: doctrinam de schematismis materiæ, et doctrinam de appetitibus et motibus. Utrosque cursim enumerabimus, unde veræ physicæ de abstractis adumbratio quædam deduci possit. Schematismi materiæ sunt, densum, rarum; grave, leve; calidum, frigidum; tangibile, pneumaticum; volatile, fixum; determinatum, fluidum; humidum, siccum; pingue, crudum; durum, molle; fragile, tensile; porosum, unitum; spirituosum, jejunum; simplex, compositum; absolutum, imperfecte mixtum; fibrosum, atque venosum, simplicis posituræ sive æquum; simile, dissimilare; specificatum, non specificatum; organicum, inorganicum; animatum, inanimatum: neque ultra rem extendimus. Sensibile enim et insensibile, rationale et irrationale, ad doctrinam de homine rejicimus. Appetituum vero et motuum duo genera sunt: sunt enim vel motus simplices, in quibus radix omnium naturalium actionum continetur, pro ratione tamen schematismorum materiæ; vel motus compositi sive producti; a quibus ultimis recepta philosophia (quæ parum de corpore naturæ stringit) auspicatur. Debent autem haberi hujusmodi motus compositi (quales sunt generatio, corruptio, et reliqui) pro pensis quibusdam, aut summis motuum simplicium, potius quam pro motibus primitivis. Motus simplices sunt, motus antitypiæ, quem vulgo motum, ne fiat penetratio dimensionum, vocant: motus nexus, quem motum ex fuga vacui appellant: motus libertatis, ne detur compressio aut extensio præternaturalis: motus in spheram novam, sive ad rarefactionem et condensationem: motus nexus secundi, sive ne detur solutio continuitatis: motus congregationis majoris, sive ad massas connaturalium suorum, qui vulgo dicitur motus naturalis: motus congregationis minoris, qui vulgo dicitur sympathiæ et antipathiæ: motus disponens, sive ut partes bene collocentur in toto: motus assimilationis sive multiplicationis naturæ suæ super aliud: motus excitationis, ubi agens nobilior motum in alio latente et sopitum excitat: motus sigilli sive impressionis, operatio scilicet absque communicatione substantiæ: motus regius, sive cohibitio reliquorum motuum a motu prædominante: motus absque termino, sive rotatio spontanea: motus trepidationis; sive systoles, et diastoles, corporum scilicet, quæ locantur inter commoda et incommoda: postremo decubitus, sive exhorrentia motus, quæ etiam plurimarum rerum est causativa. Hujusmodi sunt motus simplices, qui ex penetrabilibus naturæ vere prodeunt:

quique complicati, continuati, alternati, frænati, repetiti, et multis modis aggregati, motus illos compositos, sive summas motuum, quæ receptæ sunt, aut illis similes constituunt. Summæ motuum, sunt decantati illi motus, generatio, corruptio, augmentatio, diminutio, alteratio, et latio: etiam mixtio, separatio, versio. Supersunt tantum tanquam appendices physicae, mensuræ motuum: quid possit quantum, sive dosis naturæ? Quid possit distantia? id quod orbis virtutis sive activitatis non male vocatur. Quid possit incitatio et tarditas? Quid brevis aut longa mora? Quid vis aut hebetudo rei? Quid stimulus peristaseos? Atque hæc sunt phycicæ veræ de abstractis partes genuinæ. Etenim in schematicis materiæ, in motibus simplicibus, in summis sive aggregationibus motuum, et in mensuris motuum, physica de abstractis absolvitur. Nam motum voluntarium in animalibus; motum qui fit in actionibus sensuum; motum phantasie, appetitus, et voluntatis; motum mentis, decreti, et intellectualium, ad proprias doctrinas amandamus. Illud tamen iterato monemus, universa hæc, quæ diximus, in physica non ulterius tractari, quam ut inquirantur materia et efficiens ipsorum; retractantur enim in metaphysica, quoad formas et fines.

Physicæ subjungemus appendices insignes duas; quæ non tam ad materiam, quam ad modum inquisitionis, spectant; problemata naturalia, et placita antiquorum philosophorum. Prior naturæ multiplicis sive sparse appendix est: secunda naturæ unitæ, sive summarum; utraque ad solertem dubitationem pertinet, quæ scientiæ pars est non contemnenda. Nam problemata particulares dubitationes complectantur; placita generales circa principia et fabricam. Problematum exemplum nobile est in libris Aristotelis: quod genus operis meruit certe, non solum et posteriorum laudibus celebraretur, verum etiam ut eorum laboribus continuaretur; cum dubitationes indies oriantur novæ. Attamen in hac re adhibenda est cautio magni utique momenti. Dubiorum commemoratio et propositio duplicem in se habet fructum: unum, quod philosophiam munit contra errores: quando id, quod non plane liquet, non iudicatur aut asseritur, (ne error errorem gigneret) sed suspenditur de eo iudicium, et non fit positivum: alterum, quod dubitationes in codicillis relatæ, totidem spongiæ sunt, quæ incrementa scientiæ perpetuo ad se sugant et alliciant; unde fit ut illa, quæ, nisi præcessissent dubitationes, leviter et sicco pede transmissa fuissent, dubitationum admonitu attente et studiose observentur. Verum hæc duæ utilitates vix unum compensant incommodum, quod, nisi sedulo prohibeatur, se ingeret: nimirum quod dubitatio, si semel admittatur tanquam justa, et fiat quasi authentica, statim defensores in utramque partem suscitabit, qui etiam posteris eandem licentiam dubitandi transmittant: adeo ut homines ingenia sua intendant et applicent ad hoc, ut alatur potius dubitatio, quam terminetur aut solvatur. Cujus quidem rei exempla et in jurisperitis, et in academicis ubique occurrunt: quibus moris est, ut dubitationem semel admissam, perpetuam esse velint, nec minus dubitandi, quam asserendi, auctoramenta amplectantur: cum tamen ille demum sit ingenii usus legiti-

mus, qui ex dubiis certa faciat, non qui certa in dubium vocet. Quare calendarium dubitationum sive problematum in natura et desiderari assero, et suscipi probo: modo curæ sit, ut aucta scientia indies (quod fiet proculdubio si nos audiant homines) quæ claræ discussæ sint dubitationes ex albo deleantur. Huic calendario aliud addi cuperem, non minus utile: cum enim in omni inquisitione inveniuntur hæc tria, perspicue vera, dubia, perspicue falsa: utilissimum foret, calendario dubiorum, calendarium falsitatum et errorum popularium, vel in historia naturali, vel in dogmatibus grassantium, adjungere: ne illæ amplius scientiis molestæ sint.

Quod ad placita antiquorum philosophorum, qualia fuerunt Pythagoræ, Philolai, Xenophanis, Anaxagoræ, Parmenidis, Leucippi, Democriti, aliorum (quæ homines contemptim percurrere solent) non abs re fuerit paulo modestius in ea oculos conjicere. Etsi enim Aristoteles, more Ottomanorum, regnare se haud tuto posse putaret, nisi fratres suos omnes contrucidasset; tamen iis, qui non regnum aut magistrum, sed veritatis inquisitionem atque illustrationem sibi proponunt, non potest non videri res utilis, diversas diversorum, circa rerum naturas, opiniones, sub uno aspectu intueri. Neque tamen subest spes quod veritas aliqua purior, ex illis aut similibus theoriis, speranda ullo modo sit. Quemadmodum enim eadem phænomena, iidem calculi et Ptolemæi principiis astronomicis, et Copernici competunt: ita experientia ista vulgaris, qua utimur, atque obvia rerum facies, pluribus diversis theoriis se applicare potest: ubi ad rectam veritatis indagationem longe alia severitate opus fuerit. Eleganter enim Aristoteles: "Infantes primo balbutientes, quasvis mulieres appellare matres; post autem propriam matrem discernere." Sic certe puerilis experientia, omnem philosophiam appellabit matrem: adulta vero matrem veram internoscet. Interea juvabit philosophias discrepantes, veluti diversas naturæ glossas (quarum una fortasse uno loco, alia alio est emendatior) perlegere. Optarim igitur, ex vitis antiquorum philosophorum, ex fasciculo Plutarchi de placitis eorum, ex citationibus Platonis, ex confutationibus Aristotelis, ex sparsa mentione, quæ habetur in aliis libris, tam ecclesiasticis, quam ethnicis (Lactantio, Philone, Philostrato, et reliquis) opus confici, cum diligentia et iudicio, de antiquis philosophiis. Tale enim opus nondum extare video. Attamen hic moneo, ut hoc fiat distincte: ita ut singulæ philosophiæ seorsum componantur et continuentur; non per titulos et fasciculos (quod Plutarchus fecit) excipiantur. Quævis enim philosophia integra se ipsam sustentat: atque dogmata ejus sibi mutuo et lumen et robur adjiciunt: quod si distrahantur, peregrinum quiddam et durum sonant. Certe quando apud Tacitum lego facta Neronis aut Claudii, circumstantiis temporum, personarum, et occasionum vestita; nil video quod a probabilitate prorsus abhorreat: cum vero eadem lego in Suetonio Tranquillo, per capita et communes locos, minimeque in serie temporis representata, portenta quædam videntur, et plane incredibilia. Neque absimilis est ratio philosophiæ, quando proponitur integra, et quando in frustra concisa et dissecta. Neque

vero ex hoc placitorum philosophiæ calendario nuperas theorias et dogmata excludo; sicut illam Theophrasti Paracelci, eloquenter in corpus quoddam et harmoniam philosophiæ redactam a Severino Dano; aut Telesii Consentini, qui Parmenidis philosophiam instaurans, arma Peripateticorum in illos ipsos vertit; aut Patricii Veneti, qui Platoniorum fumos sublimavit; aut Gilberti popularis nostri, qui Philolai dogmata reposuit; aut alterius cujuscunque, si modo dignus sit. Horum vero (quoniam volumina integra extant) summæ tantum inde conficiendæ, et cum cæteris conjungendæ. Atque de physica cum appendicibus hæc dicta sint.

Quantum ad metaphysicam, assignavimus jam ei inquisitionem causarum formalium et finalium; quæ assignatio, quatenus ad formas, incassum facta videatur. Invaluit siquidem opinio atque inveteravit, rerum formas essentielles, seu veras differentias, nulla humana inveniri diligentia posse. Quæ opinio interim nobis elargitur, atque concedit, inventionem formarum ex omnibus scientiæ partibus dignissimam esse, quæ investigetur, si modo fieri possit, ut reperiantur. Ad inventionis possibilitatem vero quod attinet, sunt certe ignavi regionum exploratores, qui ubi nil nisi cælum et pontum vident, terras ultra esse prorsus negant. At manifestum est Platonem, virum sublimis ingenii (quique veluti ex rupe excelsa omnia circumspiciebat) in sua de ideis doctrina, "Formas esse verum scientiæ objectum," vidisse; utcunque sententiæ hujus verissimæ fructum amisit, formas penitus a materia abstractas, non in materia determinatas, contemplando et prensando: unde factum est, ut ad speculationes theologicas diverteret; quod omnem naturalem suam philosophiam infecit et polluit. Quod si diligenter, serio, et sincere ad actionem et usum oculos convertamus; non difficile erit disquirere, et notitiam assequi, quæ sint illæ formæ, quarum cognitio res humanas miris modis locupletare et beare possit. Substantiarum enim formæ (uno homine excepto, de quo Scriptura, "Formavit hominem de limo terræ, et spiravit in faciem ejus spiraculum vitæ;" non ut de cæteris speciebus, "Producant aquæ, Producat terra") species, inquam, creaturarum (prout nunc per compositionem et transpositionem inveniuntur multiplicatæ) ita perplexæ sunt et complicatæ, ut aut omnino de iis inquirere frustra sit; aut inquisitio earum, qualis esse potest, seponi ad tempus, et postquam formæ simplicioris naturæ rite exploratæ sint et inventæ, tum demum institui debeat. Quemadmodum enim nec facile esset, nec ullo modo utile, formam soni investigare ejus, qui verbum aliquod constituat, cum verba compositione et transpositione literarum sint infinita: at soni, qui literam aliquam simplicem exprimat, formam inquirere (quali scilicet collisione, quali instrumentorum vocis applicatione, constituatur) comprehensibile est, imo facile: quæ tamen formæ literarum cognitæ ad formas verborum illico nos deducunt: eadem prorsus ratione, formam inquirendo leonis, quercus, auri, imo etiam aquæ, aut aëris, operam quis luserit: formam vero inquirere densi, rari; calidi, frigidi; gravis, levis; tangibilis, pneumatici; volatilis, fixi; et similium, tam schematismorum, quam motuum, quos

in physica tractanda, magna ex parte, enumeravimus, (et formas primæ classis appellare consuevimus,) quique (veluti literæ alphabeti) numero haud ita multi sunt, et tamen essentias et formas omnium substantiarum conficiunt et sustinent; hoc est, inquam, illud ipsum, quod conamur; quodque eam partem metaphysicæ, de qua nunc inquirimus, constituit et definit. Neque hæc officiant, quo minus physica easdem naturas consideret quoque (ut dictum est) sed tantum quoad causas fluxas. Exempli gratia, si de causa inquiratur albedinis in nive, vel spuma; recte redditur, quod sit subtilis inmixtio aëris cum aqua. Hæc autem, longe abest, ut sit forma albedinis, cum aër etiam pulveri vitri aut crystalli intermixtus, albedinem similiter procreat, non minus quam si admisceatur aquæ; verum causa efficiens illa tantum est, quæ nihil aliud quam vehiculum est formæ. At in metaphysica, si fiat inquisitio, hujusmodi quidpiam reperies: corpora duo diaphana intermixta portionibus eorum opticus, simplici ordine sive equaliter collocatis, constituere albedinem. Hanc metaphysicæ partem desiderari reperio. Nec mirum; quia illo inquirendi modo, qui hucusque in usum venit, nunquam in seculum comparere rerum formæ. Radix autem mali hujus, ut et omnium, ea est; quod homines et prope nimis et nimis longe, ab experientia et rebus particularibus, cogitationes suas divellere et abstrahere consueverunt, et suis meditationibus et argumentationibus se totos dedere.

Usus autem hujus partis metaphysicæ, quam desideratis annuero, duas ob causas vel maxime excellit. Prima est, quod scientiarum omnium officium sit et propria virtus, ut experientiæ ambagea, et itinera longa (quantum veritatis ratio permittit) abbrevient; ac proinde remedium veteri querimonie afferant, de vita brevi et arte longa. Illud vero optime præstat, axiomata scientiarum in magis generalia, et quæ omni materiæ rerum individuuarum competant, colligendo et uniendo. Sunt enim scientiæ instar pyramidum, quibus historia et experientia, tanquam basis unica, substernuntur; ac proinde basis naturalis philosophiæ est historia naturalis: tabulatum primum a basi est physica; vertici proximum metaphysica: ad quod attinet et punctum verticale (opus quod operatur Deus a principio usque ad finem; summariam nempe naturæ legem) hæsitamus merito, an humana possit ad illud inquisitio pertingere. Cæterum hæc tria, verè sunt scientiarum contabulationes, suntque apud homines propria scientia inflatos, et theomachos, tanquam tres moles gigantes:

"Ter sunt conati imponere Pelio Ossam,  
Scilicet atque Ossæ frondosum involvere Olympon."

Apud eos vero, qui se ipsos exinanientes, omnia ad Dei gloriam referunt, tanquam trina illa acclamatio, Sancte, Sancte, Sancte. Sanctus enim Deus in multitudine operum suorum, sanctus in ordine eorum, sanctus in unione. Quare speculatio illa Parmenidis et Platonis (quamvis in illis nuda fuerit speculatio) excellit tamen; "Omnia per scalam quandam ad unitatem ascendere." Atque illa demum scientia cæteris est præstantior, quæ humanum intellectum

minimum multiplicitate onerat, quam liquet esse metaphysicam: quippe quæ contemplatur præcipue simplices illas rerum formas (quas superior formas primæ classis nominavimus) quandoquidem licet numero paucae, tamen commensurationibus et coordinationibus suis omnem varietatem constituunt. Secunda res, quæ hanc metaphysicæ partem de formis nobilitat, hæc nimirum est; quod potestatem humanam emancipet maxime et liberet; eamque in amplissimum et apertissimum operandi campum educat. Nam physica per angustos et impeditos calles humanam operam dirigit, naturæ ordinariæ flexuosos tramites imitata. Sed late undique sunt sapientibus viæ; sapientiæ nimirum (quæ a veteribus rerum divinarum et humanarum scientia definiebatur) mediorem copia et varietas semper suppetit. Causæ enim physicæ, novis inventis, in simili materia, lucem et ansam præbent: at qui formam aliquam novit, novit etiam ultimam possibilitatem superinducendi naturam illam in omnigenam materiam, eoque minus inter operandum restringitur et alligatur, vel ad materiæ basim, vel ad conditionem efficientis. Quod genus scientiæ eleganter describit etiam Salomon, etsi sensu magis divino: "Non arctabuntur gressus tui, et currens non habebis offendiculum." Intelligit scilicet sapientiæ vias, nec angustiis nec obicibus obnoxias esse.

Metaphysicæ pars secunda est finalium causarum inquisitio, quam non ut prætermissam, sed ut male collocatam notamus. Solent enim inquiri inter physica, non inter metaphysica. Quanquam si ordinis hoc solum vitium esset, non mihi fuerit tanti. Ordo enim ad illustrationem pertinet, neque est hæc substantia scientiarum. At hæc ordinis inversio defectum insignem peperit, et maximam philosophiæ induxit calamitatem. Tractatio enim causarum finalium in physicis, inquisitionem causarum physicarum expulit et dejecit, effecitque ut homines in istiusmodi speciosis et umbratilibus causis acquiescerent, nec inquisitionem causarum realium, et vere physicarum strenue urgerent; ingenti scientiarum detrimento. Etenim reperio hoc factum esse, non solum a Platone, qui in hoc littore semper anchoram figit, verum etiam ab Aristotele, Galeno, et aliis, qui sæpissime etiam ad illa vada impingunt. Etenim qui causas adduxerit hujusmodi; "Palpebras cum pilis, pro sepi et vallo esse, ad munimentum oculorum:" aut "corii in animalibus firmitudinem esse ad propellendos calores et frigora:" aut "ossa pro columnis et trabibus a natura induci, quibus fabrica corporis innitatur:" aut "folia arborum emitti, quo fructus minus patiantur a sole et vento:" aut "nubes in sublimi fieri, ut terram imbris irrigent:" aut "terram densari et solidari, ut statio et mansio sit animalium;" et alia similia: is in metaphysicis non male ista allegavit; in physicis autem nequaquam. Imo, quod cepimus dicere, hujusmodi sermonum discursus (instar remorarum, uti fingunt, navibus adherentium) scientiarum quasi velificationem et progressum retardarunt, ne cursum suum tenerent, et ulterius progredirentur: et jam pridem effecerunt, ut physicarum causarum inquisitio neglecta deficeret, ac silentio præteriretur. Quapropter philosophia naturalis Democriti, et aliorum, qui Deum et men-

tem a fabrica rerum amoverunt; et structuram universi infinitis naturæ præclusionibus et tentamentis (quas uno nomine fatum, aut fortunam vocabant) attribuerunt; et rerum particularium causas materiæ necessitati, sine intermixtione causarum finalium, assignarunt; nobis videtur (quantum ex fragmentis et reliquiis philosophiæ eorum conjicere licet) quatenus ad causas physicas, multo solidior fuisse, et altius in naturam penetrasse, quam illa Aristotelis et Platonis: hanc unicam ob causam, quod illi in causis finalibus nunquam operam triverunt; hi autem eas perpetuo inculcarunt. Atque magis in hac parte accusandus Aristoteles, quam Plato: quandoquidem fontem causarum finalium, Deum scilicet, omiserit, et naturam pro Deo substituerit, causasque ipsas finales, potius ut logicæ amator, quam theologiæ, amplexus sit. Neque hæc eo dicimus, quod causæ illæ finales veræ non sint, et inquisitione admodum dignæ in speculationibus metaphysicæ; sed quia dum in physicarum causarum possessiones excurrunt et irruunt, misere eam provinciam depopulantur et vastant. Alioquin, si modo intra terminos suos coërceantur, magnopere hallucinantur, quicunque eas physicis causis adversari aut repugnare putent. Nam causa reddita, quod "palpebrarum pili oculos muniant," nequaquam sane repugnat alteri illi, "quod pilositas soleat contingere humiditatum orificiis:

Muscosi fontes," etc.

Neque causa reddita, quod "coriorum in animalibus firmitudo pertinet ad cœli injurias propulsandas," adversatur illi alteri, "quod illa firmitudo fit ob contractionem pororum, in extimis corporum, per frigus et deprædationem aëris." Et sic de reliquis: conspirantibus optime utrisque causis; nisi quod altera intentionem, altera simplicem consecutionem denotet. Neque vero ista res in dubium vocat providentiam divinam, aut ei quicquam derogat; sed potius eandem miris modis confirmat et evehit. Nam sicut in rebus civilibus prudentia politica fuerit multo altior et mirabilior, si quis opera aliorum ad suos fines et desideria abuti possit, quibus tamen nihil consilii sui impertit (ut interim ea agant, quæ ipse velit, nequiquam vero se hoc facere intelligant) quam si consilia sua cum administris voluntatis suæ communicaret: sic Dei sapientia efulget mirabilibus, cum natura aliud agit, providentia aliud elicit; quam si singulis schematibus et motibus naturalibus, providentiæ characteres essent impressi. Scilicet Aristoteli, postquam naturam finalibus causis imprægnasset: "Naturamque nihil frustra facere, sui que voti semper esse compotem (si impedimenta abessent)" et hujusmodi multa eo spectantia posuisset; amplius Deo non fuit opus: at Democritus et Epicurus, cum atomos suos prædicabant, eosque a subtilioribus nonnullis tolerabantur; verum cum ex eorum fortuito concursu, fabricam ipsam rerum absque mente coaluisse assererent, ab omnibus risu excepti sunt. Adeo ut tantum absit, ut causæ physice homines a Deo et providentia abducant, ut contra potius philosophi illi, qui in iisdem erudiendis occupati fuerunt, nullum exitum rei reperiant, nisi postremo ad Deum et providentiam confugiant. At-

que hæc de metaphysica dicta sint : cujus partem de causis finalibus, in libris et physicis et metaphysicis, tractatam non negaverim ; in his recte, in illis perperam, propter incommodum inde secutum.

### CAPUT QUINTUM.

*Partitio operativæ doctrinæ de natura in mechanicam et magiam ; quæ respondent partibus speculativæ : physicæ mechanica, metaphysicæ magia ; et expurgatio vocabuli magiæ. Appendices duæ operativæ ; inventarium opum humanarum, et catalogus polychrestorum.*

OPERATIVAM de natura similiter in duas partes dividemus, idque ex necessitate quadam. Subjicitur enim hæc divisio divisioni priori doctrinæ speculativæ. Physica siquidem, et inquisitio causarum efficientium et materialium, producit mechanicam ; at metaphysica, et inquisitio formarum, producit magiam : nam causarum finalium inquisitio sterilis est, et, tanquam virgo Deo consecrata, nihil parit. Neque nos fugit, esse et mechanicam sæpius mere empiricam et operariam, quæ a physica non pendeat ; verum hanc in historiam naturalem conjecimus ; a philosophia naturali segregamus. Loquimur tantum de ea mechanica, quæ cum causis physicis conjuncta est. Verum tamen intervenit quædam mechanica, quæ nec prorsus operaria est, neque tamen philosophiam proprie attingit. Operum enim inventa omnia, quæ in hominum notitiam venerunt, aut casu occurrerunt et deinceps per manus tradita sunt ; aut de industria quæsita : quæ autem intentionaliter inventa sunt ; illa aut per causarum et axiomatum lucem eruta sunt ; aut per extensionem quandam, vel translationem, vel compositionem inventorum priorum deprehensa ; quæ magis ingeniosa quædam res est et sagax, quam philosophica. Hanc vero partem, quam neutiquam contemnimus, non multo post, cum de experientia literata inter logica tractabimus, cursim perstringemus. Enimvero mechanicam, de qua nunc agimus, tractavit Aristoteles promiscue : Hero in spiritualibus ; etiam Georgius Agricola, scriptor recens, diligenter admodum in mineralibus ; aliique quamplurimi in subjectis particularibus : adeo ut non habeam, quod dicam de omissis in hac parte ; nisi quod mechanica promiscua, secundum exemplum Aristotelis, diligentius debuissent continuari per labores recentiorum ; præsertim cum delectu eorum mechanicorum, quorum aut causæ magis obscuræ, aut effectus magis nobiles. Verum qui in hisce insistent, quasi oras tantum maritimas perreptant :

“ — Premendo littus iniquum.”

Meo siquidem judicio, vix possit aliquid in natura radicitus verti aut innovari, vel per casus aliquos fortuitos, vel per tentamenta experientiorum, vel ex luce causarum physicarum, sed solummodo per inventionem formarum. Si igitur desiderari eam partem metaphysicæ, quæ de formis agit, posuimus ; sequitur, ut naturalis etiam magia, quæ ad eam est relativa, similiter desideretur. Verum hoc loco postulandum videtur, ut vocabulum istud magiæ, in deteriorem partem jam pridem acceptum, antiquo et

honorifico sensui restituatur. Etenim magia apud Persas pro sapientia sublimi, et scientia consensuum rerum universalium, accipiebatur ; atque etiam tres illi reges, qui ab oriente ad Christum adorandum venerunt, magorum nomine vocabantur. Nos vero eam illo in sensu intelligimus, ut sit scientia, quæ cognitionem formarum abditarum ad opera admiranda deducat ; atque, quod dici solet, activa cum passivis conjungendo, magnalia naturæ manifestet. Nam quantum ad naturalem magiam (quæ in libris plurimorum volitat) credulas quasdam et superstitionis traditiones, et observationes de symphathiis et antipathiis rerum, atque de occultis et specificis proprietatibus complectentem, cum frivolis ut plurimum experimentis, potius occultandi artificio et larva, quam re ipsa, admirandis : non erraverit sane, qui eam dixerit a scientia, quam quærimus, tantum distare, quoad veritatem naturæ, quantum libri rerum gestarum Arthuri ex Britannia, aut Hugonis Burdegalisensis, et hujusmodi heroum umbratiliū, differunt a Cæsaris commentariis, quoad veritatem historicam. Manifestum enim est, Cæsarem majora revera perpetrasse, quam illi de heroibus suis confingere aui sunt ; sed modis faciendi minime fabulosis. Hujusmodi doctrinas bene adumbravit fabula de Ixione ; qui cum Junonis, potentis deæ, concubitu animo sibi designaret, cum evanida nube rem habuit ; ex qua Centauros et Chimæras progenuit. Sic qui insana et impotenti cupiditate feruntur ad ea, quæ per imaginationis tantum fumos et nebulas cernere se putant, loco operum, nil aliud quam spes inanes, et deformia quædam ac monstrosa spectra, suscipiunt. Hujus autem magiæ naturalis, levis et degeneris, operatio super homines, similis est soporiferis quibusdam medicamentis ; quæ somnum conciliant, atque insuper inter dormiendum læta et placenta somnia immittunt. Primo enim intellectum humanum in soporem conjicit ; canendo proprietates específicas et virtutes occultas, et tanquam cœlitus demissas, et per traditionum susurros solummodo perdiscendas ; unde homines ad veras causas eruendas et indagandas non amplius excitantur, et evigilant ; sed in hujusmodi otiosis et credulis opinionibus acquiescunt : deinde vero innumera commenta grata, et qualia quis optaret maxime, instar somniorum, insinuat. Atque operæ pretium est notare, in illis scientiis, quæ nimium trahunt ex phantasia et fide (quales sunt magia ista levis, de qua nunc loquimur, alchemia, astrologia, et aliæ consimiles) media sua, et theoriam, solere esse magis monstrosa, quam finis ipse est, et actio, quo tendunt. Versio argenti, aut argenti vivi, aut alicujus alterius metalli in aurum, res creditu dura : attamen longe verisimilius est ab homine, qui ponderis, coloris flavi, malleabilis et extensibilis, fixi etiam et volatilis, naturas cognitatas et perspectas habuerit ; quique similiter prima mineralium semina et menstrua diligenter introspexerit, posse aurum multa et sagaci molitione tandem produci ; quam quod pauca elixiris grana, paucis momentis, alia metalla in aurum vertere valeant, per activitatem ejusdem elixiris, quæ naturam scilicet perficere, et omni impedimento liberare possit. Similiter senectutis retardatio, aut gradus alicujus juventutis instauratio, non facile fidem reperiat : attamen longe

verisimilius est ab homine, qui naturam arefactionis, et spirituum super solida corporis deprædatione bene norit; quique naturam assimilationis, atque alimentationis, vel perfectioris, vel pravioris, perspexerit; naturam etiam spirituum, et quasi flammæ corporis, alias ad consumendum appositæ, alias ad reparandum, notarit; posse per dietas, balnea, unctiones, medicinas proprias, accommodata etiam exercitia, et similia, vitam prolongari, aut vigorem juventutis aliqua ex parte renovari: quam quod hoc fieri possit per guttas pauculas, aut scrupulos alicujus pretiosi liquoris, aut quintessentiæ. Rursus ex astris fata elici posse, non statim, aut facile homines consenserint: illa vero; quod hora nativitatis (quæ sæpissime ex pluribus accidentibus naturalibus, vel acceleratur, vel differtur) vitæ totius fortunam regat; aut quod hora quæstionis sit cum re ipsa, quæ queritur, confatalis; meras nugas dixeris. Attamen tanta exercet humanum genus impotentia et intemperies, ut non solum, quæ fieri non possunt, sibi spondeant, sed etiam maxime ardua, sine molestia aut sudore, tanquam feriantes, se adipisci posse confidunt. Verum de magia hactenus, cujus et vocabulum ipsum ab infamia vindicavimus, et speciem veram a falsa et ignobili segregavimus.

Hujus vero partis, operativæ scilicet de natura, duæ sunt appendices, magni utraque pretii. Prima est, ut fiat inventarium opum humanarum, quo excipiantur, et breviter enumerentur, omnia hominum bona et fortunæ (sive sint ex fructibus et proventibus naturæ, sive artis) quæ jam habentur, et quibus homines fruantur, adjectis iis, quæ olim innotuisse constat, nunc autem perierunt: ad hunc finem, ut qui ad nova inventa accingitur, de jam inventis et extantibus negotium sibi non facessat. Hoc vero inventarium magis erit artificiosum, magisque etiam utile, si quæ communi hominum opinione impossibilia reputantur, in unoquoque genere adjunxeris: atque una proxima impossibilibus, quæ tamen habentur, copules; ut alterum humanam inventionem acuat, alterum quadantenus dirigat; utque ex his optativis et potentialibus activa promptius deducantur. Secunda est, ut fiat calendarium eorum experimentorum, quæ maxime polychresta sunt, et ad aliorum inventionem faciunt et ducunt. Exempli gratia, "Experimentum artificialis congelationis aquæ," per glaciem cum sale nigro, ad infinita pertinet: hoc enim modum condensationis secretum revelat, quo homini nihil est fructuosius. Præsto enim est ignis ad rarefactiones; verum in condensationibus laboratur. Plurimum autem facit ad inveniendi compendium, si hujusmodi polychresta proprio catalogo excipiantur.

### CAPUT SEXTUM.

*De magna philosophiæ naturalis, tam speculative quam operative, appendice mathematica. quodque inter appendices potius poni debet, quam inter scientias substantivas. Partitio mathematicæ in puram et mixtam.*

OPTIME Aristoteles, "physicam et mathematicam generare practicam" sive "mechanicam." Quare

cum jam tam speculativam quam operativam partem doctrinæ de natura tractaverimus, locus est ut de mathematica dicamus, quæ ad utramque est scientia auxiliariis. Hæc siquidem in philosophia recepta, physicæ et metaphysicæ pars tertia adjungitur. At nobis ista retractantibus et recolentibus, si eam ut scientiam substantivam, et principalem, designare in animo esset, magis consentaneum videretur, et rei ipsius naturæ, et ordinis perspicuitati, ut constitueretur tanquam portio metaphysicæ. Quantitas enim (quæ subjectum est mathematicæ) materiæ applicata, veluti dosis naturæ est, et plurimorum effectuum in rebus naturalibus causativa: ideoque inter formas essentielles numeranda est. Figuræ autem et numerorum potentia in tantum apud antiquos valere visa est, ut Democritus "principia varietatis rerum" in "figuris atomorum" præcipue collocaverit: ac Pythagoras "naturam rerum ex numeris" constitui asseruerit. Illud interim verum est, quantitatem inter formas naturales (quales nos eas intelligimus) omnium maxime esse abstractam, et a materia separabilem: quod ipsum in causa fuit, cur et diligentius excolta, et acrius inquisita ab hominibus fuerit, quam aliæ quæcunque formæ, quæ omnes in materia magis sunt immersæ. Cum enim id hominum animis plane insitum sit (plurimo certe cum scientiarum detrimento) ut generalium quasi campis liberis, magis quam particularium sylvis et septis, delectentur, nil repertum est mathematicis gratius et jucundius, quo appetitus iste expatiandi et meditandi expleretur. Etsi autem hæc vera sint, nobis tamen, qui non tantum veritati et ordini, verum etiam usui et commodis hominum, consulimus, satius demum visum est, mathematicas, cum et in physicis, et in metaphysicis, et in mechanicis, et in magicis plurimum polleant, ut omnium appendices et copias auxiliarias, designare: quod etiam quodammodo facere compellimur, propter delicias et fastum mathematicorum, qui hanc scientiam physicæ fere imperare discipiant. Nescio enim quo fato fiat, ut mathematica et logica, quæ ancillarum loco erga physicam se gerere debeant, nihilominus certitudinem suam præ ea jactantes, dominatum contra exercere præsumant. Verum de loco et dignitate hujus scientiæ minus curandum: de re ipsa videamus.

Mathematica aut pura est, aut mixta. Ad puram referuntur scientiæ, quæ circa quantitatem occupatæ sunt, a materia et axiomatibus physicis penitus abstractam. Eæ duæ sunt, geometria et arithmetica: quantitatem altera continuam, altera discretam tractans. Quæ duæ artes, magno certe cum acumine, et industria, inquisitæ et tractatæ sunt: veruntamen et Euclidis laboribus, in geometricis, nihil additum est a sequentibus, quod intervallo tot seculorum dignum sit; et doctrina de solidis, nec a veteribus, nec a modernis, pro rei usu et excellentia, instructa et aucta est. In arithmetice autem, nec satis varia et commoda inventa sunt supputationum compendia, præsertim circa progressionem, quarum in physicis usus est non mediocri; nec algebra bene consummata est; atque arithmetica illa Pythagorica et mystica, quæ ex Proclo et reliquiis quibusdam Euclidis cæpit instaurari, expatiatio quædam speculationis est. Hoc enim habet ingenium humanum, ut

cum ad solida non sufficiat, in supervacaneis se atterat. Mixta habet pro subjecto axiomata et portiones physicas: quantitatem autem considerat, quatenus est ad ea elucidanda, et demonstranda, et actuanda, auxiliaris. Multæ siquidem naturæ partes, nec satis subtiliter comprehendi, nec satis perspicue demonstrari, nec satis dextre et certo ad usum accommodari possint, sine ope et interventu mathematicæ. Cujus generis sunt perspectiva, musica, astronomia, cosmographia, architectura, machinaria, et nonnullæ aliæ. Cæterum in mathematicis mixtis integras aliquas portiones desideratas jam non reperio, sed multas in posterum prædico, si homines non ferientur. Prout enim physica, majora indies incrementa capiet, et nova axiomata educet; eo mathematicæ opera nova in multis indigebit, et plures demum fient mathematicæ mixtæ.

Jam autem doctrinam de natura pertransivimus, et desiderata in ipsa notavimus. Qua in re si a

priscis et receptis opinionibus discesserimus, eoque nomine contradicendi ansam cuiquam præbuerimus; quod ad nos attinet, ut dissentiendi studium longe a nobis abest, ita etiam et contendendi consilium. Si hæc vera sunt;

“ Non canimus surdis, respondent omnia sylvæ :”

vox naturæ ingeminabit, etsi vox hominum reclamet. Quemadmodum autem Alexander Borgia dicere solebat, de expeditione Gallorum Neopolitana, “ Eos venisse cum creta in manibus, quo diversoria sua notarent, non cum armis, ut perrumperent :” sic nobis magis cordi est pacificus veritatis ingressus; ubi quasi creta consignentur animi, qui tantam hospitem excipere possint; quam qui pugnax est, viamque sibi per contentiones, et lites sternat. Absolutis igitur duabus partibus philosophiæ, de Numine et de natura, restat tertia de homine.

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER QUARTUS.

AD REGEM SUUM.

### CAPUT PRIMUM.

*Partitio doctrinæ de homine, in philosophiam humanitatis, et civilem. Partitio philosophiæ humanitatis, in doctrinam circa corpus hominis, et doctrinam circa animam hominis. Constitutio unius doctrinæ generalis de natura, sive de statu hominis. Partitio doctrinæ de statu hominis, in doctrinam de persona hominis, et de fœdere animi et corporis. Partitio doctrinæ de persona hominis, in doctrinam de miseris hominis, et de prærogativis. Partitio doctrinæ de fœdere, in doctrinam de indicationibus, et de impressionibus. Assignatio physiognomiæ et interpretationis somniorum naturalium, doctrinæ de indicationibus.*

Siquis me (rex optime) ob aliquid eorum, quæ proposui, aut deinceps proponam, impetat aut vulneret (præterquam quod intra præsidia majestatis tuæ tutus esse debeam) sciat is, se contra morem et disciplinam militiæ facere. Ego enim buccinator tantum, pugnam non in eo; unus fortasse ex iis, de quibus Homerus:

*Χαίρειτε, κίρυκες, Διὸς ἄγγελοι ἡδὲ καὶ ἀνθρώπων.*

Hi enim inter hostes, etiam infensissimos et acerbissimos, ultro citroque inviolati ubique commeabant. Neque vero nostra buccina homines advocat et excitat, ut se mutuo contradictionibus proscindant, aut secum ipsi prælientur et digladiantur; sed potius ut pace inter ipsos facta, conjunctis viribus, se adversus naturam rerum comparent, ejusque edita et munita capiant et expugnent, atque fines imperii humani (quantum Deus Opt. Max. pro bonitate sua indulserit) proferant.

Veniamus nunc ad eam scientiam, ad quam nos ducit oraculum antiquum: nempe ad scientiam nostri. Cui, quo magis nostra intersit, eo incumbendum est diligentius. Hæc scientia homini pro fine est scientiarum; at naturæ ipsius portio tantum. Atque hoc pro regula ponatur generali; quod omnes scientiarum partitiones ita intelligantur et adhibeantur, ut scientias potius signent aut distinguant, quam secent et divellant, ut perpetuo evitetur solutio continuitatis in scientiis. Hujus etenim contrarium particulares scientias steriles reddidit, inanes et erroneas, dum a fonte et fomite communi non aluntur.

sustentantur, et rectificantur. Sic videmus Ciceronem oratorem, de Socrate et ejus schola conquerentem, quod hic primus philosophiam a rhetorica disjuxerit, unde facta sit rhetorica ars loquax et inanis. Constat similiter sententiam Copernici de rotatione terræ (quæ nunc quoque invaluit) quia phænomenis non repugnat, ab astronomicis principiis non posse revinci; a naturalis tamen philosophiæ principiis, recte positis, posse. Artem denique medicam videmus, si a naturali philosophia destituatur, empiricorum praxi haud multum præstare. Hoc igitur posito, accedamus ad doctrinam de homine. Ea duplex est: aut enim contemplatur hominem segregatum, aut congregatum atque in societate. Alteram harum philosophiam humanitatis; alteram civilem vocamus. Philosophia humanitatis sive humana ex partibus similibus illis, ex quibus homo ipse, consistit: nempe ex scientiis, quæ circa corpus; et ex scientiis, quæ circa animam versantur.

Verum priusquam distributionis particulares persequamur, constituamus scientiam unam generalem, de natura et statu hominis: digna enim certe res est, ut emancipetur hæc scientia, et in scientiam seorsum redigatur. Conficitur autem illa ex iis rebus, quæ sunt tam corpori quam animæ communes. Rursus, hæc scientia de natura et statu hominis, distribui potest in duas partes; attribuendo alteri naturam hominis indivisam, alteri vinculum ipsum animæ et corporis: quarum primam doctrinam de persona hominis, secundam doctrinam de fœdere vocabimus. Liqueat autem hæc omnia, cum sint communia et mixta, primæ illi divisioni scientiarum circa corpus, et scientiarum circa animam versantium, assignari non potuisse.

Doctrina de persona hominis duas res præcipue complectitur; contemplationes scilicet de miseriis humani generis; et de ejusdem prærogativis sive excellentiis. Atque deploratio humanarum ærurnarum eleganter et copiose a compluribus adornata est, tam in scriptis philosophicis, quam theologicis: estque res et dulcis simul et salubris.

At illa altera de prærogativis, digna visa res nobis, quæ certe desiderata proponatur. Elegantissime certe Pindarus (ut plerunque solet) inter laudandum Hieronem ait, "Eum decerpere summitates ex omnibus virtutibus." Equidem plurimum ad magnanimitatem et humanum decus conferre posse putarem, si ultimitates (ut loquuntur scholastici) sive *summitates* (ut Pindarus) humanæ naturæ colligerentur; præcipue ex historiæ fide. Illud est quid ultimum et supremum fuerit, quo unquam humana natura per se ascenderit, in singulis et corporis et animi dotibus. Quanta res, quæ de Cæsare narratur, quod amanuensis quinque simul dictare suffecerit? Quin et exercitationes illæ antiquorum rhetorum, Protagoræ, Gorgiæ; etiam philosophorum, Callisthenis, Posidonii, Carneadis, ut de quovis themate in utramque partem ex tempore disserere eleganter et copiose poterint; ingenii humani vires haud parum nobilitant. Res autem usu minor, at ostentatione et facultate fortasse major, quam de Archia magistro suo memorat Cicero: "eum magnum numerum optimorum versuum de iis rebus, quæ tum aggerentia, potuisse dicere ex tempore." Tot millibus hominum nomina reddere potuisse Cyrum aut Scipionem, magnum memoriæ decus.

At virtutum moralium palmæ non minus celebres, quam intellectualium. Quantum rem in exercitio patientiæ exhibet historia illa vulgata de Anaxarcho, qui quæstioni et tormentis subjectus, linguam (indicii spem) dentibus præscidit, et in os tyranni expuit? Neque tolerantia cedit (licet dignitate plurimum) quod seculo nostro accidit in Burgundo quodam, principis Arausionensis interfectore; is virgis ferreis flagellatus, et forcipibus ignitis laceratus, nullum prorsus gemitum edidit: quinetiam cum forte fractum aliquid desuper in caput astantis cujuspiam incideret, ustulatus jam nebulo, et in mediis tormentis, risit; qui tamen paulo ante, cum ciccinni capillitii, quos gestabat, tonderentur, fieverat. Animi quoque mira serenitas et securitas, sub ipsum tempus mortis, in pluribus enituit. Qualis fuit illa centurionis apud Tacitum: is cum a milite, qui eum ex imperato occisurus esset, juberetur, ut cervicem porrigeret fortiter, "Utinam," inquit ille, "tu tam fortiter ferias." At Joannes dux Saxoniam, cum inter ludam scacchorum diploma, quo nex ejus in posterum diem mandabatur, allatum esset, astantem quandam ad se vocavit, et subridens: "Specta," inquit, "num non potiores partes ludi hujus teneam. Iste enim" (ad collusorem innuens) "me mortuo, jactabit, suas potiores partes fuisse." Noster vero Morus, Angliæ cancellarius, cum pridie quo moriturus esset, tonsor ad eum veniret (missus scilicet ad hoc, ne forte capillitio promisso esset apud populum in spectaculo miserabilior) eumque interrogaret, num tonderi placeret; renuit, atque ad tonsorem versus: "Mihi," inquit, "cum rege de capite meo controversia est; antequam vero illa terminata fuerit, sumptus in illud non faciam." Quin et idem, sub ipsum mortis articulum, postquam jam caput in truncum fatalem reclinasset, rursus se paululum erexit, et barba, quæ ei erat promissior, leniter amota, "At certe hæc," inquit, "non offendit regem." Verum, ne hoc loco longiores simus, satis patet quid velimus, nempe ut miracula naturæ humanæ, viresque ejus et virtutes ultimæ tam animi quam corporis, in volumen aliquod colligantur; quod fuerit instar fastorum de humanis triumphis. Qua in re institutum Valerii Maximi et C. Plinii probamus, diligentiam et judicium eorum requirimus.

Quantum ad doctrinam de fœdere, sive de communi vinculo animæ et corporis; ea in duas partes tribui possit. Quemadmodum enim inter federatos intercedunt, et mutua rerum suarum communicatio, et mutua officia; sic fœdus istud animæ et corporis duabus similiter rebus continetur: nimirum ut describatur quomodo hæc duo (anima scilicet et corpus) se in vicem detegant; et quomodo invicem in se agant; notitia sive indicatione, et impressione. Harum prior (descriptio scilicet, qualis possit haberi notitia de anima ex habitu corporis; aut de corpore ex accidentibus animi) duas nobis peperit artes, utramque prædictionis; inquisitionibus alteram Aristotelis, alteram Hippocratis decoratam. Quanquam autem tempora recentiora has artes superstitiosis et phantasticis mixturis polluerint; repurgatæ tamen, ac in integrum restitutæ, et fundamentum habent in natura solidum, et fructum edunt ad vitam communem utilem. Prima est physiognomia, quæ per

corporis lineamenta animi indicat propensiones; altera somniorum naturalium interpretatio, quæ corporis statum et dispositionem ex animi agitationibus detegit. In harum priore partem nonnullam desiderari perspicio. Siquidem Aristoteles ingeniose et solerter corporis fabricam, dum quiescit, tractavit; eandem in motu (nimirum gestus corporis) omisit; qui tamen non minus artis observationibus subjiciuntur, et majoris sunt usus. Etenim lineamenta corporis, animi inclinationes et propensiones generales ostendunt; oris autem et partium motus et gestus, insuper aditus, et tempora, et præsentis dispositionis et voluntatis signa, declarant. Ut enim aptissimis atque elegantissimis majestatis tuæ verbis utar, "Lingua aures ferit, gestus vero oculos alloquitur." Hoc vero bene norunt veteratores complures, et astuti homines, quorum oculi in aliorum vultu et gestibus habitant; idque in commodum suum trahunt; utpote in quo facultatis et prudentiæ suæ pars maxima vertatur. Nec sane negari potest, hoc ipsum simulationes in altero indicem esse mirificum, et monere homines optime de electionibus temporum et opportunitatum adeundi personas; quæ civilis prudentiæ pars est non parva. Nemo autem putet hujusmodi solertiam aliquid quidem valere circa homines individuos, sub regula autem non cadere: nam ad unum fere modum omnes ridemus, et ploramus, et erubescimus, et frontem contrahimus; et sic (ut plurimum) de motibus subtilioribus. Si quis autem hic chiromantiæ meminet, sciat rem esse prorsus vanam; et in hujusmodi sermonibus, quos tractamus, nec dignam quidem quæ nominetur. Quod vero ad somniorum naturalium interpretationem attinet: res est quorundam laboribus pertractata, sed plurimis ineptiis scatens. Illud tantum in præsentem innuo, basim illam huic rei, quæ maxime est solida, non substerni. Ea hujusmodi est; ubi idem fit ab interna causa, quod fieri quoque solet ab externa, actus ille externus transit in somnium. Similis et stomachi oppressio, ex crasso vapore, atque incubitu ponderis externi: itaque qui incubo laborant, pondus sibi superimponi, magno cum apparatu circumstantiarum, somniant. Similis viscerum pensilitas ex fluctuum agitatione in mari, et ex flatu circa præcordia collecto: itaque hypochondriaci sæpius navigationes et agitationes super aquas somniant. Sunt et innumera id genus.

Posterior pars doctrinæ fœderis (quam impressionem nominavimus) in artem nondum redacta est, sed obiter tantum, et carptim, inter alios tractatus aliquando intervenit. Illa eandem antistrophe cum priori habet. Quippe duo considerat: Aut quomodo, et quousque humores et temperamentum corporis immutent animam, in eamque agant: Aut rursus, quomodo, et quousque animæ passiones, vel apprehensiones, immutent corpus et in illud agant. Horum prius in re medica interdum tractari videmus; at id ipsum se miris modis religionibus inseruit. Pharmaca enim præscribunt medici, quæ morbis animæ persanandis inserviant, ut in curationibus mania et melancholia: quinetiam medicinas porrigunt ad animum exhilarandum, ad cor muniendum, atque inde fortitudinem augendam, ad ingenium acuendum, ad memoriam roborandam, et similia. At

diætæ, et delectus ciborum et potuum, et abstinæ, et aliæ circa corpus observantiæ, in secta Pythagoreorum, et in hæresi Manichæorum, et in lege Mahometi, omnem modum superant. Ordinationes quoque legis ceremonialis, sanguinis et adipis esum prohibentes, ac animalia munda ab immundis distinguentes (quatenus ad cibi usum) et plurimæ sunt et præcisæ. Imo Christiana fides ipsa (quamvis a ceremoniarum nube libera et serena) usum tamen retinet jejuniorum, abstinæ, et aliarum rerum, quæ ad corporis macerationem et humiliationem spectant, tanquam rerum non mere ritualium, sed etiam fructuosarum. Atqui radix omnium hujusmodi præceptionum, præter ipsam ceremoniam et exercitium obedientiæ, in hac re consistit, de qua loquimur: nimirum quod anima compatiatur corpori. Si quis autem judicio infirmior existimet, istas corporis in animam impressiones, aut immortalitatem animæ in dubium revocare, aut imperio animæ in corpus derogare; levi dubitationi leve responsum suffecerit. Exempla petat, vel ab infante in utero matris; qui simul cum matris affectibus compatiatur, et tamen e corpore matris suo tempore excluditur: vel a monarchis, qui, licet potentes, a servorum impetu quandoque flectuntur, salva interim majestate sua regia.

Jam quod ad partem reciprocam, (de anima, et affectibus ejus in corpus agentibus) illa quoque in medicina locum invenit. Nemo enim medicus est paulo prudentior, quin accidentia animi, ut rem maximi ad sanationes suas momenti, quæque omnia alia remedia plurimum vel adjuvet, vel impediatur, consideret et tractet. At aliud quippiam, quod huc pertinet, parce admodum, nec pro rei vel subtilitate vel utilitate inquisitum est; quatenus scilicet (missis affectibus) ipsa imaginatio animæ, vel cogitatio perquam fixa, et veluti in fidem quandam exaltata, valeat ad immutandum corpus imaginantis? Quamvis enim vim habeat ad nocendum manifestam, haud tamen inde sequitur pari potentia præditum esse ad subveniendum. Non magis hercle, quam si quis concluderit, quoniam reperitur aliquis aër ita pestilens, ut subito interimat; debere quoque esse aliquem aërem ita salubrem, ut decumbentem subito restituat. Atque hæc inquisitio nobilis profecto esset usus; verum (ut ait Socrates) natatore Delio indiget, quia mergitur in profundo. Rursus inter has doctrinas de fœdere, sive consensibus animæ et corporis, non alia fuerit magis necessaria, quam illa disquisitio de sedibus propriis et domiciliis, quæ singulæ animæ facultates habent in corpore, ejusque organis. Quod genus scientiæ qui sectati fuerint, non desunt; sed quæ habentur in plerisque, aut contraria sunt, aut leviter inquisita; ut majori diligentia et acumine opus sit. Nam sententia introducta a Platone; qua intellectus in cerebro, tanquam in arce, collocatus est; animositas (quam ille satis imperite iracundiam vocavit, cum tumori et superbis sit propior) in corde; concupiscentia autem et sensualitas in jecinore; neque prorsus contemnenda est, neque cupide recipienda. Rursus nec collocatio facultatum illarum intellectualium (phantasiæ, rationis, memoriæ) secundum ventriculos cerebri, erroris expers est. Atque doctrinam de natura

hominis indivisa, ac etiam de fœdere animi et corporis, explicavimus.

### CAPUT SECUNDUM.

*Partitio doctrinæ circa corpus hominis in medicinam, cosmeticam, athleticam, et voluptariam. Partitio medicinæ in officia tria, viz. in conservationem sanitatis, curationem morborum, et prolongationem vitæ: quodque pars postrema de prolongatione vitæ disjungi debeat a duabus reliquis.*

DOCTRINA circa corpus hominis eandem recipit divisionem, quam bona corporis ipsius, quibus inservit. Bona corporis humani quatuor sunt; sanitas, forma sive pulchritudo, vires, voluptas. Totidem igitur scientiæ; medicina, cosmetica, athletica, et voluptaria, quam Tacitus appellat "eruditum luxum."

Medicina ars in primis nobilis, et ex generosissima prosapia secundum poëtâs. Illi enim introduxerunt Apollinem primarium medicinæ deum; cui filium dederunt Æsculapium, deum itidem, et medicinæ professorem: quippe cum sol in naturalibus sit vitæ auctor et fons, medicus ejusdem conservator, et tanquam scaturigo altera. At decus longe illustrius accedit medicinæ ex operibus Servatoris, qui et animæ et corporis medicus fuit; et sicut animam doctrinæ suæ cœlestis, ita corpus miraculorum suorum, objectum veluti proprium constituit. Nusquam enim legitimus miraculum aliquod ab eo patratum circa honores, aut pecunias (præter unicum, quo tributum redderetur Cæsari) sed tantum circa corpus humanum, aut conservandum, aut sustentandum, aut persanandum.
